

# ESP32-C2

## ESP-IDF Programming Guide

Release v5.0.7-418-g37b51f1ec8  
Espressif Systems  
Nov 18, 2024

# Table of contents

<b>Table of contents</b>	<b>i</b>
<b>1 Get Started</b>	<b>3</b>
1.1 Introduction	3
1.2 What You Need	3
1.2.1 Hardware	3
1.2.2 Software	4
1.3 Installation	4
1.3.1 IDE	4
1.3.2 Manual Installation	4
1.4 Build Your First Project	34
1.5 Uninstall ESP-IDF	34
<b>2 API Reference</b>	<b>35</b>
2.1 API Conventions	35
2.1.1 Error handling	35
2.1.2 Configuration structures	35
2.1.3 Private APIs	36
2.1.4 Components in example projects	36
2.1.5 API Stability	37
2.2 Application Protocols	38
2.2.1 ASIO port	38
2.2.2 ESP-Modbus	38
2.2.3 ESP-MQTT	39
2.2.4 ESP-TLS	54
2.2.5 ESP HTTP Client	69
2.2.6 ESP Local Control	84
2.2.7 ESP Serial Slave Link	94
2.2.8 ESP x509 Certificate Bundle	108
2.2.9 HTTP Server	111
2.2.10 HTTPS Server	138
2.2.11 ICMP Echo	141
2.2.12 mDNS Service	146
2.2.13 Mbed TLS	147
2.2.14 IP Network Layer	149
2.3 Bluetooth API	149
2.3.1 Bluetooth® Common	149
2.3.2 Bluetooth® Low Energy	158
2.3.3 Controller && VHCI	302
2.3.4 NimBLE-based host APIs	314
2.4 Error Codes Reference	316
2.5 Networking APIs	322
2.5.1 Wi-Fi	322
2.5.2 Ethernet	405
2.5.3 Thread	439
2.5.4 ESP-NETIF	445
2.5.5 IP Network Layer	477

2.5.6	Application Layer	479
2.6	Peripherals API	480
2.6.1	Analog to Digital Converter (ADC) Oneshot Mode Driver	480
2.6.2	Analog to Digital Converter (ADC) Calibration Driver	488
2.6.3	Clock Tree	490
2.6.4	GPIO & RTC GPIO	496
2.6.5	General Purpose Timer (GPTimer)	510
2.6.6	Dedicated GPIO	522
2.6.7	Inter-Integrated Circuit (I2C)	526
2.6.8	LCD	541
2.6.9	LED Control (LEDC)	554
2.6.10	SD SPI Host Driver	572
2.6.11	SPI Master Driver	577
2.6.12	SPI Slave Driver	598
2.6.13	Temperature Sensor	604
2.6.14	Universal Asynchronous Receiver/Transmitter (UART)	608
2.7	Project Configuration	632
2.7.1	Introduction	632
2.7.2	Project Configuration Menu	632
2.7.3	Using sdkconfig.defaults	632
2.7.4	Kconfig Formatting Rules	632
2.7.5	Backward Compatibility of Kconfig Options	633
2.7.6	Configuration Options Reference	633
2.8	Provisioning API	909
2.8.1	Protocol Communication	909
2.8.2	Unified Provisioning	924
2.8.3	Wi-Fi Provisioning	931
2.9	Storage API	949
2.9.1	FAT Filesystem Support	949
2.9.2	Manufacturing Utility	957
2.9.3	Non-volatile Storage Library	961
2.9.4	NVS Partition Generator Utility	983
2.9.5	SD/SDIO/MMC Driver	988
2.9.6	SPI Flash API	1001
2.9.7	SPIFFS Filesystem	1037
2.9.8	Virtual filesystem component	1041
2.9.9	Wear Levelling API	1057
2.10	System API	1060
2.10.1	App Image Format	1060
2.10.2	Application Level Tracing	1065
2.10.3	Call function with external stack	1070
2.10.4	Chip Revision	1072
2.10.5	Console	1074
2.10.6	eFuse Manager	1083
2.10.7	Error Codes and Helper Functions	1103
2.10.8	ESP HTTPS OTA	1106
2.10.9	Event Loop Library	1113
2.10.10	FreeRTOS (Overview)	1126
2.10.11	FreeRTOS (ESP-IDF)	1128
2.10.12	FreeRTOS (Supplemental Features)	1245
2.10.13	Heap Memory Allocation	1265
2.10.14	Heap Memory Debugging	1278
2.10.15	High Resolution Timer (ESP Timer)	1288
2.10.16	Internal and Unstable APIs	1295
2.10.17	Interrupt allocation	1296
2.10.18	Logging library	1302
2.10.19	Miscellaneous System APIs	1309
2.10.20	Over The Air Updates (OTA)	1324

2.10.21	Power Management	1335
2.10.22	POSIX Threads Support	1342
2.10.23	Random Number Generation	1346
2.10.24	Sleep Modes	1348
2.10.25	SoC Capabilities	1358
2.10.26	System Time	1366
2.10.27	The Async memcpy API	1371
2.10.28	Watchdogs	1375
<b>3</b>	<b>Hardware Reference</b>	<b>1381</b>
3.1	Chip Series Comparison	1381
3.1.1	Related Documents	1384
<b>4</b>	<b>API Guides</b>	<b>1385</b>
4.1	Application Level Tracing library	1385
4.1.1	Overview	1385
4.1.2	Modes of Operation	1385
4.1.3	Configuration Options and Dependencies	1386
4.1.4	How to Use This Library	1387
4.2	Application Startup Flow	1395
4.2.1	First stage bootloader	1395
4.2.2	Second stage bootloader	1396
4.2.3	Application startup	1396
4.3	Bluetooth® Low Energy	1397
4.3.1	Overview	1397
4.3.2	Get Started	1401
4.3.3	Profile	1450
4.4	Bootloader	1458
4.4.1	Bootloader compatibility	1459
4.4.2	Log Level	1459
4.4.3	Factory reset	1459
4.4.4	Boot from Test Firmware	1460
4.4.5	Rollback	1460
4.4.6	Watchdog	1460
4.4.7	Bootloader Size	1461
4.4.8	Custom bootloader	1461
4.5	Build System	1461
4.5.1	Overview	1461
4.5.2	Using the Build System	1462
4.5.3	Example Project	1464
4.5.4	Project CMakeLists File	1465
4.5.5	Component CMakeLists Files	1466
4.5.6	Component Configuration	1468
4.5.7	Preprocessor Definitions	1468
4.5.8	Component Requirements	1469
4.5.9	Overriding Parts of the Project	1473
4.5.10	Configuration-Only Components	1473
4.5.11	Debugging CMake	1473
4.5.12	Example Component CMakeLists	1474
4.5.13	Custom sdkconfig defaults	1478
4.5.14	Flash arguments	1478
4.5.15	Building the Bootloader	1479
4.5.16	Writing Pure CMake Components	1479
4.5.17	Using Third-Party CMake Projects with Components	1479
4.5.18	Using Prebuilt Libraries with Components	1480
4.5.19	Using ESP-IDF in Custom CMake Projects	1481
4.5.20	ESP-IDF CMake Build System API	1481
4.5.21	File Globbing & Incremental Builds	1485

4.5.22	Build System Metadata	1486
4.5.23	Build System Internals	1486
4.5.24	Migrating from ESP-IDF GNU Make System	1488
4.6	Core Dump	1489
4.6.1	Overview	1489
4.6.2	Configurations	1490
4.6.3	Save core dump to flash	1490
4.6.4	Print core dump to UART	1491
4.6.5	ROM Functions in Backtraces	1491
4.6.6	Dumping variables on demand	1491
4.6.7	Running <code>espcoredump.py</code>	1492
4.7	Error Handling	1493
4.7.1	Overview	1495
4.7.2	Error codes	1495
4.7.3	Converting error codes to error messages	1495
4.7.4	<code>ESP_ERROR_CHECK</code> macro	1495
4.7.5	<code>ESP_ERROR_CHECK_WITHOUT_ABORT</code> macro	1496
4.7.6	<code>ESP_RETURN_ON_ERROR</code> macro	1496
4.7.7	<code>ESP_GOTO_ON_ERROR</code> macro	1496
4.7.8	<code>ESP_RETURN_ON_FALSE</code> macro	1496
4.7.9	<code>ESP_GOTO_ON_FALSE</code> macro	1496
4.7.10	CHECK MACROS Examples	1496
4.7.11	Error handling patterns	1497
4.7.12	C++ Exceptions	1498
4.8	Event Handling	1498
4.8.1	Wi-Fi, Ethernet, and IP Events	1498
4.8.2	Bluetooth Events	1500
4.9	Fatal Errors	1501
4.9.1	Overview	1501
4.9.2	Panic Handler	1501
4.9.3	Register Dump and Backtrace	1502
4.9.4	GDB Stub	1505
4.9.5	RTC Watchdog Timeout	1505
4.9.6	Guru Meditation Errors	1506
4.9.7	Other Fatal Errors	1507
4.10	Flash Encryption	1509
4.10.1	Introduction	1510
4.10.2	Relevant eFuses	1510
4.10.3	Flash Encryption Process	1511
4.10.4	Flash Encryption Configuration	1511
4.10.5	Possible Failures	1517
4.10.6	ESP32-C2 Flash Encryption Status	1519
4.10.7	Reading and Writing Data in Encrypted Flash	1519
4.10.8	Updating Encrypted Flash	1520
4.10.9	Disabling Flash Encryption	1520
4.10.10	Key Points About Flash Encryption	1520
4.10.11	Limitations of Flash Encryption	1521
4.10.12	Flash Encryption and Secure Boot	1521
4.10.13	Advanced Features	1521
4.10.14	Technical Details	1523
4.11	Hardware Abstraction	1523
4.11.1	Architecture	1524
4.11.2	LL (Low Level) Layer	1525
4.11.3	HAL (Hardware Abstraction Layer)	1526
4.12	JTAG Debugging	1527
4.12.1	Introduction	1527
4.12.2	How it Works?	1528
4.12.3	Selecting JTAG Adapter	1528

4.12.4	Setup of OpenOCD	1529
4.12.5	Configuring ESP32-C2 Target	1529
4.12.6	Launching Debugger	1531
4.12.7	Debugging Examples	1531
4.12.8	Building OpenOCD from Sources	1531
4.12.9	Tips and Quirks	1536
4.12.10	Related Documents	1540
4.13	Linker Script Generation	1565
4.13.1	Overview	1565
4.13.2	Quick Start	1565
4.13.3	Linker Script Generation Internals	1568
4.14	lwIP	1575
4.14.1	Supported APIs	1575
4.14.2	BSD Sockets API	1575
4.14.3	Netconn API	1579
4.14.4	lwIP FreeRTOS Task	1579
4.14.5	IPv6 Support	1580
4.14.6	esp-lwip custom modifications	1580
4.14.7	Performance Optimization	1582
4.15	Memory Types	1583
4.15.1	DRAM (Data RAM)	1583
4.15.2	IRAM (Instruction RAM)	1584
4.15.3	IROM (code executed from flash)	1585
4.15.4	DROM (data stored in flash)	1585
4.15.5	DMA Capable Requirement	1585
4.15.6	DMA Buffer in the stack	1586
4.16	OpenThread	1586
4.16.1	Modes of the OpenThread stack	1586
4.16.2	How to Write an OpenThread Application	1587
4.16.3	The OpenThread Border Router	1588
4.17	Partition Tables	1588
4.17.1	Overview	1588
4.17.2	Built-in Partition Tables	1589
4.17.3	Creating Custom Tables	1589
4.17.4	Generating Binary Partition Table	1592
4.17.5	Partition Size Checks	1592
4.17.6	Flashing the partition table	1592
4.17.7	Partition Tool (parttool.py)	1593
4.18	Performance	1594
4.18.1	How to Optimize Performance	1594
4.18.2	Guides	1594
4.19	RF calibration	1611
4.19.1	Partial calibration	1611
4.19.2	Full calibration	1611
4.19.3	No calibration	1611
4.19.4	PHY initialization data	1612
4.19.5	API Reference	1612
4.20	Secure Boot V2	1615
4.20.1	Background	1615
4.20.2	Advantages	1615
4.20.3	Secure Boot V2 Process	1615
4.20.4	Signature Block Format	1616
4.20.5	Secure Padding	1616
4.20.6	Verifying a Signature Block	1617
4.20.7	Verifying an Image	1617
4.20.8	Bootloader Size	1617
4.20.9	eFuse usage	1617
4.20.10	How To Enable Secure Boot V2	1618

4.20.11	Restrictions after Secure Boot is enabled	1618
4.20.12	Generating Secure Boot Signing Key	1619
4.20.13	Remote Signing of Images	1619
4.20.14	Secure Boot Best Practices	1620
4.20.15	Technical Details	1620
4.20.16	Secure Boot & Flash Encryption	1620
4.20.17	Signed App Verification Without Hardware Secure Boot	1621
4.20.18	Advanced Features	1621
4.21	Thread Local Storage	1621
4.21.1	Overview	1622
4.21.2	FreeRTOS Native API	1622
4.21.3	Pthread API	1622
4.21.4	C11 Standard	1622
4.22	Tools	1622
4.22.1	IDF Frontend - idf.py	1623
4.22.2	IDF Docker Image	1626
4.22.3	IDF Windows Installer	1628
4.22.4	IDF Component Manager	1629
4.22.5	IDF Clang Tidy	1631
4.22.6	Downloadable Tools	1632
4.23	Unit Testing in ESP32-C2	1645
4.23.1	Normal Test Cases	1645
4.23.2	Multi-device Test Cases	1646
4.23.3	Multi-stage Test Cases	1647
4.23.4	Tests For Different Targets	1647
4.23.5	Building Unit Test App	1648
4.23.6	Running Unit Tests	1648
4.23.7	Timing Code with Cache Compensated Timer	1649
4.23.8	Mocks	1650
4.24	Unit Testing on Linux	1652
4.24.1	Embedded Software Tests	1652
4.24.2	IDF Unit Tests on Linux Host	1653
4.25	Wi-Fi Driver	1654
4.25.1	ESP32-C2 Wi-Fi Feature List	1654
4.25.2	How To Write a Wi-Fi Application	1654
4.25.3	ESP32-C2 Wi-Fi API Error Code	1655
4.25.4	ESP32-C2 Wi-Fi API Parameter Initialization	1655
4.25.5	ESP32-C2 Wi-Fi Programming Model	1655
4.25.6	ESP32-C2 Wi-Fi Event Description	1656
4.25.7	ESP32-C2 Wi-Fi Station General Scenario	1659
4.25.8	ESP32-C2 Wi-Fi AP General Scenario	1662
4.25.9	ESP32-C2 Wi-Fi Scan	1662
4.25.10	ESP32-C2 Wi-Fi Station Connecting Scenario	1669
4.25.11	ESP32-C2 Wi-Fi Station Connecting When Multiple APs Are Found	1676
4.25.12	Wi-Fi Reconnect	1676
4.25.13	Wi-Fi Beacon Timeout	1676
4.25.14	ESP32-C2 Wi-Fi Configuration	1676
4.25.15	Wi-Fi Easy Connect™ (DPP)	1680
4.25.16	Wireless Network Management	1681
4.25.17	Radio Resource Measurement	1681
4.25.18	Fast BSS Transition	1682
4.25.19	Wi-Fi Location	1682
4.25.20	ESP32-C2 Wi-Fi Power-saving Mode	1682
4.25.21	ESP32-C2 Wi-Fi Throughput	1684
4.25.22	Wi-Fi 80211 Packet Send	1684
4.25.23	Wi-Fi Sniffer Mode	1686
4.25.24	Wi-Fi Multiple Antennas	1687
4.25.25	Wi-Fi HT20/40	1688

4.25.26	Wi-Fi QoS . . . . .	1688
4.25.27	Wi-Fi AMSDU . . . . .	1689
4.25.28	Wi-Fi Fragment . . . . .	1689
4.25.29	WPS Enrollee . . . . .	1689
4.25.30	Wi-Fi Buffer Usage . . . . .	1689
4.25.31	How to Improve Wi-Fi Performance . . . . .	1690
4.25.32	Wi-Fi Menuconfig . . . . .	1692
4.25.33	Troubleshooting . . . . .	1695
4.26	Wi-Fi Security . . . . .	1698
4.26.1	ESP32-C2 Wi-Fi Security Features . . . . .	1698
4.26.2	Protected Management Frames (PMF) . . . . .	1701
4.26.3	WiFi Enterprise . . . . .	1702
4.26.4	WPA3-Personal . . . . .	1702
4.26.5	Wi-Fi Enhanced Open™ . . . . .	1703
4.27	RF Coexistence . . . . .	1703
4.27.1	Overview . . . . .	1704
4.27.2	Supported Coexistence Scenario for ESP32-C2 . . . . .	1704
4.27.3	Coexistence Mechanism and Policy . . . . .	1704
4.27.4	How to Use the Coexistence Feature . . . . .	1705
4.28	Reproducible Builds . . . . .	1706
4.28.1	Introduction . . . . .	1706
4.28.2	Reasons for non-reproducible builds . . . . .	1707
4.28.3	Enabling reproducible builds in ESP-IDF . . . . .	1707
4.28.4	How reproducible builds are achieved . . . . .	1707
4.28.5	Reproducible builds and debugging . . . . .	1707
4.28.6	Factors which still affect reproducible builds . . . . .	1708
4.29	Low Power Mode User Guide . . . . .	1708
<b>5</b>	<b>Migration Guides</b>	<b>1709</b>
5.1	ESP-IDF 5.x Migration Guide . . . . .	1709
5.1.1	Migration from 4.4 to 5.0 . . . . .	1709
<b>6</b>	<b>Libraries and Frameworks</b>	<b>1735</b>
6.1	Cloud Frameworks . . . . .	1735
6.1.1	ESP RainMaker . . . . .	1735
6.1.2	AWS IoT . . . . .	1735
6.1.3	Azure IoT . . . . .	1735
6.1.4	Google IoT Core . . . . .	1735
6.1.5	Aliyun IoT . . . . .	1735
6.1.6	Joylink IoT . . . . .	1735
6.1.7	Tencent IoT . . . . .	1736
6.1.8	Tencentyun IoT . . . . .	1736
6.1.9	Baidu IoT . . . . .	1736
6.2	Espressif' s Frameworks . . . . .	1736
6.2.1	Espressif Audio Development Framework . . . . .	1736
6.2.2	ESP-CSI . . . . .	1736
6.2.3	Espressif DSP Library . . . . .	1736
6.2.4	ESP-WIFI-MESH Development Framework . . . . .	1737
6.2.5	ESP-WHO . . . . .	1737
6.2.6	ESP RainMaker . . . . .	1737
6.2.7	ESP-IoT-Solution . . . . .	1737
6.2.8	ESP-Protocols . . . . .	1737
6.2.9	ESP-BSP . . . . .	1738

This is the documentation for Espressif IoT Development Framework ([esp-idf](#)). ESP-IDF is the official development framework for the [ESP32](#), [ESP32-S](#) and [ESP32-C Series SoCs](#).

This document describes using ESP-IDF with the ESP32-C2 SoC.

		
<a href="#">Get Started</a>	<a href="#">API Reference</a>	<a href="#">API Guides</a>

# Chapter 1

## Get Started

This document is intended to help you set up the software development environment for the hardware based on the ESP32-C2 chip by Espressif. After that, a simple example will show you how to use ESP-IDF (Espressif IoT Development Framework) for menu configuration, then for building and flashing firmware onto an ESP32-C2 board.

---

**Note:** This is documentation for branch `release/v5.0` of ESP-IDF. Other *ESP-IDF Versions* are also available.

---

### 1.1 Introduction

ESP32-C2 is a system on a chip that integrates the following features:

- Wi-Fi (2.4 GHz band)
- Bluetooth Low Energy
- High performance 32-bit RISC-V single-core processor
- Multiple peripherals
- Intended for simple, high-volume IoT applications

Powered by 40 nm technology, ESP32-C2 provides a robust, highly integrated platform, which helps meet the continuous demands for efficient power usage, compact design, security, high performance, and reliability.

Espressif provides basic hardware and software resources to help application developers realize their ideas using the ESP32-C2 series hardware. The software development framework by Espressif is intended for development of Internet-of-Things (IoT) applications with Wi-Fi, Bluetooth, power management and several other system features.

### 1.2 What You Need

#### 1.2.1 Hardware

- An **ESP32-C2** board.
- **USB cable** - USB A / micro USB B.
- **Computer** running Windows, Linux, or macOS.

---

**Note:** Currently, some of the development boards are using USB Type C connectors. Be sure you have the correct cable to connect your board!

---

If you have one of ESP32-C2 official development boards listed below, you can click on the link to learn more about the hardware.

## 1.2.2 Software

To start using ESP-IDF on **ESP32-C2**, install the following software:

- **Toolchain** to compile code for ESP32-C2
- **Build tools** - CMake and Ninja to build a full **Application** for ESP32-C2
- **ESP-IDF** that essentially contains API (software libraries and source code) for ESP32-C2 and scripts to operate the **Toolchain**

## 1.3 Installation

To install all the required software, we offer some different ways to facilitate this task. Choose from one of the available options.

### 1.3.1 IDE

---

**Note:** We highly recommend installing the ESP-IDF through your favorite IDE.

---

- [Eclipse Plugin](#)
- [VSCode Extension](#)

### 1.3.2 Manual Installation

For the manual procedure, please select according to your operating system.

## Standard Setup of Toolchain for Windows

**Introduction** ESP-IDF requires some prerequisite tools to be installed so you can build firmware for supported chips. The prerequisite tools include Python, Git, cross-compilers, CMake and Ninja build tools.

For this Getting Started we're going to use the Command Prompt, but after ESP-IDF is installed you can use [Eclipse Plugin](#) or another graphical IDE with CMake support instead.

---

**Note:** Limitations: - The installation path of ESP-IDF and ESP-IDF Tools must not be longer than 90 characters. Too long installation paths might result in a failed build. - The installation path of Python or ESP-IDF must not contain white spaces or parentheses. - The installation path of Python or ESP-IDF should not contain special characters (non-ASCII) unless the operating system is configured with "Unicode UTF-8" support.

System Administrator can enable the support via Control Panel - Change date, time, or number formats - Administrative tab - Change system locale - check the option "Beta: Use Unicode UTF-8 for worldwide language support" - Ok and reboot the computer.

---

**ESP-IDF Tools Installer** The easiest way to install ESP-IDF's prerequisites is to download one of ESP-IDF Tools Installers.

**What is the usecase for Online and Offline Installer** Online Installer is very small and allows the installation of all available releases of ESP-IDF. The installer will download only necessary dependencies including [Git For Windows](#) during the installation process. The installer stores downloaded files in the cache directory `%userprofile%\.espressif`

Offline Installer does not require any network connection. The installer contains all required dependencies including [Git For Windows](#).

**Components of the installation** The installer deploys the following components:

- Embedded Python
- Cross-compilers
- OpenOCD
- CMake and Ninja build tools
- ESP-IDF

The installer also allows reusing the existing directory with ESP-IDF. The recommended directory is `%userprofile%\Desktop\esp-idf` where `%userprofile%` is your home directory.

**Launching ESP-IDF Environment** At the end of the installation process you can check out option `Run ESP-IDF PowerShell Environment` or `Run ESP-IDF Command Prompt (cmd.exe)`. The installer will launch ESP-IDF environment in selected prompt.

Run ESP-IDF PowerShell Environment:

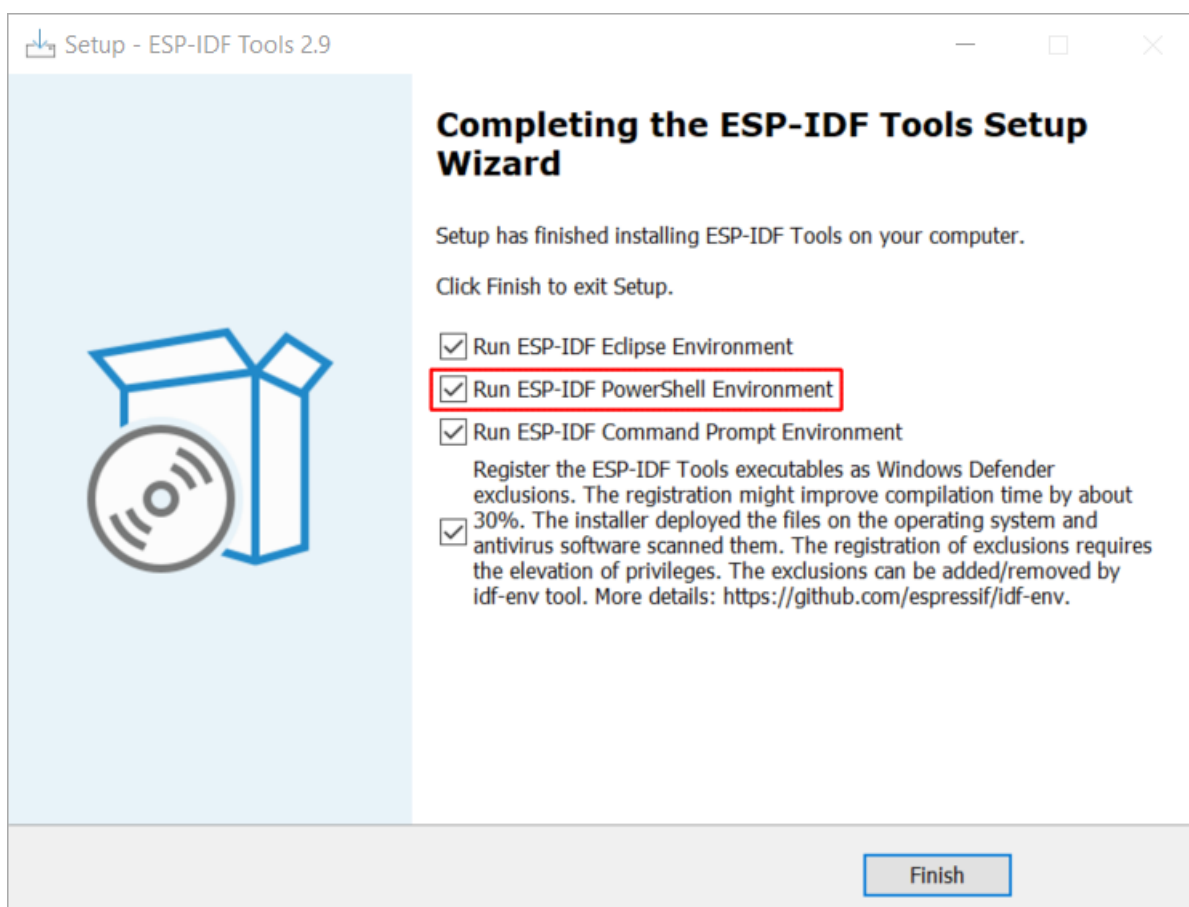

Fig. 1: Completing the ESP-IDF Tools Setup Wizard with Run ESP-IDF PowerShell Environment

Run ESP-IDF Command Prompt (`cmd.exe`):

**Using the Command Prompt** For the remaining Getting Started steps, we're going to use the Windows Command Prompt.

ESP-IDF Tools Installer also creates a shortcut in the Start menu to launch the ESP-IDF Command Prompt. This shortcut launches the Command Prompt (`cmd.exe`) and runs `export.bat` script to set up the environment variables (`PATH`, `IDF_PATH` and others). Inside this command prompt, all the installed tools are available.

Note that this shortcut is specific to the ESP-IDF directory selected in the ESP-IDF Tools Installer. If you have multiple ESP-IDF directories on the computer (for example, to work with different versions of ESP-IDF), you have two options to use them:

1. Create a copy of the shortcut created by the ESP-IDF Tools Installer, and change the working directory of the new shortcut to the ESP-IDF directory you wish to use.
2. Alternatively, run `cmd.exe`, then change to the ESP-IDF directory you wish to use, and run `export.bat`. Note that unlike the previous option, this way requires Python and Git to be present in `PATH`. If you get errors related to Python or Git not being found, use the first option.

**First Steps on ESP-IDF** Now since all requirements are met, the next topic will guide you on how to start your first project.

```
ESP-IDF PowerShell

Using Python in C:/Users/developer/.espressif/python_env/idf4.1_py3.8_env/scripts
Python 3.8.7
Using Git in c:/Program Files/Git/cmd/
git version 2.29.2.windows.1
Setting IDF_PATH: C:/Users/developer/Desktop/esp-idf
Adding ESP-IDF tools to PATH...
C:/Users/developer/.espressif/tools/xtensa-esp32-elf/esp-2020r3-8.4.0/xtensa-esp32-elf/bin

  C:\Users\test\esp\esp-idf\tools

Checking if Python packages are up to date...
Python requirements from C:\Users\test\esp\esp-idf\requirements.txt are satisfied.

Done! You can now compile ESP-IDF projects.
Go to the project directory and run:

idf.py build

C:\Users\test\esp\esp-idf>
```

Fig. 4: ESP-IDF Command Prompt

This guide will help you on the first steps using ESP-IDF. Follow this guide to start a new project on the ESP32-C2 and build, flash, and monitor the device output.

---

**Note:** If you have not yet installed ESP-IDF, please go to [Installation](#) and follow the instruction in order to get all the software needed to use this guide.

---

**Start a Project** Now you are ready to prepare your application for ESP32-C2. You can start with [get-started/hello\\_world](#) project from [examples](#) directory in ESP-IDF.

---

**Important:** The ESP-IDF build system does not support spaces in the paths to either ESP-IDF or to projects.

---

Copy the project [get-started/hello\\_world](#) to `~/esp` directory:

```
cd %userprofile%\esp
xcopy /e /i %IDF_PATH%\examples\get-started\hello_world hello_world
```

---

**Note:** There is a range of example projects in the [examples](#) directory in ESP-IDF. You can copy any project in the same way as presented above and run it. It is also possible to build examples in-place without copying them first.

---

**Connect Your Device** Now connect your ESP32-C2 board to the computer and check under which serial port the board is visible.

Serial port names start with COM in Windows.

If you are not sure how to check the serial port name, please refer to [Establish Serial Connection with ESP32-C2](#) for full details.

---

**Note:** Keep the port name handy as you will need it in the next steps.

---

**Configure Your Project** Navigate to your `hello_world` directory, set ESP32-C2 as the target, and run the project configuration utility `menuconfig`.

## Windows

```
cd %userprofile%\esp\hello_world
idf.py set-target esp32c2
idf.py menuconfig
```

After opening a new project, you should first set the target with `idf.py set-target esp32c2`. Note that existing builds and configurations in the project, if any, will be cleared and initialized in this process. The target may be saved in the environment variable to skip this step at all. See [Select the Target Chip: set-target](#) for additional information.

If the previous steps have been done correctly, the following menu appears:

You are using this menu to set up project specific variables, e.g., Wi-Fi network name and password, the processor speed, etc. Setting up the project with `menuconfig` may be skipped for “`hello_word`”, since this example runs with default configuration.

---

**Note:** The colors of the menu could be different in your terminal. You can change the appearance with the option `--style`. Please run `idf.py menuconfig --help` for further information.

---

Fig. 5: Project configuration - Home window

**Build the Project** Build the project by running:

```
idf.py build
```

This command will compile the application and all ESP-IDF components, then it will generate the bootloader, partition table, and application binaries.

```
$ idf.py build
Running cmake in directory /path/to/hello_world/build
Executing "cmake -G Ninja --warn-uninitialized /path/to/hello_world"...
Warn about uninitialized values.
-- Found Git: /usr/bin/git (found version "2.17.0")
-- Building empty aws_iot component due to configuration
-- Component names: ...
-- Component paths: ...

... (more lines of build system output)

[527/527] Generating hello_world.bin
esptool.py v2.3.1

Project build complete. To flash, run this command:
../../components/esptool_py/esptool/esptool.py -p (PORT) -b 921600 write_flash -
↪-flash_mode dio --flash_size detect --flash_freq 40m 0x10000 build/hello_world.
↪bin build 0x1000 build/bootloader/bootloader.bin 0x8000 build/partition-table/
↪partition-table.bin
or run 'idf.py -p PORT flash'
```

If there are no errors, the build will finish by generating the firmware binary .bin files.

**Flash onto the Device** Flash the binaries that you just built (bootloader.bin, partition-table.bin and hello\_world.bin) onto your ESP32-C2 board by running:

```
idf.py -p PORT [-b BAUD] flash
```

Replace PORT with your ESP32-C2 board's serial port name.

You can also change the flasher baud rate by replacing BAUD with the baud rate you need. The default baud rate is 460800.

For more information on `idf.py` arguments, see [idf.py](#).

---

**Note:** The option `flash` automatically builds and flashes the project, so running `idf.py build` is not necessary.

---

**Encountered Issues While Flashing?** If you run the given command and see errors such as “Failed to connect”, there might be several reasons for this. One of the reasons might be issues encountered by `esptool.py`, the utility that is called by the build system to reset the chip, interact with the ROM bootloader, and flash firmware. One simple solution to try is manual reset described below, and if it does not help you can find more details about possible issues in [Troubleshooting](#).

`esptool.py` resets ESP32-C2 automatically by asserting DTR and RTS control lines of the USB to serial converter chip, i.e., FTDI or CP210x (for more information, see [Establish Serial Connection with ESP32-C2](#)). The DTR and RTS control lines are in turn connected to `GPIO9` and `CHIP_PU (EN)` pins of ESP32-C2, thus changes in the voltage levels of DTR and RTS will boot ESP32-C2 into Firmware Download mode. As an example, check the [schematic](#) for the ESP32 DevKitC development board.

In general, you should have no problems with the [official esp-idf development boards](#). However, `esptool.py` is not able to reset your hardware automatically in the following cases:

- Your hardware does not have the DTR and RTS lines connected to `GPIO9` and `CHIP_PU`
- The DTR and RTS lines are configured differently
- There are no such serial control lines at all

Depending on the kind of hardware you have, it may also be possible to manually put your ESP32-C2 board into Firmware Download mode (reset).

- For development boards produced by Espressif, this information can be found in the respective getting started guides or user guides. For example, to manually reset an ESP-IDF development board, hold down the **Boot** button (`GPIO9`) and press the **EN** button (`CHIP_PU`).
- For other types of hardware, try pulling `GPIO9` down.

**Normal Operation** When flashing, you will see the output log similar to the following:

```
...
esptool.py esp32c2 -p /dev/ttyUSB0 -b 460800 --before=default_reset --after=hard_
↪reset write_flash --flash_mode dio --flash_freq 60m --flash_size 2MB 0x0_
↪bootloader/bootloader.bin 0x10000 hello_world.bin 0x8000 partition_table/
↪partition-table.bin

Leaving...
Hard resetting via RTS pin...

```

If there are no issues by the end of the flash process, the board will reboot and start up the “hello\_world” application.

If you’d like to use the Eclipse or VS Code IDE instead of running `idf.py`, check out [Eclipse Plugin](#), [VSCode Extension](#).

**Monitor the Output** To check if “hello\_world” is indeed running, type `idf.py -p PORT monitor` (Do not forget to replace PORT with your serial port name).

This command launches the *IDF Monitor* application:

```

$ idf.py -p <PORT> monitor
Running idf_monitor in directory [...]/esp/hello_world/build
Executing "python [...]/esp-idf/tools/idf_monitor.py -b 115200 [...]/esp/hello_
↳world/build/hello_world.elf"...
--- idf_monitor on <PORT> 115200 ---
--- Quit: Ctrl+] | Menu: Ctrl+T | Help: Ctrl+T followed by Ctrl+H ---
ets Jun  8 2016 00:22:57

rst:0x1 (POWERON_RESET),boot:0x13 (SPI_FAST_FLASH_BOOT)
ets Jun  8 2016 00:22:57
...

```

After startup and diagnostic logs scroll up, you should see “Hello world!” printed out by the application.

```

...
Hello world!
Restarting in 10 seconds...
This is esp32c2 chip with 1 CPU core(s), WiFi/BLE, silicon revision 0, 2MB↳
↳external flash
Minimum free heap size: 203888 bytes
Restarting in 9 seconds...
Restarting in 8 seconds...
Restarting in 7 seconds...

```

To exit IDF monitor use the shortcut `Ctrl+]`.

If IDF monitor fails shortly after the upload, or, if instead of the messages above, you see random garbage similar to what is given below, your board is likely using a 26 MHz crystal. Most development board designs use 40 MHz, so ESP-IDF uses this frequency as a default value.

```

e000)(Xn@0y.!00(0PW+)00Hn9a~^/90!0t500P0~0k00e0ea050jA
~zY00Y(10,1 00 e000)(Xn@0y.!Dr0zY(0 jpi0|0+z5Ymvp

```

If you have such a problem, do the following:

1. Exit the monitor.
2. Go back to menuconfig.
3. Go to Component config → Hardware Settings → Main XTAL Config → Main XTAL frequency, then change `CONFIG_XTAL_FREQ_SEL` to 26 MHz.
4. After that, build and flash the application again.

In the current version of ESP-IDF, main XTAL frequencies supported by ESP32-C2 are as follows:

- 26 MHz
- 40 MHz

---

**Note:** You can combine building, flashing and monitoring into one step by running:

```
idf.py -p PORT flash monitor
```

---

See also:

- [IDF Monitor](#) for handy shortcuts and more details on using IDF monitor.
- [idf.py](#) for a full reference of `idf.py` commands and options.

**That's all that you need to get started with ESP32-C2!**

Now you are ready to try some other [examples](#), or go straight to developing your own applications.

---

**Important:** Some of examples do not support ESP32-C2 because required hardware is not included in ESP32-C2 so it cannot be supported.

If building an example, please check the README file for the Supported Targets table. If this is present including ESP32-C2 target, or the table does not exist at all, the example will work on ESP32-C2.

---

### Additional Tips

**Permission issues /dev/ttyUSB0** With some Linux distributions, you may get the Failed to open port /dev/ttyUSB0 error message when flashing the ESP32-C2. *This can be solved by adding the current user to the dialout group.*

**Python compatibility** ESP-IDF supports Python 3.7 or newer. It is recommended to upgrade your operating system to a recent version satisfying this requirement. Other options include the installation of Python from [sources](#) or the use of a Python version management system such as [pyenv](#).

**Related Documents** For advanced users who want to customize the install process:

- [Updating ESP-IDF tools on Windows](#)
- [Establish Serial Connection with ESP32-C2](#)
- [Eclipse Plugin](#)
- [VSCode Extension](#)
- [IDF Monitor](#)

### Updating ESP-IDF tools on Windows

**Install ESP-IDF tools using a script** From the Windows Command Prompt, change to the directory where ESP-IDF is installed. Then run:

```
install.bat
```

For Powershell, change to the directory where ESP-IDF is installed. Then run:

```
install.ps1
```

This will download and install the tools necessary to use ESP-IDF. If the specific version of the tool is already installed, no action will be taken. The tools are downloaded and installed into a directory specified during ESP-IDF Tools Installer process. By default, this is `C:\Users\username\.espressif`.

**Add ESP-IDF tools to PATH using an export script** ESP-IDF tools installer creates a Start menu shortcut for “ESP-IDF Command Prompt” . This shortcut opens a Command Prompt window where all the tools are already available.

In some cases, you may want to work with ESP-IDF in a Command Prompt window which wasn't started using that shortcut. If this is the case, follow the instructions below to add ESP-IDF tools to PATH.

In the command prompt where you need to use ESP-IDF, change to the directory where ESP-IDF is installed, then execute `export.bat`:

```
cd %userprofile%\esp\esp-idf
export.bat
```

Alternatively in the Powershell where you need to use ESP-IDF, change to the directory where ESP-IDF is installed, then execute `export.ps1`:

```
cd ~/esp/esp-idf
export.ps1
```

When this is done, the tools will be available in this command prompt.

### Establish Serial Connection with ESP32-C2

This section provides guidance how to establish serial connection between ESP32-C2 and PC.

**Connect ESP32-C2 to PC** Connect the ESP32-C2 board to the PC using the USB cable. If device driver does not install automatically, identify USB to serial converter chip on your ESP32-C2 board (or external converter dongle), search for drivers in internet and install them.

Below is the list of USB to serial converter chips installed on most of the ESP32-C2 boards produced by Espressif together with links to the drivers:

- CP210x: [CP210x USB to UART Bridge VCP Drivers](#)
- FTDI: [FTDI Virtual COM Port Drivers](#)

Please check the board user guide for specific USB to serial converter chip used. The drivers above are primarily for reference. Under normal circumstances, the drivers should be bundled with an operating system and automatically installed upon connecting the board to the PC.

**Check port on Windows** Check the list of identified COM ports in the Windows Device Manager. Disconnect ESP32-C2 and connect it back, to verify which port disappears from the list and then shows back again.

Figures below show serial port for ESP32 DevKitC and ESP32 WROVER KIT

Fig. 6: USB to UART bridge of ESP32-DevKitC in Windows Device Manager

Fig. 7: Two USB Serial Ports of ESP-WROVER-KIT in Windows Device Manager

**Check port on Linux and macOS** To check the device name for the serial port of your ESP32-C2 board (or external converter dongle), run this command two times, first with the board / dongle unplugged, then with plugged in. The port which appears the second time is the one you need:

Linux

```
ls /dev/tty*
```

macOS

```
ls /dev/cu.*
```

---

**Note:** macOS users: if you don't see the serial port then check you have the USB/serial drivers installed. See Section [Connect ESP32-C2 to PC](#) for links to drivers. For macOS High Sierra (10.13), you may also have to explicitly allow the drivers to load. Open System Preferences -> Security & Privacy -> General and check if there is a message shown here about "System Software from developer ..." where the developer name is Silicon Labs or FTDI.

---

**Adding user to dialout on Linux** The currently logged user should have read and write access the serial port over USB. On most Linux distributions, this is done by adding the user to `dialout` group with the following command:

```
sudo usermod -a -G dialout $USER
```

on Arch Linux this is done by adding the user to `uucp` group with the following command:

```
sudo usermod -a -G uucp $USER
```

Make sure you re-login to enable read and write permissions for the serial port.

**Verify serial connection** Now verify that the serial connection is operational. You can do this using a serial terminal program by checking if you get any output on the terminal after resetting ESP32-C2.

The default console baud rate on ESP32-C2 is 115200 when a 40 MHz XTAL is used, or 74880 when a 26 MHz XTAL is used.

**Windows and Linux** In this example we will use [PuTTY SSH Client](#) that is available for both Windows and Linux. You can use other serial programs and set communication parameters like below.

Run terminal and set identified serial port. Baud rate = 115200 (if needed, change this to the default baud rate of the chip in use), data bits = 8, stop bits = 1, and parity = N. Below are example screenshots of setting the port and such transmission parameters (in short described as 115200-8-1-N) on Windows and Linux. Remember to select exactly the same serial port you have identified in steps above.

Then open serial port in terminal and check, if you see any log printed out by ESP32-C2. The log contents will depend on application loaded to ESP32-C2, see [Example Output](#).

---

**Note:** Close the serial terminal after verification that communication is working. If you keep the terminal session open, the serial port will be inaccessible for uploading firmware later.

---

**macOS** To spare you the trouble of installing a serial terminal program, macOS offers the `screen` command.

- As discussed in [Check port on Linux and macOS](#), run:

```
ls /dev/cu.*
```

- You should see similar output:

Fig. 8: Setting Serial Communication in PuTTY on Windows

Fig. 9: Setting Serial Communication in PuTTY on Linux

```
/dev/cu.Bluetooth-Incoming-Port /dev/cu.SLAB_USBtoUART /dev/cu.SLAB_
↔USBtoUART7
```

- The output will vary depending on the type and the number of boards connected to your PC. Then pick the device name of your board and run (if needed, change “115200” to the default baud rate of the chip in use):

```
screen /dev/cu.device_name 115200
```

Replace `device_name` with the name found running `ls /dev/cu.*`.

- What you are looking for is some log displayed by the **screen**. The log contents will depend on application loaded to ESP32-C2, see [Example Output](#). To exit the **screen** session type `Ctrl-A + \`.

---

**Note:** Do not forget to **exit the screen session** after verifying that the communication is working. If you fail to do it and just close the terminal window, the serial port will be inaccessible for uploading firmware later.

---

**Example Output** An example log is shown below. Reset the board if you do not see anything.

```
ets Jun  8 2016 00:22:57

rst:0x5 (DEEPSLEEP_RESET),boot:0x13 (SPI_FAST_FLASH_BOOT)
ets Jun  8 2016 00:22:57

configsip: 0, SPIWP:0x00
clk_drv:0x00,q_drv:0x00,d_drv:0x00,cs0_drv:0x00,hd_drv:0x00,wp_drv:0x00
mode:DIO, clock div:2
load:0x3fff0008,len:8
load:0x3fff0010,len:3464
load:0x40078000,len:7828
load:0x40080000,len:252
entry 0x40080034
I (44) boot: ESP-IDF v2.0-rc1-401-gf9fba35 2nd stage bootloader
I (45) boot: compile time 18:48:10

...
```

If you can see readable log output, it means serial connection is working and you are ready to proceed with installation and finally upload of application to ESP32-C2.

---

**Note:** For some serial port wiring configurations, the serial RTS & DTR pins need to be disabled in the terminal program before the ESP32-C2 will boot and produce serial output. This depends on the hardware itself, most development boards (including all Espressif boards) *do not* have this issue. The issue is present if RTS & DTR are wired directly to the EN & GPIO0 pins. See the [esptool documentation](#) for more details.

---

If you got here from [Step 5. First Steps on ESP-IDF](#) when installing s/w for ESP32-C2 development, then you can continue with [Step 5. First Steps on ESP-IDF](#).

### IDF Monitor

IDF Monitor is mainly a serial terminal program which relays serial data to and from the target device's serial port. It also provides some IDF-specific features.

IDF Monitor can be launched from an IDF project by running `idf.py monitor`.

**Keyboard Shortcuts** For easy interaction with IDF Monitor, use the keyboard shortcuts given in the table.

Keyboard Shortcut	Action	Description
Ctrl+] ]	Exit the program	
Ctrl+T	Menu escape key	Press and follow it by one of the keys given below.
• Ctrl+T	Send the menu character itself to remote	
• Ctrl+] ]	Send the exit character itself to remote	
• Ctrl+P	Reset target into bootloader to pause app via RTS line	Resets the target, into bootloader via the RTS line (if connected), so that the board runs nothing. Useful when you need to wait for another device to startup.
• Ctrl+R	Reset target board via RTS	Resets the target board and re-starts the application via the RTS line (if connected).
• Ctrl+F	Build and flash the project	Pauses idf_monitor to run the project flash target, then resumes idf_monitor. Any changed source files are recompiled and then re-flashed. Target encrypted-flash is run if idf_monitor was started with argument -E.
• Ctrl+A (or A)	Build and flash the app only	Pauses idf_monitor to run the app-flash target, then resumes idf_monitor. Similar to the flash target, but only the main app is built and re-flashed. Target encrypted-app-flash is run if idf_monitor was started with argument -E.
• Ctrl+Y	Stop/resume log output printing on screen	Discards all incoming serial data while activated. Allows to quickly pause and examine log output without quitting the monitor.
• Ctrl+L	Stop/resume log output saved to file	Creates a file in the project directory and the output is written to that file until this is disabled with the same keyboard shortcut (or IDF Monitor exits).
• Ctrl+I (or I)	Stop/resume printing timestamps	IDF Monitor can print a timestamp in the beginning of each line. The timestamp format can be changed by the --timestamp-format command line argument.
• Ctrl+H (or H)	Display all keyboard shortcuts	
• Ctrl+X (or X)	Exit the program	
Ctrl+C	Interrupt running application	Pauses IDF Monitor and run GDB project debugger to debug the application at runtime. This requires :ref:CONFIG_ESP_SYSTEM_GDBSTUB_RUNTIME option to be enabled.

Any keys pressed, other than Ctrl-] and Ctrl-T, will be sent through the serial port.

### IDF-specific features

**Automatic Address Decoding** Whenever ESP-IDF outputs a hexadecimal code address of the form 0x4\_\_\_\_\_, IDF Monitor uses `addr2line_` to look up the location in the source code and find the function name.

If an ESP-IDF app crashes and panics, a register dump and backtrace is produced, such as the following:

```

abort() was called at PC 0x42067cd5 on core 0

Stack dump detected

```

To decode each address, IDF Monitor runs the following command in the background:

```
riscv32-esp-elf-addr2line -pfiaC -e build/PROJECT.elf ADDRESS
```

**Note:** Set environment variable `ESP_MONITOR_DECODE` to 0 or call `idf_monitor.py` with specific command line option: `idf_monitor.py --disable-address-decoding` to disable address decoding.

**Target Reset on Connection** By default, IDF Monitor will reset the target when connecting to it. The reset of the target chip is performed using the DTR and RTS serial lines. To prevent IDF Monitor from automatically resetting the target on connection, call IDF Monitor with the `--no-reset` option (e.g., `idf_monitor.py --no-reset`).

**Note:** The `--no-reset` option applies the same behavior even when connecting IDF Monitor to a particular port (e.g., `idf.py monitor --no-reset -p [PORT]`).

**Launching GDB with GDBStub** GDBStub is a useful runtime debugging feature that runs on the target and connects to the host over the serial port to receive debugging commands. GDBStub supports commands such as reading memory and variables, examining call stack frames etc. Although GDBStub is less versatile than JTAG debugging, it does not require any special hardware (such as a JTAG to USB bridge) as communication is done entirely over the serial port.

A target can be configured to run GDBStub in the background by setting the `CONFIG_ESP_SYSTEM_PANIC` to GDBStub on runtime. GDBStub will run in the background until a `Ctrl+C` message is sent over the serial port and causes the GDBStub to break (i.e., stop the execution of) the program, thus allowing GDBStub to handle debugging commands.

Furthermore, the panic handler can be configured to run GDBStub on a crash by setting the `CONFIG_ESP_SYSTEM_PANIC` to GDBStub on panic. When a crash occurs, GDBStub will output a special string pattern over the serial port to indicate that it is running.

In both cases (i.e., sending the `Ctrl+C` message, or receiving the special string pattern), IDF Monitor will automatically launch GDB in order to allow the user to send debugging commands. After GDB exits, the target is reset via the RTS serial line. If this line is not connected, users can reset their target (by pressing the board's Reset button).

---

**Note:** In the background, IDF Monitor runs the following command to launch GDB:

```
riscv32-esp-elf-gdb -ex "set serial baud BAUD" -ex "target remote PORT" -ex ↵
↳ interrupt build/PROJECT.elf :idf_target:`Hello NAME chip`
```

---

**Output Filtering** IDF monitor can be invoked as `idf.py monitor --print-filter="xyz"`, where `--print-filter` is the parameter for output filtering. The default value is an empty string, which means that everything is printed.

Restrictions on what to print can be specified as a series of `<tag>:<log_level>` items where `<tag>` is the tag string and `<log_level>` is a character from the set `{N, E, W, I, D, V, *}` referring to a level for *logging*.

For example, `PRINT_FILTER="tag1:W"` matches and prints only the outputs written with `ESP_LOGW("tag1", ...)` or at lower verbosity level, i.e. `ESP_LOGE("tag1", ...)`. Not specifying a `<log_level>` or using `*` defaults to Verbose level.

---

**Note:** Use primary logging to disable at compilation the outputs you do not need through the *logging library*. Output filtering with IDF monitor is a secondary solution which can be useful for adjusting the filtering options without recompiling the application.

---

Your app tags must not contain spaces, asterisks `*`, or colons `:` to be compatible with the output filtering feature.

If the last line of the output in your app is not followed by a carriage return, the output filtering might get confused, i.e., the monitor starts to print the line and later finds out that the line should not have been written. This is a known issue and can be avoided by always adding a carriage return (especially when no output follows immediately afterwards).

### Examples of Filtering Rules:

- `*` can be used to match any tags. However, the string `PRINT_FILTER="*:I tag1:E"` with regards to `tag1` prints errors only, because the rule for `tag1` has a higher priority over the rule for `*`.
- The default (empty) rule is equivalent to `*:V` because matching every tag at the Verbose level or lower means matching everything.
- `*:N` suppresses not only the outputs from logging functions, but also the prints made by `printf`, etc. To avoid this, use `*:E` or a higher verbosity level.
- Rules `"tag1:V"`, `"tag1:v"`, `"tag1:"`, `"tag1:*"`, and `"tag1"` are equivalent.
- Rule `"tag1:W tag1:E"` is equivalent to `"tag1:E"` because any consequent occurrence of the same tag name overwrites the previous one.
- Rule `"tag1:I tag2:W"` only prints `tag1` at the Info verbosity level or lower and `tag2` at the Warning verbosity level or lower.
- Rule `"tag1:I tag2:W tag3:N"` is essentially equivalent to the previous one because `tag3:N` specifies that `tag3` should not be printed.
- `tag3:N` in the rule `"tag1:I tag2:W tag3:N *:V"` is more meaningful because without `tag3:N` the `tag3` messages could have been printed; the errors for `tag1` and `tag2` will be printed at the specified (or lower) verbosity level and everything else will be printed by default.

**A More Complex Filtering Example** The following log snippet was acquired without any filtering options:

```
load:0x40078000,len:13564
entry 0x40078d4c
E (31) esp_image: image at 0x30000 has invalid magic byte
W (31) esp_image: image at 0x30000 has invalid SPI mode 255
E (39) boot: Factory app partition is not bootable
I (568) cpu_start: Pro cpu up.
I (569) heap_init: Initializing. RAM available for dynamic allocation:
I (603) cpu_start: Pro cpu start user code
D (309) light_driver: [light_init, 74]:status: 1, mode: 2
D (318) vfs: esp_vfs_register_fd_range is successful for range <54; 64) and VFS ID_
↪1
I (328) wifi: wifi driver task: 3ffdbf84, prio:23, stack:4096, core=0
```

The captured output for the filtering options `PRINT_FILTER="wifi esp_image:E light_driver:I"` is given below:

```
E (31) esp_image: image at 0x30000 has invalid magic byte
I (328) wifi: wifi driver task: 3ffdbf84, prio:23, stack:4096, core=0
```

The options `PRINT_FILTER="light_driver:D esp_image:N boot:N cpu_start:N vfs:N wifi:N *:V"` show the following output:

```
load:0x40078000,len:13564
entry 0x40078d4c
I (569) heap_init: Initializing. RAM available for dynamic allocation:
D (309) light_driver: [light_init, 74]:status: 1, mode: 2
```

## Known Issues with IDF Monitor

### Issues Observed on Windows

- Arrow keys, as well as some other keys, do not work in GDB due to Windows Console limitations.
- Occasionally, when “idf.py” exits, it might stall for up to 30 seconds before IDF Monitor resumes.
- When “gdb” is run, it might stall for a short time before it begins communicating with the GDBStub.

## Standard Toolchain Setup for Linux and macOS

**Installation Step by Step** This is a detailed roadmap to walk you through the installation process.

**Setting up Development Environment** These are the steps for setting up the ESP-IDF for your ESP32-C2.

- *Step 1. Install Prerequisites*
- *Step 2. Get ESP-IDF*
- *Step 3. Set up the tools*
- *Step 4. Set up the environment variables*
- *Step 5. First Steps on ESP-IDF*

**Step 1. Install Prerequisites** In order to use ESP-IDF with the ESP32-C2, you need to install some software packages based on your Operating System. This setup guide will help you on getting everything installed on Linux and macOS based systems.

**For Linux Users** To compile using ESP-IDF you will need to get the following packages. The command to run depends on which distribution of Linux you are using:

- Ubuntu and Debian:

```
sudo apt-get install git wget flex bison gperf python3 python3-pip python3-venv cmake ninja-build ccache libffi-dev libssl-dev dfu-util libusb-1.0-0
```

- CentOS 7 & 8:

```
sudo yum -y update && sudo yum install git wget flex bison gperf python3 cmake ninja-build ccache dfu-util libusb
```

CentOS 7 is still supported but CentOS version 8 is recommended for a better user experience.

- Arch:

```
sudo pacman -S --needed gcc git make flex bison gperf python cmake ninja-build ccache dfu-util libusb
```

---

**Note:**

- CMake version 3.16 or newer is required for use with ESP-IDF. Run “tools/idf\_tools.py install cmake” to install a suitable version if your OS versions doesn’t have one.
  - If you do not see your Linux distribution in the above list then please check its documentation to find out which command to use for package installation.
- 

**For macOS Users** ESP-IDF will use the version of Python installed by default on macOS.

- Install CMake & Ninja build:

- If you have [HomeBrew](#), you can run:

```
brew install cmake ninja dfu-util
```

- If you have [MacPorts](#), you can run:

```
sudo port install cmake ninja dfu-util
```

- Otherwise, consult the [CMake](#) and [Ninja](#) home pages for macOS installation downloads.

- It is strongly recommended to also install [ccache](#) for faster builds. If you have [HomeBrew](#), this can be done via `brew install ccache` or `sudo port install ccache` on [MacPorts](#).
- 

**Note:** If an error like this is shown during any step:

```
xcrun: error: invalid active developer path (/Library/Developer/CommandLineTools), missing xcrun at: /Library/Developer/CommandLineTools/usr/bin/xcrun
```

Then you will need to install the XCode command line tools to continue. You can install these by running `xcode-select --install`.

---

**Apple M1 Users** If you use Apple M1 platform and see an error like this:

```
WARNING: directory for tool xtensa-esp32-elf version esp-2021r2-patch3-8.4.0 is present, but tool was not found
ERROR: tool xtensa-esp32-elf has no installed versions. Please run 'install.sh' to install it.
```

or:

```
zsh: bad CPU type in executable: ~/.espressif/tools/xtensa-esp32-elf/esp-2021r2-  
↳patch3-8.4.0/xtensa-esp32-elf/bin/xtensa-esp32-elf-gcc
```

Then you will need to install Apple Rosetta 2 by running

```
/usr/sbin/softwareupdate --install-rosetta --agree-to-license
```

**Installing Python 3** Based on [macOS Catalina 10.15 release notes](#), use of Python 2.7 is not recommended and Python 2.7 will not be included by default in future versions of macOS. Check what Python you currently have:

```
python --version
```

If the output is like `Python 2.7.17`, your default interpreter is Python 2.7. If so, also check if Python 3 isn't already installed on your computer:

```
python3 --version
```

If the above command returns an error, it means Python 3 is not installed.

Below is an overview of the steps to install Python 3.

- Installing with [HomeBrew](#) can be done as follows:

```
brew install python3
```

- If you have [MacPorts](#), you can run:

```
sudo port install python38
```

**Step 2. Get ESP-IDF** To build applications for the ESP32-C2, you need the software libraries provided by Espressif in [ESP-IDF repository](#).

To get ESP-IDF, navigate to your installation directory and clone the repository with `git clone`, following instructions below specific to your operating system.

Open Terminal, and run the following commands:

```
mkdir -p ~/esp  
cd ~/esp  
git clone -b release/v5.0 --recursive https://github.com/espressif/esp-idf.git
```

ESP-IDF will be downloaded into `~/esp/esp-idf`.

Consult [ESP-IDF Versions](#) for information about which ESP-IDF version to use in a given situation.

**Step 3. Set up the tools** Aside from the ESP-IDF, you also need to install the tools used by ESP-IDF, such as the compiler, debugger, Python packages, etc, for projects supporting ESP32-C2.

```
cd ~/esp/esp-idf  
./install.sh esp32c2
```

or with Fish shell

```
cd ~/esp/esp-idf  
./install.fish esp32c2
```

The above commands install tools for ESP32-C2 only. If you intend to develop projects for more chip targets then you should list all of them and run for example:

```
cd ~/esp/esp-idf
./install.sh esp32,esp32s2
```

or with Fish shell

```
cd ~/esp/esp-idf
./install.fish esp32,esp32s2
```

In order to install tools for all supported targets please run the following command:

```
cd ~/esp/esp-idf
./install.sh all
```

or with Fish shell

```
cd ~/esp/esp-idf
./install.fish all
```

---

**Note:** For macOS users, if an error like this is shown during any step:

```
<urlopen error [SSL: CERTIFICATE_VERIFY_FAILED] certificate verify failed: unable_
↳to get local issuer certificate (_ssl.c:xxx)
```

You may run `Install Certificates.command` in the Python folder of your computer to install certificates. For details, see [Download Error While Installing ESP-IDF Tools](#).

---

**Alternative File Downloads** The tools installer downloads a number of files attached to GitHub Releases. If accessing GitHub is slow then it is possible to set an environment variable to prefer Espressif's download server for GitHub asset downloads.

---

**Note:** This setting only controls individual tools downloaded from GitHub releases, it doesn't change the URLs used to access any Git repositories.

---

To prefer the Espressif download server when installing tools, use the following sequence of commands when running `install.sh`:

```
cd ~/esp/esp-idf
export IDF_GITHUB_ASSETS="dl.espressif.com/github_assets"
./install.sh
```

**Customizing the tools installation path** The scripts introduced in this step install compilation tools required by ESP-IDF inside the user home directory: `$HOME/.espressif` on Linux. If you wish to install the tools into a different directory, set the environment variable `IDF_TOOLS_PATH` before running the installation scripts. Make sure that your user account has sufficient permissions to read and write this path.

If changing the `IDF_TOOLS_PATH`, make sure it is set to the same value every time the Install script (`install.bat`, `install.ps1` or `install.sh`) and an Export script (`export.bat`, `export.ps1` or `export.sh`) are executed.

**Step 4. Set up the environment variables** The installed tools are not yet added to the `PATH` environment variable. To make the tools usable from the command line, some environment variables must be set. ESP-IDF provides another script which does that.

In the terminal where you are going to use ESP-IDF, run:

```
. $HOME/esp/esp-idf/export.sh
```

or for fish (supported only since fish version 3.0.0):

```
. $HOME/esp/esp-idf/export.fish
```

Note the space between the leading dot and the path!

If you plan to use esp-idf frequently, you can create an alias for executing `export.sh`:

1. Copy and paste the following command to your shell's profile (`.profile`, `.bashrc`, `.zprofile`, etc.)

```
alias get_idf='. $HOME/esp/esp-idf/export.sh'
```

2. Refresh the configuration by restarting the terminal session or by running `source [path to profile]`, for example, `source ~/.bashrc`.

Now you can run `get_idf` to set up or refresh the esp-idf environment in any terminal session.

Technically, you can add `export.sh` to your shell's profile directly; however, it is not recommended. Doing so activates IDF virtual environment in every terminal session (including those where IDF is not needed), defeating the purpose of the virtual environment and likely affecting other software.

**Step 5. First Steps on ESP-IDF** Now since all requirements are met, the next topic will guide you on how to start your first project.

This guide will help you on the first steps using ESP-IDF. Follow this guide to start a new project on the ESP32-C2 and build, flash, and monitor the device output.

---

**Note:** If you have not yet installed ESP-IDF, please go to [Installation](#) and follow the instruction in order to get all the software needed to use this guide.

---

**Start a Project** Now you are ready to prepare your application for ESP32-C2. You can start with [get-started/hello\\_world](#) project from [examples](#) directory in ESP-IDF.

---

**Important:** The ESP-IDF build system does not support spaces in the paths to either ESP-IDF or to projects.

---

Copy the project [get-started/hello\\_world](#) to `~/esp` directory:

```
cd ~/esp
cp -r $IDF_PATH/examples/get-started/hello_world .
```

---

**Note:** There is a range of example projects in the [examples](#) directory in ESP-IDF. You can copy any project in the same way as presented above and run it. It is also possible to build examples in-place without copying them first.

---

**Connect Your Device** Now connect your ESP32-C2 board to the computer and check under which serial port the board is visible.

Serial ports have the following naming patterns:

- **Linux:** starting with `/dev/tty`
- **macOS:** starting with `/dev/cu`.

If you are not sure how to check the serial port name, please refer to [Establish Serial Connection with ESP32-C2](#) for full details.

---

**Note:** Keep the port name handy as you will need it in the next steps.

---

**Configure Your Project** Navigate to your `hello_world` directory, set ESP32-C2 as the target, and run the project configuration utility `menuconfig`.

```
cd ~/esp/hello_world
idf.py set-target esp32c2
idf.py menuconfig
```

After opening a new project, you should first set the target with `idf.py set-target esp32c2`. Note that existing builds and configurations in the project, if any, will be cleared and initialized in this process. The target may be saved in the environment variable to skip this step at all. See [Select the Target Chip: set-target](#) for additional information.

If the previous steps have been done correctly, the following menu appears:

```
(Top)
Espressif IoT Development Framework Configuration
SDK tool configuration --->
Build type --->
Application manager --->
Bootloader config --->
Security features --->
Serial flasher config --->
Partition Table --->
Compiler options --->
Component config --->
Compatibility options --->

[Space/Enter] Toggle/enter  [ESC] Leave menu          [S] Save
[O] Load                    [?] Symbol info          [/] Jump to symbol
[F] Toggle show-help mode  [C] Toggle show-name mode [A] Toggle show-all mode
[Q] Quit (prompts for save) [D] Save minimal config (advanced)
```

Fig. 10: Project configuration - Home window

You are using this menu to set up project specific variables, e.g., Wi-Fi network name and password, the processor speed, etc. Setting up the project with `menuconfig` may be skipped for “`hello_world`”, since this example runs with default configuration.

---

**Note:** The colors of the menu could be different in your terminal. You can change the appearance with the option `--style`. Please run `idf.py menuconfig --help` for further information.

---

**Build the Project** Build the project by running:

```
idf.py build
```

This command will compile the application and all ESP-IDF components, then it will generate the bootloader, partition table, and application binaries.

```
$ idf.py build
Running cmake in directory /path/to/hello_world/build
Executing "cmake -G Ninja --warn-uninitialized /path/to/hello_world"...
```

(continues on next page)

(continued from previous page)

```
Warn about uninitialized values.
-- Found Git: /usr/bin/git (found version "2.17.0")
-- Building empty aws_iot component due to configuration
-- Component names: ...
-- Component paths: ...

... (more lines of build system output)

[527/527] Generating hello_world.bin
esptool.py v2.3.1

Project build complete. To flash, run this command:
../../components/esptool_py/esptool/esptool.py -p (PORT) -b 921600 write_flash -
↪-flash_mode dio --flash_size detect --flash_freq 40m 0x10000 build/hello_world.
↪bin build 0x1000 build/bootloader/bootloader.bin 0x8000 build/partition_table/
↪partition-table.bin
or run 'idf.py -p PORT flash'
```

If there are no errors, the build will finish by generating the firmware binary `.bin` files.

**Flash onto the Device** Flash the binaries that you just built (`bootloader.bin`, `partition-table.bin` and `hello_world.bin`) onto your ESP32-C2 board by running:

```
idf.py -p PORT [-b BAUD] flash
```

Replace `PORT` with your ESP32-C2 board's serial port name.

You can also change the flasher baud rate by replacing `BAUD` with the baud rate you need. The default baud rate is 460800.

For more information on `idf.py` arguments, see [idf.py](#).

---

**Note:** The option `flash` automatically builds and flashes the project, so running `idf.py build` is not necessary.

---

**Encountered Issues While Flashing?** If you run the given command and see errors such as “Failed to connect”, there might be several reasons for this. One of the reasons might be issues encountered by `esptool.py`, the utility that is called by the build system to reset the chip, interact with the ROM bootloader, and flash firmware. One simple solution to try is manual reset described below, and if it does not help you can find more details about possible issues in [Troubleshooting](#).

`esptool.py` resets ESP32-C2 automatically by asserting DTR and RTS control lines of the USB to serial converter chip, i.e., FTDI or CP210x (for more information, see [Establish Serial Connection with ESP32-C2](#)). The DTR and RTS control lines are in turn connected to `GPIO9` and `CHIP_PU (EN)` pins of ESP32-C2, thus changes in the voltage levels of DTR and RTS will boot ESP32-C2 into Firmware Download mode. As an example, check the [schematic](#) for the ESP32 DevKitC development board.

In general, you should have no problems with the [official esp-idf development boards](#). However, `esptool.py` is not able to reset your hardware automatically in the following cases:

- Your hardware does not have the DTR and RTS lines connected to `GPIO9` and `CHIP_PU`
- The DTR and RTS lines are configured differently
- There are no such serial control lines at all

Depending on the kind of hardware you have, it may also be possible to manually put your ESP32-C2 board into Firmware Download mode (reset).

- For development boards produced by Espressif, this information can be found in the respective getting started guides or user guides. For example, to manually reset an ESP-IDF development board, hold down the **Boot** button (`GPIO9`) and press the **EN** button (`CHIP_PU`).

- For other types of hardware, try pulling GPIO9 down.

**Normal Operation** When flashing, you will see the output log similar to the following:

```

...
esptool.py esp32c2 -p /dev/ttyUSB0 -b 460800 --before=default_reset --after=hard_
↪reset write_flash --flash_mode dio --flash_freq 60m --flash_size 2MB 0x0_
↪bootloader/bootloader.bin 0x10000 hello_world.bin 0x8000 partition_table/
↪partition-table.bin

```

If there are no issues by the end of the flash process, the board will reboot and start up the “hello\_world” application.

If you’d like to use the Eclipse or VS Code IDE instead of running `idf.py`, check out [Eclipse Plugin](#), [VSCode Extension](#).

**Monitor the Output** To check if “hello\_world” is indeed running, type `idf.py -p PORT monitor` (Do not forget to replace PORT with your serial port name).

This command launches the *IDF Monitor* application:

```

$ idf.py -p <PORT> monitor
Running idf_monitor in directory [...]esp/hello_world/build
Executing "python [...]esp-idf/tools/idf_monitor.py -b 115200 [...]esp/hello_
↪world/build/hello_world.elf"...

```

(continues on next page)

(continued from previous page)

```

--- idf_monitor on <PORT> 115200 ---
--- Quit: Ctrl+] | Menu: Ctrl+T | Help: Ctrl+T followed by Ctrl+H ---
ets Jun  8 2016 00:22:57

rst:0x1 (POWERON_RESET),boot:0x13 (SPI_FAST_FLASH_BOOT)
ets Jun  8 2016 00:22:57
...

```

After startup and diagnostic logs scroll up, you should see “Hello world!” printed out by the application.

```

...
Hello world!
Restarting in 10 seconds...
This is esp32c2 chip with 1 CPU core(s), WiFi/BLE, silicon revision 0, 2MB_
↔external flash
Minimum free heap size: 203888 bytes
Restarting in 9 seconds...
Restarting in 8 seconds...
Restarting in 7 seconds...

```

To exit IDF monitor use the shortcut Ctrl+].

If IDF monitor fails shortly after the upload, or, if instead of the messages above, you see random garbage similar to what is given below, your board is likely using a 26 MHz crystal. Most development board designs use 40 MHz, so ESP-IDF uses this frequency as a default value.

```

e000)(Xn@0y.!00(0PW+)00Hn9a~/90!0t500P0~0k00e0ea050jA
~zY00Y(10,1 00 e000)(Xn@0y.!Dr0zY(0 jpi0|0+z5Ymvp

```

If you have such a problem, do the following:

1. Exit the monitor.
2. Go back to menuconfig.
3. Go to Component config → Hardware Settings → Main XTAL Config → Main XTAL frequency, then change `CONFIG_XTAL_FREQ_SEL` to 26 MHz.
4. After that, build and flash the application again.

In the current version of ESP-IDF, main XTAL frequencies supported by ESP32-C2 are as follows:

- 26 MHz
- 40 MHz

**Note:** You can combine building, flashing and monitoring into one step by running:

```
idf.py -p PORT flash monitor
```

See also:

- [IDF Monitor](#) for handy shortcuts and more details on using IDF monitor.
- [idf.py](#) for a full reference of `idf.py` commands and options.

**That’s all that you need to get started with ESP32-C2!**

Now you are ready to try some other [examples](#), or go straight to developing your own applications.

**Important:** Some of examples do not support ESP32-C2 because required hardware is not included in ESP32-C2 so it cannot be supported.

If building an example, please check the README file for the `Supported Targets` table. If this is present including ESP32-C2 target, or the table does not exist at all, the example will work on ESP32-C2.

---

### Additional Tips

**Permission issues `/dev/ttyUSB0`** With some Linux distributions, you may get the `Failed to open port /dev/ttyUSB0` error message when flashing the ESP32-C2. *This can be solved by adding the current user to the `dialout` group.*

**Python compatibility** ESP-IDF supports Python 3.7 or newer. It is recommended to upgrade your operating system to a recent version satisfying this requirement. Other options include the installation of Python from [sources](#) or the use of a Python version management system such as [pyenv](#).

**Tip: Updating ESP-IDF** It is recommended to update ESP-IDF from time to time, as newer versions fix bugs and/or provide new features. Please note that each ESP-IDF major and minor release version has an associated support period, and when one release branch is approaching end of life (EOL), all users are encouraged to upgrade their projects to more recent ESP-IDF releases, to find out more about support periods, see [ESP-IDF Versions](#).

The simplest way to do the update is to delete the existing `esp-idf` folder and clone it again, as if performing the initial installation described in [Step 2. Get ESP-IDF](#).

Another solution is to update only what has changed. *The update procedure depends on the version of ESP-IDF you are using.*

After updating ESP-IDF, execute the Install script again, in case the new ESP-IDF version requires different versions of tools. See instructions at [Step 3. Set up the tools](#).

Once the new tools are installed, update the environment using the Export script. See instructions at [Step 4. Set up the environment variables](#).

## 1.4 Build Your First Project

If you already have the ESP-IDF installed and not using IDE, you can build your first project from the command line following the [Start a Project on Windows](#) or [Start a Project on Linux and macOS](#).

## 1.5 Uninstall ESP-IDF

If you want to remove ESP-IDF, please follow [Uninstall ESP-IDF](#).

# Chapter 2

## API Reference

### 2.1 API Conventions

This document describes conventions and assumptions common to ESP-IDF Application Programming Interfaces (APIs).

ESP-IDF provides several kinds of programming interfaces:

- C functions, structures, enums, type definitions and preprocessor macros declared in public header files of ESP-IDF components. Various pages in the API Reference section of the programming guide contain descriptions of these functions, structures and types.
- Build system functions, predefined variables and options. These are documented in the *build system guide*.
- *Kconfig* options can be used in code and in the build system (CMakeLists.txt) files.
- *Host tools* and their command line parameters are also part of ESP-IDF interface.

ESP-IDF consists of components written specifically for ESP-IDF as well as third-party libraries. In some cases, an ESP-IDF-specific wrapper is added to the third-party library, providing an interface that is either simpler or better integrated with the rest of ESP-IDF facilities. In other cases, the original API of the third-party library is presented to the application developers.

Following sections explain some of the aspects of ESP-IDF APIs and their usage.

#### 2.1.1 Error handling

Most ESP-IDF APIs return error codes defined with `esp_err_t` type. See *Error Handling* section for more information about error handling approaches. *Error Code Reference* contains the list of error codes returned by ESP-IDF components.

#### 2.1.2 Configuration structures

---

**Important:** Correct initialization of configuration structures is an important part in making the application compatible with future versions of ESP-IDF.

---

Most initialization or configuration functions in ESP-IDF take as an argument a pointer to a configuration structure. For example:

```

const esp_timer_create_args_t my_timer_args = {
    .callback = &my_timer_callback,
    .arg = callback_arg,
    .name = "my_timer"
};
esp_timer_handle_t my_timer;
esp_err_t err = esp_timer_create(&my_timer_args, &my_timer);

```

Initialization functions never store the pointer to the configuration structure, so it is safe to allocate the structure on the stack.

The application must initialize all fields of the structure. The following is incorrect:

```

esp_timer_create_args_t my_timer_args;
my_timer_args.callback = &my_timer_callback;
/* Incorrect! Fields .arg and .name are not initialized */
esp_timer_create(&my_timer_args, &my_timer);

```

Most ESP-IDF examples use C99 [designated initializers](#) for structure initialization, since they provide a concise way of setting a subset of fields, and zero-initializing the remaining fields:

```

const esp_timer_create_args_t my_timer_args = {
    .callback = &my_timer_callback,
    /* Correct, fields .arg and .name are zero-initialized */
};

```

C++ language doesn't support the designated initializers syntax until C++20, however GCC compiler partially supports it as an extension. When using ESP-IDF APIs in C++ code, you may consider using the following pattern:

```

esp_timer_create_args_t my_timer_args = {};
/* All the fields are zero-initialized */
my_timer_args.callback = &my_timer_callback;

```

## Default initializers

For some configuration structures, ESP-IDF provides macros for setting default values of fields:

```

httpd_config_t config = HTTPD_DEFAULT_CONFIG();
/* HTTPD_DEFAULT_CONFIG expands to a designated initializer.
   Now all fields are set to the default values.
   Any field can still be modified: */
config.server_port = 8081;
httpd_handle_t server;
esp_err_t err = httpd_start(&server, &config);

```

It is recommended to use default initializer macros whenever they are provided for a particular configuration structure.

## 2.1.3 Private APIs

Certain header files in ESP-IDF contain APIs intended to be used only in ESP-IDF source code, and not by the applications. Such header files often contain `private` or `esp_private` in their name or path. Certain components, such as `hal` only contain private APIs.

Private APIs may be removed or changed in an incompatible way between minor or patch releases.

## 2.1.4 Components in example projects

ESP-IDF examples contain a variety of projects demonstrating usage of ESP-IDF APIs. In order to reduce code duplication in the examples, a few common helpers are defined inside components that are used by multiple examples.

This includes components located in `common_components` directory, as well as some of the components located in the examples themselves. These components are not considered to be part of the ESP-IDF API.

It is not recommended to reference these components directly in custom projects (via `EXTRA_COMPONENT_DIRS` build system variable), as they may change significantly between ESP-IDF versions. When starting a new project based on an ESP-IDF example, copy both the project and the common components it depends on out of ESP-IDF, and treat the common components as part of the project. Note that the common components are written with examples in mind, and might not include all the error handling required for production applications. Take time to read the code and understand if it applicable to your use case.

### 2.1.5 API Stability

ESP-IDF uses [Semantic Versioning](#) as explained in the [versions page](#).

Minor and bugfix releases of ESP-IDF guarantee compatibility with previous releases. The sections below explain different aspects and limitations to compatibility.

#### Source level compatibility

ESP-IDF guarantees source level compatibility of C functions, structures, enums, type definitions and preprocessor macros declared in public header files of ESP-IDF components. Source level compatibility implies that the application can be recompiled with the newer version of ESP-IDF without changes.

The following changes are allowed between minor versions and do not break source level compatibility:

- Deprecating functions (using the `deprecated` attribute) and header files (using a preprocessor `#warning`). Deprecations are listed in ESP-IDF release notes. It is recommended to update the source code to use the newer functions or files that replace the deprecated ones, however this is not mandatory. Deprecated functions and files can be removed in major versions of ESP-IDF.
- Renaming components, moving source and header files between components — provided that the build system ensures that correct files are still found.
- Renaming Kconfig options. Kconfig system [renaming mechanism](#) ensures that the original Kconfig option names can still be used by the application in `sdkconfig` file, CMake files and source code.

#### Lack of binary compatibility

ESP-IDF does not guarantee binary compatibility between releases. This means that if a precompiled library is built with one ESP-IDF version, it is not guaranteed to work the same way with the next minor or bugfix release. The following are the possible changes that keep source level compatibility but not binary compatibility:

- Changing numerical values for C enum members.
- Adding new structure members or changing the order of members. See [Configuration structures](#) for tips that help ensure compatibility.
- Replacing an `extern` function with a `static inline` one with the same signature, or vice versa.
- Replacing a function-like macro with a compatible C function.

#### Other exceptions from compatibility

While we try to make upgrading to a new ESP-IDF version easy, there are parts of ESP-IDF that may change between minor versions in an incompatible way. We appreciate issue reports about any unintended breaking changes that don't fall into the categories below.

- [Private APIs](#).
- [Components in example projects](#).
- Features clearly marked as “beta”, “preview”, or “experimental”.
- Changes made to mitigate security issues or to replace insecure default behaviors with a secure ones.

- Features which were never functional. For example, if it was never possible to use a certain function or an enumeration value, it may get renamed (as part of fixing it) or removed. This includes software features which depend on non-functional chip hardware features.
- Unexpected or undefined behavior (for example, due to missing validation of argument ranges) that is not documented explicitly may be fixed/changed.
- Location of *Kconfig* options in menuconfig.
- Location and names of example projects.

## 2.2 Application Protocols

### 2.2.1 ASIO port

Asio is a cross-platform C++ library, see <https://think-async.com/Asio/>. It provides a consistent asynchronous model using a modern C++ approach.

The ESP-IDF component *ASIO* has been moved from ESP-IDF since version v5.0 to a separate repository:

- [ASIO component on GitHub](#)

To add ASIO component in your project, please run `idf.py add-dependency espressif/asio`

#### Hosted Documentation

The documentation can be found on the link below:

- [ASIO documentation \(English\)](#)

### 2.2.2 ESP-Modbus

The Espressif ESP-Modbus Library (*esp-modbus*) supports Modbus communication in the networks based on RS485, Wi-Fi, Ethernet interfaces. The ESP-IDF component *freemodbus* has been moved from ESP-IDF since version v5.0 to a separate repository:

- [ESP-Modbus component on GitHub](#)

#### Hosted Documentation

The documentation can be found on the link below:

- [ESP-Modbus documentation \(English\)](#)

#### Application Example

The examples below demonstrate the ESP-Modbus library of serial, TCP ports for slave and master implementations accordingly.

- [protocols/modbus/serial/mb\\_slave](#)
- [protocols/modbus/serial/mb\\_master](#)
- [protocols/modbus/tcp/mb\\_tcp\\_slave](#)
- [protocols/modbus/tcp/mb\\_tcp\\_master](#)

Please refer to the specific example README.md for details.

## Protocol References

- <https://modbus.org/specs.php>: Modbus Organization with protocol specifications.

### 2.2.3 ESP-MQTT

#### Overview

ESP-MQTT is an implementation of [MQTT](mqtt.org) protocol client (MQTT is a lightweight publish/subscribe messaging protocol).

#### Features

- Supports MQTT over TCP, SSL with mbedtls, MQTT over Websocket, MQTT over Websocket Secure.
- Easy to setup with URI
- Multiple instances (Multiple clients in one application)
- Support subscribing, publishing, authentication, last will messages, keep alive pings and all 3 QoS levels (it should be a fully functional client).

#### Application Example

- [protocols/mqtt/tcp](#): MQTT over tcp, default port 1883
- [protocols/mqtt/ssl](#): MQTT over tls, default port 8883
- [protocols/mqtt/ssl\\_ds](#): MQTT over tls using digital signature peripheral for authentication, default port 8883.
- [protocols/mqtt/ssl\\_mutual\\_auth](#): MQTT over tls using certificates for authentication, default port 8883
- [protocols/mqtt/ssl\\_psk](#): MQTT over tls using pre-shared keys for authentication, default port 8883.
- [protocols/mqtt/ws](#): MQTT over Websocket, default port 80
- [protocols/mqtt/wss](#): MQTT over Websocket Secure, default port 443

#### Configuration

The configuration is made by setting fields in `esp_mqtt_client_config_t` struct. The configuration struct has the following sub structs to configure different aspects of the client operation.

- `broker` - Allow to set address and security verification.
- `credentials` - Client credentials for authentication.
- `session` - Configuration for MQTT session aspects.
- `network` - Networking related configuration.
- `task` - Allow to configure FreeRTOS task.
- `buffer` - Buffer size for input and output.

In the following session the most common aspects are detailed.

#### Broker

**Address** Broker address can be set by usage of `broker.address` struct. The configuration can be made by usage of `uri` field or the combination of `hostname`, `transport` and `port`. Optionally, `path` could be set, this field is useful in websocket connections.

The `uri` field is used in the following format `scheme://hostname:port/path`. - Curently support `mqtt`, `mqttps`, `ws`, `wss` schemes - MQTT over TCP samples:

- `mqtt://mqtt.eclipseprojects.io`: MQTT over TCP, default port 1883:
- `mqtt://mqtt.eclipseprojects.io:1884` MQTT over TCP, port 1884:

- `mqtt://username:password@mqtt.eclipseprojects.io:1884` MQTT over TCP, port 1884, with username and password
- MQTT over SSL samples:
  - `mqttps://mqtt.eclipseprojects.io:8883` MQTT over SSL, port 8883
  - `mqttps://mqtt.eclipseprojects.io:8884` MQTT over SSL, port 8884
- MQTT over Websocket samples:
  - `ws://mqtt.eclipseprojects.io:80/mqtt`
- MQTT over Websocket Secure samples:
  - `wss://mqtt.eclipseprojects.io:443/mqtt`
- Minimal configurations:

```
const esp_mqtt_client_config_t mqtt_cfg = {
    .broker.address.uri = "mqtt://mqtt.eclipseprojects.io",
};
esp_mqtt_client_handle_t client = esp_mqtt_client_init(&mqtt_cfg);
esp_mqtt_client_register_event(client, ESP_EVENT_ANY_ID, mqtt_event_handler,
    ↪client);
esp_mqtt_client_start(client);
```

- Note: By default mqtt client uses event loop library to post related mqtt events (connected, subscribed, published, etc.)

**Verification** For secure connections TLS is used, and to guarantee Broker's identity the `broker_verification` struct must be set. The broker certificate may be set in PEM or DER format. To select DER the equivalent `_len` field must be set, otherwise a NULL terminated string in PEM format should be provided to certificate field.

- Get certificate from server, example: `mqtt.eclipseprojects.io openssl s_client -showcerts -connect mqtt.eclipseprojects.io:8883 </dev/null 2>/dev/null|openssl x509 -outform PEM >mqtt_eclipse_org.pem`
- Check the sample application: `examples/mqtt_ssl`
- Configuration:

```
const esp_mqtt_client_config_t mqtt_cfg = {
    .broker = {
        .address.uri = "mqttps://mqtt.eclipseprojects.io:8883",
        .verification.certificate = (const char *)mqtt_eclipse_org_pem_start,
    },
};
```

To details on other fields check the Reference API and [TLS Server verification](#).

**Client Credentials** All client related credentials are under the `credentials` field.

- `username`: pointer to the username used for connecting to the broker, can also be set by URI.
- `client_id`: pointer to the client id, defaults to `ESP32_%CHIPID%` where `%CHIPID%` are the last 3 bytes of MAC address in hex format

**Authentication** It's possible to set authentication parameters through the `authentication` field. The client supports the following authentication methods:

- Using a password by setting `authentication.password`.
- Mutual authentication with TLS by setting `authentication.certificate` and `authentication.key`, both can be provided in PEM or DER format.
- Using secure element available in ESP32-WROOM-32SE, setting `authentication.use_secure_element`.
- Using Digital Signature Peripheral available in some Espressif devices, setting `authentication.ds_data`.

**Session** For MQTT session related configurations `session` fields should be used.

**Last Will and Testament** MQTT allows for a last will and testament (LWT) message to notify other clients when a client ungracefully disconnects. This is configured by the following fields in the `esp_mqtt_client_config_t.session.last_will`-struct.

- `topic`: pointer to the LWT message topic
- `msg`: pointer to the LWT message
- `msg_len`: length of the LWT message, required if `msg` is not null-terminated
- `qos`: quality of service for the LWT message
- `retain`: specifies the retain flag of the LWT message

**Change settings in Project Configuration Menu** The settings for MQTT can be found using `idf.py menuconfig`, under Component config -> ESP-MQTT Configuration

The following settings are available:

- `CONFIG_MQTT_PROTOCOL_311`: Enables 3.1.1 version of MQTT protocol
- `CONFIG_MQTT_TRANSPORT_SSL`, `CONFIG_MQTT_TRANSPORT_WEBSOCKET`: Enables specific MQTT transport layer, such as SSL, WEBSOCKET, WEBSOCKET\_SECURE
- `CONFIG_MQTT_CUSTOM_OUTBOX`: Disables default implementation of `mqtt_outbox`, so a specific implementation can be supplied

## Events

The following events may be posted by the MQTT client:

- `MQTT_EVENT_BEFORE_CONNECT`: The client is initialized and about to start connecting to the broker.
- `MQTT_EVENT_CONNECTED`: The client has successfully established a connection to the broker. The client is now ready to send and receive data.
- `MQTT_EVENT_DISCONNECTED`: The client has aborted the connection due to being unable to read or write data, e.g. because the server is unavailable.
- `MQTT_EVENT_SUBSCRIBED`: The broker has acknowledged the client's subscribe request. The event data will contain the message ID of the subscribe message.
- `MQTT_EVENT_UNSUBSCRIBED`: The broker has acknowledged the client's unsubscribe request. The event data will contain the message ID of the unsubscribe message.
- `MQTT_EVENT_PUBLISHED`: The broker has acknowledged the client's publish message. This will only be posted for Quality of Service level 1 and 2, as level 0 does not use acknowledgements. The event data will contain the message ID of the publish message.
- `MQTT_EVENT_DATA`: The client has received a publish message. The event data contains: message ID, name of the topic it was published to, received data and its length. For data that exceeds the internal buffer multiple `MQTT_EVENT_DATA` will be posted and `current_data_offset` and `total_data_len` from event data updated to keep track of the fragmented message.
- `MQTT_EVENT_ERROR`: The client has encountered an error. `esp_mqtt_error_type_t` from `error_handle` in the event data can be used to further determine the type of the error. The type of error will determine which parts of the `error_handle` struct is filled.

## API Reference

### Header File

- `components/mqtt/esp-mqtt/include/mqtt_client.h`

### Functions

`esp_mqtt_client_handle_t esp_mqtt_client_init` (const `esp_mqtt_client_config_t` \*config)

Creates *MQTT* client handle based on the configuration.

**Parameters** **config** –MQTT configuration structure

**Returns** mqtt\_client\_handle if successfully created, NULL on error

**esp\_err\_t esp\_mqtt\_client\_set\_uri** (esp\_mqtt\_client\_handle\_t client, const char \*uri)

Sets MQTT connection URI. This API is usually used to overrides the URI configured in esp\_mqtt\_client\_init.

**Parameters**

- **client** –MQTT client handle
- **uri** –

**Returns** ESP\_FAIL if URI parse error, ESP\_OK on success

**esp\_err\_t esp\_mqtt\_client\_start** (esp\_mqtt\_client\_handle\_t client)

Starts MQTT client with already created client handle.

**Parameters** **client** –MQTT client handle

**Returns** ESP\_OK on success ESP\_ERR\_INVALID\_ARG on wrong initialization ESP\_FAIL on other error

**esp\_err\_t esp\_mqtt\_client\_reconnect** (esp\_mqtt\_client\_handle\_t client)

This api is typically used to force reconnection upon a specific event.

**Parameters** **client** –MQTT client handle

**Returns** ESP\_OK on success ESP\_ERR\_INVALID\_ARG on wrong initialization ESP\_FAIL if client is in invalid state

**esp\_err\_t esp\_mqtt\_client\_disconnect** (esp\_mqtt\_client\_handle\_t client)

This api is typically used to force disconnection from the broker.

**Parameters** **client** –MQTT client handle

**Returns** ESP\_OK on success ESP\_ERR\_INVALID\_ARG on wrong initialization

**esp\_err\_t esp\_mqtt\_client\_stop** (esp\_mqtt\_client\_handle\_t client)

Stops MQTT client tasks.

- Notes:
- Cannot be called from the MQTT event handler

**Parameters** **client** –MQTT client handle

**Returns** ESP\_OK on success ESP\_ERR\_INVALID\_ARG on wrong initialization ESP\_FAIL if client is in invalid state

**int esp\_mqtt\_client\_subscribe** (esp\_mqtt\_client\_handle\_t client, const char \*topic, int qos)

Subscribe the client to defined topic with defined qos.

Notes:

- Client must be connected to send subscribe message
- This API is could be executed from a user task or from a MQTT event callback i.e. internal MQTT task (API is protected by internal mutex, so it might block if a longer data receive operation is in progress.

**Parameters**

- **client** –MQTT client handle
- **topic** –
- **qos** –// TODO describe parameters

**Returns** message\_id of the subscribe message on success -1 on failure

**int esp\_mqtt\_client\_unsubscribe** (esp\_mqtt\_client\_handle\_t client, const char \*topic)

Unsubscribe the client from defined topic.

Notes:

- Client must be connected to send unsubscribe message

- It is thread safe, please refer to `esp_mqtt_client_subscribe` for details

**Parameters**

- **client** –MQTT client handle
- **topic** –

**Returns** message\_id of the subscribe message on success -1 on failure

int **esp\_mqtt\_client\_publish** (*esp\_mqtt\_client\_handle\_t* client, const char \*topic, const char \*data, int len, int qos, int retain)

Client to send a publish message to the broker.

Notes:

- This API might block for several seconds, either due to network timeout (10s) or if publishing payloads longer than internal buffer (due to message fragmentation)
- Client doesn't have to be connected for this API to work, enqueueing the messages with qos>1 (returning -1 for all the qos=0 messages if disconnected). If MQTT\_SKIP\_PUBLISH\_IF\_DISCONNECTED is enabled, this API will not attempt to publish when the client is not connected and will always return -1.
- It is thread safe, please refer to `esp_mqtt_client_subscribe` for details

**Parameters**

- **client** –MQTT client handle
- **topic** –topic string
- **data** –payload string (set to NULL, sending empty payload message)
- **len** –data length, if set to 0, length is calculated from payload string
- **qos** –QoS of publish message
- **retain** –retain flag

**Returns** message\_id of the publish message (for QoS 0 message\_id will always be zero) on success. -1 on failure.

int **esp\_mqtt\_client\_enqueue** (*esp\_mqtt\_client\_handle\_t* client, const char \*topic, const char \*data, int len, int qos, int retain, bool store)

Enqueue a message to the outbox, to be sent later. Typically used for messages with qos>0, but could be also used for qos=0 messages if store=true.

This API generates and stores the publish message into the internal outbox and the actual sending to the network is performed in the mqtt-task context (in contrast to the `esp_mqtt_client_publish()` which sends the publish message immediately in the user task's context). Thus, it could be used as a non blocking version of `esp_mqtt_client_publish()`.

**Parameters**

- **client** –MQTT client handle
- **topic** –topic string
- **data** –payload string (set to NULL, sending empty payload message)
- **len** –data length, if set to 0, length is calculated from payload string
- **qos** –QoS of publish message
- **retain** –retain flag
- **store** –if true, all messages are enqueued; otherwise only QoS 1 and QoS 2 are enqueued

**Returns** message\_id if queued successfully, -1 otherwise

*esp\_err\_t* **esp\_mqtt\_client\_destroy** (*esp\_mqtt\_client\_handle\_t* client)

Destroys the client handle.

Notes:

- Cannot be called from the MQTT event handler

**Parameters** **client** –MQTT client handle

**Returns** ESP\_OK ESP\_ERR\_INVALID\_ARG on wrong initialization

*esp\_err\_t* **esp\_mqtt\_set\_config** (*esp\_mqtt\_client\_handle\_t* client, const *esp\_mqtt\_client\_config\_t* \*config)

Set configuration structure, typically used when updating the config (i.e. on “before\_connect” event.

#### Parameters

- **client** –MQTT client handle
- **config** –MQTT configuration structure

**Returns** ESP\_ERR\_NO\_MEM if failed to allocate ESP\_ERR\_INVALID\_ARG if conflicts on transport configuration. ESP\_OK on success

*esp\_err\_t* **esp\_mqtt\_client\_register\_event** (*esp\_mqtt\_client\_handle\_t* client, *esp\_mqtt\_event\_id\_t* event, *esp\_event\_handler\_t* event\_handler, void \*event\_handler\_arg)

Registers MQTT event.

#### Parameters

- **client** –MQTT client handle
- **event** –event type
- **event\_handler** –handler callback
- **event\_handler\_arg** –handlers context

**Returns** ESP\_ERR\_NO\_MEM if failed to allocate ESP\_ERR\_INVALID\_ARG on wrong initialization ESP\_OK on success

int **esp\_mqtt\_client\_get\_outbox\_size** (*esp\_mqtt\_client\_handle\_t* client)

Get outbox size.

**Parameters** **client** –MQTT client handle

**Returns** outbox size 0 on wrong initialization

## Structures

struct **esp\_mqtt\_error\_codes**

MQTT error code structure to be passed as a contextual information into ERROR event

Important: This structure extends *esp\_tls\_last\_error* error structure and is backward compatible with it (so might be down-casted and treated as *esp\_tls\_last\_error* error, but recommended to update applications if used this way previously)

Use this structure directly checking error\_type first and then appropriate error code depending on the source of the error:

error_type	related member variables	note
MQTT_ERROR_TYPE_TCP_TRANSPORT	esp_tls_last_esp_err, esp_tls_stack_err, esp_tls_cert_verify_flags, sock_errno	Error reported from tcp_transport/esp-tls
MQTT_ERROR_TYPE_CONNECTION_REFUSED	connect_return_code	Internal error reported from MQTT broker on connection

## Public Members

*esp\_err\_t* **esp\_tls\_last\_esp\_err**

last esp\_err code reported from esp-tls component

int **esp\_tls\_stack\_err**

tls specific error code reported from underlying tls stack

int **esp\_tls\_cert\_verify\_flags**

tls flags reported from underlying tls stack during certificate verification

*esp\_mqtt\_error\_type\_t* **error\_type**

error type referring to the source of the error

*esp\_mqtt\_connect\_return\_code\_t* **connect\_return\_code**

connection refused error code reported from MQTT\* broker on connection

int **esp\_transport\_sock\_errno**

errno from the underlying socket

struct **esp\_mqtt\_event\_t**

*MQTT* event configuration structure

### Public Members

*esp\_mqtt\_event\_id\_t* **event\_id**

*MQTT* event type

*esp\_mqtt\_client\_handle\_t* **client**

*MQTT* client handle for this event

char \***data**

Data associated with this event

int **data\_len**

Length of the data for this event

int **total\_data\_len**

Total length of the data (longer data are supplied with multiple events)

int **current\_data\_offset**

Actual offset for the data associated with this event

char \***topic**

Topic associated with this event

int **topic\_len**

Length of the topic for this event associated with this event

int **msg\_id**

*MQTT* messaged id of message

int **session\_present**

*MQTT* session\_present flag for connection event

*esp\_mqtt\_error\_codes\_t* \***error\_handle**

esp-mqtt error handle including esp-tls errors as well as internal *MQTT* errors

bool **retain**

Retained flag of the message associated with this event

int **qos**

QoS of the messages associated with this event

bool **dup**

dup flag of the message associated with this event

*esp\_mqtt\_protocol\_ver\_t* **protocol\_ver**

MQTT protocol version used for connection, defaults to value from menuconfig

struct **esp\_mqtt\_client\_config\_t**

*MQTT* client configuration structure

- Default values can be set via menuconfig
- All certificates and key data could be passed in PEM or DER format. PEM format must have a terminating NULL character and the related len field set to 0. DER format requires a related len field set to the correct length.

### Public Members

struct *esp\_mqtt\_client\_config\_t::broker\_t* **broker**

Broker address and security verification

struct *esp\_mqtt\_client\_config\_t::credentials\_t* **credentials**

User credentials for broker

struct *esp\_mqtt\_client\_config\_t::session\_t* **session**

*MQTT* session configuration.

struct *esp\_mqtt\_client\_config\_t::network\_t* **network**

Network configuration

struct *esp\_mqtt\_client\_config\_t::task\_t* **task**

FreeRTOS task configuration.

struct *esp\_mqtt\_client\_config\_t::buffer\_t* **buffer**

Buffer size configuration.

struct **broker\_t**

Broker related configuration

### Public Members

struct *esp\_mqtt\_client\_config\_t::broker\_t::address\_t* **address**

Broker address configuration

```
struct esp_mqtt_client_config_t::broker_t::verification_t verification
```

Security verification of the broker

```
struct address_t
```

Broker address

- uri have precedence over other fields
- If uri isn't set at least hostname, transport and port should.

### Public Members

```
const char *uri
```

Complete *MQTT* broker URI

```
const char *hostname
```

Hostname, to set ipv4 pass it as string)

```
esp_mqtt_transport_t transport
```

Selects transport

```
const char *path
```

Path in the URI

```
uint32_t port
```

*MQTT* server port

```
struct verification_t
```

Broker identity verification

If fields are not set broker's identity isn't verified. it's recommended to set the options in this struct for security reasons.

### Public Members

```
bool use_global_ca_store
```

Use a global ca\_store, look esp-tls documentation for details.

```
esp_err_t (*crt_bundle_attach)(void *conf)
```

Pointer to ESP x509 Certificate Bundle attach function for the usage of certificate bundles.

```
const char *certificate
```

Certificate data, default is NULL, not required to verify the server.

```
size_t certificate_len
```

Length of the buffer pointed to by certificate.

const struct *psk\_key\_hint* \***psk\_hint\_key**

Pointer to PSK struct defined in esp\_tls.h to enable PSK authentication (as alternative to certificate verification). PSK is enabled only if there are no other ways to verify broker.

bool **skip\_cert\_common\_name\_check**

Skip any validation of server certificate CN field, this reduces the security of TLS and makes the *MQTT* client susceptible to MITM attacks

const char \*\***alpn\_protos**

NULL-terminated list of supported application protocols to be used for ALPN

struct **buffer\_t**

Client buffer size configuration

Client have two buffers for input and output respectively.

### Public Members

int **size**

size of *MQTT* send/receive buffer

int **out\_size**

size of *MQTT* output buffer. If not defined, defaults to the size defined by *buffer\_size*

struct **credentials\_t**

Client related credentials for authentication.

### Public Members

const char \***username**

*MQTT* username

const char \***client\_id**

Set *MQTT* client identifier. Ignored if *set\_null\_client\_id* == true If NULL set the default client id. Default client id is ESP32\_CHIPID% where CHIPID% are last 3 bytes of MAC address in hex format

bool **set\_null\_client\_id**

Selects a NULL client id

struct *esp\_mqtt\_client\_config\_t::credentials\_t::authentication\_t* **authentication**

Client authentication

struct **authentication\_t**

Client authentication

Fields related to client authentication by broker

For mutual authentication using TLS, user could select certificate and key, secure element or digital signature peripheral if available.

### Public Members

const char \***password**

*MQTT* password

const char \***certificate**

Certificate for ssl mutual authentication, not required if mutual authentication is not needed. Must be provided with *key*.

size\_t **certificate\_len**

Length of the buffer pointed to by *certificate*.

const char \***key**

Private key for SSL mutual authentication, not required if mutual authentication is not needed. If it is not NULL, also *certificate* has to be provided.

size\_t **key\_len**

Length of the buffer pointed to by *key*.

const char \***key\_password**

Client key decryption password, not PEM nor DER, if provided *key\_password\_len* must be correctly set.

int **key\_password\_len**

Length of the password pointed to by *key\_password*

bool **use\_secure\_element**

Enable secure element, available in ESP32-ROOM-32SE, for SSL connection

void \***ds\_data**

Carrier of handle for digital signature parameters, digital signature peripheral is available in some Espressif devices.

struct **network\_t**

Network related configuration

### Public Members

int **reconnect\_timeout\_ms**

Reconnect to the broker after this value in milliseconds if auto reconnect is not disabled (defaults to 10s)

int **timeout\_ms**

Abort network operation if it is not completed after this value, in milliseconds (defaults to 10s).

int **refresh\_connection\_after\_ms**

Refresh connection after this value (in milliseconds)

bool **disable\_auto\_reconnect**

Client will reconnect to server (when errors/disconnect). Set `disable_auto_reconnect=true` to disable

struct **session\_t**

*MQTT* Session related configuration

### Public Members

struct *esp\_mqtt\_client\_config\_t::session\_t::last\_will\_t* **last\_will**

Last will configuration

bool **disable\_clean\_session**

*MQTT* clean session, default `clean_session` is true

int **keepalive**

*MQTT* keepalive, default is 120 seconds

bool **disable\_keepalive**

Set `disable_keepalive=true` to turn off keep-alive mechanism, keepalive is active by default. Note: setting the config value `keepalive` to 0 doesn't disable keepalive feature, but uses a default keepalive period

*esp\_mqtt\_protocol\_ver\_t* **protocol\_ver**

*MQTT* protocol version used for connection.

int **message\_retransmit\_timeout**

timeout for retransmitting of failed packet

struct **last\_will\_t**

Last Will and Testament message configuration.

### Public Members

const char **\*topic**

LWT (Last Will and Testament) message topic

const char **\*msg**

LWT message, may be NULL terminated

int **msg\_len**

LWT message length, if `msg` isn't NULL terminated must have the correct length

int **qos**

LWT message QoS

int **retain**

LWT retained message flag

struct **task\_t**  
Client task configuration

### Public Members

int **priority**  
*MQTT* task priority

int **stack\_size**  
*MQTT* task stack size

### Macros

#### **MQTT\_ERROR\_TYPE\_ESP\_TLS**

**MQTT\_ERROR\_TYPE\_TCP\_TRANSPORT** error type hold all sorts of transport layer errors, including ESP-TLS error, but in the past only the errors from **MQTT\_ERROR\_TYPE\_ESP\_TLS** layer were reported, so the ESP-TLS error type is re-defined here for backward compatibility

### Type Definitions

typedef struct esp\_mqtt\_client \***esp\_mqtt\_client\_handle\_t**

typedef enum *esp\_mqtt\_event\_id\_t* **esp\_mqtt\_event\_id\_t**

*MQTT* event types.

User event handler receives context data in *esp\_mqtt\_event\_t* structure with

- *client* - *MQTT* client handle
- various other data depending on event type

typedef enum *esp\_mqtt\_connect\_return\_code\_t* **esp\_mqtt\_connect\_return\_code\_t**

*MQTT* connection error codes propagated via ERROR event

typedef enum *esp\_mqtt\_error\_type\_t* **esp\_mqtt\_error\_type\_t**

*MQTT* connection error codes propagated via ERROR event

typedef enum *esp\_mqtt\_transport\_t* **esp\_mqtt\_transport\_t**

typedef enum *esp\_mqtt\_protocol\_ver\_t* **esp\_mqtt\_protocol\_ver\_t**

*MQTT* protocol version used for connection

typedef struct *esp\_mqtt\_error\_codes* **esp\_mqtt\_error\_codes\_t**

*MQTT* error code structure to be passed as a contextual information into ERROR event

Important: This structure extends *esp\_tls\_last\_error* error structure and is backward compatible with it (so might be down-casted and treated as *esp\_tls\_last\_error* error, but recommended to update applications if used this way previously)

Use this structure directly checking *error\_type* first and then appropriate error code depending on the source of the error:

| *error\_type* | related member variables | note | | **MQTT\_ERROR\_TYPE\_TCP\_TRANSPORT** |  
*esp\_tls\_last\_esp\_err*, *esp\_tls\_stack\_err*, *esp\_tls\_cert\_verify\_flags*, *sock\_errno* | Error reported from

tcp\_transport/esp-tls || MQTT\_ERROR\_TYPE\_CONNECTION\_REFUSED | connect\_return\_code | Internal error reported from *MQTT* broker on connection |

typedef struct *esp\_mqtt\_event\_t* **esp\_mqtt\_event\_t**

*MQTT* event configuration structure

typedef *esp\_mqtt\_event\_t* \***esp\_mqtt\_event\_handle\_t**

typedef *esp\_err\_t* (\***mqtt\_event\_callback\_t**)(*esp\_mqtt\_event\_handle\_t* event)

typedef struct *esp\_mqtt\_client\_config\_t* **esp\_mqtt\_client\_config\_t**

*MQTT* client configuration structure

- Default values can be set via menuconfig
- All certificates and key data could be passed in PEM or DER format. PEM format must have a terminating NULL character and the related len field set to 0. DER format requires a related len field set to the correct length.

## Enumerations

enum **esp\_mqtt\_event\_id\_t**

*MQTT* event types.

User event handler receives context data in *esp\_mqtt\_event\_t* structure with

- `client` - *MQTT* client handle
- various other data depending on event type

*Values:*

enumerator **MQTT\_EVENT\_ANY**

enumerator **MQTT\_EVENT\_ERROR**

on error event, additional context: connection return code, error handle from `esp_tls` (if supported)

enumerator **MQTT\_EVENT\_CONNECTED**

connected event, additional context: `session_present` flag

enumerator **MQTT\_EVENT\_DISCONNECTED**

disconnected event

enumerator **MQTT\_EVENT\_SUBSCRIBED**

subscribed event, additional context:

- `msg_id` message id
- data pointer to the received data
- `data_len` length of the data for this event

enumerator **MQTT\_EVENT\_UNSUBSCRIBED**

unsubscribed event

enumerator **MQTT\_EVENT\_PUBLISHED**

published event, additional context: `msg_id`

enumerator **MQTT\_EVENT\_DATA**

data event, additional context:

- `msg_id` message id
- topic pointer to the received topic
- `topic_len` length of the topic
- data pointer to the received data
- `data_len` length of the data for this event
- `current_data_offset` offset of the current data for this event
- `total_data_len` total length of the data received
- retain retain flag of the message
- `qos` QoS level of the message
- `dup` dup flag of the message Note: Multiple **MQTT\_EVENT\_DATA** could be fired for one message, if it is longer than internal buffer. In that case only first event contains topic pointer and length, other contain data only with current data length and current data offset updating.

enumerator **MQTT\_EVENT\_BEFORE\_CONNECT**

The event occurs before connecting

enumerator **MQTT\_EVENT\_DELETED**

Notification on delete of one message from the internal outbox, if the message couldn't have been sent and acknowledged before expiring defined in `OUTBOX_EXPIRED_TIMEOUT_MS`. (events are not posted upon deletion of successfully acknowledged messages)

- This event id is posted only if `MQTT_REPORT_DELETED_MESSAGES==1`
- Additional context: `msg_id` (id of the deleted message).

enum **esp\_mqtt\_connect\_return\_code\_t**

*MQTT* connection error codes propagated via ERROR event

*Values:*

enumerator **MQTT\_CONNECTION\_ACCEPTED**

Connection accepted

enumerator **MQTT\_CONNECTION\_REFUSE\_PROTOCOL**

*MQTT* connection refused reason: Wrong protocol

enumerator **MQTT\_CONNECTION\_REFUSE\_ID\_REJECTED**

*MQTT* connection refused reason: ID rejected

enumerator **MQTT\_CONNECTION\_REFUSE\_SERVER\_UNAVAILABLE**

*MQTT* connection refused reason: Server unavailable

enumerator **MQTT\_CONNECTION\_REFUSE\_BAD\_USERNAME**

*MQTT* connection refused reason: Wrong user

enumerator **MQTT\_CONNECTION\_REFUSE\_NOT\_AUTHORIZED**

*MQTT* connection refused reason: Wrong username or password

enum **esp\_mqtt\_error\_type\_t**

*MQTT* connection error codes propagated via ERROR event

*Values:*

enumerator **MQTT\_ERROR\_TYPE\_NONE**

enumerator **MQTT\_ERROR\_TYPE\_TCP\_TRANSPORT**

enumerator **MQTT\_ERROR\_TYPE\_CONNECTION\_REFUSED**

enum **esp\_mqtt\_transport\_t**

*Values:*

enumerator **MQTT\_TRANSPORT\_UNKNOWN**

enumerator **MQTT\_TRANSPORT\_OVER\_TCP**

*MQTT* over TCP, using scheme: **MQTT**

enumerator **MQTT\_TRANSPORT\_OVER\_SSL**

*MQTT* over SSL, using scheme: **MQTTS**

enumerator **MQTT\_TRANSPORT\_OVER\_WS**

*MQTT* over Websocket, using scheme:: **ws**

enumerator **MQTT\_TRANSPORT\_OVER\_WSS**

*MQTT* over Websocket Secure, using scheme: **wss**

enum **esp\_mqtt\_protocol\_ver\_t**

*MQTT* protocol version used for connection

*Values:*

enumerator **MQTT\_PROTOCOL\_UNDEFINED**

enumerator **MQTT\_PROTOCOL\_V\_3\_1**

enumerator **MQTT\_PROTOCOL\_V\_3\_1\_1**

enumerator **MQTT\_PROTOCOL\_V\_5**

## 2.2.4 ESP-TLS

### Overview

The ESP-TLS component provides a simplified API interface for accessing the commonly used TLS functionality. It supports common scenarios like CA certification validation, SNI, ALPN negotiation, non-blocking connection among others. All the configuration can be specified in the `esp_tls_cfg_t` data structure. Once done, TLS communication can be conducted using the following APIs:

- `esp_tls_init()`: for initializing the TLS connection handle.
- `esp_tls_conn_new_sync()`: for opening a new blocking TLS connection.
- `esp_tls_conn_new_async()`: for opening a new non-blocking TLS connection.
- `esp_tls_conn_read()`: for reading from the connection.
- `esp_tls_conn_write()`: for writing into the connection.
- `esp_tls_conn_destroy()`: for freeing up the connection.

Any application layer protocol like HTTP1, HTTP2 etc can be executed on top of this layer.

### Application Example

Simple HTTPS example that uses ESP-TLS to establish a secure socket connection: [protocols/https\\_request](#).

### Tree structure for ESP-TLS component

```

├── esp_tls.c
├── esp_tls.h
├── esp_tls_mbedtls.c
├── esp_tls_wolfssl.c
├── private_include
│   ├── esp_tls_mbedtls.h
│   └── esp_tls_wolfssl.h

```

The ESP-TLS component has a file `esp-tls/esp_tls.h` which contain the public API headers for the component. Internally ESP-TLS component uses one of the two SSL/TLS Libraries between `mbedtls` and `wolfssl` for its operation. API specific to `mbedtls` are present in `esp-tls/private_include/esp_tls_mbedtls.h` and API specific to `wolfssl` are present in `esp-tls/private_include/esp_tls_wolfssl.h`.

### TLS Server verification

The ESP-TLS provides multiple options for TLS server verification on the client side. The ESP-TLS client can verify the server by validating the peer's server certificate or with the help of pre-shared keys. The user should select only one of the following options in the `esp_tls_cfg_t` structure for TLS server verification. If no option is selected then client will return a fatal error by default at the time of the TLS connection setup.

- **ca\_cert\_buf** and **ca\_cert\_bytes**: The CA certificate can be provided in a buffer to the `esp_tls_cfg_t` structure. The ESP-TLS will use the CA certificate present in the buffer to verify the server. The following variables in `esp_tls_cfg_t` structure must be set.
  - `ca_cert_buf` - pointer to the buffer which contains the CA cert.
  - `ca_cert_bytes` - size of the CA certificate in bytes.
- **use\_global\_ca\_store**: The `global_ca_store` can be initialized and set at once. Then it can be used to verify the server for all the ESP-TLS connections which have set `use_global_ca_store = true` in their respective `esp_tls_cfg_t` structure. See API Reference section below on information regarding different API used for initializing and setting up the `global_ca_store`.
- **crt\_bundle\_attach**: The ESP x509 Certificate Bundle API provides an easy way to include a bundle of custom x509 root certificates for TLS server verification. More details can be found at [ESP x509 Certificate Bundle](#)
- **psk\_hint\_key**: To use pre-shared keys for server verification, `CONFIG_ESP_TLS_PSK_VERIFICATION` should be enabled in the ESP-TLS menuconfig. Then the pointer to PSK hint and key should be provided to the `esp_tls_cfg_t` structure. The ESP-TLS will use the PSK for server verification only when no other option regarding the server verification is selected.
- **skip server verification**: This is an insecure option provided in the ESP-TLS for testing purpose. The option can be set by enabling `CONFIG_ESP_TLS_INSECURE` and `CONFIG_ESP_TLS_SKIP_SERVER_CERT_VERIFY` in the ESP-TLS menuconfig. When this option is enabled the ESP-TLS will skip server verification by default when no other options for server verification are selected in the `esp_tls_cfg_t` structure. *WARNING:Enabling this option comes with a potential risk of establishing a TLS connection with a server which has a fake identity, provided that the server certificate is not provided either through API or other mechanism like ca\_store etc.*

### ESP-TLS Server cert selection hook

The ESP-TLS component provides an option to set the server cert selection hook when using the mbedTLS stack. This provides an ability to configure and use a certificate selection callback during server handshake, to select a certificate to present to the client based on the TLS extensions supplied in the client hello (alpn, sni, etc). To enable this feature, please enable `CONFIG_ESP_TLS_SERVER_CERT_SELECT_HOOK` in the ESP-TLS menuconfig. The certificate selection callback can be configured in the `esp_tls_cfg_t` structure as follows:

```
int cert_selection_callback(mbedtls_ssl_context *ssl)
{
    /* Code that the callback should execute */
    return 0;
}

esp_tls_cfg_t cfg = {
    cert_select_cb = cert_section_callback,
};
```

### Underlying SSL/TLS Library Options

The ESP-TLS component has an option to use mbedtls or wolfssl as their underlying SSL/TLS library. By default only mbedtls is available and is used, wolfssl SSL/TLS library is available publicly at <https://github.com/espressif/esp-wolfssl>. The repository provides wolfssl component in binary format, it also provides few examples which are useful for understanding the API. Please refer the repository README.md for information on licensing and other options. Please see below option for using wolfssl in your project.

---

**Note:** *As the library options are internal to ESP-TLS, switching the libraries will not change ESP-TLS specific code for a project.*

---

### How to use wolfssl with ESP-IDF

There are two ways to use wolfssl in your project

- 1) Directly add wolfssl as a component in your project with following three commands.:

```
(First change directory (cd) to your project directory)
mkdir components
cd components
git clone https://github.com/espressif/esp-wolfssl.git
```

- 2) Add wolfssl as an extra component in your project.

- Download wolfssl with:

```
git clone https://github.com/espressif/esp-wolfssl.git
```

- Include esp-wolfssl in ESP-IDF with setting `EXTRA_COMPONENT_DIRS` in CMakeLists.txt of your project as done in [wolfssl/examples](#). For reference see Optional Project variables in [build-system](#).

After above steps, you will have option to choose wolfssl as underlying SSL/TLS library in configuration menu of your project as follows:

```
idf.py menuconfig -> ESP-TLS -> choose SSL/TLS Library -> mbedtls/wolfssl
```

### Comparison between mbedtls and wolfssl

The following table shows a typical comparison between wolfssl and mbedtls when [protocols/https\\_request](#) example (which has server authentication) was run with both SSL/TLS libraries and with all respective configurations

set to default. (*mbedtls IN\_CONTENT length and OUT\_CONTENT length were set to 16384 bytes and 4096 bytes respectively*)

Property	Wolfssl	Mbedtls
Total Heap Consumed	~19 Kb	~37 Kb
Task Stack Used	~2.2 Kb	~3.6 Kb
Bin size	~858 Kb	~736 Kb

---

**Note:** *These values are subject to change with change in configuration options and version of respective libraries.*

---

## API Reference

### Header File

- [components/esp-tls/esp\\_tls.h](#)

### Functions

`esp_tls_t *esp_tls_init` (void)

Create TLS connection.

This function allocates and initializes esp-tls structure handle.

**Returns** `tls` Pointer to esp-tls as esp-tls handle if successfully initialized, NULL if allocation error

`esp_tls_t *esp_tls_conn_http_new` (const char \*url, const `esp_tls_cfg_t` \*cfg)

Create a new blocking TLS/SSL connection with a given “HTTP” url.

Note: This API is present for backward compatibility reasons. Alternative function with the same functionality is `esp_tls_conn_http_new_sync` (and its asynchronous version `esp_tls_conn_http_new_async`)

#### Parameters

- **url** –[in] url of host.
- **cfg** –[in] TLS configuration as `esp_tls_cfg_t`. If you wish to open non-TLS connection, keep this NULL. For TLS connection, a pass pointer to ‘`esp_tls_cfg_t`’. At a minimum, this structure should be zero-initialized.

**Returns** pointer to `esp_tls_t`, or NULL if connection couldn’t be opened.

int `esp_tls_conn_new_sync` (const char \*hostname, int hostlen, int port, const `esp_tls_cfg_t` \*cfg, `esp_tls_t` \*tls)

Create a new blocking TLS/SSL connection.

This function establishes a TLS/SSL connection with the specified host in blocking manner.

#### Parameters

- **hostname** –[in] Hostname of the host.
- **hostlen** –[in] Length of hostname.
- **port** –[in] Port number of the host.
- **cfg** –[in] TLS configuration as `esp_tls_cfg_t`. If you wish to open non-TLS connection, keep this NULL. For TLS connection, a pass pointer to `esp_tls_cfg_t`. At a minimum, this structure should be zero-initialized.
- **tls** –[in] Pointer to esp-tls as esp-tls handle.

#### Returns

- -1 If connection establishment fails.
- 1 If connection establishment is successful.
- 0 If connection state is in progress.

int **esp\_tls\_conn\_http\_new\_sync** (const char \*url, const *esp\_tls\_cfg\_t* \*cfg, *esp\_tls\_t* \*tls)

Create a new blocking TLS/SSL connection with a given “HTTP” url.

The behaviour is same as `esp_tls_conn_new_sync()` API. However this API accepts host’s url.

#### Parameters

- **url** –[in] url of host.
- **cfg** –[in] TLS configuration as *esp\_tls\_cfg\_t*. If you wish to open non-TLS connection, keep this NULL. For TLS connection, a pass pointer to ‘*esp\_tls\_cfg\_t*’. At a minimum, this structure should be zero-initialized.
- **tls** –[in] Pointer to esp-tls as esp-tls handle.

#### Returns

- -1 If connection establishment fails.
- 1 If connection establishment is successful.
- 0 If connection state is in progress.

int **esp\_tls\_conn\_new\_async** (const char \*hostname, int hostlen, int port, const *esp\_tls\_cfg\_t* \*cfg, *esp\_tls\_t* \*tls)

Create a new non-blocking TLS/SSL connection.

This function initiates a non-blocking TLS/SSL connection with the specified host, but due to its non-blocking nature, it doesn’t wait for the connection to get established.

#### Parameters

- **hostname** –[in] Hostname of the host.
- **hostlen** –[in] Length of hostname.
- **port** –[in] Port number of the host.
- **cfg** –[in] TLS configuration as *esp\_tls\_cfg\_t*. `non_block` member of this structure should be set to be true.
- **tls** –[in] pointer to esp-tls as esp-tls handle.

#### Returns

- -1 If connection establishment fails.
- 0 If connection establishment is in progress.
- 1 If connection establishment is successful.

int **esp\_tls\_conn\_http\_new\_async** (const char \*url, const *esp\_tls\_cfg\_t* \*cfg, *esp\_tls\_t* \*tls)

Create a new non-blocking TLS/SSL connection with a given “HTTP” url.

The behaviour is same as `esp_tls_conn_new_async()` API. However this API accepts host’s url.

#### Parameters

- **url** –[in] url of host.
- **cfg** –[in] TLS configuration as *esp\_tls\_cfg\_t*.
- **tls** –[in] pointer to esp-tls as esp-tls handle.

#### Returns

- -1 If connection establishment fails.
- 0 If connection establishment is in progress.
- 1 If connection establishment is successful.

ssize\_t **esp\_tls\_conn\_write** (*esp\_tls\_t* \*tls, const void \*data, size\_t datalen)

Write from buffer ‘data’ into specified tls connection.

#### Parameters

- **tls** –[in] pointer to esp-tls as esp-tls handle.
- **data** –[in] Buffer from which data will be written.
- **datalen** –[in] Length of data buffer.

#### Returns

- $\geq 0$  if write operation was successful, the return value is the number of bytes actually written to the TLS/SSL connection.
- $< 0$  if write operation was not successful, because either an error occurred or an action must be taken by the calling process.

- `ESP_TLS_ERR_SSL_WANT_READ/ ESP_TLS_ERR_SSL_WANT_WRITE`. if the handshake is incomplete and waiting for data to be available for reading. In this case this functions needs to be called again when the underlying transport is ready for operation.

`ssize_t esp_tls_conn_read (esp_tls_t *tls, void *data, size_t datalen)`

Read from specified tls connection into the buffer 'data' .

**Parameters**

- **tls** –[in] pointer to esp-tls as esp-tls handle.
- **data** –[in] Buffer to hold read data.
- **datalen** –[in] Length of data buffer.

**Returns**

- >0 if read operation was successful, the return value is the number of bytes actually read from the TLS/SSL connection.
- 0 if read operation was not successful. The underlying connection was closed.
- <0 if read operation was not successful, because either an error occurred or an action must be taken by the calling process.

`int esp_tls_conn_destroy (esp_tls_t *tls)`

Close the TLS/SSL connection and free any allocated resources.

This function should be called to close each tls connection opened with `esp_tls_conn_new_sync()` (or `esp_tls_conn_http_new_sync()`) and `esp_tls_conn_new_async()` (or `esp_tls_conn_http_new_async()`) APIs.

**Parameters** **tls** –[in] pointer to esp-tls as esp-tls handle.

**Returns** - 0 on success

- -1 if socket error or an invalid argument

`ssize_t esp_tls_get_bytes_avail (esp_tls_t *tls)`

Return the number of application data bytes remaining to be read from the current record.

This API is a wrapper over mbedtls' `s_mbedtls_ssl_get_bytes_avail()` API.

**Parameters** **tls** –[in] pointer to esp-tls as esp-tls handle.

**Returns**

- -1 in case of invalid arg
- bytes available in the application data record read buffer

`esp_err_t esp_tls_get_conn_sockfd (esp_tls_t *tls, int *sockfd)`

Returns the connection socket file descriptor from esp\_tls session.

**Parameters**

- **tls** –[in] handle to esp\_tls context
- **sockfd** –[out] int pointer to sockfd value.

**Returns** - `ESP_OK` on success and value of sockfd will be updated with socket file descriptor for connection

- `ESP_ERR_INVALID_ARG` if (tls == NULL || sockfd == NULL)

`void *esp_tls_get_ssl_context (esp_tls_t *tls)`

Returns the ssl context.

**Parameters** **tls** –[in] handle to esp\_tls context

**Returns** - `ssl_ctx` pointer to ssl context of underlying TLS layer on success

- `NULL` in case of error

`esp_err_t esp_tls_init_global_ca_store (void)`

Create a global CA store, initially empty.

This function should be called if the application wants to use the same CA store for multiple connections. This function initialises the global CA store which can be then set by calling `esp_tls_set_global_ca_store()`. To be effective, this function must be called before any call to `esp_tls_set_global_ca_store()`.

**Returns**

- `ESP_OK` if creating global CA store was successful.

- `ESP_ERR_NO_MEM` if an error occurred when allocating the mbedTLS resources.

*esp\_err\_t* **esp\_tls\_set\_global\_ca\_store** (const unsigned char \*cacert\_pem\_buf, const unsigned int cacert\_pem\_bytes)

Set the global CA store with the buffer provided in pem format.

This function should be called if the application wants to set the global CA store for multiple connections i.e. to add the certificates in the provided buffer to the certificate chain. This function implicitly calls `esp_tls_init_global_ca_store()` if it has not already been called. The application must call this function before calling `esp_tls_conn_new()`.

#### Parameters

- **cacert\_pem\_buf** –[in] Buffer which has certificates in pem format. This buffer is used for creating a global CA store, which can be used by other tls connections.
- **cacert\_pem\_bytes** –[in] Length of the buffer.

#### Returns

- `ESP_OK` if adding certificates was successful.
- Other if an error occurred or an action must be taken by the calling process.

void **esp\_tls\_free\_global\_ca\_store** (void)

Free the global CA store currently being used.

The memory being used by the global CA store to store all the parsed certificates is freed up. The application can call this API if it no longer needs the global CA store.

*esp\_err\_t* **esp\_tls\_get\_and\_clear\_last\_error** (*esp\_tls\_error\_handle\_t* h, int \*esp\_tls\_code, int \*esp\_tls\_flags)

Returns last error in `esp_tls` with detailed mbedtls related error codes. The error information is cleared internally upon return.

#### Parameters

- **h** –[in] esp-tls error handle.
- **esp\_tls\_code** –[out] last error code returned from mbedtls api (set to zero if none) This pointer could be NULL if caller does not care about `esp_tls_code`
- **esp\_tls\_flags** –[out] last certification verification flags (set to zero if none) This pointer could be NULL if caller does not care about `esp_tls_code`

#### Returns

- `ESP_ERR_INVALID_STATE` if invalid parameters
- `ESP_OK` (0) if no error occurred
- specific error code (based on `ESP_ERR_ESP_TLS_BASE`) otherwise

*esp\_err\_t* **esp\_tls\_get\_and\_clear\_error\_type** (*esp\_tls\_error\_handle\_t* h, *esp\_tls\_error\_type\_t* err\_type, int \*error\_code)

Returns the last error captured in `esp_tls` of a specific type The error information is cleared internally upon return.

#### Parameters

- **h** –[in] esp-tls error handle.
- **err\_type** –[in] specific error type
- **error\_code** –[out] last error code returned from mbedtls api (set to zero if none) This pointer could be NULL if caller does not care about `esp_tls_code`

#### Returns

- `ESP_ERR_INVALID_STATE` if invalid parameters
- `ESP_OK` if a valid error returned and was cleared

*esp\_err\_t* **esp\_tls\_get\_error\_handle** (*esp\_tls\_t* \*tls, *esp\_tls\_error\_handle\_t* \*error\_handle)

Returns the ESP-TLS error\_handle.

#### Parameters

- **tls** –[in] handle to `esp_tls` context
- **error\_handle** –[out] pointer to the error handle.

#### Returns

- ESP\_OK on success and error\_handle will be updated with the ESP-TLS error handle.
- ESP\_ERR\_INVALID\_ARG if (tls == NULL || error\_handle == NULL)

mbedtls\_x509\_crt \***esp\_tls\_get\_global\_ca\_store** (void)

Get the pointer to the global CA store currently being used.

The application must first call esp\_tls\_set\_global\_ca\_store(). Then the same CA store could be used by the application for APIs other than esp\_tls.

---

**Note:** Modifying the pointer might cause a failure in verifying the certificates.

---

### Returns

- Pointer to the global CA store currently being used if successful.
- NULL if there is no global CA store set.

*esp\_err\_t* **esp\_tls\_plain\_tcp\_connect** (const char \*host, int hostlen, int port, const *esp\_tls\_cfg\_t* \*cfg, *esp\_tls\_error\_handle\_t* error\_handle, int \*sockfd)

Creates a plain TCP connection, returning a valid socket fd on success or an error handle.

### Parameters

- **host** –[in] Hostname of the host.
- **hostlen** –[in] Length of hostname.
- **port** –[in] Port number of the host.
- **cfg** –[in] ESP-TLS configuration as esp\_tls\_cfg\_t.
- **error\_handle** –[out] ESP-TLS error handle holding potential errors occurred during connection
- **sockfd** –[out] Socket descriptor if successfully connected on TCP layer

**Returns** ESP\_OK on success ESP\_ERR\_INVALID\_ARG if invalid output parameters ESP-TLS based error codes on failure

## Structures

struct **psk\_key\_hint**

ESP-TLS preshared key and hint structure.

### Public Members

const uint8\_t \***key**

key in PSK authentication mode in binary format

const size\_t **key\_size**

length of the key

const char \***hint**

hint in PSK authentication mode in string format

struct **tls\_keep\_alive\_cfg**

esp-tls client session ticket ctx

Keep alive parameters structure

### Public Members

bool **keep\_alive\_enable**

Enable keep-alive timeout

int **keep\_alive\_idle**

Keep-alive idle time (second)

int **keep\_alive\_interval**

Keep-alive interval time (second)

int **keep\_alive\_count**

Keep-alive packet retry send count

struct **esp\_tls\_cfg**

ESP-TLS configuration parameters.

---

**Note:** Note about format of certificates:

- This structure includes certificates of a Certificate Authority, of client or server as well as private keys, which may be of PEM or DER format. In case of PEM format, the buffer must be NULL terminated (with NULL character included in certificate size).
  - Certificate Authority's certificate may be a chain of certificates in case of PEM format, but could be only one certificate in case of DER format
  - Variables names of certificates and private key buffers and sizes are defined as unions providing backward compatibility for legacy \*\_pem\_buf and \*\_pem\_bytes names which suggested only PEM format was supported. It is encouraged to use generic names such as cacert\_buf and cacert\_bytes.
- 

## Public Members

const char \*\***alpn\_protos**

Application protocols required for HTTP2. If HTTP2/ALPN support is required, a list of protocols that should be negotiated. The format is length followed by protocol name. For the most common cases the following is ok: const char \*\*alpn\_protos = { "h2", NULL };

- where 'h2' is the protocol name

const unsigned char \***cacert\_buf**

Certificate Authority's certificate in a buffer. Format may be PEM or DER, depending on mbedtls-support This buffer should be NULL terminated in case of PEM

const unsigned char \***cacert\_pem\_buf**

CA certificate buffer legacy name

unsigned int **cacert\_bytes**

Size of Certificate Authority certificate pointed to by cacert\_buf (including NULL-terminator in case of PEM format)

unsigned int **cacert\_pem\_bytes**

Size of Certificate Authority certificate legacy name

const unsigned char \***clientcert\_buf**

Client certificate in a buffer Format may be PEM or DER, depending on mbedtls-support This buffer should be NULL terminated in case of PEM

const unsigned char \***clientcert\_pem\_buf**

Client certificate legacy name

unsigned int **clientcert\_bytes**

Size of client certificate pointed to by clientcert\_pem\_buf (including NULL-terminator in case of PEM format)

unsigned int **clientcert\_pem\_bytes**

Size of client certificate legacy name

const unsigned char \***clientkey\_buf**

Client key in a buffer Format may be PEM or DER, depending on mbedtls-support This buffer should be NULL terminated in case of PEM

const unsigned char \***clientkey\_pem\_buf**

Client key legacy name

unsigned int **clientkey\_bytes**

Size of client key pointed to by clientkey\_pem\_buf (including NULL-terminator in case of PEM format)

unsigned int **clientkey\_pem\_bytes**

Size of client key legacy name

const unsigned char \***clientkey\_password**

Client key decryption password string

unsigned int **clientkey\_password\_len**

String length of the password pointed to by clientkey\_password

bool **non\_block**

Configure non-blocking mode. If set to true the underneath socket will be configured in non blocking mode after tls session is established

bool **use\_secure\_element**

Enable this option to use secure element or atec608a chip ( Integrated with ESP32-WROOM-32SE )

int **timeout\_ms**

Network timeout in milliseconds. Note: If this value is not set, by default the timeout is set to 10 seconds. If you wish that the session should wait indefinitely then please use a larger value e.g., INT32\_MAX

bool **use\_global\_ca\_store**

Use a global ca\_store for all the connections in which this bool is set.

const char \***common\_name**

If non-NULL, server certificate CN must match this name. If NULL, server certificate CN must match hostname.

bool **skip\_common\_name**

Skip any validation of server certificate CN field

*tls\_keep\_alive\_cfg\_t* \***keep\_alive\_cfg**

Enable TCP keep-alive timeout for SSL connection

const *psk\_hint\_key\_t* \***psk\_hint\_key**

Pointer to PSK hint and key. if not NULL (and certificates are NULL) then PSK authentication is enabled with configured setup. Important note: the pointer must be valid for connection

*esp\_err\_t* (\***crt\_bundle\_attach**)(void \*conf)

Function pointer to esp\_cert\_bundle\_attach. Enables the use of certification bundle for server verification, must be enabled in menuconfig

void \***ds\_data**

Pointer for digital signature peripheral context

bool **is\_plain\_tcp**

Use non-TLS connection: When set to true, the esp-tls uses plain TCP transport rather than TLS/SSL connection. Note, that it is possible to connect using a plain tcp transport directly with esp\_tls\_plain\_tcp\_connect() API

struct ifreq \***if\_name**

The name of interface for data to go through. Use the default interface without setting

*esp\_tls\_addr\_family\_t* **addr\_family**

The address family to use when connecting to a host.

*esp\_tls\_proto\_ver\_t* **tls\_version**

TLS protocol version of the connection, e.g., TLS 1.2, TLS 1.3 (default - no preference)

## Type Definitions

typedef enum *esp\_tls\_conn\_state* **esp\_tls\_conn\_state\_t**

ESP-TLS Connection State.

typedef enum *esp\_tls\_role* **esp\_tls\_role\_t**

typedef struct *psk\_key\_hint* **psk\_hint\_key\_t**

ESP-TLS preshared key and hint structure.

typedef struct *tls\_keep\_alive\_cfg* **tls\_keep\_alive\_cfg\_t**

esp-tls client session ticket ctx

Keep alive parameters structure

typedef enum *esp\_tls\_addr\_family* **esp\_tls\_addr\_family\_t**

typedef struct *esp\_tls\_cfg* **esp\_tls\_cfg\_t**

ESP-TLS configuration parameters.

---

**Note:** Note about format of certificates:

- This structure includes certificates of a Certificate Authority, of client or server as well as private keys, which may be of PEM or DER format. In case of PEM format, the buffer must be NULL terminated (with NULL character included in certificate size).
  - Certificate Authority's certificate may be a chain of certificates in case of PEM format, but could be only one certificate in case of DER format
  - Variables names of certificates and private key buffers and sizes are defined as unions providing backward compatibility for legacy \*\_pem\_buf and \*\_pem\_bytes names which suggested only PEM format was supported. It is encouraged to use generic names such as cacert\_buf and cacert\_bytes.
- 

typedef struct esp\_tls **esp\_tls\_t**

### Enumerations

enum **esp\_tls\_conn\_state**

ESP-TLS Connection State.

*Values:*

enumerator **ESP\_TLS\_INIT**

enumerator **ESP\_TLS\_CONNECTING**

enumerator **ESP\_TLS\_HANDSHAKE**

enumerator **ESP\_TLS\_FAIL**

enumerator **ESP\_TLS\_DONE**

enum **esp\_tls\_role**

*Values:*

enumerator **ESP\_TLS\_CLIENT**

enumerator **ESP\_TLS\_SERVER**

enum **esp\_tls\_addr\_family**

*Values:*

enumerator **ESP\_TLS\_AF\_UNSPEC**

Unspecified address family.

enumerator **ESP\_TLS\_AF\_INET**

IPv4 address family.

enumerator **ESP\_TLS\_AF\_INET6**

IPv6 address family.

enum **esp\_tls\_proto\_ver\_t**

*Values:*

enumerator **ESP\_TLS\_VER\_ANY**

enumerator **ESP\_TLS\_VER\_TLS\_1\_2**

enumerator **ESP\_TLS\_VER\_TLS\_1\_3**

enumerator **ESP\_TLS\_VER\_TLS\_MAX**

### Header File

- [components/esp-tls/esp\\_tls\\_errors.h](#)

### Structures

struct **esp\_tls\_last\_error**

Error structure containing relevant errors in case tls error occurred.

#### Public Members

*esp\_err\_t* **last\_error**

error code (based on ESP\_ERR\_ESP\_TLS\_BASE) of the last occurred error

int **esp\_tls\_error\_code**

esp\_tls error code from last esp\_tls failed api

int **esp\_tls\_flags**

last certification verification flags

### Macros

**ESP\_ERR\_ESP\_TLS\_BASE**

Starting number of ESP-TLS error codes

**ESP\_ERR\_ESP\_TLS\_CANNOT\_RESOLVE\_HOSTNAME**

Error if hostname couldn't be resolved upon tls connection

**ESP\_ERR\_ESP\_TLS\_CANNOT\_CREATE\_SOCKET**

Failed to create socket

**ESP\_ERR\_ESP\_TLS\_UNSUPPORTED\_PROTOCOL\_FAMILY**

Unsupported protocol family

**ESP\_ERR\_ESP\_TLS\_FAILED\_CONNECT\_TO\_HOST**

Failed to connect to host

**ESP\_ERR\_ESP\_TLS\_SOCKET\_SETOPT\_FAILED**

failed to set/get socket option

**ESP\_ERR\_ESP\_TLS\_CONNECTION\_TIMEOUT**

new connection in esp\_tls\_low\_level\_conn connection timeouted

**ESP\_ERR\_ESP\_TLS\_SE\_FAILED**

**ESP\_ERR\_ESP\_TLS\_TCP\_CLOSED\_FIN**

**ESP\_ERR\_MBEDTLS\_CERT\_PARTLY\_OK**

mbedtls parse certificates was partly successful

**ESP\_ERR\_MBEDTLS\_CTR\_DRBG\_SEED\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_SSL\_SET\_HOSTNAME\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_SSL\_CONFIG\_DEFAULTS\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_SSL\_CONF\_ALPN\_PROTOCOLS\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_X509\_CRT\_PARSE\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_SSL\_CONF\_OWN\_CERT\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_SSL\_SETUP\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_SSL\_WRITE\_FAILED**

mbedtls api returned error

**ESP\_ERR\_MBEDTLS\_PK\_PARSE\_KEY\_FAILED**

mbedtls api returned failed

**ESP\_ERR\_MBEDTLS\_SSL\_HANDSHAKE\_FAILED**

mbedtls api returned failed

**ESP\_ERR\_MBEDTLS\_SSL\_CONF\_PSK\_FAILED**

mbedtls api returned failed

**ESP\_ERR\_MBEDTLS\_SSL\_TICKET\_SETUP\_FAILED**

mbedtls api returned failed

**ESP\_ERR\_WOLFSSL\_SSL\_SET\_HOSTNAME\_FAILED**

**ESP\_ERR\_WOLFSSL\_SSL\_CONF\_ALPN\_PROTOCOLS\_FAILED**

wolfSSL api returned error

**ESP\_ERR\_WOLFSSL\_CERT\_VERIFY\_SETUP\_FAILED**

wolfSSL api returned error

**ESP\_ERR\_WOLFSSL\_KEY\_VERIFY\_SETUP\_FAILED**

wolfSSL api returned error

**ESP\_ERR\_WOLFSSL\_SSL\_HANDSHAKE\_FAILED**

wolfSSL api returned failed

**ESP\_ERR\_WOLFSSL\_CTX\_SETUP\_FAILED**

wolfSSL api returned failed

**ESP\_ERR\_WOLFSSL\_SSL\_SETUP\_FAILED**

wolfSSL api returned failed

**ESP\_ERR\_WOLFSSL\_SSL\_WRITE\_FAILED**

wolfSSL api returned failed

**ESP\_TLS\_ERR\_SSL\_WANT\_READ**

Definition of errors reported from IO API (potentially non-blocking) in case of error:

- esp\_tls\_conn\_read()
- esp\_tls\_conn\_write()

**ESP\_TLS\_ERR\_SSL\_WANT\_WRITE****ESP\_TLS\_ERR\_SSL\_TIMEOUT**

### Type Definitions

```
typedef struct esp_tls_last_error *esp_tls_error_handle_t
```

```
typedef struct esp_tls_last_error esp_tls_last_error_t
```

Error structure containing relevant errors in case tls error occurred.

### Enumerations

```
enum esp_tls_error_type_t
```

Definition of different types/sources of error codes reported from different components

*Values:*

enumerator **ESP\_TLS\_ERR\_TYPE\_UNKNOWN**

enumerator **ESP\_TLS\_ERR\_TYPE\_SYSTEM**

System error `&#8212;` `errno`

enumerator **ESP\_TLS\_ERR\_TYPE\_MBEDTLS**

Error code from mbedTLS library

enumerator **ESP\_TLS\_ERR\_TYPE\_MBEDTLS\_CERT\_FLAGS**

Certificate flags defined in mbedTLS

enumerator **ESP\_TLS\_ERR\_TYPE\_ESP**

ESP-IDF error type `&#8212;` `esp_err_t`

enumerator **ESP\_TLS\_ERR\_TYPE\_WOLFSSL**

Error code from wolfSSL library

enumerator **ESP\_TLS\_ERR\_TYPE\_WOLFSSL\_CERT\_FLAGS**

Certificate flags defined in wolfSSL

enumerator **ESP\_TLS\_ERR\_TYPE\_MAX**

Last err type `&#8212;` invalid entry

## 2.2.5 ESP HTTP Client

### Overview

`esp_http_client` provides an API for making HTTP/S requests from ESP-IDF applications. The steps to use this API are as follows:

- `esp_http_client_init()`: Creates an `esp_http_client_config_t` instance i.e. a HTTP client handle based on the given `esp_http_client_config_t` configuration. This function must be the first to be called; default values will be assumed for the configuration values that are not explicitly defined by the user.
- `esp_http_client_perform()`: Performs all operations of the `esp_http_client` - opening the connection, exchanging data and closing the connection (as required), while blocking the current task until its completion. All related events will be invoked through the event handler (as specified in `esp_http_client_config_t`).
- `esp_http_client_cleanup()`: Closes the connection (if any) and frees up all the memory allocated to the HTTP client instance. This must be the last function to be called after the completion of operations.

### Application Example

Simple example that uses ESP HTTP Client to make HTTP/S requests at [protocols/esp\\_http\\_client](protocols/esp_http_client).

### Basic HTTP request

Check out the example functions `http_rest_with_url` and `http_rest_with_hostname_path` in the application example for implementation details.

## Persistent Connections

Persistent connection means that the HTTP client can re-use the same connection for several exchanges. If the server does not request to close the connection with the `Connection: close` header, the connection is not dropped but is instead kept open and used for further requests.

To allow ESP HTTP client to take full advantage of persistent connections, one should make as many requests as possible using the same handle instance.

Check out the example functions `http_rest_with_url` and `http_rest_with_hostname_path` in the application example. Here, once the connection is created, multiple requests (GET, POST, PUT, etc.) are made before the connection is closed.

## HTTPS Request

ESP HTTP client supports SSL connections using **mbedTLS**, with the `url` configuration starting with `https` scheme or `transport_type` set to `HTTP_TRANSPORT_OVER_SSL`. HTTPS support can be configured via `CONFIG_ESP_HTTP_CLIENT_ENABLE_HTTPS` (enabled by default).

---

**Note:** While making HTTPS requests, if server verification is needed, additional root certificate (in PEM format) needs to be provided to the `cert_pem` member in `esp_http_client_config_t` configuration. Users can also use the ESP x509 Certificate Bundle for server verification using the `crt_bundle_attach` member of the `esp_http_client_config_t` configuration.

---

Check out the example functions `https_with_url` and `https_with_hostname_path` in the application example. (Implementation details of the above note are found [here](#))

## HTTP Stream

Some applications need to open the connection and control the exchange of data actively (data streaming). In such cases, the application flow is different from regular requests. Example flow is given below:

- `esp_http_client_init()`: Create a HTTP client handle
- `esp_http_client_set_*` or `esp_http_client_delete_*`: Modify the HTTP connection parameters (optional)
- `esp_http_client_open()`: Open the HTTP connection with `write_len` parameter (content length that needs to be written to server), set `write_len=0` for read-only connection
- `esp_http_client_write()`: Write data to server with a maximum length equal to `write_len` of `esp_http_client_open()` function; no need to call this function for `write_len=0`
- `esp_http_client_fetch_headers()`: Read the HTTP Server response headers, after sending the request headers and server data (if any). Returns the `content-length` from the server and can be succeeded by `esp_http_client_get_status_code()` for getting the HTTP status of the connection.
- `esp_http_client_read()`: Read the HTTP stream
- `esp_http_client_close()`: Close the connection
- `esp_http_client_cleanup()`: Release allocated resources

Check out the example function `http_perform_as_stream_reader` in the application example for implementation details.

## HTTP Authentication

**ESP HTTP client supports both Basic and Digest Authentication.**

- Users can provide the username and password in the `url` or the `username` and `password` members of the `esp_http_client_config_t` configuration. For `auth_type = HTTP_AUTH_TYPE_BASIC`, the HTTP client takes only 1 perform operation to pass the authentication process.

- If `auth_type = HTTP_AUTH_TYPE_NONE`, but the `username` and `password` fields are present in the configuration, the HTTP client takes 2 perform operations. The client will receive the 401 `Unauthorized` header in its first attempt to connect to the server. Based on this information, it decides which authentication method to choose and performs it in the second operation.
- Check out the example functions `http_auth_basic`, `http_auth_basic_redirect` (for Basic authentication) and `http_auth_digest` (for Digest authentication) in the application example for implementation details.

### Examples of Authentication Configuration

- Authentication with URI

```
esp_http_client_config_t config = {
    .url = "http://user:passwd@httpbin.org/basic-auth/user/passwd",
    .auth_type = HTTP_AUTH_TYPE_BASIC,
};
```

- Authentication with username and password entry

```
esp_http_client_config_t config = {
    .url = "http://httpbin.org/basic-auth/user/passwd",
    .username = "user",
    .password = "passwd",
    .auth_type = HTTP_AUTH_TYPE_BASIC,
};
```

## API Reference

### Header File

- `components/esp_http_client/include/esp_http_client.h`

### Functions

`esp_http_client_handle_t esp_http_client_init` (const `esp_http_client_config_t` \*config)

Start a HTTP session This function must be the first function to call, and it returns a `esp_http_client_handle_t` that you must use as input to other functions in the interface. This call MUST have a corresponding call to `esp_http_client_cleanup` when the operation is complete.

**Parameters** `config` –[in] The configurations, see `http_client_config_t`

#### Returns

- `esp_http_client_handle_t`
- NULL if any errors

`esp_err_t esp_http_client_perform` (`esp_http_client_handle_t` client)

Invoke this function after `esp_http_client_init` and all the options calls are made, and will perform the transfer as described in the options. It must be called with the same `esp_http_client_handle_t` as input as the `esp_http_client_init` call returned. `esp_http_client_perform` performs the entire request in either blocking or non-blocking manner. By default, the API performs request in a blocking manner and returns when done, or if it failed, and in non-blocking manner, it returns if `EAGAIN/EWOULDBLOCK` or `EINPROGRESS` is encountered, or if it failed. And in case of non-blocking request, the user may call this API multiple times unless request & response is complete or there is a failure. To enable non-blocking `esp_http_client_perform()`, `is_async` member of `esp_http_client_config_t` must be set while making a call to `esp_http_client_init()` API. You can do any amount of calls to `esp_http_client_perform` while using the same `esp_http_client_handle_t`. The underlying connection may be kept open if the server allows it. If you intend to transfer more than one file, you are even encouraged to do so. `esp_http_client` will then attempt to reuse the same connection for the following transfers, thus making the operations faster, less CPU intense and using less network resources. Just note that you will have to use `esp_http_client_set_*` between the invokes to set options for the following `esp_http_client_perform`.

**Note:** You must never call this function simultaneously from two places using the same client handle. Let the function return first before invoking it another time. If you want parallel transfers, you must use several `esp_http_client_handle_t`. This function include `esp_http_client_open` -> `esp_http_client_write` -> `esp_http_client_fetch_headers` -> `esp_http_client_read` (and option) `esp_http_client_close`.

---

**Parameters** `client` –The `esp_http_client` handle

**Returns**

- `ESP_OK` on successful
- `ESP_FAIL` on error

*esp\_err\_t* `esp_http_client_set_url` (*esp\_http\_client\_handle\_t* client, const char \*url)

Set URL for client, when performing this behavior, the options in the URL will replace the old ones.

**Parameters**

- `client` –[in] The `esp_http_client` handle
- `url` –[in] The url

**Returns**

- `ESP_OK`
- `ESP_FAIL`

*esp\_err\_t* `esp_http_client_set_post_field` (*esp\_http\_client\_handle\_t* client, const char \*data, int len)

Set post data, this function must be called before `esp_http_client_perform`. Note: The data parameter passed to this function is a pointer and this function will not copy the data.

**Parameters**

- `client` –[in] The `esp_http_client` handle
- `data` –[in] post data pointer
- `len` –[in] post length

**Returns**

- `ESP_OK`
- `ESP_FAIL`

int `esp_http_client_get_post_field` (*esp\_http\_client\_handle\_t* client, char \*\*data)

Get current post field information.

**Parameters**

- `client` –[in] The client
- `data` –[out] Point to post data pointer

**Returns** Size of post data

*esp\_err\_t* `esp_http_client_set_header` (*esp\_http\_client\_handle\_t* client, const char \*key, const char \*value)

Set http request header, this function must be called after `esp_http_client_init` and before any perform function.

**Parameters**

- `client` –[in] The `esp_http_client` handle
- `key` –[in] The header key
- `value` –[in] The header value

**Returns**

- `ESP_OK`
- `ESP_FAIL`

*esp\_err\_t* `esp_http_client_get_header` (*esp\_http\_client\_handle\_t* client, const char \*key, char \*\*value)

Get http request header. The value parameter will be set to NULL if there is no header which is same as the key specified, otherwise the address of header value will be assigned to value parameter. This function must be called after `esp_http_client_init`.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **key** –[in] The header key
- **value** –[out] The header value

**Returns**

- ESP\_OK
- ESP\_FAIL

*esp\_err\_t* **esp\_http\_client\_get\_username** (*esp\_http\_client\_handle\_t* client, char \*\*value)

Get http request username. The address of username buffer will be assigned to value parameter. This function must be called after esp\_http\_client\_init.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **value** –[out] The username value

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

*esp\_err\_t* **esp\_http\_client\_set\_username** (*esp\_http\_client\_handle\_t* client, const char \*username)

Set http request username. The value of username parameter will be assigned to username buffer. If the username parameter is NULL then username buffer will be freed.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **username** –[in] The username value

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

*esp\_err\_t* **esp\_http\_client\_get\_password** (*esp\_http\_client\_handle\_t* client, char \*\*value)

Get http request password. The address of password buffer will be assigned to value parameter. This function must be called after esp\_http\_client\_init.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **value** –[out] The password value

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

*esp\_err\_t* **esp\_http\_client\_set\_password** (*esp\_http\_client\_handle\_t* client, const char \*password)

Set http request password. The value of password parameter will be assigned to password buffer. If the password parameter is NULL then password buffer will be freed.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **password** –[in] The password value

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

*esp\_err\_t* **esp\_http\_client\_set\_auth\_type** (*esp\_http\_client\_handle\_t* client, *esp\_http\_client\_auth\_type\_t* auth\_type)

Set http request auth\_type.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **auth\_type** –[in] The esp\_http\_client auth type

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

int **esp\_http\_client\_get\_errno** (*esp\_http\_client\_handle\_t* client)

Get HTTP client session errno.

**Parameters** **client** –[in] The esp\_http\_client handle

**Returns**

- (-1) if invalid argument
- errno

*esp\_err\_t* **esp\_http\_client\_set\_method** (*esp\_http\_client\_handle\_t* client, *esp\_http\_client\_method\_t* method)

Set http request method.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **method** –[in] The method

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

*esp\_err\_t* **esp\_http\_client\_set\_timeout\_ms** (*esp\_http\_client\_handle\_t* client, int timeout\_ms)

Set http request timeout.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **timeout\_ms** –[in] The timeout value

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

*esp\_err\_t* **esp\_http\_client\_delete\_header** (*esp\_http\_client\_handle\_t* client, const char \*key)

Delete http request header.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **key** –[in] The key

**Returns**

- ESP\_OK
- ESP\_FAIL

*esp\_err\_t* **esp\_http\_client\_open** (*esp\_http\_client\_handle\_t* client, int write\_len)

This function will be open the connection, write all header strings and return.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **write\_len** –[in] HTTP Content length need to write to the server

**Returns**

- ESP\_OK
- ESP\_FAIL

int **esp\_http\_client\_write** (*esp\_http\_client\_handle\_t* client, const char \*buffer, int len)

This function will write data to the HTTP connection previously opened by esp\_http\_client\_open()

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **buffer** –The buffer
- **len** –[in] This value must not be larger than the write\_len parameter provided to esp\_http\_client\_open()

**Returns**

- (-1) if any errors
- Length of data written

`int64_t esp_http_client_fetch_headers` (*esp\_http\_client\_handle\_t* client)

This function need to call after `esp_http_client_open`, it will read from http stream, process all receive headers.

**Parameters** `client` –[in] The `esp_http_client` handle

**Returns**

- (0) if stream doesn't contain content-length header, or chunked encoding (checked by `esp_http_client_is_chunked_response`)
- (-1: `ESP_FAIL`) if any errors
- (`-ESP_ERR_HTTP_EAGAIN = -0x7007`) if call is timed-out before any data was ready
- Download data length defined by content-length header

`bool esp_http_client_is_chunked_response` (*esp\_http\_client\_handle\_t* client)

Check response data is chunked.

**Parameters** `client` –[in] The `esp_http_client` handle

**Returns** true or false

`int esp_http_client_read` (*esp\_http\_client\_handle\_t* client, char \*buffer, int len)

Read data from http stream.

---

**Note:** (`-ESP_ERR_HTTP_EAGAIN = -0x7007`) is returned when call is timed-out before any data was ready

---

**Parameters**

- `client` –[in] The `esp_http_client` handle
- `buffer` –The buffer
- `len` –[in] The length

**Returns**

- (-1) if any errors
- Length of data was read

`int esp_http_client_get_status_code` (*esp\_http\_client\_handle\_t* client)

Get http response status code, the valid value if this function invoke after `esp_http_client_perform`

**Parameters** `client` –[in] The `esp_http_client` handle

**Returns** Status code

`int64_t esp_http_client_get_content_length` (*esp\_http\_client\_handle\_t* client)

Get http response content length (from header Content-Length) the valid value if this function invoke after `esp_http_client_perform`

**Parameters** `client` –[in] The `esp_http_client` handle

**Returns**

- (-1) Chunked transfer
- Content-Length value as bytes

*esp\_err\_t* `esp_http_client_close` (*esp\_http\_client\_handle\_t* client)

Close http connection, still kept all http request resources.

**Parameters** `client` –[in] The `esp_http_client` handle

**Returns**

- `ESP_OK`
- `ESP_FAIL`

*esp\_err\_t* `esp_http_client_cleanup` (*esp\_http\_client\_handle\_t* client)

This function must be the last function to call for an session. It is the opposite of the `esp_http_client_init` function and must be called with the same handle as input that a `esp_http_client_init` call returned. This might close all connections this handle has used and possibly has kept open until now. Don't call this function if you intend to transfer more files, re-using handles is a key to good performance with `esp_http_client`.

**Parameters** `client` –[in] The `esp_http_client` handle

**Returns**

- ESP\_OK
- ESP\_FAIL

*esp\_http\_client\_transport\_t* **esp\_http\_client\_get\_transport\_type** (*esp\_http\_client\_handle\_t* client)

Get transport type.

**Parameters** **client** –[in] The esp\_http\_client handle

**Returns**

- HTTP\_TRANSPORT\_UNKNOWN
- HTTP\_TRANSPORT\_OVER\_TCP
- HTTP\_TRANSPORT\_OVER\_SSL

*esp\_err\_t* **esp\_http\_client\_set\_redirection** (*esp\_http\_client\_handle\_t* client)

Set redirection URL. When received the 30x code from the server, the client stores the redirect URL provided by the server. This function will set the current URL to redirect to enable client to execute the redirection request. When `disable_auto_redirect` is set, the client will not call this function but the event `HTTP_EVENT_REDIRECT` will be dispatched giving the user control over the redirection event.

**Parameters** **client** –[in] The esp\_http\_client handle

**Returns**

- ESP\_OK
- ESP\_FAIL

*esp\_err\_t* **esp\_http\_client\_reset\_redirect\_counter** (*esp\_http\_client\_handle\_t* client)

Reset the redirection counter. This is useful to reset redirect counter in cases where the same handle is used for multiple requests.

**Parameters** **client** –[in] The esp\_http\_client handle

**Returns**

- ESP\_OK
- ESP\_ERR\_INVALID\_ARG

void **esp\_http\_client\_add\_auth** (*esp\_http\_client\_handle\_t* client)

On receiving HTTP Status code 401, this API can be invoked to add authorization information.

---

**Note:** There is a possibility of receiving body message with redirection status codes, thus make sure to flush off body data after calling this API.

---

**Parameters** **client** –[in] The esp\_http\_client handle

bool **esp\_http\_client\_is\_complete\_data\_received** (*esp\_http\_client\_handle\_t* client)

Checks if entire data in the response has been read without any error.

**Parameters** **client** –[in] The esp\_http\_client handle

**Returns**

- true
- false

int **esp\_http\_client\_read\_response** (*esp\_http\_client\_handle\_t* client, char \*buffer, int len)

Helper API to read larger data chunks This is a helper API which internally calls `esp_http_client_read` multiple times till the end of data is reached or till the buffer gets full.

**Parameters**

- **client** –[in] The esp\_http\_client handle
- **buffer** –The buffer
- **len** –[in] The buffer length

**Returns**

- Length of data was read

*esp\_err\_t* **esp\_http\_client\_flush\_response** (*esp\_http\_client\_handle\_t* client, int \*len)

Process all remaining response data This uses an internal buffer to repeatedly receive, parse, and discard response data until complete data is processed. As no additional user-supplied buffer is required, this may be preferable to `esp_http_client_read_response` in situations where the content of the response may be ignored.

#### Parameters

- **client** –[in] The `esp_http_client` handle
- **len** –Length of data discarded

#### Returns

- ESP\_OK If successful, len will have discarded length
- ESP\_FAIL If failed to read response
- ESP\_ERR\_INVALID\_ARG If the client is NULL

*esp\_err\_t* **esp\_http\_client\_get\_url** (*esp\_http\_client\_handle\_t* client, char \*url, const int len)

Get URL from client.

#### Parameters

- **client** –[in] The `esp_http_client` handle
- **url** –[inout] The buffer to store URL
- **len** –[in] The buffer length

#### Returns

- ESP\_OK
- ESP\_FAIL

*esp\_err\_t* **esp\_http\_client\_get\_chunk\_length** (*esp\_http\_client\_handle\_t* client, int \*len)

Get Chunk-Length from client.

#### Parameters

- **client** –[in] The `esp_http_client` handle
- **len** –[out] Variable to store length

#### Returns

- ESP\_OK If successful, len will have length of current chunk
- ESP\_FAIL If the server is not a chunked server
- ESP\_ERR\_INVALID\_ARG If the client or len are NULL

## Structures

struct **esp\_http\_client\_event**

HTTP Client events data.

### Public Members

*esp\_http\_client\_event\_id\_t* **event\_id**

event\_id, to know the cause of the event

*esp\_http\_client\_handle\_t* **client**

`esp_http_client_handle_t` context

void \***data**

data of the event

int **data\_len**

data length of data

void **\*user\_data**

user\_data context, from *esp\_http\_client\_config\_t* user\_data

char **\*header\_key**

For HTTP\_EVENT\_ON\_HEADER event\_id, it's store current http header key

char **\*header\_value**

For HTTP\_EVENT\_ON\_HEADER event\_id, it's store current http header value

struct **esp\_http\_client\_config\_t**

HTTP configuration.

### Public Members

const char **\*url**

HTTP URL, the information on the URL is most important, it overrides the other fields below, if any

const char **\*host**

Domain or IP as string

int **port**

Port to connect, default depend on esp\_http\_client\_transport\_t (80 or 443)

const char **\*username**

Using for Http authentication

const char **\*password**

Using for Http authentication

*esp\_http\_client\_auth\_type\_t* **auth\_type**

Http authentication type, see *esp\_http\_client\_auth\_type\_t*

const char **\*path**

HTTP Path, if not set, default is /

const char **\*query**

HTTP query

const char **\*cert\_pem**

SSL server certification, PEM format as string, if the client requires to verify server

size\_t **cert\_len**

Length of the buffer pointed to by cert\_pem. May be 0 for null-terminated pem

const char **\*client\_cert\_pem**

SSL client certification, PEM format as string, if the server requires to verify client

size\_t **client\_cert\_len**

Length of the buffer pointed to by client\_cert\_pem. May be 0 for null-terminated pem

const char \***client\_key\_pem**

SSL client key, PEM format as string, if the server requires to verify client

size\_t **client\_key\_len**

Length of the buffer pointed to by client\_key\_pem. May be 0 for null-terminated pem

const char \***client\_key\_password**

Client key decryption password string

size\_t **client\_key\_password\_len**

String length of the password pointed to by client\_key\_password

*esp\_http\_client\_proto\_ver\_t* **tls\_version**

TLS protocol version of the connection, e.g., TLS 1.2, TLS 1.3 (default - no preference)

const char \***user\_agent**

The User Agent string to send with HTTP requests

*esp\_http\_client\_method\_t* **method**

HTTP Method

int **timeout\_ms**

Network timeout in milliseconds

bool **disable\_auto\_redirect**

Disable HTTP automatic redirects

int **max\_redirection\_count**

Max number of redirections on receiving HTTP redirect status code, using default value if zero

int **max\_authorization\_retries**

Max connection retries on receiving HTTP unauthorized status code, using default value if zero. Disables authorization retry if -1

*http\_event\_handle\_cb* **event\_handler**

HTTP Event Handle

*esp\_http\_client\_transport\_t* **transport\_type**

HTTP transport type, see esp\_http\_client\_transport\_t

int **buffer\_size**

HTTP receive buffer size

int **buffer\_size\_tx**

HTTP transmit buffer size

void **\*user\_data**

HTTP user\_data context

bool **is\_async**

Set asynchronous mode, only supported with HTTPS for now

bool **use\_global\_ca\_store**

Use a global ca\_store for all the connections in which this bool is set.

bool **skip\_cert\_common\_name\_check**

Skip any validation of server certificate CN field

*esp\_err\_t* (**\*crt\_bundle\_attach**)(void \*conf)

Function pointer to esp\_cert\_bundle\_attach. Enables the use of certification bundle for server verification, must be enabled in menuconfig

bool **keep\_alive\_enable**

Enable keep-alive timeout

int **keep\_alive\_idle**

Keep-alive idle time. Default is 5 (second)

int **keep\_alive\_interval**

Keep-alive interval time. Default is 5 (second)

int **keep\_alive\_count**

Keep-alive packet retry send count. Default is 3 counts

struct ifreq **\*if\_name**

The name of interface for data to go through. Use the default interface without setting

## Macros

**DEFAULT\_HTTP\_BUF\_SIZE**

**ESP\_ERR\_HTTP\_BASE**

Starting number of HTTP error codes

**ESP\_ERR\_HTTP\_MAX\_REDIRECT**

The error exceeds the number of HTTP redirects

**ESP\_ERR\_HTTP\_CONNECT**

Error open the HTTP connection

**ESP\_ERR\_HTTP\_WRITE\_DATA**

Error write HTTP data

**ESP\_ERR\_HTTP\_FETCH\_HEADER**

Error read HTTP header from server

**ESP\_ERR\_HTTP\_INVALID\_TRANSPORT**

There are no transport support for the input scheme

**ESP\_ERR\_HTTP\_CONNECTING**

HTTP connection hasn't been established yet

**ESP\_ERR\_HTTP\_EAGAIN**

Mapping of errno EAGAIN to esp\_err\_t

**ESP\_ERR\_HTTP\_CONNECTION\_CLOSED**

Read FIN from peer and the connection closed

**Type Definitions**

```
typedef struct esp_http_client *esp_http_client_handle_t
```

```
typedef struct esp_http_client_event *esp_http_client_event_handle_t
```

```
typedef struct esp_http_client_event esp_http_client_event_t
```

HTTP Client events data.

```
typedef esp_err_t (*http_event_handle_cb)(esp_http_client_event_t *evt)
```

**Enumerations**

```
enum esp_http_client_event_id_t
```

HTTP Client events id.

*Values:*

```
enumerator HTTP_EVENT_ERROR
```

This event occurs when there are any errors during execution

```
enumerator HTTP_EVENT_ON_CONNECTED
```

Once the HTTP has been connected to the server, no data exchange has been performed

```
enumerator HTTP_EVENT_HEADERS_SENT
```

After sending all the headers to the server

```
enumerator HTTP_EVENT_HEADER_SENT
```

This header has been kept for backward compatibility and will be deprecated in future versions esp-idf

```
enumerator HTTP_EVENT_ON_HEADER
```

Occurs when receiving each header sent from the server

```
enumerator HTTP_EVENT_ON_DATA
```

Occurs when receiving data from the server, possibly multiple portions of the packet

```
enumerator HTTP_EVENT_ON_FINISH
```

Occurs when finish a HTTP session

enumerator **HTTP\_EVENT\_DISCONNECTED**

The connection has been disconnected

enumerator **HTTP\_EVENT\_REDIRECT**

Intercepting HTTP redirects to handle them manually

enum **esp\_http\_client\_transport\_t**

HTTP Client transport.

*Values:*

enumerator **HTTP\_TRANSPORT\_UNKNOWN**

Unknown

enumerator **HTTP\_TRANSPORT\_OVER\_TCP**

Transport over tcp

enumerator **HTTP\_TRANSPORT\_OVER\_SSL**

Transport over ssl

enum **esp\_http\_client\_proto\_ver\_t**

*Values:*

enumerator **ESP\_HTTP\_CLIENT\_TLS\_VER\_ANY**

enumerator **ESP\_HTTP\_CLIENT\_TLS\_VER\_TLS\_1\_2**

enumerator **ESP\_HTTP\_CLIENT\_TLS\_VER\_TLS\_1\_3**

enumerator **ESP\_HTTP\_CLIENT\_TLS\_VER\_MAX**

enum **esp\_http\_client\_method\_t**

HTTP method.

*Values:*

enumerator **HTTP\_METHOD\_GET**

HTTP GET Method

enumerator **HTTP\_METHOD\_POST**

HTTP POST Method

enumerator **HTTP\_METHOD\_PUT**

HTTP PUT Method

enumerator **HTTP\_METHOD\_PATCH**

HTTP PATCH Method

enumerator **HTTP\_METHOD\_DELETE**

HTTP DELETE Method

enumerator **HTTP\_METHOD\_HEAD**

HTTP HEAD Method

enumerator **HTTP\_METHOD\_NOTIFY**

HTTP NOTIFY Method

enumerator **HTTP\_METHOD\_SUBSCRIBE**

HTTP SUBSCRIBE Method

enumerator **HTTP\_METHOD\_UNSUBSCRIBE**

HTTP UNSUBSCRIBE Method

enumerator **HTTP\_METHOD\_OPTIONS**

HTTP OPTIONS Method

enumerator **HTTP\_METHOD\_COPY**

HTTP COPY Method

enumerator **HTTP\_METHOD\_MOVE**

HTTP MOVE Method

enumerator **HTTP\_METHOD\_LOCK**

HTTP LOCK Method

enumerator **HTTP\_METHOD\_UNLOCK**

HTTP UNLOCK Method

enumerator **HTTP\_METHOD\_PROPFIND**

HTTP PROPFIND Method

enumerator **HTTP\_METHOD\_PROPPATCH**

HTTP PROPPATCH Method

enumerator **HTTP\_METHOD\_MKCOL**

HTTP MKCOL Method

enumerator **HTTP\_METHOD\_MAX**

enum **esp\_http\_client\_auth\_type\_t**

HTTP Authentication type.

*Values:*

enumerator **HTTP\_AUTH\_TYPE\_NONE**

No authentication

enumerator **HTTP\_AUTH\_TYPE\_BASIC**

HTTP Basic authentication

    .usr_ctx_free_fn = NULL
},
/* Maximum number of properties that may be set */
.max_properties = 10
};

/* Start esp_local_ctrl service */
ESP_ERROR_CHECK(esp_local_ctrl_start(&config));

```

Similarly for HTTPS transport:

```

/* Set the configuration */
httpd_ssl_config_t https_conf = HTTPD_SSL_CONFIG_DEFAULT();

/* Load server certificate */
extern const unsigned char servercert_start[] asm("_binary_servercert_pem_
↪start");
extern const unsigned char servercert_end[]   asm("_binary_servercert_pem_
↪end");
https_conf.servercert = servercert_start;
https_conf.servercert_len = servercert_end - servercert_start;

/* Load server private key */
extern const unsigned char prvtkey_pem_start[] asm("_binary_prvtkey_pem_
↪start");
extern const unsigned char prvtkey_pem_end[]   asm("_binary_prvtkey_pem_
↪end");
https_conf.prvtkey_pem = prvtkey_pem_start;
https_conf.prvtkey_len = prvtkey_pem_end - prvtkey_pem_start;

esp_local_ctrl_config_t config = {
    .transport = ESP_LOCAL_CTRL_TRANSPORT_HTTPD,
    .transport_config = {
        .httpd = &https_conf
    },
    .proto_sec = {
        .version = PROTOCOM_SEC0,
        .custom_handle = NULL,
        .pop = NULL,
    },
    .handlers = {
        /* User defined handler functions */
        .get_prop_values = get_property_values,
        .set_prop_values = set_property_values,
        .usr_ctx         = NULL,
        .usr_ctx_free_fn = NULL
    }
};

```

(continues on next page)

(continued from previous page)

```

    },
    /* Maximum number of properties that may be set */
    .max_properties = 10
};

/* Start esp_local_ctrl service */
ESP_ERROR_CHECK(esp_local_ctrl_start(&config));

```

You may set security for transport in ESP local control using following options:

1. *PROTOCOL\_SEC2*: specifies that SRP6a based key exchange and end to end encryption based on AES-GCM is used. This is the most preferred option as it adds a robust security with Augmented PAKE protocol i.e. SRP6a.
2. *PROTOCOL\_SEC1*: specifies that Curve25519 based key exchange and end to end encryption based on AES-CTR is used.
3. *PROTOCOL\_SEC0*: specifies that data will be exchanged as a plain text (no security).
4. *PROTOCOL\_SEC\_CUSTOM*: you can define your own security requirement. Please note that you will also have to provide *custom\_handle* of type *protocomm\_security\_t* \* in this context.

**Note:** The respective security schemes need to be enabled through the project configuration menu. Please refer to the Enabling protocol security version section in *Protocol Communication* for more details.

### Creating a property

Now that we know how to start the `esp_local_ctrl` service, let's add a property to it. Each property must have a unique *name* (string), a *type* (e.g. enum), *flags* (bit fields) and *size*.

The *size* is to be kept 0, if we want our property value to be of variable length (e.g. if its a string or bytestream). For fixed length property value data-types, like int, float, etc., setting the *size* field to the right value, helps `esp_local_ctrl` to perform internal checks on arguments received with write requests.

The interpretation of *type* and *flags* fields is totally upto the application, hence they may be used as enumerations, bit-fields, or even simple integers. One way is to use *type* values to classify properties, while *flags* to specify characteristics of a property.

Here is an example property which is to function as a timestamp. It is assumed that the application defines *TYPE\_TIMESTAMP* and *READONLY*, which are used for setting the *type* and *flags* fields here.

```

/* Create a timestamp property */
esp_local_ctrl_prop_t timestamp = {
    .name      = "timestamp",
    .type      = TYPE_TIMESTAMP,
    .size      = sizeof(int32_t),
    .flags     = READONLY,
    .ctx       = func_get_time,
    .ctx_free_fn = NULL
};

/* Now register the property */
esp_local_ctrl_add_property(&timestamp);

```

Also notice that there is a *ctx* field, which is set to point to some custom *func\_get\_time()*. This can be used inside the property get / set handlers to retrieve timestamp.

Here is an example of *get\_prop\_values()* handler, which is used for retrieving the timestamp.

```

static esp_err_t get_property_values(size_t props_count,
                                     const esp_local_ctrl_prop_t *props,

```

(continues on next page)

(continued from previous page)

```

                                esp_local_ctrl_prop_val_t *prop_
->values,                                void *usr_ctx)
{
    for (uint32_t i = 0; i < props_count; i++) {
        ESP_LOGI(TAG, "Reading %s", props[i].name);
        if (props[i].type == TYPE_TIMESTAMP) {
            /* Obtain the timer function from ctx */
            int32_t (*func_get_time)(void) = props[i].ctx;

            /* Use static variable for saving the value.
             * This is essential because the value has to be
             * valid even after this function returns.
             * Alternative is to use dynamic allocation
             * and set the free_fn field */
            static int32_t ts = func_get_time();
            prop_values[i].data = &ts;
        }
    }
    return ESP_OK;
}

```

Here is an example of `set_prop_values()` handler. Notice how we restrict from writing to read-only properties.

```

static esp_err_t set_property_values(size_t props_count,
                                    const esp_local_ctrl_prop_t *props,
                                    const esp_local_ctrl_prop_val_t_
->*prop_values,
                                    void *usr_ctx)
{
    for (uint32_t i = 0; i < props_count; i++) {
        if (props[i].flags & READONLY) {
            ESP_LOGE(TAG, "Cannot write to read-only property %s",
->props[i].name);
            return ESP_ERR_INVALID_ARG;
        } else {
            ESP_LOGI(TAG, "Setting %s", props[i].name);

            /* For keeping it simple, lets only log the incoming data */
            ESP_LOG_BUFFER_HEX_LEVEL(TAG, prop_values[i].data,
                                     prop_values[i].size, ESP_LOG_INFO);
        }
    }
    return ESP_OK;
}

```

For complete example see [protocols/esp\\_local\\_ctrl](#)

### Client Side Implementation

The client side implementation will have establish a protocomm session with the device first, over the supported mode of transport, and then send and receive protobuf messages understood by the `esp_local_ctrl` service. The service will translate these messages into requests and then call the appropriate handlers (set / get). Then, the generated response for each handler is again packed into a protobuf message and transmitted back to the client.

See below the various protobuf messages understood by the `esp_local_ctrl` service:

1. `get_prop_count` : This should simply return the total number of properties supported by the service
2. `get_prop_values` : This accepts an array of indices and should return the information (name, type, flags) and values of the properties corresponding to those indices

3. *set\_prop\_values* : This accepts an array of indices and an array of new values, which are used for setting the values of the properties corresponding to the indices

Note that indices may or may not be the same for a property, across multiple sessions. Therefore, the client must only use the names of the properties to uniquely identify them. So, every time a new session is established, the client should first call *get\_prop\_count* and then *get\_prop\_values*, hence form an index to name mapping for all properties. Now when calling *set\_prop\_values* for a set of properties, it must first convert the names to indexes, using the created mapping. As emphasized earlier, the client must refresh the index to name mapping every time a new session is established with the same device.

The various protocomm endpoints provided by **esp\_local\_ctrl** are listed below:

Table 1: Endpoints provided by ESP Local Control

Endpoint Name (BLE + GATT Server)	URI (HTTPS + mDNS)	Description
<code>esp_local_ctrl_version</code>	<code>https://&lt;mdns-hostname&gt;.local/esp_local_ctrl/version</code>	Endpoint used for retrieving version string
<code>esp_local_ctrl_ctrl</code>	<code>https://&lt;mdns-hostname&gt;.local/esp_local_ctrl/control</code>	Endpoint used for sending / receiving control messages

## API Reference

### Header File

- [components/esp\\_local\\_ctrl/include/esp\\_local\\_ctrl.h](#)

### Functions

`const esp_local_ctrl_transport_t *esp_local_ctrl_get_transport_ble` (void)

Function for obtaining BLE transport mode.

`const esp_local_ctrl_transport_t *esp_local_ctrl_get_transport_httpd` (void)

Function for obtaining HTTPD transport mode.

`esp_err_t esp_local_ctrl_start` (const `esp_local_ctrl_config_t` \*config)

Start local control service.

**Parameters** `config` –[in] Pointer to configuration structure

**Returns**

- ESP\_OK : Success
- ESP\_FAIL : Failure

`esp_err_t esp_local_ctrl_stop` (void)

Stop local control service.

`esp_err_t esp_local_ctrl_add_property` (const `esp_local_ctrl_prop_t` \*prop)

Add a new property.

This adds a new property and allocates internal resources for it. The total number of properties that could be added is limited by configuration option `max_properties`

**Parameters** `prop` –[in] Property description structure

**Returns**

- ESP\_OK : Success
- ESP\_FAIL : Failure

*esp\_err\_t* **esp\_local\_ctrl\_remove\_property** (const char \*name)

Remove a property.

This finds a property by name, and releases the internal resources which are associated with it.

**Parameters** **name** –[in] Name of the property to remove

**Returns**

- ESP\_OK : Success
- ESP\_ERR\_NOT\_FOUND : Failure

const *esp\_local\_ctrl\_prop\_t* \***esp\_local\_ctrl\_get\_property** (const char \*name)

Get property description structure by name.

This API may be used to get a property's context structure *esp\_local\_ctrl\_prop\_t* when its name is known

**Parameters** **name** –[in] Name of the property to find

**Returns**

- Pointer to property
- NULL if not found

*esp\_err\_t* **esp\_local\_ctrl\_set\_handler** (const char \*ep\_name, *protocomm\_req\_handler\_t* handler, void \*user\_ctx)

Register protocomm handler for a custom endpoint.

This API can be called by the application to register a protocomm handler for an endpoint after the local control service has started.

---

**Note:** In case of BLE transport the names and uuids of all custom endpoints must be provided beforehand as a part of the *protocomm\_ble\_config\_t* structure set in *esp\_local\_ctrl\_config\_t*, and passed to *esp\_local\_ctrl\_start()*.

---

**Parameters**

- **ep\_name** –[in] Name of the endpoint
- **handler** –[in] Endpoint handler function
- **user\_ctx** –[in] User data

**Returns**

- ESP\_OK : Success
- ESP\_FAIL : Failure

## Unions

union **esp\_local\_ctrl\_transport\_config\_t**

*#include <esp\_local\_ctrl.h>* Transport mode (BLE / HTTPD) configuration.

### Public Members

*esp\_local\_ctrl\_transport\_config\_ble\_t* \***ble**

This is same as *protocomm\_ble\_config\_t*. See *protocomm\_ble.h* for available configuration parameters.

*esp\_local\_ctrl\_transport\_config\_httpd\_t* \***httpd**

This is same as *httpd\_ssl\_config\_t*. See *esp\_https\_server.h* for available configuration parameters.

## Structures

### struct **esp\_local\_ctrl\_prop**

Property description data structure, which is to be populated and passed to the `esp_local_ctrl_add_property()` function.

Once a property is added, its structure is available for read-only access inside `get_prop_values()` and `set_prop_values()` handlers.

#### Public Members

char \***name**

Unique name of property

uint32\_t **type**

Type of property. This may be set to application defined enums

size\_t **size**

Size of the property value, which:

- if zero, the property can have values of variable size
- if non-zero, the property can have values of fixed size only, therefore, checks are performed internally by `esp_local_ctrl` when setting the value of such a property

uint32\_t **flags**

Flags set for this property. This could be a bit field. A flag may indicate property behavior, e.g. read-only / constant

void \***ctx**

Pointer to some context data relevant for this property. This will be available for use inside the `get_prop_values` and `set_prop_values` handlers as a part of this property structure. When set, this is valid throughout the lifetime of a property, till either the property is removed or the `esp_local_ctrl` service is stopped.

void (\***ctx\_free\_fn**)(void \*ctx)

Function used by `esp_local_ctrl` to internally free the property context when `esp_local_ctrl_remove_property()` or `esp_local_ctrl_stop()` is called.

### struct **esp\_local\_ctrl\_prop\_val**

Property value data structure. This gets passed to the `get_prop_values()` and `set_prop_values()` handlers for the purpose of retrieving or setting the present value of a property.

#### Public Members

void \***data**

Pointer to memory holding property value

size\_t **size**

Size of property value

```
void (*free_fn)(void *data)
```

This may be set by the application in `get_prop_values()` handler to tell `esp_local_ctrl` to call this function on the data pointer above, for freeing its resources after sending the `get_prop_values` response.

```
struct esp_local_ctrl_handlers
```

Handlers for receiving and responding to local control commands for getting and setting properties.

### Public Members

```
esp_err_t (*get_prop_values)(size_t props_count, const esp_local_ctrl_prop_t props[],  
esp_local_ctrl_prop_val_t prop_values[], void *usr_ctx)
```

Handler function to be implemented for retrieving current values of properties.

---

**Note:** If any of the properties have fixed sizes, the size field of corresponding element in `prop_values` need to be set

---

**Param props\_count [in]** Total elements in the props array

**Param props [in]** Array of properties, the current values for which have been requested by the client

**Param prop\_values [out]** Array of empty property values, the elements of which need to be populated with the current values of those properties specified by props argument

**Param usr\_ctx [in]** This provides value of the `usr_ctx` field of `esp_local_ctrl_handlers_t` structure

**Return** Returning different error codes will convey the corresponding protocol level errors to the client :

- ESP\_OK : Success
- ESP\_ERR\_INVALID\_ARG : InvalidArgument
- ESP\_ERR\_INVALID\_STATE : InvalidProto
- All other error codes : InternalError

```
esp_err_t (*set_prop_values)(size_t props_count, const esp_local_ctrl_prop_t props[], const  
esp_local_ctrl_prop_val_t prop_values[], void *usr_ctx)
```

Handler function to be implemented for changing values of properties.

---

**Note:** If any of the properties have variable sizes, the size field of the corresponding element in `prop_values` must be checked explicitly before making any assumptions on the size.

---

**Param props\_count [in]** Total elements in the props array

**Param props [in]** Array of properties, the values for which the client requests to change

**Param prop\_values [in]** Array of property values, the elements of which need to be used for updating those properties specified by props argument

**Param usr\_ctx [in]** This provides value of the `usr_ctx` field of `esp_local_ctrl_handlers_t` structure

**Return** Returning different error codes will convey the corresponding protocol level errors to the client :

- ESP\_OK : Success
- ESP\_ERR\_INVALID\_ARG : InvalidArgument
- ESP\_ERR\_INVALID\_STATE : InvalidProto
- All other error codes : InternalError

void **\*usr\_ctx**

Context pointer to be passed to above handler functions upon invocation. This is different from the property level context, as this is valid throughout the lifetime of the `esp_local_ctrl` service, and freed only when the service is stopped.

void (**\*usr\_ctx\_free\_fn**)(void \*usr\_ctx)

Pointer to function which will be internally invoked on `usr_ctx` for freeing the context resources when `esp_local_ctrl_stop()` is called.

struct **esp\_local\_ctrl\_proto\_sec\_cfg**

Protocom security configs

### Public Members

*esp\_local\_ctrl\_proto\_sec\_t* **version**

This sets protocom security version, `sec0/sec1` or `custom`. If `custom`, user must provide handle via `proto_sec_custom_handle` below

void **\*custom\_handle**

Custom security handle if security is set `custom` via `proto_sec` above. This handle must follow `protocomm_security_t` signature

const void **\*pop**

Proof of possession to be used for local control. Could be `NULL`.

const void **\*sec\_params**

Pointer to security params (`NULL` if not needed). This is not needed for `protocomm` security 0. This pointer should hold the struct of type `esp_local_ctrl_security1_params_t` for `protocomm` security 1 and `esp_local_ctrl_security2_params_t` for `protocomm` security 2 respectively. Could be `NULL`.

struct **esp\_local\_ctrl\_config**

Configuration structure to pass to `esp_local_ctrl_start()`

### Public Members

const *esp\_local\_ctrl\_transport\_t* **\*transport**

Transport layer over which service will be provided

*esp\_local\_ctrl\_transport\_config\_t* **transport\_config**

Transport layer over which service will be provided

*esp\_local\_ctrl\_proto\_sec\_cfg\_t* **proto\_sec**

Security version and POP

*esp\_local\_ctrl\_handlers\_t* **handlers**

Register handlers for responding to get/set requests on properties

size\_t **max\_properties**

This limits the number of properties that are available at a time

## Macros

**ESP\_LOCAL\_CTRL\_TRANSPORT\_BLE**

**ESP\_LOCAL\_CTRL\_TRANSPORT\_HTTPD**

## Type Definitions

typedef struct *esp\_local\_ctrl\_prop* **esp\_local\_ctrl\_prop\_t**

Property description data structure, which is to be populated and passed to the `esp_local_ctrl_add_property()` function.

Once a property is added, its structure is available for read-only access inside `get_prop_values()` and `set_prop_values()` handlers.

typedef struct *esp\_local\_ctrl\_prop\_val* **esp\_local\_ctrl\_prop\_val\_t**

Property value data structure. This gets passed to the `get_prop_values()` and `set_prop_values()` handlers for the purpose of retrieving or setting the present value of a property.

typedef struct *esp\_local\_ctrl\_handlers* **esp\_local\_ctrl\_handlers\_t**

Handlers for receiving and responding to local control commands for getting and setting properties.

typedef struct *esp\_local\_ctrl\_transport* **esp\_local\_ctrl\_transport\_t**

Transport mode (BLE / HTTPD) over which the service will be provided.

This is forward declaration of a private structure, implemented internally by `esp_local_ctrl`.

typedef struct *protocomm\_ble\_config* **esp\_local\_ctrl\_transport\_config\_ble\_t**

Configuration for transport mode BLE.

This is a forward declaration for `protocomm_ble_config_t`. To use this, application must set `CONFIG_BT_BLUEDROID_ENABLED` and include `protocomm_ble.h`.

typedef struct *httpd\_config* **esp\_local\_ctrl\_transport\_config\_httpd\_t**

Configuration for transport mode HTTPD.

This is a forward declaration for `httpd_ssl_config_t` (for HTTPS) or `httpd_config_t` (for HTTP)

typedef enum *esp\_local\_ctrl\_proto\_sec* **esp\_local\_ctrl\_proto\_sec\_t**

Security types for `esp_local_control`.

typedef *protocomm\_security1\_params\_t* **esp\_local\_ctrl\_security1\_params\_t**

typedef *protocomm\_security2\_params\_t* **esp\_local\_ctrl\_security2\_params\_t**

typedef struct *esp\_local\_ctrl\_proto\_sec\_cfg* **esp\_local\_ctrl\_proto\_sec\_cfg\_t**

Protocom security configs

typedef struct *esp\_local\_ctrl\_config* **esp\_local\_ctrl\_config\_t**

Configuration structure to pass to `esp_local_ctrl_start()`

## Enumerations

enum **esp\_local\_ctrl\_proto\_sec**

Security types for esp\_local\_control.

*Values:*

enumerator **PROTOCOLCOM\_SEC0**

enumerator **PROTOCOLCOM\_SEC1**

enumerator **PROTOCOLCOM\_SEC2**

enumerator **PROTOCOLCOM\_SEC\_CUSTOM**

## 2.2.7 ESP Serial Slave Link

### Overview

Espressif provides several chips that can work as slaves. These slave devices rely on some common buses, and have their own communication protocols over those buses. The *esp\_serial\_slave\_link* component is designed for the master to communicate with ESP slave devices through those protocols over the bus drivers.

After an *esp\_serial\_slave\_link* device is initialized properly, the application can use it to communicate with the ESP slave devices conveniently.

### Espressif Device protocols

For more details about Espressif device protocols, see the following documents.

### ESP SPI Slave HD (Half Duplex) Mode Protocol

#### SPI Slave Capabilities of Espressif chips

	ESP32	ESP32-S2	ESP32-C3
SPI Slave HD	N	Y (v2)	Y (v2)
Tohost intr		N	N
Frhost intr		2 *	2 *
TX DMA		Y	Y
RX DMA		Y	Y
Shared registers		72	64

**Introduction** In the half duplex mode, the master has to use the protocol defined by the slave to communicate with the slave. Each transaction may consist of the following phases (list by the order they should exist):

- **Command:** 8-bit, master to slave  
This phase determines the rest phases of the transactions. See *Supported Commands*.
- **Address:** 8-bit, master to slave, optional  
For some commands (WRBUF, RDBUF), this phase specifies the address of the shared buffer to write to/read from. For other commands with this phase, they are meaningless but still have to exist in the transaction.
- **Dummy:** 8-bit, floating, optional  
This phase is the turnaround time between the master and the slave on the bus, and also provides enough time for the slave to prepare the data to send to the master.

- Data: variable length, the direction is also determined by the command.  
This may be a data OUT phase, in which the direction is slave to master, or a data IN phase, in which the direction is master to slave.

The *direction* means which side (master or slave) controls the MOSI, MISO, WP, and HD pins.

**Data IO Modes** In some IO modes, more data wires can be used to send the data. As a result, the SPI clock cycles required for the same amount of data will be less than in the 1-bit mode. For example, in QIO mode, address and data (IN and OUT) should be sent on all 4 data wires (MOSI, MISO, WP, and HD). Here are the modes supported by the ESP32-S2 SPI slave and the wire number used in corresponding modes.

Mode	command WN	address WN	dummy cycles	data WN
1-bit	1	1	1	1
DOUT	1	1	4	2
DIO	1	2	4	2
QOUT	1	1	4	4
QIO	1	4	4	4
QPI	4	4	4	4

Normally, which mode is used is determined by the command sent by the master (See [Supported Commands](#)), except the QPI mode.

**QPI Mode** The QPI mode is a special state of the SPI Slave. The master can send the ENQPI command to put the slave into the QPI mode state. In the QPI mode, the command is also sent in 4-bit, thus it's not compatible with the normal modes. The master should only send QPI commands when the slave is in QPI mode. To exit from the QPI mode, master can send the EXQPI command.

### Supported Commands

---

**Note:** The command name is in a master-oriented direction. For example, WRBUF means master writes the buffer of slave.

---

Name	Description	Command	Address	Data
WRBUF	Write buffer	0x01	Buf addr	master to slave, no longer than buffer size
RDBUF	Read buffer	0x02	Buf addr	slave to master, no longer than buffer size
WRDMA	Write DMA	0x03	8 bits	master to slave, no longer than length provided by slave
RDDMA	Read DMA	0x04	8 bits	slave to master, no longer than length provided by slave
SEG_DONE	Segments done	0x05	.	.
ENQPI	Enter QPI mode	0x06	.	.
WR_DONE	Write segments done	0x07	.	.
CMD8	Interrupt	0x08	.	.
CMD9	Interrupt	0x09	.	.
CMDA	Interrupt	0x0A	.	.
EXQPI	Exit QPI mode	0xDD	.	.

Moreover, WRBUF, RDBUF, WRDMA, RDDMA commands have their 2-bit and 4-bit version. To do transactions in 2-bit or 4-bit mode, send the original command ORed by the corresponding command mask below. For example, command 0xA1 means WRBUF in QIO mode.

Mode	Mask
1-bit	0x00
DOUT	0x10
DIO	0x50
QOUT	0x20
QIO	0xA0
QPI	0xA0

**Segment Transaction Mode** Segment transaction mode is the only mode supported by the SPI Slave HD driver for now. In this mode, for a transaction the slave load onto the DMA, the master is allowed to read or write in segments. This way the master doesn't have to prepare a large buffer as the size of data provided by the slave. After the master finishes reading/writing a buffer, it has to send the corresponding termination command to the slave as a synchronization signal. The slave driver will update new data (if exist) onto the DMA upon seeing the termination command.

The termination command is WR\_DONE (0x07) for the WRDMA and CMD8 (0x08) for the RDDMA.

Here's an example for the flow the master read data from the slave DMA:

1. The slave loads 4092 bytes of data onto the RDDMA
2. The master do seven RDDMA transactions, each of them is 512 bytes long, and reads the first 3584 bytes from the slave

3. The master do the last RDDMA transaction of 512 bytes (equal, longer, or shorter than the total length loaded by the slave are all allowed). The first 508 bytes are valid data from the slave, while the last 4 bytes are meaningless bytes.
4. The master sends CMD8 to the slave
5. The slave loads another 4092 bytes of data onto the RDDMA
6. The master can start new reading transactions after it sends the CMD8

### Terminology

- ESSL: Abbreviation for ESP Serial Slave Link, the component described by this document.
- Master: The device running the *esp\_serial\_slave\_link* component.
- ESSL device: a virtual device on the master associated with an ESP slave device. The device context has the knowledge of the slave protocol above the bus, relying on some bus drivers to communicate with the slave.
- ESSL device handle: a handle to ESSL device context containing the configuration, status and data required by the ESSL component. The context stores the driver configurations, communication state, data shared by master and slave, etc.  
The context should be initialized before it is used, and get deinitialized if not used any more. The master application operates on the ESSL device through this handle.
- ESP slave: the slave device connected to the bus, which ESSL component is designed to communicate with.
- Bus: The bus over which the master and the slave communicate with each other.
- Slave protocol: The special communication protocol specified by Espressif HW/SW over the bus.
- TX buffer num: a counter, which is on the slave and can be read by the master, indicates the accumulated buffer numbers that the slave has loaded to the hardware to receive data from the master.
- RX data size: a counter, which is on the slave and can be read by the master, indicates the accumulated data size that the slave has loaded to the hardware to send to the master.

### Services provided by ESP slave

There are some common services provided by the Espressif slaves:

1. Tohost Interrupts: The slave can inform the master about certain events by the interrupt line. (optional)
2. Frhost Interrupts: The master can inform the slave about certain events.
3. Tx FIFO (master to slave): the slave can send data in stream to the master. The SDIO slave can also indicate it has new data to send to master by the interrupt line.  
The slave updates the TX buffer num to inform the master how much data it can receive, and the master then read the TX buffer num, and take off the used buffer number to know how many buffers are remaining.
4. Rx FIFO (slave to master): the slave can receive data from the master in units of receiving buffers.  
The slave updates the RX data size to inform the master how much data it has prepared to send, and then the master read the data size, and take off the data length it has already received to know how many data is remaining.
5. Shared registers: the master can read some part of the registers on the slave, and also write these registers to let the slave read.

The services provided by the slave depends on the slave's model. See *SPI Slave Capabilities of Espressif chips* for more details.

### Initialization of ESP Serial Slave Link

**ESP SDIO Slave** The ESP SDIO slave link (ESSL SDIO) devices relies on the sdmmc component. It includes the usage of communicating with ESP SDIO Slave device via SDSPI feature. The ESSL device should be initialized as below:

1. Initialize a sdmmc card (see `:doc:` Document of SDMMC driver </api-reference/storage/sdmmc>``) structure.
2. Call `sdmmc_card_init()` to initialize the card.
3. Initialize the ESSL device with `essl_sdio_config_t`. The `card` member should be the `sdmmc_card_t` got in step 2, and the `recv_buffer_size` member should be filled correctly according to pre-negotiated value.

4. Call `essl_init()` to do initialization of the SDIO part.
5. Call `essl_wait_for_ready()` to wait for the slave to be ready.

### ESP SPI Slave

**Note:** If you are communicating with the ESP SDIO Slave device through SPI interface, you should use the *SDIO interface* instead.

---

Hasn't been supported yet.

### APIs

After the initialization process above is performed, you can call the APIs below to make use of the services provided by the slave:

#### Tohost Interrupts (optional)

1. Call `essl_get_intr_ena()` to know which events will trigger the interrupts to the master.
2. Call `essl_set_intr_ena()` to set the events that will trigger interrupts to the master.
3. Call `essl_wait_int()` to wait until interrupt from the slave, or timeout.
4. When interrupt is triggered, call `essl_get_intr()` to know which events are active, and call `essl_clear_intr()` to clear them.

#### Frhost Interrupts

1. Call `essl_send_slave_intr()` to trigger general purpose interrupt of the slave.

#### TX FIFO

1. Call `essl_get_tx_buffer_num()` to know how many buffers the slave has prepared to receive data from the master. This is optional. The master will poll `tx_buffer_num` when it try to send packets to the slave, until the slave has enough buffer or timeout.
2. Call `essl_send_packet()` to send data to the slave.

#### RX FIFO

1. Call `essl_get_rx_data_size()` to know how many data the slave has prepared to send to the master. This is optional. When the master tries to receive data from the slave, it will update the `rx_data_size` for once, if the current `rx_data_size` is shorter than the buffer size the master prepared to receive. And it may poll the `rx_data_size` if the `rx_data_size` keeps 0, until timeout.
2. Call `essl_get_packet()` to receive data from the slave.

**Reset counters (Optional)** Call `essl_reset_cnt()` to reset the internal counter if you find the slave has reset its counter.

### Application Example

The example below shows how ESP32-C2 SDIO host and slave communicate with each other. The host use the ESSL SDIO.

[peripherals/sdio](#).

Please refer to the specific example README.md for details.

## API Reference

### Header File

- `components/driver/test/esp_serial_slave_link/include/esp_serial_slave_link/essl.h`

### Functions

`esp_err_t` **essl\_init** (*essl\_handle\_t* handle, uint32\_t wait\_ms)

Initialize the slave.

#### Parameters

- **handle** –Handle of an ESSL device.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

#### Returns

- ESP\_OK: If success
- ESP\_ERR\_NOT\_SUPPORTED: Current device does not support this function.
- Other value returned from lower layer `init`.

`esp_err_t` **essl\_wait\_for\_ready** (*essl\_handle\_t* handle, uint32\_t wait\_ms)

Wait for interrupt of an ESSL slave device.

#### Parameters

- **handle** –Handle of an ESSL device.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

#### Returns

- ESP\_OK: If success
- ESP\_ERR\_NOT\_SUPPORTED: Current device does not support this function.
- One of the error codes from SDMMC host controller

`esp_err_t` **essl\_get\_tx\_buffer\_num** (*essl\_handle\_t* handle, uint32\_t \*out\_tx\_num, uint32\_t wait\_ms)

Get buffer num for the host to send data to the slave. The buffers are size of `buffer_size`.

#### Parameters

- **handle** –Handle of a ESSL device.
- **out\_tx\_num** –Output of buffer num that host can send data to ESSL slave.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

#### Returns

- ESP\_OK: Success
- ESP\_ERR\_NOT\_SUPPORTED: This API is not supported in this mode
- One of the error codes from SDMMC/SPI host controller

`esp_err_t` **essl\_get\_rx\_data\_size** (*essl\_handle\_t* handle, uint32\_t \*out\_rx\_size, uint32\_t wait\_ms)

Get the size, in bytes, of the data that the ESSL slave is ready to send

#### Parameters

- **handle** –Handle of an ESSL device.
- **out\_rx\_size** –Output of data size to read from slave, in bytes
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

#### Returns

- ESP\_OK: Success
- ESP\_ERR\_NOT\_SUPPORTED: This API is not supported in this mode
- One of the error codes from SDMMC/SPI host controller

`esp_err_t` **essl\_reset\_cnt** (*essl\_handle\_t* handle)

Reset the counters of this component. Usually you don't need to do this unless you know the slave is reset.

**Parameters** **handle** –Handle of an ESSL device.

#### Returns

- ESP\_OK: Success
- ESP\_ERR\_NOT\_SUPPORTED: This API is not supported in this mode
- ESP\_ERR\_INVALID\_ARG: Invalid argument, handle is not init.

*esp\_err\_t* **essl\_send\_packet** (*essl\_handle\_t* handle, const void \*start, size\_t length, uint32\_t wait\_ms)

Send a packet to the ESSL Slave. The Slave receives the packet into buffers whose size is `buffer_size` (configured during initialization).

#### Parameters

- **handle** –Handle of an ESSL device.
- **start** –Start address of the packet to send
- **length** –Length of data to send, if the packet is over-size, the it will be divided into blocks and hold into different buffers automatically.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

#### Returns

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG`: Invalid argument, handle is not init or other argument is not valid.
- `ESP_ERR_TIMEOUT`: No buffer to use, or error from SDMMC host controller.
- `ESP_ERR_NOT_FOUND`: Slave is not ready for receiving.
- `ESP_ERR_NOT_SUPPORTED`: This API is not supported in this mode
- One of the error codes from SDMMC/SPI host controller.

*esp\_err\_t* **essl\_get\_packet** (*essl\_handle\_t* handle, void \*out\_data, size\_t size, size\_t \*out\_length, uint32\_t wait\_ms)

Get a packet from ESSL slave.

#### Parameters

- **handle** –Handle of an ESSL device.
- **out\_data** –[out] Data output address
- **size** –The size of the output buffer, if the buffer is smaller than the size of data to receive from slave, the driver returns `ESP_ERR_NOT_FINISHED`
- **out\_length** –[out] Output of length the data actually received from slave.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

#### Returns

- `ESP_OK` Success: All the data has been read from the slave.
- `ESP_ERR_INVALID_ARG`: Invalid argument, The handle is not initialized or the other arguments are invalid.
- `ESP_ERR_NOT_FINISHED`: Read was successful, but there is still data remaining.
- `ESP_ERR_NOT_FOUND`: Slave is not ready to send data.
- `ESP_ERR_NOT_SUPPORTED`: This API is not supported in this mode
- One of the error codes from SDMMC/SPI host controller.

*esp\_err\_t* **essl\_write\_reg** (*essl\_handle\_t* handle, uint8\_t addr, uint8\_t value, uint8\_t \*value\_o, uint32\_t wait\_ms)

Write general purpose R/W registers (8-bit) of ESSL slave.

---

**Note:** sdio 28-31 are reserved, the lower API helps to skip.

---

#### Parameters

- **handle** –Handle of an ESSL device.
- **addr** –Address of register to write. For SDIO, valid address: 0-59. For SPI, see `essl_spi.h`
- **value** –Value to write to the register.
- **value\_o** –Output of the returned written value.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

#### Returns

- `ESP_OK` Success
- One of the error codes from SDMMC/SPI host controller

*esp\_err\_t* **essl\_read\_reg** (*essl\_handle\_t* handle, uint8\_t add, uint8\_t \*value\_o, uint32\_t wait\_ms)

Read general purpose R/W registers (8-bit) of ESSL slave.

**Parameters**

- **handle** –Handle of a `essl` device.
- **add** –Address of register to read. For SDIO, Valid address: 0-27, 32-63 (28-31 reserved, return interrupt bits on read). For SPI, see `essl_spi.h`
- **value\_o** –Output value read from the register.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

**Returns**

- ESP\_OK Success
- One of the error codes from SDMMC/SPI host controller

`esp_err_t` **essl\_wait\_int** (`essl_handle_t` handle, `uint32_t` wait\_ms)

wait for an interrupt of the slave

**Parameters**

- **handle** –Handle of an ESSL device.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

**Returns**

- ESP\_OK: If interrupt is triggered.
- ESP\_ERR\_NOT\_SUPPORTED: Current device does not support this function.
- ESP\_ERR\_TIMEOUT: No interrupts before timeout.

`esp_err_t` **essl\_clear\_intr** (`essl_handle_t` handle, `uint32_t` intr\_mask, `uint32_t` wait\_ms)

Clear interrupt bits of ESSL slave. All the bits set in the mask will be cleared, while other bits will stay the same.

**Parameters**

- **handle** –Handle of an ESSL device.
- **intr\_mask** –Mask of interrupt bits to clear.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

**Returns**

- ESP\_OK: Success
- ESP\_ERR\_NOT\_SUPPORTED: Current device does not support this function.
- One of the error codes from SDMMC host controller

`esp_err_t` **essl\_get\_intr** (`essl_handle_t` handle, `uint32_t` \*intr\_raw, `uint32_t` \*intr\_st, `uint32_t` wait\_ms)

Get interrupt bits of ESSL slave.

**Parameters**

- **handle** –Handle of an ESSL device.
- **intr\_raw** –Output of the raw interrupt bits. Set to NULL if only masked bits are read.
- **intr\_st** –Output of the masked interrupt bits. set to NULL if only raw bits are read.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

**Returns**

- ESP\_OK: Success
- ESP\_INVALID\_ARG: If both `intr_raw` and `intr_st` are NULL.
- ESP\_ERR\_NOT\_SUPPORTED: Current device does not support this function.
- One of the error codes from SDMMC host controller

`esp_err_t` **essl\_set\_intr\_ena** (`essl_handle_t` handle, `uint32_t` ena\_mask, `uint32_t` wait\_ms)

Set interrupt enable bits of ESSL slave. The slave only sends interrupt on the line when there is a bit both the raw status and the enable are set.

**Parameters**

- **handle** –Handle of an ESSL device.
- **ena\_mask** –Mask of the interrupt bits to enable.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

**Returns**

- ESP\_OK: Success
- ESP\_ERR\_NOT\_SUPPORTED: Current device does not support this function.
- One of the error codes from SDMMC host controller

*esp\_err\_t* **essl\_get\_intr\_ena** (*essl\_handle\_t* handle, uint32\_t \*ena\_mask\_o, uint32\_t wait\_ms)

Get interrupt enable bits of ESSL slave.

**Parameters**

- **handle** –Handle of an ESSL device.
- **ena\_mask\_o** –Output of interrupt bit enable mask.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

**Returns**

- ESP\_OK Success
- One of the error codes from SDMMC host controller

*esp\_err\_t* **essl\_send\_slave\_intr** (*essl\_handle\_t* handle, uint32\_t intr\_mask, uint32\_t wait\_ms)

Send interrupts to slave. Each bit of the interrupt will be triggered.

**Parameters**

- **handle** –Handle of an ESSL device.
- **intr\_mask** –Mask of interrupt bits to send to slave.
- **wait\_ms** –Millisecond to wait before timeout, will not wait at all if set to 0-9.

**Returns**

- ESP\_OK: Success
- ESP\_ERR\_NOT\_SUPPORTED: Current device does not support this function.
- One of the error codes from SDMMC host controller

## Type Definitions

```
typedef struct essl_dev_t *essl_handle_t
```

Handle of an ESSL device.

## Header File

- [components/driver/test/esp\\_serial\\_slave\\_link/include/esp\\_serial\\_slave\\_link/essl\\_sdio.h](#)

## Functions

*esp\_err\_t* **essl\_sdio\_init\_dev** (*essl\_handle\_t* \*out\_handle, const *essl\_sdio\_config\_t* \*config)

Initialize the ESSL SDIO device and get its handle.

**Parameters**

- **out\_handle** –Output of the handle.
- **config** –Configuration for the ESSL SDIO device.

**Returns**

- ESP\_OK: on success
- ESP\_ERR\_NO\_MEM: memory exhausted.

*esp\_err\_t* **essl\_sdio\_deinit\_dev** (*essl\_handle\_t* handle)

Deinitialize and free the space used by the ESSL SDIO device.

**Parameters** **handle** –Handle of the ESSL SDIO device to deinit.

**Returns**

- ESP\_OK: on success
- ESP\_ERR\_INVALID\_ARG: wrong handle passed

## Structures

```
struct essl_sdio_config_t
```

Configuration for the ESSL SDIO device.

## Public Members

*sdmmc\_card\_t* \***card**

The initialized sdmmc card pointer of the slave.

int **recv\_buffer\_size**

The pre-negotiated recv buffer size used by both the host and the slave.

## Header File

- `components/driver/test/esp_serial_slave_link/include/esp_serial_slave_link/essl_spi.h`

## Functions

*esp\_err\_t* **essl\_spi\_init\_dev** (*essl\_handle\_t* \*out\_handle, const *essl\_spi\_config\_t* \*init\_config)

Initialize the ESSL SPI device function list and get its handle.

### Parameters

- **out\_handle** –[out] Output of the handle
- **init\_config** –Configuration for the ESSL SPI device

### Returns

- ESP\_OK: On success
- ESP\_ERR\_NO\_MEM: Memory exhausted
- ESP\_ERR\_INVALID\_STATE: SPI driver is not initialized
- ESP\_ERR\_INVALID\_ARG: Wrong register ID

*esp\_err\_t* **essl\_spi\_deinit\_dev** (*essl\_handle\_t* handle)

Deinitialize the ESSL SPI device and free the memory used by the device.

**Parameters** **handle** –Handle of the ESSL SPI device

### Returns

- ESP\_OK: On success
- ESP\_ERR\_INVALID\_STATE: ESSL SPI is not in use

*esp\_err\_t* **essl\_spi\_read\_reg** (void \*arg, uint8\_t addr, uint8\_t \*out\_value, uint32\_t wait\_ms)

Read from the shared registers.

---

**Note:** The registers for Master/Slave synchronization are reserved. Do not use them. (see `rx_sync_reg` in `essl_spi_config_t`)

---

### Parameters

- **arg** –Context of the component. (Member `arg` from `essl_handle_t`)
- **addr** –Address of the shared registers. (Valid: 0 ~ SOC\_SPI\_MAXIMUM\_BUFFER\_SIZE, registers for M/S sync are reserved, see note1).
- **out\_value** –[out] Read buffer for the shared registers.
- **wait\_ms** –Time to wait before timeout (reserved for future use, user should set this to 0).

### Returns

- ESP\_OK: success
- ESP\_ERR\_INVALID\_STATE: ESSL SPI has not been initialized.
- ESP\_ERR\_INVALID\_ARG: The address argument is not valid. See note 1.
- or other return value from `:cpp:func:spi_device_transmit`.

*esp\_err\_t* **essl\_spi\_get\_packet** (void \*arg, void \*out\_data, size\_t size, uint32\_t wait\_ms)

Get a packet from Slave.

**Parameters**

- **arg** –Context of the component. (Member `arg` from `essl_handle_t`)
- **out\_data** –[out] Output data address
- **size** –The size of the output data.
- **wait\_ms** –Time to wait before timeout (reserved for future use, user should set this to 0).

**Returns**

- `ESP_OK`: On Success
- `ESP_ERR_INVALID_STATE`: ESSL SPI has not been initialized.
- `ESP_ERR_INVALID_ARG`: The output data address is neither DMA capable nor 4 byte-aligned
- `ESP_ERR_INVALID_SIZE`: Master requires `size` bytes of data but Slave did not load enough bytes.

`esp_err_t` **essl\_spi\_write\_reg** (void \*arg, uint8\_t addr, uint8\_t value, uint8\_t \*out\_value, uint32\_t wait\_ms)

Write to the shared registers.

---

**Note:** The registers for Master/Slave synchronization are reserved. Do not use them. (see `tx_sync_reg` in `essl_spi_config_t`)

---

---

**Note:** Feature of checking the actual written value (`out_value`) is not supported.

---

**Parameters**

- **arg** –Context of the component. (Member `arg` from `essl_handle_t`)
- **addr** –Address of the shared registers. (Valid: 0 ~ `SOC_SPI_MAXIMUM_BUFFER_SIZE`, registers for M/S sync are reserved, see note1)
- **value** –Buffer for data to send, should be align to 4.
- **out\_value** –[out] Not supported, should be set to `NULL`.
- **wait\_ms** –Time to wait before timeout (reserved for future use, user should set this to 0).

**Returns**

- `ESP_OK`: success
- `ESP_ERR_INVALID_STATE`: ESSL SPI has not been initialized.
- `ESP_ERR_INVALID_ARG`: The address argument is not valid. See note 1.
- `ESP_ERR_NOT_SUPPORTED`: Should set `out_value` to `NULL`. See note 2.
- or other return value from `:cpp:func:spi_device_transmit`.

`esp_err_t` **essl\_spi\_send\_packet** (void \*arg, const void \*data, size\_t size, uint32\_t wait\_ms)

Send a packet to Slave.

**Parameters**

- **arg** –Context of the component. (Member `arg` from `essl_handle_t`)
- **data** –Address of the data to send
- **size** –Size of the data to send.
- **wait\_ms** –Time to wait before timeout (reserved for future use, user should set this to 0).

**Returns**

- `ESP_OK`: On success
- `ESP_ERR_INVALID_STATE`: ESSL SPI has not been initialized.
- `ESP_ERR_INVALID_ARG`: The data address is not DMA capable
- `ESP_ERR_INVALID_SIZE`: Master will send `size` bytes of data but Slave did not load enough RX buffer

void **essl\_spi\_reset\_cnt** (void \*arg)

Reset the counter in Master context.

---

**Note:** Shall only be called if the slave has reset its counter. Else, Slave and Master would be desynchronized

---

**Parameters** **arg** –Context of the component. (Member **arg** from **essl\_handle\_t**)

*esp\_err\_t* **essl\_spi\_rdbuf** (*spi\_device\_handle\_t* spi, uint8\_t \*out\_data, int addr, int len, uint32\_t flags)

Read the shared buffer from the slave in ISR way.

---

**Note:** The slave's HW doesn't guarantee the data in one SPI transaction is consistent. It sends data in unit of byte. In other words, if the slave SW attempts to update the shared register when a rdbuf SPI transaction is in-flight, the data got by the master will be the combination of bytes of different writes of slave SW.

---

---

**Note:** **out\_data** should be prepared in words and in the DRAM. The buffer may be written in words by the DMA. When a byte is written, the remaining bytes in the same word will also be overwritten, even the **len** is shorter than a word.

---

**Parameters**

- **spi** –SPI device handle representing the slave
- **out\_data** –[out] Buffer for read data, strongly suggested to be in the DRAM and aligned to 4
- **addr** –Address of the slave shared buffer
- **len** –Length to read
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

**Returns**

- ESP\_OK: on success
- or other return value from :cpp:func:spi\_device\_transmit.

*esp\_err\_t* **essl\_spi\_rdbuf\_polling** (*spi\_device\_handle\_t* spi, uint8\_t \*out\_data, int addr, int len, uint32\_t flags)

Read the shared buffer from the slave in polling way.

---

**Note:** **out\_data** should be prepared in words and in the DRAM. The buffer may be written in words by the DMA. When a byte is written, the remaining bytes in the same word will also be overwritten, even the **len** is shorter than a word.

---

**Parameters**

- **spi** –SPI device handle representing the slave
- **out\_data** –[out] Buffer for read data, strongly suggested to be in the DRAM and aligned to 4
- **addr** –Address of the slave shared buffer
- **len** –Length to read
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

**Returns**

- ESP\_OK: on success
- or other return value from :cpp:func:spi\_device\_transmit.

*esp\_err\_t* **essl\_spi\_wrbuf** (*spi\_device\_handle\_t* spi, const uint8\_t \*data, int addr, int len, uint32\_t flags)

Write the shared buffer of the slave in ISR way.

---

**Note:** `out_data` should be prepared in words and in the DRAM. The buffer may be written in words by the DMA. When a byte is written, the remaining bytes in the same word will also be overwritten, even the `len` is shorter than a word.

---

#### Parameters

- **spi** –SPI device handle representing the slave
- **data** –Buffer for data to send, strongly suggested to be in the DRAM
- **addr** –Address of the slave shared buffer,
- **len** –Length to write
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

#### Returns

- ESP\_OK: success
- or other return value from `:cpp:func:spi_device_transmit`.

`esp_err_t` `essl_spi_wrbuf_polling` (`spi_device_handle_t` spi, const uint8\_t \*data, int addr, int len, uint32\_t flags)

Write the shared buffer of the slave in polling way.

---

**Note:** `out_data` should be prepared in words and in the DRAM. The buffer may be written in words by the DMA. When a byte is written, the remaining bytes in the same word will also be overwritten, even the `len` is shorter than a word.

---

#### Parameters

- **spi** –SPI device handle representing the slave
- **data** –Buffer for data to send, strongly suggested to be in the DRAM
- **addr** –Address of the slave shared buffer,
- **len** –Length to write
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

#### Returns

- ESP\_OK: success
- or other return value from `:cpp:func:spi_device_polling_transmit`.

`esp_err_t` `essl_spi_rddma` (`spi_device_handle_t` spi, uint8\_t \*out\_data, int len, int seg\_len, uint32\_t flags)

Receive long buffer in segments from the slave through its DMA.

---

**Note:** This function combines several `:cpp:func:essl_spi_rddma_seg` and one `:cpp:func:essl_spi_rddma_done` at the end. Used when the slave is working in segment mode.

---

#### Parameters

- **spi** –SPI device handle representing the slave
- **out\_data** –[out] Buffer to hold the received data, strongly suggested to be in the DRAM and aligned to 4
- **len** –Total length of data to receive.
- **seg\_len** –Length of each segment, which is not larger than the maximum transaction length allowed for the spi device. Suggested to be multiples of 4. When set < 0, means send all data in one segment (the `rddma_done` will still be sent.)
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

#### Returns

- ESP\_OK: success
- or other return value from `:cpp:func:spi_device_transmit`.

*esp\_err\_t* **essl\_spi\_rddma\_seg** (*spi\_device\_handle\_t* spi, uint8\_t \*out\_data, int seg\_len, uint32\_t flags)

Read one data segment from the slave through its DMA.

---

**Note:** To read long buffer, call `:cpp:func:essl_spi_rddma` instead.

---

#### Parameters

- **spi** –SPI device handle representing the slave
- **out\_data** –[out] Buffer to hold the received data. strongly suggested to be in the DRAM and aligned to 4
- **seg\_len** –Length of this segment
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

#### Returns

- ESP\_OK: success
- or other return value from `:cpp:func:spi_device_transmit`.

*esp\_err\_t* **essl\_spi\_rddma\_done** (*spi\_device\_handle\_t* spi, uint32\_t flags)

Send the `rddma_done` command to the slave. Upon receiving this command, the slave will stop sending the current buffer even there are data unsent, and maybe prepare the next buffer to send.

---

**Note:** This is required only when the slave is working in segment mode.

---

#### Parameters

- **spi** –SPI device handle representing the slave
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

#### Returns

- ESP\_OK: success
- or other return value from `:cpp:func:spi_device_transmit`.

*esp\_err\_t* **essl\_spi\_wrdma** (*spi\_device\_handle\_t* spi, const uint8\_t \*data, int len, int seg\_len, uint32\_t flags)

Send long buffer in segments to the slave through its DMA.

---

**Note:** This function combines several `:cpp:func:essl_spi_wrdma_seg` and one `:cpp:func:essl_spi_wrdma_done` at the end. Used when the slave is working in segment mode.

---

#### Parameters

- **spi** –SPI device handle representing the slave
- **data** –Buffer for data to send, strongly suggested to be in the DRAM
- **len** –Total length of data to send.
- **seg\_len** –Length of each segment, which is not larger than the maximum transaction length allowed for the spi device. Suggested to be multiples of 4. When set < 0, means send all data in one segment (the `wrdma_done` will still be sent.)
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

#### Returns

- ESP\_OK: success
- or other return value from `:cpp:func:spi_device_transmit`.

*esp\_err\_t* **essl\_spi\_wrdma\_seg** (*spi\_device\_handle\_t* spi, const uint8\_t \*data, int seg\_len, uint32\_t flags)

Send one data segment to the slave through its DMA.

---

**Note:** To send long buffer, call `:cpp:func:essl_spi_wrdma` instead.

---

**Parameters**

- **spi** –SPI device handle representing the slave
- **data** –Buffer for data to send, strongly suggested to be in the DRAM
- **seg\_len** –Length of this segment
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

**Returns**

- ESP\_OK: success
- or other return value from :cpp:func:spi\_device\_transmit.

*esp\_err\_t* **essl\_spi\_wrdma\_done** (*spi\_device\_handle\_t* spi, uint32\_t flags)

Send the `wrdma_done` command to the slave. Upon receiving this command, the slave will stop receiving, process the received data, and maybe prepare the next buffer to receive.

---

**Note:** This is required only when the slave is working in segment mode.

---

**Parameters**

- **spi** –SPI device handle representing the slave
- **flags** –SPI\_TRANS\_\* flags to control the transaction mode of the transaction to send.

**Returns**

- ESP\_OK: success
- or other return value from :cpp:func:spi\_device\_transmit.

**Structures**

struct **essl\_spi\_config\_t**

Configuration of ESSL SPI device.

**Public Members**

*spi\_device\_handle\_t* \***spi**

Pointer to SPI device handle.

uint32\_t **tx\_buf\_size**

The pre-negotiated Master TX buffer size used by both the host and the slave.

uint8\_t **tx\_sync\_reg**

The pre-negotiated register ID for Master-TX-SLAVE-RX synchronization. 1 word (4 Bytes) will be reserved for the synchronization.

uint8\_t **rx\_sync\_reg**

The pre-negotiated register ID for Master-RX-Slave-TX synchronization. 1 word (4 Bytes) will be reserved for the synchronization.

## 2.2.8 ESP x509 Certificate Bundle

**Overview**

The ESP x509 Certificate Bundle API provides an easy way to include a bundle of custom x509 root certificates for TLS server verification.

**Note:** The bundle is currently not available when using WolfSSL.

---

The bundle comes with the complete list of root certificates from Mozilla's NSS root certificate store. Using the `gen_cert_bundle.py` python utility the certificates' subject name and public key are stored in a file and embedded in the ESP32-C2 binary.

When generating the bundle you may choose between:

- The full root certificate bundle from Mozilla, containing more than 130 certificates. The current bundle was updated Tue Jul 19 03:12:06 2022 GMT.
- A pre-selected filter list of the name of the most commonly used root certificates, reducing the amount of certificates to around 35 while still having around 90 % coverage according to market share statistics.

In addition it is possible to specify a path to a certificate file or a directory containing certificates which then will be added to the generated bundle.

**Note:** Trusting all root certificates means the list will have to be updated if any of the certificates are retracted. This includes removing them from `ca.crt_all.pem`.

---

## Configuration

Most configuration is done through `menuconfig`. CMake will generate the bundle according to the configuration and embed it.

- `CONFIG_MBEDTLS_CERTIFICATE_BUNDLE`: automatically build and attach the bundle.
- `CONFIG_MBEDTLS_DEFAULT_CERTIFICATE_BUNDLE`: decide which certificates to include from the complete root list.
- `CONFIG_MBEDTLS_CUSTOM_CERTIFICATE_BUNDLE_PATH`: specify the path of any additional certificates to embed in the bundle.

To enable the bundle when using ESP-TLS simply pass the function pointer to the bundle attach function:

```
esp_tls_cfg_t cfg = {
    .cert_bundle_attach = esp_cert_bundle_attach,
};
```

This is done to avoid embedding the certificate bundle unless activated by the user.

If using mbedTLS directly then the bundle may be activated by directly calling the attach function during the setup process:

```
mbedtls_ssl_config conf;
mbedtls_ssl_config_init(&conf);

esp_cert_bundle_attach(&conf);
```

## Generating the List of Root Certificates

The list of root certificates comes from Mozilla's NSS root certificate store, which can be found [here](#). The list can be downloaded and created by running the script `mk-ca-bundle.pl` that is distributed as a part of `curl`. Another alternative would be to download the finished list directly from the curl website: [CA certificates extracted from Mozilla](#)

The common certificates bundle were made by selecting the authorities with a market share of more than 1 % from w3tech's [SSL Survey](#). These authorities were then used to pick the names of the certificates for the filter list, `cmn_cert_authorities.csv`, from [this list](#) provided by Mozilla.

## Updating the Certificate Bundle

The bundle is embedded into the app and can be updated along with the app by an OTA update. If you want to include a more up-to-date bundle than the bundle currently included in ESP-IDF, then the certificate list can be downloaded from Mozilla as described in [Generating the List of Root Certificates](#).

## Application Example

Simple HTTPS example that uses ESP-TLS to establish a secure socket connection using the certificate bundle with two custom certificates added for verification: [protocols/https\\_x509\\_bundle](#).

HTTPS example that uses ESP-TLS and the default bundle: [protocols/https\\_request](#).

HTTPS example that uses mbedTLS and the default bundle: [protocols/https\\_mbedtls](#).

## API Reference

### Header File

- [components/mbedtls/esp\\_cert\\_bundle/include/esp\\_cert\\_bundle.h](#)

### Functions

*esp\_err\_t* **esp\_cert\_bundle\_attach** (void \*conf)

Attach and enable use of a bundle for certificate verification.

Attach and enable use of a bundle for certificate verification through a verification callback. If no specific bundle has been set through `esp_cert_bundle_set()` it will default to the bundle defined in menuconfig and embedded in the binary.

**Parameters** **conf** –[in] The config struct for the SSL connection.

**Returns**

- ESP\_OK if adding certificates was successful.
- Other if an error occurred or an action must be taken by the calling process.

void **esp\_cert\_bundle\_detach** (mbedtls\_ssl\_config \*conf)

Disable and deallocate the certification bundle.

Removes the certificate verification callback and deallocates used resources

**Parameters** **conf** –[in] The config struct for the SSL connection.

*esp\_err\_t* **esp\_cert\_bundle\_set** (const uint8\_t \*x509\_bundle, size\_t bundle\_size)

Set the default certificate bundle used for verification.

Overrides the default certificate bundle only in case of successful initialization. In most use cases the bundle should be set through menuconfig. The bundle needs to be sorted by subject name since binary search is used to find certificates.

**Parameters**

- **x509\_bundle** –[in] A pointer to the certificate bundle.
- **bundle\_size** –[in] Size of the certificate bundle in bytes.

**Returns**

- ESP\_OK if adding certificates was successful.
- Other if an error occurred or an action must be taken by the calling process.

bool **esp\_cert\_bundle\_in\_use** (const mbedtls\_x509\_cert \*ca\_chain)

Check if the given CA certificate chain is the default “dummy” certificate chain attached by the `esp_cert_bundle`.

**Parameters** **ca\_chain** –A pointer to the CA chain.

**Returns** true if the `ca_chain` is the dummy CA chain attached by `esp_cert_bundle`

**Returns** false otherwise

## 2.2.9 HTTP Server

### Overview

The HTTP Server component provides an ability for running a lightweight web server on ESP32-C2. Following are detailed steps to use the API exposed by HTTP Server:

- `httpd_start()`: Creates an instance of HTTP server, allocate memory/resources for it depending upon the specified configuration and outputs a handle to the server instance. The server has both, a listening socket (TCP) for HTTP traffic, and a control socket (UDP) for control signals, which are selected in a round robin fashion in the server task loop. The task priority and stack size are configurable during server instance creation by passing `httpd_config_t` structure to `httpd_start()`. TCP traffic is parsed as HTTP requests and, depending on the requested URI, user registered handlers are invoked which are supposed to send back HTTP response packets.
- `httpd_stop()`: This stops the server with the provided handle and frees up any associated memory/resources. This is a blocking function that first signals a halt to the server task and then waits for the task to terminate. While stopping, the task will close all open connections, remove registered URI handlers and reset all session context data to empty.
- `httpd_register_uri_handler()`: A URI handler is registered by passing object of type `httpd_uri_t` structure which has members including uri name, method type (eg. HTTPD\_GET/HTTPD\_POST/HTTPD\_PUT etc.), function pointer of type `esp_err_t *handler (httpd_req_t *req)` and `user_ctx` pointer to user context data.

### Application Example

```

/* Our URI handler function to be called during GET /uri request */
esp_err_t get_handler(httpd_req_t *req)
{
    /* Send a simple response */
    const char resp[] = "URI GET Response";
    httpd_resp_send(req, resp, HTTPD_RESP_USE_STRLEN);
    return ESP_OK;
}

/* Our URI handler function to be called during POST /uri request */
esp_err_t post_handler(httpd_req_t *req)
{
    /* Destination buffer for content of HTTP POST request.
     * httpd_req_recv() accepts char* only, but content could
     * as well be any binary data (needs type casting).
     * In case of string data, null termination will be absent, and
     * content length would give length of string */
    char content[100];

    /* Truncate if content length larger than the buffer */
    size_t recv_size = MIN(req->content_len, sizeof(content));

    int ret = httpd_req_recv(req, content, recv_size);
    if (ret <= 0) { /* 0 return value indicates connection closed */
        /* Check if timeout occurred */
        if (ret == HTTPD_SOCK_ERR_TIMEOUT) {
            /* In case of timeout one can choose to retry calling
             * httpd_req_recv(), but to keep it simple, here we
             * respond with an HTTP 408 (Request Timeout) error */
            httpd_resp_send_408(req);
        }
        /* In case of error, returning ESP_FAIL will

```

(continues on next page)

(continued from previous page)

```
        * ensure that the underlying socket is closed */
        return ESP_FAIL;
    }

    /* Send a simple response */
    const char resp[] = "URI POST Response";
    httpd_resp_send(req, resp, HTTPD_RESP_USE_STRLEN);
    return ESP_OK;
}

/* URI handler structure for GET /uri */
httpd_uri_t uri_get = {
    .uri      = "/uri",
    .method   = HTTP_GET,
    .handler  = get_handler,
    .user_ctx = NULL
};

/* URI handler structure for POST /uri */
httpd_uri_t uri_post = {
    .uri      = "/uri",
    .method   = HTTP_POST,
    .handler  = post_handler,
    .user_ctx = NULL
};

/* Function for starting the webserver */
httpd_handle_t start_webserver(void)
{
    /* Generate default configuration */
    httpd_config_t config = HTTPD_DEFAULT_CONFIG();

    /* Empty handle to esp_http_server */
    httpd_handle_t server = NULL;

    /* Start the httpd server */
    if (httpd_start(&server, &config) == ESP_OK) {
        /* Register URI handlers */
        httpd_register_uri_handler(server, &uri_get);
        httpd_register_uri_handler(server, &uri_post);
    }
    /* If server failed to start, handle will be NULL */
    return server;
}

/* Function for stopping the webserver */
void stop_webserver(httpd_handle_t server)
{
    if (server) {
        /* Stop the httpd server */
        httpd_stop(server);
    }
}
```

**Simple HTTP Server Example** Check HTTP server example under [protocols/http\\_server/simple](#) where handling of arbitrary content lengths, reading request headers and URL query parameters, and setting response headers is demonstrated.

## Persistent Connections

HTTP server features persistent connections, allowing for the re-use of the same connection (session) for several transfers, all the while maintaining context specific data for the session. Context data may be allocated dynamically by the handler in which case a custom function may need to be specified for freeing this data when the connection/session is closed.

### Persistent Connections Example

```

/* Custom function to free context */
void free_ctx_func(void *ctx)
{
    /* Could be something other than free */
    free(ctx);
}

esp_err_t adder_post_handler(httpd_req_t *req)
{
    /* Create session's context if not already available */
    if (! req->sess_ctx) {
        req->sess_ctx = malloc(sizeof(ANY_DATA_TYPE)); /*!< Pointer to context_
↪data */
        req->free_ctx = free_ctx_func; /*!< Function to free_
↪context data */
    }

    /* Access context data */
    ANY_DATA_TYPE *ctx_data = (ANY_DATA_TYPE *) req->sess_ctx;

    /* Respond */
    .....
    .....
    .....

    return ESP_OK;
}

```

Check the example under [protocols/http\\_server/persistent\\_sockets](#).

## Websocket Server

The HTTP server component provides websocket support. The websocket feature can be enabled in menuconfig using the `CONFIG_HTTPD_WS_SUPPORT` option. Please refer to the [protocols/http\\_server/ws\\_echo\\_server](#) example which demonstrates usage of the websocket feature.

## Event Handling

ESP HTTP Server has various events for which a handler can be triggered by *the Event Loop library* when the particular event occurs. The handler has to be registered using `esp_event_handler_register()`. This helps in event handling for ESP HTTP Server. `esp_http_server_event_id_t` has all the events which can happen for ESP HTTP Server.

### Expected data type for different ESP HTTP Server events in event loop:

- `HTTP_SERVER_EVENT_ERROR`: `httpd_err_code_t`
- `HTTP_SERVER_EVENT_START`: `NULL`
- `HTTP_SERVER_EVENT_ON_CONNECTED`: `int`
- `HTTP_SERVER_EVENT_ON_HEADER`: `int`
- `HTTP_SERVER_EVENT_HEADERS_SENT`: `int`
- `HTTP_SERVER_EVENT_ON_DATA`: `esp_http_server_event_data`

- `HTTP_SERVER_EVENT_SENT_DATA` : `esp_http_server_event_data`
- `HTTP_SERVER_EVENT_DISCONNECTED` : `int`
- `HTTP_SERVER_EVENT_STOP` : `NULL`

## API Reference

### Header File

- `components/esp_http_server/include/esp_http_server.h`

### Functions

`esp_err_t httpd_register_uri_handler` (`httpd_handle_t` handle, const `httpd_uri_t` \*uri\_handler)

Registers a URI handler.

Example usage:

```
esp_err_t my_uri_handler(httpd_req_t* req)
{
    // Recv , Process and Send
    ....
    ....
    ....

    // Fail condition
    if (....) {
        // Return fail to close session //
        return ESP_FAIL;
    }

    // On success
    return ESP_OK;
}

// URI handler structure
httpd_uri_t my_uri {
    .uri      = "/my_uri/path/xyz",
    .method   = HTTPD_GET,
    .handler  = my_uri_handler,
    .user_ctx = NULL
};

// Register handler
if (httpd_register_uri_handler(server_handle, &my_uri) != ESP_OK) {
    // If failed to register handler
    ....
}
```

---

**Note:** URI handlers can be registered in real time as long as the server handle is valid.

---

### Parameters

- **handle** `–[in]` handle to HTTPD server instance
- **uri\_handler** `–[in]` pointer to handler that needs to be registered

### Returns

- `ESP_OK` : On successfully registering the handler
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_HTTPD_HANDLERS_FULL` : If no slots left for new handler

- `ESP_ERR_HTTPD_HANDLER_EXISTS` : If handler with same URI and method is already registered

*esp\_err\_t* `httpd_unregister_uri_handler` (*httpd\_handle\_t* handle, const char \*uri, *httpd\_method\_t* method)

Unregister a URI handler.

#### Parameters

- **handle** –[in] handle to HTTPD server instance
- **uri** –[in] URI string
- **method** –[in] HTTP method

#### Returns

- `ESP_OK` : On successfully deregistering the handler
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_NOT_FOUND` : Handler with specified URI and method not found

*esp\_err\_t* `httpd_unregister_uri` (*httpd\_handle\_t* handle, const char \*uri)

Unregister all URI handlers with the specified uri string.

#### Parameters

- **handle** –[in] handle to HTTPD server instance
- **uri** –[in] uri string specifying all handlers that need to be deregistered

#### Returns

- `ESP_OK` : On successfully deregistering all such handlers
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_NOT_FOUND` : No handler registered with specified uri string

*esp\_err\_t* `httpd_sess_set_recv_override` (*httpd\_handle\_t* hd, int sockfd, *httpd\_recv\_func\_t* recv\_func)

Override web server's receive function (by session FD)

This function overrides the web server's receive function. This same function is used to read HTTP request packets.

---

**Note:** This API is supposed to be called either from the context of

- an http session APIs where sockfd is a valid parameter
  - a URI handler where sockfd is obtained using `httpd_req_to_sockfd()`
- 

#### Parameters

- **hd** –[in] HTTPD instance handle
- **sockfd** –[in] Session socket FD
- **recv\_func** –[in] The receive function to be set for this session

#### Returns

- `ESP_OK` : On successfully registering override
- `ESP_ERR_INVALID_ARG` : Null arguments

*esp\_err\_t* `httpd_sess_set_send_override` (*httpd\_handle\_t* hd, int sockfd, *httpd\_send\_func\_t* send\_func)

Override web server's send function (by session FD)

This function overrides the web server's send function. This same function is used to send out any response to any HTTP request.

---

**Note:** This API is supposed to be called either from the context of

- an http session APIs where sockfd is a valid parameter
  - a URI handler where sockfd is obtained using `httpd_req_to_sockfd()`
- 

#### Parameters

- **hd** –[in] HTTPD instance handle

- **sockfd** –[in] Session socket FD
- **send\_func** –[in] The send function to be set for this session

**Returns**

- ESP\_OK : On successfully registering override
- ESP\_ERR\_INVALID\_ARG : Null arguments

*esp\_err\_t* **httpd\_sess\_set\_pending\_override** (*httpd\_handle\_t* hd, int sockfd, *httpd\_pending\_func\_t* pending\_func)

Override web server's pending function (by session FD)

This function overrides the web server's pending function. This function is used to test for pending bytes in a socket.

---

**Note:** This API is supposed to be called either from the context of

- an http session APIs where sockfd is a valid parameter
  - a URI handler where sockfd is obtained using httpd\_req\_to\_sockfd()
- 

**Parameters**

- **hd** –[in] HTTPD instance handle
- **sockfd** –[in] Session socket FD
- **pending\_func** –[in] The receive function to be set for this session

**Returns**

- ESP\_OK : On successfully registering override
- ESP\_ERR\_INVALID\_ARG : Null arguments

int **httpd\_req\_to\_sockfd** (*httpd\_req\_t* \*r)

Get the Socket Descriptor from the HTTP request.

This API will return the socket descriptor of the session for which URI handler was executed on reception of HTTP request. This is useful when user wants to call functions that require session socket fd, from within a URI handler, ie. : httpd\_sess\_get\_ctx(), httpd\_sess\_trigger\_close(), httpd\_sess\_update\_lru\_counter().

---

**Note:** This API is supposed to be called only from the context of a URI handler where httpd\_req\_t\* request pointer is valid.

---

**Parameters** **r** –[in] The request whose socket descriptor should be found

**Returns**

- Socket descriptor : The socket descriptor for this request
- -1 : Invalid/NULL request pointer

int **httpd\_req\_recv** (*httpd\_req\_t* \*r, char \*buf, size\_t buf\_len)

API to read content data from the HTTP request.

This API will read HTTP content data from the HTTP request into provided buffer. Use content\_len provided in httpd\_req\_t structure to know the length of data to be fetched. If content\_len is too large for the buffer then user may have to make multiple calls to this function, each time fetching 'buf\_len' number of bytes, while the pointer to content data is incremented internally by the same number.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where httpd\_req\_t\* request pointer is valid.
- If an error is returned, the URI handler must further return an error. This will ensure that the erroneous socket is closed and cleaned up by the web server.
- Presently Chunked Encoding is not supported

**Parameters**

- **r** –[in] The request being responded to
- **buf** –[in] Pointer to a buffer that the data will be read into
- **buf\_len** –[in] Length of the buffer

**Returns**

- Bytes : Number of bytes read into the buffer successfully
- 0 : Buffer length parameter is zero / connection closed by peer
- HTTPD SOCK\_ERR\_INVALID : Invalid arguments
- HTTPD SOCK\_ERR\_TIMEOUT : Timeout/interrupted while calling socket recv()
- HTTPD SOCK\_ERR\_FAIL : Unrecoverable error while calling socket recv()

size\_t **httpd\_req\_get\_hdr\_value\_len** (*httpd\_req\_t* \*r, const char \*field)

Search for a field in request headers and return the string length of it' s value.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where *httpd\_req\_t*\* request pointer is valid.
  - Once *httpd\_resp\_send()* API is called all request headers are purged, so request headers need be copied into separate buffers if they are required later.
- 

**Parameters**

- **r** –[in] The request being responded to
- **field** –[in] The header field to be searched in the request

**Returns**

- Length : If field is found in the request URL
- Zero : Field not found / Invalid request / Null arguments

*esp\_err\_t* **httpd\_req\_get\_hdr\_value\_str** (*httpd\_req\_t* \*r, const char \*field, char \*val, size\_t val\_size)

Get the value string of a field from the request headers.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where *httpd\_req\_t*\* request pointer is valid.
  - Once *httpd\_resp\_send()* API is called all request headers are purged, so request headers need be copied into separate buffers if they are required later.
  - If output size is greater than input, then the value is truncated, accompanied by truncation error as return value.
  - Use *httpd\_req\_get\_hdr\_value\_len()* to know the right buffer length
- 

**Parameters**

- **r** –[in] The request being responded to
- **field** –[in] The field to be searched in the header
- **val** –[out] Pointer to the buffer into which the value will be copied if the field is found
- **val\_size** –[in] Size of the user buffer “val”

**Returns**

- ESP\_OK : Field found in the request header and value string copied
- ESP\_ERR\_NOT\_FOUND : Key not found
- ESP\_ERR\_INVALID\_ARG : Null arguments
- ESP\_ERR\_HTTPD\_INVALID\_REQ : Invalid HTTP request pointer
- ESP\_ERR\_HTTPD\_RESULT\_TRUNC : Value string truncated

`size_t httpd_req_get_url_query_len` (*httpd\_req\_t* \*r)

Get Query string length from the request URL.

---

**Note:** This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid

---

**Parameters** `r` –[in] The request being responded to

**Returns**

- Length : Query is found in the request URL
- Zero : Query not found / Null arguments / Invalid request

*esp\_err\_t* `httpd_req_get_url_query_str` (*httpd\_req\_t* \*r, char \*buf, size\_t buf\_len)

Get Query string from the request URL.

---

**Note:**

- Presently, the user can fetch the full URL query string, but decoding will have to be performed by the user. Request headers can be read using `httpd_req_get_hdr_value_str()` to know the ‘Content-Type’ (eg. Content-Type: application/x-www-form-urlencoded) and then the appropriate decoding algorithm needs to be applied.
  - This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid
  - If output size is greater than input, then the value is truncated, accompanied by truncation error as return value
  - Prior to calling this function, one can use `httpd_req_get_url_query_len()` to know the query string length beforehand and hence allocate the buffer of right size (usually query string length + 1 for null termination) for storing the query string
- 

**Parameters**

- `r` –[in] The request being responded to
- `buf` –[out] Pointer to the buffer into which the query string will be copied (if found)
- `buf_len` –[in] Length of output buffer

**Returns**

- `ESP_OK` : Query is found in the request URL and copied to buffer
- `ESP_ERR_NOT_FOUND` : Query not found
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_HTTPD_INVALID_REQ` : Invalid HTTP request pointer
- `ESP_ERR_HTTPD_RESULT_TRUNC` : Query string truncated

*esp\_err\_t* `httpd_query_key_value` (const char \*qry, const char \*key, char \*val, size\_t val\_size)

Helper function to get a URL query tag from a query string of the type `param1=val1&param2=val2`.

---

**Note:**

- The components of URL query string (keys and values) are not URLdecoded. The user must check for ‘Content-Type’ field in the request headers and then depending upon the specified encoding (URLencoded or otherwise) apply the appropriate decoding algorithm.
  - If actual value size is greater than `val_size`, then the value is truncated, accompanied by truncation error as return value.
- 

**Parameters**

- `qry` –[in] Pointer to query string
- `key` –[in] The key to be searched in the query string
- `val` –[out] Pointer to the buffer into which the value will be copied if the key is found

- **val\_size** –[in] Size of the user buffer “val”

**Returns**

- ESP\_OK : Key is found in the URL query string and copied to buffer
- ESP\_ERR\_NOT\_FOUND : Key not found
- ESP\_ERR\_INVALID\_ARG : Null arguments
- ESP\_ERR\_HTTPD\_RESULT\_TRUNC : Value string truncated

*esp\_err\_t* **httpd\_req\_get\_cookie\_val** (*httpd\_req\_t* \*req, const char \*cookie\_name, char \*val, size\_t \*val\_size)

Get the value string of a cookie value from the “Cookie” request headers by cookie name.

**Parameters**

- **req** –[in] Pointer to the HTTP request
- **cookie\_name** –[in] The cookie name to be searched in the request
- **val** –[out] Pointer to the buffer into which the value of cookie will be copied if the cookie is found
- **val\_size** –[inout] Pointer to size of the user buffer “val” . This variable will contain cookie length if ESP\_OK is returned and required buffer length incase ESP\_ERR\_HTTPD\_RESULT\_TRUNC is returned.

**Returns**

- ESP\_OK : Key is found in the cookie string and copied to buffer
- ESP\_ERR\_NOT\_FOUND : Key not found
- ESP\_ERR\_INVALID\_ARG : Null arguments
- ESP\_ERR\_HTTPD\_RESULT\_TRUNC : Value string truncated
- ESP\_ERR\_NO\_MEM : Memory allocation failure

bool **httpd\_uri\_match\_wildcard** (const char \*uri\_template, const char \*uri\_to\_match, size\_t match\_upto)

Test if a URI matches the given wildcard template.

Template may end with “?” to make the previous character optional (typically a slash), “\*” for a wildcard match, and “?\*” to make the previous character optional, and if present, allow anything to follow.

Example:

- \* matches everything
- /foo/? matches /foo and /foo/
- /foo/\* (sans the backslash) matches /foo/ and /foo/bar, but not /foo or /fo
- /foo/?\* or /foo/\*? (sans the backslash) matches /foo/, /foo/bar, and also /foo, but not /foox or /fo

The special characters “?” and “\*” anywhere else in the template will be taken literally.

**Parameters**

- **uri\_template** –[in] URI template (pattern)
- **uri\_to\_match** –[in] URI to be matched
- **match\_upto** –[in] how many characters of the URI buffer to test (there may be trailing query string etc.)

**Returns** true if a match was found

*esp\_err\_t* **httpd\_resp\_send** (*httpd\_req\_t* \*r, const char \*buf, ssize\_t buf\_len)

API to send a complete HTTP response.

This API will send the data as an HTTP response to the request. This assumes that you have the entire response ready in a single buffer. If you wish to send response in incremental chunks use `httpd_resp_send_chunk()` instead.

If no status code and content-type were set, by default this will send 200 OK status code and content type as text/html. You may call the following functions before this API to configure the response headers : `httpd_resp_set_status()` - for setting the HTTP status string, `httpd_resp_set_type()` - for setting the Content Type, `httpd_resp_set_hdr()` - for appending any additional field value entries in the response header

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid.
  - Once this API is called, the request has been responded to.
  - No additional data can then be sent for the request.
  - Once this API is called, all request headers are purged, so request headers need be copied into separate buffers if they are required later.
- 

**Parameters**

- **r** –[in] The request being responded to
- **buf** –[in] Buffer from where the content is to be fetched
- **buf\_len** –[in] Length of the buffer, `HTTPD_RESP_USE_STRLEN` to use `strlen()`

**Returns**

- `ESP_OK` : On successfully sending the response packet
- `ESP_ERR_INVALID_ARG` : Null request pointer
- `ESP_ERR_HTTPD_RESP_HDR` : Essential headers are too large for internal buffer
- `ESP_ERR_HTTPD_RESP_SEND` : Error in raw send
- `ESP_ERR_HTTPD_INVALID_REQ` : Invalid request

*esp\_err\_t* **httpd\_resp\_send\_chunk** (*httpd\_req\_t* \*r, const char \*buf, ssize\_t buf\_len)

API to send one HTTP chunk.

This API will send the data as an HTTP response to the request. This API will use chunked-encoding and send the response in the form of chunks. If you have the entire response contained in a single buffer, please use `httpd_resp_send()` instead.

If no status code and content-type were set, by default this will send 200 OK status code and content type as text/html. You may call the following functions before this API to configure the response headers `httpd_resp_set_status()` - for setting the HTTP status string, `httpd_resp_set_type()` - for setting the Content Type, `httpd_resp_set_hdr()` - for appending any additional field value entries in the response header

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid.
  - When you are finished sending all your chunks, you must call this function with `buf_len` as 0.
  - Once this API is called, all request headers are purged, so request headers need be copied into separate buffers if they are required later.
- 

**Parameters**

- **r** –[in] The request being responded to
- **buf** –[in] Pointer to a buffer that stores the data
- **buf\_len** –[in] Length of the buffer, `HTTPD_RESP_USE_STRLEN` to use `strlen()`

**Returns**

- `ESP_OK` : On successfully sending the response packet chunk
- `ESP_ERR_INVALID_ARG` : Null request pointer
- `ESP_ERR_HTTPD_RESP_HDR` : Essential headers are too large for internal buffer
- `ESP_ERR_HTTPD_RESP_SEND` : Error in raw send
- `ESP_ERR_HTTPD_INVALID_REQ` : Invalid request pointer

static inline *esp\_err\_t* **httpd\_resp\_sendstr** (*httpd\_req\_t* \*r, const char \*str)

API to send a complete string as HTTP response.

This API simply calls `httpd_resp_send` with buffer length set to string length assuming the buffer contains a null terminated string

**Parameters**

- **r** –[in] The request being responded to
- **str** –[in] String to be sent as response body

**Returns**

- ESP\_OK : On successfully sending the response packet
- ESP\_ERR\_INVALID\_ARG : Null request pointer
- ESP\_ERR\_HTTPD\_RESP\_HDR : Essential headers are too large for internal buffer
- ESP\_ERR\_HTTPD\_RESP\_SEND : Error in raw send
- ESP\_ERR\_HTTPD\_INVALID\_REQ : Invalid request

static inline *esp\_err\_t* **httpd\_resp\_sendstr\_chunk** (*httpd\_req\_t* \*r, const char \*str)

API to send a string as an HTTP response chunk.

This API simply calls `http_resp_send_chunk` with buffer length set to string length assuming the buffer contains a null terminated string

**Parameters**

- **r** –[in] The request being responded to
- **str** –[in] String to be sent as response body (NULL to finish response packet)

**Returns**

- ESP\_OK : On successfully sending the response packet
- ESP\_ERR\_INVALID\_ARG : Null request pointer
- ESP\_ERR\_HTTPD\_RESP\_HDR : Essential headers are too large for internal buffer
- ESP\_ERR\_HTTPD\_RESP\_SEND : Error in raw send
- ESP\_ERR\_HTTPD\_INVALID\_REQ : Invalid request

*esp\_err\_t* **httpd\_resp\_set\_status** (*httpd\_req\_t* \*r, const char \*status)

API to set the HTTP status code.

This API sets the status of the HTTP response to the value specified. By default, the ‘200 OK’ response is sent as the response.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid.
  - This API only sets the status to this value. The status isn’t sent out until any of the send APIs is executed.
  - Make sure that the lifetime of the status string is valid till send function is called.
- 

**Parameters**

- **r** –[in] The request being responded to
- **status** –[in] The HTTP status code of this response

**Returns**

- ESP\_OK : On success
- ESP\_ERR\_INVALID\_ARG : Null arguments
- ESP\_ERR\_HTTPD\_INVALID\_REQ : Invalid request pointer

*esp\_err\_t* **httpd\_resp\_set\_type** (*httpd\_req\_t* \*r, const char \*type)

API to set the HTTP content type.

This API sets the ‘Content Type’ field of the response. The default content type is ‘text/html’.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid.
  - This API only sets the content type to this value. The type isn’t sent out until any of the send APIs is executed.
  - Make sure that the lifetime of the type string is valid till send function is called.
- 

**Parameters**

- **r** –[in] The request being responded to
- **type** –[in] The Content Type of the response

**Returns**

- ESP\_OK : On success
- ESP\_ERR\_INVALID\_ARG : Null arguments
- ESP\_ERR\_HTTPD\_INVALID\_REQ : Invalid request pointer

*esp\_err\_t* **httpd\_resp\_set\_hdr** (*httpd\_req\_t* \*r, const char \*field, const char \*value)

API to append any additional headers.

This API sets any additional header fields that need to be sent in the response.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where *httpd\_req\_t*\* request pointer is valid.
- The header isn't sent out until any of the send APIs is executed.
- The maximum allowed number of additional headers is limited to value of *max\_resp\_headers* in config structure.
- Make sure that the lifetime of the field value strings are valid till send function is called.

---

**Parameters**

- **r** –[in] The request being responded to
- **field** –[in] The field name of the HTTP header
- **value** –[in] The value of this HTTP header

**Returns**

- ESP\_OK : On successfully appending new header
- ESP\_ERR\_INVALID\_ARG : Null arguments
- ESP\_ERR\_HTTPD\_RESP\_HDR : Total additional headers exceed max allowed
- ESP\_ERR\_HTTPD\_INVALID\_REQ : Invalid request pointer

*esp\_err\_t* **httpd\_resp\_send\_err** (*httpd\_req\_t* \*req, *httpd\_err\_code\_t* error, const char \*msg)

For sending out error code in response to HTTP request.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where *httpd\_req\_t*\* request pointer is valid.
- Once this API is called, all request headers are purged, so request headers need be copied into separate buffers if they are required later.
- If you wish to send additional data in the body of the response, please use the lower-level functions directly.

---

**Parameters**

- **req** –[in] Pointer to the HTTP request for which the response needs to be sent
- **error** –[in] Error type to send
- **msg** –[in] Error message string (pass NULL for default message)

**Returns**

- ESP\_OK : On successfully sending the response packet
- ESP\_ERR\_INVALID\_ARG : Null arguments
- ESP\_ERR\_HTTPD\_RESP\_SEND : Error in raw send
- ESP\_ERR\_HTTPD\_INVALID\_REQ : Invalid request pointer

static inline *esp\_err\_t* **httpd\_resp\_send\_404** (*httpd\_req\_t* \*r)

Helper function for HTTP 404.

Send HTTP 404 message. If you wish to send additional data in the body of the response, please use the lower-level functions directly.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid.
  - Once this API is called, all request headers are purged, so request headers need be copied into separate buffers if they are required later.
- 

**Parameters** `r` –[in] The request being responded to

**Returns**

- `ESP_OK` : On successfully sending the response packet
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_HTTPD_RESP_SEND` : Error in raw send
- `ESP_ERR_HTTPD_INVALID_REQ` : Invalid request pointer

static inline `esp_err_t httpd_resp_send_408` (`httpd_req_t` \*r)

Helper function for HTTP 408.

Send HTTP 408 message. If you wish to send additional data in the body of the response, please use the lower-level functions directly.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid.
  - Once this API is called, all request headers are purged, so request headers need be copied into separate buffers if they are required later.
- 

**Parameters** `r` –[in] The request being responded to

**Returns**

- `ESP_OK` : On successfully sending the response packet
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_HTTPD_RESP_SEND` : Error in raw send
- `ESP_ERR_HTTPD_INVALID_REQ` : Invalid request pointer

static inline `esp_err_t httpd_resp_send_500` (`httpd_req_t` \*r)

Helper function for HTTP 500.

Send HTTP 500 message. If you wish to send additional data in the body of the response, please use the lower-level functions directly.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where `httpd_req_t*` request pointer is valid.
  - Once this API is called, all request headers are purged, so request headers need be copied into separate buffers if they are required later.
- 

**Parameters** `r` –[in] The request being responded to

**Returns**

- `ESP_OK` : On successfully sending the response packet
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_HTTPD_RESP_SEND` : Error in raw send
- `ESP_ERR_HTTPD_INVALID_REQ` : Invalid request pointer

int **httpd\_send** (*httpd\_req\_t* \*r, const char \*buf, size\_t buf\_len)

Raw HTTP send.

Call this API if you wish to construct your custom response packet. When using this, all essential header, eg. HTTP version, Status Code, Content Type and Length, Encoding, etc. will have to be constructed manually, and HTTP delimiters (CRLF) will need to be placed correctly for separating sub-sections of the HTTP response packet.

If the send override function is set, this API will end up calling that function eventually to send data out.

---

**Note:**

- This API is supposed to be called only from the context of a URI handler where *httpd\_req\_t*\* request pointer is valid.
- Unless the response has the correct HTTP structure (which the user must now ensure) it is not guaranteed that it will be recognized by the client. For most cases, you wouldn't have to call this API, but you would rather use either of : *httpd\_resp\_send()*, *httpd\_resp\_send\_chunk()*

---

**Parameters**

- **r** –[in] The request being responded to
- **buf** –[in] Buffer from where the fully constructed packet is to be read
- **buf\_len** –[in] Length of the buffer

**Returns**

- Bytes : Number of bytes that were sent successfully
- HTTPD\_SOCK\_ERR\_INVALID : Invalid arguments
- HTTPD\_SOCK\_ERR\_TIMEOUT : Timeout/interrupted while calling socket send()
- HTTPD\_SOCK\_ERR\_FAIL : Unrecoverable error while calling socket send()

int **httpd\_socket\_send** (*httpd\_handle\_t* hd, int sockfd, const char \*buf, size\_t buf\_len, int flags)

A low level API to send data on a given socket

This internally calls the default send function, or the function registered by *httpd\_sess\_set\_send\_override()*.

---

**Note:** This API is not recommended to be used in any request handler. Use this only for advanced use cases, wherein some asynchronous data is to be sent over a socket.

---

**Parameters**

- **hd** –[in] server instance
- **sockfd** –[in] session socket file descriptor
- **buf** –[in] buffer with bytes to send
- **buf\_len** –[in] data size
- **flags** –[in] flags for the send() function

**Returns**

- Bytes : The number of bytes sent successfully
- HTTPD\_SOCK\_ERR\_INVALID : Invalid arguments
- HTTPD\_SOCK\_ERR\_TIMEOUT : Timeout/interrupted while calling socket send()
- HTTPD\_SOCK\_ERR\_FAIL : Unrecoverable error while calling socket send()

int **httpd\_socket\_recv** (*httpd\_handle\_t* hd, int sockfd, char \*buf, size\_t buf\_len, int flags)

A low level API to receive data from a given socket

This internally calls the default recv function, or the function registered by *httpd\_sess\_set\_recv\_override()*.

---

**Note:** This API is not recommended to be used in any request handler. Use this only for advanced use cases, wherein some asynchronous communication is required.

---

### Parameters

- **hd** –[in] server instance
- **sockfd** –[in] session socket file descriptor
- **buf** –[in] buffer with bytes to send
- **buf\_len** –[in] data size
- **flags** –[in] flags for the send() function

### Returns

- Bytes : The number of bytes received successfully
- 0 : Buffer length parameter is zero / connection closed by peer
- HTTPD\_SOCK\_ERR\_INVALID : Invalid arguments
- HTTPD\_SOCK\_ERR\_TIMEOUT : Timeout/interrupted while calling socket recv()
- HTTPD\_SOCK\_ERR\_FAIL : Unrecoverable error while calling socket recv()

*esp\_err\_t* **httpd\_register\_err\_handler** (*httpd\_handle\_t* handle, *httpd\_err\_code\_t* error, *httpd\_err\_handler\_func\_t* handler\_fn)

Function for registering HTTP error handlers.

This function maps a handler function to any supported error code given by *httpd\_err\_code\_t*. See prototype *httpd\_err\_handler\_func\_t* above for details.

### Parameters

- **handle** –[in] HTTP server handle
- **error** –[in] Error type
- **handler\_fn** –[in] User implemented handler function (Pass NULL to unset any previously set handler)

### Returns

- ESP\_OK : handler registered successfully
- ESP\_ERR\_INVALID\_ARG : invalid error code or server handle

*esp\_err\_t* **httpd\_start** (*httpd\_handle\_t* \*handle, const *httpd\_config\_t* \*config)

Starts the web server.

Create an instance of HTTP server and allocate memory/resources for it depending upon the specified configuration.

Example usage:

```
//Function for starting the webserver
httpd_handle_t start_webserver(void)
{
    // Generate default configuration
    httpd_config_t config = HTTPD_DEFAULT_CONFIG();

    // Empty handle to http_server
    httpd_handle_t server = NULL;

    // Start the httpd server
    if (httpd_start(&server, &config) == ESP_OK) {
        // Register URI handlers
        httpd_register_uri_handler(server, &uri_get);
        httpd_register_uri_handler(server, &uri_post);
    }
    // If server failed to start, handle will be NULL
    return server;
}
```

**Parameters**

- **config** –[in] Configuration for new instance of the server
- **handle** –[out] Handle to newly created instance of the server. NULL on error

**Returns**

- ESP\_OK : Instance created successfully
- ESP\_ERR\_INVALID\_ARG : Null argument(s)
- ESP\_ERR\_HTTPD\_ALLOC\_MEM : Failed to allocate memory for instance
- ESP\_ERR\_HTTPD\_TASK : Failed to launch server task

*esp\_err\_t* **httpd\_stop** (*httpd\_handle\_t* handle)

Stops the web server.

Deallocates memory/resources used by an HTTP server instance and deletes it. Once deleted the handle can no longer be used for accessing the instance.

Example usage:

```
// Function for stopping the webserver
void stop_webserver(httpd_handle_t server)
{
    // Ensure handle is non NULL
    if (server != NULL) {
        // Stop the httpd server
        httpd_stop(server);
    }
}
```

**Parameters** **handle** –[in] Handle to server returned by `httpd_start`

**Returns**

- ESP\_OK : Server stopped successfully
- ESP\_ERR\_INVALID\_ARG : Handle argument is Null

*esp\_err\_t* **httpd\_queue\_work** (*httpd\_handle\_t* handle, *httpd\_work\_fn\_t* work, void \*arg)

Queue execution of a function in HTTPD' s context.

This API queues a work function for asynchronous execution

---

**Note:** Some protocols require that the web server generate some asynchronous data and send it to the persistently opened connection. This facility is for use by such protocols.

---

**Parameters**

- **handle** –[in] Handle to server returned by `httpd_start`
- **work** –[in] Pointer to the function to be executed in the HTTPD' s context
- **arg** –[in] Pointer to the arguments that should be passed to this function

**Returns**

- ESP\_OK : On successfully queueing the work
- ESP\_FAIL : Failure in ctrl socket
- ESP\_ERR\_INVALID\_ARG : Null arguments

void \***httpd\_sess\_get\_ctx** (*httpd\_handle\_t* handle, int sockfd)

Get session context from socket descriptor.

Typically if a session context is created, it is available to URI handlers through the `httpd_req_t` structure. But, there are cases where the web server' s send/receive functions may require the context (for example, for accessing keying information etc). Since the send/receive function only have the socket descriptor at their disposal, this API provides them with a way to retrieve the session context.

**Parameters**

- **handle** –[in] Handle to server returned by `httpd_start`

- **sockfd** –[in] The socket descriptor for which the context should be extracted.

**Returns**

- void\* : Pointer to the context associated with this session
- NULL : Empty context / Invalid handle / Invalid socket fd

void **httpd\_sess\_set\_ctx** (*httpd\_handle\_t* handle, int sockfd, void \*ctx, *httpd\_free\_ctx\_fn\_t* free\_fn)

Set session context by socket descriptor.

**Parameters**

- **handle** –[in] Handle to server returned by httpd\_start
- **sockfd** –[in] The socket descriptor for which the context should be extracted.
- **ctx** –[in] Context object to assign to the session
- **free\_fn** –[in] Function that should be called to free the context

void \***httpd\_sess\_get\_transport\_ctx** (*httpd\_handle\_t* handle, int sockfd)

Get session ‘transport’ context by socket descriptor.

This context is used by the send/receive functions, for example to manage SSL context.

**See also:**

httpd\_sess\_get\_ctx()

**Parameters**

- **handle** –[in] Handle to server returned by httpd\_start
- **sockfd** –[in] The socket descriptor for which the context should be extracted.

**Returns**

- void\* : Pointer to the transport context associated with this session
- NULL : Empty context / Invalid handle / Invalid socket fd

void **httpd\_sess\_set\_transport\_ctx** (*httpd\_handle\_t* handle, int sockfd, void \*ctx, *httpd\_free\_ctx\_fn\_t* free\_fn)

Set session ‘transport’ context by socket descriptor.

**See also:**

httpd\_sess\_set\_ctx()

**Parameters**

- **handle** –[in] Handle to server returned by httpd\_start
- **sockfd** –[in] The socket descriptor for which the context should be extracted.
- **ctx** –[in] Transport context object to assign to the session
- **free\_fn** –[in] Function that should be called to free the transport context

void \***httpd\_get\_global\_user\_ctx** (*httpd\_handle\_t* handle)

Get HTTPD global user context (it was set in the server config struct)

**Parameters** **handle** –[in] Handle to server returned by httpd\_start

**Returns** global user context

void \***httpd\_get\_global\_transport\_ctx** (*httpd\_handle\_t* handle)

Get HTTPD global transport context (it was set in the server config struct)

**Parameters** **handle** –[in] Handle to server returned by httpd\_start

**Returns** global transport context

*esp\_err\_t* **httpd\_sess\_trigger\_close** (*httpd\_handle\_t* handle, int sockfd)

Trigger an httpd session close externally.

---

**Note:** Calling this API is only required in special circumstances wherein some application requires to close an httpd client session asynchronously.

---

**Parameters**

- **handle** –[in] Handle to server returned by httpd\_start
- **sockfd** –[in] The socket descriptor of the session to be closed

**Returns**

- ESP\_OK : On successfully initiating closure
- ESP\_FAIL : Failure to queue work
- ESP\_ERR\_NOT\_FOUND : Socket fd not found
- ESP\_ERR\_INVALID\_ARG : Null arguments

*esp\_err\_t* **httpd\_sess\_update\_lru\_counter** (*httpd\_handle\_t* handle, int sockfd)

Update LRU counter for a given socket.

LRU Counters are internally associated with each session to monitor how recently a session exchanged traffic. When LRU purge is enabled, if a client is requesting for connection but maximum number of sockets/sessions is reached, then the session having the earliest LRU counter is closed automatically.

Updating the LRU counter manually prevents the socket from being purged due to the Least Recently Used (LRU) logic, even though it might not have received traffic for some time. This is useful when all open sockets/session are frequently exchanging traffic but the user specifically wants one of the sessions to be kept open, irrespective of when it last exchanged a packet.

---

**Note:** Calling this API is only necessary if the LRU Purge Enable option is enabled.

---

**Parameters**

- **handle** –[in] Handle to server returned by httpd\_start
- **sockfd** –[in] The socket descriptor of the session for which LRU counter is to be updated

**Returns**

- ESP\_OK : Socket found and LRU counter updated
- ESP\_ERR\_NOT\_FOUND : Socket not found
- ESP\_ERR\_INVALID\_ARG : Null arguments

*esp\_err\_t* **httpd\_get\_client\_list** (*httpd\_handle\_t* handle, size\_t \*fds, int \*client\_fds)

Returns list of current socket descriptors of active sessions.

---

**Note:** Size of provided array has to be equal or greater than maximum number of opened sockets, configured upon initialization with max\_open\_sockets field in httpd\_config\_t structure.

---

**Parameters**

- **handle** –[in] Handle to server returned by httpd\_start
- **fds** –[inout] In: Size of provided client\_fds array Out: Number of valid client fds returned in client\_fds,
- **client\_fds** –[out] Array of client fds

**Returns**

- ESP\_OK : Successfully retrieved session list
- ESP\_ERR\_INVALID\_ARG : Wrong arguments or list is longer than provided array

## Structures

struct **esp\_http\_server\_event\_data**

Argument structure for HTTP\_SERVER\_EVENT\_ON\_DATA and HTTP\_SERVER\_EVENT\_SENT\_DATA event

### Public Members

int **fd**

Session socket file descriptor

int **data\_len**

Data length

struct **httpd\_config**

HTTP Server Configuration Structure.

---

**Note:** Use HTTPD\_DEFAULT\_CONFIG() to initialize the configuration to a default value and then modify only those fields that are specifically determined by the use case.

---

### Public Members

unsigned **task\_priority**

Priority of FreeRTOS task which runs the server

size\_t **stack\_size**

The maximum stack size allowed for the server task

BaseType\_t **core\_id**

The core the HTTP server task will run on

uint16\_t **server\_port**

TCP Port number for receiving and transmitting HTTP traffic

uint16\_t **ctrl\_port**

UDP Port number for asynchronously exchanging control signals between various components of the server

uint16\_t **max\_open\_sockets**

Max number of sockets/clients connected at any time

uint16\_t **max\_uri\_handlers**

Maximum allowed uri handlers

uint16\_t **max\_resp\_headers**

Maximum allowed additional headers in HTTP response

uint16\_t **backlog\_conn**

Number of backlog connections

bool **lru\_purge\_enable**

Purge “Least Recently Used” connection

uint16\_t **recv\_wait\_timeout**

Timeout for recv function (in seconds)

uint16\_t **send\_wait\_timeout**

Timeout for send function (in seconds)

void \***global\_user\_ctx**

Global user context.

This field can be used to store arbitrary user data within the server context. The value can be retrieved using the server handle, available e.g. in the `httpd_req_t` struct.

When shutting down, the server frees up the user context by calling `free()` on the `global_user_ctx` field. If you wish to use a custom function for freeing the global user context, please specify that here.

[\*httpd\\_free\\_ctx\\_fn\\_t\*](#) **global\_user\_ctx\_free\_fn**

Free function for global user context

void \***global\_transport\_ctx**

Global transport context.

Similar to `global_user_ctx`, but used for session encoding or encryption (e.g. to hold the SSL context). It will be freed using `free()`, unless `global_transport_ctx_free_fn` is specified.

[\*httpd\\_free\\_ctx\\_fn\\_t\*](#) **global\_transport\_ctx\_free\_fn**

Free function for global transport context

bool **enable\_so\_linger**

bool to enable/disable linger

int **linger\_timeout**

linger timeout (in seconds)

bool **keep\_alive\_enable**

Enable keep-alive timeout

int **keep\_alive\_idle**

Keep-alive idle time. Default is 5 (second)

int **keep\_alive\_interval**

Keep-alive interval time. Default is 5 (second)

int **keep\_alive\_count**

Keep-alive packet retry send count. Default is 3 counts

***httpd\_open\_func\_t* open\_fn**

Custom session opening callback.

Called on a new session socket just after `accept()`, but before reading any data.

This is an opportunity to set up e.g. SSL encryption using `global_transport_ctx` and the `send/recv/pending` session overrides.

If a context needs to be maintained between these functions, store it in the session using `httpd_sess_set_transport_ctx()` and retrieve it later with `httpd_sess_get_transport_ctx()`

Returning a value other than `ESP_OK` will immediately close the new socket.

***httpd\_close\_func\_t* close\_fn**

Custom session closing callback.

Called when a session is deleted, before freeing user and transport contexts and before closing the socket. This is a place for custom de-init code common to all sockets.

The server will only close the socket if no custom session closing callback is set. If a custom callback is used, `close(sockfd)` should be called in here for most cases.

Set the user or transport context to `NULL` if it was freed here, so the server does not try to free it again.

This function is run for all terminated sessions, including sessions where the socket was closed by the network stack - that is, the file descriptor may not be valid anymore.

***httpd\_uri\_match\_func\_t* uri\_match\_fn**

URI matcher function.

Called when searching for a matching URI: 1) whose request handler is to be executed right after an HTTP request is successfully parsed 2) in order to prevent duplication while registering a new URI handler using `httpd_register_uri_handler()`

Available options are: 1) `NULL` : Internally do basic matching using `strncmp()` 2) `httpd_uri_match_wildcard()` : URI wildcard matcher

Users can implement their own matching functions (See description of the `httpd_uri_match_func_t` function prototype)

**struct `httpd_req`**

HTTP Request Data Structure.

**Public Members*****httpd\_handle\_t* handle**

Handle to server instance

**int `method`**

The type of HTTP request, -1 if unsupported method

**const char `uri`[HTTPD\_MAX\_URI\_LEN + 1]**

The URI of this request (1 byte extra for null termination)

**size\_t `content_len`**

Length of the request body

void **\*aux**

Internally used members

void **\*user\_ctx**

User context pointer passed during URI registration.

void **\*sess\_ctx**

Session Context Pointer

A session context. Contexts are maintained across ‘sessions’ for a given open TCP connection. One session could have multiple request responses. The web server will ensure that the context persists across all these request and responses.

By default, this is NULL. URI Handlers can set this to any meaningful value.

If the underlying socket gets closed, and this pointer is non-NULL, the web server will free up the context by calling free(), unless free\_ctx function is set.

[\*httpd\\_free\\_ctx\\_fn\\_t\*](#) **free\_ctx**

Pointer to free context hook

Function to free session context

If the web server’s socket closes, it frees up the session context by calling free() on the sess\_ctx member. If you wish to use a custom function for freeing the session context, please specify that here.

bool **ignore\_sess\_ctx\_changes**

Flag indicating if Session Context changes should be ignored

By default, if you change the sess\_ctx in some URI handler, the http server will internally free the earlier context (if non NULL), after the URI handler returns. If you want to manage the allocation/reallocation/freeing of sess\_ctx yourself, set this flag to true, so that the server will not perform any checks on it. The context will be cleared by the server (by calling free\_ctx or free()) only if the socket gets closed.

struct **httpd\_uri**

Structure for URI handler.

### Public Members

const char **\*uri**

The URI to handle

[\*httpd\\_method\\_t\*](#) **method**

Method supported by the URI

[\*esp\\_err\\_t\*](#) (**\*handler**)([\*httpd\\_req\\_t\*](#) \*r)

Handler to call for supported request method. This must return ESP\_OK, or else the underlying socket will be closed.

void **\*user\_ctx**

Pointer to user context data which will be available to handler

## Macros

**HTTPD\_MAX\_REQ\_HDR\_LEN**

**HTTPD\_MAX\_URI\_LEN**

**HTTPD SOCK\_ERR\_FAIL**

**HTTPD SOCK\_ERR\_INVALID**

**HTTPD SOCK\_ERR\_TIMEOUT**

**HTTPD\_200**

HTTP Response 200

**HTTPD\_204**

HTTP Response 204

**HTTPD\_207**

HTTP Response 207

**HTTPD\_400**

HTTP Response 400

**HTTPD\_404**

HTTP Response 404

**HTTPD\_408**

HTTP Response 408

**HTTPD\_500**

HTTP Response 500

**HTTPD\_TYPE\_JSON**

HTTP Content type JSON

**HTTPD\_TYPE\_TEXT**

HTTP Content type text/HTML

**HTTPD\_TYPE\_OCTET**

HTTP Content type octext-stream

**ESP\_HTTPD\_DEF\_CTRL\_PORT**

HTTP Server control socket port

**HTTPD\_DEFAULT\_CONFIG()**

**ESP\_ERR\_HTTPD\_BASE**

Starting number of HTTPD error codes

**ESP\_ERR\_HTTPD\_HANDLERS\_FULL**

All slots for registering URI handlers have been consumed

**ESP\_ERR\_HTTPD\_HANDLER\_EXISTS**

URI handler with same method and target URI already registered

**ESP\_ERR\_HTTPD\_INVALID\_REQ**

Invalid request pointer

**ESP\_ERR\_HTTPD\_RESULT\_TRUNC**

Result string truncated

**ESP\_ERR\_HTTPD\_RESP\_HDR**

Response header field larger than supported

**ESP\_ERR\_HTTPD\_RESP\_SEND**

Error occurred while sending response packet

**ESP\_ERR\_HTTPD\_ALLOC\_MEM**

Failed to dynamically allocate memory for resource

**ESP\_ERR\_HTTPD\_TASK**

Failed to launch server task/thread

**HTTPD\_RESP\_USE\_STRLEN**

### Type Definitions

```
typedef struct httpd_req httpd_req_t
```

HTTP Request Data Structure.

```
typedef struct httpd_uri httpd_uri_t
```

Structure for URI handler.

```
typedef int (*httpd_send_func_t)(httpd_handle_t hd, int sockfd, const char *buf, size_t buf_len, int flags)
```

Prototype for HTTPDs low-level send function.

---

**Note:** User specified send function must handle errors internally, depending upon the set value of `errno`, and return specific `HTTPD SOCK_ERR_` codes, which will eventually be conveyed as return value of `httpd_send()` function

---

**Param `hd` [in]** server instance

**Param `sockfd` [in]** session socket file descriptor

**Param `buf` [in]** buffer with bytes to send

**Param `buf_len` [in]** data size

**Param `flags` [in]** flags for the `send()` function

**Return**

- Bytes : The number of bytes sent successfully
- `HTTPD SOCK_ERR_INVALID` : Invalid arguments
- `HTTPD SOCK_ERR_TIMEOUT` : Timeout/interrupted while calling socket `send()`

- `HTTPD_SOCK_ERR_FAIL` : Unrecoverable error while calling socket send()

```
typedef int (*httpd_recv_func_t)(httpd_handle_t hd, int sockfd, char *buf, size_t buf_len, int flags)
```

Prototype for HTTPDs low-level recv function.

---

**Note:** User specified recv function must handle errors internally, depending upon the set value of `errno`, and return specific `HTTPD_SOCK_ERR_` codes, which will eventually be conveyed as return value of `httpd_req_recv()` function

---

**Param `hd` [in]** server instance

**Param `sockfd` [in]** session socket file descriptor

**Param `buf` [in]** buffer with bytes to send

**Param `buf_len` [in]** data size

**Param `flags` [in]** flags for the send() function

**Return**

- Bytes : The number of bytes received successfully
- 0 : Buffer length parameter is zero / connection closed by peer
- `HTTPD_SOCK_ERR_INVALID` : Invalid arguments
- `HTTPD_SOCK_ERR_TIMEOUT` : Timeout/interrupted while calling socket recv()
- `HTTPD_SOCK_ERR_FAIL` : Unrecoverable error while calling socket recv()

```
typedef int (*httpd_pending_func_t)(httpd_handle_t hd, int sockfd)
```

Prototype for HTTPDs low-level “get pending bytes” function.

---

**Note:** User specified pending function must handle errors internally, depending upon the set value of `errno`, and return specific `HTTPD_SOCK_ERR_` codes, which will be handled accordingly in the server task.

---

**Param `hd` [in]** server instance

**Param `sockfd` [in]** session socket file descriptor

**Return**

- Bytes : The number of bytes waiting to be received
- `HTTPD_SOCK_ERR_INVALID` : Invalid arguments
- `HTTPD_SOCK_ERR_TIMEOUT` : Timeout/interrupted while calling socket pending()
- `HTTPD_SOCK_ERR_FAIL` : Unrecoverable error while calling socket pending()

```
typedef esp_err_t (*httpd_err_handler_func_t)(httpd_req_t *req, httpd_err_code_t error)
```

Function prototype for HTTP error handling.

This function is executed upon HTTP errors generated during internal processing of an HTTP request. This is used to override the default behavior on error, which is to send HTTP error response and close the underlying socket.

---

**Note:**

- If implemented, the server will not automatically send out HTTP error response codes, therefore, `httpd_resp_send_err()` must be invoked inside this function if user wishes to generate HTTP error responses.
  - When invoked, the validity of `uri`, `method`, `content_len` and `user_ctx` fields of the `httpd_req_t` parameter is not guaranteed as the HTTP request may be partially received/parsed.
  - The function must return `ESP_OK` if underlying socket needs to be kept open. Any other value will ensure that the socket is closed. The return value is ignored when error is of type `HTTPD_500_INTERNAL_SERVER_ERROR` and the socket closed anyway.
-

**Param req [in]** HTTP request for which the error needs to be handled

**Param error [in]** Error type

**Return**

- ESP\_OK : error handled successful
- ESP\_FAIL : failure indicates that the underlying socket needs to be closed

typedef void **\*httpd\_handle\_t**

HTTP Server Instance Handle.

Every instance of the server will have a unique handle.

typedef enum http\_method **httpd\_method\_t**

HTTP Method Type wrapper over “enum http\_method” available in “http\_parser” library.

typedef void (**\*httpd\_free\_ctx\_fn\_t**)(void \*ctx)

Prototype for freeing context data (if any)

**Param ctx [in]** object to free

typedef *esp\_err\_t* (**\*httpd\_open\_func\_t**)(*httpd\_handle\_t* hd, int sockfd)

Function prototype for opening a session.

Called immediately after the socket was opened to set up the send/recv functions and other parameters of the socket.

**Param hd [in]** server instance

**Param sockfd [in]** session socket file descriptor

**Return**

- ESP\_OK : On success
- Any value other than ESP\_OK will signal the server to close the socket immediately

typedef void (**\*httpd\_close\_func\_t**)(*httpd\_handle\_t* hd, int sockfd)

Function prototype for closing a session.

---

**Note:** It’s possible that the socket descriptor is invalid at this point, the function is called for all terminated sessions. Ensure proper handling of return codes.

---

**Param hd [in]** server instance

**Param sockfd [in]** session socket file descriptor

typedef bool (**\*httpd\_uri\_match\_func\_t**)(const char \*reference\_uri, const char \*uri\_to\_match, size\_t match\_upto)

Function prototype for URI matching.

**Param reference\_uri [in]** URI/template with respect to which the other URI is matched

**Param uri\_to\_match [in]** URI/template being matched to the reference URI/template

**Param match\_upto [in]** For specifying the actual length of `uri_to_match` up to which the matching algorithm is to be applied (The maximum value is `strlen(uri_to_match)`, independent of the length of `reference_uri`)

**Return** true on match

typedef struct *httpd\_config* **httpd\_config\_t**

HTTP Server Configuration Structure.

---

**Note:** Use `HTTPD_DEFAULT_CONFIG()` to initialize the configuration to a default value and then modify only those fields that are specifically determined by the use case.

---

typedef void (\***httpd\_work\_fn\_t**)(void \*arg)

Prototype of the HTTPD work function Please refer to `httpd_queue_work()` for more details.

**Param arg [in]** The arguments for this work function

### Enumerations

enum **httpd\_err\_code\_t**

Error codes sent as HTTP response in case of errors encountered during processing of an HTTP request.

*Values:*

enumerator **HTTPD\_500\_INTERNAL\_SERVER\_ERROR**

enumerator **HTTPD\_501\_METHOD\_NOT\_IMPLEMENTED**

enumerator **HTTPD\_505\_VERSION\_NOT\_SUPPORTED**

enumerator **HTTPD\_400\_BAD\_REQUEST**

enumerator **HTTPD\_401\_UNAUTHORIZED**

enumerator **HTTPD\_403\_FORBIDDEN**

enumerator **HTTPD\_404\_NOT\_FOUND**

enumerator **HTTPD\_405\_METHOD\_NOT\_ALLOWED**

enumerator **HTTPD\_408\_REQ\_TIMEOUT**

enumerator **HTTPD\_411\_LENGTH\_REQUIRED**

enumerator **HTTPD\_414\_URI\_TOO\_LONG**

enumerator **HTTPD\_431\_REQ\_HDR\_FIELDS\_TOO\_LARGE**

enumerator **HTTPD\_ERR\_CODE\_MAX**

enum **esp\_http\_server\_event\_id\_t**

HTTP Server events id.

*Values:*

enumerator **HTTP\_SERVER\_EVENT\_ERROR**

This event occurs when there are any errors during execution

enumerator **HTTP\_SERVER\_EVENT\_START**

This event occurs when HTTP Server is started

enumerator **HTTP\_SERVER\_EVENT\_ON\_CONNECTED**

Once the HTTP Server has been connected to the client, no data exchange has been performed

enumerator **HTTP\_SERVER\_EVENT\_ON\_HEADER**

Occurs when receiving each header sent from the client

enumerator **HTTP\_SERVER\_EVENT\_HEADERS\_SENT**

After sending all the headers to the client

enumerator **HTTP\_SERVER\_EVENT\_ON\_DATA**

Occurs when receiving data from the client

enumerator **HTTP\_SERVER\_EVENT\_SENT\_DATA**

Occurs when an ESP HTTP server session is finished

enumerator **HTTP\_SERVER\_EVENT\_DISCONNECTED**

The connection has been disconnected

enumerator **HTTP\_SERVER\_EVENT\_STOP**

This event occurs when HTTP Server is stopped

## 2.2.10 HTTPS Server

### Overview

This component is built on top of *HTTP Server*. The HTTPS server takes advantage of hook registration functions in the regular HTTP server to provide callback function for SSL session.

All documentation for *HTTP Server* applies also to a server you create this way.

### Used APIs

The following APIs of *HTTP Server* should not be used with *HTTPS Server*, as they are used internally to handle secure sessions and to maintain internal state:

- “send”, “receive” and “pending” callback registration functions - secure socket handling
  - `httpd_sess_set_send_override()`
  - `httpd_sess_set_rcv_override()`
  - `httpd_sess_set_pending_override()`
- “transport context” - both global and session
  - `httpd_sess_get_transport_ctx()` - returns SSL used for the session
  - `httpd_sess_set_transport_ctx()`
  - `httpd_get_global_transport_ctx()` - returns the shared SSL context
  - `httpd_config::global_transport_ctx`
  - `httpd_config::global_transport_ctx_free_fn`
  - `httpd_config::open_fn` - used to set up secure sockets

Everything else can be used without limitations.

## Usage

Please see the example [protocols/https\\_server](#) to learn how to set up a secure server.

Basically, all you need is to generate a certificate, embed it into the firmware, and pass the init struct into the start function after the certificate address and lengths are correctly configured in the init struct.

The server can be started with or without SSL by changing a flag in the init struct - [httpd\\_ssl\\_config::transport\\_mode](#). This could be used, e.g., for testing or in trusted environments where you prefer speed over security.

## Performance

The initial session setup can take about two seconds, or more with slower clock speed or more verbose logging. Subsequent requests through the open secure socket are much faster (down to under 100 ms).

## API Reference

### Header File

- [components/esp\\_https\\_server/include/esp\\_https\\_server.h](#)

### Functions

[esp\\_err\\_t](#) **httpd\_ssl\_start** ([httpd\\_handle\\_t](#) \*handle, [httpd\\_ssl\\_config\\_t](#) \*config)

Create a SSL capable HTTP server (secure mode may be disabled in config)

#### Parameters

- **config** -[inout] - server config, must not be const. Does not have to stay valid after calling this function.
- **handle** -[out] - storage for the server handle, must be a valid pointer

**Returns** success

[esp\\_err\\_t](#) **httpd\_ssl\_stop** ([httpd\\_handle\\_t](#) handle)

Stop the server. Blocks until the server is shut down.

**Parameters** **handle** -[in]

#### Returns

- ESP\_OK: Server stopped successfully
- ESP\_ERR\_INVALID\_ARG: Invalid argument
- ESP\_FAIL: Failure to shut down server

### Structures

struct **esp\_https\_server\_user\_cb\_arg**

Callback data struct, contains the ESP-TLS connection handle and the connection state at which the callback is executed.

### Public Members

[httpd\\_ssl\\_user\\_cb\\_state\\_t](#) **user\_cb\_state**

State of user callback

[esp\\_tls\\_t](#) \***tls**

ESP-TLS connection handle

struct **httpd\_ssl\_config**

HTTPS server config struct

Please use `HTTPD_SSL_CONFIG_DEFAULT()` to initialize it.

### Public Members

*httpd\_config\_t* **httpd**

Underlying HTTPD server config

Parameters like task stack size and priority can be adjusted here.

const uint8\_t \***servercert**

Server certificate

size\_t **servercert\_len**

Server certificate byte length

const uint8\_t \***cacert\_pem**

CA certificate ((CA used to sign clients, or client cert itself)

size\_t **cacert\_len**

CA certificate byte length

const uint8\_t \***prvtkey\_pem**

Private key

size\_t **prvtkey\_len**

Private key byte length

*httpd\_ssl\_transport\_mode\_t* **transport\_mode**

Transport Mode (default secure)

uint16\_t **port\_secure**

Port used when transport mode is secure (default 443)

uint16\_t **port\_insecure**

Port used when transport mode is insecure (default 80)

bool **session\_tickets**

Enable tls session tickets

bool **use\_secure\_element**

Enable secure element for server session

*esp\_https\_server\_user\_cb* \***user\_cb**

User callback for esp\_https\_server

void \***ssl\_userdata**

user data to add to the ssl context

`esp_tls_handshake_callback cert_select_cb`

Certificate selection callback to use

### Macros

`HTTPD_SSL_CONFIG_DEFAULT()`

Default config struct init

(`http_server` default config had to be copied for customization)

Notes:

- port is set when starting the server, according to 'transport\_mode'
- one socket uses ~ 40kB RAM with SSL, we reduce the default socket count to 4
- SSL sockets are usually long-lived, closing LRU prevents pool exhaustion DOS
- Stack size may need adjustments depending on the user application

### Type Definitions

typedef struct *esp\_https\_server\_user\_cb\_arg* `esp_https_server_user_cb_arg_t`

Callback data struct, contains the ESP-TLS connection handle and the connection state at which the callback is executed.

typedef void `esp_https_server_user_cb` (*esp\_https\_server\_user\_cb\_arg\_t* \*user\_cb)

Callback function prototype Can be used to get connection or client information (SSL context) E.g. Client certificate, Socket FD, Connection state, etc.

**Param user\_cb** Callback data struct

typedef struct *httpd\_ssl\_config* `httpd_ssl_config_t`

### Enumerations

enum `httpd_ssl_transport_mode_t`

Values:

enumerator `HTTPD_SSL_TRANSPORT_SECURE`

enumerator `HTTPD_SSL_TRANSPORT_INSECURE`

enum `httpd_ssl_user_cb_state_t`

Indicates the state at which the user callback is executed, i.e at session creation or session close.

Values:

enumerator `HTTPD_SSL_USER_CB_SESS_CREATE`

enumerator `HTTPD_SSL_USER_CB_SESS_CLOSE`

## 2.2.11 ICMP Echo

### Overview

ICMP (Internet Control Message Protocol) is used for diagnostic or control purposes or generated in response to errors in IP operations. The common network util `ping` is implemented based on the ICMP packets with the type field value of 0, also called Echo Reply.

During a ping session, the source host firstly sends out an ICMP echo request packet and wait for an ICMP echo reply with specific times. In this way, it also measures the round-trip time for the messages. After receiving a valid ICMP echo reply, the source host will generate statistics about the IP link layer (e.g. packet loss, elapsed time, etc).

It is common that IoT device needs to check whether a remote server is alive or not. The device should show the warnings to users when it got offline. It can be achieved by creating a ping session and sending/parsing ICMP echo packets periodically.

To make this internal procedure much easier for users, ESP-IDF provides some out-of-box APIs.

**Create a new ping session** To create a ping session, you need to fill in the `esp_ping_config_t` configuration structure firstly, specifying target IP address, interval times, and etc. Optionally, you can also register some callback functions with the `esp_ping_callbacks_t` structure.

Example method to create a new ping session and register callbacks:

```
static void test_on_ping_success(esp_ping_handle_t hdl, void *args)
{
    // optionally, get callback arguments
    // const char* str = (const char*) args;
    // printf("%s\r\n", str); // "foo"
    uint8_t ttl;
    uint16_t seqno;
    uint32_t elapsed_time, recv_len;
    ip_addr_t target_addr;
    esp_ping_get_profile(hdl, ESP_PING_PROF_SEQNO, &seqno, sizeof(seqno));
    esp_ping_get_profile(hdl, ESP_PING_PROF_TTL, &ttl, sizeof(ttl));
    esp_ping_get_profile(hdl, ESP_PING_PROF_IPADDR, &target_addr, sizeof(target_
    ↪addr));
    esp_ping_get_profile(hdl, ESP_PING_PROF_SIZE, &recv_len, sizeof(recv_len));
    esp_ping_get_profile(hdl, ESP_PING_PROF_TIMEGAP, &elapsed_time, sizeof(elapsed_
    ↪time));
    printf("%d bytes from %s icmp_seq=%d ttl=%d time=%d ms\r\n",
           recv_len, inet_ntoa(target_addr.u_addr.ip4), seqno, ttl, elapsed_time);
}

static void test_on_ping_timeout(esp_ping_handle_t hdl, void *args)
{
    uint16_t seqno;
    ip_addr_t target_addr;
    esp_ping_get_profile(hdl, ESP_PING_PROF_SEQNO, &seqno, sizeof(seqno));
    esp_ping_get_profile(hdl, ESP_PING_PROF_IPADDR, &target_addr, sizeof(target_
    ↪addr));
    printf("From %s icmp_seq=%d timeout\r\n", inet_ntoa(target_addr.u_addr.ip4),
    ↪seqno);
}

static void test_on_ping_end(esp_ping_handle_t hdl, void *args)
{
    uint32_t transmitted;
    uint32_t received;
    uint32_t total_time_ms;

    esp_ping_get_profile(hdl, ESP_PING_PROF_REQUEST, &transmitted,
    ↪sizeof(transmitted));
    esp_ping_get_profile(hdl, ESP_PING_PROF_REPLY, &received, sizeof(received));
    esp_ping_get_profile(hdl, ESP_PING_PROF_DURATION, &total_time_ms, sizeof(total_
    ↪time_ms));
    printf("%d packets transmitted, %d received, time %dms\r\n", transmitted,
    ↪received, total_time_ms);
}
```

(continues on next page)

```

void initialize_ping()
{
    /* convert URL to IP address */
    ip_addr_t target_addr;
    struct addrinfo hint;
    struct addrinfo *res = NULL;
    memset(&hint, 0, sizeof(hint));
    memset(&target_addr, 0, sizeof(target_addr));
    getaddrinfo("www.espressif.com", NULL, &hint, &res);
    struct in_addr addr4 = ((struct sockaddr_in *) (res->ai_addr))->sin_addr;
    inet_addr_to_ip4addr(ip_2_ip4(&target_addr), &addr4);
    freeaddrinfo(res);

    esp_ping_config_t ping_config = ESP_PING_DEFAULT_CONFIG();
    ping_config.target_addr = target_addr;           // target IP address
    ping_config.count = ESP_PING_COUNT_INFINITE;    // ping in infinite mode, esp_
↳ping_stop can stop it

    /* set callback functions */
    esp_ping_callbacks_t cbs;
    cbs.on_ping_success = test_on_ping_success;
    cbs.on_ping_timeout = test_on_ping_timeout;
    cbs.on_ping_end = test_on_ping_end;
    cbs.cb_args = "foo"; // arguments that will feed to all callback functions,
↳can be NULL
    cbs.cb_args = eth_event_group;

    esp_ping_handle_t ping;
    esp_ping_new_session(&ping_config, &cbs, &ping);
}

```

**Start and Stop ping session** You can start and stop ping session with the handle returned by `esp_ping_new_session`. Note that, the ping session won't start automatically after creation. If the ping session is stopped, and restart again, the sequence number in ICMP packets will recount from zero again.

**Delete a ping session** If a ping session won't be used any more, you can delete it with `esp_ping_delete_session`. Please make sure the ping session is in stop state (i.e. you have called `esp_ping_stop` before or the ping session has finished all the procedures) when you call this function.

**Get runtime statistics** As the example code above, you can call `esp_ping_get_profile` to get different runtime statistics of ping session in the callback function.

## Application Example

ICMP echo example: [protocols/icmp\\_echo](#)

## API Reference

### Header File

- `components/lwip/include/apps/ping/ping_sock.h`

### Functions

*esp\_err\_t* **esp\_ping\_new\_session** (const *esp\_ping\_config\_t* \*config, const *esp\_ping\_callbacks\_t* \*cbs, *esp\_ping\_handle\_t* \*hdl\_out)

Create a ping session.

**Parameters**

- **config** –ping configuration
- **cbs** –a bunch of callback functions invoked by internal ping task
- **hdl\_out** –handle of ping session

**Returns**

- ESP\_ERR\_INVALID\_ARG: invalid parameters (e.g. configuration is null, etc)
- ESP\_ERR\_NO\_MEM: out of memory
- ESP\_FAIL: other internal error (e.g. socket error)
- ESP\_OK: create ping session successfully, user can take the ping handle to do follow-on jobs

*esp\_err\_t* **esp\_ping\_delete\_session** (*esp\_ping\_handle\_t* hdl)

Delete a ping session.

**Parameters** **hdl** –handle of ping session

**Returns**

- ESP\_ERR\_INVALID\_ARG: invalid parameters (e.g. ping handle is null, etc)
- ESP\_OK: delete ping session successfully

*esp\_err\_t* **esp\_ping\_start** (*esp\_ping\_handle\_t* hdl)

Start the ping session.

**Parameters** **hdl** –handle of ping session

**Returns**

- ESP\_ERR\_INVALID\_ARG: invalid parameters (e.g. ping handle is null, etc)
- ESP\_OK: start ping session successfully

*esp\_err\_t* **esp\_ping\_stop** (*esp\_ping\_handle\_t* hdl)

Stop the ping session.

**Parameters** **hdl** –handle of ping session

**Returns**

- ESP\_ERR\_INVALID\_ARG: invalid parameters (e.g. ping handle is null, etc)
- ESP\_OK: stop ping session successfully

*esp\_err\_t* **esp\_ping\_get\_profile** (*esp\_ping\_handle\_t* hdl, *esp\_ping\_profile\_t* profile, void \*data, uint32\_t size)

Get runtime profile of ping session.

**Parameters**

- **hdl** –handle of ping session
- **profile** –type of profile
- **data** –profile data
- **size** –profile data size

**Returns**

- ESP\_ERR\_INVALID\_ARG: invalid parameters (e.g. ping handle is null, etc)
- ESP\_ERR\_INVALID\_SIZE: the actual profile data size doesn't match the "size" parameter
- ESP\_OK: get profile successfully

## Structures

struct **esp\_ping\_callbacks\_t**

Type of "ping" callback functions.

## Public Members

void **\*cb\_args**

arguments for callback functions

void (**\*on\_ping\_success**)(*esp\_ping\_handle\_t* hdl, void \*args)

Invoked by internal ping thread when received ICMP echo reply packet.

void (**\*on\_ping\_timeout**)(*esp\_ping\_handle\_t* hdl, void \*args)

Invoked by internal ping thread when receive ICMP echo reply packet timeout.

void (**\*on\_ping\_end**)(*esp\_ping\_handle\_t* hdl, void \*args)

Invoked by internal ping thread when a ping session is finished.

struct **esp\_ping\_config\_t**

Type of “ping” configuration.

### Public Members

uint32\_t **count**

A “ping” session contains count procedures

uint32\_t **interval\_ms**

Milliseconds between each ping procedure

uint32\_t **timeout\_ms**

Timeout value (in milliseconds) of each ping procedure

uint32\_t **data\_size**

Size of the data next to ICMP packet header

int **tos**

Type of Service, a field specified in the IP header

int **ttl**

Time to Live, a field specified in the IP header

ip\_addr\_t **target\_addr**

Target IP address, either IPv4 or IPv6

uint32\_t **task\_stack\_size**

Stack size of internal ping task

uint32\_t **task\_prio**

Priority of internal ping task

uint32\_t **interface**

Netif index, interface=0 means NETIF\_NO\_INDEX

### Macros

**ESP\_PING\_DEFAULT\_CONFIG** ()

Default ping configuration.

**ESP\_PING\_COUNT\_INFINITE**

Set ping count to zero will ping target infinitely

### Type Definitions

typedef void \***esp\_ping\_handle\_t**

Type of “ping” session handle.

### Enumerations

enum **esp\_ping\_profile\_t**

Profile of ping session.

*Values:*

enumerator **ESP\_PING\_PROF\_SEQNO**

Sequence number of a ping procedure

enumerator **ESP\_PING\_PROF\_TOS**

Type of service of a ping procedure

enumerator **ESP\_PING\_PROF\_TTL**

Time to live of a ping procedure

enumerator **ESP\_PING\_PROF\_REQUEST**

Number of request packets sent out

enumerator **ESP\_PING\_PROF\_REPLY**

Number of reply packets received

enumerator **ESP\_PING\_PROF\_IPADDR**

IP address of replied target

enumerator **ESP\_PING\_PROF\_SIZE**

Size of received packet

enumerator **ESP\_PING\_PROF\_TIMEGAP**

Elapsed time between request and reply packet

enumerator **ESP\_PING\_PROF\_DURATION**

Elapsed time of the whole ping session

## 2.2.12 mDNS Service

mDNS is a multicast UDP service that is used to provide local network service and host discovery.

The ESP-IDF component *mDNS* has been moved from ESP-IDF since version v5.0 to a separate repository:

- [mDNS component on GitHub](#)

To add mDNS component in your project, please run `idf.py add-dependency espressif/mdns`.

### Hosted Documentation

The documentation can be found on the link below:

- [mDNS documentation](#)

### 2.2.13 Mbed TLS

**Mbed TLS** is a C library that implements cryptographic primitives, X.509 certificate manipulation and the SSL/TLS and DTLS protocols. Its small code footprint makes it suitable for embedded systems.

---

**Note:** ESP-IDF uses a [fork](#) of Mbed TLS which includes a few patches (related to hardware routines of certain modules like `bignum` (MPI) and ECC) over vanilla Mbed TLS.

---

Mbed TLS supports SSL 3.0 up to TLS 1.3 and DTLS 1.0 to 1.2 communication by providing the following:

- TCP/IP communication functions: listen, connect, accept, read/write.
- SSL/TLS communication functions: init, handshake, read/write.
- X.509 functions: CRT, CRL and key handling
- Random number generation
- Hashing
- Encryption/decryption

---

**Note:** Mbed TLS is in the process of migrating all the documentation to a single place. In the meantime, users can find the documentation at the [old Mbed TLS site](#).

---

### Mbed TLS Support in ESP-IDF

Please find the information about the Mbed TLS versions present in different branches of ESP-IDF [here](#).

---

**Note:** Please refer the [ESP-IDF Migration Guide](#) to migrate from Mbed TLS version 2.x to version 3.0 or greater.

---

### Application Examples

Examples in ESP-IDF use [ESP-TLS](#) which provides a simplified API interface for accessing the commonly used TLS functionality.

Refer to the examples [protocols/https\\_server/simple](#) (Simple HTTPS server) and [protocols/https\\_request](#) (Make HTTPS requests) for more information.

If the Mbed TLS API is to be used directly, refer to the example [protocols/https\\_mbedtls](#).

### Alternatives

[ESP-TLS](#) acts as an abstraction layer over the underlying SSL/TLS library and thus has an option to use Mbed TLS or wolfSSL as the underlying library. By default, only Mbed TLS is available and used in ESP-IDF whereas wolfSSL is available publicly at <https://github.com/espressif/esp-wolfSSL> with the upstream submodule pointer.

Please refer to [ESP-TLS: Underlying SSL/TLS Library Options](#) docs for more information on this and comparison of Mbed TLS and wolfSSL.

### Important Config Options

Following is a brief list of important config options accessible at `Component Config -> mbedTLS`. The full list of config options can be found [here](#).

- `CONFIG_MBEDTLS_SSL_PROTO_TLS1_2`: Support for TLS 1.2
- `CONFIG_MBEDTLS_SSL_PROTO_TLS1_3`: Support for TLS 1.3
- `CONFIG_MBEDTLS_CERTIFICATE_BUNDLE`: Support for trusted root certificate bundle (more about this: [ESP x509 Certificate Bundle](#))
- `CONFIG_MBEDTLS_CLIENT_SSL_SESSION_TICKETS`: Support for TLS Session Resumption: Client session tickets
- `CONFIG_MBEDTLS_SERVER_SSL_SESSION_TICKETS`: Support for TLS Session Resumption: Server session tickets
- `CONFIG_MBEDTLS_HARDWARE_SHA`: Support for hardware SHA acceleration
- `CONFIG_MBEDTLS_HARDWARE_ECC`: Support for hardware ECC acceleration

---

**Note:** Mbed TLS v3.0.0 and later support only TLS 1.2 and TLS 1.3 (SSL 3.0, TLS 1.0, TLS 1.1 and DTLS 1.0 are not supported). The support for TLS 1.3 is experimental and only supports the client-side. More information about this can be found out [here](#).

---

### Performance and Memory Tweaks

**Reducing Heap Usage** The following table shows typical memory usage with different configs when the [protocols/https\\_request](#) example (with Server Validation enabled) was run with Mbed TLS as the SSL/TLS library.

Mbed TLS Test	Related Configs	Heap Usage (approx.)
Default	NA	42196 B
Enable SSL Variable Length	<a href="#">CONFIG_MBEDTLS_SSL_VARIABLE_BUFFER_LENGTH</a>	42120 B
Disable Keep Peer Certificate	<a href="#">CONFIG_MBEDTLS_SSL_KEEP_PEER_CERTIFICATE</a>	38533 B
Enable Dynamic TX/RX Buffer	<a href="#">CONFIG_MBEDTLS_DYNAMIC_BUFFER</a> <a href="#">FIG_MBEDTLS_DYNAMIC_FREE_CONFIG_DATA</a> <a href="#">FIG_MBEDTLS_DYNAMIC_FREE_CA_CERT</a>	<a href="#">CON-</a> <a href="#">CON-</a> 22013 B

---

**Note:** These values are subject to change with change in configuration options and versions of Mbed TLS.

---

**Reducing Binary Size** Under `Component Config -> mbedTLS`, there are multiple Mbed TLS features which are enabled by default but can be disabled if not needed to save code size. More information can be about this can be found in [Minimizing Binary Size](#) docs.

Code examples for this API section are provided in the [protocols](#) directory of ESP-IDF examples.

## 2.2.14 IP Network Layer

Documentation for IP Network Layer protocols (below the Application Protocol layer) are provided in [Networking APIs](#).

## 2.3 Bluetooth API

### 2.3.1 Bluetooth® Common

#### BT GENERIC DEFINES

##### API Reference

##### Header File

- [components/bt/host/bluedroid/api/include/api/esp\\_bt\\_defs.h](#)

##### Structures

struct **esp\_bt\_uuid\_t**

UUID type.

##### Public Members

uint16\_t **len**

UUID length, 16bit, 32bit or 128bit

uint16\_t **uuid16**

16bit UUID

uint32\_t **uuid32**

32bit UUID

uint8\_t **uuid128**[ESP\_UUID\_LEN\_128]

128bit UUID

union *esp\_bt\_uuid\_t*::[anonymous] **uuid**

UUID

##### Macros

**ESP\_BLUEDROID\_STATUS\_CHECK** (status)

**ESP\_BT\_STATUS\_BASE\_FOR\_HCI\_ERR**

**ESP\_BT\_OCTET16\_LEN**

**ESP\_BT\_OCTETS\_LEN**

**ESP\_DEFAULT\_GATT\_IF**

Default GATT interface id.

**ESP\_BLE\_PRIM\_ADV\_INT\_MIN**

Minimum advertising interval for undirected and low duty cycle directed advertising

**ESP\_BLE\_PRIM\_ADV\_INT\_MAX**

Maximum advertising interval for undirected and low duty cycle directed advertising

**ESP\_BLE\_CONN\_INT\_MIN**

relate to BTM\_BLE\_CONN\_INT\_MIN in stack/btm\_ble\_api.h

**ESP\_BLE\_CONN\_INT\_MAX**

relate to BTM\_BLE\_CONN\_INT\_MAX in stack/btm\_ble\_api.h

**ESP\_BLE\_CONN\_LATENCY\_MAX**

relate to ESP\_BLE\_CONN\_LATENCY\_MAX in stack/btm\_ble\_api.h

**ESP\_BLE\_CONN\_SUP\_TOUT\_MIN**

relate to BTM\_BLE\_CONN\_SUP\_TOUT\_MIN in stack/btm\_ble\_api.h

**ESP\_BLE\_CONN\_SUP\_TOUT\_MAX**

relate to ESP\_BLE\_CONN\_SUP\_TOUT\_MAX in stack/btm\_ble\_api.h

**ESP\_BLE\_IS\_VALID\_PARAM** (x, min, max)

Check the param is valid or not.

**ESP\_UUID\_LEN\_16**

**ESP\_UUID\_LEN\_32**

**ESP\_UUID\_LEN\_128**

**ESP\_BD\_ADDR\_LEN**

Bluetooth address length.

**ESP\_PEER\_IRK\_LEN**

Bluetooth peer irk.

**ESP\_BLE\_ENC\_KEY\_MASK**

Used to exchange the encryption key in the init key & response key.

**ESP\_BLE\_ID\_KEY\_MASK**

Used to exchange the IRK key in the init key & response key.

**ESP\_BLE\_CSR\_KEY\_MASK**

Used to exchange the CSRK key in the init key & response key.

**ESP\_BLE\_LINK\_KEY\_MASK**

Used to exchange the link key(this key just used in the BLE & BR/EDR coexist mode) in the init key & response key.

**ESP\_APP\_ID\_MIN**

Minimum of the application id.

**ESP\_APP\_ID\_MAX**

Maximum of the application id.

**ESP\_BD\_ADDR\_STR****ESP\_BD\_ADDR\_HEX** (addr)**ESP\_BLE\_ADV\_NAME\_LEN\_MAX****Type Definitions**

```
typedef uint8_t esp_bt_octet16_t[ESP_BT_OCTET16_LEN]

enumerator **ESP\_BT\_DEVICE\_TYPE\_BREDR**

enumerator **ESP\_BT\_DEVICE\_TYPE\_BLE**

enumerator **ESP\_BT\_DEVICE\_TYPE\_DUMO**

enum **esp\_ble\_addr\_type\_t**

BLE device address type.

*Values:*

enumerator **BLE\_ADDR\_TYPE\_PUBLIC**

Public Device Address

enumerator **BLE\_ADDR\_TYPE\_RANDOM**

Random Device Address. To set this address, use the function `esp_ble_gap_set_rand_addr(esp_bd_addr_t rand_addr)`

enumerator **BLE\_ADDR\_TYPE\_RPA\_PUBLIC**

Resolvable Private Address (RPA) with public identity address

enumerator **BLE\_ADDR\_TYPE\_RPA\_RANDOM**

Resolvable Private Address (RPA) with random identity address. To set this address, use the function `esp_ble_gap_set_rand_addr(esp_bd_addr_t rand_addr)`

enum **esp\_ble\_wl\_addr\_type\_t**

white list address type

*Values:*

enumerator **BLE\_WL\_ADDR\_TYPE\_PUBLIC**

enumerator **BLE\_WL\_ADDR\_TYPE\_RANDOM**

## BT MAIN API

### API Reference

#### Header File

- [components/bt/host/bluedroid/api/include/api/esp\\_bt\\_main.h](#)

#### Functions

*esp\_bluedroid\_status\_t* **esp\_bluedroid\_get\_status** (void)

Get bluetooth stack status.

**Returns** Bluetooth stack status

*esp\_err\_t* **esp\_bluedroid\_enable** (void)

Enable bluetooth, must after `esp_bluedroid_init()`.

**Returns**

- ESP\_OK : Succeed
- Other : Failed

*esp\_err\_t* **esp\_bluedroid\_disable** (void)

Disable Bluetooth, must be called prior to `esp_bluedroid_deinit()`.

---

**Note:** Before calling this API, ensure that all activities related to the application, such as connections, scans, etc., are properly closed.

---

**Returns**

- ESP\_OK : Succeed
- Other : Failed

*esp\_err\_t* **esp\_bluedroid\_init** (void)

Init and alloc the resource for bluetooth, must be prior to every bluetooth stuff.

**Returns**

- ESP\_OK : Succeed
- Other : Failed

*esp\_err\_t* **esp\_bluedroid\_deinit** (void)

Deinit and free the resource for bluetooth, must be after every bluetooth stuff.

**Returns**

- ESP\_OK : Succeed
- Other : Failed

**Enumerations**

enum **esp\_bluedroid\_status\_t**

Bluetooth stack status type, to indicate whether the bluetooth stack is ready.

*Values:*

enumerator **ESP\_BLUEDROID\_STATUS\_UNINITIALIZED**

Bluetooth not initialized

enumerator **ESP\_BLUEDROID\_STATUS\_INITIALIZED**

Bluetooth initialized but not enabled

enumerator **ESP\_BLUEDROID\_STATUS\_ENABLED**

Bluetooth initialized and enabled

**BT DEVICE APIs**

**Overview** Bluetooth device reference APIs.

**API Reference****Header File**

- [components/bt/host/bluedroid/api/include/api/esp\\_bt\\_device.h](#)

**Functions**

const uint8\_t \***esp\_bt\_dev\_get\_address** (void)

Get bluetooth device address. Must use after “esp\_bluedroid\_enable” .

**Returns** bluetooth device address (six bytes), or NULL if bluetooth stack is not enabled

*esp\_err\_t* **esp\_bt\_dev\_set\_device\_name** (const char \*name)

Set bluetooth device name. This function should be called after esp\_bluedroid\_enable() completes successfully.

A BR/EDR/LE device type shall have a single Bluetooth device name which shall be identical irrespective of the physical channel used to perform the name discovery procedure.

**Parameters** **name** –[in] : device name to be set

**Returns**

- ESP\_OK : Succeed
- ESP\_ERR\_INVALID\_ARG : if name is NULL pointer or empty, or string length out of limit
- ESP\_ERR\_INVALID\_STATE : if bluetooth stack is not yet enabled
- ESP\_FAIL : others

## 2.3.2 Bluetooth® Low Energy

### GAP API

**Application Example** Check [bluetooth/bluedroid/ble](#) folder in ESP-IDF examples, which contains the following demos and their tutorials:

- This is a SMP security client demo and its tutorial. This demo initiates its security parameters and acts as a GATT client, which can send a security request to the peer device and then complete the encryption procedure.
  - [bluetooth/bluedroid/ble/gatt\\_security\\_client](#)
  - [GATT Security Client Example Walkthrough](#)
- This is a SMP security server demo and its tutorial. This demo initiates its security parameters and acts as a GATT server, which can send a pair request to the peer device and then complete the encryption procedure.
  - [bluetooth/bluedroid/ble/gatt\\_security\\_server](#)
  - [GATT Security Server Example Walkthrough](#)

### API Reference

#### Header File

- [components/bt/host/bluedroid/api/include/api/esp\\_gap\\_ble\\_api.h](#)

#### Functions

*esp\_err\_t* **esp\_ble\_gap\_register\_callback** (*esp\_gap\_ble\_cb\_t* callback)

This function is called to occur gap event, such as scan result.

**Parameters** **callback** –[in] callback function

**Returns**

- ESP\_OK : success
- other : failed

*esp\_gap\_ble\_cb\_t* **esp\_ble\_gap\_get\_callback** (void)

This function is called to get the current gap callback.

**Returns**

- *esp\_gap\_ble\_cb\_t* : callback function

*esp\_err\_t* **esp\_ble\_gap\_config\_adv\_data** (*esp\_ble\_adv\_data\_t* \*adv\_data)

This function is called to override the BTA default ADV parameters.

**Parameters** **adv\_data** –[in] Pointer to User defined ADV data structure. This memory space can not be freed until callback of config\_adv\_data is received.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_scan\_params** (*esp\_ble\_scan\_params\_t* \*scan\_params)

This function is called to set scan parameters.

**Parameters** **scan\_params** –[in] Pointer to User defined scan\_params data structure. This memory space can not be freed until callback of set\_scan\_params

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_start\_scanning** (uint32\_t duration)

This procedure keep the device scanning the peer device which advertising on the air.

**Parameters** *duration* –[in] Keeping the scanning time, the unit is second.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_stop\_scanning** (void)

This function call to stop the device scanning the peer device which advertising on the air.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_start\_advertising** (*esp\_ble\_adv\_params\_t* \*adv\_params)

This function is called to start advertising.

**Parameters** *adv\_params* –[in] pointer to User defined adv\_params data structure.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_stop\_advertising** (void)

This function is called to stop advertising.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_update\_conn\_params** (*esp\_ble\_conn\_update\_params\_t* \*params)

Update connection parameters, can only be used when connection is up.

**Parameters** *params* –[in] - connection update parameters

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_pkt\_data\_len** (*esp\_bd\_addr\_t* remote\_device, uint16\_t tx\_data\_length)

This function is to set maximum LE data packet size.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_rand\_addr** (*esp\_bd\_addr\_t* rand\_addr)

This function allows configuring either a Non-Resolvable Private Address or a Static Random Address.

**Parameters** *rand\_addr* –[in] The address to be configured. Refer to the table below for possible address subtypes:

	address [47:46]	Address Type	
↪Corresponding API			
↪	0b00	Non-Resolvable Private	esp_
↪ble_gap_addr_create_nrpa		Address (NRPA)	
↪			
↪			

(continues on next page)

(continued from previous page)

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_addr\_create\_static** (*esp\_bd\_addr\_t* rand\_addr)

Create a static device address.

**Parameters** **rand\_addr** –[out] Pointer to the buffer where the static device address will be stored.

**Returns** - ESP\_OK : Success

- Other : Failed

*esp\_err\_t* **esp\_ble\_gap\_addr\_create\_nrpa** (*esp\_bd\_addr\_t* rand\_addr)

Create a non-resolvable private address (NRPA)

**Parameters** **rand\_addr** –[out] Pointer to the buffer where the NRPA will be stored.

**Returns** - ESP\_OK : Success

- Other : Failed

*esp\_err\_t* **esp\_ble\_gap\_set\_resolvable\_private\_address\_timeout** (uint16\_t rpa\_timeout)

This function sets the length of time the Controller uses a Resolvable Private Address before generating and starting to use a new resolvable private address.

---

**Note:** Note: This function is currently not supported on the ESP32 but will be enabled in a future update.

---

**Parameters** **rpa\_timeout** –[in] The timeout duration in seconds for how long a Resolvable Private Address is used before a new one is generated. The value must be within the range specified by the Bluetooth specification (0x0001 to 0x0E10), which corresponds to a time range of 1 second to 1 hour. The default value is 0x0384 (900 seconds or 15 minutes).

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_add\_device\_to\_resolving\_list** (*esp\_bd\_addr\_t* peer\_addr, uint8\_t addr\_type, uint8\_t \*peer\_irk)

This function adds a device to the resolving list used to generate and resolve Resolvable Private Addresses in the Controller.

---

**Note:** Note: This function shall not be used when address resolution is enabled in the Controller and:

- Advertising (other than periodic advertising) is enabled,
  - Scanning is enabled, or
  - an HCI\_LE\_Create\_Connection, HCI\_LE\_Extended\_Create\_Connection, or HCI\_LE\_Periodic\_Advertising\_Create\_Sync command is pending. This command may be used at any time when address resolution is disabled in the Controller. The added device shall be set to Network Privacy mode.
- 

**Parameters**

- **peer\_addr** –[in] The peer identity address of the device to be added to the resolving list.
- **addr\_type** –[in] The address type of the peer identity address (BLE\_ADDR\_TYPE\_PUBLIC or BLE\_ADDR\_TYPE\_RANDOM).

- **peer\_irk** –[in] The Identity Resolving Key (IRK) of the device.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_clear\_rand\_addr** (void)

This function clears the random address for the application.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_config\_local\_privacy** (bool privacy\_enable)

Enable/disable privacy (including address resolution) on the local device.

**Parameters** **privacy\_enable** –[in] - enable/disable privacy on remote device.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_config\_local\_icon** (uint16\_t icon)

set local gap appearance icon

**Parameters** **icon** –[in] - External appearance value, these values are defined by the Bluetooth SIG, please refer to <https://www.bluetooth.com/specifications/assigned-numbers/>

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_update\_whitelist** (bool add\_remove, *esp\_bd\_addr\_t* remote\_bda, *esp\_ble\_wl\_addr\_type\_t* wl\_addr\_type)

Add or remove device from white list.

**Parameters**

- **add\_remove** –[in] the value is true if added the ble device to the white list, and false remove to the white list.
- **remote\_bda** –[in] the remote device address add/remove from the white list.
- **wl\_addr\_type** –[in] whitelist address type

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_clear\_whitelist** (void)

Clear all white list.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_get\_whitelist\_size** (uint16\_t \*length)

Get the whitelist size in the controller.

**Parameters** **length** –[out] the white list length.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_prefer\_conn\_params** (*esp\_bd\_addr\_t* bd\_addr, uint16\_t min\_conn\_int, uint16\_t max\_conn\_int, uint16\_t slave\_latency, uint16\_t supervision\_tout)

This function is called to set the preferred connection parameters when default connection parameter is not desired before connecting. This API can only be used in the master role.

**Parameters**

- **bd\_addr** –[in] BD address of the peripheral
- **min\_conn\_int** –[in] minimum preferred connection interval
- **max\_conn\_int** –[in] maximum preferred connection interval
- **slave\_latency** –[in] preferred slave latency
- **supervision\_tout** –[in] preferred supervision timeout

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_device\_name** (const char \*name)

Set device name to the local device Note: This API don't affect the advertising data.

**Parameters** **name** –[in] - device name.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_get\_device\_name** (void)

Get device name of the local device.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_get\_local\_used\_addr** (*esp\_bd\_addr\_t* local\_used\_addr, uint8\_t \*addr\_type)

This function is called to get local used address and address type. uint8\_t \*esp\_bt\_dev\_get\_address(void) get the public address.

**Parameters**

- **local\_used\_addr** –[in] - current local used ble address (six bytes)
- **addr\_type** –[in] - ble address type

**Returns** - ESP\_OK : success

- other : failed

uint8\_t \***esp\_ble\_resolve\_adv\_data\_by\_type** (uint8\_t \*adv\_data, uint16\_t adv\_data\_len, *esp\_ble\_adv\_data\_type* type, uint8\_t \*length)

This function is called to get ADV data for a specific type.

---

**Note:** This is the recommended function to use for resolving ADV data by type. It improves upon the deprecated `esp_ble_resolve_adv_data` function by including an additional parameter to specify the length of the ADV data, thereby offering better safety and reliability.

---

**Parameters**

- **adv\_data** –[in] - pointer of ADV data which to be resolved
- **adv\_data\_len** –[in] - the length of ADV data which to be resolved.
- **type** –[in] - finding ADV data type
- **length** –[out] - return the length of ADV data not including type

**Returns** pointer of ADV data

uint8\_t \***esp\_ble\_resolve\_adv\_data** (uint8\_t \*adv\_data, uint8\_t type, uint8\_t \*length)

This function is called to get ADV data for a specific type.

---

**Note:** This function has been deprecated and will be removed in a future release. Please use `esp_ble_resolve_adv_data_by_type` instead, which provides better parameter validation and supports more accurate data resolution.

---

**Parameters**

- **adv\_data** –[in] - pointer of ADV data which to be resolved
- **type** –[in] - finding ADV data type
- **length** –[out] - return the length of ADV data not including type

**Returns** pointer of ADV data

*esp\_err\_t* **esp\_ble\_gap\_config\_adv\_data\_raw** (uint8\_t \*raw\_data, uint32\_t raw\_data\_len)

This function is called to set raw advertising data. User need to fill ADV data by self.

**Parameters**

- **raw\_data** –[in] : raw advertising data with the format: [Length 1][Data Type 1][Data 1][Length 2][Data Type 2][Data 2] ...
- **raw\_data\_len** –[in] : raw advertising data length , less than 31 bytes

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_config\_scan\_rsp\_data\_raw** (uint8\_t \*raw\_data, uint32\_t raw\_data\_len)

This function is called to set raw scan response data. User need to fill scan response data by self.

**Parameters**

- **raw\_data** –[in] : raw scan response data
- **raw\_data\_len** –[in] : raw scan response data length , less than 31 bytes

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_read\_rssi** (*esp\_bd\_addr\_t* remote\_addr)

This function is called to read the RSSI of remote device. The address of link policy results are returned in the gap callback function with ESP\_GAP\_BLE\_READ\_RSSI\_COMPLETE\_EVT event.

**Parameters** **remote\_addr** –[in] : The remote connection device address.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_add\_duplicate\_scan\_exceptional\_device** (*esp\_ble\_duplicate\_exceptional\_info\_type\_t* type, *esp\_duplicate\_info\_t* device\_info)

This function is called to add a device info into the duplicate scan exceptional list.

**Parameters**

- **type** –[in] device info type, it is defined in *esp\_ble\_duplicate\_exceptional\_info\_type\_t* when type is MESH\_BEACON\_TYPE, MESH\_PROV\_SRV\_ADV or MESH\_PROXY\_SRV\_ADV , device\_info is invalid.
- **device\_info** –[in] the device information.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_remove\_duplicate\_scan\_exceptional\_device** (*esp\_ble\_duplicate\_exceptional\_info\_type\_t* type, *esp\_duplicate\_info\_t* device\_info)

This function is called to remove a device info from the duplicate scan exceptional list.

**Parameters**

- **type** –[in] device info type, it is defined in *esp\_ble\_duplicate\_exceptional\_info\_type\_t* when type is MESH\_BEACON\_TYPE, MESH\_PROV\_SRV\_ADV or MESH\_PROXY\_SRV\_ADV , device\_info is invalid.
- **device\_info** –[in] the device information.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_clean\_duplicate\_scan\_exceptional\_list** (*esp\_duplicate\_scan\_exceptional\_list\_type\_t* list\_type)

This function is called to clean the duplicate scan exceptional list. This API will delete all device information in the duplicate scan exceptional list.

**Parameters** **list\_type** –[in] duplicate scan exceptional list type, the value can be one or more of *esp\_duplicate\_scan\_exceptional\_list\_type\_t*.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_security\_param** (*esp\_ble\_sm\_param\_t* param\_type, void \*value, uint8\_t len)

Set a GAP security parameter value. Overrides the default value.

Secure connection is highly recommended to avoid some major vulnerabilities like 'Impersonation in the Pin Pairing Protocol' (CVE-2020-26555) and 'Authentication of the LE Legacy Pairing Protocol'.

To accept only `secure connection mode`, it is necessary do as following:

1. Set bit `ESP\_LE\_AUTH\_REQ\_SC\_ONLY` (`param\_type` is `ESP\_BLE\_SM\_AUTHEN\_REQ\_MODE`), bit `ESP\_LE\_AUTH\_BOND` and bit `ESP\_LE\_AUTH\_REQ\_MITM` is optional as required.
2. Set to `ESP\_BLE\_ONLY\_ACCEPT\_SPECIFIED\_AUTH\_ENABLE` (`param\_type` is `ESP\_BLE\_SM\_ONLY\_ACCEPT\_SPECIFIED\_SEC\_AUTH`).

**Parameters**

- **param\_type** –[in] : the type of the param which to be set
- **value** –[in] : the param value
- **len** –[in] : the length of the param value

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_security\_rsp** (*esp\_bd\_addr\_t* bd\_addr, bool accept)

Grant security request access.

**Parameters**

- **bd\_addr** –[in] : BD address of the peer
- **accept** –[in] : accept the security request or not

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_set\_encryption** (*esp\_bd\_addr\_t* bd\_addr, *esp\_ble\_sec\_act\_t* sec\_act)

Set a gap parameter value. Use this function to change the default GAP parameter values.

**Parameters**

- **bd\_addr** –[in] : the address of the peer device need to encryption
- **sec\_act** –[in] : This is the security action to indicate what kind of BLE security level is required for the BLE link if the BLE is supported

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_passkey\_reply** (*esp\_bd\_addr\_t* bd\_addr, bool accept, uint32\_t passkey)

Reply the key value to the peer device in the legacy connection stage.

**Parameters**

- **bd\_addr** –[in] : BD address of the peer
- **accept** –[in] : passkey entry successful or declined.
- **passkey** –[in] : passkey value, must be a 6 digit number, can be lead by 0.

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_confirm\_reply** (*esp\_bd\_addr\_t* bd\_addr, bool accept)

Reply the confirm value to the peer device in the secure connection stage.

**Parameters**

- **bd\_addr** –[in] : BD address of the peer device
- **accept** –[in] : numbers to compare are the same or different.

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_remove\_bond\_device** (*esp\_bd\_addr\_t* bd\_addr)

Removes a device from the security database list of peer device. It manages unpairing event while connected.

**Parameters** **bd\_addr** –[in] : BD address of the peer device

**Returns** - ESP\_OK : success

- other : failed

int **esp\_ble\_get\_bond\_device\_num** (void)

Get the device number from the security database list of peer device. It will return the device bonded number immediately.

**Returns** - >= 0 : bonded devices number.

- ESP\_FAIL : failed

*esp\_err\_t* **esp\_ble\_get\_bond\_device\_list** (int \*dev\_num, *esp\_ble\_bond\_dev\_t* \*dev\_list)

Get the device from the security database list of peer device. It will return the device bonded information immediately.

**Parameters**

- **dev\_num** –[inout] Indicate the dev\_list array(buffer) size as input. If dev\_num is large enough, it means the actual number as output. Suggest that dev\_num value equal to esp\_ble\_get\_bond\_device\_num().
- **dev\_list** –[out] an array(buffer) of *esp\_ble\_bond\_dev\_t* type. Use for storing the bonded devices address. The dev\_list should be allocated by who call this API.

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_oob\_req\_reply** (*esp\_bd\_addr\_t* bd\_addr, uint8\_t \*TK, uint8\_t len)

This function is called to provide the OOB data for SMP in response to ESP\_GAP\_BLE\_OOB\_REQ\_EVT.

**Parameters**

- **bd\_addr** –[in] BD address of the peer device.
- **TK** –[in] Temporary Key value, the TK value shall be a 128-bit random number
- **len** –[in] length of temporary key, should always be 128-bit

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_sc\_oob\_req\_reply** (*esp\_bd\_addr\_t* bd\_addr, uint8\_t p\_c[16], uint8\_t p\_r[16])

This function is called to provide the OOB data for SMP in response to ESP\_GAP\_BLE\_SC\_OOB\_REQ\_EVT.

**Parameters**

- **bd\_addr** –[in] BD address of the peer device.
  - **p\_c** –[in] Confirmation value, it shall be a 128-bit random number
  - **p\_r** –[in] Randomizer value, it should be a 128-bit random number
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_create\_sc\_oob\_data** (void)

This function is called to create the OOB data for SMP when secure connection.

- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_disconnect** (*esp\_bd\_addr\_t* remote\_device)

This function is to disconnect the physical connection of the peer device gattc may have multiple virtual GATT server connections when multiple app\_id registered. `esp_ble_gattc_close` (`esp_gatt_if_t` gattc\_if, `uint16_t` conn\_id) only close one virtual GATT server connection. if there exist other virtual GATT server connections, it does not disconnect the physical connection. `esp_ble_gap_disconnect`(`esp_bd_addr_t` remote\_device) disconnect the physical connection directly.

- Parameters** **remote\_device** –[in] : BD address of the peer device
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_get\_current\_conn\_params** (*esp\_bd\_addr\_t* bd\_addr, *esp\_gap\_conn\_params\_t* \*conn\_params)

This function is called to read the connection parameters information of the device.

- Parameters**
- **bd\_addr** –[in] BD address of the peer device.
  - **conn\_params** –[out] the connection parameters information
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_gap\_ble\_set\_channels** (*esp\_gap\_ble\_channels\_t* channels)

BLE set channels.

- Parameters** **channels** –[in] : The n<sup>th</sup> such field (in the range 0 to 36) contains the value for the link layer channel index n. 0 means channel n is bad. 1 means channel n is unknown. The most significant bits are reserved and shall be set to 0. At least one channel shall be marked as unknown.
- Returns** - ESP\_OK : success
- ESP\_ERR\_INVALID\_STATE: if bluetooth stack is not yet enabled
  - other : failed

*esp\_err\_t* **esp\_gap\_ble\_set\_authorization** (*esp\_bd\_addr\_t* bd\_addr, bool authorize)

This function is called to authorized a link after Authentication(MITM protection)

- Parameters**
- **bd\_addr** –[in] BD address of the peer device.
  - **authorize** –[out] Authorized the link or not.
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_read\_phy** (*esp\_bd\_addr\_t* bd\_addr)

This function is used to read the current transmitter PHY and receiver PHY on the connection identified by remote address.

- Parameters** **bd\_addr** –[in] : BD address of the peer device
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_preferred\_default\_phy** (*esp\_ble\_gap\_phy\_mask\_t* tx\_phy\_mask, *esp\_ble\_gap\_phy\_mask\_t* rx\_phy\_mask)

This function is used to allow the Host to specify its preferred values for the transmitter PHY and receiver PHY to be used for all subsequent connections over the LE transport.

#### Parameters

- **tx\_phy\_mask** –[in]: indicates the transmitter PHYs that the Host prefers the Controller to use
- **rx\_phy\_mask** –[in]: indicates the receiver PHYs that the Host prefers the Controller to use

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t esp\_ble\_gap\_set\_preferred\_phy* (*esp\_bd\_addr\_t* bd\_addr, *esp\_ble\_gap\_all\_phys\_t* all\_phys\_mask, *esp\_ble\_gap\_phy\_mask\_t* tx\_phy\_mask, *esp\_ble\_gap\_phy\_mask\_t* rx\_phy\_mask, *esp\_ble\_gap\_prefer\_phy\_options\_t* phy\_options)

This function is used to set the PHY preferences for the connection identified by the remote address. The Controller might not be able to make the change (e.g. because the peer does not support the requested PHY) or may decide that the current PHY is preferable.

#### Parameters

- **bd\_addr** –[in]: remote address
- **all\_phys\_mask** –[in]: a bit field that allows the Host to specify
- **tx\_phy\_mask** –[in]: a bit field that indicates the transmitter PHYs that the Host prefers the Controller to use
- **rx\_phy\_mask** –[in]: a bit field that indicates the receiver PHYs that the Host prefers the Controller to use
- **phy\_options** –[in]: a bit field that allows the Host to specify options for PHYs

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t esp\_ble\_gap\_ext\_adv\_set\_rand\_addr* (*uint8\_t* instance, *esp\_bd\_addr\_t* rand\_addr)

This function is used by the Host to set the random device address specified by the Random\_Address parameter.

#### Parameters

- **instance** –[in]: Used to identify an advertising set
- **rand\_addr** –[in]: Random Device Address

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t esp\_ble\_gap\_ext\_adv\_set\_params* (*uint8\_t* instance, const *esp\_ble\_gap\_ext\_adv\_params\_t* \*params)

This function is used by the Host to set the advertising parameters.

#### Parameters

- **instance** –[in]: identifies the advertising set whose parameters are being configured.
- **params** –[in]: advertising parameters

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t esp\_ble\_gap\_config\_ext\_adv\_data\_raw* (*uint8\_t* instance, *uint16\_t* length, const *uint8\_t* \*data)

This function is used to set the data used in advertising PDUs that have a data field.

#### Parameters

- **instance** –[in]: identifies the advertising set whose data are being configured
- **length** –[in]: data length
- **data** –[in]: data information

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_config\_ext\_scan\_rsp\_data\_raw** (uint8\_t instance, uint16\_t length, const uint8\_t \*scan\_rsp\_data)

This function is used to provide scan response data used in scanning response PDUs.

**Parameters**

- **instance** –[in] : identifies the advertising set whose response data are being configured.
- **length** –[in] : responsedata length
- **scan\_rsp\_data** –[in] : response data information

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_ext\_adv\_start** (uint8\_t num\_adv, const *esp\_ble\_gap\_ext\_adv\_t* \*ext\_adv)

This function is used to request the Controller to enable one or more advertising sets using the advertising sets identified by the instance parameter.

**Parameters**

- **num\_adv** –[in] : Number of advertising sets to enable or disable
- **ext\_adv** –[in] : adv parameters

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_ext\_adv\_stop** (uint8\_t num\_adv, const uint8\_t \*ext\_adv\_inst)

This function is used to request the Controller to disable one or more advertising sets using the advertising sets identified by the instance parameter.

**Parameters**

- **num\_adv** –[in] : Number of advertising sets to enable or disable
- **ext\_adv\_inst** –[in] : ext adv instance

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_ext\_adv\_set\_remove** (uint8\_t instance)

This function is used to remove an advertising set from the Controller.

**Parameters** **instance** –[in] : Used to identify an advertising set

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_ext\_adv\_set\_clear** (void)

This function is used to remove all existing advertising sets from the Controller.

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_set\_params** (uint8\_t instance, const *esp\_ble\_gap\_periodic\_adv\_params\_t* \*params)

This function is used by the Host to set the parameters for periodic advertising.

**Parameters**

- **instance** –[in] : identifies the advertising set whose periodic advertising parameters are being configured.
- **params** –[in] : periodic adv parameters

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_config\_periodic\_adv\_data\_raw** (uint8\_t instance, uint16\_t length, const uint8\_t \*data)

This function is used to set the data used in periodic advertising PDUs.

**Parameters**

- **instance** –[in] : identifies the advertising set whose periodic advertising parameters are being configured.
- **length** –[in] : the length of periodic data

- **data** –[in] : periodic data information
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_start** (uint8\_t instance)

This function is used to request the Controller to enable the periodic advertising for the advertising set specified.

- Parameters** **instance** –[in] : Used to identify an advertising set
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_stop** (uint8\_t instance)

This function is used to request the Controller to disable the periodic advertising for the advertising set specified.

- Parameters** **instance** –[in] : Used to identify an advertising set
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_ext\_scan\_params** (const *esp\_ble\_ext\_scan\_params\_t* \*params)

This function is used to set the extended scan parameters to be used on the advertising channels.

- Parameters** **params** –[in] : scan parameters
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_start\_ext\_scan** (uint32\_t duration, uint16\_t period)

This function is used to enable scanning.

**Parameters**

- **duration** –[in] Scan duration time, where Time = N \* 10 ms. Range: 0x0001 to 0xFFFF.
- **period** –[in] Time interval from when the Controller started its last Scan Duration until it begins the subsequent Scan Duration. Time = N \* 1.28 sec. Range: 0x0001 to 0xFFFF.

- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_stop\_ext\_scan** (void)

This function is used to disable scanning.

- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_create\_sync** (const *esp\_ble\_gap\_periodic\_adv\_sync\_params\_t* \*params)

This function is used to synchronize with periodic advertising from an advertiser and begin receiving periodic advertising packets.

- Parameters** **params** –[in] : sync parameters
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_sync\_cancel** (void)

This function is used to cancel the LE\_Periodic\_Advertising\_Create\_Sync command while it is pending.

- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_sync\_terminate** (uint16\_t sync\_handle)

This function is used to stop reception of the periodic advertising identified by the Sync Handle parameter.

- Parameters** **sync\_handle** –[in] : identify the periodic advertiser
- Returns** - ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_add\_dev\_to\_list** (*esp\_ble\_addr\_type\_t* addr\_type, *esp\_bd\_addr\_t* addr, uint8\_t sid)

This function is used to add a single device to the Periodic Advertiser list stored in the Controller.

#### Parameters

- **addr\_type** –[in] : address type
- **addr** –[in] : Device Address
- **sid** –[in] : Advertising SID subfield in the ADI field used to identify the Periodic Advertising

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_remove\_dev\_from\_list** (*esp\_ble\_addr\_type\_t* addr\_type, *esp\_bd\_addr\_t* addr, uint8\_t sid)

This function is used to remove one device from the list of Periodic Advertisers stored in the Controller. Removals from the Periodic Advertisers List take effect immediately.

#### Parameters

- **addr\_type** –[in] : address type
- **addr** –[in] : Device Address
- **sid** –[in] : Advertising SID subfield in the ADI field used to identify the Periodic Advertising

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_clear\_dev** (void)

This function is used to remove all devices from the list of Periodic Advertisers in the Controller.

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_prefer\_ext\_connect\_params\_set** (*esp\_bd\_addr\_t* addr, *esp\_ble\_gap\_phy\_mask\_t* phy\_mask, const *esp\_ble\_gap\_conn\_params\_t* \*phy\_1m\_conn\_params, const *esp\_ble\_gap\_conn\_params\_t* \*phy\_2m\_conn\_params, const *esp\_ble\_gap\_conn\_params\_t* \*phy\_coded\_conn\_params)

This function is used to set aux connection parameters.

#### Parameters

- **addr** –[in] : device address
- **phy\_mask** –[in] : indicates the PHY(s) on which the advertising packets should be received on the primary advertising channel and the PHYs for which connection parameters have been specified.
- **phy\_1m\_conn\_params** –[in] : Scan connectable advertisements on the LE 1M PHY. Connection parameters for the LE 1M PHY are provided.
- **phy\_2m\_conn\_params** –[in] : Connection parameters for the LE 2M PHY are provided.
- **phy\_coded\_conn\_params** –[in] : Scan connectable advertisements on the LE Coded PHY. Connection parameters for the LE Coded PHY are provided.

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_rcv\_enable** (uint16\_t sync\_handle, uint8\_t enable)

This function is used to set periodic advertising receive enable.

#### Parameters

- **sync\_handle** –[in] : Handle of periodic advertising sync

- **enable** –[in] : Determines whether reporting and duplicate filtering are enabled or disabled

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_sync\_trans** (*esp\_bd\_addr\_t* addr, uint16\_t service\_data, uint16\_t sync\_handle)

This function is used to transfer periodic advertising sync.

**Parameters**

- **addr** –[in] : Peer device address
- **service\_data** –[in] : Service data used by Host
- **sync\_handle** –[in] : Handle of periodic advertising sync

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_periodic\_adv\_set\_info\_trans** (*esp\_bd\_addr\_t* addr, uint16\_t service\_data, uint8\_t adv\_handle)

This function is used to transfer periodic advertising set info.

**Parameters**

- **addr** –[in] : Peer device address
- **service\_data** –[in] : Service data used by Host
- **adv\_handle** –[in] : Handle of advertising set

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_periodic\_adv\_sync\_trans\_params** (*esp\_bd\_addr\_t* addr, const *esp\_ble\_gap\_past\_params\_t* \*params)

This function is used to set periodic advertising sync transfer params.

**Parameters**

- **addr** –[in] : Peer device address
- **params** –[in] : Params of periodic advertising sync transfer

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_dtm\_tx\_start** (const *esp\_ble\_dtm\_tx\_t* \*tx\_params)

This function is used to start a test where the DUT generates reference packets at a fixed interval.

**Parameters** **tx\_params** –[in] : DTM Transmitter parameters

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_dtm\_rx\_start** (const *esp\_ble\_dtm\_rx\_t* \*rx\_params)

This function is used to start a test where the DUT receives test reference packets at a fixed interval.

**Parameters** **rx\_params** –[in] : DTM Receiver parameters

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_dtm\_enh\_tx\_start** (const *esp\_ble\_dtm\_enh\_tx\_t* \*tx\_params)

This function is used to start a test where the DUT generates reference packets at a fixed interval.

**Parameters** **tx\_params** –[in] : DTM Transmitter parameters

**Returns** - ESP\_OK : success

- other : failed

*esp\_err\_t* **esp\_ble\_dtm\_enh\_rx\_start** (const *esp\_ble\_dtm\_enh\_rx\_t* \*rx\_params)

This function is used to start a test where the DUT receives test reference packets at a fixed interval.

**Parameters** **rx\_params** –[in] : DTM Receiver parameters

**Returns** - ESP\_OK : success  
• other : failed

*esp\_err\_t* **esp\_ble\_dtm\_stop**(void)

This function is used to stop any test which is in progress.

**Returns** - ESP\_OK : success  
• other : failed

*esp\_err\_t* **esp\_ble\_gap\_clear\_advertising**(void)

This function is used to clear legacy advertising.

**Returns** - ESP\_OK : success  
• other : failed

*esp\_err\_t* **esp\_ble\_gap\_vendor\_command\_send**(*esp\_ble\_vendor\_cmd\_params\_t* \*vendor\_cmd\_param)

This function is called to send vendor hci command.

**Parameters** **vendor\_cmd\_param** –[in] vendor hci command parameters

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_privacy\_mode**(*esp\_ble\_addr\_type\_t* addr\_type, *esp\_bd\_addr\_t* addr, *esp\_ble\_privacy\_mode\_t* mode)

This function set the privacy mode of the device in resolving list.

---

**Note:** This feature is not supported on ESP32.

---

**Parameters**

- **addr\_type** –[in] The address type of the peer identity address (BLE\_ADDR\_TYPE\_PUBLIC or BLE\_ADDR\_TYPE\_RANDOM).
- **addr** –[in] The peer identity address of the device.
- **mode** –[in] The privacy mode of the device.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gap\_set\_csa\_support**(uint8\_t csa\_select)

This function is used to set which channel selection algorithm(CSA) is supported.

---

**Note:** - This function should only be used when there are BLE compatibility issues about channel hopping after connected. For example, if the peer device only supports CSA#1, this function can be called to make the Controller use CSA#1.

- This function is not supported on ESP32.
- 

**Parameters** **csa\_select** –[in] 0: Channel Selection Algorithm will be selected by Controller  
1: Select the LE Channel Selection Algorithm #1 2: Select the LE Channel Selection Algorithm #2

**Returns**

- ESP\_OK : success
- other : failed

## Unions

union **esp\_ble\_key\_value\_t**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_GET\_BOND\_DEV\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the get bond device operation success status

uint8\_t **dev\_num**

Indicate the get number device in the bond list

*esp\_ble\_bond\_dev\_t* \***bond\_dev**

the pointer to the bond device Structure

struct **ble\_get\_dev\_name\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_GET\_DEV\_NAME\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the get device name success status

char \***name**

Name of bluetooth device

struct **ble\_local\_privacy\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_LOCAL\_PRIVACY\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the set local privacy operation success status

struct **ble\_period\_adv\_add\_dev\_cmpl\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_PERIODIC\_ADV\_ADD\_DEV\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate periodic advertising device list add status

```
struct ble_period_adv_clear_dev_cmpl_param
#include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_CLEAR_DEV_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* status

Indicate periodic advertising device list clean status

```
struct ble_period_adv_create_sync_cmpl_param
#include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_CREATE_SYNC_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* status

Indicate periodic advertising create sync status

```
struct ble_period_adv_remove_dev_cmpl_param
#include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_REMOVE_DEV_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* status

Indicate periodic advertising device list remove status

```
struct ble_period_adv_sync_cancel_cmpl_param
#include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_SYNC_CANCEL_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* status

Indicate periodic advertising sync cancel status

```
struct ble_period_adv_sync_terminate_cmpl_param
#include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_SYNC_TERMINATE_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* status

Indicate periodic advertising sync terminate status

```
struct ble_periodic_adv_data_set_cmpl_param
#include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_DATA_SET_COMPLETE_EVT.
```

### Public Members

#### *esp\_bt\_status\_t* status

Indicate periodic advertising data set status

#### uint8\_t instance

extend advertising handle

struct **ble\_periodic\_adv\_rcv\_enable\_cmpl\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_PERIODIC\_ADV\_RECV\_ENABLE\_COMPLETE\_EVT.

### Public Members

#### *esp\_bt\_status\_t* status

Set periodic advertising receive enable status

struct **ble\_periodic\_adv\_report\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_PERIODIC\_ADV\_REPORT\_EVT.

### Public Members

#### *esp\_ble\_gap\_periodic\_adv\_report\_t* params

periodic advertising report parameters

struct **ble\_periodic\_adv\_set\_info\_trans\_cmpl\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_PERIODIC\_ADV\_SET\_INFO\_TRANS\_COMPLETE\_EVT.

### Public Members

#### *esp\_bt\_status\_t* status

Periodic advertising set info transfer status

#### *esp\_bd\_addr\_t* bda

The remote device address

struct **ble\_periodic\_adv\_set\_params\_cmpl\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_PERIODIC\_ADV\_SET\_PARAMS\_COMPLETE\_EVT.

### Public Members

#### *esp\_bt\_status\_t* status

Indicate periodic advertising parameters set status

#### uint8\_t instance

extend advertising handle

```
struct ble_periodic_adv_start_cmpl_param  
    #include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_START_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* **status**  
 Indicate periodic advertising start status

uint8\_t **instance**  
 extend advertising handle

```
struct ble_periodic_adv_stop_cmpl_param  
    #include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_STOP_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* **status**  
 Indicate periodic advertising stop status

uint8\_t **instance**  
 extend advertising handle

```
struct ble_periodic_adv_sync_estab_param  
    #include <esp_gap_ble_api.h> ESP_GAP_BLE_PERIODIC_ADV_SYNC_ESTAB_EVT.
```

### Public Members

rx phy type

struct `ble_pkt_data_length_cmpl_evt_param`  
`#include <esp_gap_ble_api.h> ESP_GAP_BLE_SET_PKT_LENGTH_COMPLETE_EVT.`

### Public Members

`esp_bt_status_t status`  
Indicate the set pkt data length operation success status

`esp_ble_pkt_data_length_params_t params`  
pkt data length value

struct `ble_read_phy_cmpl_evt_param`  
`#include <esp_gap_ble_api.h> ESP_GAP_BLE_READ_PHY_COMPLETE_EVT.`

### Public Members

*esp\_bt\_status\_t* **status**

read phy complete status

*esp\_bd\_addr\_t* **bda**

read phy address

*esp\_ble\_gap\_phy\_t* **tx\_phy**

tx phy type

*esp\_ble\_gap\_phy\_t* **rx\_phy**

rx phy type

struct **ble\_read\_rssi\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_READ\_RSSI\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the read adv tx power operation success status

*int8\_t* **rssi**

The ble remote device rssi value, the range is from -127 to 20, the unit is dbm, if the RSSI cannot be read, the RSSI metric shall be set to 127.

*esp\_bd\_addr\_t* **remote\_addr**

The remote device address

struct **ble\_remove\_bond\_dev\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_REMOVE\_BOND\_DEV\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the remove bond device operation success status

*esp\_bd\_addr\_t* **bd\_addr**

The device address which has been remove from the bond list

struct **ble\_rpa\_timeout\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_RPA\_TIMEOUT\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the set RPA timeout operation success status

```
struct ble_scan_param_cmpl_evt_param  
    #include <esp_gap_ble_api.h> ESP_GAP_BLE_SCAN_PARAM_SET_COMPLETE_EVT.
```

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the set scan param operation success status

```
struct ble_scan_req_received_param  
    #include <esp_gap_ble_api.h> ESP_GAP_BLE_SCAN_REQ_RECEIVED_EVT.
```

### Public Members

uint8\_t **adv\_instance**

extend advertising handle

*esp\_ble\_addr\_type\_t* **scan\_addr\_type**

scanner address type

*esp\_bd\_addr\_t* **scan\_addr**

scanner address

```
struct ble_scan_result_evt_param  
    #include <esp_gap_ble_api.h> ESP_GAP_BLE_SCAN_RESULT_EVT.
```

### Public Members

*esp\_gap\_search\_evt\_t* **search\_evt**

Search event type

*esp\_bd\_addr\_t* **bda**

Bluetooth device address which has been searched

*esp\_bt\_dev\_type\_t* **dev\_type**

Device type

*esp\_ble\_addr\_type\_t* **ble\_addr\_type**

Ble device address type

*esp\_ble\_evt\_type\_t* **ble\_evt\_type**

Ble scan result event type

int **rssi**

Searched device' s RSSI

uint8\_t **ble\_adv**[ESP\_BLE\_ADV\_DATA\_LEN\_MAX +  
ESP\_BLE\_SCAN\_RSP\_DATA\_LEN\_MAX]

Received EIR

int **flag**

Advertising data flag bit

int **num\_resps**

Scan result number

uint8\_t **adv\_data\_len**

Adv data length

uint8\_t **scan\_rsp\_len**

Scan response length

uint32\_t **num\_dis**

The number of discard packets

struct **ble\_scan\_rsp\_data\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SCAN\_RSP\_DATA\_SET\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the set scan response data operation success status

struct **ble\_scan\_rsp\_data\_raw\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SCAN\_RSP\_DATA\_RAW\_SET\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate the set raw advertising data operation success status

struct **ble\_scan\_start\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SCAN\_START\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate scan start operation success status

struct **ble\_scan\_stop\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SCAN\_STOP\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate scan stop operation success status

struct **ble\_set\_channels\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_CHANNELS\_EVT.

### Public Members

*esp\_bt\_status\_t* **stat**

BLE set channel status

struct **ble\_set\_csa\_support\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_CSA\_SUPPORT\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate CSA support set operation success status

struct **ble\_set\_ext\_scan\_params\_cmpl\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_EXT\_SCAN\_PARAMS\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate extend advertising parameters set status

struct **ble\_set\_past\_params\_cmpl\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_PAST\_PARAMS\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Set periodic advertising sync transfer params status

*esp\_bd\_addr\_t* **bda**

The remote device address

struct **ble\_set\_perf\_def\_phy\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_PREFERRED\_DEFAULT\_PHY\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate perf default phy set status

struct **ble\_set\_perf\_phy\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_PREFERRED\_PHY\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate perf phy set status

struct **ble\_set\_privacy\_mode\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_PRIVACY\_MODE\_COMPLETE\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate privacy mode set operation success status

struct **ble\_set\_rand\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_SET\_STATIC\_RAND\_ADDR\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate set static rand address operation success status

struct **ble\_update\_conn\_params\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_UPDATE\_CONN\_PARAMS\_EVT.

### Public Members

*esp\_bt\_status\_t* **status**

Indicate update connection parameters success status

*esp\_bd\_addr\_t* **bda**

Bluetooth device address

uint16\_t **min\_int**

Minimum connection interval. If the master initiates the connection parameter update, this value is not applicable for the slave and will be set to zero.

**uint16\_t max\_int**

Maximum connection interval. If the master initiates the connection parameter update, this value is not applicable for the slave and will be set to zero.

**uint16\_t latency**

Slave latency for the connection in number of connection events. Range: 0x0000 to 0x01F3

**uint16\_t conn\_int**

Current connection interval in milliseconds, calculated as  $N \times 1.25$  ms

**uint16\_t timeout**

Supervision timeout for the LE Link. Range: 0x000A to 0x0C80. This value is calculated as  $N \times 10$  ms

struct **ble\_update\_duplicate\_exceptional\_list\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_UPDATE\_DUPLICATE\_EXCEPTIONAL\_LIST\_COMPLETE\_EVT.

**Public Members***esp\_bt\_status\_t* **status**

Indicate update duplicate scan exceptional list operation success status

**uint8\_t subcode**

Define in `esp_bt_duplicate_exceptional_subcode_type_t`

**uint16\_t length**

The length of `device_info`

*esp\_duplicate\_info\_t* **device\_info**

device information, when subcode is `ESP_BLE_DUPLICATE_EXCEPTIONAL_LIST_CLEAN`, the value is invalid

struct **ble\_update\_whitelist\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_UPDATE\_WHITELIST\_COMPLETE\_EVT.

**Public Members***esp\_bt\_status\_t* **status**

Indicate the add or remove whitelist operation success status

*esp\_ble\_wl\_operation\_t* **wl\_operation**

The value is `ESP_BLE_WHITELIST_ADD` if add address to whitelist operation success, `ESP_BLE_WHITELIST_REMOVE` if remove address from the whitelist operation success

struct **vendor\_cmd\_cmpl\_evt\_param**

*#include <esp\_gap\_ble\_api.h>* ESP\_GAP\_BLE\_VENDOR\_CMD\_COMPLETE\_EVT.

### Public Members

`uint16_t opcode`  
vendor hci command opcode

`uint16_t param_len`  
The length of parameter buffer

`uint8_t *p_param_buf`  
The point of parameter buffer

### Structures

struct `esp_ble_vendor_cmd_params_t`  
Vendor HCI command parameters.

### Public Members

`uint16_t opcode`  
vendor hci command opcode

`uint8_t param_len`  
the length of parameter

`uint8_t *p_param_buf`  
the point of parameter buffer

struct `esp_ble_dtm_tx_t`  
DTM TX parameters.

### Public Members

`uint8_t tx_channel`  
channel for sending test data,  $tx\_channel = (Frequency - 2402) / 2$ , `tx_channel` range: 0x00-0x27, Frequency range: 2402 MHz to 2480 MHz

`uint8_t len_of_data`  
length in bytes of payload data in each packet

`esp_ble_dtm_pkt_payload_t pkt_payload`  
packet payload type. value range: 0x00-0x07

struct `esp_ble_dtm_rx_t`  
DTM RX parameters.

### Public Members

uint8\_t **rx\_channel**

channel for test data reception, rx\_channel = (Frequency - 2402)/2, tx\_channel range: 0x00-0x27, Frequency range: 2402 MHz to 2480 MHz

struct **esp\_ble\_adv\_params\_t**

Advertising parameters.

### Public Members

uint16\_t **adv\_int\_min**

Minimum advertising interval for undirected and low duty cycle directed advertising. Range: 0x0020 to 0x4000 Default: N = 0x0800 (1.28 second) Time = N \* 0.625 msec Time Range: 20 ms to 10.24 sec

uint16\_t **adv\_int\_max**

Maximum advertising interval for undirected and low duty cycle directed advertising. Range: 0x0020 to 0x4000 Default: N = 0x0800 (1.28 second) Time = N \* 0.625 msec Time Range: 20 ms to 10.24 sec  
Advertising max interval

*esp\_ble\_adv\_type\_t* **adv\_type**

Advertising type

*esp\_ble\_addr\_type\_t* **own\_addr\_type**

Owner bluetooth device address type

*esp\_bd\_addr\_t* **peer\_addr**

Peer device bluetooth device address

*esp\_ble\_addr\_type\_t* **peer\_addr\_type**

Peer device bluetooth device address type, only support public address type and random address type

*esp\_ble\_adv\_channel\_t* **channel\_map**

Advertising channel map

*esp\_ble\_adv\_filter\_t* **adv\_filter\_policy**

Advertising filter policy

struct **esp\_ble\_adv\_data\_t**

Advertising data content, according to “Supplement to the Bluetooth Core Specification” .

### Public Members

bool **set\_scan\_rsp**

Set this advertising data as scan response or not

bool **include\_name**

Advertising data include device name or not

bool **include\_txpower**

Advertising data include TX power

int **min\_interval**

Advertising data show slave preferred connection min interval. The connection interval in the following manner:  $\text{connIntervalmin} = \text{Conn\_Interval\_Min} * 1.25 \text{ ms}$  Conn\_Interval\_Min range: 0x0006 to 0x0C80 Value of 0xFFFF indicates no specific minimum. Values not defined above are reserved for future use.

int **max\_interval**

Advertising data show slave preferred connection max interval. The connection interval in the following manner:  $\text{connIntervalmax} = \text{Conn\_Interval\_Max} * 1.25 \text{ ms}$  Conn\_Interval\_Max range: 0x0006 to 0x0C80 Conn\_Interval\_Max shall be equal to or greater than the Conn\_Interval\_Min. Value of 0xFFFF indicates no specific maximum. Values not defined above are reserved for future use.

int **appearance**

External appearance of device

uint16\_t **manufacturer\_len**

Manufacturer data length

uint8\_t \***p\_manufacturer\_data**

Manufacturer data point

uint16\_t **service\_data\_len**

Service data length

uint8\_t \***p\_service\_data**

Service data point

uint16\_t **service\_uuid\_len**

Service uuid length

uint8\_t \***p\_service\_uuid**

Service uuid array point

uint8\_t **flag**

Advertising flag of discovery mode, see BLE\_ADV\_DATA\_FLAG detail

struct **esp\_ble\_scan\_params\_t**

Ble scan parameters.

### Public Members

*esp\_ble\_scan\_type\_t* **scan\_type**

Scan type

*esp\_ble\_addr\_type\_t* **own\_addr\_type**

Owner address type

*esp\_ble\_scan\_filter\_t* **scan\_filter\_policy**

Scan filter policy

uint16\_t **scan\_interval**

Scan interval. This is defined as the time interval from when the Controller started its last LE scan until it begins the subsequent LE scan. Range: 0x0004 to 0x4000 Default: 0x0010 (10 ms) Time =  $N * 0.625$  msec Time Range: 2.5 msec to 10.24 seconds

uint16\_t **scan\_window**

Scan window. The duration of the LE scan. LE\_Scan\_Window shall be less than or equal to LE\_Scan\_Interval Range: 0x0004 to 0x4000 Default: 0x0010 (10 ms) Time =  $N * 0.625$  msec Time Range: 2.5 msec to 10240 msec

*esp\_ble\_scan\_duplicate\_t* **scan\_duplicate**

The Scan\_Duplicates parameter controls whether the Link Layer should filter out duplicate advertising reports (BLE\_SCAN\_DUPLICATE\_ENABLE) to the Host, or if the Link Layer should generate advertising reports for each packet received

struct **esp\_gap\_conn\_params\_t**

connection parameters information

### Public Members

uint16\_t **interval**

connection interval

uint16\_t **latency**

Slave latency for the connection in number of connection events. Range: 0x0000 to 0x01F3

uint16\_t **timeout**

Supervision timeout for the LE Link. Range: 0x000A to 0x0C80. Mandatory Range: 0x000A to 0x0C80 Time =  $N * 10$  msec Time Range: 100 msec to 32 seconds

struct **esp\_ble\_conn\_update\_params\_t**

Connection update parameters.

### Public Members

*esp\_bd\_addr\_t* **bda**

Bluetooth device address

uint16\_t **min\_int**

Min connection interval

uint16\_t **max\_int**

Max connection interval

uint16\_t **latency**

Slave latency for the connection in number of connection events. Range: 0x0000 to 0x01F3

uint16\_t **timeout**

Supervision timeout for the LE Link. Range: 0x000A to 0x0C80. Mandatory Range: 0x000A to 0x0C80  
Time = N \* 10 msec Time Range: 100 msec to 32 seconds

struct **esp\_ble\_pkt\_data\_length\_params\_t**

BLE pkt data length keys.

### **Public Members**

uint16\_t **rx\_len**

pkt rx data length value

uint16\_t **tx\_len**

pkt tx data length value

struct **esp\_ble\_penc\_keys\_t**

BLE encryption keys.

### **Public Members**

*esp\_bt\_octet16\_t* **ltk**

The long term key

*esp\_bt\_octet8\_t* **rand**

The random number

uint16\_t **ediv**

The ediv value

uint8\_t **sec\_level**

The security level of the security link

uint8\_t **key\_size**

The key size(7~16) of the security link

struct **esp\_ble\_pcsrkeys\_t**

BLE CSRK keys.

### **Public Members**

uint32\_t **counter**

The counter

*esp\_bt\_octet16\_t* **csr\_k**

The csr\_k key

uint8\_t **sec\_level**

The security level

struct **esp\_ble\_pid\_keys\_t**

BLE pid keys.

### Public Members

*esp\_bt\_octet16\_t* **irk**

The irk value

*esp\_ble\_addr\_type\_t* **addr\_type**

The address type

*esp\_bd\_addr\_t* **static\_addr**

The static address

struct **esp\_ble\_lenc\_keys\_t**

BLE Encryption reproduction keys.

### Public Members

*esp\_bt\_octet16\_t* **ltk**

The long term key

uint16\_t **div**

The div value

uint8\_t **key\_size**

The key size of the security link

uint8\_t **sec\_level**

The security level of the security link

struct **esp\_ble\_lcsr\_k\_keys**

BLE SRK keys.

### Public Members

uint32\_t **counter**

The counter value

`uint16_t div`

The div value

`uint8_t sec_level`

The security level of the security link

`esp_bt_octet16_t csrk`

The csrk key value

struct `esp_ble_sec_key_notif_t`

Structure associated with ESP\_KEY\_NOTIF\_EVT.

### Public Members

`esp_bd_addr_t bd_addr`

peer address

`uint32_t passkey`

the numeric value for comparison. If `just_works`, do not show this number to UI

struct `esp_ble_sec_req_t`

Structure of the security request.

### Public Members

`esp_bd_addr_t bd_addr`

peer address

struct `esp_ble_bond_key_info_t`

struct type of the bond key information value

### Public Members

`esp_ble_key_mask_t key_mask`

the key mask to indicate witch key is present

`esp_ble_penc_keys_t penc_key`

received peer encryption key

`esp_ble_pcsrkeys_t pcsrk_key`

received peer device SRK

`esp_ble_pidkeys_t pid_key`

peer device ID key

struct `esp_ble_bond_dev_t`

struct type of the bond device value

**Public Members**

*esp\_bd\_addr\_t* **bd\_addr**

peer address

*esp\_ble\_bond\_key\_info\_t* **bond\_key**

the bond key information

*esp\_ble\_addr\_type\_t* **bd\_addr\_type**

peer address type

struct **esp\_ble\_key\_t**

union type of the security key value

**Public Members**

*esp\_bd\_addr\_t* **bd\_addr**

peer address

*esp\_ble\_key\_type\_t* **key\_type**

key type of the security link

*esp\_ble\_key\_value\_t* **p\_key\_value**

the pointer to the key value

struct **esp\_ble\_local\_id\_keys\_t**

structure type of the ble local id keys value

**Public Members**

*esp\_bt\_octet16\_t* **ir**

the 16 bits of the ir value

*esp\_bt\_octet16\_t* **irk**

the 16 bits of the ir key value

*esp\_bt\_octet16\_t* **dhk**

the 16 bits of the dh key value

struct **esp\_ble\_local\_oob\_data\_t**

structure type of the ble local oob data value

**Public Members**

*esp\_bt\_octet16\_t* **oob\_c**

the 128 bits of confirmation value

*esp\_bt\_octet16\_t* **oob\_r**

the 128 bits of randomizer value

struct **esp\_ble\_auth\_cmpl\_t**

Structure associated with ESP\_AUTH\_CMPL\_EVT.

### Public Members

*esp\_bd\_addr\_t* **bd\_addr**

BD address of peer device

bool **key\_present**

True if the link key value is valid; false otherwise

*esp\_link\_key* **key**

Link key associated with peer device

uint8\_t **key\_type**

The type of link key

bool **success**

True if authentication succeeded; false otherwise

*esp\_ble\_auth\_fail\_rsn\_t* **fail\_reason**

The HCI reason/error code for failure when success is false

*esp\_ble\_addr\_type\_t* **addr\_type**

Peer device address type

*esp\_bt\_dev\_type\_t* **dev\_type**

Device type

*esp\_ble\_auth\_req\_t* **auth\_mode**

Authentication mode

struct **esp\_ble\_gap\_ext\_adv\_params\_t**

ext adv parameters

### Public Members

*esp\_ble\_ext\_adv\_type\_mask\_t* **type**

ext adv type

uint32\_t **interval\_min**

ext adv minimum interval

uint32\_t **interval\_max**  
ext adv maximum interval

*esp\_ble\_adv\_channel\_t* **channel\_map**  
ext adv channel map

*esp\_ble\_addr\_type\_t* **own\_addr\_type**  
ext adv own address type

*esp\_ble\_addr\_type\_t* **peer\_addr\_type**  
ext adv peer address type

*esp\_bd\_addr\_t* **peer\_addr**  
ext adv peer address

*esp\_ble\_adv\_filter\_t* **filter\_policy**  
ext adv filter policy

int8\_t **tx\_power**  
ext adv tx power

*esp\_ble\_gap\_pri\_phy\_t* **primary\_phy**  
ext adv primary phy

uint8\_t **max\_skip**  
ext adv maximum skip

*esp\_ble\_gap\_phy\_t* **secondary\_phy**  
ext adv secondary phy

uint8\_t **sid**  
ext adv sid

bool **scan\_req\_notif**  
ext adv scan request event notify

struct **esp\_ble\_ext\_scan\_cfg\_t**  
ext scan config

### **Public Members**

*esp\_ble\_scan\_type\_t* **scan\_type**  
ext scan type

uint16\_t **scan\_interval**  
ext scan interval

uint16\_t **scan\_window**

ext scan window

struct **esp\_ble\_ext\_scan\_params\_t**

ext scan parameters

### Public Members

*esp\_ble\_addr\_type\_t* **own\_addr\_type**

ext scan own address type

*esp\_ble\_scan\_filter\_t* **filter\_policy**

ext scan filter policy

*esp\_ble\_scan\_duplicate\_t* **scan\_duplicate**

ext scan duplicate scan

*esp\_ble\_ext\_scan\_cfg\_mask\_t* **cfg\_mask**

ext scan config mask

*esp\_ble\_ext\_scan\_cfg\_t* **uncoded\_cfg**

ext scan uncoded config parameters

*esp\_ble\_ext\_scan\_cfg\_t* **coded\_cfg**

ext scan coded config parameters

struct **esp\_ble\_gap\_conn\_params\_t**

create extend connection parameters

### Public Members

uint16\_t **scan\_interval**

init scan interval

uint16\_t **scan\_window**

init scan window

uint16\_t **interval\_min**

minimum interval

uint16\_t **interval\_max**

maximum interval

uint16\_t **latency**

ext scan type

uint16\_t **supervision\_timeout**

connection supervision timeout

uint16\_t **min\_ce\_len**

minimum ce length

uint16\_t **max\_ce\_len**

maximum ce length

struct **esp\_ble\_gap\_ext\_adv\_t**

extend adv enable parameters

### **Public Members**

uint8\_t **instance**

advertising handle

int **duration**

advertising duration

int **max\_events**

maximum number of extended advertising events

struct **esp\_ble\_gap\_periodic\_adv\_params\_t**

periodic adv parameters

### **Public Members**

uint16\_t **interval\_min**

periodic advertising minimum interval

uint16\_t **interval\_max**

periodic advertising maximum interval

uint8\_t **properties**

periodic advertising properties

struct **esp\_ble\_gap\_periodic\_adv\_sync\_params\_t**

periodic adv sync parameters

### **Public Members**

*esp\_ble\_gap\_sync\_t* **filter\_policy**

Configures the filter policy for periodic advertising sync: 0: Use Advertising SID, Advertiser Address Type, and Advertiser Address parameters to determine the advertiser to listen to. 1: Use the Periodic Advertiser List to determine the advertiser to listen to.

`uint8_t sid`

SID of the periodic advertising

`esp_ble_addr_type_t addr_type`

Address type of the periodic advertising

`esp_bd_addr_t addr`

Address of the periodic advertising

`uint16_t skip`

Maximum number of periodic advertising events that can be skipped

`uint16_t sync_timeout`

Synchronization timeout

struct `esp_ble_gap_ext_adv_report_t`

extend adv report parameters

### Public Members

`esp_ble_gap_adv_type_t event_type`

extend advertising type

`uint8_t addr_type`

extend advertising address type

`esp_bd_addr_t addr`

extend advertising address

`esp_ble_gap_pri_phy_t primary_phy`

extend advertising primary phy

`esp_ble_gap_phy_t secondly_phy`

extend advertising secondary phy

`uint8_t sid`

extend advertising sid

`uint8_t tx_power`

extend advertising tx power

`int8_t rssi`

extend advertising rssi

`uint16_t per_adv_interval`

periodic advertising interval

uint8\_t **dir\_addr\_type**

direct address type

*esp\_ble\_addr\_t* **dir\_addr**

direct address

*esp\_ble\_gap\_ext\_adv\_data\_status\_t* **data\_status**

data type

uint8\_t **adv\_data\_len**

extend advertising data length

uint8\_t **adv\_data**[251]

extend advertising data

struct **esp\_ble\_gap\_periodic\_adv\_report\_t**

periodic adv report parameters

### **Public Members**

uint16\_t **sync\_handle**

periodic advertising train handle

uint8\_t **tx\_power**

periodic advertising tx power

int8\_t **rssi**

periodic advertising rssi

*esp\_ble\_gap\_ext\_adv\_data\_status\_t* **data\_status**

periodic advertising data type

uint8\_t **data\_length**

periodic advertising data length

uint8\_t **data**[251]

periodic advertising data

struct **esp\_ble\_gap\_periodic\_adv\_sync\_estab\_t**

periodic adv sync establish parameters

### **Public Members**

uint8\_t **status**

periodic advertising sync status

uint16\_t **sync\_handle**  
periodic advertising train handle

uint8\_t **sid**  
periodic advertising sid

*esp\_ble\_addr\_type\_t* **addr\_type**  
periodic advertising address type

*esp\_bd\_addr\_t* **adv\_addr**  
periodic advertising address

*esp\_ble\_gap\_phy\_t* **adv\_phy**  
periodic advertising adv phy type

uint16\_t **period\_adv\_interval**  
periodic advertising interval

uint8\_t **adv\_clk\_accuracy**  
periodic advertising clock accuracy

struct **esp\_ble\_dtm\_enh\_tx\_t**  
DTM TX parameters.

### Public Members

uint8\_t **tx\_channel**  
channel for sending test data, tx\_channel = (Frequency -2402)/2, tx\_channel range:0x00-0x27, Frequency range: 2402 MHz to 2480 MHz

uint8\_t **len\_of\_data**  
length in bytes of payload data in each packet

*esp\_ble\_dtm\_pkt\_payload\_t* **pkt\_payload**  
packet payload type. value range: 0x00-0x07

*esp\_ble\_gap\_phy\_t* **phy**  
the phy type used by the transmitter, coded phy with S=2:0x04

struct **esp\_ble\_dtm\_enh\_rx\_t**  
DTM RX parameters.

### Public Members

uint8\_t **rx\_channel**  
channel for test data reception, rx\_channel = (Frequency -2402)/2, tx\_channel range:0x00-0x27, Frequency range: 2402 MHz to 2480 MHz

***esp\_ble\_gap\_phy\_t* phy**

the phy type used by the receiver, 1M phy: 0x01, 2M phy:0x02, coded phy:0x03

**uint8\_t modulation\_idx**

modulation index, 0x00:standard modulation index, 0x01:stable modulation index

**struct esp\_ble\_gap\_past\_params\_t**

periodic adv sync transfer parameters

**Public Members*****esp\_ble\_gap\_past\_mode\_t* mode**

periodic advertising sync transfer mode

**uint16\_t skip**

the number of periodic advertising packets that can be skipped

**uint16\_t sync\_timeout**

synchronization timeout for the periodic advertising train

**uint8\_t cte\_type**

periodic advertising sync transfer CET type

**Macros****ESP\_BLE\_ADV\_FLAG\_LIMIT\_DISC**

BLE\_ADV\_DATA\_FLAG data flag bit definition used for advertising data flag.

**ESP\_BLE\_ADV\_FLAG\_GEN\_DISC****ESP\_BLE\_ADV\_FLAG\_BREDR\_NOT\_SPT****ESP\_BLE\_ADV\_FLAG\_DMT\_CONTROLLER\_SPT****ESP\_BLE\_ADV\_FLAG\_DMT\_HOST\_SPT****ESP\_BLE\_ADV\_FLAG\_NON\_LIMIT\_DISC****ESP\_LE\_KEY\_NONE**

relate to BTM\_LE\_KEY\_XXX in stack/btm\_api.h

No encryption key

**ESP\_LE\_KEY\_PENC**

encryption key, encryption information of peer device

**ESP\_LE\_KEY\_PID**

identity key of the peer device

**ESP\_LE\_KEY\_PCSRK**

peer SRK

**ESP\_LE\_KEY\_PLK**

Link key

**ESP\_LE\_KEY\_LLK**

peer link key

**ESP\_LE\_KEY\_LENC**

master role security information:div

**ESP\_LE\_KEY\_LID**

master device ID key

**ESP\_LE\_KEY\_LCSRK**

local CSRK has been deliver to peer

**ESP\_LE\_AUTH\_NO\_BOND**

relate to BTM\_LE\_AUTH\_xxx in stack/btm\_api.h

0 no bondingv

**ESP\_LE\_AUTH\_BOND**

1 << 0 device in the bonding with peer

**ESP\_LE\_AUTH\_REQ\_MITM**

1 << 2 man in the middle attack

**ESP\_LE\_AUTH\_REQ\_BOND\_MITM**

0101 banding with man in the middle attack

**ESP\_LE\_AUTH\_REQ\_SC\_ONLY**

1 << 3 secure connection

**ESP\_LE\_AUTH\_REQ\_SC\_BOND**

1001 secure connection with band

**ESP\_LE\_AUTH\_REQ\_SC\_MITM**

1100 secure conn with MITM

**ESP\_LE\_AUTH\_REQ\_SC\_MITM\_BOND**

1101 SC with MITM and Bonding

**ESP\_BLE\_ONLY\_ACCEPT\_SPECIFIED\_AUTH\_DISABLE**

authentication disable

**ESP\_BLE\_ONLY\_ACCEPT\_SPECIFIED\_AUTH\_ENABLE**

authentication enable

**ESP\_BLE\_OOB\_DISABLE**

disbale the out of bond

**ESP\_BLE\_OOB\_ENABLE**

enable the out of bond

**ESP\_IO\_CAP\_OUT**

relate to BTM\_IO\_CAP\_xxx in stack/btm\_api.h

DisplayOnly

**ESP\_IO\_CAP\_IO**

DisplayYesNo

**ESP\_IO\_CAP\_IN**

KeyboardOnly

**ESP\_IO\_CAP\_NONE**

NoInputNoOutput

**ESP\_IO\_CAP\_KBDISP**

Keyboard display

**ESP\_BLE\_APPEARANCE\_UNKNOWN**

relate to BTM\_BLE\_APPEARANCE\_UNKNOWN in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_PHONE**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_PHONE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_COMPUTER**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_COMPUTER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_WATCH**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_WATCH in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_SPORTS\_WATCH**

relate to BTM\_BLE\_APPEARANCE\_SPORTS\_WATCH in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_CLOCK**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_CLOCK in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_DISPLAY**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_DISPLAY in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_REMOTE**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_REMOTE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_EYEGLASSES**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_EYEGLASSES in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_TAG**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_TAG in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_KEYRING**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_KEYRING in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_MEDIA\_PLAYER**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_MEDIA\_PLAYER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_BARCODE\_SCANNER**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_BARCODE\_SCANNER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_THERMOMETER**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_THERMOMETER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_THERMOMETER\_EAR**

relate to BTM\_BLE\_APPEARANCE\_THERMOMETER\_EAR in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_HEART\_RATE**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_HEART\_RATE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HEART\_RATE\_BELT**

relate to BTM\_BLE\_APPEARANCE\_HEART\_RATE\_BELT in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_BLOOD\_PRESSURE**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_BLOOD\_PRESSURE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_BLOOD\_PRESSURE\_ARM**

relate to BTM\_BLE\_APPEARANCE\_BLOOD\_PRESSURE\_ARM in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_BLOOD\_PRESSURE\_WRIST**

relate to BTM\_BLE\_APPEARANCE\_BLOOD\_PRESSURE\_WRIST in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_HID**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_HID in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_KEYBOARD**

relate to BTM\_BLE\_APPEARANCE\_HID\_KEYBOARD in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_MOUSE**

relate to BTM\_BLE\_APPEARANCE\_HID\_MOUSE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_JOYSTICK**

relate to BTM\_BLE\_APPEARANCE\_HID\_JOYSTICK in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_GAMEPAD**

relate to BTM\_BLE\_APPEARANCE\_HID\_GAMEPAD in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_DIGITIZER\_TABLET**

relate to BTM\_BLE\_APPEARANCE\_HID\_DIGITIZER\_TABLET in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_CARD\_READER**

relate to BTM\_BLE\_APPEARANCE\_HID\_CARD\_READER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_DIGITAL\_PEN**

relate to BTM\_BLE\_APPEARANCE\_HID\_DIGITAL\_PEN in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_HID\_BARCODE\_SCANNER**

relate to BTM\_BLE\_APPEARANCE\_HID\_BARCODE\_SCANNER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_GLUCOSE**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_GLUCOSE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_WALKING**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_WALKING in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_WALKING\_IN\_SHOE**

relate to BTM\_BLE\_APPEARANCE\_WALKING\_IN\_SHOE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_WALKING\_ON\_SHOE**

relate to BTM\_BLE\_APPEARANCE\_WALKING\_ON\_SHOE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_WALKING\_ON\_HIP**

relate to BTM\_BLE\_APPEARANCE\_WALKING\_ON\_HIP in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_CYCLING**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_CYCLING in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_CYCLING\_COMPUTER**

relate to BTM\_BLE\_APPEARANCE\_CYCLING\_COMPUTER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_CYCLING\_SPEED**

relate to BTM\_BLE\_APPEARANCE\_CYCLING\_SPEED in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_CYCLING\_CADENCE**

relate to BTM\_BLE\_APPEARANCE\_CYCLING\_CADENCE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_CYCLING\_POWER**

relate to BTM\_BLE\_APPEARANCE\_CYCLING\_POWER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_CYCLING\_SPEED\_CADENCE**

relate to BTM\_BLE\_APPEARANCE\_CYCLING\_SPEED\_CADENCE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_STANDALONE\_SPEAKER**

relate to BTM\_BLE\_APPEARANCE\_STANDALONE\_SPEAKER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_PULSE\_OXIMETER**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_PULSE\_OXIMETER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_PULSE\_OXIMETER\_FINGERTIP**

relate to BTM\_BLE\_APPEARANCE\_PULSE\_OXIMETER\_FINGERTIP in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_PULSE\_OXIMETER\_WRIST**

relate to BTM\_BLE\_APPEARANCE\_PULSE\_OXIMETER\_WRIST in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_WEIGHT**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_WEIGHT in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_PERSONAL\_MOBILITY\_DEVICE**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_PERSONAL\_MOBILITY\_DEVICE in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_POWERED\_WHEELCHAIR**

relate to BTM\_BLE\_APPEARANCE\_POWERED\_WHEELCHAIR in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_MOBILITY\_SCOOTER**

relate to BTM\_BLE\_APPEARANCE\_MOBILITY\_SCOOTER in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_CONTINUOUS\_GLUCOSE\_MONITOR**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_CONTINUOUS\_GLUCOSE\_MONITOR in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_INSULIN\_PUMP**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_INSULIN\_PUMP in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_INSULIN\_PUMP\_DURABLE\_PUMP**

relate to BTM\_BLE\_APPEARANCE\_INSULIN\_PUMP\_DURABLE\_PUMP in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_INSULIN\_PUMP\_PATCH\_PUMP**

relate to BTM\_BLE\_APPEARANCE\_INSULIN\_PUMP\_PATCH\_PUMP in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_INSULIN\_PEN**

relate to BTM\_BLE\_APPEARANCE\_INSULIN\_PEN in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_MEDICATION\_DELIVERY**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_MEDICATION\_DELIVERY in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_GENERIC\_OUTDOOR\_SPORTS**

relate to BTM\_BLE\_APPEARANCE\_GENERIC\_OUTDOOR\_SPORTS in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION**

relate to BTM\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION\_AND\_NAV**

relate to BTM\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION\_AND\_NAV in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION\_POD**

relate to BTM\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION\_POD in stack/btm\_ble\_api.h

**ESP\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION\_POD\_AND\_NAV**

relate to BTM\_BLE\_APPEARANCE\_OUTDOOR\_SPORTS\_LOCATION\_POD\_AND\_NAV in stack/btm\_ble\_api.h

**BLE\_DTM\_PKT\_PAYLOAD\_0x00**

PRBS9 sequence '1111111100000111101...' (in transmission order) as described in [Vol 6] Part F, Section 4.1.5

**BLE\_DTM\_PKT\_PAYLOAD\_0x01**

Repeated '11110000' (in transmission order) sequence as described in [Vol 6] Part F, Section 4.1.5

**BLE\_DTM\_PKT\_PAYLOAD\_0x02**

Repeated '10101010' (in transmission order) sequence as described in [Vol 6] Part F, Section 4.1.5

**BLE\_DTM\_PKT\_PAYLOAD\_0x03**

PRBS15 sequence as described in [Vol 6] Part F, Section 4.1.5

**BLE\_DTM\_PKT\_PAYLOAD\_0x04**

Repeated '11111111' (in transmission order) sequence

**BLE\_DTM\_PKT\_PAYLOAD\_0x05**

Repeated '00000000' (in transmission order) sequence

**BLE\_DTM\_PKT\_PAYLOAD\_0x06**

Repeated '00001111' (in transmission order) sequence

**BLE\_DTM\_PKT\_PAYLOAD\_0x07**

Repeated '01010101' (in transmission order) sequence

**BLE\_DTM\_PKT\_PAYLOAD\_MAX**

0x08 ~ 0xFF, Reserved for future use

**ESP\_GAP\_BLE\_CHANNELS\_LEN**

channel length

**ESP\_GAP\_BLE\_ADD\_WHITELIST\_COMPLETE\_EVT**

This is the old name, just for backwards compatibility.

**ESP\_BLE\_ADV\_DATA\_LEN\_MAX**

Advertising data maximum length.

**ESP\_BLE\_SCAN\_RSP\_DATA\_LEN\_MAX**

Scan response data maximum length.

**VENDOR\_HCI\_CMD\_MASK**

**BLE\_BIT** (n)

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_NONCONN\_NONSCANNABLE\_UNDIRECTED**

Non-Connectable and Non-Scannable Undirected advertising

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_CONNECTABLE**

Connectable advertising

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_SCANNABLE**

Scannable advertising

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_DIRECTED**

Directed advertising

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_HD\_DIRECTED**

High Duty Cycle Directed Connectable advertising (<= 3.75 ms Advertising Interval)

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_LEGACY**

Use legacy advertising PDUs

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_ANON\_ADV**

Omit advertiser's address from all PDUs ( "anonymous advertising" )

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_INCLUDE\_TX\_PWR**

Include TxPower in the extended header of the advertising PDU

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_MASK**

Reserved for future use If extended advertising PDU types are being used (bit 4 = 0) then: The advertisement shall not be both connectable and scannable. High duty cycle directed connectable advertising (<= 3.75 ms advertising interval) shall not be used (bit 3 = 0) ADV\_IND

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_LEGACY\_IND**

ADV\_DIRECT\_IND (low duty cycle)

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_LEGACY\_LD\_DIR**

ADV\_DIRECT\_IND (high duty cycle)

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_LEGACY\_HD\_DIR**

ADV\_SCAN\_IND

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_LEGACY\_SCAN**

ADV\_NONCONN\_IND

**ESP\_BLE\_GAP\_SET\_EXT\_ADV\_PROP\_LEGACY\_NONCONN**

**ESP\_BLE\_GAP\_PHY\_1M**

Secondary Advertisement PHY is LE1M

**ESP\_BLE\_GAP\_PHY\_2M**

Secondary Advertisement PHY is LE2M

**ESP\_BLE\_GAP\_PHY\_CODED**

Secondary Advertisement PHY is LE Coded

**ESP\_BLE\_GAP\_NO\_PREFER\_TRANSMIT\_PHY**

No Prefer TX PHY supported by controller

**ESP\_BLE\_GAP\_NO\_PREFER\_RECEIVE\_PHY**

No Prefer RX PHY supported by controller

**ESP\_BLE\_GAP\_PRI\_PHY\_1M**

Primary phy only support 1M and LE coded phy.

Primary Phy is LE1M

**ESP\_BLE\_GAP\_PRI\_PHY\_CODED**

Primary Phy is LE CODED

**ESP\_BLE\_GAP\_PHY\_1M\_PREF\_MASK**

The Host prefers use the LE1M transmitter or receiver PHY

**ESP\_BLE\_GAP\_PHY\_2M\_PREF\_MASK**

The Host prefers use the LE2M transmitter or receiver PHY

**ESP\_BLE\_GAP\_PHY\_CODED\_PREF\_MASK**

The Host prefers use the LE CODED transmitter or receiver PHY

**ESP\_BLE\_GAP\_PHY\_OPTIONS\_NO\_PREF**

The Host has no preferred coding when transmitting on the LE Coded PHY

**ESP\_BLE\_GAP\_PHY\_OPTIONS\_PREF\_S2\_CODING**

The Host prefers that S=2 coding be used when transmitting on the LE Coded PHY

**ESP\_BLE\_GAP\_PHY\_OPTIONS\_PREF\_S8\_CODING**

The Host prefers that S=8 coding be used when transmitting on the LE Coded PHY

**ESP\_BLE\_GAP\_EXT\_SCAN\_CFG\_UNCODE\_MASK**

Scan Advertisements on the LE1M PHY

**ESP\_BLE\_GAP\_EXT\_SCAN\_CFG\_CODE\_MASK**

Scan advertisements on the LE coded PHY

**ESP\_BLE\_GAP\_EXT\_ADV\_DATA\_COMPLETE**

Advertising data.

extended advertising data complete

**ESP\_BLE\_GAP\_EXT\_ADV\_DATA\_INCOMPLETE**

extended advertising data incomplete

**ESP\_BLE\_GAP\_EXT\_ADV\_DATA\_TRUNCATED**

extended advertising data truncated mode

**ESP\_BLE\_GAP\_SYNC\_POLICY\_BY\_ADV\_INFO**

Advertising SYNC policy.

sync policy by advertising info

**ESP\_BLE\_GAP\_SYNC\_POLICY\_BY\_PERIODIC\_LIST**

periodic advertising sync policy

**ESP\_BLE\_ADV\_REPORT\_EXT\_ADV\_IND**

Advertising report.

advertising report with extended advertising indication type

**ESP\_BLE\_ADV\_REPORT\_EXT\_SCAN\_IND**

advertising report with extended scan indication type

**ESP\_BLE\_ADV\_REPORT\_EXT\_DIRECT\_ADV**

advertising report with extended direct advertising indication type

**ESP\_BLE\_ADV\_REPORT\_EXT\_SCAN\_RSP**

advertising report with extended scan response indication type Bluetooth 5.0, Vol 2, Part E, 7.7.65.13

**ESP\_BLE\_LEGACY\_ADV\_TYPE\_IND**

advertising report with legacy advertising indication type

**ESP\_BLE\_LEGACY\_ADV\_TYPE\_DIRECT\_IND**

advertising report with legacy direct indication type

**ESP\_BLE\_LEGACY\_ADV\_TYPE\_SCAN\_IND**

advertising report with legacy scan indication type

**ESP\_BLE\_LEGACY\_ADV\_TYPE\_NONCON\_IND**

advertising report with legacy non connectable indication type

**ESP\_BLE\_LEGACY\_ADV\_TYPE\_SCAN\_RSP\_TO\_ADV\_IND**

advertising report with legacy scan response indication type

**ESP\_BLE\_LEGACY\_ADV\_TYPE\_SCAN\_RSP\_TO\_ADV\_SCAN\_IND**

advertising report with legacy advertising with scan response indication type

**EXT\_ADV\_TX\_PWR\_NO\_PREFERENCE**

Extend advertising tx power, range: [-127, +126] dBm.

host has no preference for tx power

**EXT\_ADV\_NUM\_SETS\_MAX**

max number of advertising sets to enable or disable

max evt instance num

**ESP\_BLE\_GAP\_PAST\_MODE\_NO\_SYNC\_EVT**

Periodic advertising sync trans mode.

No attempt is made to sync and no periodic adv sync transfer received event

**ESP\_BLE\_GAP\_PAST\_MODE\_NO\_REPORT\_EVT**

An periodic adv sync transfer received event and no periodic adv report events

**ESP\_BLE\_GAP\_PAST\_MODE\_DUP\_FILTER\_DISABLED**

Periodic adv report events will be enabled with duplicate filtering disabled

**ESP\_BLE\_GAP\_PAST\_MODE\_DUP\_FILTER\_ENABLED**

Periodic adv report events will be enabled with duplicate filtering enabled

**Type Definitions**

```
typedef uint8_t esp_ble_key_type_t
```

```
typedef uint8_t esp_ble_auth_req_t
```

combination of the above bit pattern

```
typedef uint8_t esp_ble_io_cap_t
```

combination of the io capability

```

```

```
typedef void (*esp_gap_ble_cb_t)(esp_gap_ble_cb_event_t event, esp_ble_gap_cb_param_t *param)
```

GAP callback function type.

**Param event** : Event type

**Param param** : Point to callback parameter, currently is union type

### Enumerations

```
enum esp_gap_ble_cb_event_t
```

GAP BLE callback event type.

*Values:*

enumerator **ESP\_GAP\_BLE\_ADV\_DATA\_SET\_COMPLETE\_EVT**

When advertising data set complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_RSP\_DATA\_SET\_COMPLETE\_EVT**

When scan response data set complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_PARAM\_SET\_COMPLETE\_EVT**

When scan parameters set complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_RESULT\_EVT**

When one scan result ready, the event comes each time

enumerator **ESP\_GAP\_BLE\_ADV\_DATA\_RAW\_SET\_COMPLETE\_EVT**

When raw advertising data set complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_RSP\_DATA\_RAW\_SET\_COMPLETE\_EVT**

When raw scan response data set complete, the event comes

enumerator **ESP\_GAP\_BLE\_ADV\_START\_COMPLETE\_EVT**

When start advertising complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_START\_COMPLETE\_EVT**

When start scan complete, the event comes

enumerator **ESP\_GAP\_BLE\_AUTH\_CMPL\_EVT**

Authentication complete indication.

enumerator **ESP\_GAP\_BLE\_KEY\_EVT**

BLE key event for peer device keys

enumerator **ESP\_GAP\_BLE\_SEC\_REQ\_EVT**

BLE security request

enumerator **ESP\_GAP\_BLE\_PASSKEY\_NOTIF\_EVT**

passkey notification event

enumerator **ESP\_GAP\_BLE\_PASSKEY\_REQ\_EVT**

passkey request event

enumerator **ESP\_GAP\_BLE\_OOB\_REQ\_EVT**

OOB request event

enumerator **ESP\_GAP\_BLE\_LOCAL\_IR\_EVT**

BLE local IR (identity Root 128-bit random static value used to generate Long Term Key) event

enumerator **ESP\_GAP\_BLE\_LOCAL\_ER\_EVT**

BLE local ER (Encryption Root value used to generate identity resolving key) event

enumerator **ESP\_GAP\_BLE\_NC\_REQ\_EVT**

Numeric Comparison request event

enumerator **ESP\_GAP\_BLE\_ADV\_STOP\_COMPLETE\_EVT**

When stop adv complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_STOP\_COMPLETE\_EVT**

When stop scan complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_STATIC\_RAND\_ADDR\_EVT**

When set the static rand address complete, the event comes

enumerator **ESP\_GAP\_BLE\_UPDATE\_CONN\_PARAMS\_EVT**

When update connection parameters complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_PKT\_LENGTH\_COMPLETE\_EVT**

When set pkt length complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_LOCAL\_PRIVACY\_COMPLETE\_EVT**

When Enable/disable privacy on the local device complete, the event comes

enumerator **ESP\_GAP\_BLE\_REMOVE\_BOND\_DEV\_COMPLETE\_EVT**

When remove the bond device complete, the event comes

enumerator **ESP\_GAP\_BLE\_CLEAR\_BOND\_DEV\_COMPLETE\_EVT**

When clear the bond device clear complete, the event comes

enumerator **ESP\_GAP\_BLE\_GET\_BOND\_DEV\_COMPLETE\_EVT**

When get the bond device list complete, the event comes

enumerator **ESP\_GAP\_BLE\_READ\_RSSI\_COMPLETE\_EVT**

When read the rssi complete, the event comes

enumerator **ESP\_GAP\_BLE\_UPDATE\_WHITELIST\_COMPLETE\_EVT**

When add or remove whitelist complete, the event comes

enumerator **ESP\_GAP\_BLE\_UPDATE\_DUPLICATE\_EXCEPTIONAL\_LIST\_COMPLETE\_EVT**

When update duplicate exceptional list complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_CHANNELS\_EVT**

When setting BLE channels complete, the event comes

enumerator **ESP\_GAP\_BLE\_READ\_PHY\_COMPLETE\_EVT**

when reading phy complete, this event comes

enumerator **ESP\_GAP\_BLE\_SET\_PREFERRED\_DEFAULT\_PHY\_COMPLETE\_EVT**

when preferred default phy complete, this event comes

enumerator **ESP\_GAP\_BLE\_SET\_PREFERRED\_PHY\_COMPLETE\_EVT**

when preferred phy complete , this event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_SET\_RAND\_ADDR\_COMPLETE\_EVT**

when extended set random address complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_SET\_PARAMS\_COMPLETE\_EVT**

when extended advertising parameter complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_DATA\_SET\_COMPLETE\_EVT**

when extended advertising data complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_SCAN\_RSP\_DATA\_SET\_COMPLETE\_EVT**

when extended scan response data complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_START\_COMPLETE\_EVT**

when extended advertising start complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_STOP\_COMPLETE\_EVT**

when extended advertising stop complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_SET\_REMOVE\_COMPLETE\_EVT**

when extended advertising set remove complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_SET\_CLEAR\_COMPLETE\_EVT**

when extended advertising set clear complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SET\_PARAMS\_COMPLETE\_EVT**

when periodic advertising parameter complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_DATA\_SET\_COMPLETE\_EVT**

when periodic advertising data complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_START\_COMPLETE\_EVT**

when periodic advertising start complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_STOP\_COMPLETE\_EVT**

when periodic advertising stop complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_CREATE\_SYNC\_COMPLETE\_EVT**

when periodic advertising create sync complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SYNC\_CANCEL\_COMPLETE\_EVT**

when extended advertising sync cancel complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SYNC\_TERMINATE\_COMPLETE\_EVT**

when extended advertising sync terminate complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_ADD\_DEV\_COMPLETE\_EVT**

when extended advertising add device complete , the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_REMOVE\_DEV\_COMPLETE\_EVT**

when extended advertising remove device complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_CLEAR\_DEV\_COMPLETE\_EVT**

when extended advertising clear device, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_EXT\_SCAN\_PARAMS\_COMPLETE\_EVT**

when extended scan parameter complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_SCAN\_START\_COMPLETE\_EVT**

when extended scan start complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_SCAN\_STOP\_COMPLETE\_EVT**

when extended scan stop complete, the event comes

enumerator **ESP\_GAP\_BLE\_PREFER\_EXT\_CONN\_PARAMS\_SET\_COMPLETE\_EVT**

when extended prefer connection parameter set complete, the event comes

enumerator **ESP\_GAP\_BLE\_PHY\_UPDATE\_COMPLETE\_EVT**

when ble phy update complete, the event comes

enumerator **ESP\_GAP\_BLE\_EXT\_ADV\_REPORT\_EVT**

when extended advertising report complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_TIMEOUT\_EVT**

when scan timeout complete, the event comes

enumerator **ESP\_GAP\_BLE\_ADV\_TERMINATED\_EVT**

when advertising terminate data complete, the event comes

enumerator **ESP\_GAP\_BLE\_SCAN\_REQ\_RECEIVED\_EVT**

when scan req received complete, the event comes

enumerator **ESP\_GAP\_BLE\_CHANNEL\_SELECT\_ALGORITHM\_EVT**

when channel select algorithm complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_REPORT\_EVT**

when periodic report advertising complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SYNC\_LOST\_EVT**

when periodic advertising sync lost complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SYNC\_ESTAB\_EVT**

when periodic advertising sync establish complete, the event comes

enumerator **ESP\_GAP\_BLE\_SC\_OOB\_REQ\_EVT**

Secure Connection OOB request event

enumerator **ESP\_GAP\_BLE\_SC\_CR\_LOC\_OOB\_EVT**

Secure Connection create OOB data complete event

enumerator **ESP\_GAP\_BLE\_GET\_DEV\_NAME\_COMPLETE\_EVT**

When getting BT device name complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_RECV\_ENABLE\_COMPLETE\_EVT**

when set periodic advertising receive enable complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SYNC\_TRANS\_COMPLETE\_EVT**

when periodic advertising sync transfer complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SET\_INFO\_TRANS\_COMPLETE\_EVT**

when periodic advertising set info transfer complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_PAST\_PARAMS\_COMPLETE\_EVT**

when set periodic advertising sync transfer params complete, the event comes

enumerator **ESP\_GAP\_BLE\_PERIODIC\_ADV\_SYNC\_TRANS\_RECV\_EVT**

when periodic advertising sync transfer received, the event comes

enumerator **ESP\_GAP\_BLE\_DTM\_TEST\_UPDATE\_EVT**

when direct test mode state changes, the event comes

enumerator **ESP\_GAP\_BLE\_ADV\_CLEAR\_COMPLETE\_EVT**

When clear advertising complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_RPA\_TIMEOUT\_COMPLETE\_EVT**

When set the Resolvable Private Address (RPA) timeout completes, the event comes

enumerator **ESP\_GAP\_BLE\_ADD\_DEV\_TO\_RESOLVING\_LIST\_COMPLETE\_EVT**

when add a device to the resolving list completes, the event comes

enumerator **ESP\_GAP\_BLE\_VENDOR\_CMD\_COMPLETE\_EVT**

When vendor hci command complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_PRIVACY\_MODE\_COMPLETE\_EVT**

When set privacy mode complete, the event comes

enumerator **ESP\_GAP\_BLE\_SET\_CSA\_SUPPORT\_COMPLETE\_EVT**

When set CSA support complete, the event comes

enumerator **ESP\_GAP\_BLE\_EVT\_MAX**

when maximum advertising event complete, the event comes

enum **esp\_ble\_adv\_data\_type**

The type of advertising data(not adv\_type)

*Values:*

enumerator **ESP\_BLE\_AD\_TYPE\_FLAG**

enumerator **ESP\_BLE\_AD\_TYPE\_16SRV\_PART**

enumerator **ESP\_BLE\_AD\_TYPE\_16SRV\_CMPL**

enumerator **ESP\_BLE\_AD\_TYPE\_32SRV\_PART**

enumerator **ESP\_BLE\_AD\_TYPE\_32SRV\_CMPL**

enumerator **ESP\_BLE\_AD\_TYPE\_128SRV\_PART**

enumerator **ESP\_BLE\_AD\_TYPE\_128SRV\_CMPL**

enumerator **ESP\_BLE\_AD\_TYPE\_NAME\_SHORT**

enumerator **ESP\_BLE\_AD\_TYPE\_NAME\_CMPL**

enumerator **ESP\_BLE\_AD\_TYPE\_TX\_PWR**

enumerator **ESP\_BLE\_AD\_TYPE\_32SOL\_SRV\_UUID**

enumerator **ESP\_BLE\_AD\_TYPE\_32SERVICE\_DATA**

enumerator **ESP\_BLE\_AD\_TYPE\_128SERVICE\_DATA**

enumerator **ESP\_BLE\_AD\_TYPE\_LE\_SECURE\_CONFIRM**

enumerator **ESP\_BLE\_AD\_TYPE\_LE\_SECURE\_RANDOM**

enumerator **ESP\_BLE\_AD\_TYPE\_URI**

enumerator **ESP\_BLE\_AD\_TYPE\_INDOOR\_POSITION**

enumerator **ESP\_BLE\_AD\_TYPE\_TRANS\_DISC\_DATA**

enumerator **ESP\_BLE\_AD\_TYPE\_LE\_SUPPORT\_FEATURE**

enumerator **ESP\_BLE\_AD\_TYPE\_CHAN\_MAP\_UPDATE**

enumerator **ESP\_BLE\_AD\_MANUFACTURER\_SPECIFIC\_TYPE**

enum **esp\_ble\_adv\_type\_t**

Advertising mode.

*Values:*

enumerator **ADV\_TYPE\_IND**

enumerator **ADV\_TYPE\_DIRECT\_IND\_HIGH**

enumerator **ADV\_TYPE\_SCAN\_IND**

enumerator **ADV\_TYPE\_NONCONN\_IND**

enumerator **ADV\_TYPE\_DIRECT\_IND\_LOW**

enum **esp\_ble\_adv\_channel\_t**

Advertising channel mask.

*Values:*

enumerator **ADV\_CHNL\_37**

enumerator **ADV\_CHNL\_38**

enumerator **ADV\_CHNL\_39**

enumerator **ADV\_CHNL\_ALL**

enum **esp\_ble\_adv\_filter\_t**

*Values:*

enumerator **ADV\_FILTER\_ALLOW\_SCAN\_ANY\_CON\_ANY**

Allow both scan and connection requests from anyone.

enumerator **ADV\_FILTER\_ALLOW\_SCAN\_WLST\_CON\_ANY**

Allow both scan req from White List devices only and connection req from anyone.

enumerator **ADV\_FILTER\_ALLOW\_SCAN\_ANY\_CON\_WLST**

Allow both scan req from anyone and connection req from White List devices only.

enumerator **ADV\_FILTER\_ALLOW\_SCAN\_WLST\_CON\_WLST**

Allow scan and connection requests from White List devices only.

enum **esp\_ble\_sec\_act\_t**

*Values:*

enumerator **ESP\_BLE\_SEC\_ENCRYPT**

relate to `BTA_DM_BLE_SEC_ENCRYPT` in `bta/bta_api.h`. If the device has already bonded, the stack will use Long Term Key (LTK) to encrypt with the remote device directly. Else if the device hasn't bonded, the stack will use the default authentication request used by the `esp_ble_gap_set_security_param` function set by the user.

enumerator **ESP\_BLE\_SEC\_ENCRYPT\_NO\_MITM**

relate to `BTA_DM_BLE_SEC_ENCRYPT_NO_MITM` in `bta/bta_api.h`. If the device has been already bonded, the stack will check the LTK (Long Term Key) whether the authentication request has been met, and if met, use the LTK to encrypt with the remote device directly, else re-pair with the remote device. Else if the device hasn't been bonded, the stack will use NO MITM authentication request in the current link instead of using the `authreq` in the `esp_ble_gap_set_security_param` function set by the user.

enumerator **ESP\_BLE\_SEC\_ENCRYPT\_MITM**

relate to `BTA_DM_BLE_SEC_ENCRYPT_MITM` in `bta/bta_api.h`. If the device has been already bonded, the stack will check the LTK (Long Term Key) whether the authentication request has been met, and if met, use the LTK to encrypt with the remote device directly, else re-pair with the remote device. Else if the device hasn't been bonded, the stack will use MITM authentication request in the current link instead of using the `authreq` in the `esp_ble_gap_set_security_param` function set by the user.

enum **esp\_ble\_sm\_param\_t**

*Values:*

enumerator **ESP\_BLE\_SM\_PASSKEY**

Authentication requirements of local device

enumerator **ESP\_BLE\_SM\_AUTHEN\_REQ\_MODE**

The IO capability of local device

enumerator **ESP\_BLE\_SM\_IOCAP\_MODE**

Initiator Key Distribution/Generation

enumerator **ESP\_BLE\_SM\_SET\_INIT\_KEY**

Responder Key Distribution/Generation

enumerator **ESP\_BLE\_SM\_SET\_RSP\_KEY**

Maximum Encryption key size to support

enumerator **ESP\_BLE\_SM\_MAX\_KEY\_SIZE**

Minimum Encryption key size requirement from Peer

enumerator **ESP\_BLE\_SM\_MIN\_KEY\_SIZE**

Set static Passkey

enumerator **ESP\_BLE\_SM\_SET\_STATIC\_PASSKEY**

Reset static Passkey

enumerator **ESP\_BLE\_SM\_CLEAR\_STATIC\_PASSKEY**

Accept only specified SMP Authentication requirement

enumerator **ESP\_BLE\_SM\_ONLY\_ACCEPT\_SPECIFIED\_SEC\_AUTH**

Enable/Disable OOB support

enumerator **ESP\_BLE\_SM\_OOB\_SUPPORT**

Appl encryption key size

enumerator **ESP\_BLE\_APP\_ENC\_KEY\_SIZE**

authentication max param

enumerator **ESP\_BLE\_SM\_MAX\_PARAM**

enum **esp\_ble\_dtm\_update\_evt\_t**

*Values:*

enumerator **DTM\_TX\_START\_EVT**

DTM TX start event.

enumerator **DTM\_RX\_START\_EVT**

DTM RX start event.

enumerator **DTM\_TEST\_STOP\_EVT**

DTM test end event.

enum **esp\_ble\_scan\_type\_t**

Ble scan type.

*Values:*

enumerator **BLE\_SCAN\_TYPE\_PASSIVE**

Passive scan

enumerator **BLE\_SCAN\_TYPE\_ACTIVE**

Active scan

enum **esp\_ble\_scan\_filter\_t**

Ble scan filter type.

*Values:*

enumerator **BLE\_SCAN\_FILTER\_ALLOW\_ALL**

Accept all :

- i. advertisement packets except directed advertising packets not addressed to this device (default).

enumerator **BLE\_SCAN\_FILTER\_ALLOW\_ONLY\_WLST**

Accept only :

- i. advertisement packets from devices where the advertiser' s address is in the White list.
- ii. Directed advertising packets which are not addressed for this device shall be ignored.

enumerator **BLE\_SCAN\_FILTER\_ALLOW\_UND\_RPA\_DIR**

Accept all :

- i. undirected advertisement packets, and
- ii. directed advertising packets where the initiator address is a resolvable private address, and
- iii. directed advertising packets addressed to this device.

enumerator **BLE\_SCAN\_FILTER\_ALLOW\_WLIST\_RPA\_DIR**

Accept all :

- i. advertisement packets from devices where the advertiser' s address is in the White list, and
- ii. directed advertising packets where the initiator address is a resolvable private address, and
- iii. directed advertising packets addressed to this device.

enum **esp\_ble\_scan\_duplicate\_t**

Ble scan duplicate type.

*Values:*

enumerator **BLE\_SCAN\_DUPLICATE\_DISABLE**

the Link Layer should generate advertising reports to the host for each packet received

enumerator **BLE\_SCAN\_DUPLICATE\_ENABLE**

the Link Layer should filter out duplicate advertising reports to the Host

enumerator **BLE\_SCAN\_DUPLICATE\_ENABLE\_RESET**

Duplicate filtering enabled, reset for each scan period, only supported in BLE 5.0.

enumerator **BLE\_SCAN\_DUPLICATE\_MAX**

Reserved for future use.

enum **esp\_ble\_auth\_fail\_rsn\_t**

Definition of the authentication failed reason.

*Values:*

enumerator **ESP\_AUTH\_SMP\_PASSKEY\_FAIL**

The user input of passkey failed

enumerator **ESP\_AUTH\_SMP\_OOB\_FAIL**

The OOB data is not available

enumerator **ESP\_AUTH\_SMP\_PAIR\_AUTH\_FAIL**

The authentication requirements cannot be met

enumerator **ESP\_AUTH\_SMP\_CONFIRM\_VALUE\_FAIL**

The confirm value does not match the calculated comparison value

enumerator **ESP\_AUTH\_SMP\_PAIR\_NOT\_SUPPORT**

Pairing is not supported by the device

enumerator **ESP\_AUTH\_SMP\_ENC\_KEY\_SIZE**

The resultant encryption key size is not long enough

enumerator **ESP\_AUTH\_SMP\_INVALID\_CMD**

The SMP command received is not supported by this device

enumerator **ESP\_AUTH\_SMP\_UNKNOWN\_ERR**

Pairing failed due to an unspecified reason

enumerator **ESP\_AUTH\_SMP\_REPEATED\_ATTEMPT**

Pairing or authentication procedure is disallowed

enumerator **ESP\_AUTH\_SMP\_INVALID\_PARAMETERS**

The command length is invalid or that a parameter is outside the specified range

enumerator **ESP\_AUTH\_SMP\_DHKEY\_CHK\_FAIL**

The DHKey Check value received doesn't match the one calculated by the local device

enumerator **ESP\_AUTH\_SMP\_NUM\_COMP\_FAIL**

The confirm values in the numeric comparison protocol do not match

enumerator **ESP\_AUTH\_SMP\_BR\_PAIRING\_IN\_PROGR**

Pairing Request sent over the BR/EDR transport is in progress

enumerator **ESP\_AUTH\_SMP\_XTRANS\_DERIVE\_NOT\_ALLOW**

The BR/EDR Link Key or BLE LTK cannot be used to derive

enumerator **ESP\_AUTH\_SMP\_INTERNAL\_ERR**

Internal error in pairing procedure

enumerator **ESP\_AUTH\_SMP\_UNKNOWN\_IO**

Unknown IO capability, unable to decide association model

enumerator **ESP\_AUTH\_SMP\_INIT\_FAIL**

SMP pairing initiation failed

enumerator **ESP\_AUTH\_SMP\_CONFIRM\_FAIL**

The confirm value does not match

enumerator **ESP\_AUTH\_SMP\_BUSY**

Pending security request on going

enumerator **ESP\_AUTH\_SMP\_ENC\_FAIL**

The Controller failed to start encryption

enumerator **ESP\_AUTH\_SMP\_STARTED**

SMP pairing process started

enumerator **ESP\_AUTH\_SMP\_RSP\_TIMEOUT**  
Security Manager timeout due to no SMP command being received

enumerator **ESP\_AUTH\_SMP\_DIV\_NOT\_AVAIL**  
Encrypted Diversifier value not available

enumerator **ESP\_AUTH\_SMP\_UNSPEC\_ERR**  
Unspecified failed reason

enumerator **ESP\_AUTH\_SMP\_CONN\_TOUT**  
Pairing process failed due to connection timeout

enum **esp\_gap\_search\_evt\_t**  
Sub Event of ESP\_GAP\_BLE\_SCAN\_RESULT\_EVT.

*Values:*

enumerator **ESP\_GAP\_SEARCH\_INQ\_RES\_EVT**  
Inquiry result for a peer device.

enumerator **ESP\_GAP\_SEARCH\_INQ\_CMPL\_EVT**  
Inquiry complete.

enumerator **ESP\_GAP\_SEARCH\_DISC\_RES\_EVT**  
Discovery result for a peer device.

enumerator **ESP\_GAP\_SEARCH\_DISC\_BLE\_RES\_EVT**  
Discovery result for BLE GATT based service on a peer device.

enumerator **ESP\_GAP\_SEARCH\_DISC\_CMPL\_EVT**  
Discovery complete.

enumerator **ESP\_GAP\_SEARCH\_DI\_DISC\_CMPL\_EVT**  
Discovery complete.

enumerator **ESP\_GAP\_SEARCH\_SEARCH\_CANCEL\_CMPL\_EVT**  
Search cancelled

enumerator **ESP\_GAP\_SEARCH\_INQ\_DISCARD\_NUM\_EVT**  
The number of pkt discarded by flow control

enum **esp\_ble\_evt\_type\_t**  
Ble scan result event type, to indicate the result is scan response or advertising data or other.

*Values:*

enumerator **ESP\_BLE\_EVT\_CONN\_ADV**  
Connectable undirected advertising (ADV\_IND)

enumerator **ESP\_BLE\_EVT\_CONN\_DIR\_ADV**  
Connectable directed advertising (ADV\_DIRECT\_IND)

enumerator **ESP\_BLE\_EVT\_DISC\_ADV**  
Scannable undirected advertising (ADV\_SCAN\_IND)

enumerator **ESP\_BLE\_EVT\_NON\_CONN\_ADV**  
Non connectable undirected advertising (ADV\_NONCONN\_IND)

enumerator **ESP\_BLE\_EVT\_SCAN\_RSP**  
Scan Response (SCAN\_RSP)

enum **esp\_ble\_wl\_operation\_t**

*Values:*

enumerator **ESP\_BLE\_WHITELIST\_REMOVE**  
remove mac from whitelist

enumerator **ESP\_BLE\_WHITELIST\_ADD**  
add address to whitelist

enumerator **ESP\_BLE\_WHITELIST\_CLEAR**  
clear all device in whitelist

enum **esp\_bt\_duplicate\_exceptional\_subcode\_type\_t**

*Values:*

enumerator **ESP\_BLE\_DUPLICATE\_EXCEPTIONAL\_LIST\_ADD**  
Add device info into duplicate scan exceptional list

enumerator **ESP\_BLE\_DUPLICATE\_EXCEPTIONAL\_LIST\_REMOVE**  
Remove device info from duplicate scan exceptional list

enumerator **ESP\_BLE\_DUPLICATE\_EXCEPTIONAL\_LIST\_CLEAN**  
Clean duplicate scan exceptional list

enum **esp\_ble\_duplicate\_exceptional\_info\_type\_t**

*Values:*

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_INFO\_ADV\_ADDR**  
BLE advertising address , device info will be added into ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_ADDR\_LIST

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_INFO\_MESH\_LINK\_ID**  
BLE mesh link ID, it is for BLE mesh, device info will be added into ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_MESH\_LINK\_ID\_LIST

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_INFO\_MESH\_BEACON\_TYPE**  
BLE mesh beacon AD type, the format is | Len | 0x2B | Beacon Type | Beacon Data |

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_INFO\_MESH\_PROV\_SRV\_ADV**

BLE mesh provisioning service uuid, the format is | 0x02 | 0x01 | flags | 0x03 | 0x03 | 0x1827 | ... |

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_INFO\_MESH\_PROXY\_SRV\_ADV**

BLE mesh adv with proxy service uuid, the format is | 0x02 | 0x01 | flags | 0x03 | 0x03 | 0x1828 | ... |

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_INFO\_MESH\_PROXY\_SOLIC\_ADV**

BLE mesh adv with proxy service uuid, the format is | 0x02 | 0x01 | flags | 0x03 | 0x03 | 0x1859 | ... |

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_INFO\_MESH\_URI\_ADV**

BLE mesh URI adv, the format is ... | Len | 0x24 | data | ...

enum **esp\_duplicate\_scan\_exceptional\_list\_type\_t**

*Values:*

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_ADDR\_LIST**

duplicate scan exceptional addr list

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_MESH\_LINK\_ID\_LIST**

duplicate scan exceptional mesh link ID list

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_MESH\_BEACON\_TYPE\_LIST**

duplicate scan exceptional mesh beacon type list

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_MESH\_PROV\_SRV\_ADV\_LIST**

duplicate scan exceptional mesh adv with provisioning service uuid

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_MESH\_PROXY\_SRV\_ADV\_LIST**

duplicate scan exceptional mesh adv with proxy service uuid

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_MESH\_PROXY\_SOLIC\_ADV\_LIST**

duplicate scan exceptional mesh adv with proxy solicitation PDU uuid

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_MESH\_URI\_ADV\_LIST**

duplicate scan exceptional URI list

enumerator **ESP\_BLE\_DUPLICATE\_SCAN\_EXCEPTIONAL\_ALL\_LIST**

duplicate scan exceptional all list

enum **esp\_ble\_privacy\_mode\_t**

*Values:*

enumerator **ESP\_BLE\_NETWORK\_PRIVACY\_MODE**

Network Privacy Mode for peer device (default)

enumerator **ESP\_BLE\_DEVICE\_PRIVACY\_MODE**

Device Privacy Mode for peer device

## GATT DEFINES

### API Reference

#### Header File

- [components/bt/host/bluedroid/api/include/api/esp\\_gatt\\_defs.h](#)

#### Unions

union **esp\_gatt\_rsp\_t**

*#include* <esp\_gatt\_defs.h> Represents the response type for a GATT remote read request.

#### Public Members

*esp\_gatt\_value\_t* **attr\_value**

The GATT attribute value, including its data, handle, and metadata.

uint16\_t **handle**

Only the handle of the GATT attribute, when that's the only required information.

#### Structures

struct **esp\_gatt\_id\_t**

Represents a GATT identifier.

#### Public Members

*esp\_bt\_uuid\_t* **uuid**

The UUID component of the GATT ID.

uint8\_t **inst\_id**

The instance ID component of the GATT ID, providing further differentiation of the GATT ID.

struct **esp\_gatt\_srvc\_id\_t**

Represents a GATT service identifier.

#### Public Members

*esp\_gatt\_id\_t* **id**

Encapsulates the UUID and instance ID of the GATT service.

bool **is\_primary**

Indicates if the service is primary. A value of true means it is a primary service, false indicates a secondary service.

struct **esp\_attr\_desc\_t**

Defines an attribute's description.

This structure is used to describe an attribute in the GATT database. It includes details such as the UUID of the attribute, its permissions, and its value.

### Public Members

uint16\_t **uuid\_length**

Length of the UUID in bytes.

uint8\_t \***uuid\_p**

Pointer to the UUID value.

uint16\_t **perm**

Attribute permissions, defined by `esp_gatt_perm_t`.

uint16\_t **max\_length**

Maximum length of the attribute's value.

uint16\_t **length**

Current length of the attribute's value.

uint8\_t \***value**

Pointer to the attribute's value array.

struct **esp\_attr\_control\_t**

Defines the auto response setting for attribute operations.

This structure is used to control whether the GATT stack or the application will handle responses to Read/Write operations.

### Public Members

uint8\_t **auto\_rsp**

Controls who handles the response to Read/Write operations.

- If set to `ESP_GATT_RSP_BY_APP`, the application is responsible for generating the response.
- If set to `ESP_GATT_AUTO_RSP`, the GATT stack will automatically generate the response.

struct **esp\_gatts\_attr\_db\_t**

attribute type added to the GATT server database

### Public Members

*esp\_attr\_control\_t* **attr\_control**

The attribute control type

*esp\_attr\_desc\_t* **att\_desc**

The attribute type

struct **esp\_attr\_value\_t**

set the attribute value type

### **Public Members**

uint16\_t **attr\_max\_len**

attribute max value length

uint16\_t **attr\_len**

attribute current value length

uint8\_t \***attr\_value**

the pointer to attribute value

struct **esp\_gatts\_incl\_svc\_desc\_t**

Gatt include service entry element.

### **Public Members**

uint16\_t **start\_hdl**

Gatt start handle value of included service

uint16\_t **end\_hdl**

Gatt end handle value of included service

uint16\_t **uuid**

Gatt attribute value UUID of included service

struct **esp\_gatts\_incl128\_svc\_desc\_t**

Gatt include 128 bit service entry element.

### **Public Members**

uint16\_t **start\_hdl**

Gatt start handle value of included 128 bit service

uint16\_t **end\_hdl**

Gatt end handle value of included 128 bit service

struct **esp\_gatt\_value\_t**

Represents a GATT attribute's value.

**Public Members**

`uint8_t value[ESP_GATT_MAX_ATTR_LEN]`  
Array holding the value of the GATT attribute.

`uint16_t handle`  
Unique identifier (handle) of the GATT attribute.

`uint16_t offset`  
Offset within the attribute's value, for partial updates.

`uint16_t len`  
Current length of the data in the value array.

`uint8_t auth_req`  
Authentication requirements for accessing this attribute.

struct `esp_gatt_conn_params_t`  
Connection parameters for GATT.

**Public Members**

`uint16_t interval`  
Connection interval.

`uint16_t latency`  
Slave latency for the connection in number of connection events.

`uint16_t timeout`  
Supervision timeout for the LE Link.

struct `esp_gattc_multi_t`  
Represents multiple attributes for reading.

**Public Members**

`uint8_t num_attr`  
Number of attributes.

`uint16_t handles[ESP_GATT_MAX_READ_MULTI_HANDLES]`  
List of attribute handles.

struct `esp_gattc_db_elem_t`  
GATT database attribute element.

**Public Members**

*esp\_gatt\_db\_attr\_type\_t* **type**

Attribute type.

uint16\_t **attribute\_handle**

Attribute handle.

uint16\_t **start\_handle**

Service start handle.

uint16\_t **end\_handle**

Service end handle.

*esp\_gatt\_char\_prop\_t* **properties**

Characteristic properties.

*esp\_bt\_uuid\_t* **uuid**

Attribute UUID.

struct **esp\_gattc\_service\_elem\_t**

Represents a GATT service element.

**Public Members**

bool **is\_primary**

Indicates if the service is primary.

uint16\_t **start\_handle**

Service start handle.

uint16\_t **end\_handle**

Service end handle.

*esp\_bt\_uuid\_t* **uuid**

Service UUID.

struct **esp\_gattc\_char\_elem\_t**

Represents a GATT characteristic element.

**Public Members**

uint16\_t **char\_handle**

Characteristic handle.

*esp\_gatt\_char\_prop\_t* **properties**

Characteristic properties.

*esp\_bt\_uuid\_t* **uuid**

Characteristic UUID.

struct **esp\_gattc\_descr\_elem\_t**

Represents a GATT descriptor element.

### Public Members

uint16\_t **handle**

Descriptor handle.

*esp\_bt\_uuid\_t* **uuid**

Descriptor UUID.

struct **esp\_gattc\_incl\_svc\_elem\_t**

Represents an included GATT service element.

### Public Members

uint16\_t **handle**

Current attribute handle of the included service.

uint16\_t **incl\_srvc\_s\_handle**

Start handle of the included service.

uint16\_t **incl\_srvc\_e\_handle**

End handle of the included service.

*esp\_bt\_uuid\_t* **uuid**

Included service UUID.

### Macros

**ESP\_GATT\_ILLEGAL\_UUID**

GATT INVALID UUID.

**ESP\_GATT\_ILLEGAL\_HANDLE**

GATT INVALID HANDLE.

**ESP\_GATT\_ATTR\_HANDLE\_MAX**

GATT attribute max handle.

**ESP\_GATT\_MAX\_READ\_MULTI\_HANDLES**

Maximum number of attributes to read in one request.

**ESP\_GATT\_UUID\_IMMEDIATE\_ALERT\_SVC**

Immediate Alert Service UUID.

**ESP\_GATT\_UUID\_LINK\_LOSS\_SVC**

Link Loss Service UUID.

**ESP\_GATT\_UUID\_TX\_POWER\_SVC**

TX Power Service UUID.

**ESP\_GATT\_UUID\_CURRENT\_TIME\_SVC**

Current Time Service UUID.

**ESP\_GATT\_UUID\_REF\_TIME\_UPDATE\_SVC**

Reference Time Update Service UUID.

**ESP\_GATT\_UUID\_NEXT\_DST\_CHANGE\_SVC**

Next DST Change Service UUID.

**ESP\_GATT\_UUID\_GLUKOSE\_SVC**

Glucose Service UUID.

**ESP\_GATT\_UUID\_HEALTH\_THERMOM\_SVC**

Health Thermometer Service UUID.

**ESP\_GATT\_UUID\_DEVICE\_INFO\_SVC**

Device Information Service UUID.

**ESP\_GATT\_UUID\_HEART\_RATE\_SVC**

Heart Rate Service UUID.

**ESP\_GATT\_UUID\_PHONE\_ALERT\_STATUS\_SVC**

Phone Alert Status Service UUID.

**ESP\_GATT\_UUID\_BATTERY\_SERVICE\_SVC**

Battery Service UUID.

**ESP\_GATT\_UUID\_BLOOD\_PRESSURE\_SVC**

Blood Pressure Service UUID.

**ESP\_GATT\_UUID\_ALERT\_NTF\_SVC**

Alert Notification Service UUID.

**ESP\_GATT\_UUID\_HID\_SVC**

HID Service UUID.

**ESP\_GATT\_UUID\_SCAN\_PARAMETERS\_SVC**

Scan Parameters Service UUID.

**ESP\_GATT\_UUID\_RUNNING\_SPEED\_CADENCE\_SVC**

Running Speed and Cadence Service UUID.

**ESP\_GATT\_UUID\_Automation\_IO\_SVC**

Automation IO Service UUID.

**ESP\_GATT\_UUID\_CYCLING\_SPEED\_CADENCE\_SVC**

Cycling Speed and Cadence Service UUID.

**ESP\_GATT\_UUID\_CYCLING\_POWER\_SVC**

Cycling Power Service UUID.

**ESP\_GATT\_UUID\_LOCATION\_AND\_NAVIGATION\_SVC**

Location and Navigation Service UUID.

**ESP\_GATT\_UUID\_ENVIRONMENTAL\_SENSING\_SVC**

Environmental Sensing Service UUID.

**ESP\_GATT\_UUID\_BODY\_COMPOSITION**

Body Composition Service UUID.

**ESP\_GATT\_UUID\_USER\_DATA\_SVC**

User Data Service UUID.

**ESP\_GATT\_UUID\_WEIGHT\_SCALE\_SVC**

Weight Scale Service UUID.

**ESP\_GATT\_UUID\_BOND\_MANAGEMENT\_SVC**

Bond Management Service UUID.

**ESP\_GATT\_UUID\_CONT\_GLUKOSE\_MONITOR\_SVC**

Continuous Glucose Monitoring Service UUID.

**ESP\_GATT\_UUID\_PRI\_SERVICE**

Primary Service UUID.

**ESP\_GATT\_UUID\_SEC\_SERVICE**

Secondary Service UUID.

**ESP\_GATT\_UUID\_INCLUDE\_SERVICE**

Include Service UUID.

**ESP\_GATT\_UUID\_CHAR\_DECLARE**

Characteristic Declaration UUID.

**ESP\_GATT\_UUID\_CHAR\_EXT\_PROP**

Characteristic Extended Properties UUID.

**ESP\_GATT\_UUID\_CHAR\_DESCRIPTION**

Characteristic User Description UUID.

**ESP\_GATT\_UUID\_CHAR\_CLIENT\_CONFIG**

Client Characteristic Configuration UUID.

**ESP\_GATT\_UUID\_CHAR\_SRVR\_CONFIG**

Server Characteristic Configuration UUID.

**ESP\_GATT\_UUID\_CHAR\_PRESENT\_FORMAT**

Characteristic Presentation Format UUID.

**ESP\_GATT\_UUID\_CHAR\_AGG\_FORMAT**

Characteristic Aggregate Format UUID.

**ESP\_GATT\_UUID\_CHAR\_VALID\_RANGE**

Characteristic Valid Range UUID.

**ESP\_GATT\_UUID\_EXT\_RPT\_REF\_DESCR**

External Report Reference Descriptor UUID.

**ESP\_GATT\_UUID\_RPT\_REF\_DESCR**

Report Reference Descriptor UUID.

**ESP\_GATT\_UUID\_NUM\_DIGITALS\_DESCR**

Number of Digitals Descriptor UUID.

**ESP\_GATT\_UUID\_VALUE\_TRIGGER\_DESCR**

Value Trigger Setting Descriptor UUID.

**ESP\_GATT\_UUID\_ENV\_SENSING\_CONFIG\_DESCR**

Environmental Sensing Configuration Descriptor UUID.

**ESP\_GATT\_UUID\_ENV\_SENSING\_MEASUREMENT\_DESCR**

Environmental Sensing Measurement Descriptor UUID.

**ESP\_GATT\_UUID\_ENV\_SENSING\_TRIGGER\_DESCR**

Environmental Sensing Trigger Setting Descriptor UUID.

**ESP\_GATT\_UUID\_TIME\_TRIGGER\_DESCR**

Time Trigger Setting Descriptor UUID.

**ESP\_GATT\_UUID\_GAP\_DEVICE\_NAME**

GAP Device Name UUID.

**ESP\_GATT\_UUID\_GAP\_ICON**

GAP Icon UUID.

**ESP\_GATT\_UUID\_GAP\_PREF\_CONN\_PARAM**

GAP Preferred Connection Parameters UUID.

**ESP\_GATT\_UUID\_GAP\_CENTRAL\_ADDR\_RESOL**

GAP Central Address Resolution UUID.

**ESP\_GATT\_UUID\_GATT\_SRV\_CHGD**

GATT Service Changed UUID.

**ESP\_GATT\_UUID\_ALERT\_LEVEL**

Alert Level UUID.

**ESP\_GATT\_UUID\_TX\_POWER\_LEVEL**

TX Power Level UUID.

**ESP\_GATT\_UUID\_CURRENT\_TIME**

Current Time UUID.

**ESP\_GATT\_UUID\_LOCAL\_TIME\_INFO**

Local Time Info UUID.

**ESP\_GATT\_UUID\_REF\_TIME\_INFO**

Reference Time Information UUID.

**ESP\_GATT\_UUID\_NW\_STATUS**

Network Availability Status UUID.

**ESP\_GATT\_UUID\_NW\_TRIGGER**

Network Availability Trigger UUID.

**ESP\_GATT\_UUID\_ALERT\_STATUS**

Alert Status UUID.

**ESP\_GATT\_UUID\_RINGER\_CP**

Ringer Control Point UUID.

**ESP\_GATT\_UUID\_RINGER\_SETTING**

Ringer Setting UUID.

**ESP\_GATT\_UUID\_GM\_MEASUREMENT**

Glucose Measurement Characteristic UUID.

**ESP\_GATT\_UUID\_GM\_CONTEXT**

Glucose Measurement Context Characteristic UUID.

**ESP\_GATT\_UUID\_GM\_CONTROL\_POINT**

Glucose Control Point Characteristic UUID.

**ESP\_GATT\_UUID\_GM\_FEATURE**

Glucose Feature Characteristic UUID.

**ESP\_GATT\_UUID\_SYSTEM\_ID**

System ID Characteristic UUID.

**ESP\_GATT\_UUID\_MODEL\_NUMBER\_STR**

Model Number String Characteristic UUID.

**ESP\_GATT\_UUID\_SERIAL\_NUMBER\_STR**

Serial Number String Characteristic UUID.

**ESP\_GATT\_UUID\_FW\_VERSION\_STR**

Firmware Revision String Characteristic UUID.

**ESP\_GATT\_UUID\_HW\_VERSION\_STR**

Hardware Revision String Characteristic UUID.

**ESP\_GATT\_UUID\_SW\_VERSION\_STR**

Software Revision String Characteristic UUID.

**ESP\_GATT\_UUID\_MANU\_NAME**

Manufacturer Name String Characteristic UUID.

**ESP\_GATT\_UUID\_IEEE\_DATA**

IEEE 11073-20601 Regulatory Certification Data List Characteristic UUID.

**ESP\_GATT\_UUID\_PNP\_ID**

PnP ID Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_INFORMATION**

HID Information Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_REPORT\_MAP**

HID Report Map Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_CONTROL\_POINT**

HID Control Point Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_REPORT**

HID Report Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_PROTO\_MODE**

HID Protocol Mode Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_BT\_KB\_INPUT**

HID Bluetooth Keyboard Input Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_BT\_KB\_OUTPUT**

HID Bluetooth Keyboard Output Characteristic UUID.

**ESP\_GATT\_UUID\_HID\_BT\_MOUSE\_INPUT**

HID Bluetooth Mouse Input Characteristic UUID.

**ESP\_GATT\_HEART\_RATE\_MEAS**

Heart Rate Measurement Characteristic UUID.

**ESP\_GATT\_BODY\_SENSOR\_LOCATION**

Body Sensor Location Characteristic UUID.

**ESP\_GATT\_HEART\_RATE\_CNTL\_POINT**

Heart Rate Control Point Characteristic UUID.

**ESP\_GATT\_UUID\_BATTERY\_LEVEL**

Battery Level Characteristic UUID.

**ESP\_GATT\_UUID\_SC\_CONTROL\_POINT**

Sensor Control Point Characteristic UUID.

**ESP\_GATT\_UUID\_SENSOR\_LOCATION**

Sensor Location Characteristic UUID.

**ESP\_GATT\_UUID\_RSC\_MEASUREMENT**

RSC Measurement Characteristic UUID.

**ESP\_GATT\_UUID\_RSC\_FEATURE**

RSC Feature Characteristic UUID.

**ESP\_GATT\_UUID\_CSC\_MEASUREMENT**

CSC Measurement Characteristic UUID.

**ESP\_GATT\_UUID\_CSC\_FEATURE**

CSC Feature Characteristic UUID.

**ESP\_GATT\_UUID\_SCAN\_INT\_WINDOW**

Scan Interval Window Characteristic UUID.

**ESP\_GATT\_UUID\_SCAN\_REFRESH**

Scan Refresh UUID.

**ESP\_GATT\_PERM\_READ**

Permission to read the attribute. Corresponds to BTA\_GATT\_PERM\_READ.

**ESP\_GATT\_PERM\_READ\_ENCRYPTED**

Permission to read the attribute with encryption. Corresponds to BTA\_GATT\_PERM\_READ\_ENCRYPTED.

**ESP\_GATT\_PERM\_READ\_ENC\_MITM**

Permission to read the attribute with encrypted MITM (Man In The Middle) protection. Corresponds to BTA\_GATT\_PERM\_READ\_ENC\_MITM.

**ESP\_GATT\_PERM\_WRITE**

Permission to write to the attribute. Corresponds to BTA\_GATT\_PERM\_WRITE.

**ESP\_GATT\_PERM\_WRITE\_ENCRYPTED**

Permission to write to the attribute with encryption. Corresponds to BTA\_GATT\_PERM\_WRITE\_ENCRYPTED.

**ESP\_GATT\_PERM\_WRITE\_ENC\_MITM**

Permission to write to the attribute with encrypted MITM protection. Corresponds to BTA\_GATT\_PERM\_WRITE\_ENC\_MITM.

**ESP\_GATT\_PERM\_WRITE\_SIGNED**

Permission for signed writes to the attribute. Corresponds to BTA\_GATT\_PERM\_WRITE\_SIGNED.

**ESP\_GATT\_PERM\_WRITE\_SIGNED\_MITM**

Permission for signed writes to the attribute with MITM protection. Corresponds to BTA\_GATT\_PERM\_WRITE\_SIGNED\_MITM.

**ESP\_GATT\_PERM\_READ\_AUTHORIZATION**

Permission to read the attribute with authorization.

**ESP\_GATT\_PERM\_WRITE\_AUTHORIZATION**

Permission to write to the attribute with authorization.

**ESP\_GATT\_PERM\_ENCRYPT\_KEY\_SIZE** (keysize)

Macro to specify minimum encryption key size.

**Parameters**

- **keysize** –The minimum size of the encryption key, in bytes.

**ESP\_GATT\_CHAR\_PROP\_BIT\_BROADCAST**

Ability to broadcast. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_BROADCAST.

**ESP\_GATT\_CHAR\_PROP\_BIT\_READ**

Ability to read. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_READ.

**ESP\_GATT\_CHAR\_PROP\_BIT\_WRITE\_NR**

Ability to write without response. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_WRITE\_NR.

**ESP\_GATT\_CHAR\_PROP\_BIT\_WRITE**

Ability to write. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_WRITE.

**ESP\_GATT\_CHAR\_PROP\_BIT\_NOTIFY**

Ability to notify. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_NOTIFY.

**ESP\_GATT\_CHAR\_PROP\_BIT\_INDICATE**

Ability to indicate. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_INDICATE.

**ESP\_GATT\_CHAR\_PROP\_BIT\_AUTH**

Ability to authenticate. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_AUTH.

**ESP\_GATT\_CHAR\_PROP\_BIT\_EXT\_PROP**

Has extended properties. Corresponds to BTA\_GATT\_CHAR\_PROP\_BIT\_EXT\_PROP.

**ESP\_GATT\_MAX\_ATTR\_LEN**

Defines the maximum length of a GATT attribute.

This definition specifies the maximum number of bytes that a GATT attribute can hold. As same as GATT\_MAX\_ATTR\_LEN.

**ESP\_GATT\_RSP\_BY\_APP**

Defines attribute control for GATT operations.

This module provides definitions for controlling attribute auto responses in GATT operations.

Response to Write/Read operations should be handled by the application.

**ESP\_GATT\_AUTO\_RSP**

Response to Write/Read operations should be automatically handled by the GATT stack.

**ESP\_GATT\_IF\_NONE**

Macro indicating no specific GATT interface.

No specific application GATT interface.

**Type Definitions**

```
typedef uint16_t esp_gatt_perm_t
```

Type to represent GATT attribute permissions.

```
typedef uint8_t esp_gatt_char_prop_t
```

Type for characteristic properties bitmask.

```
typedef uint8_t esp_gatt_if_t
```

GATT interface type for client applications.

**Enumerations**

```
enum esp_gatt_prep_write_type
```

Defines the attribute write operation types from the client.

These values are used to specify the type of write operation in a prepare write sequence. relate to BTA\_GATT\_PREP\_WRITE\_XXX in bta/bta\_gatt\_api.h.

*Values:*

```
enumerator ESP_GATT_PREP_WRITE_CANCEL
```

Prepare write cancel. Corresponds to BTA\_GATT\_PREP\_WRITE\_CANCEL.

```
enumerator ESP_GATT_PREP_WRITE_EXEC
```

Prepare write execute. Corresponds to BTA\_GATT\_PREP\_WRITE\_EXEC.

```
enum esp_gatt_status_t
```

GATT operation status codes.

These status codes are used to indicate the result of various GATT operations. relate to BTA\_GATT\_XXX in bta/bta\_gatt\_api.h .

*Values:*

enumerator **ESP\_GATT\_OK**

0x0, Operation successful. Corresponds to BTA\_GATT\_OK.

enumerator **ESP\_GATT\_INVALID\_HANDLE**

0x01, Invalid handle. Corresponds to BTA\_GATT\_INVALID\_HANDLE.

enumerator **ESP\_GATT\_READ\_NOT\_PERMIT**

0x02, Read operation not permitted. Corresponds to BTA\_GATT\_READ\_NOT\_PERMIT.

enumerator **ESP\_GATT\_WRITE\_NOT\_PERMIT**

0x03, Write operation not permitted. Corresponds to BTA\_GATT\_WRITE\_NOT\_PERMIT.

enumerator **ESP\_GATT\_INVALID\_PDU**

0x04, Invalid PDU. Corresponds to BTA\_GATT\_INVALID\_PDU.

enumerator **ESP\_GATT\_INSUF\_AUTHENTICATION**

0x05, Insufficient authentication. Corresponds to BTA\_GATT\_INSUF\_AUTHENTICATION.

enumerator **ESP\_GATT\_REQ\_NOT\_SUPPORTED**

0x06, Request not supported. Corresponds to BTA\_GATT\_REQ\_NOT\_SUPPORTED.

enumerator **ESP\_GATT\_INVALID\_OFFSET**

0x07, Invalid offset. Corresponds to BTA\_GATT\_INVALID\_OFFSET.

enumerator **ESP\_GATT\_INSUF\_AUTHORIZATION**

0x08, Insufficient authorization. Corresponds to BTA\_GATT\_INSUF\_AUTHORIZATION.

enumerator **ESP\_GATT\_PREPARE\_Q\_FULL**

0x09, Prepare queue full. Corresponds to BTA\_GATT\_PREPARE\_Q\_FULL.

enumerator **ESP\_GATT\_NOT\_FOUND**

0x0a, Not found. Corresponds to BTA\_GATT\_NOT\_FOUND.

enumerator **ESP\_GATT\_NOT\_LONG**

0x0b, Not long. Corresponds to BTA\_GATT\_NOT\_LONG.

enumerator **ESP\_GATT\_INSUF\_KEY\_SIZE**

0x0c, Insufficient key size. Corresponds to BTA\_GATT\_INSUF\_KEY\_SIZE.

enumerator **ESP\_GATT\_INVALID\_ATTR\_LEN**

0x0d, Invalid attribute length. Corresponds to BTA\_GATT\_INVALID\_ATTR\_LEN.

enumerator **ESP\_GATT\_ERR\_UNLIKELY**

0x0e, Unlikely error. Corresponds to BTA\_GATT\_ERR\_UNLIKELY.

enumerator **ESP\_GATT\_INSUF\_ENCRYPTION**

0x0f, Insufficient encryption. Corresponds to BTA\_GATT\_INSUF\_ENCRYPTION.

enumerator **ESP\_GATT\_UN SUPPORT\_GRP\_TYPE**

0x10, Unsupported group type. Corresponds to BTA\_GATT\_UN SUPPORT\_GRP\_TYPE.

enumerator **ESP\_GATT\_INSUF\_RESOURCE**

0x11, Insufficient resource. Corresponds to BTA\_GATT\_INSUF\_RESOURCE.

enumerator **ESP\_GATT\_NO\_RESOURCES**

0x80, No resources. Corresponds to BTA\_GATT\_NO\_RESOURCES.

enumerator **ESP\_GATT\_INTERNAL\_ERROR**

0x81, Internal error. Corresponds to BTA\_GATT\_INTERNAL\_ERROR.

enumerator **ESP\_GATT\_WRONG\_STATE**

0x82, Wrong state. Corresponds to BTA\_GATT\_WRONG\_STATE.

enumerator **ESP\_GATT\_DB\_FULL**

0x83, Database full. Corresponds to BTA\_GATT\_DB\_FULL.

enumerator **ESP\_GATT\_BUSY**

0x84, Busy. Corresponds to BTA\_GATT\_BUSY.

enumerator **ESP\_GATT\_ERROR**

0x85, Generic error. Corresponds to BTA\_GATT\_ERROR.

enumerator **ESP\_GATT\_CMD\_STARTED**

0x86, Command started. Corresponds to BTA\_GATT\_CMD\_STARTED.

enumerator **ESP\_GATT\_ILLEGAL\_PARAMETER**

0x87, Illegal parameter. Corresponds to BTA\_GATT\_ILLEGAL\_PARAMETER.

enumerator **ESP\_GATT\_PENDING**

0x88, Operation pending. Corresponds to BTA\_GATT\_PENDING.

enumerator **ESP\_GATT\_AUTH\_FAIL**

0x89, Authentication failed. Corresponds to BTA\_GATT\_AUTH\_FAIL.

enumerator **ESP\_GATT\_MORE**

0x8a, More data available. Corresponds to BTA\_GATT\_MORE.

enumerator **ESP\_GATT\_INVALID\_CFG**

0x8b, Invalid configuration. Corresponds to BTA\_GATT\_INVALID\_CFG.

enumerator **ESP\_GATT\_SERVICE\_STARTED**

0x8c, Service started. Corresponds to BTA\_GATT\_SERVICE\_STARTED.

enumerator **ESP\_GATT\_ENCRYPTED\_MITM**

0x0, Encrypted, with MITM protection. Corresponds to BTA\_GATT\_ENCRYPTED\_MITM.

enumerator **ESP\_GATT\_ENCRYPTED\_NO\_MITM**

0x8d, Encrypted, without MITM protection. Corresponds to BTA\_GATT\_ENCRYPTED\_NO\_MITM.

enumerator **ESP\_GATT\_NOT\_ENCRYPTED**

0x8e, Not encrypted. Corresponds to BTA\_GATT\_NOT\_ENCRYPTED.

enumerator **ESP\_GATT\_CONGESTED**

0x8f, Congested. Corresponds to BTA\_GATT\_CONGESTED.

enumerator **ESP\_GATT\_DUP\_REG**

0x90, Duplicate registration. Corresponds to BTA\_GATT\_DUP\_REG.

enumerator **ESP\_GATT\_ALREADY\_OPEN**

0x91, Already open. Corresponds to BTA\_GATT\_ALREADY\_OPEN.

enumerator **ESP\_GATT\_CANCEL**

0x92, Operation cancelled. Corresponds to BTA\_GATT\_CANCEL.

enumerator **ESP\_GATT\_STACK\_RSP**

0xe0, Stack response. Corresponds to BTA\_GATT\_STACK\_RSP.

enumerator **ESP\_GATT\_APP\_RSP**

0xe1, Application response. Corresponds to BTA\_GATT\_APP\_RSP.

enumerator **ESP\_GATT\_UNKNOWN\_ERROR**

0xef, Unknown error. Corresponds to BTA\_GATT\_UNKNOWN\_ERROR.

enumerator **ESP\_GATT\_CCC\_CFG\_ERR**

0xfd, Client Characteristic Configuration Descriptor improperly configured. Corresponds to BTA\_GATT\_CCC\_CFG\_ERR.

enumerator **ESP\_GATT\_PRC\_IN\_PROGRESS**

0xfe, Procedure already in progress. Corresponds to BTA\_GATT\_PRC\_IN\_PROGRESS.

enumerator **ESP\_GATT\_OUT\_OF\_RANGE**

0xff, Attribute value out of range. Corresponds to BTA\_GATT\_OUT\_OF\_RANGE.

enum **esp\_gatt\_conn\_reason\_t**

Enumerates reasons for GATT connection.

*Values:*

enumerator **ESP\_GATT\_CONN\_UNKNOWN**

Unknown connection reason. Corresponds to BTA\_GATT\_CONN\_UNKNOWN in bta/bta\_gatt\_api.h

enumerator **ESP\_GATT\_CONN\_L2C\_FAILURE**

General L2CAP failure. Corresponds to BTA\_GATT\_CONN\_L2C\_FAILURE in bta/bta\_gatt\_api.h

enumerator **ESP\_GATT\_CONN\_TIMEOUT**

Connection timeout. Corresponds to BTA\_GATT\_CONN\_TIMEOUT in bta/bta\_gatt\_api.h

enumerator **ESP\_GATT\_CONN\_TERMINATE\_PEER\_USER**

Connection terminated by peer user. Corresponds to `BTA_GATT_CONN_TERMINATE_PEER_USER` in `bta/bta_gatt_api.h`

enumerator **ESP\_GATT\_CONN\_TERMINATE\_LOCAL\_HOST**

Connection terminated by local host. Corresponds to `BTA_GATT_CONN_TERMINATE_LOCAL_HOST` in `bta/bta_gatt_api.h`

enumerator **ESP\_GATT\_CONN\_FAIL\_ESTABLISH**

Failure to establish connection. Corresponds to `BTA_GATT_CONN_FAIL_ESTABLISH` in `bta/bta_gatt_api.h`

enumerator **ESP\_GATT\_CONN\_LMP\_TIMEOUT**

Connection failed due to LMP response timeout. Corresponds to `BTA_GATT_CONN_LMP_TIMEOUT` in `bta/bta_gatt_api.h`

enumerator **ESP\_GATT\_CONN\_CONN\_CANCEL**

L2CAP connection cancelled. Corresponds to `BTA_GATT_CONN_CONN_CANCEL` in `bta/bta_gatt_api.h`

enumerator **ESP\_GATT\_CONN\_NONE**

No connection to cancel. Corresponds to `BTA_GATT_CONN_NONE` in `bta/bta_gatt_api.h`

enum **esp\_gatt\_auth\_req\_t**

Defines the GATT authentication request types.

This enumeration lists the types of authentication requests that can be made. It corresponds to the `BTA_GATT_AUTH_REQ_XXX` values defined in `bta/bta_gatt_api.h`. The types include options for no authentication, unauthenticated encryption, authenticated encryption, and both signed versions with and without MITM (Man-In-The-Middle) protection.

*Values:*

enumerator **ESP\_GATT\_AUTH\_REQ\_NONE**

No authentication required. Corresponds to `BTA_GATT_AUTH_REQ_NONE`.

enumerator **ESP\_GATT\_AUTH\_REQ\_NO\_MITM**

Unauthenticated encryption. Corresponds to `BTA_GATT_AUTH_REQ_NO_MITM`.

enumerator **ESP\_GATT\_AUTH\_REQ\_MITM**

Authenticated encryption (MITM protection). Corresponds to `BTA_GATT_AUTH_REQ_MITM`.

enumerator **ESP\_GATT\_AUTH\_REQ\_SIGNED\_NO\_MITM**

Signed data, no MITM protection. Corresponds to `BTA_GATT_AUTH_REQ_SIGNED_NO_MITM`.

enumerator **ESP\_GATT\_AUTH\_REQ\_SIGNED\_MITM**

Signed data with MITM protection. Corresponds to `BTA_GATT_AUTH_REQ_SIGNED_MITM`.

enum **esp\_service\_source\_t**

Enumerates the possible sources of a GATT service discovery.

This enumeration identifies the source of a GATT service discovery process, indicating whether the service information was obtained from a remote device, from NVS (Non-Volatile Storage) flash, or the source is unknown.

*Values:*

enumerator **ESP\_GATT\_SERVICE\_FROM\_REMOTE\_DEVICE**

Service information from a remote device. Relates to `BTA_GATTC_SERVICE_INFO_FROM_REMOTE_DEVICE`.

enumerator **ESP\_GATT\_SERVICE\_FROM\_NVS\_FLASH**

Service information from NVS flash. Relates to `BTA_GATTC_SERVICE_INFO_FROM_NVS_FLASH`.

enumerator **ESP\_GATT\_SERVICE\_FROM\_UNKNOWN**

Service source is unknown. Relates to `BTA_GATTC_SERVICE_INFO_FROM_UNKNOWN`.

enum **esp\_gatt\_write\_type\_t**

Defines the types of GATT write operations.

*Values:*

enumerator **ESP\_GATT\_WRITE\_TYPE\_NO\_RSP**

Write operation where no response is needed.

enumerator **ESP\_GATT\_WRITE\_TYPE\_RSP**

Write operation that requires a remote response.

enum **esp\_gatt\_db\_attr\_type\_t**

Enumerates types of GATT database attributes.

*Values:*

enumerator **ESP\_GATT\_DB\_PRIMARY\_SERVICE**

Primary service attribute.

enumerator **ESP\_GATT\_DB\_SECONDARY\_SERVICE**

Secondary service attribute.

enumerator **ESP\_GATT\_DB\_CHARACTERISTIC**

Characteristic attribute.

enumerator **ESP\_GATT\_DB\_DESCRIPTOR**

Descriptor attribute.

enumerator **ESP\_GATT\_DB\_INCLUDED\_SERVICE**

Included service attribute.

enumerator **ESP\_GATT\_DB\_ALL**

All attribute types.

## GATT SERVER API

**Application Example** Check `bluetooth/bluedroid/ble` folder in ESP-IDF examples, which contains the following demos and their tutorials:

- This is a GATT sever demo and its tutorial. This demo creates a GATT service with an attribute table, which releases the user from adding attributes one by one. This is the recommended method of adding attributes.
  - [bluetooth/bluedroid/ble/gatt\\_server\\_service\\_table](#)
  - [GATT Server Service Table Example Walkthrough](#)
- This is a GATT server demo and its tutorial. This demo creates a GATT service by adding attributes one by one as defined by Bluedroid. The recommended method of adding attributes is presented in example above.
  - [bluetooth/bluedroid/ble/gatt\\_server](#)
  - [GATT Server Example Walkthrough](#)
- This is a BLE SPP-Like demo. This demo, which acts as a GATT server, can receive data from UART and then send the data to the peer device automatically.
  - [bluetooth/bluedroid/ble/ble\\_spp\\_server](#)

## API Reference

### Header File

### Functions

*esp\_err\_t* **esp\_ble\_gatts\_register\_callback** (*esp\_gatts\_cb\_t* callback)

This function is called to register application callbacks with BTA GATTS module.

#### Returns

- ESP\_OK : success
- other : failed

*esp\_gatts\_cb\_t* **esp\_ble\_gatts\_get\_callback** (void)

This function is called to get the current application callbacks with BTA GATTS module.

#### Returns

- *esp\_gatts\_cb\_t* : current callback

*esp\_err\_t* **esp\_ble\_gatts\_app\_register** (uint16\_t app\_id)

This function is called to register application identifier.

#### Returns

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_app\_unregister** (*esp\_gatt\_if\_t* gatts\_if)

unregister with GATT Server.

**Parameters** *gatts\_if* –[in] GATT server access interface

#### Returns

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_create\_service** (*esp\_gatt\_if\_t* gatts\_if, *esp\_gatt\_srvc\_id\_t* \*service\_id, uint16\_t num\_handle)

Create a service. When service creation is done, a callback event ESP\_GATTS\_CREATE\_EVT is called to report status and service ID to the profile. The service ID obtained in the callback function needs to be used when adding included service and characteristics/descriptors into the service.

#### Parameters

- **gatts\_if** –[in] GATT server access interface
- **service\_id** –[in] service ID.

- **num\_handle** –[in] number of handle requested for this service.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_create\_attr\_tab** (const *esp\_gatts\_attr\_db\_t* \*gatts\_attr\_db, *esp\_gatt\_if\_t* gatts\_if, uint16\_t max\_nb\_attr, uint8\_t srvc\_inst\_id)

Create a service attribute tab.

**Parameters**

- **gatts\_attr\_db** –[in] the pointer to the service attr tab
- **gatts\_if** –[in] GATT server access interface
- **max\_nb\_attr** –[in] the number of attribute to be added to the service database.
- **srvc\_inst\_id** –[in] the instance id of the service

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_add\_included\_service** (uint16\_t service\_handle, uint16\_t included\_service\_handle)

This function is called to add an included service. This function have to be called between ‘esp\_ble\_gatts\_create\_service’ and ‘esp\_ble\_gatts\_add\_char’. After included service is included, a callback event ESP\_GATTS\_ADD\_INCL\_SRVC\_EVT is reported the included service ID.

**Parameters**

- **service\_handle** –[in] service handle to which this included service is to be added.
- **included\_service\_handle** –[in] the service ID to be included.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_add\_char** (uint16\_t service\_handle, *esp\_bt\_uuid\_t* \*char\_uuid, *esp\_gatt\_perm\_t* perm, *esp\_gatt\_char\_prop\_t* property, *esp\_attr\_value\_t* \*char\_val, *esp\_attr\_control\_t* \*control)

This function is called to add a characteristic into a service.

**Parameters**

- **service\_handle** –[in] service handle to which this included service is to be added.
- **char\_uuid** –[in] : Characteristic UUID.
- **perm** –[in] : Characteristic value declaration attribute permission.
- **property** –[in] : Characteristic Properties
- **char\_val** –[in] : Characteristic value
- **control** –[in] : attribute response control byte

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_add\_char\_descr** (uint16\_t service\_handle, *esp\_bt\_uuid\_t* \*descr\_uuid, *esp\_gatt\_perm\_t* perm, *esp\_attr\_value\_t* \*char\_descr\_val, *esp\_attr\_control\_t* \*control)

This function is called to add characteristic descriptor. When it’s done, a callback event ESP\_GATTS\_ADD\_DESCR\_EVT is called to report the status and an ID number for this descriptor.

**Parameters**

- **service\_handle** –[in] service handle to which this characteristic descriptor is to be added.
- **perm** –[in] descriptor access permission.
- **descr\_uuid** –[in] descriptor UUID.
- **char\_descr\_val** –[in] : Characteristic descriptor value
- **control** –[in] : attribute response control byte

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_delete\_service** (uint16\_t service\_handle)

This function is called to delete a service. When this is done, a callback event ESP\_GATTS\_DELETE\_EVT is report with the status.

**Parameters** **service\_handle** –[in] service\_handle to be deleted.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_start\_service** (uint16\_t service\_handle)

This function is called to start a service.

**Parameters** **service\_handle** –[in] the service handle to be started.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_stop\_service** (uint16\_t service\_handle)

This function is called to stop a service.

**Parameters** **service\_handle** –[in] - service to be topped.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_send\_indicate** (*esp\_gatt\_if\_t* gatts\_if, uint16\_t conn\_id, uint16\_t attr\_handle, uint16\_t value\_len, uint8\_t \*value, bool need\_confirm)

Send indicate or notify to GATT client. Set param need\_confirm as false will send notification, otherwise indication. Note: the size of indicate or notify data need less than MTU size,see “esp\_ble\_gattc\_send\_mtu\_req”

**Parameters**

- **gatts\_if** –[in] GATT server access interface
- **conn\_id** –[in] - connection id to indicate.
- **attr\_handle** –[in] - attribute handle to indicate.
- **value\_len** –[in] - indicate value length.
- **value** –[in] value to indicate.
- **need\_confirm** –[in] - Whether a confirmation is required. false sends a GATT notification, true sends a GATT indication.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_send\_response** (*esp\_gatt\_if\_t* gatts\_if, uint16\_t conn\_id, uint32\_t trans\_id, *esp\_gatt\_status\_t* status, *esp\_gatt\_rsp\_t* \*rsp)

This function is called to send a response to a request.

**Parameters**

- **gatts\_if** –[in] GATT server access interface
- **conn\_id** –[in] - connection identifier.
- **trans\_id** –[in] - transfer id
- **status** –[in] - response status
- **rsp** –[in] - response data.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_set\_attr\_value** (uint16\_t attr\_handle, uint16\_t length, const uint8\_t \*value)

This function is called to set the attribute value by the application.

**Parameters**

- **attr\_handle** –[in] the attribute handle which to be set
- **length** –[in] the value length
- **value** –[in] the pointer to the attribute value

**Returns**

- ESP\_OK : success
- other : failed

*esp\_gatt\_status\_t* **esp\_ble\_gatts\_get\_attr\_value** (uint16\_t attr\_handle, uint16\_t \*length, const uint8\_t \*\*value)

Retrieve attribute value.

**Parameters**

- **attr\_handle** –[in] Attribute handle.
- **length** –[out] pointer to the attribute value length
- **value** –[out] Pointer to attribute value payload, the value cannot be modified by user

**Returns**

- ESP\_GATT\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_open** (*esp\_gatt\_if\_t* gatts\_if, *esp\_bd\_addr\_t* remote\_bda, bool is\_direct)

Open a direct open connection or add a background auto connection.

**Parameters**

- **gatts\_if** –[in] GATT server access interface
- **remote\_bda** –[in] remote device bluetooth device address.
- **is\_direct** –[in] direct connection or background auto connection

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_close** (*esp\_gatt\_if\_t* gatts\_if, uint16\_t conn\_id)

Close a connection a remote device.

**Parameters**

- **gatts\_if** –[in] GATT server access interface
- **conn\_id** –[in] connection ID to be closed.

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_send\_service\_change\_indication** (*esp\_gatt\_if\_t* gatts\_if, *esp\_bd\_addr\_t* remote\_bda)

Send service change indication.

**Parameters**

- **gatts\_if** –[in] GATT server access interface
- **remote\_bda** –[in] remote device bluetooth device address. If remote\_bda is NULL then it will send service change indication to all the connected devices and if not then to a specific device

**Returns**

- ESP\_OK : success
- other : failed

*esp\_err\_t* **esp\_ble\_gatts\_show\_local\_database** (void)

Print local database (GATT service table)

**Returns**

- ESP\_OK : success
- other : failed

## Unions

union **esp\_ble\_gatts\_cb\_param\_t**

*#include <esp\_gatts\_api.h>* Gatt server callback parameters union.

### Public Members

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_reg\_evt\_param* **reg**

Gatt server callback param of ESP\_GATTS\_REG\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_read\_evt\_param* **read**

Gatt server callback param of ESP\_GATTS\_READ\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_write\_evt\_param* **write**

Gatt server callback param of ESP\_GATTS\_WRITE\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_exec\_write\_evt\_param* **exec\_write**

Gatt server callback param of ESP\_GATTS\_EXEC\_WRITE\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_mtu\_evt\_param* **mtu**

Gatt server callback param of ESP\_GATTS\_MTU\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_conf\_evt\_param* **conf**

Gatt server callback param of ESP\_GATTS\_CONF\_EVT (confirm)

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_create\_evt\_param* **create**

Gatt server callback param of ESP\_GATTS\_CREATE\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_add\_incl\_srvc\_evt\_param* **add\_incl\_srvc**

Gatt server callback param of ESP\_GATTS\_ADD\_INCL\_SRVC\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_add\_char\_evt\_param* **add\_char**

Gatt server callback param of ESP\_GATTS\_ADD\_CHAR\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_add\_char\_descr\_evt\_param* **add\_char\_descr**

Gatt server callback param of ESP\_GATTS\_ADD\_CHAR\_DESCR\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_delete\_evt\_param* **del**

Gatt server callback param of ESP\_GATTS\_DELETE\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_start\_evt\_param* **start**

Gatt server callback param of ESP\_GATTS\_START\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_stop\_evt\_param* **stop**

Gatt server callback param of ESP\_GATTS\_STOP\_EVT

struct *esp\_ble\_gatts\_cb\_param\_t::gatts\_connect\_evt\_param* **connect**

Gatt server callback param of ESP\_GATTS\_CONNECT\_EVT

```
struct esp_ble_gatts_cb_param_t::gatts_disconnect_evt_param disconnect
    Gatt server callback param of ESP_GATTS_DISCONNECT_EVT

struct esp_ble_gatts_cb_param_t::gatts_open_evt_param open
    Gatt server callback param of ESP_GATTS_OPEN_EVT

struct esp_ble_gatts_cb_param_t::gatts_cancel_open_evt_param cancel_open
    Gatt server callback param of ESP_GATTS_CANCEL_OPEN_EVT

struct esp_ble_gatts_cb_param_t::gatts_close_evt_param close
    Gatt server callback param of ESP_GATTS_CLOSE_EVT

struct esp_ble_gatts_cb_param_t::gatts_congest_evt_param congest
    Gatt server callback param of ESP_GATTS_CONGEST_EVT

struct esp_ble_gatts_cb_param_t::gatts_rsp_evt_param rsp
    Gatt server callback param of ESP_GATTS_RESPONSE_EVT

struct esp_ble_gatts_cb_param_t::gatts_add_attr_tab_evt_param add_attr_tab
    Gatt server callback param of ESP_GATTS_CREAT_ATTR_TAB_EVT

struct esp_ble_gatts_cb_param_t::gatts_set_attr_val_evt_param set_attr_val
    Gatt server callback param of ESP_GATTS_SET_ATTR_VAL_EVT

struct esp_ble_gatts_cb_param_t::gatts_send_service_change_evt_param service_change
    Gatt server callback param of ESP_GATTS_SEND_SERVICE_CHANGE_EVT

struct gatts_add_attr_tab_evt_param
    #include <esp_gatts_api.h> ESP_GATTS_CREAT_ATTR_TAB_EVT.
```

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

*esp\_bt\_uuid\_t* **svc\_uuid**

Service uuid type

uint8\_t **svc\_inst\_id**

Service id

uint16\_t **num\_handle**

The number of the attribute handle to be added to the gatts database

uint16\_t **\*handles**

The number to the handles

```
struct gatts_add_char_descr_evt_param
```

```
    #include <esp_gatts_api.h> ESP_GATTS_ADD_CHAR_DESCR_EVT.
```

**Public Members**

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **attr\_handle**

Descriptor attribute handle

uint16\_t **service\_handle**

Service attribute handle

*esp\_bt\_uuid\_t* **descr\_uuid**

Characteristic descriptor uuid

struct **gatts\_add\_char\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_ADD\_CHAR\_EVT.

**Public Members**

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **attr\_handle**

Characteristic attribute handle

uint16\_t **service\_handle**

Service attribute handle

*esp\_bt\_uuid\_t* **char\_uuid**

Characteristic uuid

struct **gatts\_add\_incl\_srvc\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_ADD\_INCL\_SRVC\_EVT.

**Public Members**

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **attr\_handle**

Included service attribute handle

uint16\_t **service\_handle**

Service attribute handle

struct **gatts\_cancel\_open\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_CANCEL\_OPEN\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

struct **gatts\_close\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_CLOSE\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

struct **gatts\_conf\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_CONF\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

uint16\_t **handle**

attribute handle

uint16\_t **len**

The indication or notification value length, len is valid when send notification or indication failed

uint8\_t \***value**

The indication or notification value , value is valid when send notification or indication failed

struct **gatts\_congest\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_LISTEN\_EVT.

ESP\_GATTS\_CONGEST\_EVT

### Public Members

uint16\_t **conn\_id**

Connection id

bool **congested**

Congested or not

struct **gatts\_connect\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_CONNECT\_EVT.

### Public Members

uint16\_t **conn\_id**

Connection id

uint8\_t **link\_role**

Link role : master role = 0 ; slave role = 1

*esp\_bd\_addr\_t* **remote\_bda**

Remote bluetooth device address

*esp\_gatt\_conn\_params\_t* **conn\_params**

current Connection parameters

*esp\_ble\_addr\_type\_t* **ble\_addr\_type**

Remote BLE device address type

uint16\_t **conn\_handle**

HCI connection handle

struct **gatts\_create\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_UNREG\_EVT.

ESP\_GATTS\_CREATE\_EVT

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **service\_handle**

Service attribute handle

*esp\_gatt\_srvc\_id\_t* **service\_id**

Service id, include service uuid and other information

struct **gatts\_delete\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_DELETE\_EVT.

**Public Members**

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **service\_handle**

Service attribute handle

struct **gatts\_disconnect\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_DISCONNECT\_EVT.

**Public Members**

uint16\_t **conn\_id**

Connection id

*esp\_bd\_addr\_t* **remote\_bda**

Remote bluetooth device address

*esp\_gatt\_conn\_reason\_t* **reason**

Indicate the reason of disconnection

struct **gatts\_exec\_write\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_EXEC\_WRITE\_EVT.

**Public Members**

uint16\_t **conn\_id**

Connection id

uint32\_t **trans\_id**

Transfer id

*esp\_bd\_addr\_t* **bda**

The bluetooth device address which been written

uint8\_t **exec\_write\_flag**

Execute write flag

struct **gatts\_mtu\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_MTU\_EVT.

**Public Members**

uint16\_t **conn\_id**

Connection id

uint16\_t **mtu**  
MTU size

struct **gatts\_open\_evt\_param**  
*#include <esp\_gatts\_api.h>* ESP\_GATTS\_OPEN\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**  
Operation status

struct **gatts\_read\_evt\_param**  
*#include <esp\_gatts\_api.h>* ESP\_GATTS\_READ\_EVT.

### Public Members

uint16\_t **conn\_id**  
Connection id

uint32\_t **trans\_id**  
Transfer id

*esp\_bd\_addr\_t* **bda**  
The bluetooth device address which been read

uint16\_t **handle**  
The attribute handle

uint16\_t **offset**  
Offset of the value, if the value is too long

bool **is\_long**  
The value is too long or not

bool **need\_rsp**  
The read operation need to do response

struct **gatts\_reg\_evt\_param**  
*#include <esp\_gatts\_api.h>* ESP\_GATTS\_REG\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**  
Operation status

uint16\_t **app\_id**

Application id which input in register API

struct **gatts\_rsp\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_RESPONSE\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

uint16\_t **handle**

Attribute handle which send response

struct **gatts\_send\_service\_change\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_SEND\_SERVICE\_CHANGE\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

struct **gatts\_set\_attr\_val\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_SET\_ATTR\_VAL\_EVT.

### Public Members

uint16\_t **srvc\_handle**

The service handle

uint16\_t **attr\_handle**

The attribute handle

*esp\_gatt\_status\_t* **status**

Operation status

struct **gatts\_start\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_START\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **service\_handle**

Service attribute handle

struct **gatts\_stop\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_STOP\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **service\_handle**

Service attribute handle

struct **gatts\_write\_evt\_param**

*#include <esp\_gatts\_api.h>* ESP\_GATTS\_WRITE\_EVT.

### Public Members

uint16\_t **conn\_id**

Connection id

uint32\_t **trans\_id**

Transfer id

*esp\_bd\_addr\_t* **bda**

The bluetooth device address which been written

uint16\_t **handle**

The attribute handle

uint16\_t **offset**

Offset of the value, if the value is too long

bool **need\_rsp**

The write operation need to do response

bool **is\_prep**

This write operation is prepare write

uint16\_t **len**

The write attribute value length

uint8\_t \***value**

The write attribute value

## Macros

### **ESP\_GATT\_PREP\_WRITE\_CANCEL**

Prepare write flag to indicate cancel prepare write

### **ESP\_GATT\_PREP\_WRITE\_EXEC**

Prepare write flag to indicate execute prepare write

## Type Definitions

```
typedef void (*esp_gatts_cb_t)(esp_gatts_cb_event_t event, esp_gatt_if_t gatts_if, esp_ble_gatts_cb_param_t *param)
```

GATT Server callback function type.

**Param event** : Event type

**Param gatts\_if** : GATT server access interface, normally different gatts\_if correspond to different profile

**Param param** : Point to callback parameter, currently is union type

## Enumerations

### enum **esp\_gatts\_cb\_event\_t**

GATT Server callback function events.

*Values:*

#### enumerator **ESP\_GATTS\_REG\_EVT**

When register application id, the event comes

#### enumerator **ESP\_GATTS\_READ\_EVT**

When gatt client request read operation, the event comes

#### enumerator **ESP\_GATTS\_WRITE\_EVT**

When gatt client request write operation, the event comes

#### enumerator **ESP\_GATTS\_EXEC\_WRITE\_EVT**

When gatt client request execute write, the event comes

#### enumerator **ESP\_GATTS\_MTU\_EVT**

When set mtu complete, the event comes

#### enumerator **ESP\_GATTS\_CONF\_EVT**

When receive confirm, the event comes

#### enumerator **ESP\_GATTS\_UNREG\_EVT**

When unregister application id, the event comes

#### enumerator **ESP\_GATTS\_CREATE\_EVT**

When create service complete, the event comes

#### enumerator **ESP\_GATTS\_ADD\_INCL\_SRVC\_EVT**

When add included service complete, the event comes

enumerator **ESP\_GATTS\_ADD\_CHAR\_EVT**

When add characteristic complete, the event comes

enumerator **ESP\_GATTS\_ADD\_CHAR\_DESCR\_EVT**

When add descriptor complete, the event comes

enumerator **ESP\_GATTS\_DELETE\_EVT**

When delete service complete, the event comes

enumerator **ESP\_GATTS\_START\_EVT**

When start service complete, the event comes

enumerator **ESP\_GATTS\_STOP\_EVT**

When stop service complete, the event comes

enumerator **ESP\_GATTS\_CONNECT\_EVT**

When gatt client connect, the event comes

enumerator **ESP\_GATTS\_DISCONNECT\_EVT**

When gatt client disconnect, the event comes

enumerator **ESP\_GATTS\_OPEN\_EVT**

When connect to peer, the event comes

enumerator **ESP\_GATTS\_CANCEL\_OPEN\_EVT**

When disconnect from peer, the event comes

enumerator **ESP\_GATTS\_CLOSE\_EVT**

When gatt server close, the event comes

enumerator **ESP\_GATTS\_LISTEN\_EVT**

When gatt listen to be connected the event comes

enumerator **ESP\_GATTS\_CONGEST\_EVT**

When congest happen, the event comes

enumerator **ESP\_GATTS\_RESPONSE\_EVT**

When gatt send response complete, the event comes

enumerator **ESP\_GATTS\_CREAT\_ATTR\_TAB\_EVT**

When gatt create table complete, the event comes

enumerator **ESP\_GATTS\_SET\_ATTR\_VAL\_EVT**

When gatt set attr value complete, the event comes

enumerator **ESP\_GATTS\_SEND\_SERVICE\_CHANGE\_EVT**

When gatt send service change indication complete, the event comes

## GATT CLIENT API

**Application Example** Check [bluetooth/bluedroid/ble](#) folder in ESP-IDF examples, which contains the following demos and their tutorials:

- This is a GATT client demo and its tutorial. This demo can scan for devices, connect to the GATT server and discover its services.
  - [bluetooth/bluedroid/ble/gatt\\_client](#)
  - [GATT Client Example Walkthrough](#)
- This is a multiple connection demo and its tutorial. This demo can connect to multiple GATT server devices and discover their services.
  - [bluetooth/bluedroid/ble/gattc\\_multi\\_connect](#)
  - [GATT Client Multi-connection Example Walkthrough](#)
- This is a BLE SPP-Like demo. This demo, which acts as a GATT client, can receive data from UART and then send the data to the peer device automatically.
  - [bluetooth/bluedroid/ble/ble\\_spp\\_client](#)

## API Reference

### Header File

### Functions

*esp\_err\_t* **esp\_ble\_gattc\_register\_callback** (*esp\_gattc\_cb\_t* callback)

This function is called to register application callbacks with GATTC module.

**Parameters** **callback** –[in] : pointer to the application callback function.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_gattc\_cb\_t* **esp\_ble\_gattc\_get\_callback** (void)

This function is called to get the current application callbacks with BTA GATTC module.

**Returns**

- *esp\_gattc\_cb\_t* : current callback

*esp\_err\_t* **esp\_ble\_gattc\_app\_register** (uint16\_t app\_id)

This function is called to register application callbacks with GATTC module.

**Parameters** **app\_id** –[in] : Application Identify (UUID), for different application

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_app\_unregister** (*esp\_gatt\_if\_t* gattc\_if)

This function is called to unregister an application from the GATTC module.

---

**Note:** Before calling this API, ensure that all activities related to the application, such as connections, scans, ADV, are properly closed.

---

**Parameters** **gattc\_if** –[in] Gatt client access interface.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_open** (*esp\_gatt\_if\_t* gattc\_if, *esp\_bd\_addr\_t* remote\_bda, *esp\_ble\_addr\_type\_t* remote\_addr\_type, bool is\_direct)

Open a direct connection or add a background auto connection.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **remote\_bda** –[in] remote device bluetooth device address.
- **remote\_addr\_type** –[in] remote device bluetooth device the address type.
- **is\_direct** –[in] direct connection or background auto connection (by now, background auto connection is not supported).

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_aux\_open** (*esp\_gatt\_if\_t* gattc\_if, *esp\_bd\_addr\_t* remote\_bda, *esp\_ble\_addr\_type\_t* remote\_addr\_type, bool is\_direct)

*esp\_err\_t* **esp\_ble\_gattc\_close** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id)

Close the virtual connection to the GATT server. gattc may have multiple virtual GATT server connections when multiple app\_id registered, this API only close one virtual GATT server connection. if there exist other virtual GATT server connections, it does not disconnect the physical connection. if you want to disconnect the physical connection directly, you can use esp\_ble\_gap\_disconnect(esp\_bd\_addr\_t remote\_device).

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID to be closed.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_send\_mtu\_req** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id)

Configure the MTU size in the GATT channel. This can be done only once per connection. Before using, use esp\_ble\_gatt\_set\_local\_mtu() to configure the local MTU size.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_search\_service** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, *esp\_bt\_uuid\_t* \*filter\_uuid)

This function is called to get service from local cache. This function report service search result by a callback event, and followed by a service search complete event. Note: 128-bit base UUID will automatically be converted to a 16-bit UUID in the search results. Other types of UUID remain unchanged.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID.
- **filter\_uuid** –[in] a UUID of the service application is interested in. If Null, discover for all services.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_gatt\_status\_t* **esp\_ble\_gattc\_get\_service** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, *esp\_bt\_uuid\_t* \*svc\_uuid, *esp\_gattc\_service\_elem\_t* \*result, uint16\_t \*count, uint16\_t offset)

Find all the service with the given service uuid in the gattc cache, if the svc\_uuid is NULL, find all the service.

Note: It just get service from local cache, won't get from remote devices. If want to get it from remote device, need to used the `esp_ble_gattc_cache_refresh`, then call `esp_ble_gattc_get_service` again.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **svc\_uuid** –[in] the pointer to the service uuid.
- **result** –[out] The pointer to the service which has been found in the gattc cache.
- **count** –[inout] input the number of service want to find, it will output the number of service has been found in the gattc cache with the given service uuid.
- **offset** –[in] Offset of the service position to get.

#### Returns

- ESP\_OK: success
- other: failed

`esp_gatt_status_t esp_ble_gattc_get_all_char` (`esp_gatt_if_t` gattc\_if, `uint16_t` conn\_id, `uint16_t` start\_handle, `uint16_t` end\_handle, `esp_gattc_char_elem_t` \*result, `uint16_t` \*count, `uint16_t` offset)

Find all the characteristic with the given service in the gattc cache Note: It just get characteristic from local cache, won't get from remote devices.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **start\_handle** –[in] the attribute start handle.
- **end\_handle** –[in] the attribute end handle
- **result** –[out] The pointer to the characteristic in the service.
- **count** –[inout] input the number of characteristic want to find, it will output the number of characteristic has been found in the gattc cache with the given service.
- **offset** –[in] Offset of the characteristic position to get.

#### Returns

- ESP\_OK: success
- other: failed

`esp_gatt_status_t esp_ble_gattc_get_all_descr` (`esp_gatt_if_t` gattc\_if, `uint16_t` conn\_id, `uint16_t` char\_handle, `esp_gattc_descr_elem_t` \*result, `uint16_t` \*count, `uint16_t` offset)

Find all the descriptor with the given characteristic in the gattc cache Note: It just get descriptor from local cache, won't get from remote devices.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **char\_handle** –[in] the given characteristic handle
- **result** –[out] The pointer to the descriptor in the characteristic.
- **count** –[inout] input the number of descriptor want to find, it will output the number of descriptor has been found in the gattc cache with the given characteristic.
- **offset** –[in] Offset of the descriptor position to get.

#### Returns

- ESP\_OK: success
- other: failed

`esp_gatt_status_t esp_ble_gattc_get_char_by_uuid` (`esp_gatt_if_t` gattc\_if, `uint16_t` conn\_id, `uint16_t` start\_handle, `uint16_t` end\_handle, `esp_bt_uuid_t` char\_uuid, `esp_gattc_char_elem_t` \*result, `uint16_t` \*count)

Find the characteristic with the given characteristic uuid in the gattc cache Note: It just get characteristic from local cache, won't get from remote devices.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **start\_handle** –[in] the attribute start handle
- **end\_handle** –[in] the attribute end handle
- **char\_uuid** –[in] the characteristic uuid
- **result** –[out] The pointer to the characteristic in the service.
- **count** –[inout] input the number of characteristic want to find, it will output the number of characteristic has been found in the gattc cache with the given service.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_gatt\_status\_t* **esp\_ble\_gattc\_get\_descr\_by\_uuid** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t start\_handle, uint16\_t end\_handle, *esp\_bt\_uuid\_t* char\_uuid, *esp\_bt\_uuid\_t* descr\_uuid, *esp\_gattc\_descr\_elem\_t* \*result, uint16\_t \*count)

Find the descriptor with the given characteristic uuid in the gattc cache Note: It just get descriptor from local cache, won't get from remote devices.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **start\_handle** –[in] the attribute start handle
- **end\_handle** –[in] the attribute end handle
- **char\_uuid** –[in] the characteristic uuid.
- **descr\_uuid** –[in] the descriptor uuid.
- **result** –[out] The pointer to the descriptor in the given characteristic.
- **count** –[inout] input the number of descriptor want to find, it will output the number of descriptor has been found in the gattc cache with the given characteristic.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_gatt\_status\_t* **esp\_ble\_gattc\_get\_descr\_by\_char\_handle** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t char\_handle, *esp\_bt\_uuid\_t* descr\_uuid, *esp\_gattc\_descr\_elem\_t* \*result, uint16\_t \*count)

Find the descriptor with the given characteristic handle in the gattc cache Note: It just get descriptor from local cache, won't get from remote devices.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **char\_handle** –[in] the characteristic handle.
- **descr\_uuid** –[in] the descriptor uuid.
- **result** –[out] The pointer to the descriptor in the given characteristic.
- **count** –[inout] input the number of descriptor want to find, it will output the number of descriptor has been found in the gattc cache with the given characteristic.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_gatt\_status\_t* **esp\_ble\_gattc\_get\_include\_service** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t start\_handle, uint16\_t end\_handle, *esp\_bt\_uuid\_t* \*incl\_uuid, *esp\_gattc\_incl\_svc\_elem\_t* \*result, uint16\_t \*count)

Find the include service with the given service handle in the gattc cache Note: It just get include service from local cache, won't get from remote devices.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **start\_handle** –[in] the attribute start handle
- **end\_handle** –[in] the attribute end handle
- **incl\_uuid** –[in] the include service uuid
- **result** –[out] The pointer to the include service in the given service.
- **count** –[inout] input the number of include service want to find, it will output the number of include service has been found in the gattc cache with the given service.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_gatt\_status\_t* **esp\_ble\_gattc\_get\_attr\_count** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, *esp\_gatt\_db\_attr\_type\_t* type, uint16\_t start\_handle, uint16\_t end\_handle, uint16\_t char\_handle, uint16\_t \*count)

Find the attribute count with the given service or characteristic in the gattc cache.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] connection ID which identify the server.
- **type** –[in] the attribute type.
- **start\_handle** –[in] the attribute start handle, if the type is ESP\_GATT\_DB\_DESCRIPTOR, this parameter should be ignore
- **end\_handle** –[in] the attribute end handle, if the type is ESP\_GATT\_DB\_DESCRIPTOR, this parameter should be ignore
- **char\_handle** –[in] the characteristic handle, this parameter valid when the type is ESP\_GATT\_DB\_DESCRIPTOR. If the type isn't ESP\_GATT\_DB\_DESCRIPTOR, this parameter should be ignore.
- **count** –[out] output the number of attribute has been found in the gattc cache with the given attribute type.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_gatt\_status\_t* **esp\_ble\_gattc\_get\_db** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t start\_handle, uint16\_t end\_handle, *esp\_gattc\_db\_elem\_t* \*db, uint16\_t \*count)

This function is called to get the GATT database. Note: It just get attribute data base from local cache, won't get from remote devices.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **start\_handle** –[in] the attribute start handle
- **end\_handle** –[in] the attribute end handle
- **conn\_id** –[in] connection ID which identify the server.
- **db** –[in] output parameter which will contain the GATT database copy. Caller is responsible for freeing it.
- **count** –[in] number of elements in database.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_read\_char** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t handle, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to read a service's characteristics of the given characteristic handle.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.

- **handle** –[in] : characteristic handle to read.
- **auth\_req** –[in] : authenticate request type

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_read\_by\_type** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t start\_handle, uint16\_t end\_handle, *esp\_bt\_uuid\_t* \*uuid, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to read a service's characteristics of the given characteristic UUID.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.
- **start\_handle** –[in] : the attribute start handle.
- **end\_handle** –[in] : the attribute end handle
- **uuid** –[in] : The UUID of attribute which will be read.
- **auth\_req** –[in] : authenticate request type

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_read\_multiple** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, *esp\_gattc\_multi\_t* \*read\_multi, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to read multiple characteristic or characteristic descriptors.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.
- **read\_multi** –[in] : pointer to the read multiple parameter.
- **auth\_req** –[in] : authenticate request type

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_read\_multiple\_variable** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, *esp\_gattc\_multi\_t* \*read\_multi, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to read multiple variable length characteristic or characteristic descriptors.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.
- **read\_multi** –[in] : pointer to the read multiple parameter.
- **auth\_req** –[in] : authenticate request type

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_read\_char\_descr** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t handle, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to read a characteristics descriptor.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.
- **handle** –[in] : descriptor handle to read.
- **auth\_req** –[in] : authenticate request type

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_write\_char** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t handle, uint16\_t value\_len, uint8\_t \*value, *esp\_gatt\_write\_type\_t* write\_type, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to write characteristic value.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.
- **handle** –[in] : characteristic handle to write.
- **value\_len** –[in] length of the value to be written.
- **value** –[in] : the value to be written.
- **write\_type** –[in] : the type of attribute write operation.
- **auth\_req** –[in] : authentication request.

#### Returns

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_write\_char\_descr** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t handle, uint16\_t value\_len, uint8\_t \*value, *esp\_gatt\_write\_type\_t* write\_type, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to write characteristic descriptor value.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID
- **handle** –[in] : descriptor handle to write.
- **value\_len** –[in] length of the value to be written.
- **value** –[in] : the value to be written.
- **write\_type** –[in] : the type of attribute write operation.
- **auth\_req** –[in] : authentication request.

#### Returns

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_prepare\_write** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t handle, uint16\_t offset, uint16\_t value\_len, uint8\_t \*value, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to prepare write a characteristic value.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.
- **handle** –[in] : characteristic handle to prepare write.
- **offset** –[in] : offset of the write value.
- **value\_len** –[in] length of the value to be written.
- **value** –[in] : the value to be written.
- **auth\_req** –[in] : authentication request.

#### Returns

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_prepare\_write\_char\_descr** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, uint16\_t handle, uint16\_t offset, uint16\_t value\_len, uint8\_t \*value, *esp\_gatt\_auth\_req\_t* auth\_req)

This function is called to prepare write a characteristic descriptor value.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.

- **handle** –[in] : characteristic descriptor handle to prepare write.
- **offset** –[in] : offset of the write value.
- **value\_len** –[in] length of the value to be written.
- **value** –[in] : the value to be written.
- **auth\_req** –[in] : authentication request.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_execute\_write** (*esp\_gatt\_if\_t* gattc\_if, uint16\_t conn\_id, bool is\_execute)

This function is called to execute write a prepare write sequence.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **conn\_id** –[in] : connection ID.
- **is\_execute** –[in] : execute or cancel.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_register\_for\_notify** (*esp\_gatt\_if\_t* gattc\_if, *esp\_bd\_addr\_t* server\_bda, uint16\_t handle)

This function is called to register for notification of a service.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **server\_bda** –[in] : target GATT server.
- **handle** –[in] : GATT characteristic handle.

**Returns**

- ESP\_OK: registration succeeds
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_unregister\_for\_notify** (*esp\_gatt\_if\_t* gattc\_if, *esp\_bd\_addr\_t* server\_bda, uint16\_t handle)

This function is called to de-register for notification of a service.

**Parameters**

- **gattc\_if** –[in] Gatt client access interface.
- **server\_bda** –[in] : target GATT server.
- **handle** –[in] : GATT characteristic handle.

**Returns**

- ESP\_OK: unregister succeeds
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_cache\_refresh** (*esp\_bd\_addr\_t* remote\_bda)

Refresh the server cache store in the gattc stack of the remote device. If the device is connected, this API will restart the discovery of service information of the remote device.

**Parameters** **remote\_bda** –[in] remote device BD address.

**Returns**

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_cache\_assoc** (*esp\_gatt\_if\_t* gattc\_if, *esp\_bd\_addr\_t* src\_addr, *esp\_bd\_addr\_t* assoc\_addr, bool is\_assoc)

Add or delete the associated address with the source address. Note: The role of this API is mainly when the client side has stored a server-side database, when it needs to connect another device, but the device's attribute database is the same as the server database stored on the client-side, calling this API can use the database that the device has stored used as the peer server database to reduce the attribute database search and discovery process and speed up the connection time. The associated address means that device want to used the database

has stored in the local cache. The source address mains that device want to share the database to the associated address device.

#### Parameters

- **gattc\_if** –[in] Gatt client access interface.
- **src\_addr** –[in] the source address which provide the attribute table.
- **assoc\_addr** –[in] the associated device address which went to share the attribute table with the source address.
- **is\_assoc** –[in] true add the associated device address, false remove the associated device address.

#### Returns

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_cache\_get\_addr\_list** (*esp\_gatt\_if\_t* gattc\_if)

Get the address list which has store the attribute table in the gattc cache. There will callback ESP\_GATTC\_GET\_ADDR\_LIST\_EVT event when get address list complete.

**Parameters** **gattc\_if** –[in] Gatt client access interface.

#### Returns

- ESP\_OK: success
- other: failed

*esp\_err\_t* **esp\_ble\_gattc\_cache\_clean** (*esp\_bd\_addr\_t* remote\_bda)

Clean the service cache of this device in the gattc stack,.

**Parameters** **remote\_bda** –[in] remote device BD address.

#### Returns

- ESP\_OK: success
- other: failed

## Unions

union **esp\_ble\_gattc\_cb\_param\_t**

*#include <esp\_gattc\_api.h>* Gatt client callback parameters union.

### Public Members

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_EXEC\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

struct **gattc\_get\_addr\_list\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_GET\_ADDR\_LIST\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint8\_t **num\_addr**

The number of address in the gattc cache address list

*esp\_bd\_addr\_t* \***addr\_list**

The pointer to the address list which has been get from the gattc cache

struct **gattc\_notify\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_NOTIFY\_EVT.

### Public Members

uint16\_t **conn\_id**

Connection id

*esp\_bd\_addr\_t* **remote\_bda**

Remote bluetooth device address

uint16\_t **handle**

The Characteristic or descriptor handle

uint16\_t **value\_len**

Notify attribute value

uint8\_t \***value**

Notify attribute value

bool **is\_notify**

True means notify, false means indicate

struct **gattc\_open\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_OPEN\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

*esp\_bd\_addr\_t* **remote\_bda**

Remote bluetooth device address

uint16\_t **mtu**

MTU size

struct **gattc\_queue\_full\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_QUEUE\_FULL\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

bool **is\_full**

The gattc command queue is full or not

struct **gattc\_read\_char\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_READ\_CHAR\_EVT, ESP\_GATTC\_READ\_DESCR\_EVT,  
ESP\_GATTC\_READ\_MULTIPLE\_EVT, ESP\_GATTC\_READ\_MULTI\_VAR\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

uint16\_t **handle**

Characteristic handle

uint8\_t **\*value**

Characteristic value

uint16\_t **value\_len**

Characteristic value length

```
struct gattc_reg_evt_param  
    #include <esp_gattc_api.h> ESP_GATTC_REG_EVT.
```

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **app\_id**

Application id which input in register API

```
struct gattc_reg_for_notify_evt_param  
    #include <esp_gattc_api.h> ESP_GATTC_REG_FOR_NOTIFY_EVT.
```

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **handle**

The characteristic or descriptor handle

```
struct gattc_search_cmpl_evt_param  
    #include <esp_gattc_api.h> ESP_GATTC_SEARCH_CMPL_EVT.
```

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

*esp\_service\_source\_t* **searched\_service\_source**

The source of the service information

```
struct gattc_search_res_evt_param  
    #include <esp_gattc_api.h> ESP_GATTC_SEARCH_RES_EVT.
```

### Public Members

uint16\_t **conn\_id**

Connection id

uint16\_t **start\_handle**

Service start handle

uint16\_t **end\_handle**

Service end handle

*esp\_gatt\_id\_t* **srvc\_id**

Service id, include service uuid and other information

bool **is\_primary**

True if this is the primary service

struct **gattc\_set\_assoc\_addr\_cmp\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_SET\_ASSOC\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

struct **gattc\_srvc\_chg\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_SRVC\_CHG\_EVT.

### Public Members

*esp\_bd\_addr\_t* **remote\_bda**

Remote bluetooth device address

struct **gattc\_unreg\_for\_notify\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_UNREG\_FOR\_NOTIFY\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **handle**

The characteristic or descriptor handle

struct **gattc\_write\_evt\_param**

*#include <esp\_gattc\_api.h>* ESP\_GATTC\_WRITE\_CHAR\_EVT, ESP\_GATTC\_PREP\_WRITE\_EVT, ESP\_GATTC\_WRITE\_DESCR\_EVT.

### Public Members

*esp\_gatt\_status\_t* **status**

Operation status

uint16\_t **conn\_id**

Connection id

uint16\_t **handle**

The Characteristic or descriptor handle

uint16\_t **offset**

The prepare write offset, this value is valid only when prepare write

### Type Definitions

```
typedef void (*esp_gattc_cb_t)(esp_gattc_cb_event_t event, esp_gatt_if_t gattc_if, esp_ble_gattc_cb_param_t *param)
```

GATT Client callback function type.

**Param event** : Event type

**Param gattc\_if** : GATT client access interface, normally different gattc\_if correspond to different profile

**Param param** : Point to callback parameter, currently is union type

### Enumerations

```
enum esp_gattc_cb_event_t
```

GATT Client callback function events.

*Values:*

enumerator **ESP\_GATTC\_REG\_EVT**

When GATT client is registered, the event comes

enumerator **ESP\_GATTC\_UNREG\_EVT**

When GATT client is unregistered, the event comes

enumerator **ESP\_GATTC\_OPEN\_EVT**

When GATT virtual connection is set up, the event comes

enumerator **ESP\_GATTC\_READ\_CHAR\_EVT**

When GATT characteristic is read, the event comes

enumerator **ESP\_GATTC\_WRITE\_CHAR\_EVT**

When GATT characteristic write operation completes, the event comes

enumerator **ESP\_GATTC\_CLOSE\_EVT**

When GATT virtual connection is closed, the event comes

enumerator **ESP\_GATTC\_SEARCH\_CMPL\_EVT**

When GATT service discovery is completed, the event comes

enumerator **ESP\_GATTC\_SEARCH\_RES\_EVT**

When GATT service discovery result is got, the event comes

enumerator **ESP\_GATTC\_READ\_DESCR\_EVT**

When GATT characteristic descriptor read completes, the event comes

enumerator **ESP\_GATTC\_WRITE\_DESCR\_EVT**

When GATT characteristic descriptor write completes, the event comes

enumerator **ESP\_GATTC\_NOTIFY\_EVT**

When GATT notification or indication arrives, the event comes

enumerator **ESP\_GATTC\_PREP\_WRITE\_EVT**

When GATT prepare-write operation completes, the event comes

enumerator **ESP\_GATTC\_EXEC\_EVT**

When write execution completes, the event comes

enumerator **ESP\_GATTC\_ACL\_EVT**

When ACL connection is up, the event comes

enumerator **ESP\_GATTC\_CANCEL\_OPEN\_EVT**

When GATT client ongoing connection is cancelled, the event comes

enumerator **ESP\_GATTC\_SRVC\_CHG\_EVT**

When “service changed” occurs, the event comes

enumerator **ESP\_GATTC\_ENC\_CMPL\_CB\_EVT**

When encryption procedure completes, the event comes

enumerator **ESP\_GATTC\_CFG\_MTU\_EVT**

When configuration of MTU completes, the event comes

enumerator **ESP\_GATTC\_ADV\_DATA\_EVT**

When advertising of data, the event comes

enumerator **ESP\_GATTC\_MULT\_ADV\_ENB\_EVT**

When multi-advertising is enabled, the event comes

enumerator **ESP\_GATTC\_MULT\_ADV\_UPD\_EVT**

When multi-advertising parameters are updated, the event comes

enumerator **ESP\_GATTC\_MULT\_ADV\_DATA\_EVT**

When multi-advertising data arrives, the event comes

enumerator **ESP\_GATTC\_MULT\_ADV\_DIS\_EVT**

When multi-advertising is disabled, the event comes

enumerator **ESP\_GATTC\_CONGEST\_EVT**

When GATT connection congestion comes, the event comes

enumerator **ESP\_GATTC\_BTH\_SCAN\_ENB\_EVT**

When batch scan is enabled, the event comes

enumerator **ESP\_GATTC\_BTH\_SCAN\_CFG\_EVT**

When batch scan storage is configured, the event comes

enumerator **ESP\_GATTC\_BTH\_SCAN\_RD\_EVT**

When Batch scan read event is reported, the event comes

enumerator **ESP\_GATTC\_BTH\_SCAN\_THR\_EVT**

When Batch scan threshold is set, the event comes

enumerator **ESP\_GATTC\_BTH\_SCAN\_PARAM\_EVT**

When Batch scan parameters are set, the event comes

enumerator **ESP\_GATTC\_BTH\_SCAN\_DIS\_EVT**

When Batch scan is disabled, the event comes

enumerator **ESP\_GATTC\_SCAN\_FLT\_CFG\_EVT**

When Scan filter configuration completes, the event comes

enumerator **ESP\_GATTC\_SCAN\_FLT\_PARAM\_EVT**

When Scan filter parameters are set, the event comes

enumerator **ESP\_GATTC\_SCAN\_FLT\_STATUS\_EVT**

When Scan filter status is reported, the event comes

enumerator **ESP\_GATTC\_ADV\_VSC\_EVT**

When advertising vendor spec content event is reported, the event comes

enumerator **ESP\_GATTC\_REG\_FOR\_NOTIFY\_EVT**

When register for notification of a service completes, the event comes

enumerator **ESP\_GATTC\_UNREG\_FOR\_NOTIFY\_EVT**

When unregister for notification of a service completes, the event comes

enumerator **ESP\_GATTC\_CONNECT\_EVT**

When the ble physical connection is set up, the event comes

enumerator **ESP\_GATTC\_DISCONNECT\_EVT**

When the ble physical connection disconnected, the event comes

enumerator **ESP\_GATTC\_READ\_MULTIPLE\_EVT**

When the ble characteristic or descriptor multiple complete, the event comes

enumerator **ESP\_GATTC\_QUEUE\_FULL\_EVT**

When the gattc command queue full, the event comes

enumerator **ESP\_GATTC\_SET\_ASSOC\_EVT**

When the ble gattc set the associated address complete, the event comes

enumerator **ESP\_GATTC\_GET\_ADDR\_LIST\_EVT**

When the ble get gattc address list in cache finish, the event comes

enumerator **ESP\_GATTC\_DIS\_SRVC\_CMPL\_EVT**

When the ble discover service complete, the event comes

enumerator **ESP\_GATTC\_READ\_MULTI\_VAR\_EVT**

When read multiple variable characteristic complete, the event comes

## BLUFI API

**Overview** BLUFI is a profile based GATT to config ESP32 WIFI to connect/disconnect AP or setup a softap and etc. Use should concern these things:

1. The event sent from profile. Then you need to do something as the event indicate.
2. Security reference. You can write your own Security functions such as symmetrical encryption/decryption and checksum functions. Even you can define the “Key Exchange/Negotiation” procedure.

**Application Example** Check [bluetooth](#) folder in ESP-IDF examples, which contains the following application:

- This is the BLUFI demo. This demo can set ESP32’s wifi to softap/station/softap&station mode and config wifi connections - [bluetooth/blufi](#)

## API Reference

### Header File

- [components/bt/common/api/include/api/esp\\_blufi\\_api.h](#)

### Functions

*esp\_err\_t* **esp\_blufi\_register\_callbacks** (*esp\_blufi\_callbacks\_t* \*callbacks)

This function is called to receive blufi callback event.

**Parameters** **callbacks** –[in] callback functions

**Returns** ESP\_OK - success, other - failed

*esp\_err\_t* **esp\_blufi\_profile\_init** (void)

This function is called to initialize blufi\_profile.

**Returns** ESP\_OK - success, other - failed

*esp\_err\_t* **esp\_blufi\_profile\_deinit** (void)

This function is called to de-initialize blufi\_profile.

**Returns** ESP\_OK - success, other - failed

*esp\_err\_t* **esp\_blufi\_send\_wifi\_conn\_report** (*wifi\_mode\_t* opmode, *esp\_blufi\_sta\_conn\_state\_t* sta\_conn\_state, *uint8\_t* softap\_conn\_num, *esp\_blufi\_extra\_info\_t* \*extra\_info)

This function is called to send wifi connection report.

**Parameters**

- **opmode** –: wifi opmode

- **sta\_conn\_state** –: station is already in connection or not
- **softap\_conn\_num** –: softap connection number
- **extra\_info** –: extra information, such as sta\_ssid, softap\_ssid and etc.

**Returns** ESP\_OK - success, other - failed

*esp\_err\_t* **esp\_blufi\_send\_wifi\_list** (uint16\_t apCount, *esp\_blufi\_ap\_record\_t* \*list)

This function is called to send wifi list.

**Parameters**

- **apCount** –: wifi list count
- **list** –: wifi list

**Returns** ESP\_OK - success, other - failed

uint16\_t **esp\_blufi\_get\_version** (void)

Get BLUFI profile version.

**Returns** Most 8bit significant is Great version, Least 8bit is Sub version

*esp\_err\_t* **esp\_blufi\_send\_error\_info** (*esp\_blufi\_error\_state\_t* state)

This function is called to send blufi error information.

**Parameters** **state** –: error state

**Returns** ESP\_OK - success, other - failed

*esp\_err\_t* **esp\_blufi\_send\_custom\_data** (uint8\_t \*data, uint32\_t data\_len)

This function is called to custom data.

**Parameters**

- **data** –: custom data value
- **data\_len** –: the length of custom data

**Returns** ESP\_OK - success, other - failed

## Unions

union **esp\_blufi\_cb\_param\_t**

#include <esp\_blufi\_api.h> BLUFI callback parameters union.

## Public Members

struct *esp\_blufi\_cb\_param\_t::blufi\_init\_finish\_evt\_param* **init\_finish**

Blufi callback param of ESP\_BLUFI\_EVENT\_INIT\_FINISH

struct *esp\_blufi\_cb\_param\_t::blufi\_deinit\_finish\_evt\_param* **deinit\_finish**

Blufi callback param of ESP\_BLUFI\_EVENT\_DEINIT\_FINISH

struct *esp\_blufi\_cb\_param\_t::blufi\_set\_wifi\_mode\_evt\_param* **wifi\_mode**

Blufi callback param of ESP\_BLUFI\_EVENT\_INIT\_FINISH

struct *esp\_blufi\_cb\_param\_t::blufi\_connect\_evt\_param* **connect**

Blufi callback param of ESP\_BLUFI\_EVENT\_CONNECT

struct *esp\_blufi\_cb\_param\_t::blufi\_disconnect\_evt\_param* **disconnect**

Blufi callback param of ESP\_BLUFI\_EVENT\_DISCONNECT

struct *esp\_blufi\_cb\_param\_t::blufi\_recv\_sta\_bssid\_evt\_param* **sta\_bssid**

Blufi callback param of ESP\_BLUFI\_EVENT\_RECV\_STA\_BSSID

```
struct esp_blufi_cb_param_t::blufi_rcv_sta_ssid_evt_param sta_ssid  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_STA_SSID
```

```
struct esp_blufi_cb_param_t::blufi_rcv_sta_passwd_evt_param sta_passwd  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_STA_PASSWD
```

```
struct esp_blufi_cb_param_t::blufi_rcv_softap_ssid_evt_param softap_ssid  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_SOFTAP_SSID
```

```
struct esp_blufi_cb_param_t::blufi_rcv_softap_passwd_evt_param softap_passwd  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_SOFTAP_PASSWD
```

```
struct esp_blufi_cb_param_t::blufi_rcv_softap_max_conn_num_evt_param softap_max_conn_num  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_SOFTAP_MAX_CONN_NUM
```

```
struct esp_blufi_cb_param_t::blufi_rcv_softap_auth_mode_evt_param softap_auth_mode  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_SOFTAP_AUTH_MODE
```

```
struct esp_blufi_cb_param_t::blufi_rcv_softap_channel_evt_param softap_channel  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_SOFTAP_CHANNEL
```

```
struct esp_blufi_cb_param_t::blufi_rcv_username_evt_param username  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_USERNAME
```

```
struct esp_blufi_cb_param_t::blufi_rcv_ca_evt_param ca  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_CA_CERT
```

```
struct esp_blufi_cb_param_t::blufi_rcv_client_cert_evt_param client_cert  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_CLIENT_CERT
```

```
struct esp_blufi_cb_param_t::blufi_rcv_server_cert_evt_param server_cert  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_SERVER_CERT
```

```
struct esp_blufi_cb_param_t::blufi_rcv_client_pkey_evt_param client_pkey  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_CLIENT_PRIV_KEY
```

```
struct esp_blufi_cb_param_t::blufi_rcv_server_pkey_evt_param server_pkey  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_SERVER_PRIV_KEY
```

```
struct esp_blufi_cb_param_t::blufi_get_error_evt_param report_error  
    Blufi callback param of ESP_BLUFI_EVENT_REPORT_ERROR
```

```
struct esp_blufi_cb_param_t::blufi_rcv_custom_data_evt_param custom_data  
    Blufi callback param of ESP_BLUFI_EVENT_RECV_CUSTOM_DATA
```

```
struct blufi_connect_evt_param  
    #include <esp_blufi_api.h> ESP_BLUFI_EVENT_CONNECT.
```

is rssi of sta connection set

struct **esp\_blufi\_ap\_record\_t**

Description of an WiFi AP.

### Public Members

uint8\_t **ssid**[33]

SSID of AP

int8\_t **rssi**

signal strength of AP

struct **esp\_blufi\_callbacks\_t**

BLUFI callback functions type.

### Public Members

*esp\_blufi\_event\_cb\_t* **event\_cb**

BLUFI event callback

*esp\_blufi\_negotiate\_data\_handler\_t* **negotiate\_data\_handler**

BLUFI negotiate data function for negotiate share key

*esp\_blufi\_encrypt\_func\_t* **encrypt\_func**

BLUFI encrypt data function with share key generated by negotiate\_data\_handler

*esp\_blufi\_decrypt\_func\_t* **decrypt\_func**

BLUFI decrypt data function with share key generated by negotiate\_data\_handler

*esp\_blufi\_checksum\_func\_t* **checksum\_func**

BLUFI check sum function (FCS)

### Macros

**ESP\_BLUFI\_BD\_ADDR\_LEN**

Bluetooth address length.

### Type Definitions

typedef uint8\_t **esp\_blufi\_bd\_addr\_t**[ESP\_BLUFI\_BD\_ADDR\_LEN]

Bluetooth device address.

typedef void (\***esp\_blufi\_event\_cb\_t**)(*esp\_blufi\_cb\_event\_t* event, *esp\_blufi\_cb\_param\_t* \*param)

BLUFI event callback function type.

**Param event** : Event type

**Param param** : Point to callback parameter, currently is union type

typedef void (\***esp\_blufi\_negotiate\_data\_handler\_t**)(uint8\_t \*data, int len, uint8\_t \*\*output\_data, int \*output\_len, bool \*need\_free)

BLUFI negotiate data handler.

**Param data** : data from phone

**Param len** : length of data from phone

**Param output\_data** : data want to send to phone

**Param output\_len** : length of data want to send to phone  
**Param need\_free** : output reporting if memory needs to be freed or not \*

typedef int (**\*esp\_blufi\_encrypt\_func\_t**)(uint8\_t iv8, uint8\_t \*crypt\_data, int crypt\_len)

BLUFI encrypt the data after negotiate a share key.

**Param iv8** : initial vector(8bit), normally, blufi core will input packet sequence number  
**Param crypt\_data** : plain text and encrypted data, the encrypt function must support autochthonous encrypt  
**Param crypt\_len** : length of plain text  
**Return** Nonnegative number is encrypted length, if error, return negative number;

typedef int (**\*esp\_blufi\_decrypt\_func\_t**)(uint8\_t iv8, uint8\_t \*crypt\_data, int crypt\_len)

BLUFI decrypt the data after negotiate a share key.

**Param iv8** : initial vector(8bit), normally, blufi core will input packet sequence number  
**Param crypt\_data** : encrypted data and plain text, the encrypt function must support autochthonous decrypt  
**Param crypt\_len** : length of encrypted text  
**Return** Nonnegative number is decrypted length, if error, return negative number;

typedef uint16\_t (**\*esp\_blufi\_checksum\_func\_t**)(uint8\_t iv8, uint8\_t \*data, int len)

BLUFI checksum.

**Param iv8** : initial vector(8bit), normally, blufi core will input packet sequence number  
**Param data** : data need to checksum  
**Param len** : length of data

## Enumerations

enum **esp\_blufi\_cb\_event\_t**

*Values:*

enumerator **ESP\_BLUFI\_EVENT\_INIT\_FINISH**

enumerator **ESP\_BLUFI\_EVENT\_DEINIT\_FINISH**

enumerator **ESP\_BLUFI\_EVENT\_SET\_WIFI\_OPMODE**

enumerator **ESP\_BLUFI\_EVENT\_BLE\_CONNECT**

enumerator **ESP\_BLUFI\_EVENT\_BLE\_DISCONNECT**

enumerator **ESP\_BLUFI\_EVENT\_REQ\_CONNECT\_TO\_AP**

enumerator **ESP\_BLUFI\_EVENT\_REQ\_DISCONNECT\_FROM\_AP**

enumerator **ESP\_BLUFI\_EVENT\_GET\_WIFI\_STATUS**

enumerator **ESP\_BLUFI\_EVENT\_DEAUTHENTICATE\_STA**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_STA\_BSSID**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_STA\_SSID**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_STA\_PASSWD**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SOFTAP\_SSID**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SOFTAP\_PASSWD**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SOFTAP\_MAX\_CONN\_NUM**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SOFTAP\_AUTH\_MODE**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SOFTAP\_CHANNEL**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_USERNAME**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_CA\_CERT**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_CLIENT\_CERT**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SERVER\_CERT**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_CLIENT\_PRIV\_KEY**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SERVER\_PRIV\_KEY**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_SLAVE\_DISCONNECT\_BLE**

enumerator **ESP\_BLUFI\_EVENT\_GET\_WIFI\_LIST**

enumerator **ESP\_BLUFI\_EVENT\_REPORT\_ERROR**

enumerator **ESP\_BLUFI\_EVENT\_RECV\_CUSTOM\_DATA**

enum **esp\_blufi\_sta\_conn\_state\_t**

BLUFI config status.

*Values:*

enumerator **ESP\_BLUFI\_STA\_CONN\_SUCCESS**

enumerator **ESP\_BLUFI\_STA\_CONN\_FAIL**

enumerator **ESP\_BLUFI\_STA\_CONNECTING**

enumerator **ESP\_BLUFI\_STA\_NO\_IP**

enum **esp\_blufi\_init\_state\_t**

BLUFI init status.

*Values:*

enumerator **ESP\_BLUFI\_INIT\_OK**

enumerator **ESP\_BLUFI\_INIT\_FAILED**

enum **esp\_blufi\_deinit\_state\_t**

BLUFI deinit status.

*Values:*

enumerator **ESP\_BLUFI\_DEINIT\_OK**

enumerator **ESP\_BLUFI\_DEINIT\_FAILED**

enum **esp\_blufi\_error\_state\_t**

*Values:*

enumerator **ESP\_BLUFI\_SEQUENCE\_ERROR**

enumerator **ESP\_BLUFI\_CHECKSUM\_ERROR**

enumerator **ESP\_BLUFI\_DECRYPT\_ERROR**

enumerator **ESP\_BLUFI\_ENCRYPT\_ERROR**

enumerator **ESP\_BLUFI\_INIT\_SECURITY\_ERROR**

enumerator **ESP\_BLUFI\_DH\_MALLOC\_ERROR**

enumerator **ESP\_BLUFI\_DH\_PARAM\_ERROR**

enumerator **ESP\_BLUFI\_READ\_PARAM\_ERROR**

enumerator **ESP\_BLUFI\_MAKE\_PUBLIC\_ERROR**

enumerator **ESP\_BLUFI\_DATA\_FORMAT\_ERROR**

enumerator **ESP\_BLUFI\_CALC\_MD5\_ERROR**

enumerator **ESP\_BLUFI\_WIFI\_SCAN\_FAIL**

enumerator **ESP\_BLUFI\_MSG\_STATE\_ERROR**

### 2.3.3 Controller & VHCI

#### Application Example

Check `bluetooth/hci` folder in ESP-IDF examples, which contains the following application:

- This is a BLE advertising demo with virtual HCI interface. Send `Reset/ADV_PARAM/ADV_DATA/ADV_ENABLE` HCI command for BLE advertising - [bluetooth/hci/controller\\_vhci\\_ble\\_adv](#).

#### API Reference

##### Header File

- `components/bt/include/esp32/include/esp_bt.h`

##### Functions

`esp_err_t esp_ble_tx_power_set (esp_ble_power_type_t power_type, esp_power_level_t power_level)`  
Set BLE TX power.

---

**Note:** Connection TX power should only be set after the connection is established.

---

##### Parameters

- **power\_type** –[in] The type of TX power. It could be Advertising, Connection, Default, etc.
- **power\_level** –[in] Power level (index) corresponding to the absolute value (dBm)

##### Returns

- ESP\_OK: Success
- ESP\_ERR\_INVALID\_ARG: Invalid argument

`esp_power_level_t esp_ble_tx_power_get (esp_ble_power_type_t power_type)`  
Get BLE TX power.

---

**Note:** Connection TX power should only be retrieved after the connection is established.

---

**Parameters** **power\_type** –[in] The type of TX power. It could be Advertising/Connection/Default and etc.

##### Returns

- Power level

`esp_err_t esp_bredr_tx_power_set (esp_power_level_t min_power_level, esp_power_level_t max_power_level)`

Set BR/EDR TX power.

BR/EDR power control will use the power within the range of minimum value and maximum value. The power level will affect the global BR/EDR TX power for operations such as inquiry, page, and connection.

---

##### Note:

- a. Please call this function after `esp_bt_controller_enable ()` and before any functions that cause RF transmission, such as performing discovery, profile initialization, and so on.
  - b. For BR/EDR to use the new TX power for inquiry, call this function before starting an inquiry. If BR/EDR is already inquiring, restart the inquiry after calling this function.
-

**Parameters**

- **min\_power\_level** **–[in]** The minimum power level. The default value is `ESP_PWR_LVL_N0`.
- **max\_power\_level** **–[in]** The maximum power level. The default value is `ESP_PWR_LVL_P3`.

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_ARG`: Invalid argument
- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state

*esp\_err\_t* **esp\_bredr\_tx\_power\_get** (*esp\_power\_level\_t* \*min\_power\_level, *esp\_power\_level\_t* \*max\_power\_level)

Get BR/EDR TX power.

The corresponding power levels will be stored into the arguments.

**Parameters**

- **min\_power\_level** **–[out]** Pointer to store the minimum power level
- **max\_power\_level** **–[out]** The maximum power level

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_ARG`: Invalid argument

*esp\_err\_t* **esp\_bredr\_sco\_datapath\_set** (*esp\_sco\_data\_path\_t* data\_path)

Set default SCO data path.

---

**Note:** This function should be called after the Controller is enabled, and before (e)SCO link is established.

---

**Parameters** **data\_path** **–[in]** SCO data path

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state

*esp\_err\_t* **esp\_bt\_controller\_init** (*esp\_bt\_controller\_config\_t* \*cfg)

Initialize the Bluetooth Controller to allocate tasks and other resources.

---

**Note:** This function should be called only once, before any other Bluetooth functions.

---

**Parameters** **cfg** **–[in]** Initial Bluetooth Controller configuration

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state

*esp\_err\_t* **esp\_bt\_controller\_deinit** (void)

De-initialize Bluetooth Controller to free resources and delete tasks.

**Note:**

- a. You should stop advertising and scanning, and disconnect all existing connections before de-initializing Bluetooth Controller.
  - b. This function should be called only once, after any other Bluetooth functions.
- 

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_ARG`: Invalid argument

- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state
- `ESP_ERR_NO_MEM`: Out of memory

*esp\_err\_t* **esp\_bt\_controller\_enable** (*esp\_bt\_mode\_t* mode)

Enable Bluetooth Controller.

For API compatibility, retain this argument. This mode must match the mode specified in the `cfg` of `esp_bt_controller_init()`.

---

**Note:**

- a. Bluetooth Controller cannot be enabled in `ESP_BT_CONTROLLER_STATUS_IDLE` status. It has to be initialized first.
- b. Due to a known issue, you cannot call `esp_bt_controller_enable()` for the second time to change the Controller mode dynamically. To change the Controller mode, call `esp_bt_controller_disable()` and then call `esp_bt_controller_enable()` with the new mode.

---

**Parameters** `mode` –[in] The Bluetooth Controller mode (BLE/Classic Bluetooth/BTDM) to enable

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state

*esp\_err\_t* **esp\_bt\_controller\_disable** (void)

Disable Bluetooth Controller.

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state

*esp\_bt\_controller\_status\_t* **esp\_bt\_controller\_get\_status** (void)

Get Bluetooth Controller status.

**Returns**

- `ESP_BT_CONTROLLER_STATUS_IDLE`: The Controller is not initialized or has been de-initialized.
- `ESP_BT_CONTROLLER_STATUS_INITED`: The Controller has been initialized, but not enabled or has been disabled.
- `ESP_BT_CONTROLLER_STATUS_ENABLED`: The Controller has been initialized and enabled.

bool **esp\_vhci\_host\_check\_send\_available** (void)

Check whether the Controller is ready to receive the packet.

If the return value is True, the Host can send the packet to the Controller.

---

**Note:** This function should be called before each `esp_vhci_host_send_packet()`.

---

**Returns** True if the Controller is ready to receive packets; false otherwise

void **esp\_vhci\_host\_send\_packet** (uint8\_t \*data, uint16\_t len)

Send the packet to the Controller.

---

**Note:**

- a. This function shall not be called within a critical section or when the scheduler is suspended.
  - b. This function should be called only if `esp_vhci_host_check_send_available()` returns True.
- 

**Parameters**

- **data** –[in] Pointer to the packet data
- **len** –[in] The packet length

*esp\_err\_t* **esp\_vhci\_host\_register\_callback** (const *esp\_vhci\_host\_callback\_t* \*callback)

Register the VHCI callback functions defined in *esp\_vhci\_host\_callback* structure.

**Parameters** **callback** –[in] *esp\_vhci\_host\_callback* type variable

**Returns**

- ESP\_OK: Success
- ESP\_FAIL: Failure

*esp\_err\_t* **esp\_bt\_controller\_mem\_release** (*esp\_bt\_mode\_t* mode)

Release the Controller memory as per the mode.

This function releases the BSS, data and other sections of the Controller to heap. The total size is about 70 KB.

If you never intend to use Bluetooth in a current boot-up cycle, calling `esp_bt_controller_mem_release(ESP_BT_MODE_BTDM)` could release the BSS and data consumed by both Classic Bluetooth and BLE Controller to heap.

If you intend to use BLE only, calling `esp_bt_controller_mem_release(ESP_BT_MODE_CLASSIC_BT)` could release the BSS and data consumed by Classic Bluetooth Controller. You can then continue using BLE.

If you intend to use Classic Bluetooth only, calling `esp_bt_controller_mem_release(ESP_BT_MODE_BLE)` could release the BSS and data consumed by BLE Controller. You can then continue using Classic Bluetooth.

---

**Note:**

- a. This function is optional and should be called only if you want to free up memory for other components.
  - b. This function should only be called when the controller is in `ESP_BT_CONTROLLER_STATUS_IDLE` status.
  - c. Once Bluetooth Controller memory is released, the process cannot be reversed. This means you cannot use the Bluetooth Controller mode that you have released using this function.
  - d. If your firmware will upgrade the Bluetooth Controller mode later (such as switching from BLE to Classic Bluetooth or from disabled to enabled), then do not call this function.
- 

**Parameters** **mode** –[in] The Bluetooth Controller mode

**Returns**

- ESP\_OK: Success
- ESP\_ERR\_INVALID\_STATE: Invalid Bluetooth Controller state
- ESP\_ERR\_NOT\_FOUND: Requested resource not found

*esp\_err\_t* **esp\_bt\_mem\_release** (*esp\_bt\_mode\_t* mode)

Release the Controller memory, BSS and data section of the Classic Bluetooth/BLE Host stack as per the mode.

This function first releases Controller memory by internally calling `esp_bt_controller_mem_release()`, then releases Host memory.

If you never intend to use Bluetooth in a current boot-up cycle, calling `esp_bt_mem_release(ESP_BT_MODE_BTDM)` could release the BSS and data consumed by both Classic Bluetooth and BLE stack to heap.

If you intend to use BLE only, calling `esp_bt_mem_release(ESP_BT_MODE_CLASSIC_BT)` could release the BSS and data consumed by Classic Bluetooth. You can then continue using BLE.

If you intend to use Classic Bluetooth only, calling `esp_bt_mem_release(ESP_BT_MODE_BLE)` could release the BSS and data consumed by BLE. You can then continue using Classic Bluetooth.

For example, if you only use Bluetooth for setting the Wi-Fi configuration, and do not use Bluetooth in the rest of the product operation, after receiving the Wi-Fi configuration, you can disable/de-init Bluetooth and release its memory. Below is the sequence of APIs to be called for such scenarios:

```
esp_bluedroid_disable();
esp_bluedroid_deinit();
esp_bt_controller_disable();
esp_bt_controller_deinit();
esp_bt_mem_release(ESP_BT_MODE_BTDM);
```

---

**Note:**

- This function is optional and should be called only if you want to free up memory for other components.
  - This function should only be called when the controller is in `ESP_BT_CONTROLLER_STATUS_IDLE` status.
  - Once Bluetooth Controller memory is released, the process cannot be reversed. This means you cannot use the Bluetooth Controller mode that you have released using this function.
  - If your firmware will upgrade the Bluetooth Controller mode later (such as switching from BLE to Classic Bluetooth or from disabled to enabled), then do not call this function.
- 

**Parameters** `mode` –[in] The Bluetooth Controller mode

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state
- `ESP_ERR_NOT_FOUND`: Requested resource not found

*esp\_err\_t* **esp\_bt\_sleep\_enable** (void)

Enable Bluetooth modem sleep.

There are currently two options for Bluetooth modem sleep: `ORIG` mode and `EVED` mode. The latter is intended for BLE only. The modem sleep mode could be configured in `menuconfig`.

In `ORIG` mode, if there is no event to process, the Bluetooth Controller will periodically switch off some components and pause operation, then wake up according to the scheduled interval and resume work. It can also wakeup earlier upon external request using function `esp_bt_controller_wakeup_request()`.

---

**Note:** This function shall not be invoked before `esp_bt_controller_enable()`.

---

**Returns**

- `ESP_OK`: Success
- `ESP_ERR_INVALID_STATE`: Invalid Bluetooth Controller state
- `ESP_ERR_NOT_SUPPORTED`: Operation or feature not supported

*esp\_err\_t* **esp\_bt\_sleep\_disable** (void)

Disable Bluetooth modem sleep.

---

**Note:**

- a. Bluetooth Controller will not be allowed to enter modem sleep after calling this function.
  - b. In ORIG modem sleep mode, calling this function may not immediately wake up the Controller if it is currently dormant. In this case, `esp_bt_controller_wakeup_request()` can be used to shorten the wake-up time.
  - c. This function shall not be invoked before `esp_bt_controller_enable()`.
- 

**Returns**

- ESP\_OK: Success
- ESP\_ERR\_INVALID\_STATE: Invalid Bluetooth Controller state
- ESP\_ERR\_NOT\_SUPPORTED: Operation or feature not supported

*esp\_err\_t* `esp_ble_scan_duplicate_list_flush`(void)

Manually clear the scan duplicate list.

---

**Note:**

- a. This function name is incorrectly spelled, it will be fixed in release 5.x version.
  - b. The scan duplicate list will be automatically cleared when the maximum amount of devices in the filter is reached. The amount of devices in the filter can be configured in menuconfig.
- 

**Returns**

- ESP\_OK: Success
- ESP\_ERR\_INVALID\_STATE: Invalid Bluetooth Controller state

void `esp_wifi_bt_power_domain_on`(void)

Power on Bluetooth Wi-Fi power domain.

---

**Note:** This function is not recommended to use due to potential risk.

---

void `esp_wifi_bt_power_domain_off`(void)

Power off Bluetooth Wi-Fi power domain.

---

**Note:** This function is not recommended to use due to potential risk.

---

**Structures**

struct `esp_bt_controller_config_t`

Bluetooth Controller config options.

---

**Note:**

- a. For parameters configurable in menuconfig, please refer to menuconfig for details on range and default values.
  - b. It is not recommended to modify the default values of `controller_task_stack_size`, `controller_task_prio`.
- 

**Public Members**

**uint16\_t controller\_task\_stack\_size**

Bluetooth Controller task stack size in bytes

**uint8\_t controller\_task\_prio**

Bluetooth Controller task priority

**uint8\_t hci\_uart\_no**

Indicates UART number if using UART1/2 as HCI I/O interface. Configurable in menuconfig.

**uint32\_t hci\_uart\_baudrate**

Indicates UART baudrate if using UART1/2 as HCI I/O interface. Configurable in menuconfig.

**uint8\_t scan\_duplicate\_mode**

Scan duplicate filtering mode. Configurable in menuconfig.

**uint8\_t scan\_duplicate\_type**

Scan duplicate filtering type. Configurable in menuconfig.

**uint16\_t normal\_adv\_size**

Maximum number of devices in scan duplicate filtering list. Configurable in menuconfig.

**uint16\_t mesh\_adv\_size**

Maximum number of Mesh ADV packets in scan duplicate filtering list. Configurable in menuconfig.

**uint16\_t send\_adv\_reserved\_size**

Controller minimum memory value in bytes. Internal use only

**uint32\_t controller\_debug\_flag**

Controller debug log flag. Internal use only

**uint8\_t mode**

Controller mode:

1: BLE mode

2: Classic Bluetooth mode

3: Dual mode

Others: Invalid

Configurable in menuconfig

**uint8\_t ble\_max\_conn**

Maximum number of BLE connections. Configurable in menuconfig.

**uint8\_t bt\_max\_acl\_conn**

Maximum number of BR/EDR ACL connections. Configurable in menuconfig.

**uint8\_t bt\_sco\_datapath**

SCO data path, i.e. HCI or PCM module. Configurable in menuconfig.

**bool auto\_latency**

True if BLE auto latency is enabled, used to enhance Classic Bluetooth performance; false otherwise. Configurable in menuconfig.

**bool bt\_legacy\_auth\_vs\_evt**

True if BR/EDR Legacy Authentication Vendor Specific Event is enabled, which is required to protect from BIAS attack; false otherwise. Configurable in menuconfig.

**uint8\_t bt\_max\_sync\_conn**

Maximum number of BR/EDR synchronous connections. Configurable in menuconfig.

**uint8\_t ble\_sca**

BLE low power crystal accuracy index. Configurable in menuconfig.

**uint8\_t pcm\_role**

PCM role (master & slave). Configurable in menuconfig.

**uint8\_t pcm\_polar**

PCM polar trig (falling clk edge & rising clk edge). Configurable in menuconfig.

**uint8\_t pcm\_fsyncshp**

Physical shape of the PCM Frame Synchronization signal (stereo mode & mono mode). Configurable in menuconfig

**bool hli**

True if using high level interrupt; false otherwise. Configurable in menuconfig.

**uint16\_t dup\_list\_refresh\_period**

Scan duplicate filtering list refresh period in seconds. Configurable in menuconfig.

**bool ble\_scan\_backoff**

True if BLE scan backoff is enabled; false otherwise. Configurable in menuconfig.

**uint8\_t ble\_llcp\_disc\_flag**

BLE disconnect flag when instant passed. Configurable in menuconfig.

**bool ble\_aa\_check**

True if adds a verification step for the Access Address within the CONNECT\_IND PDU; false otherwise. Configurable in menuconfig.

**uint32\_t magic**

Magic number

**struct esp\_vhci\_host\_callback**

Vendor HCI (VHCI) callback functions to notify the Host on the next operation.

**Public Members**

void (**\*notify\_host\_send\_available**)(void)

Callback to notify the Host that the Controller is ready to receive the packet

int (**\*notify\_host\_recv**)(uint8\_t \*data, uint16\_t len)

Callback to notify the Host that the Controller has a packet to send

## Macros

**ESP\_BT\_CONTROLLER\_CONFIG\_MAGIC\_VAL**

Internal use only.

---

**Note:** Please do not modify this value.

---

**BT\_CONTROLLER\_INIT\_CONFIG\_DEFAULT** ()

Default Bluetooth Controller configuration.

## Type Definitions

typedef struct *esp\_vhci\_host\_callback* **esp\_vhci\_host\_callback\_t**

Vendor HCI (VHCI) callback functions to notify the Host on the next operation.

## Enumerations

enum **esp\_bt\_mode\_t**

Bluetooth Controller mode.

*Values:*

enumerator **ESP\_BT\_MODE\_IDLE**

Bluetooth is not operating.

enumerator **ESP\_BT\_MODE\_BLE**

Bluetooth is operating in BLE mode.

enumerator **ESP\_BT\_MODE\_CLASSIC\_BT**

Bluetooth is operating in Classic Bluetooth mode.

enumerator **ESP\_BT\_MODE\_BTDM**

Bluetooth is operating in Dual mode.

enum **esp\_ble\_sca\_t**

BLE sleep clock accuracy (SCA)

---

**Note:** Currently only **ESP\_BLE\_SCA\_500PPM** and **ESP\_BLE\_SCA\_250PPM** are supported.

---

*Values:*

enumerator **ESP\_BLE\_SCA\_500PPM**

BLE SCA at 500 ppm

enumerator **ESP\_BLE\_SCA\_250PPM**

BLE SCA at 250 ppm

enumerator **ESP\_BLE\_SCA\_150PPM**

BLE SCA at 150 ppm

enumerator **ESP\_BLE\_SCA\_100PPM**

BLE SCA at 100 ppm

enumerator **ESP\_BLE\_SCA\_75PPM**

BLE SCA at 75 ppm

enumerator **ESP\_BLE\_SCA\_50PPM**

BLE SCA at 50 ppm

enumerator **ESP\_BLE\_SCA\_30PPM**

BLE SCA at 30 ppm

enumerator **ESP\_BLE\_SCA\_20PPM**

BLE SCA at 20 ppm

enum **esp\_bt\_controller\_status\_t**

Bluetooth Controller status.

*Values:*

enumerator **ESP\_BT\_CONTROLLER\_STATUS\_IDLE**

The Controller is not initialized or has been de-initialized.

enumerator **ESP\_BT\_CONTROLLER\_STATUS\_INITED**

The Controller has been initialized, but not enabled or has been disabled.

enumerator **ESP\_BT\_CONTROLLER\_STATUS\_ENABLED**

The Controller has been initialized and enabled.

enumerator **ESP\_BT\_CONTROLLER\_STATUS\_NUM**

Number of Controller statuses

enum **esp\_ble\_power\_type\_t**

BLE TX power type.

---

**Note:**

- a. The connection TX power can only be set after the connection is established. After disconnecting, the corresponding TX power will not be affected.
  - b. **ESP\_BLE\_PWR\_TYPE\_DEFAULT** can be used to set the TX power for power types that have not been set before. It will not affect the TX power values which have been set for the following CONNO-8/ADV/SCAN power types.
  - c. If none of power type is set, the system will use **ESP\_PWR\_LVL\_P3** as default for all power types.
- 

*Values:*

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL0**

TX power for connection handle 0

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL1**

TX power for connection handle 1

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL2**

TX power for connection handle 2

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL3**

TX power for connection handle 3

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL4**

TX power for connection handle 4

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL5**

TX power for connection handle 5

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL6**

TX power for connection handle 6

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL7**

TX power for connection handle 7

enumerator **ESP\_BLE\_PWR\_TYPE\_CONN\_HDL8**

TX power for connection handle 8

enumerator **ESP\_BLE\_PWR\_TYPE\_ADV**

TX power for advertising

enumerator **ESP\_BLE\_PWR\_TYPE\_SCAN**

TX power for scan

enumerator **ESP\_BLE\_PWR\_TYPE\_DEFAULT**

Default TX power type, which can be used to set the TX power for power types that have not been set before.

enumerator **ESP\_BLE\_PWR\_TYPE\_NUM**

Number of types

enum **esp\_power\_level\_t**

Bluetooth TX power level (index). Each index corresponds to a specific power value in dBm.

*Values:*

enumerator **ESP\_PWR\_LVL\_N12**

Corresponding to -12 dBm

enumerator **ESP\_PWR\_LVL\_N9**

Corresponding to -9 dBm

enumerator **ESP\_PWR\_LVL\_N6**

Corresponding to -6 dBm

enumerator **ESP\_PWR\_LVL\_N3**

Corresponding to -3 dBm

enumerator **ESP\_PWR\_LVL\_N0**

Corresponding to 0 dBm

enumerator **ESP\_PWR\_LVL\_P3**

Corresponding to +3 dBm

enumerator **ESP\_PWR\_LVL\_P6**

Corresponding to +6 dBm

enumerator **ESP\_PWR\_LVL\_P9**

Corresponding to +9 dBm

enumerator **ESP\_PWR\_LVL\_N14**

Backward compatibility! Setting to -14 dBm will actually result in -12 dBm

enumerator **ESP\_PWR\_LVL\_N11**

Backward compatibility! Setting to -11 dBm will actually result in -9 dBm

enumerator **ESP\_PWR\_LVL\_N8**

Backward compatibility! Setting to -8 dBm will actually result in -6 dBm

enumerator **ESP\_PWR\_LVL\_N5**

Backward compatibility! Setting to -5 dBm will actually result in -3 dBm

enumerator **ESP\_PWR\_LVL\_N2**

Backward compatibility! Setting to -2 dBm will actually result in 0 dBm

enumerator **ESP\_PWR\_LVL\_P1**

Backward compatibility! Setting to +1 dBm will actually result in +3 dBm

enumerator **ESP\_PWR\_LVL\_P4**

Backward compatibility! Setting to +4 dBm will actually result in +6 dBm

enumerator **ESP\_PWR\_LVL\_P7**

Backward compatibility! Setting to +7 dBm will actually result in +9 dBm

enum **esp\_sco\_data\_path\_t**

Bluetooth audio data transport path.

*Values:*

enumerator **ESP\_SCO\_DATA\_PATH\_HCI**

data over HCI transport

enumerator `ESP_SCO_DATA_PATH_PCM`  
data over PCM interface

### 2.3.4 NimBLE-based host APIs

#### Overview

Apache MyNewt NimBLE is a highly configurable and BT SIG qualifiable BLE stack providing both host and controller functionalities. ESP-IDF supports NimBLE host stack which is specifically ported for ESP32 platform and FreeRTOS. The underlying controller is still the same (as in case of Blueroid) providing VHCI interface. Refer to [NimBLE user guide](#) for a complete list of features and additional information on NimBLE stack. Most features of NimBLE including BLE Mesh are supported by ESP-IDF. The porting layer is kept cleaner by maintaining all the existing APIs of NimBLE along with a single ESP-NimBLE API for initialization, making it simpler for the application developers.

#### Architecture

Currently, NimBLE host and controller support different transports such as UART and RAM between them. However, RAM transport cannot be used as is in case of ESP as ESP controller supports VHCI interface and buffering schemes used by NimBLE host is incompatible with that used by ESP controller. Therefore, a new transport between NimBLE host and ESP controller has been added. This is depicted in the figure below. This layer is responsible for maintaining pool of transport buffers and formatting buffers exchanges between host and controller as per the requirements.

Fig. 1: ESP NimBLE Stack

#### Threading Model

The NimBLE host can run inside the application thread or can have its own independent thread. This flexibility is inherently provided by NimBLE design. By default, a thread is spawned by the porting function `nimble_port_freertos_init`. This behavior can be changed by overriding the same function. For BLE Mesh, additional thread (advertising thread) is used which keeps on feeding advertisement events to the main thread.

#### Programming Sequence

To begin with, make sure that the NimBLE stack is enabled from menuconfig *choose NimBLE for the Bluetooth host*.

**Typical programming sequence with NimBLE stack consists of the following steps:**

- Initialize NVS flash using `nvs_flash_init()` API. This is because ESP controller uses NVS during initialization.
- Initialize the host and controller stack using `nimble_port_init`.
- Initialize the required NimBLE host configuration parameters and callbacks
- Perform application specific tasks/initialization
- Run the thread for host stack using `nimble_port_freertos_init`

This documentation does not cover NimBLE APIs. Refer to [NimBLE tutorial](#) for more details on the programming sequence/NimBLE APIs for different scenarios.

## API Reference

### Header File

- [components/bt/host/nimble/esp-hci/include/esp\\_nimble\\_hci.h](#)

### Functions

*esp\_err\_t* **esp\_nimble\_hci\_init** (void)

Initialize VHCI transport layer between NimBLE Host and ESP Bluetooth controller.

This function initializes the transport buffers to be exchanged between NimBLE host and ESP controller. It also registers required host callbacks with the controller.

#### Returns

- ESP\_OK if the initialization is successful
- Appropriate error code from *esp\_err\_t* in case of an error

*esp\_err\_t* **esp\_nimble\_hci\_deinit** (void)

Deinitialize VHCI transport layer between NimBLE Host and ESP Bluetooth controller.

---

**Note:** This function should be called after the NimBLE host is deinitialized.

---

#### Returns

- ESP\_OK if the deinitialization is successful
- Appropriate error codes from *esp\_err\_t* in case of an error

### Macros

**BLE\_HCI\_UART\_H4\_NONE**

**BLE\_HCI\_UART\_H4\_CMD**

**BLE\_HCI\_UART\_H4\_ACL**

**BLE\_HCI\_UART\_H4\_SCO**

**BLE\_HCI\_UART\_H4\_EVT**

ESP-IDF currently supports two host stacks. The Bluebird based stack (default) supports classic Bluetooth as well as BLE. On the other hand, Apache NimBLE based stack is BLE only. For users to make a choice:

- For usecases involving classic Bluetooth as well as BLE, Bluebird should be used.
- For BLE-only usecases, using NimBLE is recommended. It is less demanding in terms of code footprint and runtime memory, making it suitable for such scenarios.

Code examples for this API section are provided in the [bluetooth/bluedroid](#) directory of ESP-IDF examples.

The following examples contain detailed walkthroughs:

- [GATT Client Example Walkthrough](#)
- [GATT Server Service Table Example Walkthrough](#)
- [GATT Server Example Walkthrough](#)
- [GATT Security Client Example Walkthrough](#)
- [GATT Security Server Example Walkthrough](#)
- [GATT Client Multi-connection Example Walkthrough](#)

## 2.4 Error Codes Reference

This section lists various error code constants defined in ESP-IDF.

For general information about error codes in ESP-IDF, see [Error Handling](#).

*ESP\_FAIL* (-1): Generic esp\_err\_t code indicating failure

*ESP\_OK* (0): esp\_err\_t value indicating success (no error)

*ESP\_ERR\_NO\_MEM* (0x101): Out of memory

*ESP\_ERR\_INVALID\_ARG* (0x102): Invalid argument

*ESP\_ERR\_INVALID\_STATE* (0x103): Invalid state

*ESP\_ERR\_INVALID\_SIZE* (0x104): Invalid size

*ESP\_ERR\_NOT\_FOUND* (0x105): Requested resource not found

*ESP\_ERR\_NOT\_SUPPORTED* (0x106): Operation or feature not supported

*ESP\_ERR\_TIMEOUT* (0x107): Operation timed out

*ESP\_ERR\_INVALID\_RESPONSE* (0x108): Received response was invalid

*ESP\_ERR\_INVALID\_CRC* (0x109): CRC or checksum was invalid

*ESP\_ERR\_INVALID\_VERSION* (0x10a): Version was invalid

*ESP\_ERR\_INVALID\_MAC* (0x10b): MAC address was invalid

*ESP\_ERR\_NOT\_FINISHED* (0x10c): There are items remained to retrieve

*ESP\_ERR\_NVS\_BASE* (0x1100): Starting number of error codes

*ESP\_ERR\_NVS\_NOT\_INITIALIZED* (0x1101): The storage driver is not initialized

*ESP\_ERR\_NVS\_NOT\_FOUND* (0x1102): A requested entry couldn't be found or namespace doesn't exist yet and mode is NVS\_READONLY

*ESP\_ERR\_NVS\_TYPE\_MISMATCH* (0x1103): The type of set or get operation doesn't match the type of value stored in NVS

*ESP\_ERR\_NVS\_READ\_ONLY* (0x1104): Storage handle was opened as read only

*ESP\_ERR\_NVS\_NOT\_ENOUGH\_SPACE* (0x1105): There is not enough space in the underlying storage to save the value

*ESP\_ERR\_NVS\_INVALID\_NAME* (0x1106): Namespace name doesn't satisfy constraints

*ESP\_ERR\_NVS\_INVALID\_HANDLE* (0x1107): Handle has been closed or is NULL

*ESP\_ERR\_NVS\_REMOVE\_FAILED* (0x1108): The value wasn't updated because flash write operation has failed. The value was written however, and update will be finished after re-initialization of nvs, provided that flash operation doesn't fail again.

*ESP\_ERR\_NVS\_KEY\_TOO\_LONG* (0x1109): Key name is too long

*ESP\_ERR\_NVS\_PAGE\_FULL* (0x110a): Internal error; never returned by nvs API functions

*ESP\_ERR\_NVS\_INVALID\_STATE* (0x110b): NVS is in an inconsistent state due to a previous error. Call nvs\_flash\_init and nvs\_open again, then retry.

*ESP\_ERR\_NVS\_INVALID\_LENGTH* (0x110c): String or blob length is not sufficient to store data

*ESP\_ERR\_NVS\_NO\_FREE\_PAGES* (0x110d): NVS partition doesn't contain any empty pages. This may happen if NVS partition was truncated. Erase the whole partition and call nvs\_flash\_init again.

*ESP\_ERR\_NVS\_VALUE\_TOO\_LONG* (0x110e): Value doesn't fit into the entry or string or blob length is longer than supported by the implementation

*ESP\_ERR\_NVS\_PART\_NOT\_FOUND* (0x110f): Partition with specified name is not found in the partition table

*ESP\_ERR\_NVS\_NEW\_VERSION\_FOUND* (**0x1110**): NVS partition contains data in new format and cannot be recognized by this version of code

*ESP\_ERR\_NVS\_XTS\_ENCR\_FAILED* (**0x1111**): XTS encryption failed while writing NVS entry

*ESP\_ERR\_NVS\_XTS\_DECR\_FAILED* (**0x1112**): XTS decryption failed while reading NVS entry

*ESP\_ERR\_NVS\_XTS\_CFG\_FAILED* (**0x1113**): XTS configuration setting failed

*ESP\_ERR\_NVS\_XTS\_CFG\_NOT\_FOUND* (**0x1114**): XTS configuration not found

*ESP\_ERR\_NVS\_ENCR\_NOT\_SUPPORTED* (**0x1115**): NVS encryption is not supported in this version

*ESP\_ERR\_NVS\_KEYS\_NOT\_INITIALIZED* (**0x1116**): NVS key partition is uninitialized

*ESP\_ERR\_NVS\_CORRUPT\_KEY\_PART* (**0x1117**): NVS key partition is corrupt

*ESP\_ERR\_NVS\_CONTENT\_DIFFERS* (**0x1118**): Internal error; never returned by nvs API functions. NVS key is different in comparison

*ESP\_ERR\_NVS\_WRONG\_ENCRYPTION* (**0x1119**): NVS partition is marked as encrypted with generic flash encryption. This is forbidden since the NVS encryption works differently.

*ESP\_ERR\_ULP\_BASE* (**0x1200**): Offset for ULP-related error codes

*ESP\_ERR\_ULP\_SIZE\_TOO\_BIG* (**0x1201**): Program doesn't fit into RTC memory reserved for the ULP

*ESP\_ERR\_ULP\_INVALID\_LOAD\_ADDR* (**0x1202**): Load address is outside of RTC memory reserved for the ULP

*ESP\_ERR\_ULP\_DUPLICATE\_LABEL* (**0x1203**): More than one label with the same number was defined

*ESP\_ERR\_ULP\_UNDEFINED\_LABEL* (**0x1204**): Branch instructions references an undefined label

*ESP\_ERR\_ULP\_BRANCH\_OUT\_OF\_RANGE* (**0x1205**): Branch target is out of range of B instruction (try replacing with BX)

*ESP\_ERR\_OTA\_BASE* (**0x1500**): Base error code for ota\_ops api

*ESP\_ERR\_OTA\_PARTITION\_CONFLICT* (**0x1501**): Error if request was to write or erase the current running partition

*ESP\_ERR\_OTA\_SELECT\_INFO\_INVALID* (**0x1502**): Error if OTA data partition contains invalid content

*ESP\_ERR\_OTA\_VALIDATE\_FAILED* (**0x1503**): Error if OTA app image is invalid

*ESP\_ERR\_OTA\_SMALL\_SEC\_VER* (**0x1504**): Error if the firmware has a secure version less than the running firmware.

*ESP\_ERR\_OTA\_ROLLBACK\_FAILED* (**0x1505**): Error if flash does not have valid firmware in passive partition and hence rollback is not possible

*ESP\_ERR\_OTA\_ROLLBACK\_INVALID\_STATE* (**0x1506**): Error if current active firmware is still marked in pending validation state (*ESP\_OTA\_IMG\_PENDING\_VERIFY*), essentially first boot of firmware image post upgrade and hence firmware upgrade is not possible

*ESP\_ERR\_EFUSE* (**0x1600**): Base error code for efuse api.

*ESP\_OK\_EFUSE\_CNT* (**0x1601**): OK the required number of bits is set.

*ESP\_ERR\_EFUSE\_CNT\_IS\_FULL* (**0x1602**): Error field is full.

*ESP\_ERR\_EFUSE\_REPEATED\_PROG* (**0x1603**): Error repeated programming of programmed bits is strictly forbidden.

*ESP\_ERR\_CODING* (**0x1604**): Error while a encoding operation.

*ESP\_ERR\_NOT\_ENOUGH\_UNUSED\_KEY\_BLOCKS* (**0x1605**): Error not enough unused key blocks available

*ESP\_ERR\_DAMAGED\_READING* (**0x1606**): Error. Burn or reset was done during a reading operation leads to damage read data. This error is internal to the efuse component and not returned by any public API.

*ESP\_ERR\_IMAGE\_BASE* (**0x2000**)

`ESP_ERR_IMAGE_FLASH_FAIL (0x2001)`

`ESP_ERR_IMAGE_INVALID (0x2002)`

`ESP_ERR_WIFI_BASE (0x3000)`: Starting number of WiFi error codes

`ESP_ERR_WIFI_NOT_INIT (0x3001)`: WiFi driver was not installed by `esp_wifi_init`

`ESP_ERR_WIFI_NOT_STARTED (0x3002)`: WiFi driver was not started by `esp_wifi_start`

`ESP_ERR_WIFI_NOT_STOPPED (0x3003)`: WiFi driver was not stopped by `esp_wifi_stop`

`ESP_ERR_WIFI_IF (0x3004)`: WiFi interface error

`ESP_ERR_WIFI_MODE (0x3005)`: WiFi mode error

`ESP_ERR_WIFI_STATE (0x3006)`: WiFi internal state error

`ESP_ERR_WIFI_CONN (0x3007)`: WiFi internal control block of station or soft-AP error

`ESP_ERR_WIFI_NVS (0x3008)`: WiFi internal NVS module error

`ESP_ERR_WIFI_MAC (0x3009)`: MAC address is invalid

`ESP_ERR_WIFI_SSID (0x300a)`: SSID is invalid

`ESP_ERR_WIFI_PASSWORD (0x300b)`: Password is invalid

`ESP_ERR_WIFI_TIMEOUT (0x300c)`: Timeout error

`ESP_ERR_WIFI_WAKE_FAIL (0x300d)`: WiFi is in sleep state(RF closed) and wakeup fail

`ESP_ERR_WIFI_WOULD_BLOCK (0x300e)`: The caller would block

`ESP_ERR_WIFI_NOT_CONNECT (0x300f)`: Station still in disconnect status

`ESP_ERR_WIFI_POST (0x3012)`: Failed to post the event to WiFi task

`ESP_ERR_WIFI_INIT_STATE (0x3013)`: Invalid WiFi state when init/deinit is called

`ESP_ERR_WIFI_STOP_STATE (0x3014)`: Returned when WiFi is stopping

`ESP_ERR_WIFI_NOT_ASSOC (0x3015)`: The WiFi connection is not associated

`ESP_ERR_WIFI_TX_DISALLOW (0x3016)`: The WiFi TX is disallowed

`ESP_ERR_WIFI_DISCARD (0x3017)`: Discard frame

`ESP_ERR_WIFI_ROC_IN_PROGRESS (0x3018)`: ROC op is in progress

`ESP_ERR_WIFI_REGISTRAR (0x3033)`: WPS registrar is not supported

`ESP_ERR_WIFI_WPS_TYPE (0x3034)`: WPS type error

`ESP_ERR_WIFI_WPS_SM (0x3035)`: WPS state machine is not initialized

`ESP_ERR_ESPNOW_BASE (0x3064)`: ESPNOW error number base.

`ESP_ERR_ESPNOW_NOT_INIT (0x3065)`: ESPNOW is not initialized.

`ESP_ERR_ESPNOW_ARG (0x3066)`: Invalid argument

`ESP_ERR_ESPNOW_NO_MEM (0x3067)`: Out of memory

`ESP_ERR_ESPNOW_FULL (0x3068)`: ESPNOW peer list is full

`ESP_ERR_ESPNOW_NOT_FOUND (0x3069)`: ESPNOW peer is not found

`ESP_ERR_ESPNOW_INTERNAL (0x306a)`: Internal error

`ESP_ERR_ESPNOW_EXIST (0x306b)`: ESPNOW peer has existed

`ESP_ERR_ESPNOW_IF (0x306c)`: Interface error

`ESP_ERR_DPP_FAILURE (0x3097)`: Generic failure during DPP Operation

`ESP_ERR_DPP_TX_FAILURE (0x3098)`: DPP Frame Tx failed OR not Acked

*ESP\_ERR\_DPP\_INVALID\_ATTR* (**0x3099**): Encountered invalid DPP Attribute

*ESP\_ERR\_DPP\_AUTH\_TIMEOUT* (**0x309a**): DPP Auth response was not received in time

*ESP\_ERR\_MESH\_BASE* (**0x4000**): Starting number of MESH error codes

*ESP\_ERR\_MESH\_WIFI\_NOT\_START* (**0x4001**)

*ESP\_ERR\_MESH\_NOT\_INIT* (**0x4002**)

*ESP\_ERR\_MESH\_NOT\_CONFIG* (**0x4003**)

*ESP\_ERR\_MESH\_NOT\_START* (**0x4004**)

*ESP\_ERR\_MESH\_NOT\_SUPPORT* (**0x4005**)

*ESP\_ERR\_MESH\_NOT\_ALLOWED* (**0x4006**)

*ESP\_ERR\_MESH\_NO\_MEMORY* (**0x4007**)

*ESP\_ERR\_MESH\_ARGUMENT* (**0x4008**)

*ESP\_ERR\_MESH\_EXCEED\_MTU* (**0x4009**)

*ESP\_ERR\_MESH\_TIMEOUT* (**0x400a**)

*ESP\_ERR\_MESH\_DISCONNECTED* (**0x400b**)

*ESP\_ERR\_MESH\_QUEUE\_FAIL* (**0x400c**)

*ESP\_ERR\_MESH\_QUEUE\_FULL* (**0x400d**)

*ESP\_ERR\_MESH\_NO\_PARENT\_FOUND* (**0x400e**)

*ESP\_ERR\_MESH\_NO\_ROUTE\_FOUND* (**0x400f**)

*ESP\_ERR\_MESH\_OPTION\_NULL* (**0x4010**)

*ESP\_ERR\_MESH\_OPTION\_UNKNOWN* (**0x4011**)

*ESP\_ERR\_MESH\_XON\_NO\_WINDOW* (**0x4012**)

*ESP\_ERR\_MESH\_INTERFACE* (**0x4013**)

*ESP\_ERR\_MESH\_DISCARD\_DUPLICATE* (**0x4014**)

*ESP\_ERR\_MESH\_DISCARD* (**0x4015**)

*ESP\_ERR\_MESH\_VOTING* (**0x4016**)

*ESP\_ERR\_MESH\_XMIT* (**0x4017**)

*ESP\_ERR\_MESH\_QUEUE\_READ* (**0x4018**)

*ESP\_ERR\_MESH\_PS* (**0x4019**)

*ESP\_ERR\_MESH\_RECV\_RELEASE* (**0x401a**)

*ESP\_ERR\_ESP\_NETIF\_BASE* (**0x5000**)

*ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS* (**0x5001**)

*ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY* (**0x5002**)

*ESP\_ERR\_ESP\_NETIF\_DHCP\_START\_FAILED* (**0x5003**)

*ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STARTED* (**0x5004**)

*ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STOPPED* (**0x5005**)

*ESP\_ERR\_ESP\_NETIF\_NO\_MEM* (**0x5006**)

*ESP\_ERR\_ESP\_NETIF\_DHCP\_NOT\_STOPPED* (**0x5007**)

*ESP\_ERR\_ESP\_NETIF\_DRIVER\_ATTACH\_FAILED* (**0x5008**)

*ESP\_ERR\_ESP\_NETIF\_INIT\_FAILED* (**0x5009**)

*ESP\_ERR\_ESP\_NETIF\_DNS\_NOT\_CONFIGURED* (**0x500a**)

*ESP\_ERR\_ESP\_NETIF\_MLD6\_FAILED* (**0x500b**)

*ESP\_ERR\_ESP\_NETIF\_IP6\_ADDR\_FAILED* (**0x500c**)

*ESP\_ERR\_ESP\_NETIF\_DHCP\_START\_FAILED* (**0x500d**)

*ESP\_ERR\_FLASH\_BASE* (**0x6000**): Starting number of flash error codes

*ESP\_ERR\_FLASH\_OP\_FAIL* (**0x6001**)

*ESP\_ERR\_FLASH\_OP\_TIMEOUT* (**0x6002**)

*ESP\_ERR\_FLASH\_NOT\_INITIALISED* (**0x6003**)

*ESP\_ERR\_FLASH\_UNSUPPORTED\_HOST* (**0x6004**)

*ESP\_ERR\_FLASH\_UNSUPPORTED\_CHIP* (**0x6005**)

*ESP\_ERR\_FLASH\_PROTECTED* (**0x6006**)

*ESP\_ERR\_HTTP\_BASE* (**0x7000**): Starting number of HTTP error codes

*ESP\_ERR\_HTTP\_MAX\_REDIRECT* (**0x7001**): The error exceeds the number of HTTP redirects

*ESP\_ERR\_HTTP\_CONNECT* (**0x7002**): Error open the HTTP connection

*ESP\_ERR\_HTTP\_WRITE\_DATA* (**0x7003**): Error write HTTP data

*ESP\_ERR\_HTTP\_FETCH\_HEADER* (**0x7004**): Error read HTTP header from server

*ESP\_ERR\_HTTP\_INVALID\_TRANSPORT* (**0x7005**): There are no transport support for the input scheme

*ESP\_ERR\_HTTP\_CONNECTING* (**0x7006**): HTTP connection hasn't been established yet

*ESP\_ERR\_HTTP\_EAGAIN* (**0x7007**): Mapping of errno EAGAIN to esp\_err\_t

*ESP\_ERR\_HTTP\_CONNECTION\_CLOSED* (**0x7008**): Read FIN from peer and the connection closed

*ESP\_ERR\_ESP\_TLS\_BASE* (**0x8000**): Starting number of ESP-TLS error codes

*ESP\_ERR\_ESP\_TLS\_CANNOT\_RESOLVE\_HOSTNAME* (**0x8001**): Error if hostname couldn't be resolved upon tls connection

*ESP\_ERR\_ESP\_TLS\_CANNOT\_CREATE\_SOCKET* (**0x8002**): Failed to create socket

*ESP\_ERR\_ESP\_TLS\_UNSUPPORTED\_PROTOCOL\_FAMILY* (**0x8003**): Unsupported protocol family

*ESP\_ERR\_ESP\_TLS\_FAILED\_CONNECT\_TO\_HOST* (**0x8004**): Failed to connect to host

*ESP\_ERR\_ESP\_TLS\_SOCKET\_SETOPT\_FAILED* (**0x8005**): failed to set/get socket option

*ESP\_ERR\_ESP\_TLS\_CONNECTION\_TIMEOUT* (**0x8006**): new connection in esp\_tls\_low\_level\_conn connection timed out

*ESP\_ERR\_ESP\_TLS\_SE\_FAILED* (**0x8007**)

*ESP\_ERR\_ESP\_TLS\_TCP\_CLOSED\_FIN* (**0x8008**)

*ESP\_ERR\_MBEDTLS\_CERT\_PARTLY\_OK* (**0x8010**): mbedtls parse certificates was partly successful

*ESP\_ERR\_MBEDTLS\_CTR\_DRBG\_SEED\_FAILED* (**0x8011**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_SSL\_SET\_HOSTNAME\_FAILED* (**0x8012**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_SSL\_CONFIG\_DEFAULTS\_FAILED* (**0x8013**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_SSL\_CONF\_ALPN\_PROTOCOLS\_FAILED* (**0x8014**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_X509\_CERT\_PARSE\_FAILED* (**0x8015**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_SSL\_CONF\_OWN\_CERT\_FAILED* (**0x8016**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_SSL\_SETUP\_FAILED* (**0x8017**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_SSL\_WRITE\_FAILED* (**0x8018**): mbedtls api returned error

*ESP\_ERR\_MBEDTLS\_PK\_PARSE\_KEY\_FAILED (0x8019)*: mbedtls api returned failed

*ESP\_ERR\_MBEDTLS\_SSL\_HANDSHAKE\_FAILED (0x801a)*: mbedtls api returned failed

*ESP\_ERR\_MBEDTLS\_SSL\_CONF\_PSK\_FAILED (0x801b)*: mbedtls api returned failed

*ESP\_ERR\_MBEDTLS\_SSL\_TICKET\_SETUP\_FAILED (0x801c)*: mbedtls api returned failed

*ESP\_ERR\_WOLFSSL\_SSL\_SET\_HOSTNAME\_FAILED (0x8031)*: wolfSSL api returned error

*ESP\_ERR\_WOLFSSL\_SSL\_CONF\_ALPN\_PROTOCOLS\_FAILED (0x8032)*: wolfSSL api returned error

*ESP\_ERR\_WOLFSSL\_CERT\_VERIFY\_SETUP\_FAILED (0x8033)*: wolfSSL api returned error

*ESP\_ERR\_WOLFSSL\_KEY\_VERIFY\_SETUP\_FAILED (0x8034)*: wolfSSL api returned error

*ESP\_ERR\_WOLFSSL\_SSL\_HANDSHAKE\_FAILED (0x8035)*: wolfSSL api returned failed

*ESP\_ERR\_WOLFSSL\_CTX\_SETUP\_FAILED (0x8036)*: wolfSSL api returned failed

*ESP\_ERR\_WOLFSSL\_SSL\_SETUP\_FAILED (0x8037)*: wolfSSL api returned failed

*ESP\_ERR\_WOLFSSL\_SSL\_WRITE\_FAILED (0x8038)*: wolfSSL api returned failed

*ESP\_ERR\_HTTPS\_OTA\_BASE (0x9000)*

*ESP\_ERR\_HTTPS\_OTA\_IN\_PROGRESS (0x9001)*

*ESP\_ERR\_PING\_BASE (0xa000)*

*ESP\_ERR\_PING\_INVALID\_PARAMS (0xa001)*

*ESP\_ERR\_PING\_NO\_MEM (0xa002)*

*ESP\_ERR\_HTTPD\_BASE (0xb000)*: Starting number of HTTPD error codes

*ESP\_ERR\_HTTPD\_HANDLERS\_FULL (0xb001)*: All slots for registering URI handlers have been consumed

*ESP\_ERR\_HTTPD\_HANDLER\_EXISTS (0xb002)*: URI handler with same method and target URI already registered

*ESP\_ERR\_HTTPD\_INVALID\_REQ (0xb003)*: Invalid request pointer

*ESP\_ERR\_HTTPD\_RESULT\_TRUNC (0xb004)*: Result string truncated

*ESP\_ERR\_HTTPD\_RESP\_HDR (0xb005)*: Response header field larger than supported

*ESP\_ERR\_HTTPD\_RESP\_SEND (0xb006)*: Error occurred while sending response packet

*ESP\_ERR\_HTTPD\_ALLOC\_MEM (0xb007)*: Failed to dynamically allocate memory for resource

*ESP\_ERR\_HTTPD\_TASK (0xb008)*: Failed to launch server task/thread

*ESP\_ERR\_HW\_CRYPTO\_BASE (0xc000)*: Starting number of HW cryptography module error codes

*ESP\_ERR\_HW\_CRYPTO\_DS\_HMAC\_FAIL (0xc001)*: HMAC peripheral problem

*ESP\_ERR\_HW\_CRYPTO\_DS\_INVALID\_KEY (0xc002)*

*ESP\_ERR\_HW\_CRYPTO\_DS\_INVALID\_DIGEST (0xc004)*

*ESP\_ERR\_HW\_CRYPTO\_DS\_INVALID\_PADDING (0xc005)*

*ESP\_ERR\_MEMPROT\_BASE (0xd000)*: Starting number of Memory Protection API error codes

*ESP\_ERR\_MEMPROT\_MEMORY\_TYPE\_INVALID (0xd001)*

*ESP\_ERR\_MEMPROT\_SPLIT\_ADDR\_INVALID (0xd002)*

*ESP\_ERR\_MEMPROT\_SPLIT\_ADDR\_OUT\_OF\_RANGE (0xd003)*

*ESP\_ERR\_MEMPROT\_SPLIT\_ADDR\_UNALIGNED (0xd004)*

*ESP\_ERR\_MEMPROT\_UNIMGMT\_BLOCK\_INVALID (0xd005)*

*ESP\_ERR\_MEMPROT\_WORLD\_INVALID (0xd006)*

ESP\_ERR\_MEMPROT\_AREA\_INVALID (**0xd007**)

ESP\_ERR\_MEMPROT\_CPUID\_INVALID (**0xd008**)

ESP\_ERR\_TCP\_TRANSPORT\_BASE (**0xe000**): Starting number of TCP Transport error codes

ESP\_ERR\_TCP\_TRANSPORT\_CONNECTION\_TIMEOUT (**0xe001**): Connection has timed out

ESP\_ERR\_TCP\_TRANSPORT\_CONNECTION\_CLOSED\_BY\_FIN (**0xe002**): Read FIN from peer and the connection has closed (in a clean way)

ESP\_ERR\_TCP\_TRANSPORT\_CONNECTION\_FAILED (**0xe003**): Failed to connect to the peer

ESP\_ERR\_TCP\_TRANSPORT\_NO\_MEM (**0xe004**): Memory allocation failed

## 2.5 Networking APIs

### 2.5.1 Wi-Fi

#### ESP-NOW

**Overview** ESP-NOW is a kind of connectionless Wi-Fi communication protocol that is defined by Espressif. In ESP-NOW, application data is encapsulated in a vendor-specific action frame and then transmitted from one Wi-Fi device to another without connection. CTR with CBC-MAC Protocol(CCMP) is used to protect the action frame for security. ESP-NOW is widely used in smart light, remote controlling, sensor, etc.

**Frame Format** ESP-NOW uses a vendor-specific action frame to transmit ESP-NOW data. The default ESP-NOW bit rate is 1 Mbps.

Currently, ESP-NOW supports one version: v1.0. The maximum packet length supported by v1.0 devices is ESP\_NOW\_MAX\_DATA\_LEN bytes. The v1.0 devices can receive packets if the packet length is less than or equal to ESP\_NOW\_MAX\_IE\_DATA\_LEN. For packets exceeding this length, the v1.0 devices will discard the packet entirely.

The format of the vendor-specific action frame is as follows:

- **Category Code:** The Category Code field is set to the value(127) indicating the vendor-specific category.
- **Organization Identifier:** The Organization Identifier contains a unique identifier (0x18fe34), which is the first three bytes of MAC address applied by Espressif.
- **Random Value:** The Random Value field is used to prevent relay attacks.
- **Vendor Specific Content:** The Vendor Specific Content contains one vendor-specific element field,  $x = 257(250 + 7)$ .

The format of the vendor-specific element frame is as follows:

- **Element ID:** The Element ID field is set to the value (221), indicating the vendor-specific element.
- **Length:** The length is the total length of Organization Identifier, Type, Version and Body, the maximum value is 255.
- **Organization Identifier:** The Organization Identifier contains a unique identifier (0x18fe34), which is the first three bytes of MAC address applied by Espressif.
- **Type:** The Type field is set to the value (4) indicating ESP-NOW.
- **Version:** The Version field is set to the version of ESP-NOW.
- **Body:** The Body contains the actual ESP-NOW data to be transmitted.

As ESP-NOW is connectionless, the MAC header is a little different from that of standard frames. The FromDS and ToDS bits of FrameControl field are both 0. The first address field is set to the destination address. The second address field is set to the source address. The third address field is set to broadcast address (0xff:0xff:0xff:0xff:0xff:0xff).

## Security

**ESP-NOW uses the CCMP method, which is described in IEEE Std. 802.11-2012, to protect the vendor-specific action frame**

- PMK is used to encrypt LMK with the AES-128 algorithm. Call `esp_now_set_pmk()` to set PMK. If PMK is not set, a default PMK will be used.
- LMK of the paired device is used to encrypt the vendor-specific action frame with the CCMP method. If the LMK of the paired device is not set, the vendor-specific action frame will not be encrypted.

Encrypting multicast vendor-specific action frame is not supported.

**Initialization and De-initialization** Call `esp_now_init()` to initialize ESP-NOW and `esp_now_deinit()` to de-initialize ESP-NOW. ESP-NOW data must be transmitted after Wi-Fi is started, so it is recommended to start Wi-Fi before initializing ESP-NOW and stop Wi-Fi after de-initializing ESP-NOW. When `esp_now_deinit()` is called, all of the information of paired devices will be deleted.

**Add Paired Device** Call `esp_now_add_peer()` to add the device to the paired device list before you send data to this device. If security is enabled, the LMK must be set. You can send ESP-NOW data via both the Station and the SoftAP interface. Make sure that the interface is enabled before sending ESP-NOW data.

The maximum number of paired devices is 20, and the paired encryption devices are no more than 4, the default is 2. If you want to change the number of paired encryption devices, set `CONFIG_ESP_WIFI_ESPNOW_MAX_ENCRYPT_NUM` in the Wi-Fi component configuration menu.

A device with a broadcast MAC address must be added before sending broadcast data. The range of the channel of paired devices is from 0 to 14. If the channel is set to 0, data will be sent on the current channel. Otherwise, the channel must be set as the channel that the local device is on.

**Send ESP-NOW Data** Call `esp_now_send()` to send ESP-NOW data and `esp_now_register_send_cb()` to register sending callback function. It will return `ESP_NOW_SEND_SUCCESS` in sending callback function if the data is received successfully on the MAC layer. Otherwise, it will return `ESP_NOW_SEND_FAIL`. Several reasons can lead to ESP-NOW fails to send data. For example, the destination device doesn't exist; the channels of the devices are not the same; the action frame is lost when transmitting on the air, etc. It is not guaranteed that application layer can receive the data. If necessary,

send back ack data when receiving ESP-NOW data. If receiving ack data timeouts, retransmit the ESP-NOW data. A sequence number can also be assigned to ESP-NOW data to drop the duplicate data.

If there is a lot of ESP-NOW data to send, call `esp_now_send()` to send less than or equal to 250 bytes of data once a time. Note that too short interval between sending two ESP-NOW data may lead to disorder of sending callback function. So, it is recommended that sending the next ESP-NOW data after the sending callback function of the previous sending has returned. The sending callback function runs from a high-priority Wi-Fi task. So, do not do lengthy operations in the callback function. Instead, post the necessary data to a queue and handle it from a lower priority task.

**Receiving ESP-NOW Data** Call `esp_now_register_recv_cb()` to register receiving callback function. Call the receiving callback function when receiving ESP-NOW. The receiving callback function also runs from the Wi-Fi task. So, do not do lengthy operations in the callback function. Instead, post the necessary data to a queue and handle it from a lower priority task.

**Config ESP-NOW Rate** Call `esp_wifi_config_espnow_rate()` to config ESPNOW rate of specified interface. Make sure that the interface is enabled before config rate. This API should be called after `esp_wifi_start()`.

**Config ESP-NOW Power-saving Parameter** Sleep is supported only when ESP32-C2 is configured as station.

Call `esp_now_set_wake_window()` to configure Window for ESP-NOW RX at sleep. The default value is the maximum, which allowing RX all the time.

If Power-saving is needed for ESP-NOW, call `esp_wifi_connectionless_module_set_wake_interval()` to configure Interval as well.

Please refer to [connectionless module power save](#) to get more detail.

## Application Examples

- Example of sending and receiving ESP-NOW data between two devices: [wifi/espnow](#).
- For more application examples of how to use ESP-NOW, please visit [ESP-NOW](#) repository.

## API Reference

### Header File

- [components/esp\\_wifi/include/esp\\_now.h](#)

### Functions

`esp_err_t esp_now_init (void)`

Initialize ESPNOW function.

#### Returns

- ESP\_OK : succeed
- ESP\_ERR\_ESPNOW\_INTERNAL : Internal error

`esp_err_t esp_now_deinit (void)`

De-initialize ESPNOW function.

#### Returns

- ESP\_OK : succeed

`esp_err_t esp_now_get_version (uint32_t *version)`

Get the version of ESPNOW. Currently, ESPNOW supports one version: v1.0.

The v1.0 devices can receive packets if the packet length is less than\_ or equal to ESP\_NOW\_MAX\_IE\_DATA\_LEN.  
 For packets exceeding this length, the v1.0 devices will discard the\_ packet entirely.

**Parameters** *version* –ESPNOW version

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_ESPNOW\_ARG : invalid argument

*esp\_err\_t* **esp\_now\_register\_rcv\_cb** (*esp\_now\_rcv\_cb\_t* cb)

Register callback function of receiving ESPNOW data.

**Parameters** *cb* –callback function of receiving ESPNOW data

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_ESPNOW\_NOT\_INIT : ESPNOW is not initialized
- ESP\_ERR\_ESPNOW\_INTERNAL : internal error

*esp\_err\_t* **esp\_now\_unregister\_rcv\_cb** (void)

Unregister callback function of receiving ESPNOW data.

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_ESPNOW\_NOT\_INIT : ESPNOW is not initialized

*esp\_err\_t* **esp\_now\_register\_send\_cb** (*esp\_now\_send\_cb\_t* cb)

Register callback function of sending ESPNOW data.

**Parameters** *cb* –callback function of sending ESPNOW data

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_ESPNOW\_NOT\_INIT : ESPNOW is not initialized
- ESP\_ERR\_ESPNOW\_INTERNAL : internal error

*esp\_err\_t* **esp\_now\_unregister\_send\_cb** (void)

Unregister callback function of sending ESPNOW data.

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_ESPNOW\_NOT\_INIT : ESPNOW is not initialized

*esp\_err\_t* **esp\_now\_send** (const uint8\_t \*peer\_addr, const uint8\_t \*data, size\_t len)

Send ESPNOW data.

**Attention** 1. If peer\_addr is not NULL, send data to the peer whose MAC address matches peer\_addr

**Attention** 2. If peer\_addr is NULL, send data to all of the peers that are added to the peer list

**Attention** 3. The maximum length of data must be less than ESP\_NOW\_MAX\_DATA\_LEN

**Attention** 4. The buffer pointed to by data argument does not need to be valid after esp\_now\_send returns

**Parameters**

- **peer\_addr** –peer MAC address
- **data** –data to send
- **len** –length of data

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_ESPNOW\_NOT\_INIT : ESPNOW is not initialized
- ESP\_ERR\_ESPNOW\_ARG : invalid argument
- ESP\_ERR\_ESPNOW\_INTERNAL : internal error

- `ESP_ERR_ESPNOW_NO_MEM` : out of memory, when this happens, you can delay a while before sending the next data
- `ESP_ERR_ESPNOW_NOT_FOUND` : peer is not found
- `ESP_ERR_ESPNOW_IF` : current WiFi interface doesn't match that of peer

*esp\_err\_t* **esp\_now\_add\_peer** (const *esp\_now\_peer\_info\_t* \*peer)

Add a peer to peer list.

**Parameters** `peer` –peer information

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized
- `ESP_ERR_ESPNOW_ARG` : invalid argument
- `ESP_ERR_ESPNOW_FULL` : peer list is full
- `ESP_ERR_ESPNOW_NO_MEM` : out of memory
- `ESP_ERR_ESPNOW_EXIST` : peer has existed

*esp\_err\_t* **esp\_now\_del\_peer** (const uint8\_t \*peer\_addr)

Delete a peer from peer list.

**Parameters** `peer_addr` –peer MAC address

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized
- `ESP_ERR_ESPNOW_ARG` : invalid argument
- `ESP_ERR_ESPNOW_NOT_FOUND` : peer is not found

*esp\_err\_t* **esp\_now\_mod\_peer** (const *esp\_now\_peer\_info\_t* \*peer)

Modify a peer.

**Parameters** `peer` –peer information

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized
- `ESP_ERR_ESPNOW_ARG` : invalid argument
- `ESP_ERR_ESPNOW_FULL` : peer list is full

*esp\_err\_t* **esp\_wifi\_config\_espnw\_rate** (*wifi\_interface\_t* ifx, *wifi\_phy\_rate\_t* rate)

Config ESPNOW rate of specified interface.

**Attention** 1. This API should be called after `esp_wifi_start()`.

**Parameters**

- `ifx` –Interface to be configured.
- `rate` –Phy rate to be configured.

**Returns**

- `ESP_OK`: succeed
- others: failed

*esp\_err\_t* **esp\_now\_get\_peer** (const uint8\_t \*peer\_addr, *esp\_now\_peer\_info\_t* \*peer)

Get a peer whose MAC address matches `peer_addr` from peer list.

**Parameters**

- `peer_addr` –peer MAC address
- `peer` –peer information

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized
- `ESP_ERR_ESPNOW_ARG` : invalid argument

- `ESP_ERR_ESPNOW_NOT_FOUND` : peer is not found

*esp\_err\_t* `esp_now_fetch_peer` (bool from\_head, *esp\_now\_peer\_info\_t* \*peer)

Fetch a peer from peer list. Only return the peer which address is unicast, for the multicast/broadcast address, the function will ignore and try to find the next in the peer list.

**Parameters**

- **from\_head** –fetch from head of list or not
- **peer** –peer information

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized
- `ESP_ERR_ESPNOW_ARG` : invalid argument
- `ESP_ERR_ESPNOW_NOT_FOUND` : peer is not found

bool `esp_now_is_peer_exist` (const uint8\_t \*peer\_addr)

Peer exists or not.

**Parameters** **peer\_addr** –peer MAC address

**Returns**

- true : peer exists
- false : peer not exists

*esp\_err\_t* `esp_now_get_peer_num` (*esp\_now\_peer\_num\_t* \*num)

Get the number of peers.

**Parameters** **num** –number of peers

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized
- `ESP_ERR_ESPNOW_ARG` : invalid argument

*esp\_err\_t* `esp_now_set_pmk` (const uint8\_t \*pmk)

Set the primary master key.

**Attention** 1. primary master key is used to encrypt local master key

**Parameters** **pmk** –primary master key

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized
- `ESP_ERR_ESPNOW_ARG` : invalid argument

*esp\_err\_t* `esp_now_set_wake_window` (uint16\_t window)

Set wake window for esp\_now to wake up in interval unit.

**Attention** 1. This configuration could work at connected status. When `ESP_WIFI_STA_DISCONNECTED_PM_ENABLE` is enabled, this configuration could work at disconnected status.

**Attention** 2. Default value is the maximum.

**Parameters** **window** –Milliseconds would the chip keep waked each interval, from 0 to 65535.

**Returns**

- `ESP_OK` : succeed
- `ESP_ERR_ESPNOW_NOT_INIT` : ESPNOW is not initialized

## Structures

struct **esp\_now\_peer\_info**

ESPNow peer information parameters.

### Public Members

uint8\_t **peer\_addr**[ESP\_NOW\_ETH\_ALEN]

ESPNow peer MAC address that is also the MAC address of station or softap

uint8\_t **lmk**[ESP\_NOW\_KEY\_LEN]

ESPNow peer local master key that is used to encrypt data

uint8\_t **channel**

Wi-Fi channel that peer uses to send/receive ESPNow data. If the value is 0, use the current channel which station or softap is on. Otherwise, it must be set as the channel that station or softap is on.

*wifi\_interface\_t* **ifidx**

Wi-Fi interface that peer uses to send/receive ESPNow data

bool **encrypt**

ESPNow data that this peer sends/receives is encrypted or not

void \***priv**

ESPNow peer private data

struct **esp\_now\_peer\_num**

Number of ESPNow peers which exist currently.

### Public Members

int **total\_num**

Total number of ESPNow peers, maximum value is ESP\_NOW\_MAX\_TOTAL\_PEER\_NUM

int **encrypt\_num**

Number of encrypted ESPNow peers, maximum value is ESP\_NOW\_MAX\_ENCRYPT\_PEER\_NUM

struct **esp\_now\_recv\_info**

ESPNow packet information.

### Public Members

uint8\_t \***src\_addr**

Source address of ESPNow packet

uint8\_t \***des\_addr**

Destination address of ESPNow packet

*wifi\_pkt\_rx\_ctrl\_t*\***rx\_ctrl**

Rx control info of ESPNOW packet

## Macros

**ESP\_ERR\_ESPNOW\_BASE**

ESPNOW error number base.

**ESP\_ERR\_ESPNOW\_NOT\_INIT**

ESPNOW is not initialized.

**ESP\_ERR\_ESPNOW\_ARG**

Invalid argument

**ESP\_ERR\_ESPNOW\_NO\_MEM**

Out of memory

**ESP\_ERR\_ESPNOW\_FULL**

ESPNOW peer list is full

**ESP\_ERR\_ESPNOW\_NOT\_FOUND**

ESPNOW peer is not found

**ESP\_ERR\_ESPNOW\_INTERNAL**

Internal error

**ESP\_ERR\_ESPNOW\_EXIST**

ESPNOW peer has existed

**ESP\_ERR\_ESPNOW\_IF**

Interface error

**ESP\_NOW\_ETH\_ALEN**

Length of ESPNOW peer MAC address

**ESP\_NOW\_KEY\_LEN**

Length of ESPNOW peer local master key

**ESP\_NOW\_MAX\_TOTAL\_PEER\_NUM**

Maximum number of ESPNOW total peers

**ESP\_NOW\_MAX\_ENCRYPT\_PEER\_NUM**

Maximum number of ESPNOW encrypted peers

**ESP\_NOW\_MAX\_IE\_DATA\_LEN**

Maximum data length in a vendor-specific element

**ESP\_NOW\_MAX\_DATA\_LEN**

Maximum length of data sent in each ESPNOW transmission for v1.0

## Type Definitions

typedef struct *esp\_now\_peer\_info* **esp\_now\_peer\_info\_t**

ESPNow peer information parameters.

typedef struct *esp\_now\_peer\_num* **esp\_now\_peer\_num\_t**

Number of ESPNow peers which exist currently.

typedef struct *esp\_now\_recv\_info* **esp\_now\_recv\_info\_t**

ESPNow packet information.

typedef void (\***esp\_now\_recv\_cb\_t**)(const *esp\_now\_recv\_info\_t* \*esp\_now\_info, const uint8\_t \*data, int data\_len)

Callback function of receiving ESPNow data.

**Attention** esp\_now\_info is a local variable, it can only be used in the callback.

**Param esp\_now\_info** received ESPNow packet information

**Param data** received data

**Param data\_len** length of received data

typedef void (\***esp\_now\_send\_cb\_t**)(const uint8\_t \*mac\_addr, *esp\_now\_send\_status\_t* status)

Callback function of sending ESPNow data.

**Param mac\_addr** peer MAC address

**Param status** status of sending ESPNow data (succeed or fail)

## Enumerations

enum **esp\_now\_send\_status\_t**

Status of sending ESPNow data .

*Values:*

enumerator **ESP\_NOW\_SEND\_SUCCESS**

Send ESPNow data successfully

enumerator **ESP\_NOW\_SEND\_FAIL**

Send ESPNow data fail

## SmartConfig

**Introduction** The SmartConfig™ is a provisioning technology developed by TI to connect a new Wi-Fi device to a Wi-Fi network. It uses a mobile application to broadcast the network credentials from a smartphone, or a tablet, to an un-provisioned Wi-Fi device.

The advantage of this technology is that the device does not need to directly know SSID or password of an Access Point (AP). This information is provided using the smartphone. This is particularly important to headless device and systems, due to their lack of a user interface.

Currently, ESP32-C2 support three types of SmartConfig: Airkiss, ESPTouch, and ESPTouch v2. ESPTouch v2 has been supported since SmartConfig v3.0 (the version of SmartConfig can be get from

`esp_smartconfig_get_version()`), and it employs a completely different algorithm compared to ESP-Touch, resulting in faster setup times. Additionally, ESPTouch v2 introduces AES encryption and custom data fields.

Starting from SmartConfig v3.0.2, ESPTouch v2 introduces support for random IV in AES encryption. On the application side, when the option for random IV is disabled, the default IV is set to 0, maintaining consistency with previous versions. When the random IV option is enabled, the IV will be a random value. It is important to note that when AES encryption is enabled with a random IV, the provision time will be extended due to the need of transmitting the IV to the provisioning device. On the provisioning device side, the device will identify whether the random IV for AES is enabled based on the flag in the provisioning packet.

If you are looking for other options to provision your ESP32-C2 devices, check [Provisioning API](#).

**Application Example** Connect ESP32-C2 to target AP using SmartConfig: [wifi/smart\\_config](#).

## API Reference

### Header File

- `components/esp_wifi/include/esp_smartconfig.h`

### Functions

`const char *esp_smartconfig_get_version (void)`

Get the version of SmartConfig.

#### Returns

- SmartConfig version const char.

`esp_err_t esp_smartconfig_start (const smartconfig_start_config_t *config)`

Start SmartConfig, config ESP device to connect AP. You need to broadcast information by phone APP. Device sniffer special packets from the air that containing SSID and password of target AP.

**Attention** 1. This API can be called in station or softAP-station mode.

**Attention** 2. Can not call `esp_smartconfig_start` twice before it finish, please call `esp_smartconfig_stop` first.

**Parameters** `config` –pointer to smartconfig start configure structure

#### Returns

- ESP\_OK: succeed
- others: fail

`esp_err_t esp_smartconfig_stop (void)`

Stop SmartConfig, free the buffer taken by `esp_smartconfig_start`.

**Attention** Whether connect to AP succeed or not, this API should be called to free memory taken by `smartconfig_start`.

#### Returns

- ESP\_OK: succeed
- others: fail

`esp_err_t esp_esptouch_set_timeout (uint8_t time_s)`

Set timeout of SmartConfig process.

**Attention** Timing starts from SC\_STATUS\_FIND\_CHANNEL status. SmartConfig will restart if timeout.

**Parameters** `time_s` –range 15s~255s, offset:45s.

**Returns**

- ESP\_OK: succeed
- others: fail

*esp\_err\_t* `esp_smartconfig_set_type` (*smartconfig\_type\_t* type)

Set protocol type of SmartConfig.

**Attention** If users need to set the SmartConfig type, please set it before calling `esp_smartconfig_start`.

**Parameters** `type` –Choose from the `smartconfig_type_t`.

**Returns**

- ESP\_OK: succeed
- others: fail

*esp\_err\_t* `esp_smartconfig_fast_mode` (bool enable)

Set mode of SmartConfig. default normal mode.

**Attention** 1. Please call it before API `esp_smartconfig_start`.

**Attention** 2. Fast mode have corresponding APP(phone).

**Attention** 3. Two mode is compatible.

**Parameters** `enable` –false-disable(default); true-enable;

**Returns**

- ESP\_OK: succeed
- others: fail

*esp\_err\_t* `esp_smartconfig_get_rvd_data` (uint8\_t \*rvd\_data, uint8\_t len)

Get reserved data of ESPTouch v2.

**Parameters**

- `rvd_data` –reserved data
- `len` –length of reserved data

**Returns**

- ESP\_OK: succeed
- others: fail

## Structures

struct `smartconfig_event_got_ssid_pswd_t`

Argument structure for SC\_EVENT\_GOT\_SSID\_PSWD event

### Public Members

uint8\_t `ssid`[32]

SSID of the AP. Null terminated string.

uint8\_t `password`[64]

Password of the AP. Null terminated string.

bool `bssid_set`

whether set MAC address of target AP or not.

uint8\_t **bssid**[6]

MAC address of target AP.

*smartconfig\_type\_t* **type**

Type of smartconfig(ESPTouch or AirKiss).

uint8\_t **token**

Token from cellphone which is used to send ACK to cellphone.

uint8\_t **cellphone\_ip**[4]

IP address of cellphone.

struct **smartconfig\_start\_config\_t**

Configure structure for esp\_smartconfig\_start

### Public Members

bool **enable\_log**

Enable smartconfig logs.

bool **esp\_touch\_v2\_enable\_crypt**

Enable ESPTouch v2 crypt.

char \***esp\_touch\_v2\_key**

ESPTouch v2 crypt key, len should be 16.

### Macros

**SMARTCONFIG\_START\_CONFIG\_DEFAULT** ()

### Enumerations

enum **smartconfig\_type\_t**

*Values:*

enumerator **SC\_TYPE\_ESPTOUCH**

protocol: ESPTouch

enumerator **SC\_TYPE\_AIRKISS**

protocol: AirKiss

enumerator **SC\_TYPE\_ESPTOUCH\_AIRKISS**

protocol: ESPTouch and AirKiss

enumerator **SC\_TYPE\_ESPTOUCH\_V2**

protocol: ESPTouch v2

enum **smartconfig\_event\_t**

Smartconfig event declarations

*Values:*

enumerator **SC\_EVENT\_SCAN\_DONE**

ESP32 station smartconfig has finished to scan for APs

enumerator **SC\_EVENT\_FOUND\_CHANNEL**

ESP32 station smartconfig has found the channel of the target AP

enumerator **SC\_EVENT\_GOT\_SSID\_PSWD**

ESP32 station smartconfig got the SSID and password

enumerator **SC\_EVENT\_SEND\_ACK\_DONE**

ESP32 station smartconfig has sent ACK to cellphone

## Wi-Fi

**Introduction** The Wi-Fi libraries provide support for configuring and monitoring the ESP32-C2 Wi-Fi networking functionality. This includes configuration for:

- Station mode (aka STA mode or Wi-Fi client mode). ESP32-C2 connects to an access point.
- AP mode (aka Soft-AP mode or Access Point mode). Stations connect to the ESP32-C2.
- Station/AP-coexistence mode (ESP32-C2 is concurrently an access point and a station connected to another access point).
- Various security modes for the above (WPA, WPA2, WPA3, etc.)
- Scanning for access points (active & passive scanning).
- Promiscuous mode for monitoring of IEEE802.11 Wi-Fi packets.

**Application Examples** The `wifi` directory of ESP-IDF examples contains the following applications:

- Code examples for Wi-Fi.
- A simple [esp-idf-template](#) application to demonstrate a minimal IDF project structure.

## API Reference

### Header File

- `components/esp_wifi/include/esp_wifi.h`

### Functions

`esp_err_t esp_wifi_init` (const `wifi_init_config_t` \*config)

Initialize WiFi Allocate resource for WiFi driver, such as WiFi control structure, RX/TX buffer, WiFi NVS structure etc. This WiFi also starts WiFi task.

**Attention** 1. This API must be called before all other WiFi API can be called

**Attention** 2. Always use `WIFI_INIT_CONFIG_DEFAULT` macro to initialize the configuration to default values, this can guarantee all the fields get correct value when more fields are added into `wifi_init_config_t` in future release. If you want to set your own initial values, overwrite the default values which are set by `WIFI_INIT_CONFIG_DEFAULT`. Please be notified that the field ‘magic’ of `wifi_init_config_t` should always be `WIFI_INIT_CONFIG_MAGIC`!

**Parameters** `config` –pointer to WiFi initialized configuration structure; can point to a temporary variable.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_NO\_MEM: out of memory
- others: refer to error code esp\_err.h

*esp\_err\_t* **esp\_wifi\_deinit** (void)

Deinit WiFi Free all resource allocated in esp\_wifi\_init and stop WiFi task.

**Attention** 1. This API should be called if you want to remove WiFi driver from the system

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

*esp\_err\_t* **esp\_wifi\_set\_mode** (*wifi\_mode\_t* mode)

Set the WiFi operating mode.

Set the WiFi operating mode **as** station, soft-AP **or** station+soft-AP,  
The default mode **is** station mode.

**Parameters mode** –WiFi operating mode

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument
- others: refer to error code in esp\_err.h

*esp\_err\_t* **esp\_wifi\_get\_mode** (*wifi\_mode\_t* \*mode)

Get current operating mode of WiFi.

**Parameters mode** –[out] store current WiFi mode

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_start** (void)

Start WiFi according to current configuration If mode is WIFI\_MODE\_STA, it create station control block and start station If mode is WIFI\_MODE\_AP, it create soft-AP control block and start soft-AP If mode is WIFI\_MODE\_APSTA, it create soft-AP and station control block and start soft-AP and station.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_ERR\_NO\_MEM: out of memory
- ESP\_ERR\_WIFI\_CONN: WiFi internal error, station or soft-AP control block wrong
- ESP\_FAIL: other WiFi internal errors

*esp\_err\_t* **esp\_wifi\_stop** (void)

Stop WiFi If mode is WIFI\_MODE\_STA, it stop station and free station control block If mode is WIFI\_MODE\_AP, it stop soft-AP and free soft-AP control block If mode is WIFI\_MODE\_APSTA, it stop station/soft-AP and free station/soft-AP control block.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

***esp\_err\_t* esp\_wifi\_restore** (void)

Restore WiFi stack persistent settings to default values.

This function will reset settings made using the following APIs:

- esp\_wifi\_set\_bandwidth,
- esp\_wifi\_set\_protocol,
- esp\_wifi\_set\_config related
- esp\_wifi\_set\_mode

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

***esp\_err\_t* esp\_wifi\_connect** (void)

Connect the ESP32 WiFi station to the AP.

**Attention** 1. This API only impact WIFI\_MODE\_STA or WIFI\_MODE\_APSTA mode

**Attention** 2. If the ESP32 is connected to an AP, call esp\_wifi\_disconnect to disconnect.

**Attention** 3. The scanning triggered by esp\_wifi\_scan\_start() will not be effective until connection between ESP32 and the AP is established. If ESP32 is scanning and connecting at the same time, ESP32 will abort scanning and return a warning message and error number ESP\_ERR\_WIFI\_STATE.

**Attention** 4. This API attempts to connect to an Access Point (AP) only once. To enable reconnection in case of a connection failure, please use the 'failure\_retry\_cnt' feature in the '*wifi\_sta\_config\_t*'. Users are suggested to implement reconnection logic in their application for scenarios where the specified AP does not exist, or reconnection is desired after the device has received a disconnect event.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by esp\_wifi\_start
- ESP\_ERR\_WIFI\_MODE: WiFi mode error
- ESP\_ERR\_WIFI\_CONN: WiFi internal error, station or soft-AP control block wrong
- ESP\_ERR\_WIFI\_SSID: SSID of AP which station connects is invalid

***esp\_err\_t* esp\_wifi\_disconnect** (void)

Disconnect the ESP32 WiFi station from the AP.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi was not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi was not started by esp\_wifi\_start
- ESP\_FAIL: other WiFi internal errors

***esp\_err\_t* esp\_wifi\_clear\_fast\_connect** (void)

Currently this API is just an stub API.

**Returns**

- ESP\_OK: succeed
- others: fail

***esp\_err\_t* esp\_wifi\_deauth\_sta** (uint16\_t aid)

deauthenticate all stations or associated id equals to aid

**Parameters** **aid** –when aid is 0, deauthenticate all stations, otherwise deauthenticate station whose associated id is aid

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

- `ESP_ERR_WIFI_NOT_STARTED`: WiFi was not started by `esp_wifi_start`
- `ESP_ERR_INVALID_ARG`: invalid argument
- `ESP_ERR_WIFI_MODE`: WiFi mode is wrong

*esp\_err\_t* **esp\_wifi\_scan\_start** (const *wifi\_scan\_config\_t* \*config, bool block)

Scan all available APs.

**Attention** If this API is called, the found APs are stored in WiFi driver dynamic allocated memory. And then can be freed in `esp_wifi_scan_get_ap_records()`, `esp_wifi_scan_get_ap_record()` or `esp_wifi_clear_ap_list()`, so call any one to free the memory once the scan is done.

**Attention** The values of maximum active scan time and passive scan time per channel are limited to 1500 milliseconds. Values above 1500ms may cause station to disconnect from AP and are not recommended.

#### Parameters

- **config** –configuration settings for scanning, if set to NULL default settings will be used of which default values are `show_hidden:false`, `scan_type:active`, `scan_time.active.min:0`, `scan_time.active.max:120` miliseconds, `scan_time.passive:360` miliseconds
- **block** –if block is true, this API will block the caller until the scan is done, otherwise it will return immediately

#### Returns

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_WIFI_NOT_STARTED`: WiFi was not started by `esp_wifi_start`
- `ESP_ERR_WIFI_TIMEOUT`: blocking scan is timeout
- `ESP_ERR_WIFI_STATE`: wifi still connecting when invoke `esp_wifi_scan_start`
- others: refer to error code in `esp_err.h`

*esp\_err\_t* **esp\_wifi\_scan\_stop** (void)

Stop the scan in process.

#### Returns

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_WIFI_NOT_STARTED`: WiFi is not started by `esp_wifi_start`

*esp\_err\_t* **esp\_wifi\_scan\_get\_ap\_num** (uint16\_t \*number)

Get number of APs found in last scan.

**Attention** This API can only be called when the scan is completed, otherwise it may get wrong value.

**Parameters** **number** –[out] store number of APs found in last scan

#### Returns

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_WIFI_NOT_STARTED`: WiFi is not started by `esp_wifi_start`
- `ESP_ERR_INVALID_ARG`: invalid argument

*esp\_err\_t* **esp\_wifi\_scan\_get\_ap\_records** (uint16\_t \*number, *wifi\_ap\_record\_t* \*ap\_records)

Get AP list found in last scan.

**Attention** This API will free all memory occupied by scanned AP list.

#### Parameters

- **number** –[inout] As input param, it stores max AP number `ap_records` can hold. As output param, it receives the actual AP number this API returns.
- **ap\_records** –*wifi\_ap\_record\_t* array to hold the found APs

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by esp\_wifi\_start
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_ERR\_NO\_MEM: out of memory

*esp\_err\_t* **esp\_wifi\_scan\_get\_ap\_record** (*wifi\_ap\_record\_t* \*ap\_record)

Get one AP record from the scanned AP list.

**Attention** Different from esp\_wifi\_scan\_get\_ap\_records(), this API only gets one AP record from the scanned AP list each time. This API will free the memory of one AP record, if the user doesn't get all records in the scanned AP list, then needs to call esp\_wifi\_clear\_ap\_list() to free the remaining memory.

**Parameters** **ap\_record** –[out] pointer to one AP record

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by esp\_wifi\_start
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_FAIL: scan APs is NULL, means all AP records fetched or no AP found

*esp\_err\_t* **esp\_wifi\_clear\_ap\_list** (void)

Clear AP list found in last scan.

**Attention** This API will free all memory occupied by scanned AP list. When the obtained AP list fails, AP records must be cleared, otherwise it may cause memory leakage.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by esp\_wifi\_start
- ESP\_ERR\_WIFI\_MODE: WiFi mode is wrong
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_sta\_get\_ap\_info** (*wifi\_ap\_record\_t* \*ap\_info)

Get information of AP which the ESP32 station is associated with.

**Attention** When the obtained country information is empty, it means that the AP does not carry country information

**Parameters** **ap\_info** –the *wifi\_ap\_record\_t* to hold AP information sta can get the connected ap's phy mode info through the struct member phy\_11b, phy\_11g, phy\_11n, phy\_lr in the *wifi\_ap\_record\_t* struct. For example, phy\_11b = 1 imply that ap support 802.11b mode

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_CONN: The station interface don't initialized
- ESP\_ERR\_WIFI\_NOT\_CONNECT: The station is in disconnect status

*esp\_err\_t* **esp\_wifi\_set\_ps** (*wifi\_ps\_type\_t* type)

Set current WiFi power save type.

**Attention** Default power save type is WIFI\_PS\_MIN\_MODEM.

**Parameters** `type` –power save type

**Returns** ESP\_OK: succeed

`esp_err_t esp_wifi_get_ps (wifi_ps_type_t *type)`

Get current WiFi power save type.

**Attention** Default power save type is WIFI\_PS\_MIN\_MODEM.

**Parameters** `type` –[out] store current power save type

**Returns** ESP\_OK: succeed

`esp_err_t esp_wifi_set_protocol (wifi_interface_t ifx, uint8_t protocol_bitmap)`

Set protocol type of specified interface The default protocol is (WIFI\_PROTOCOL\_11B|WIFI\_PROTOCOL\_11G|WIFI\_PROTOCOL\_11N)

**Attention** Support 802.11b or 802.11bg or 802.11n or LR mode

#### Parameters

- `ifx` –interfaces
- `protocol_bitmap` –WiFi protocol bitmap

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_IF: invalid interface
- others: refer to error codes in esp\_err.h

`esp_err_t esp_wifi_get_protocol (wifi_interface_t ifx, uint8_t *protocol_bitmap)`

Get the current protocol bitmap of the specified interface.

#### Parameters

- `ifx` –interface
- `protocol_bitmap` –[out] store current WiFi protocol bitmap of interface ifx

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_IF: invalid interface
- ESP\_ERR\_INVALID\_ARG: invalid argument
- others: refer to error codes in esp\_err.h

`esp_err_t esp_wifi_set_bandwidth (wifi_interface_t ifx, wifi_bandwidth_t bw)`

Set the bandwidth of ESP32 specified interface.

**Attention** 1. API return false if try to configure an interface that is not enabled

**Attention** 2. WIFI\_BW\_HT40 is supported only when the interface support 11N

#### Parameters

- `ifx` –interface to be configured
- `bw` –bandwidth

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_IF: invalid interface
- ESP\_ERR\_INVALID\_ARG: invalid argument
- others: refer to error codes in esp\_err.h

*esp\_err\_t* **esp\_wifi\_get\_bandwidth** (*wifi\_interface\_t* ifx, *wifi\_bandwidth\_t* \*bw)

Get the bandwidth of ESP32 specified interface.

**Attention** 1. API return false if try to get a interface that is not enable

#### Parameters

- **ifx** –interface to be configured
- **bw** –[out] store bandwidth of interface ifx

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_IF: invalid interface
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_set\_channel** (uint8\_t primary, *wifi\_second\_chan\_t* second)

Set primary/secondary channel of ESP32.

**Attention** 1. This API should be called after esp\_wifi\_start() and before esp\_wifi\_stop()

**Attention** 2. When ESP32 is in STA mode, this API should not be called when STA is scanning or connecting to an external AP

**Attention** 3. When ESP32 is in softAP mode, this API should not be called when softAP has connected to external STAs

**Attention** 4. When ESP32 is in STA+softAP mode, this API should not be called when in the scenarios described above

**Attention** 5. The channel info set by this API will not be stored in NVS. So If you want to remeber the channel used before wifi stop, you need to call this API again after wifi start, or you can call esp\_wifi\_set\_config() to store the channel info in NVS.

#### Parameters

- **primary** –for HT20, primary is the channel number, for HT40, primary is the primary channel
- **second** –for HT20, second is ignored, for HT40, second is the second channel

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_IF: invalid interface
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by esp\_wifi\_start

*esp\_err\_t* **esp\_wifi\_get\_channel** (uint8\_t \*primary, *wifi\_second\_chan\_t* \*second)

Get the primary/secondary channel of ESP32.

**Attention** 1. API return false if try to get a interface that is not enable

#### Parameters

- **primary** –store current primary channel
- **second** –[out] store current second channel

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_set\_country** (const *wifi\_country\_t* \*country)

configure country info

**Attention** 1. It is discouraged to call this API since this doesn't validate the per-country rules, it's up to the user to fill in all fields according to local regulations. Please use `esp_wifi_set_country_code` instead.

**Attention** 2. The default country is "01" (world safe mode) `{.cc=" 01" , .schan=1, .nchan=11, .policy=WIFI_COUNTRY_POLICY_AUTO}`.

**Attention** 3. The third octet of country code string is one of the following: '0', 'O', 'I', 'X', otherwise it is considered as '0'.

**Attention** 4. When the country policy is `WIFI_COUNTRY_POLICY_AUTO`, the country info of the AP to which the station is connected is used. E.g. if the configured country info is `{.cc=" US" , .schan=1, .nchan=11}` and the country info of the AP to which the station is connected is `{.cc=" JP" , .schan=1, .nchan=14}` then the country info that will be used is `{.cc=" JP" , .schan=1, .nchan=14}`. If the station disconnected from the AP the country info is set back to the country info of the station automatically, `{.cc=" US" , .schan=1, .nchan=11}` in the example.

**Attention** 5. When the country policy is `WIFI_COUNTRY_POLICY_MANUAL`, then the configured country info is used always.

**Attention** 6. When the country info is changed because of configuration or because the station connects to a different external AP, the country IE in probe response/beamcon of the soft-AP is also changed.

**Attention** 7. The country configuration is stored into flash.

**Attention** 8. When this API is called, the PHY init data will switch to the PHY init data type corresponding to the country info.

**Parameters** **country** –the configured country info

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument

*esp\_err\_t* **esp\_wifi\_get\_country** (*wifi\_country\_t* \*country)

get the current country info

**Parameters** **country** –country info

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument

*esp\_err\_t* **esp\_wifi\_set\_mac** (*wifi\_interface\_t* ifx, const uint8\_t mac[6])

Set MAC address of the ESP32 WiFi station or the soft-AP interface.

**Attention** 1. This API can only be called when the interface is disabled

**Attention** 2. ESP32 soft-AP and station have different MAC addresses, do not set them to be the same.

**Attention** 3. The bit 0 of the first byte of ESP32 MAC address can not be 1. For example, the MAC address can set to be "1a:XX:XX:XX:XX:XX", but can not be "15:XX:XX:XX:XX:XX".

**Parameters**

- **ifx** –interface
- **mac** –the MAC address

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument
- `ESP_ERR_WIFI_IF`: invalid interface
- `ESP_ERR_WIFI_MAC`: invalid mac address
- `ESP_ERR_WIFI_MODE`: WiFi mode is wrong

- others: refer to error codes in esp\_err.h

*esp\_err\_t* **esp\_wifi\_get\_mac** (*wifi\_interface\_t* ifx, uint8\_t mac[6])

Get mac of specified interface.

**Parameters**

- **ifx** –interface
- **mac** –[out] store mac of the interface ifx

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_ERR\_WIFI\_IF: invalid interface

*esp\_err\_t* **esp\_wifi\_set\_promiscuous\_rx\_cb** (*wifi\_promiscuous\_cb\_t* cb)

Register the RX callback function in the promiscuous mode.

Each time a packet is received, the registered callback function will be called.

**Parameters** **cb** –callback

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

*esp\_err\_t* **esp\_wifi\_set\_promiscuous** (bool en)

Enable the promiscuous mode.

**Parameters** **en** –false - disable, true - enable

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

*esp\_err\_t* **esp\_wifi\_get\_promiscuous** (bool \*en)

Get the promiscuous mode.

**Parameters** **en** –[out] store the current status of promiscuous mode

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_set\_promiscuous\_filter** (const *wifi\_promiscuous\_filter\_t* \*filter)

Enable the promiscuous mode packet type filter.

---

**Note:** The default filter is to filter all packets except WIFI\_PKT\_MISC

---

**Parameters** **filter** –the packet type filtered in promiscuous mode.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

*esp\_err\_t* **esp\_wifi\_get\_promiscuous\_filter** (*wifi\_promiscuous\_filter\_t* \*filter)

Get the promiscuous filter.

**Parameters** **filter** –[out] store the current status of promiscuous filter

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_set\_promiscuous\_ctrl\_filter** (const *wifi\_promiscuous\_filter\_t* \*filter)

Enable subtype filter of the control packet in promiscuous mode.

---

**Note:** The default filter is to filter none control packet.

---

**Parameters** **filter** –the subtype of the control packet filtered in promiscuous mode.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init

*esp\_err\_t* **esp\_wifi\_get\_promiscuous\_ctrl\_filter** (*wifi\_promiscuous\_filter\_t* \*filter)

Get the subtype filter of the control packet in promiscuous mode.

**Parameters** **filter** –[out] store the current status of subtype filter of the control packet in promiscuous mode

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_set\_config** (*wifi\_interface\_t* interface, *wifi\_config\_t* \*conf)

Set the configuration of the ESP32 STA or AP.

**Attention** 1. This API can be called only when specified interface is enabled, otherwise, API fail

**Attention** 2. For station configuration, bssid\_set needs to be 0; and it needs to be 1 only when users need to check the MAC address of the AP.

**Attention** 3. ESP32 is limited to only one channel, so when in the soft-AP+station mode, the soft-AP will adjust its channel automatically to be the same as the channel of the ESP32 station.

**Attention** 4. The configuration will be stored in NVS

**Parameters**

- **interface** –interface
- **conf** –station or soft-AP configuration

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_ERR\_WIFI\_IF: invalid interface
- ESP\_ERR\_WIFI\_MODE: invalid mode
- ESP\_ERR\_WIFI\_PASSWORD: invalid password
- ESP\_ERR\_WIFI\_NVS: WiFi internal NVS error
- others: refer to the error code in esp\_err.h

*esp\_err\_t* **esp\_wifi\_get\_config** (*wifi\_interface\_t* interface, *wifi\_config\_t* \*conf)

Get configuration of specified interface.

**Parameters**

- **interface** –interface
- **conf** –[out] station or soft-AP configuration

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_ERR\_WIFI\_IF: invalid interface

`esp_err_t esp_wifi_ap_get_sta_list (wifi_sta_list_t *sta)`

Get STAs associated with soft-AP.

**Attention** SSC only API

**Parameters** `sta` –[`out`] station list ap can get the connected sta's phy mode info through the struct member `phy_11b`, `phy_11g`, `phy_11n`, `phy_lr` in the `wifi_sta_info_t` struct. For example, `phy_11b = 1` imply that sta support 802.11b mode

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument
- `ESP_ERR_WIFI_MODE`: WiFi mode is wrong
- `ESP_ERR_WIFI_CONN`: WiFi internal error, the station/soft-AP control block is invalid

`esp_err_t esp_wifi_ap_get_sta_aid (const uint8_t mac[6], uint16_t *aid)`

Get AID of STA connected with soft-AP.

**Parameters**

- `mac` –STA's mac address
- `aid` –[`out`] Store the AID corresponding to STA mac

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument
- `ESP_ERR_NOT_FOUND`: Requested resource not found
- `ESP_ERR_WIFI_MODE`: WiFi mode is wrong
- `ESP_ERR_WIFI_CONN`: WiFi internal error, the station/soft-AP control block is invalid

`esp_err_t esp_wifi_set_storage (wifi_storage_t storage)`

Set the WiFi API configuration storage type.

**Attention** 1. The default value is `WIFI_STORAGE_FLASH`

**Parameters** `storage` –: storage type

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument

`esp_err_t esp_wifi_set_vendor_ie (bool enable, wifi_vendor_ie_type_t type, wifi_vendor_ie_id_t idx, const void *vnd_ie)`

Set 802.11 Vendor-Specific Information Element.

**Parameters**

- `enable` –If true, specified IE is enabled. If false, specified IE is removed.
- `type` –Information Element type. Determines the frame type to associate with the IE.
- `idx` –Index to set or clear. Each IE type can be associated with up to two elements (indices 0 & 1).
- `vnd_ie` –Pointer to vendor specific element data. First 6 bytes should be a header with fields matching `wifi_vendor_ie_data_t`. If enable is false, this argument is ignored and can be NULL. Data does not need to remain valid after the function returns.

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init()`
- `ESP_ERR_INVALID_ARG`: Invalid argument, including if first byte of `vnd_ie` is not `WIFI_VENDOR_IE_ELEMENT_ID` (0xDD) or second byte is an invalid length.

- `ESP_ERR_NO_MEM`: Out of memory

`esp_err_t esp_wifi_set_vendor_ie_cb` (`esp_vendor_ie_cb_t` cb, void \*ctx)

Register Vendor-Specific Information Element monitoring callback.

#### Parameters

- **cb** –Callback function
- **ctx** –Context argument, passed to callback function.

#### Returns

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`

`esp_err_t esp_wifi_set_max_tx_power` (int8\_t power)

Set maximum transmitting power after WiFi start.

**Attention** 1. Maximum power before wifi startup is limited by PHY init data bin.

**Attention** 2. The value set by this API will be mapped to the `max_tx_power` of the structure `wifi_country_t` variable.

**Attention** 3. Mapping Table {Power, max\_tx\_power} = {{8, 2}, {20, 5}, {28, 7}, {34, 8}, {44, 11}, {52, 13}, {56, 14}, {60, 15}, {66, 16}, {72, 18}, {80, 20}}.

**Attention** 4. Param power unit is 0.25dBm, range is [8, 84] corresponding to 2dBm - 20dBm.

**Attention** 5. Relationship between set value and actual value. As follows: {set value range, actual value} = {{[8, 19],8}, {[20, 27],20}, {[28, 33],28}, {[34, 43],34}, {[44, 51],44}, {[52, 55],52}, {[56, 59],56}, {[60, 65],60}, {[66, 71],66}, {[72, 79],72}, {[80, 84],80}}.

**Parameters** **power** –Maximum WiFi transmitting power.

#### Returns

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_WIFI_NOT_STARTED`: WiFi is not started by `esp_wifi_start`
- `ESP_ERR_INVALID_ARG`: invalid argument, e.g. parameter is out of range

`esp_err_t esp_wifi_get_max_tx_power` (int8\_t \*power)

Get maximum transmitting power after WiFi start.

**Parameters** **power** –Maximum WiFi transmitting power, unit is 0.25dBm.

#### Returns

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_WIFI_NOT_STARTED`: WiFi is not started by `esp_wifi_start`
- `ESP_ERR_INVALID_ARG`: invalid argument

`esp_err_t esp_wifi_set_event_mask` (uint32\_t mask)

Set mask to enable or disable some WiFi events.

**Attention** 1. Mask can be created by logical OR of various `WIFI_EVENT_MASK_` constants. Events which have corresponding bit set in the mask will not be delivered to the system event handler.

**Attention** 2. Default WiFi event mask is `WIFI_EVENT_MASK_AP_PROBEREQRCVD`.

**Attention** 3. There may be lots of stations sending probe request data around. Don't unmask this event unless you need to receive probe request data.

**Parameters** **mask** –WiFi event mask.

#### Returns

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`

`esp_err_t esp_wifi_get_event_mask` (uint32\_t \*mask)

Get mask of WiFi events.

**Parameters** `mask` –WiFi event mask.

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument

`esp_err_t esp_wifi_80211_tx` (`wifi_interface_t` ifx, const void \*buffer, int len, bool en\_sys\_seq)

Send raw ieee80211 data.

**Attention** Currently only support for sending beacon/probe request/probe response/action and non-QoS data frame

**Parameters**

- `ifx` –interface if the Wi-Fi mode is Station, the ifx should be `WIFI_IF_STA`. If the Wi-Fi mode is SoftAP, the ifx should be `WIFI_IF_AP`. If the Wi-Fi mode is Station+SoftAP, the ifx should be `WIFI_IF_STA` or `WIFI_IF_AP`. If the ifx is wrong, the API returns `ESP_ERR_WIFI_IF`.
- `buffer` –raw ieee80211 buffer
- `len` –the length of raw buffer, the len must be  $\leq 1500$  Bytes and  $\geq 24$  Bytes
- `en_sys_seq` –indicate whether use the internal sequence number. If `en_sys_seq` is false, the sequence in raw buffer is unchanged, otherwise it will be overwritten by WiFi driver with the system sequence number. Generally, if `esp_wifi_80211_tx` is called before the Wi-Fi connection has been set up, both `en_sys_seq==true` and `en_sys_seq==false` are fine. However, if the API is called after the Wi-Fi connection has been set up, `en_sys_seq` must be true, otherwise `ESP_ERR_INVALID_ARG` is returned.

**Returns**

- `ESP_OK`: success
- `ESP_ERR_WIFI_IF`: Invalid interface
- `ESP_ERR_INVALID_ARG`: Invalid parameter
- `ESP_ERR_WIFI_NO_MEM`: out of memory

`esp_err_t esp_wifi_set_csi_rx_cb` (`wifi_csi_cb_t` cb, void \*ctx)

Register the RX callback function of CSI data.

Each time a CSI data **is** received, the callback function will be called.

**Parameters**

- `cb` –callback
- `ctx` –context argument, passed to callback function

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`

`esp_err_t esp_wifi_set_csi_config` (const `wifi_csi_config_t` \*config)

Set CSI data configuration.

return

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_WIFI_NOT_STARTED`: WiFi is not started by `esp_wifi_start` or promiscuous mode is not enabled

- `ESP_ERR_INVALID_ARG`: invalid argument

**Parameters** `config` –configuration

`esp_err_t esp_wifi_set_csi` (bool `en`)

Enable or disable CSI.

return

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_WIFI_NOT_STARTED`: WiFi is not started by `esp_wifi_start` or promiscuous mode is not enabled
- `ESP_ERR_INVALID_ARG`: invalid argument

**Parameters** `en` –true - enable, false - disable

`esp_err_t esp_wifi_set_ant_gpio` (const `wifi_ant_gpio_config_t` \*`config`)

Set antenna GPIO configuration.

**Parameters** `config` –Antenna GPIO configuration.

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: Invalid argument, e.g. parameter is NULL, invalid GPIO number etc

`esp_err_t esp_wifi_get_ant_gpio` (`wifi_ant_gpio_config_t` \*`config`)

Get current antenna GPIO configuration.

**Parameters** `config` –Antenna GPIO configuration.

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument, e.g. parameter is NULL

`esp_err_t esp_wifi_set_ant` (const `wifi_ant_config_t` \*`config`)

Set antenna configuration.

**Parameters** `config` –Antenna configuration.

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: Invalid argument, e.g. parameter is NULL, invalid antenna mode or invalid GPIO number

`esp_err_t esp_wifi_get_ant` (`wifi_ant_config_t` \*`config`)

Get current antenna configuration.

**Parameters** `config` –Antenna configuration.

**Returns**

- `ESP_OK`: succeed
- `ESP_ERR_WIFI_NOT_INIT`: WiFi is not initialized by `esp_wifi_init`
- `ESP_ERR_INVALID_ARG`: invalid argument, e.g. parameter is NULL

`int64_t esp_wifi_get_tsf_time` (`wifi_interface_t` `interface`)

Get the TSF time In Station mode or SoftAP+Station mode if station is not connected or station doesn't receive at least one beacon after connected, will return 0.

**Attention** Enabling power save may cause the return value inaccurate, except WiFi modem sleep

**Parameters** **interface** –The interface whose tsf\_time is to be retrieved.

**Returns** 0 or the TSF time

`esp_err_t esp_wifi_set_inactive_time (wifi_interface_t ifx, uint16_t sec)`

Set the inactive time of the ESP32 STA or AP.

**Attention** 1. For Station, If the station does not receive a beacon frame from the connected SoftAP during the inactive time, disconnect from SoftAP. Default 6s.

**Attention** 2. For SoftAP, If the softAP doesn't receive any data from the connected STA during inactive time, the softAP will force death the STA. Default is 300s.

**Attention** 3. The inactive time configuration is not stored into flash

**Parameters**

- **ifx** –interface to be configured.
- **sec** –Inactive time. Unit seconds.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by esp\_wifi\_start
- ESP\_ERR\_INVALID\_ARG: invalid argument, For Station, if sec is less than 3. For SoftAP, if sec is less than 10.

`esp_err_t esp_wifi_get_inactive_time (wifi_interface_t ifx, uint16_t *sec)`

Get inactive time of specified interface.

**Parameters**

- **ifx** –Interface to be configured.
- **sec** –Inactive time. Unit seconds.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by esp\_wifi\_start
- ESP\_ERR\_INVALID\_ARG: invalid argument

`esp_err_t esp_wifi_stats_dump (uint32_t modules)`

Dump WiFi statistics.

**Parameters** **modules** –statistic modules to be dumped

**Returns**

- ESP\_OK: succeed
- others: failed

`esp_err_t esp_wifi_set_rssi_threshold (int32_t rssi)`

Set RSSI threshold, if average rssi gets lower than threshold, WiFi task will post event WIFI\_EVENT\_STA\_BSS\_RSSI\_LOW.

**Attention** If the user wants to receive another WIFI\_EVENT\_STA\_BSS\_RSSI\_LOW event after receiving one, this API needs to be called again with an updated/same RSSI threshold.

**Parameters** **rssi** –threshold value in dbm between -100 to 10 Note that in some rare cases where signal strength is very strong, rssi values can be slightly positive.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by esp\_wifi\_init
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_ftm\_initiate\_session** (*wifi\_ftm\_initiator\_cfg\_t* \*cfg)

Start an FTM Initiator session by sending FTM request. If successful, event `WIFI_EVENT_FTM_REPORT` is generated with the result of the FTM procedure.

**Attention** 1. Use this API only in Station mode.

**Attention** 2. If FTM is initiated on a different channel than Station is connected in or internal SoftAP is started in, FTM defaults to a single burst in ASAP mode.

**Parameters** **cfg** –FTM Initiator session configuration

**Returns**

- `ESP_OK`: succeed
- others: failed

*esp\_err\_t* **esp\_wifi\_ftm\_end\_session** (void)

End the ongoing FTM Initiator session.

**Attention** This API works only on FTM Initiator

**Returns**

- `ESP_OK`: succeed
- others: failed

*esp\_err\_t* **esp\_wifi\_ftm\_resp\_set\_offset** (int16\_t offset\_cm)

Set offset in cm for FTM Responder. An equivalent offset is calculated in picoseconds and added in TOD of FTM Measurement frame (T1).

**Attention** Use this API only in AP mode before performing FTM as responder

**Parameters** **offset\_cm** –T1 Offset to be added in centimeters

**Returns**

- `ESP_OK`: succeed
- others: failed

*esp\_err\_t* **esp\_wifi\_ftm\_get\_report** (*wifi\_ftm\_report\_entry\_t* \*report, uint8\_t num\_entries)

Get FTM measurements report copied into a user provided buffer.

**Attention** 1. To get the FTM report, user first needs to allocate a buffer of size `(sizeof(wifi_ftm_report_entry_t) * num_entries)` where the API will fill up to `num_entries` valid FTM measurements in the buffer. Total number of entries can be found in the event `WIFI_EVENT_FTM_REPORT` as `ftm_report_num_entries`

**Attention** 2. The internal FTM report is freed upon use of this API which means the API can only be used once after every FTM session initiated

**Attention** 3. Passing the buffer as `NULL` merely frees the FTM report

**Parameters**

- **report** –Pointer to the buffer for receiving the FTM report
- **num\_entries** –Number of FTM report entries to be filled in the report

**Returns**

- `ESP_OK`: succeed
- others: failed

*esp\_err\_t* **esp\_wifi\_config\_11b\_rate** (*wifi\_interface\_t* ifx, bool disable)

Enable or disable 11b rate of specified interface.

**Attention** 1. This API should be called after `esp_wifi_init()` and before `esp_wifi_start()`.

**Attention** 2. Only when really need to disable 11b rate call this API otherwise don't call this.

#### Parameters

- **ifx** –Interface to be configured.
- **disable** –true means disable 11b rate while false means enable 11b rate.

#### Returns

- ESP\_OK: succeed
- others: failed

*esp\_err\_t* **esp\_wifi\_connectionless\_module\_set\_wake\_interval** (uint16\_t wake\_interval)

Set wake interval for connectionless modules to wake up periodically.

**Attention** 1. Only one wake interval for all connectionless modules.

**Attention** 2. This configuration could work at connected status. When ESP\_WIFI\_STA\_DISCONNECTED\_PM\_ENABLE is enabled, this configuration could work at disconnected status.

**Attention** 3. Event WIFI\_EVENT\_CONNECTIONLESS\_MODULE\_WAKE\_INTERVAL\_START would be posted each time wake interval starts.

**Attention** 4. Recommend to configure interval in multiples of hundred. (e.g. 100ms)

**Attention** 5. Recommend to configure interval to ESP\_WIFI\_CONNECTIONLESS\_INTERVAL\_DEFAULT\_MODE to get stable performance at coexistence mode.

**Parameters** **wake\_interval** –Milliseconds after would the chip wake up, from 1 to 65535.

*esp\_err\_t* **esp\_wifi\_force\_wakeup\_acquire** (void)

Request extra reference of Wi-Fi radio. Wi-Fi keep active state(RF opened) to be able to receive packets.

**Attention** Please pair the use of `esp_wifi_force_wakeup_acquire` with `esp_wifi_force_wakeup_release`.

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by `esp_wifi_init`
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by `esp_wifi_start`

*esp\_err\_t* **esp\_wifi\_force\_wakeup\_release** (void)

Release extra reference of Wi-Fi radio. Wi-Fi go to sleep state(RF closed) if no more use of radio.

**Attention** Please pair the use of `esp_wifi_force_wakeup_acquire` with `esp_wifi_force_wakeup_release`.

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by `esp_wifi_init`
- ESP\_ERR\_WIFI\_NOT\_STARTED: WiFi is not started by `esp_wifi_start`

*esp\_err\_t* **esp\_wifi\_set\_country\_code** (const char \*country, bool ieee80211d\_enabled)

configure country

**Attention** 1. When `ieee80211d_enabled`, the country info of the AP to which the station is connected is used. E.g. if the configured country is US and the country info of the AP to which the station is connected is JP then the country info that will be used is JP. If the station disconnected from the AP the country info is set back to the country info of the station automatically, US in the example.

**Attention** 2. When `ieee80211d_enabled` is disabled, then the configured country info is used always.

**Attention** 3. When the country info is changed because of configuration or because the station connects to a different external AP, the country IE in probe response/beacon of the soft-AP is also changed.

**Attention** 4. The country configuration is stored into flash.

**Attention** 5. When this API is called, the PHY init data will switch to the PHY init data type corresponding to the country info.

**Attention** 6. Supported country codes are “01” (world safe mode) “AT” ,” AU” ,” BE” ,” BG” ,” BR” ,” CA” ,” CH” ,” CN” ,” CY” ,” CZ” ,” DE” ,” DK” ,” EE” ,” ES” ,” FI” ,” FR” ,” GB” ,” GR” ,” HK” ,” HR” ,” HU” ,” IE” ,” IN” ,” IS” ,” IT” ,” JP” ,” KR” ,” LI” ,” LT” ,” LU” ,” LV” ,” MT” ,” MX” ,” NL” ,” NO” ,” NZ” ,” PL” ,” PT” ,” RO” ,” SE” ,” SI” ,” SK” ,” TW” ,” US”

**Attention** 7. When country code “01” (world safe mode) is set, SoftAP mode won't contain country IE.

**Attention** 8. The default country is “01” (world safe mode) and `ieee80211d_enabled` is TRUE.

**Attention** 9. The third octet of country code string is one of the following: ‘‘, ‘O’, ‘I’, ‘X’, otherwise it is considered as ‘‘.

#### Parameters

- **country** –the configured country ISO code
- **ieee80211d\_enabled** –802.11d is enabled or not

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by `esp_wifi_init`
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_get\_country\_code** (char \*country)

get the current country code

**Parameters** **country** –country code

#### Returns

- ESP\_OK: succeed
- ESP\_ERR\_WIFI\_NOT\_INIT: WiFi is not initialized by `esp_wifi_init`
- ESP\_ERR\_INVALID\_ARG: invalid argument

*esp\_err\_t* **esp\_wifi\_config\_80211\_tx\_rate** (*wifi\_interface\_t* ifx, *wifi\_phy\_rate\_t* rate)

Config 80211 tx rate of specified interface.

**Attention** 1. This API should be called after `esp_wifi_init()` and before `esp_wifi_start()`.

#### Parameters

- **ifx** –Interface to be configured.
- **rate** –Phy rate to be configured.

#### Returns

- ESP\_OK: succeed
- others: failed

*esp\_err\_t* **esp\_wifi\_disable\_pmf\_config** (*wifi\_interface\_t* ifx)

Disable PMF configuration for specified interface.

**Attention** This API should be called after `esp_wifi_set_config()` and before `esp_wifi_start()`.

**Parameters** `ifx` –Interface to be configured.

**Returns**

- ESP\_OK: succeed
- others: failed

*esp\_err\_t* `esp_wifi_sta_get_aid` (uint16\_t \*aid)

Get the Association id assigned to STA by AP.

**Attention** aid = 0 if station is not connected to AP.

**Parameters** `aid` –[out] store the aid

**Returns**

- ESP\_OK: succeed

*esp\_err\_t* `esp_wifi_sta_get_negotiated_phymode` (*wifi\_phy\_mode\_t* \*phymode)

Get the negotiated phymode after connection.

**Parameters** `phymode` –[out] store the negotiated phymode.

**Returns**

- ESP\_OK: succeed

*esp\_err\_t* `esp_wifi_sta_get_rssi` (int \*rssi)

Get the rssi information of AP to which the device is associated with.

**Attention** 1. This API should be called after station connected to AP.

**Attention** 2. Use this API only in WIFI\_MODE\_STA or WIFI\_MODE\_APSTA mode.

**Parameters** `rssi` –store the rssi info received from last beacon.

**Returns**

- ESP\_OK: succeed
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_FAIL: failed

## Structures

struct `wifi_init_config_t`

WiFi stack configuration parameters passed to `esp_wifi_init` call.

## Public Members

`wifi_osi_funcs_t` \*`osi_funcs`

WiFi OS functions

`wpa_crypto_funcs_t` `wpa_crypto_funcs`

WiFi station crypto functions when connect

int `static_rx_buf_num`

WiFi static RX buffer number

int **dynamic\_rx\_buf\_num**  
WiFi dynamic RX buffer number

int **tx\_buf\_type**  
WiFi TX buffer type

int **static\_tx\_buf\_num**  
WiFi static TX buffer number

int **dynamic\_tx\_buf\_num**  
WiFi dynamic TX buffer number

int **rx\_mgmt\_buf\_type**  
WiFi RX MGMT buffer type

int **rx\_mgmt\_buf\_num**  
WiFi RX MGMT buffer number

int **cache\_tx\_buf\_num**  
WiFi TX cache buffer number

int **csi\_enable**  
WiFi channel state information enable flag

int **ampdu\_rx\_enable**  
WiFi AMPDU RX feature enable flag

int **ampdu\_tx\_enable**  
WiFi AMPDU TX feature enable flag

int **amsdu\_tx\_enable**  
WiFi AMSDU TX feature enable flag

int **nvs\_enable**  
WiFi NVS flash enable flag

int **nano\_enable**  
Nano option for printf/scan family enable flag

int **rx\_ba\_win**  
WiFi Block Ack RX window size

int **wifi\_task\_core\_id**  
WiFi Task Core ID

int **beacon\_max\_len**  
WiFi softAP maximum length of the beacon

int **mgmt\_sbuf\_num**

WiFi management short buffer number, the minimum value is 6, the maximum value is 32

uint64\_t **feature\_caps**

Enables additional WiFi features and capabilities

bool **sta\_disconnected\_pm**

WiFi Power Management for station at disconnected status

int **espnow\_max\_encrypt\_num**

Maximum encrypt number of peers supported by espnow

int **magic**

WiFi init magic number, it should be the last field

## Macros

**ESP\_ERR\_WIFI\_NOT\_INIT**

WiFi driver was not installed by esp\_wifi\_init

**ESP\_ERR\_WIFI\_NOT\_STARTED**

WiFi driver was not started by esp\_wifi\_start

**ESP\_ERR\_WIFI\_NOT\_STOPPED**

WiFi driver was not stopped by esp\_wifi\_stop

**ESP\_ERR\_WIFI\_IF**

WiFi interface error

**ESP\_ERR\_WIFI\_MODE**

WiFi mode error

**ESP\_ERR\_WIFI\_STATE**

WiFi internal state error

**ESP\_ERR\_WIFI\_CONN**

WiFi internal control block of station or soft-AP error

**ESP\_ERR\_WIFI\_NVS**

WiFi internal NVS module error

**ESP\_ERR\_WIFI\_MAC**

MAC address is invalid

**ESP\_ERR\_WIFI\_SSID**

SSID is invalid

**ESP\_ERR\_WIFI\_PASSWORD**

Password is invalid

**ESP\_ERR\_WIFI\_TIMEOUT**

Timeout error

**ESP\_ERR\_WIFI\_WAKE\_FAIL**

WiFi is in sleep state(RF closed) and wakeup fail

**ESP\_ERR\_WIFI\_WOULD\_BLOCK**

The caller would block

**ESP\_ERR\_WIFI\_NOT\_CONNECT**

Station still in disconnect status

**ESP\_ERR\_WIFI\_POST**

Failed to post the event to WiFi task

**ESP\_ERR\_WIFI\_INIT\_STATE**

Invalid WiFi state when init/deinit is called

**ESP\_ERR\_WIFI\_STOP\_STATE**

Returned when WiFi is stopping

**ESP\_ERR\_WIFI\_NOT\_ASSOC**

The WiFi connection is not associated

**ESP\_ERR\_WIFI\_TX\_DISALLOW**

The WiFi TX is disallowed

**ESP\_ERR\_WIFI\_DISCARD**

Discard frame

**ESP\_ERR\_WIFI\_ROC\_IN\_PROGRESS**

ROC op is in progress

**WIFI\_STATIC\_TX\_BUFFER\_NUM**

**WIFI\_CACHE\_TX\_BUFFER\_NUM**

**WIFI\_DYNAMIC\_TX\_BUFFER\_NUM**

**WIFI\_RX\_MGMT\_BUF\_NUM\_DEF**

**WIFI\_CSI\_ENABLED**

`ESP_WIFI_CONNECTIONLESS_INTERVAL_DEFAULT_MODE`

## Type Definitions

typedef void (\***wifi\_promiscuous\_cb\_t**)(void \*buf, *wifi\_promiscuous\_pkt\_type\_t* type)

The RX callback function in the promiscuous mode. Each time a packet is received, the callback function will be called.

**Param buf** Data received. Type of data in buffer (*wifi\_promiscuous\_pkt\_t* or *wifi\_pkt\_rx\_ctrl\_t*) indicated by 'type' parameter.

**Param type** promiscuous packet type.

typedef void (\***esp\_vendor\_ie\_cb\_t**)(void \*ctx, *wifi\_vendor\_ie\_type\_t* type, const uint8\_t sa[6], const *vendor\_ie\_data\_t* \*vnd\_ie, int rssi)

Function signature for received Vendor-Specific Information Element callback.

**Param ctx** Context argument, as passed to `esp_wifi_set_vendor_ie_cb()` when registering callback.

**Param type** Information element type, based on frame type received.

**Param sa** Source 802.11 address.

**Param vnd\_ie** Pointer to the vendor specific element data received.

**Param rssi** Received signal strength indication.

typedef void (\***wifi\_csi\_cb\_t**)(void \*ctx, *wifi\_csi\_info\_t* \*data)

The RX callback function of Channel State Information(CSI) data.

Each time a CSI data **is** received, the callback function will be called.

**Param ctx** context argument, passed to `esp_wifi_set_csi_rx_cb()` when registering callback function.

**Param data** CSI data received. The memory that it points to will be deallocated after callback function returns.

## Header File

- [components/esp\\_wifi/include/esp\\_wifi\\_types.h](#)

## Unions

union **wifi\_config\_t**

*#include <esp\_wifi\_types.h>* Configuration data for ESP32 AP or STA.

The usage of this union (for ap or sta configuration) is determined by the accompanying interface argument passed to `esp_wifi_set_config()` or `esp_wifi_get_config()`

### Public Members

*wifi\_ap\_config\_t* **ap**  
configuration of AP

*wifi\_sta\_config\_t* **sta**  
configuration of STA

### Structures

struct **wifi\_country\_t**  
Structure describing WiFi country-based regional restrictions.

### Public Members

char **cc**[3]  
country code string

uint8\_t **schan**  
start channel

uint8\_t **nchan**  
total channel number

int8\_t **max\_tx\_power**  
This field is used for getting WiFi maximum transmitting power, call `esp_wifi_set_max_tx_power` to set the maximum transmitting power.

*wifi\_country\_policy\_t* **policy**  
country policy

struct **wifi\_active\_scan\_time\_t**  
Range of active scan times per channel.

### Public Members

uint32\_t **min**  
minimum active scan time per channel, units: millisecond

uint32\_t **max**  
maximum active scan time per channel, units: millisecond, values above 1500ms may cause station to disconnect from AP and are not recommended.

struct **wifi\_scan\_time\_t**  
Aggregate of active & passive scan time per channel.

### Public Members

*wifi\_active\_scan\_time\_t* **active**

active scan time per channel, units: millisecond.

uint32\_t **passive**

passive scan time per channel, units: millisecond, values above 1500ms may cause station to disconnect from AP and are not recommended.

struct **wifi\_scan\_config\_t**

Parameters for an SSID scan.

### Public Members

uint8\_t \***ssid**

SSID of AP

uint8\_t \***bssid**

MAC address of AP

uint8\_t **channel**

channel, scan the specific channel

bool **show\_hidden**

enable to scan AP whose SSID is hidden

*wifi\_scan\_type\_t* **scan\_type**

scan type, active or passive

*wifi\_scan\_time\_t* **scan\_time**

scan time per channel

uint8\_t **home\_chan\_dwell\_time**

time spent at home channel between scanning consecutive channels.

struct **wifi\_ap\_record\_t**

Description of a WiFi AP.

### Public Members

uint8\_t **bssid**[6]

MAC address of AP

uint8\_t **ssid**[33]

SSID of AP

uint8\_t **primary**

channel of AP

*wifi\_second\_chan\_t* **second**

secondary channel of AP

*int8\_t* **rss**

signal strength of AP. Note that in some rare cases where signal strength is very strong, rssi values can be slightly positive

*wifi\_auth\_mode\_t* **authmode**

authmode of AP

*wifi\_cipher\_type\_t* **pairwise\_cipher**

pairwise cipher of AP

*wifi\_cipher\_type\_t* **group\_cipher**

group cipher of AP

*wifi\_ant\_t* **ant**

antenna used to receive beacon from AP

*uint32\_t* **phy\_11b**

bit: 0 flag to identify if 11b mode is enabled or not

*uint32\_t* **phy\_11g**

bit: 1 flag to identify if 11g mode is enabled or not

*uint32\_t* **phy\_11n**

bit: 2 flag to identify if 11n mode is enabled or not

*uint32\_t* **phy\_1r**

bit: 3 flag to identify if low rate is enabled or not

*uint32\_t* **wps**

bit: 4 flag to identify if WPS is supported or not

*uint32\_t* **ftm\_responder**

bit: 5 flag to identify if FTM is supported in responder mode

*uint32\_t* **ftm\_initiator**

bit: 6 flag to identify if FTM is supported in initiator mode

*uint32\_t* **reserved**

bit: 7..31 reserved

*wifi\_country\_t* **country**

country information of AP

struct **wifi\_scan\_threshold\_t**

Structure describing parameters for a WiFi fast scan.

### Public Members

`int8_t rssi`

The minimum rssi to accept in the fast scan mode

`wifi_auth_mode_t authmode`

The weakest authmode to accept in the fast scan mode Note: In case this value is not set and password is set as per WPA2 standards (password len  $\geq$  8), it will be defaulted to WPA2 and device won't connect to deprecated WEP/WPA networks. Please set authmode threshold as WIFI\_AUTH\_WEP/WIFI\_AUTH\_WPA\_PSK to connect to WEP/WPA networks

struct `wifi_pmf_config_t`

Configuration structure for Protected Management Frame

### Public Members

bool `capable`

Deprecated variable. Device will always connect in PMF mode if other device also advertizes PMF capability.

bool `required`

Advertizes that Protected Management Frame is required. Device will not associate to non-PMF capable devices.

struct `wifi_ap_config_t`

Soft-AP configuration settings for the ESP32.

### Public Members

`uint8_t ssid[32]`

SSID of ESP32 soft-AP. If `ssid_len` field is 0, this must be a Null terminated string. Otherwise, length is set according to `ssid_len`.

`uint8_t password[64]`

Password of ESP32 soft-AP.

`uint8_t ssid_len`

Optional length of SSID field.

`uint8_t channel`

Channel of soft-AP

`wifi_auth_mode_t authmode`

Auth mode of soft-AP. Do not support AUTH\_WEP, AUTH\_WAPI\_PSK and AUTH\_OWE in soft-AP mode. When the auth mode is set to WPA2\_PSK, WPA2\_WPA3\_PSK or WPA3\_PSK, the pairwise cipher will be overwritten with WIFI\_CIPHER\_TYPE\_CCMP.

`uint8_t ssid_hidden`

Broadcast SSID or not, default 0, broadcast the SSID

uint8\_t **max\_connection**

Max number of stations allowed to connect in

uint16\_t **beacon\_interval**

Beacon interval which should be multiples of 100. Unit: TU(time unit, 1 TU = 1024 us). Range: 100 ~ 60000. Default value: 100

*wifi\_cipher\_type\_t* **pairwise\_cipher**

Pairwise cipher of SoftAP, group cipher will be derived using this. Cipher values are valid starting from WIFI\_CIPHER\_TYPE\_TKIP, enum values before that will be considered as invalid and default cipher suites(TKIP+CCMP) will be used. Valid cipher suites in softAP mode are WIFI\_CIPHER\_TYPE\_TKIP, WIFI\_CIPHER\_TYPE\_CCMP and WIFI\_CIPHER\_TYPE\_TKIP\_CCMP.

bool **ftm\_responder**

Enable FTM Responder mode

*wifi\_pmf\_config\_t* **pmf\_cfg**

Configuration for Protected Management Frame

struct **wifi\_sta\_config\_t**

STA configuration settings for the ESP32.

## Public Members

uint8\_t **ssid**[32]

SSID of target AP.

uint8\_t **password**[64]

Password of target AP.

*wifi\_scan\_method\_t* **scan\_method**

do all channel scan or fast scan

bool **bssid\_set**

whether set MAC address of target AP or not. Generally, station\_config.bssid\_set needs to be 0; and it needs to be 1 only when users need to check the MAC address of the AP.

uint8\_t **bssid**[6]

MAC address of target AP

uint8\_t **channel**

channel of target AP. Set to 1~13 to scan starting from the specified channel before connecting to AP. If the channel of AP is unknown, set it to 0.

uint16\_t **listen\_interval**

Listen interval for ESP32 station to receive beacon when WIFI\_PS\_MAX\_MODEM is set. Units: AP beacon intervals. Defaults to 3 if set to 0.

**wifi\_sort\_method\_t sort\_method**

sort the connect AP in the list by rssi or security mode

**wifi\_scan\_threshold\_t threshold**

When scan\_threshold is set, only APs which have an auth mode that is more secure than the selected auth mode and a signal stronger than the minimum RSSI will be used.

**wifi\_pmf\_config\_t pmf\_cfg**

Configuration for Protected Management Frame. Will be advertised in RSN Capabilities in RSN IE.

**uint32\_t rm\_enabled**

Whether Radio Measurements are enabled for the connection

**uint32\_t btm\_enabled**

Whether BSS Transition Management is enabled for the connection

**uint32\_t mbo\_enabled**

Whether MBO is enabled for the connection

**uint32\_t ft\_enabled**

Whether FT is enabled for the connection

**uint32\_t owe\_enabled**

Whether OWE is enabled for the connection

**uint32\_t transition\_disable**

Whether to enable transition disable feature

**uint32\_t reserved**

Reserved for future feature set

**wifi\_sae\_pwe\_method\_t sae\_pwe\_h2e**

Configuration for SAE PWE derivation method

**uint8\_t failure\_retry\_cnt**

Number of connection retries station will do before moving to next AP. scan\_method should be set as WIFI\_ALL\_CHANNEL\_SCAN to use this config. Note: Enabling this may cause connection time to increase incase best AP doesn't behave properly.

**struct wifi\_sta\_info\_t**

Description of STA associated with AP.

**Public Members****uint8\_t mac[6]**

mac address

int8\_t **rss**

current average rssi of sta connected

uint32\_t **phy\_11b**

bit: 0 flag to identify if 11b mode is enabled or not

uint32\_t **phy\_11g**

bit: 1 flag to identify if 11g mode is enabled or not

uint32\_t **phy\_11n**

bit: 2 flag to identify if 11n mode is enabled or not

uint32\_t **phy\_lr**

bit: 3 flag to identify if low rate is enabled or not

uint32\_t **is\_mesh\_child**

bit: 4 flag to identify mesh child

uint32\_t **reserved**

bit: 5..31 reserved

struct **wifi\_sta\_list\_t**

List of stations associated with the ESP32 Soft-AP.

### Public Members

*wifi\_sta\_info\_t* **sta**[ESP\_WIFI\_MAX\_CONN\_NUM]

station list

int **num**

number of stations in the list (other entries are invalid)

struct **vendor\_ie\_data\_t**

Vendor Information Element header.

The first bytes of the Information Element will match this header. Payload follows.

### Public Members

uint8\_t **element\_id**

Should be set to WIFI\_VENDOR\_IE\_ELEMENT\_ID (0xDD)

uint8\_t **length**

Length of all bytes in the element data following this field. Minimum 4.

uint8\_t **vendor\_oui**[3]

Vendor identifier (OUI).

uint8\_t **vendor\_oui\_type**

Vendor-specific OUI type.

uint8\_t **payload[0]**

Payload. Length is equal to value in 'length' field, minus 4.

struct **wifi\_pkt\_rx\_ctrl\_t**

Received packet radio metadata header, this is the common header at the beginning of all promiscuous mode RX callback buffers.

### Public Members

signed **rssi**

Received Signal Strength Indicator(RSSI) of packet. unit: dBm

unsigned **rate**

PHY rate encoding of the packet. Only valid for non HT(11bg) packet

unsigned **\_\_pad0\_\_**

reserved

unsigned **sig\_mode**

0: non HT(11bg) packet; 1: HT(11n) packet; 3: VHT(11ac) packet

unsigned **\_\_pad1\_\_**

reserved

unsigned **mcs**

Modulation Coding Scheme. If is HT(11n) packet, shows the modulation, range from 0 to 76(MSC0 ~ MCS76)

unsigned **cwb**

Channel Bandwidth of the packet. 0: 20MHz; 1: 40MHz

unsigned **\_\_pad2\_\_**

reserved

unsigned **smoothing**

reserved

unsigned **not\_sounding**

reserved

unsigned **\_\_pad3\_\_**

reserved

unsigned **aggregation**

Aggregation. 0: MPDU packet; 1: AMPDU packet

unsigned **stbc**

Space Time Block Code(STBC). 0: non STBC packet; 1: STBC packet

unsigned **fec\_coding**

Flag is set for 11n packets which are LDPC

unsigned **sgi**

Short Guide Interval(SGI). 0: Long GI; 1: Short GI

unsigned **\_\_pad4\_\_**

reserved

unsigned **ampdu\_cnt**

ampdu cnt

unsigned **channel**

primary channel on which this packet is received

unsigned **secondary\_channel**

secondary channel on which this packet is received. 0: none; 1: above; 2: below

unsigned **\_\_pad5\_\_**

reserved

unsigned **timestamp**

timestamp. The local time when this packet is received. It is precise only if modem sleep or light sleep is not enabled. unit: microsecond

unsigned **\_\_pad6\_\_**

reserved

signed **noise\_floor**

noise floor of Radio Frequency Module(RF). unit: dBm

unsigned **\_\_pad7\_\_**

reserved

unsigned **\_\_pad8\_\_**

reserved

unsigned **\_\_pad9\_\_**

reserved

unsigned **ant**

antenna number from which this packet is received. 0: WiFi antenna 0; 1: WiFi antenna 1

unsigned **\_\_pad10\_\_**

reserved

unsigned **\_\_pad11\_\_**  
reserved

unsigned **\_\_pad12\_\_**  
reserved

unsigned **sig\_len**  
length of packet including Frame Check Sequence(FCS)

unsigned **\_\_pad13\_\_**  
reserved

unsigned **rx\_state**  
state of the packet. 0: no error; others: error numbers which are not public

struct **wifi\_promiscuous\_pkt\_t**

Payload passed to ‘buf’ parameter of promiscuous mode RX callback.

### Public Members

*wifi\_pkt\_rx\_ctrl\_t* **rx\_ctrl**  
metadata header

uint8\_t **payload[0]**  
Data or management payload. Length of payload is described by rx\_ctrl.sig\_len. Type of content determined by packet type argument of callback.

struct **wifi\_promiscuous\_filter\_t**

Mask for filtering different packet types in promiscuous mode.

### Public Members

uint32\_t **filter\_mask**  
OR of one or more filter values WIFI\_PROMIS\_FILTER\_\*

struct **wifi\_csi\_config\_t**

Channel state information(CSI) configuration type.

### Public Members

bool **lltf\_en**  
enable to receive legacy long training field(lltf) data. Default enabled

bool **htltf\_en**  
enable to receive HT long training field(htltf) data. Default enabled

bool **stbc\_htlft2\_en**

enable to receive space time block code HT long training field(stbc-htlft2) data. Default enabled

bool **lft\_merge\_en**

enable to generate htlft data by averaging lft and ht\_lft data when receiving HT packet. Otherwise, use ht\_lft data directly. Default enabled

bool **channel\_filter\_en**

enable to turn on channel filter to smooth adjacent sub-carrier. Disable it to keep independence of adjacent sub-carrier. Default enabled

bool **manu\_scale**

manually scale the CSI data by left shifting or automatically scale the CSI data. If set true, please set the shift bits. false: automatically. true: manually. Default false

uint8\_t **shift**

manually left shift bits of the scale of the CSI data. The range of the left shift bits is 0~15

bool **dump\_ack\_en**

enable to dump 802.11 ACK frame, default disabled

struct **wifi\_csi\_info\_t**

CSI data type.

## Public Members

*wifi\_pkt\_rx\_ctrl\_t* **rx\_ctrl**

received packet radio metadata header of the CSI data

uint8\_t **mac**[6]

source MAC address of the CSI data

uint8\_t **dmac**[6]

destination MAC address of the CSI data

bool **first\_word\_invalid**

first four bytes of the CSI data is invalid or not

int8\_t \***buf**

buffer of CSI data

uint16\_t **len**

length of CSI data

struct **wifi\_ant\_gpio\_t**

WiFi GPIO configuration for antenna selection.

**Public Members**`uint8_t gpio_select`

Whether this GPIO is connected to external antenna switch

`uint8_t gpio_num`

The GPIO number that connects to external antenna switch

struct `wifi_ant_gpio_config_t`

WiFi GPIOs configuration for antenna selection.

**Public Members**`wifi_ant_gpio_t gpio_cfg[4]`

The configurations of GPIOs that connect to external antenna switch

struct `wifi_ant_config_t`

WiFi antenna configuration.

**Public Members**`wifi_ant_mode_t rx_ant_mode`

WiFi antenna mode for receiving

`wifi_ant_t rx_ant_default`Default antenna mode for receiving, it's ignored if `rx_ant_mode` is not `WIFI_ANT_MODE_AUTO``wifi_ant_mode_t tx_ant_mode`WiFi antenna mode for transmission, it can be set to `WIFI_ANT_MODE_AUTO` only if `rx_ant_mode` is set to `WIFI_ANT_MODE_AUTO``uint8_t enabled_ant0`Index (in antenna GPIO configuration) of enabled `WIFI_ANT_MODE_ANT0``uint8_t enabled_ant1`Index (in antenna GPIO configuration) of enabled `WIFI_ANT_MODE_ANT1`struct `wifi_action_tx_req_t`

Action Frame Tx Request.

**Public Members**`wifi_interface_t ifx`

WiFi interface to send request to

`uint8_t dest_mac[6]`

Destination MAC address

bool **no\_ack**

Indicates no ack required

*wifi\_action\_rx\_cb\_t* **rx\_cb**

Rx Callback to receive any response

uint32\_t **data\_len**

Length of the appended Data

uint8\_t **data**[0]

Appended Data payload

struct **wifi\_ftm\_initiator\_cfg\_t**

FTM Initiator configuration.

### Public Members

uint8\_t **resp\_mac**[6]

MAC address of the FTM Responder

uint8\_t **channel**

Primary channel of the FTM Responder

uint8\_t **frm\_count**

No. of FTM frames requested in terms of 4 or 8 bursts (allowed values - 0(No pref), 16, 24, 32, 64)

uint16\_t **burst\_period**

Requested period between FTM bursts in 100<sup>'</sup> s of milliseconds (allowed values 0(No pref) - 100)

bool **use\_get\_report\_api**

True - Using `esp_wifi_ftm_get_report` to get FTM report, False - Using `ftm_report_data` from `WIFI_EVENT_FTM_REPORT` to get FTM report

struct **wifi\_event\_sta\_scan\_done\_t**

Argument structure for `WIFI_EVENT_SCAN_DONE` event

### Public Members

uint32\_t **status**

status of scanning APs: 0 — success, 1 - failure

uint8\_t **number**

number of scan results

uint8\_t **scan\_id**

scan sequence number, used for block scan

struct **wifi\_event\_sta\_connected\_t**

Argument structure for WIFI\_EVENT\_STA\_CONNECTED event

### Public Members

uint8\_t **ssid**[32]

SSID of connected AP

uint8\_t **ssid\_len**

SSID length of connected AP

uint8\_t **bssid**[6]

BSSID of connected AP

uint8\_t **channel**

channel of connected AP

[wifi\\_auth\\_mode\\_t](#) **authmode**

authentication mode used by AP

struct **wifi\_event\_sta\_disconnected\_t**

Argument structure for WIFI\_EVENT\_STA\_DISCONNECTED event

### Public Members

uint8\_t **ssid**[32]

SSID of disconnected AP

uint8\_t **ssid\_len**

SSID length of disconnected AP

uint8\_t **bssid**[6]

BSSID of disconnected AP

uint8\_t **reason**

reason of disconnection

int8\_t **rssi**

rssi of disconnection

struct **wifi\_event\_sta\_authmode\_change\_t**

Argument structure for WIFI\_EVENT\_STA\_AUTHMODE\_CHANGE event

### Public Members

*wifi\_auth\_mode\_t* **old\_mode**

the old auth mode of AP

*wifi\_auth\_mode\_t* **new\_mode**

the new auth mode of AP

struct **wifi\_event\_sta\_wps\_er\_pin\_t**

Argument structure for WIFI\_EVENT\_STA\_WPS\_ER\_PIN event

### Public Members

uint8\_t **pin\_code**[8]

PIN code of station in enrollee mode

struct **wifi\_event\_sta\_wps\_er\_success\_t**

Argument structure for WIFI\_EVENT\_STA\_WPS\_ER\_SUCCESS event

### Public Members

uint8\_t **ap\_cred\_cnt**

Number of AP credentials received

uint8\_t **ssid**[MAX\_SSID\_LEN]

SSID of AP

uint8\_t **passphrase**[MAX\_PASSPHRASE\_LEN]

Passphrase for the AP

struct *wifi\_event\_sta\_wps\_er\_success\_t*::[anonymous] **ap\_cred**[MAX\_WPS\_AP\_CRED]

All AP credentials received from WPS handshake

struct **wifi\_event\_ap\_staconnected\_t**

Argument structure for WIFI\_EVENT\_AP\_STACONNECTED event

### Public Members

uint8\_t **mac**[6]

MAC address of the station connected to ESP32 soft-AP

uint8\_t **aid**

the aid that ESP32 soft-AP gives to the station connected to

bool **is\_mesh\_child**

flag to identify mesh child

struct **wifi\_event\_ap\_stadisconnected\_t**

Argument structure for WIFI\_EVENT\_AP\_STADISCONNECTED event

**Public Members**

uint8\_t **mac**[6]

MAC address of the station disconnects to ESP32 soft-AP

uint8\_t **aid**

the aid that ESP32 soft-AP gave to the station disconnects to

bool **is\_mesh\_child**

flag to identify mesh child

struct **wifi\_event\_ap\_probe\_req\_rx\_t**

Argument structure for WIFI\_EVENT\_AP\_PROBEREQRCVED event

**Public Members**

int **rssi**

Received probe request signal strength

uint8\_t **mac**[6]

MAC address of the station which send probe request

struct **wifi\_event\_bss\_rssi\_low\_t**

Argument structure for WIFI\_EVENT\_STA\_BSS\_RSSI\_LOW event

**Public Members**

int32\_t **rssi**

RSSI value of bss

struct **wifi\_ftm\_report\_entry\_t**

Argument structure for

**Public Members**

uint8\_t **dlog\_token**

Dialog Token of the FTM frame

int8\_t **rssi**

RSSI of the FTM frame received

uint32\_t **rtt**

Round Trip Time in pSec with a peer

uint64\_t **t1**

Time of departure of FTM frame from FTM Responder in pSec

uint64\_t **t2**

Time of arrival of FTM frame at FTM Initiator in pSec

uint64\_t **t3**

Time of departure of ACK from FTM Initiator in pSec

uint64\_t **t4**

Time of arrival of ACK at FTM Responder in pSec

struct **wifi\_event\_ftm\_report\_t**

Argument structure for WIFI\_EVENT\_FTM\_REPORT event

### Public Members

uint8\_t **peer\_mac**[6]

MAC address of the FTM Peer

*wifi\_ftm\_status\_t* **status**

Status of the FTM operation

uint32\_t **rtt\_raw**

Raw average Round-Trip-Time with peer in Nano-Seconds

uint32\_t **rtt\_est**

Estimated Round-Trip-Time with peer in Nano-Seconds

uint32\_t **dist\_est**

Estimated one-way distance in Centi-Meters

*wifi\_ftm\_report\_entry\_t* \***ftm\_report\_data**

Pointer to FTM Report, should be freed after use. Note: Highly recommended to use API `esp_wifi_ftm_get_report` to get the report instead of using this

uint8\_t **ftm\_report\_num\_entries**

Number of entries in the FTM Report data

struct **wifi\_event\_action\_tx\_status\_t**

Argument structure for WIFI\_EVENT\_ACTION\_TX\_STATUS event

### Public Members

*wifi\_interface\_t* **ifx**

WiFi interface to send request to

uint32\_t **context**

Context to identify the request

uint8\_t **da**[6]

Destination MAC address

uint8\_t **status**

Status of the operation

struct **wifi\_event\_roc\_done\_t**

Argument structure for WIFI\_EVENT\_ROC\_DONE event

### **Public Members**

uint32\_t **context**

Context to identify the request

struct **wifi\_event\_ap\_wps\_rg\_pin\_t**

Argument structure for WIFI\_EVENT\_AP\_WPS\_RG\_PIN event

### **Public Members**

uint8\_t **pin\_code**[8]

PIN code of station in enrollee mode

struct **wifi\_event\_ap\_wps\_rg\_fail\_reason\_t**

Argument structure for WIFI\_EVENT\_AP\_WPS\_RG\_FAILED event

### **Public Members**

*wps\_fail\_reason\_t* **reason**

WPS failure reason *wps\_fail\_reason\_t*

uint8\_t **peer\_macaddr**[6]

Enrollee mac address

struct **wifi\_event\_ap\_wps\_rg\_success\_t**

Argument structure for WIFI\_EVENT\_AP\_WPS\_RG\_SUCCESS event

### **Public Members**

uint8\_t **peer\_macaddr**[6]

Enrollee mac address

### **Macros**

**WIFI\_OFFCHAN\_TX\_REQ**

**WIFI\_OFFCHAN\_TX\_CANCEL**

**WIFI\_ROC\_REQ**

**WIFI\_ROC\_CANCEL**

**WIFI\_PROTOCOL\_11B**

**WIFI\_PROTOCOL\_11G**

**WIFI\_PROTOCOL\_11N**

**WIFI\_PROTOCOL\_LR**

**ESP\_WIFI\_MAX\_CONN\_NUM**

max number of stations which can connect to ESP32C2 soft-AP

**WIFI\_VENDOR\_IE\_ELEMENT\_ID**

**WIFI\_PROMIS\_FILTER\_MASK\_ALL**

filter all packets

**WIFI\_PROMIS\_FILTER\_MASK\_MGMT**

filter the packets with type of WIFI\_PKT\_MGMT

**WIFI\_PROMIS\_FILTER\_MASK\_CTRL**

filter the packets with type of WIFI\_PKT\_CTRL

**WIFI\_PROMIS\_FILTER\_MASK\_DATA**

filter the packets with type of WIFI\_PKT\_DATA

**WIFI\_PROMIS\_FILTER\_MASK\_MISC**

filter the packets with type of WIFI\_PKT\_MISC

**WIFI\_PROMIS\_FILTER\_MASK\_DATA\_MPDU**

filter the MPDU which is a kind of WIFI\_PKT\_DATA

**WIFI\_PROMIS\_FILTER\_MASK\_DATA\_AMPDU**

filter the AMPDU which is a kind of WIFI\_PKT\_DATA

**WIFI\_PROMIS\_FILTER\_MASK\_FCSFAIL**

filter the FCS failed packets, do not open it in general

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_ALL**

filter all control packets

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_WRAPPER**

filter the control packets with subtype of Control Wrapper

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_BAR**

filter the control packets with subtype of Block Ack Request

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_BA**

filter the control packets with subtype of Block Ack

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_PSPOLL**

filter the control packets with subtype of PS-Poll

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_RTS**

filter the control packets with subtype of RTS

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_CTS**

filter the control packets with subtype of CTS

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_ACK**

filter the control packets with subtype of ACK

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_CFEND**

filter the control packets with subtype of CF-END

**WIFI\_PROMIS\_CTRL\_FILTER\_MASK\_CFENDACK**

filter the control packets with subtype of CF-END+CF-ACK

**WIFI\_EVENT\_MASK\_ALL**

mask all WiFi events

**WIFI\_EVENT\_MASK\_NONE**

mask none of the WiFi events

**WIFI\_EVENT\_MASK\_AP\_PROBEREQRECVD**

mask SYSTEM\_EVENT\_AP\_PROBEREQRECVD event

**MAX\_SSID\_LEN**

**MAX\_PASSPHRASE\_LEN**

**MAX\_WPS\_AP\_CRED**

**WIFI\_STATIS\_BUFFER**

**WIFI\_STATIS\_RXTX**

**WIFI\_STATIS\_HW**

**WIFI\_STATIS\_DIAG**

**WIFI\_STATUS\_PS**

**WIFI\_STATUS\_ALL**

### Type Definitions

typedef int (**\*wifi\_action\_rx\_cb\_t**)(uint8\_t \*hdr, uint8\_t \*payload, size\_t len, uint8\_t channel)

The Rx callback function of Action Tx operations.

**Param hdr** pointer to the IEEE 802.11 Header structure

**Param payload** pointer to the Payload following 802.11 Header

**Param len** length of the Payload

**Param channel** channel number the frame is received on

### Enumerations

enum **wifi\_mode\_t**

*Values:*

enumerator **WIFI\_MODE\_NULL**

null mode

enumerator **WIFI\_MODE\_STA**

WiFi station mode

enumerator **WIFI\_MODE\_AP**

WiFi soft-AP mode

enumerator **WIFI\_MODE\_APSTA**

WiFi station + soft-AP mode

enumerator **WIFI\_MODE\_MAX**

enum **wifi\_interface\_t**

*Values:*

enumerator **WIFI\_IF\_STA**

enumerator **WIFI\_IF\_AP**

enum **wifi\_country\_policy\_t**

*Values:*

enumerator **WIFI\_COUNTRY\_POLICY\_AUTO**

Country policy is auto, use the country info of AP to which the station is connected

enumerator **WIFI\_COUNTRY\_POLICY\_MANUAL**

Country policy is manual, always use the configured country info

enum **wifi\_auth\_mode\_t**

*Values:*

enumerator **WIFI\_AUTH\_OPEN**

authenticate mode : open

enumerator **WIFI\_AUTH\_WEP**

authenticate mode : WEP

enumerator **WIFI\_AUTH\_WPA\_PSK**

authenticate mode : WPA\_PSK

enumerator **WIFI\_AUTH\_WPA2\_PSK**

authenticate mode : WPA2\_PSK

enumerator **WIFI\_AUTH\_WPA\_WPA2\_PSK**

authenticate mode : WPA\_WPA2\_PSK

enumerator **WIFI\_AUTH\_ENTERPRISE**

authenticate mode : WiFi EAP security

enumerator **WIFI\_AUTH\_WPA2\_ENTERPRISE**

authenticate mode : WiFi EAP security

enumerator **WIFI\_AUTH\_WPA3\_PSK**

authenticate mode : WPA3\_PSK

enumerator **WIFI\_AUTH\_WPA2\_WPA3\_PSK**

authenticate mode : WPA2\_WPA3\_PSK

enumerator **WIFI\_AUTH\_WAPI\_PSK**

authenticate mode : WAPI\_PSK

enumerator **WIFI\_AUTH\_OWE**

authenticate mode : OWE

enumerator **WIFI\_AUTH\_WPA3\_ENT\_192**

authenticate mode : WPA3\_ENT\_SUITE\_B\_192\_BIT

enumerator **WIFI\_AUTH\_MAX**

enum **wifi\_err\_reason\_t**

*Values:*

enumerator **WIFI\_REASON\_UNSPECIFIED**

enumerator **WIFI\_REASON\_AUTH\_EXPIRE**

enumerator **WIFI\_REASON\_AUTH\_LEAVE**

enumerator **WIFI\_REASON\_ASSOC\_EXPIRE**

enumerator **WIFI\_REASON\_ASSOC\_TOOMANY**

enumerator **WIFI\_REASON\_NOT\_AUTHED**

enumerator **WIFI\_REASON\_NOT\_ASSOCED**

enumerator **WIFI\_REASON\_ASSOC\_LEAVE**

enumerator **WIFI\_REASON\_ASSOC\_NOT\_AUTHED**

enumerator **WIFI\_REASON\_DISASSOC\_PWRCAP\_BAD**

enumerator **WIFI\_REASON\_DISASSOC\_SUPCHAN\_BAD**

enumerator **WIFI\_REASON\_BSS\_TRANSITION\_DISASSOC**

enumerator **WIFI\_REASON\_IE\_INVALID**

enumerator **WIFI\_REASON\_MIC\_FAILURE**

enumerator **WIFI\_REASON\_4WAY\_HANDSHAKE\_TIMEOUT**

enumerator **WIFI\_REASON\_GROUP\_KEY\_UPDATE\_TIMEOUT**

enumerator **WIFI\_REASON\_IE\_IN\_4WAY\_DIFFERS**

enumerator **WIFI\_REASON\_GROUP\_CIPHER\_INVALID**

enumerator **WIFI\_REASON\_PAIRWISE\_CIPHER\_INVALID**

enumerator **WIFI\_REASON\_AKMP\_INVALID**

enumerator **WIFI\_REASON\_UNSUPP\_RSN\_IE\_VERSION**

enumerator **WIFI\_REASON\_INVALID\_RSN\_IE\_CAP**

enumerator **WIFI\_REASON\_802\_1X\_AUTH\_FAILED**

enumerator **WIFI\_REASON\_CIPHER\_SUITE\_REJECTED**

enumerator **WIFI\_REASON\_TDLS\_PEER\_UNREACHABLE**

enumerator **WIFI\_REASON\_TDLS\_UNSPECIFIED**

enumerator **WIFI\_REASON\_SSP\_REQUESTED\_DISASSOC**

enumerator **WIFI\_REASON\_NO\_SSP\_ROAMING\_AGREEMENT**

enumerator **WIFI\_REASON\_BAD\_CIPHER\_OR\_AKM**

enumerator **WIFI\_REASON\_NOT\_AUTHORIZED\_THIS\_LOCATION**

enumerator **WIFI\_REASON\_SERVICE\_CHANGE\_PERCLUDES\_TS**

enumerator **WIFI\_REASON\_UNSPECIFIED\_QOS**

enumerator **WIFI\_REASON\_NOT\_ENOUGH\_BANDWIDTH**

enumerator **WIFI\_REASON\_MISSING\_ACKS**

enumerator **WIFI\_REASON\_EXCEEDED\_TXOP**

enumerator **WIFI\_REASON\_STA\_LEAVING**

enumerator **WIFI\_REASON\_END\_BA**

enumerator **WIFI\_REASON\_UNKNOWN\_BA**

enumerator **WIFI\_REASON\_TIMEOUT**

enumerator **WIFI\_REASON\_PEER\_INITIATED**

enumerator **WIFI\_REASON\_AP\_INITIATED**

enumerator **WIFI\_REASON\_INVALID\_FT\_ACTION\_FRAME\_COUNT**

enumerator **WIFI\_REASON\_INVALID\_PMKID**

enumerator **WIFI\_REASON\_INVALID\_MDE**

enumerator **WIFI\_REASON\_INVALID\_FTE**

enumerator **WIFI\_REASON\_TRANSMISSION\_LINK\_ESTABLISH\_FAILED**

enumerator **WIFI\_REASON\_ALTERNATIVE\_CHANNEL\_OCCUPIED**

enumerator **WIFI\_REASON\_BEACON\_TIMEOUT**

enumerator **WIFI\_REASON\_NO\_AP\_FOUND**

enumerator **WIFI\_REASON\_AUTH\_FAIL**

enumerator **WIFI\_REASON\_ASSOC\_FAIL**

enumerator **WIFI\_REASON\_HANDSHAKE\_TIMEOUT**

enumerator **WIFI\_REASON\_CONNECTION\_FAIL**

enumerator **WIFI\_REASON\_AP\_TSF\_RESET**

enumerator **WIFI\_REASON\_ROAMING**

enumerator **WIFI\_REASON\_ASSOC\_COMEBACK\_TIME\_TOO\_LONG**

enumerator **WIFI\_REASON\_SA\_QUERY\_TIMEOUT**

enum **wifi\_second\_chan\_t**

*Values:*

enumerator **WIFI\_SECOND\_CHAN\_NONE**

the channel width is HT20

enumerator **WIFI\_SECOND\_CHAN\_ABOVE**

the channel width is HT40 and the secondary channel is above the primary channel

enumerator **WIFI\_SECOND\_CHAN\_BELOW**

the channel width is HT40 and the secondary channel is below the primary channel

enum **wifi\_scan\_type\_t**

*Values:*

enumerator **WIFI\_SCAN\_TYPE\_ACTIVE**

active scan

enumerator **WIFI\_SCAN\_TYPE\_PASSIVE**

passive scan

enum **wifi\_cipher\_type\_t**

*Values:*

enumerator **WIFI\_CIPHER\_TYPE\_NONE**

the cipher type is none

enumerator **WIFI\_CIPHER\_TYPE\_WEP40**

the cipher type is WEP40

enumerator **WIFI\_CIPHER\_TYPE\_WEP104**

the cipher type is WEP104

enumerator **WIFI\_CIPHER\_TYPE\_TKIP**

the cipher type is TKIP

enumerator **WIFI\_CIPHER\_TYPE\_CCMP**

the cipher type is CCMP

enumerator **WIFI\_CIPHER\_TYPE\_TKIP\_CCMP**

the cipher type is TKIP and CCMP

enumerator **WIFI\_CIPHER\_TYPE\_AES\_CMAC128**

the cipher type is AES-CMAC-128

enumerator **WIFI\_CIPHER\_TYPE\_SMS4**

the cipher type is SMS4

enumerator **WIFI\_CIPHER\_TYPE\_GCMP**

the cipher type is GCMP

enumerator **WIFI\_CIPHER\_TYPE\_GCMP256**

the cipher type is GCMP-256

enumerator **WIFI\_CIPHER\_TYPE\_AES\_GMAC128**

the cipher type is AES-GMAC-128

enumerator **WIFI\_CIPHER\_TYPE\_AES\_GMAC256**

the cipher type is AES-GMAC-256

enumerator **WIFI\_CIPHER\_TYPE\_UNKNOWN**

the cipher type is unknown

enum **wifi\_ant\_t**

WiFi antenna.

*Values:*

enumerator **WIFI\_ANT\_ANT0**

WiFi antenna 0

enumerator **WIFI\_ANT\_ANT1**

WiFi antenna 1

enumerator **WIFI\_ANT\_MAX**

Invalid WiFi antenna

enum **wifi\_scan\_method\_t**

*Values:*

enumerator **WIFI\_FAST\_SCAN**

Do fast scan, scan will end after find SSID match AP

enumerator **WIFI\_ALL\_CHANNEL\_SCAN**

All channel scan, scan will end after scan all the channel

enum **wifi\_sort\_method\_t**

*Values:*

enumerator **WIFI\_CONNECT\_AP\_BY\_SIGNAL**

Sort match AP in scan list by RSSI

enumerator **WIFI\_CONNECT\_AP\_BY\_SECURITY**

Sort match AP in scan list by security mode

enum **wifi\_ps\_type\_t**

*Values:*

enumerator **WIFI\_PS\_NONE**

No power save

enumerator **WIFI\_PS\_MIN\_MODEM**

Minimum modem power saving. In this mode, station wakes up to receive beacon every DTIM period

enumerator **WIFI\_PS\_MAX\_MODEM**

Maximum modem power saving. In this mode, interval to receive beacons is determined by the `listen_interval` parameter in [wifi\\_sta\\_config\\_t](#)

enum **wifi\_bandwidth\_t**

*Values:*

enumerator **WIFI\_BW\_HT20**

enumerator **WIFI\_BW\_HT40**

enum **wifi\_sae\_pwe\_method\_t**

Configuration for SAE PWE derivation

*Values:*

enumerator **WPA3\_SAE\_PWE\_UNSPECIFIED**

enumerator **WPA3\_SAE\_PWE\_HUNT\_AND\_PECK**

enumerator **WPA3\_SAE\_PWE\_HASH\_TO\_ELEMENT**

enumerator **WPA3\_SAE\_PWE\_BOTH**

enum **wifi\_storage\_t**

*Values:*

enumerator **WIFI\_STORAGE\_FLASH**  
all configuration will store in both memory and flash

enumerator **WIFI\_STORAGE\_RAM**  
all configuration will only store in the memory

enum **wifi\_vendor\_ie\_type\_t**

Vendor Information Element type.

Determines the frame type that the IE will be associated with.

*Values:*

enumerator **WIFI\_VND\_IE\_TYPE\_BEACON**

enumerator **WIFI\_VND\_IE\_TYPE\_PROBE\_REQ**

enumerator **WIFI\_VND\_IE\_TYPE\_PROBE\_RESP**

enumerator **WIFI\_VND\_IE\_TYPE\_ASSOC\_REQ**

enumerator **WIFI\_VND\_IE\_TYPE\_ASSOC\_RESP**

enum **wifi\_vendor\_ie\_id\_t**

Vendor Information Element index.

Each IE type can have up to two associated vendor ID elements.

*Values:*

enumerator **WIFI\_VND\_IE\_ID\_0**

enumerator **WIFI\_VND\_IE\_ID\_1**

enum **wifi\_phy\_mode\_t**

Operation Phymode.

*Values:*

enumerator **WIFI\_PHY\_MODE\_LR**  
PHY mode for Low Rate

enumerator **WIFI\_PHY\_MODE\_11B**  
PHY mode for 11b

enumerator **WIFI\_PHY\_MODE\_11G**  
PHY mode for 11g

enumerator **WIFI\_PHY\_MODE\_HT20**

PHY mode for Bandwidth HT20

enumerator **WIFI\_PHY\_MODE\_HT40**

PHY mode for Bandwidth HT40

enumerator **WIFI\_PHY\_MODE\_HE20**

PHY mode for Bandwidth HE20

enum **wifi\_promiscuous\_pkt\_type\_t**

Promiscuous frame type.

Passed to promiscuous mode RX callback to indicate the type of parameter in the buffer.

*Values:*

enumerator **WIFI\_PKT\_MGMT**

Management frame, indicates 'buf' argument is *wifi\_promiscuous\_pkt\_t*

enumerator **WIFI\_PKT\_CTRL**

Control frame, indicates 'buf' argument is *wifi\_promiscuous\_pkt\_t*

enumerator **WIFI\_PKT\_DATA**

Data frame, indicates 'buf' argument is *wifi\_promiscuous\_pkt\_t*

enumerator **WIFI\_PKT\_MISC**

Other type, such as MIMO etc. 'buf' argument is *wifi\_promiscuous\_pkt\_t* but the payload is zero length.

enum **wifi\_ant\_mode\_t**

WiFi antenna mode.

*Values:*

enumerator **WIFI\_ANT\_MODE\_ANT0**

Enable WiFi antenna 0 only

enumerator **WIFI\_ANT\_MODE\_ANT1**

Enable WiFi antenna 1 only

enumerator **WIFI\_ANT\_MODE\_AUTO**

Enable WiFi antenna 0 and 1, automatically select an antenna

enumerator **WIFI\_ANT\_MODE\_MAX**

Invalid WiFi enabled antenna

enum **wifi\_phy\_rate\_t**

WiFi PHY rate encodings.

*Values:*

enumerator **WIFI\_PHY\_RATE\_1M\_L**

1 Mbps with long preamble

enumerator **WIFI\_PHY\_RATE\_2M\_L**

2 Mbps with long preamble

enumerator **WIFI\_PHY\_RATE\_5M\_L**

enumerator **WIFI\_PHY\_RATE\_MCS6\_SGI**  
MCS6 with short GI, 65 Mbps for 20MHz, 135 Mbps for 40MHz

enumerator **WIFI\_PHY\_RATE\_MCS7\_SGI**  
MCS7 with short GI, 72.2 Mbps for 20MHz, 150 Mbps for 40MHz

enumerator **WIFI\_PHY\_RATE\_LORA\_250K**  
250 Kbps

enumerator **WIFI\_PHY\_RATE\_LORA\_500K**  
500 Kbps

enumerator **WIFI\_PHY\_RATE\_MAX**

enum **wifi\_event\_t**

WiFi event declarations

*Values:*

enumerator **WIFI\_EVENT\_WIFI\_READY**

ESP32 WiFi ready

enumerator **WIFI\_EVENT\_SCAN\_DONE**

ESP32 finish scanning AP

enumerator **WIFI\_EVENT\_STA\_START**

ESP32 station start

enumerator **WIFI\_EVENT\_STA\_STOP**

ESP32 station stop

enumerator **WIFI\_EVENT\_STA\_CONNECTED**

ESP32 station connected to AP

enumerator **WIFI\_EVENT\_STA\_DISCONNECTED**

ESP32 station disconnected from AP

enumerator **WIFI\_EVENT\_STA\_AUTHMODE\_CHANGE**

the auth mode of AP connected by ESP32 station changed

enumerator **WIFI\_EVENT\_STA\_WPS\_ER\_SUCCESS**

ESP32 station wps succeeds in enrollee mode

enumerator **WIFI\_EVENT\_STA\_WPS\_ER\_FAILED**

ESP32 station wps fails in enrollee mode

enumerator **WIFI\_EVENT\_STA\_WPS\_ER\_TIMEOUT**

ESP32 station wps timeout in enrollee mode

enumerator **WIFI\_EVENT\_STA\_WPS\_ER\_PIN**

ESP32 station wps pin code in enrollee mode

enumerator **WIFI\_EVENT\_STA\_WPS\_ER\_PBC\_OVERLAP**

ESP32 station wps overlap in enrollee mode

enumerator **WIFI\_EVENT\_AP\_START**

ESP32 soft-AP start

enumerator **WIFI\_EVENT\_AP\_STOP**

ESP32 soft-AP stop

enumerator **WIFI\_EVENT\_AP\_STACONNECTED**

a station connected to ESP32 soft-AP

enumerator **WIFI\_EVENT\_AP\_STADISCONNECTED**

a station disconnected from ESP32 soft-AP

enumerator **WIFI\_EVENT\_AP\_PROBEREQRCVD**

Receive probe request packet in soft-AP interface

enumerator **WIFI\_EVENT\_FTM\_REPORT**

Receive report of FTM procedure

enumerator **WIFI\_EVENT\_STA\_BSS\_RSSI\_LOW**

AP' s RSSI crossed configured threshold

enumerator **WIFI\_EVENT\_ACTION\_TX\_STATUS**

Status indication of Action Tx operation

enumerator **WIFI\_EVENT\_ROC\_DONE**

Remain-on-Channel operation complete

enumerator **WIFI\_EVENT\_STA\_BEACON\_TIMEOUT**

ESP32 station beacon timeout

enumerator **WIFI\_EVENT\_CONNECTIONLESS\_MODULE\_WAKE\_INTERVAL\_START**

ESP32 connectionless module wake interval start

enumerator **WIFI\_EVENT\_AP\_WPS\_RG\_SUCCESS**

Soft-AP wps succeeds in registrar mode

enumerator **WIFI\_EVENT\_AP\_WPS\_RG\_FAILED**

Soft-AP wps fails in registrar mode

enumerator **WIFI\_EVENT\_AP\_WPS\_RG\_TIMEOUT**

Soft-AP wps timeout in registrar mode

enumerator **WIFI\_EVENT\_AP\_WPS\_RG\_PIN**

Soft-AP wps pin code in registrar mode

enumerator **WIFI\_EVENT\_AP\_WPS\_RG\_PBC\_OVERLAP**

Soft-AP wps overlap in registrar mode

enumerator **WIFI\_EVENT\_MAX**

Invalid WiFi event ID

enum **wifi\_event\_sta\_wps\_fail\_reason\_t**

Argument structure for WIFI\_EVENT\_STA\_WPS\_ER\_FAILED event

*Values:*

enumerator **WPS\_FAIL\_REASON\_NORMAL**

ESP32 WPS normal fail reason

enumerator **WPS\_FAIL\_REASON\_RECV\_M2D**

ESP32 WPS receive M2D frame

enumerator **WPS\_FAIL\_REASON\_RECV\_DEAUTH**

Recv deauth from AP while wps handshake

enumerator **WPS\_FAIL\_REASON\_MAX**

enum **wifi\_ftm\_status\_t**

FTM operation status types.

*Values:*

enumerator **FTM\_STATUS\_SUCCESS**

FTM exchange is successful

enumerator **FTM\_STATUS\_UNSUPPORTED**

Peer does not support FTM

enumerator **FTM\_STATUS\_CONF\_REJECTED**

Peer rejected FTM configuration in FTM Request

enumerator **FTM\_STATUS\_NO\_RESPONSE**

Peer did not respond to FTM Requests

enumerator **FTM\_STATUS\_FAIL**

Unknown error during FTM exchange

enumerator **FTM\_STATUS\_NO\_VALID\_MSMT**

FTM session did not result in any valid measurements

enumerator **FTM\_STATUS\_USER\_TERM**

User triggered termination

enum **wps\_fail\_reason\_t**

*Values:*

enumerator **WPS\_AP\_FAIL\_REASON\_NORMAL**

WPS normal fail reason

enumerator **WPS\_AP\_FAIL\_REASON\_CONFIG**

WPS failed due to incorrect config

enumerator **WPS\_AP\_FAIL\_REASON\_AUTH**

WPS failed during auth

enumerator **WPS\_AP\_FAIL\_REASON\_MAX**

## Header File

- `components/wpa_supplicant/esp_supplicant/include/esp_eap_client.h`

## Functions

*esp\_err\_t* **esp\_wifi\_sta\_enterprise\_enable** (void)

Enable EAP authentication(WiFi Enterprise) for the station mode.

This function enables Extensible Authentication Protocol (EAP) authentication for the Wi-Fi station mode. When EAP authentication is enabled, the ESP device will attempt to authenticate with the configured EAP credentials when connecting to a secure Wi-Fi network.

---

**Note:** Before calling this function, ensure that the Wi-Fi configuration and EAP credentials (such as username and password) have been properly set using the appropriate configuration APIs.

---

### Returns

- `ESP_OK`: EAP authentication enabled successfully.
- `ESP_ERR_NO_MEM`: Failed to enable EAP authentication due to memory allocation failure.

*esp\_err\_t* **esp\_wifi\_sta\_enterprise\_disable** (void)

Disable EAP authentication(WiFi Enterprise) for the station mode.

This function disables Extensible Authentication Protocol (EAP) authentication for the Wi-Fi station mode. When EAP authentication is disabled, the ESP device will not attempt to authenticate using EAP credentials when connecting to a secure Wi-Fi network.

---

**Note:** Disabling EAP authentication may cause the device to connect to the Wi-Fi network using other available authentication methods, if configured using `esp_wifi_set_config()`.

---

### Returns

- `ESP_OK`: EAP authentication disabled successfully.
- `ESP_ERR_INVALID_STATE`: EAP client is in an invalid state for disabling.

*esp\_err\_t* **esp\_eap\_client\_set\_identity** (const unsigned char \*identity, int len)

Set identity for PEAP/TTLS authentication method.

This function sets the identity to be used during PEAP/TTLS authentication.

### Parameters

- **identity** –[in] Pointer to the identity data.
- **len** –[in] Length of the identity data (limited to 1~127 bytes).

### Returns

- `ESP_OK`: The identity was set successfully.
- `ESP_ERR_INVALID_ARG`: Invalid argument (`len <= 0` or `len >= 128`).
- `ESP_ERR_NO_MEM`: Memory allocation failure.

void **esp\_eap\_client\_clear\_identity** (void)

Clear the previously set identity for PEAP/TTLS authentication.

This function clears the identity that was previously set for the EAP client. After calling this function, the EAP client will no longer use the previously configured identity during the authentication process.

*esp\_err\_t* **esp\_eap\_client\_set\_username** (const unsigned char \*username, int len)

Set username for PEAP/TTLS authentication method.

This function sets the username to be used during PEAP/TTLS authentication.

### Parameters

- **username** –[in] Pointer to the username data.
- **len** –[in] Length of the username data (limited to 1~127 bytes).

**Returns**

- ESP\_OK: The username was set successfully.
- ESP\_ERR\_INVALID\_ARG: Failed due to an invalid argument (len <= 0 or len >= 128).
- ESP\_ERR\_NO\_MEM: Failed due to memory allocation failure.

void **esp\_eap\_client\_clear\_username** (void)

Clear username for PEAP/TTLS method.

This function clears the previously set username for the EAP client.

*esp\_err\_t* **esp\_eap\_client\_set\_password** (const unsigned char \*password, int len)

Set password for PEAP/TTLS authentication method.

This function sets the password to be used during PEAP/TTLS authentication.

**Parameters**

- **password** –[in] Pointer to the password data.
- **len** –[in] Length of the password data (len > 0).

**Returns**

- ESP\_OK: The password was set successfully.
- ESP\_ERR\_INVALID\_ARG: Failed due to an invalid argument (len <= 0).
- ESP\_ERR\_NO\_MEM: Failed due to memory allocation failure.

void **esp\_eap\_client\_clear\_password** (void)

Clear password for PEAP/TTLS method.

This function clears the previously set password for the EAP client.

*esp\_err\_t* **esp\_eap\_client\_set\_new\_password** (const unsigned char \*new\_password, int len)

Set a new password for MSCHAPv2 authentication method.

This function sets the new password to be used during MSCHAPv2 authentication. The new password is used to substitute the old password when an eap-mschapv2 failure request message with error code ERROR\_PASSWD\_EXPIRED is received.

**Parameters**

- **new\_password** –[in] Pointer to the new password data.
- **len** –[in] Length of the new password data.

**Returns**

- ESP\_OK: The new password was set successfully.
- ESP\_ERR\_INVALID\_ARG: Failed due to an invalid argument (len <= 0).
- ESP\_ERR\_NO\_MEM: Failed due to memory allocation failure.

void **esp\_eap\_client\_clear\_new\_password** (void)

Clear new password for MSCHAPv2 method.

This function clears the previously set new password for the EAP client.

*esp\_err\_t* **esp\_eap\_client\_set\_ca\_cert** (const unsigned char \*ca\_cert, int ca\_cert\_len)

Set CA certificate for EAP authentication.

This function sets the Certificate Authority (CA) certificate to be used during EAP authentication. The CA certificate is passed to the EAP client module through a global pointer.

**Parameters**

- **ca\_cert** –[in] Pointer to the CA certificate data.
- **ca\_cert\_len** –[in] Length of the CA certificate data.

**Returns**

- ESP\_OK: The CA certificate was set successfully.

void **esp\_eap\_client\_clear\_ca\_cert** (void)

Clear the previously set Certificate Authority (CA) certificate for EAP authentication.

This function clears the CA certificate that was previously set for the EAP client. After calling this function, the EAP client will no longer use the previously configured CA certificate during the authentication process.

*esp\_err\_t* **esp\_eap\_client\_set\_certificate\_and\_key** (const unsigned char \*client\_cert, int client\_cert\_len, const unsigned char \*private\_key, int private\_key\_len, const unsigned char \*private\_key\_password, int private\_key\_passwd\_len)

Set client certificate and private key for EAP authentication.

This function sets the client certificate and private key to be used during authentication. Optionally, a private key password can be provided for encrypted private keys.

**Attention** 1. The client certificate, private key, and private key password are provided as pointers to the respective data arrays.

**Attention** 2. The client\_cert, private\_key, and private\_key\_password should be zero-terminated.

#### Parameters

- **client\_cert** –[in] Pointer to the client certificate data.
- **client\_cert\_len** –[in] Length of the client certificate data.
- **private\_key** –[in] Pointer to the private key data.
- **private\_key\_len** –[in] Length of the private key data (limited to 1~4096 bytes).
- **private\_key\_password** –[in] Pointer to the private key password data (optional).
- **private\_key\_passwd\_len** –[in] Length of the private key password data (can be 0 for no password).

#### Returns

- ESP\_OK: The certificate, private key, and password (if provided) were set successfully.

void **esp\_eap\_client\_clear\_certificate\_and\_key** (void)

Clear the previously set client certificate and private key for EAP authentication.

This function clears the client certificate and private key that were previously set for the EAP client. After calling this function, the EAP client will no longer use the previously configured certificate and private key during the authentication process.

*esp\_err\_t* **esp\_eap\_client\_set\_disable\_time\_check** (bool disable)

Set EAP client certificates time check (disable or not).

This function enables or disables the time check for EAP client certificates. When disabled, the certificates' expiration time will not be checked during the authentication process.

**Parameters** **disable** –[in] True to disable EAP client certificates time check, false to enable it.

#### Returns

- ESP\_OK: The EAP client certificates time check setting was updated successfully.

*esp\_err\_t* **esp\_eap\_client\_get\_disable\_time\_check** (bool \*disable)

Get EAP client certificates time check status.

This function retrieves the current status of the EAP client certificates time check.

**Parameters** **disable** –[out] Pointer to a boolean variable to store the disable status.

#### Returns

- ESP\_OK: The status of EAP client certificates time check was retrieved successfully.

*esp\_err\_t* **esp\_eap\_client\_set\_ttls\_phase2\_method** (*esp\_eap\_ttls\_phase2\_types* type)

Set EAP-TTLS phase 2 method.

This function sets the phase 2 method to be used during EAP-TTLS authentication.

**Parameters** **type** **–[in]** The type of phase 2 method to be used (e.g., EAP, MSCHAPv2, MSCHAP, PAP, CHAP).

**Returns**

- ESP\_OK: The EAP-TTLS phase 2 method was set successfully.

*esp\_err\_t* **esp\_eap\_client\_set\_suiteb\_192bit\_certification** (bool enable)

Enable or disable Suite-B 192-bit certification checks.

This function enables or disables the 192-bit Suite-B certification checks during EAP-TLS authentication. Suite-B is a set of cryptographic algorithms which generally are considered more secure.

**Parameters** **enable** **–[in]** True to enable 192-bit Suite-B certification checks, false to disable it.

**Returns**

- ESP\_OK: The 192-bit Suite-B certification checks were set successfully.

*esp\_err\_t* **esp\_eap\_client\_set\_pac\_file** (const unsigned char \*pac\_file, int pac\_file\_len)

Set the PAC (Protected Access Credential) file for EAP-FAST authentication.

EAP-FAST requires a PAC file that contains the client's credentials.

**Attention** 1. For files read from the file system, length has to be decremented by 1 byte.

**Attention** 2. Disabling the WPA\_MBEDTLS\_TLS\_CLIENT config is required to use EAP-FAST.

**Parameters**

- **pac\_file** **–[in]** Pointer to the PAC file buffer.
- **pac\_file\_len** **–[in]** Length of the PAC file buffer.

**Returns**

- ESP\_OK: The PAC file for EAP-FAST authentication was set successfully.

*esp\_err\_t* **esp\_eap\_client\_set\_fast\_params** (*esp\_eap\_fast\_config* config)

Set the parameters for EAP-FAST Phase 1 authentication.

EAP-FAST supports Fast Provisioning, where clients can be authenticated faster using precomputed keys (PAC). This function allows configuring parameters for Fast Provisioning.

**Attention** 1. Disabling the WPA\_MBEDTLS\_TLS\_CLIENT config is required to use EAP-FAST.

**Parameters** **config** **–[in]** Configuration structure with Fast Provisioning parameters.

**Returns**

- ESP\_OK: The parameters for EAP-FAST Phase 1 authentication were set successfully.

*esp\_err\_t* **esp\_eap\_client\_use\_default\_cert\_bundle** (bool use\_default\_bundle)

Use the default certificate bundle for EAP authentication.

By default, the EAP client uses a built-in certificate bundle for server verification. Enabling this option allows the use of the default certificate bundle.

**Parameters** **use\_default\_bundle** **–[in]** True to use the default certificate bundle, false to use a custom bundle.

**Returns**

- ESP\_OK: The option to use the default certificate bundle was set successfully.

## Structures

struct **esp\_eap\_fast\_config**

Configuration settings for EAP-FAST (Extensible Authentication Protocol - Flexible Authentication via Secure Tunneling).

This structure defines the configuration options that can be used to customize the behavior of the EAP-FAST authentication protocol, specifically for Fast Provisioning and PAC (Protected Access Credential) handling.

### Public Members

int **fast\_provisioning**

Enable or disable Fast Provisioning in EAP-FAST (0 = disabled, 1 = enabled)

int **fast\_max\_pac\_list\_len**

Maximum length of the PAC (Protected Access Credential) list

bool **fast\_pac\_format\_binary**

Set to true for binary format PAC, false for ASCII format PAC

### Enumerations

enum **esp\_eap\_ttls\_phase2\_types**

Enumeration of phase 2 authentication types for EAP-TTLS.

This enumeration defines the supported phase 2 authentication methods that can be used in the EAP-TTLS (Extensible Authentication Protocol - Tunneled Transport Layer Security) protocol for the second authentication phase.

*Values:*

enumerator **ESP\_EAP\_TTLS\_PHASE2\_EAP**

EAP (Extensible Authentication Protocol)

enumerator **ESP\_EAP\_TTLS\_PHASE2\_MSCHAPV2**

MS-CHAPv2 (Microsoft Challenge Handshake Authentication Protocol - Version 2)

enumerator **ESP\_EAP\_TTLS\_PHASE2\_MSCHAP**

MS-CHAP (Microsoft Challenge Handshake Authentication Protocol)

enumerator **ESP\_EAP\_TTLS\_PHASE2\_PAP**

PAP (Password Authentication Protocol)

enumerator **ESP\_EAP\_TTLS\_PHASE2\_CHAP**

CHAP (Challenge Handshake Authentication Protocol)

### Header File

- [components/wpa\\_supplicant/esp\\_supplicant/include/esp\\_wps.h](#)

### Functions

*esp\_err\_t* **esp\_wifi\_wps\_enable** (const *esp\_wps\_config\_t* \*config)

Enable Wi-Fi WPS function.

**Parameters** **config** –: WPS config to be used in connection

**Returns**

- **ESP\_OK** : succeed
- **ESP\_ERR\_WIFI\_WPS\_TYPE** : wps type is invalid

- ESP\_ERR\_WIFI\_WPS\_MODE : wifi is not in station mode or sniffer mode is on
- ESP\_FAIL : wps initialization fails

*esp\_err\_t* **esp\_wifi\_wps\_disable** (void)

Disable Wi-Fi WPS function and release resource it taken.

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_WIFI\_WPS\_MODE : wifi is not in station mode or sniffer mode is on

*esp\_err\_t* **esp\_wifi\_wps\_start** (int timeout\_ms)

Start WPS session.

**Attention** WPS can only be used when station is enabled. WPS needs to be enabled first for using this API.

**Parameters** **timeout\_ms** -: deprecated: This argument' s value will have not effect in functionality of API. The argument will be removed in future. The app should start WPS and register for WIFI events to get the status. WPS status is updated through WPS events. See `wifi_event_t` enum for more info.

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_WIFI\_WPS\_TYPE : wps type is invalid
- ESP\_ERR\_WIFI\_WPS\_MODE : wifi is not in station mode or sniffer mode is on
- ESP\_ERR\_WIFI\_WPS\_SM : wps state machine is not initialized
- ESP\_FAIL : wps initialization fails

*esp\_err\_t* **esp\_wifi\_ap\_wps\_enable** (const *esp\_wps\_config\_t* \*config)

Enable Wi-Fi AP WPS function.

**Attention** WPS can only be used when softAP is enabled.

**Parameters** **config** -wps configuration to be used.

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_WIFI\_WPS\_TYPE : wps type is invalid
- ESP\_ERR\_WIFI\_WPS\_MODE : wifi is not in station mode or sniffer mode is on
- ESP\_FAIL : wps initialization fails

*esp\_err\_t* **esp\_wifi\_ap\_wps\_disable** (void)

Disable Wi-Fi SoftAP WPS function and release resource it taken.

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_WIFI\_WPS\_MODE : wifi is not in station mode or sniffer mode is on

*esp\_err\_t* **esp\_wifi\_ap\_wps\_start** (const unsigned char \*pin)

WPS starts to work.

**Attention** WPS can only be used when softAP is enabled.

**Parameters** **pin** -: Pin to be used in case of WPS mode is pin. If Pin is not provided, device will use the pin generated/provided during `esp_wifi_ap_wps_enable()` and reported in `WIFI_EVENT_AP_WPS_RG_PIN`

**Returns**

- ESP\_OK : succeed
- ESP\_ERR\_WIFI\_WPS\_TYPE : wps type is invalid
- ESP\_ERR\_WIFI\_WPS\_MODE : wifi is not in station mode or sniffer mode is on

- `ESP_ERR_WIFI_WPS_SM` : wps state machine is not initialized
- `ESP_FAIL` : wps initialization fails

## Structures

struct **wps\_factory\_information\_t**

Structure representing WPS factory information for ESP device.

This structure holds various strings representing factory information for a device, such as the manufacturer, model number, model name, and device name. Each string is a null-terminated character array. If any of the strings are empty, the default values are used.

### Public Members

char **manufacturer**[WPS\_MAX\_MANUFACTURER\_LEN]

Manufacturer of the device. If empty, the default manufacturer is used.

char **model\_number**[WPS\_MAX\_MODEL\_NUMBER\_LEN]

Model number of the device. If empty, the default model number is used.

char **model\_name**[WPS\_MAX\_MODEL\_NAME\_LEN]

Model name of the device. If empty, the default model name is used.

char **device\_name**[WPS\_MAX\_DEVICE\_NAME\_LEN]

Device name. If empty, the default device name is used.

struct **esp\_wps\_config\_t**

Structure representing configuration settings for WPS (Wi-Fi Protected Setup).

This structure encapsulates various configuration settings for WPS, including the WPS type (PBC or PIN), factory information that will be shown in the WPS Information Element (IE), and a PIN if the WPS type is set to PIN.

### Public Members

*wps\_type\_t* **wps\_type**

The type of WPS to be used (PBC or PIN).

*wps\_factory\_information\_t* **factory\_info**

Factory information to be shown in the WPS Information Element (IE). Vendor can choose to display their own information.

char **pin**[PIN\_LEN]

WPS PIN (Personal Identification Number) used when `wps_type` is set to `WPS_TYPE_PIN`.

## Macros

**ESP\_ERR\_WIFI\_REGISTRAR**

WPS registrar is not supported

**ESP\_ERR\_WIFI\_WPS\_TYPE**

WPS type error

**ESP\_ERR\_WIFI\_WPS\_SM**

WPS state machine is not initialized

**WPS\_MAX\_MANUFACTURER\_LEN**

Maximum length of the manufacturer name in WPS information

**WPS\_MAX\_MODEL\_NUMBER\_LEN**

Maximum length of the model number in WPS information

**WPS\_MAX\_MODEL\_NAME\_LEN**

Maximum length of the model name in WPS information

**WPS\_MAX\_DEVICE\_NAME\_LEN**

Maximum length of the device name in WPS information

**PIN\_LEN**

The length of the WPS PIN (Personal Identification Number).

**WPS\_CONFIG\_INIT\_DEFAULT** (type)

Initialize a default WPS configuration structure with specified WPS type.

This macro initializes a *esp\_wps\_config\_t* structure with default values for the specified WPS type. It sets the WPS type, factory information (including default manufacturer, model number, model name, and device name), and a default PIN value if applicable.

**Parameters**

- **type** –The WPS type to be used (PBC or PIN).

**Returns** An initialized *esp\_wps\_config\_t* structure with the specified WPS type and default values.

**Type Definitions**

```
typedef enum wps_type wps_type_t
```

Enumeration of WPS (Wi-Fi Protected Setup) types.

**Enumerations**

```
enum wps_type
```

Enumeration of WPS (Wi-Fi Protected Setup) types.

*Values:*

```
enumerator WPS_TYPE_DISABLE
```

WPS is disabled

```
enumerator WPS_TYPE_PBC
```

WPS Push Button Configuration method

```
enumerator WPS_TYPE_PIN
```

WPS PIN (Personal Identification Number) method

enumerator **WPS\_TYPE\_MAX**

Maximum value for WPS type enumeration

### Header File

- [components/wpa\\_supplicant/esp\\_supplicant/include/esp\\_rrm.h](#)

### Functions

int **esp\_rrm\_send\_neighbor\_rep\_request** (*neighbor\_rep\_request\_cb* cb, void \*cb\_ctx)

Send Radio measurement neighbor report request to connected AP.

#### Parameters

- **cb** –callback function for neighbor report
- **cb\_ctx** –callback context

#### Returns

- 0: success
- -1: AP does not support RRM
- -2: station not connected to AP

bool **esp\_rrm\_is\_rrm\_supported\_connection** (void)

Check RRM capability of connected AP.

#### Returns

- true: AP supports RRM
- false: AP does not support RRM or station not connected to AP

### Type Definitions

typedef void (\***neighbor\_rep\_request\_cb**)(void \*ctx, const uint8\_t \*report, size\_t report\_len)

Callback function type to get neighbor report.

**Param ctx** neighbor report context

**Param report** neighbor report

**Param report\_len** neighbor report length

#### Return

- void

### Header File

- [components/wpa\\_supplicant/esp\\_supplicant/include/esp\\_wnm.h](#)

### Functions

int **esp\_wnm\_send\_bss\_transition\_mgmt\_query** (enum *btm\_query\_reason* query\_reason, const char \*btm\_candidates, int cand\_list)

Send bss transition query to connected AP.

#### Parameters

- **query\_reason** –reason for sending query
- **btm\_candidates** –btm candidates list if available
- **cand\_list** –whether candidate list to be included from scan results available in supplicant's cache.

#### Returns

- 0: success
- -1: AP does not support BTM
- -2: station not connected to AP

bool **esp\_wmm\_is\_btm\_supported\_connection** (void)

Check bss transition capability of connected AP.

**Returns**

- true: AP supports BTM
- false: AP does not support BTM or station not connected to AP

## Enumerations

enum **btm\_query\_reason**

enum btm\_query\_reason: Reason code for sending btm query

*Values:*

enumerator **REASON\_UNSPECIFIED**

enumerator **REASON\_FRAME\_LOSS**

enumerator **REASON\_DELAY**

enumerator **REASON\_BANDWIDTH**

enumerator **REASON\_LOAD\_BALANCE**

enumerator **REASON\_RSSI**

enumerator **REASON\_RETRANSMISSIONS**

enumerator **REASON\_INTERFERENCE**

enumerator **REASON\_GRAY\_ZONE**

enumerator **REASON\_PREMIUM\_AP**

## Header File

- [components/wpa\\_supplicant/esp\\_supplicant/include/esp\\_mbo.h](#)

## Functions

int **esp\_mbo\_update\_non\_pref\_chan** (struct *non\_pref\_chan\_s* \*non\_pref\_chan)

Update channel preference for MBO IE.

**Parameters** **non\_pref\_chan** –Non preference channel list

**Returns**

- 0: success else failure

## Structures

struct **non\_pref\_chan**

Structure representing a non-preferred channel in a wireless network.

This structure encapsulates information about a non-preferred channel including the reason for its non-preference, the operating class, channel number, and preference level.

### Public Members

enum *non\_pref\_chan\_reason* **reason**

Reason for the channel being non-preferred

uint8\_t **oper\_class**

Operating class of the channel

uint8\_t **chan**

Channel number

uint8\_t **preference**

Preference level of the channel

struct **non\_pref\_chan\_s**

Structure representing a list of non-preferred channels in a wireless network.

This structure encapsulates information about a list of non-preferred channels including the number of non-preferred channels and an array of structures representing individual non-preferred channels.

### Public Members

size\_t **non\_pref\_chan\_num**

Number of non-preferred channels in the list

struct *non\_pref\_chan* **chan[]**

Array of structures representing individual non-preferred channels

### Enumerations

enum **non\_pref\_chan\_reason**

Enumeration of reasons for a channel being non-preferred in a wireless network.

This enumeration defines various reasons why a specific channel might be considered non-preferred in a wireless network configuration.

*Values:*

enumerator **NON\_PREF\_CHAN\_REASON\_UNSPECIFIED**

Unspecified reason for non-preference

enumerator **NON\_PREF\_CHAN\_REASON\_RSSI**

Non-preferred due to low RSSI (Received Signal Strength Indication)

enumerator **NON\_PREF\_CHAN\_REASON\_EXT\_INTERFERENCE**

Non-preferred due to external interference

enumerator **NON\_PREF\_CHAN\_REASON\_INT\_INTERFERENCE**

Non-preferred due to internal interference

## Wi-Fi Easy Connect™ (DPP)

Wi-Fi Easy Connect™, also known as Device Provisioning Protocol (DPP) or Easy Connect, is a provisioning protocol certified by Wi-Fi Alliance. It is a secure and standardized provisioning protocol for configuration of Wi-Fi Devices. With Easy Connect adding a new device to a network is as simple as scanning a QR Code. This reduces complexity and enhances user experience while onboarding devices without UI like Smart Home and IoT products. Unlike old protocols like WiFi Protected Setup (WPS), Wi-Fi Easy Connect incorporates strong encryption through public key cryptography to ensure networks remain secure as new devices are added. Easy Connect brings many benefits in the User Experience:

- Simple and intuitive to use; no lengthy instructions to follow for new device setup
- No need to remember and enter passwords into the device being provisioned
- Works with electronic or printed QR codes, or human-readable strings
- Supports both WPA2 and WPA3 networks

Please refer to Wi-Fi Alliance's official page on [Easy Connect](#) for more information.

ESP32-C2 supports Enrollee mode of Easy Connect with QR Code as the provisioning method. A display is required to display this QR Code. Users can scan this QR Code using their capable device and provision the ESP32-C2 to their Wi-Fi network. The provisioning device needs to be connected to the AP which need not support Wi-Fi Easy Connect™. Easy Connect is still an evolving protocol. Of known platforms that support the QR Code method are some Android smartphones with Android 10 or higher. To use Easy Connect no additional App needs to be installed on the supported smartphone.

**Application Example** Example on how to provision ESP32-C2 using a supported smartphone: [wifi/wifi\\_easy\\_connect/dpp-enrollee](#).

## API Reference

### Header File

- [components/wpa\\_supplicant/esp\\_supplicant/include/esp\\_dpp.h](#)

### Functions

*esp\_err\_t* **esp\_supp\_dpp\_init** (*esp\_supp\_dpp\_event\_cb\_t* evt\_cb)

Initialize DPP Supplicant.

Starts DPP Supplicant <b>and</b> initializes related Data Structures.
---

return

- ESP\_OK: Success
- ESP\_FAIL: Failure

**Parameters** *evt\_cb* –Callback function to receive DPP related events

void **esp\_supp\_dpp\_deinit** (void)

De-initialize DPP Supplicant.

Frees memory <b>from</b> DPP Supplicant Data Structures.
--

*esp\_err\_t* **esp\_supp\_dpp\_bootstrap\_gen** (const char \*chan\_list, *esp\_supp\_dpp\_bootstrap\_t* type, const char \*key, const char \*info)

Generates Bootstrap Information as an Enrollee.

Generates Out Of Band Bootstrap information **as** an Enrollee which can be used by a DPP Configurator to provision the Enrollee.

#### Parameters

- **chan\_list** –List of channels device will be available on for listening
- **type** –Bootstrap method type, only QR Code method is supported for now.
- **key** –(Optional) 32 byte Raw Private Key for generating a Bootstrapping Public Key
- **info** –(Optional) Ancilliary Device Information like Serial Number

#### Returns

- ESP\_OK: Success
- ESP\_FAIL: Failure

*esp\_err\_t* **esp\_supp\_dpp\_start\_listen** (void)

Start listening on Channels provided during esp\_supp\_dpp\_bootstrap\_gen.

Listens on every Channel **from** Channel List **for** a pre-defined wait time.

#### Returns

- ESP\_OK: Success
- ESP\_FAIL: Generic Failure
- ESP\_ERR\_INVALID\_STATE: ROC attempted before WiFi is started
- ESP\_ERR\_NO\_MEM: Memory allocation failed while posting ROC request

void **esp\_supp\_dpp\_stop\_listen** (void)

Stop listening on Channels.

Stops listening on Channels **and** cancels ongoing listen operation.

## Macros

**ESP\_DPP\_AUTH\_TIMEOUT\_SECS**

**ESP\_ERR\_DPP\_FAILURE**

Generic failure during DPP Operation

**ESP\_ERR\_DPP\_TX\_FAILURE**

DPP Frame Tx failed OR not Acked

**ESP\_ERR\_DPP\_INVALID\_ATTR**

Encountered invalid DPP Attribute

**ESP\_ERR\_DPP\_AUTH\_TIMEOUT**

DPP Auth response was not recieved in time

## Type Definitions

typedef enum *dpp\_bootstrap\_type* **esp\_supp\_dpp\_bootstrap\_t**

Types of Bootstrap Methods for DPP.

typedef void (\***esp\_supp\_dpp\_event\_cb\_t**)(*esp\_supp\_dpp\_event\_t* evt, void \*data)

Callback function for receiving DPP Events from Supplicant.

Callback function will be called **with** DPP related information.

**Param evt** DPP event ID

**Param data** Event data payload

## Enumerations

enum **dpp\_bootstrap\_type**

Types of Bootstrap Methods for DPP.

*Values:*

enumerator **DPP\_BOOTSTRAP\_QR\_CODE**

QR Code Method

enumerator **DPP\_BOOTSTRAP\_PKEX**

Proof of Knowledge Method

enumerator **DPP\_BOOTSTRAP\_NFC\_URI**

NFC URI record Method

enum **esp\_supp\_dpp\_event\_t**

Types of Callback Events received from DPP Supplicant.

*Values:*

enumerator **ESP\_SUPP\_DPP\_URI\_READY**

URI is ready through Bootstrapping

enumerator **ESP\_SUPP\_DPP\_CFG\_RECVD**

Config received via DPP Authentication

enumerator **ESP\_SUPP\_DPP\_FAIL**

DPP Authentication failure

Code examples for the Wi-Fi API are provided in the [wifi](#) directory of ESP-IDF examples.

## 2.5.2 Ethernet

### Ethernet

**Overview** ESP-IDF provides a set of consistent and flexible APIs to support both internal Ethernet MAC (EMAC) controller and external SPI-Ethernet modules.

This programming guide is split into the following sections:

1. *Basic Ethernet Concepts*
2. *Configure MAC and PHY*
3. *Connect Driver to TCP/IP Stack*
4. *Misc control of Ethernet driver*

**Basic Ethernet Concepts** Ethernet is an asynchronous Carrier Sense Multiple Access with Collision Detect (CSMA/CD) protocol/interface. It is generally not well suited for low power applications. However, with ubiquitous deployment, internet connectivity, high data rates and limitless range expandability, Ethernet can accommodate nearly all wired communications.

Normal IEEE 802.3 compliant Ethernet frames are between 64 and 1518 bytes in length. They are made up of five or six different fields: a destination MAC address (DA), a source MAC address (SA), a type/length field, data payload, an optional padding field and a Cyclic Redundancy Check (CRC). Additionally, when transmitted on the Ethernet medium, a 7-byte preamble field and Start-of-Frame (SOF) delimiter byte are appended to the beginning of the Ethernet packet.

Thus the traffic on the twist-pair cabling will appear as shown below:

Fig. 2: Ethernet Data Frame Format

**Preamble and Start-of-Frame Delimiter** The preamble contains seven bytes of 55H, it allows the receiver to lock onto the stream of data before the actual frame arrives. The Start-of-Frame Delimiter (SFD) is a binary sequence 10101011 (as seen on the physical medium). It is sometimes considered to be part of the preamble.

When transmitting and receiving data, the preamble and SFD bytes will automatically be generated or stripped from the packets.

**Destination Address** The destination address field contains a 6-byte length MAC address of the device that the packet is directed to. If the Least Significant bit in the first byte of the MAC address is set, the address is a multi-cast destination. For example, 01-00-00-00-F0-00 and 33-45-67-89-AB-CD are multi-cast addresses, while 00-00-00-00-F0-00 and 32-45-67-89-AB-CD are not. Packets with multi-cast destination addresses are designed to arrive and be important to a selected group of Ethernet nodes. If the destination address field is the reserved multi-cast address, i.e. FF-FF-FF-FF-FF-FF, the packet is a broadcast packet and it will be directed to everyone sharing the network. If the Least Significant bit in the first byte of the MAC address is clear, the address is a uni-cast address and will be designed for usage by only the addressed node.

Normally the EMAC controller incorporates receive filters which can be used to discard or accept packets with multi-cast, broadcast and/or uni-cast destination addresses. When transmitting packets, the host controller is responsible for writing the desired destination address into the transmit buffer.

**Source Address** The source address field contains a 6-byte length MAC address of the node which created the Ethernet packet. Users of Ethernet must generate a unique MAC address for each controller used. MAC addresses consist of two portions. The first three bytes are known as the Organizationally Unique Identifier (OUI). OUIs are distributed by the IEEE. The last three bytes are address bytes at the discretion of the company that purchased the OUI. More information about MAC Address used in ESP-IDF, please see [MAC Address Allocation](#).

When transmitting packets, the assigned source MAC address must be written into the transmit buffer by the host controller.

**Type / Length** The type/length field is a 2-byte field, if the value in this field is  $\leq 1500$  (decimal), it is considered a length field and it specifies the amount of non-padding data which follows in the data field. If the value is  $\geq 1536$ , it represents the protocol the following packet data belongs to. The following are the most common type values:

- IPv4 = 0800H
- IPv6 = 86DDH
- ARP = 0806H

Users implementing proprietary networks may choose to treat this field as a length field, while applications implementing protocols such as the Internet Protocol (IP) or Address Resolution Protocol (ARP), should program this field with the appropriate type defined by the protocol's specification when transmitting packets.

**Payload** The payload field is a variable length field, anywhere from 0 to 1500 bytes. Larger data packets will violate Ethernet standards and will be dropped by most Ethernet nodes. This field contains the client data, such as an IP datagram.

**Padding and FCS** The padding field is a variable length field added to meet IEEE 802.3 specification requirements when small data payloads are used. The DA, SA, type, payload and padding of an Ethernet packet must be no smaller than 60 bytes. Adding the required 4-byte FCS field, packets must be no smaller than 64 bytes. If the data field is less than 46 bytes long, a padding field is required.

The FCS field is a 4-byte field which contains an industry standard 32-bit CRC calculated with the data from the DA, SA, type, payload and padding fields. Given the complexity of calculating a CRC, the hardware normally will automatically generate a valid CRC and transmit it. Otherwise, the host controller must generate the CRC and place it in the transmit buffer.

Normally, the host controller does not need to concern itself with padding and the CRC which the hardware EMAC will also be able to automatically generate when transmitting and verify when receiving. However, the padding and CRC fields will be written into the receive buffer when packets arrive, so they may be evaluated by the host controller if needed.

---

**Note:** Besides the basic data frame described above, there're two other common frame types in 10/100 Mbps Ethernet: control frames and VLAN tagged frames. They're not supported in ESP-IDF.

---

**Configure MAC and PHY** Ethernet driver is composed of two parts: MAC and PHY.

We need to setup necessary parameters for MAC and PHY respectively based on your Ethernet board design and then combine the two together, completing the driver installation.

Configuration for MAC is described in `eth_mac_config_t`, including:

- `eth_mac_config_t::sw_reset_timeout_ms`: software reset timeout value, in milliseconds, typically MAC reset should be finished within 100ms.
- `eth_mac_config_t::rx_task_stack_size` and `eth_mac_config_t::rx_task_prio`: the MAC driver creates a dedicated task to process incoming packets, these two parameters are used to set the stack size and priority of the task.
- `eth_mac_config_t::flags`: specifying extra features that the MAC driver should have, it could be useful in some special situations. The value of this field can be OR' d with macros prefixed with `ETH_MAC_FLAG_`. For example, if the MAC driver should work when cache is disabled, then you should configure this field with `ETH_MAC_FLAG_WORK_WITH_CACHE_DISABLE`.

Configuration for PHY is described in `eth_phy_config_t`, including:

- `eth_phy_config_t::phy_addr`: multiple PHY device can share the same SMI bus, so each PHY needs a unique address. Usually this address is configured during hardware design by pulling up/down some PHY strapping pins. You can set the value from 0 to 15 based on your Ethernet board. Especially, if the SMI bus is shared by only one PHY device, setting this value to -1 can enable the driver to detect the PHY address automatically.
- `eth_phy_config_t::reset_timeout_ms`: reset timeout value, in milliseconds, typically PHY reset should be finished within 100ms.
- `eth_phy_config_t::autonego_timeout_ms`: auto-negotiation timeout value, in milliseconds. Ethernet driver will start negotiation with the peer Ethernet node automatically, to determine to duplex and speed mode. This value usually depends on the ability of the PHY device on your board.
- `eth_phy_config_t::reset_gpio_num`: if your board also connect the PHY reset pin to one of the GPIO, then set it here. Otherwise, set this field to -1.

ESP-IDF provides a default configuration for MAC and PHY in macro `ETH_MAC_DEFAULT_CONFIG` and `ETH_PHY_DEFAULT_CONFIG`.

**Create MAC and PHY Instance** Ethernet driver is implemented in an Object-Oriented style. Any operation on MAC and PHY should be based on the instance of them two.

### SPI-Ethernet Module

```
eth_mac_config_t mac_config = ETH_MAC_DEFAULT_CONFIG(); // apply default_
↳common MAC configuration
eth_phy_config_t phy_config = ETH_PHY_DEFAULT_CONFIG(); // apply default PHY_
↳configuration
phy_config.phy_addr = CONFIG_EXAMPLE_ETH_PHY_ADDR; // alter the PHY_
↳address according to your board design
phy_config.reset_gpio_num = CONFIG_EXAMPLE_ETH_PHY_RST_GPIO; // alter the GPIO_
↳used for PHY reset
// Install GPIO interrupt service (as the SPI-Ethernet module is interrupt driven)
gpio_install_isr_service(0);
// SPI bus configuration
spi_device_handle_t spi_handle = NULL;
spi_bus_config_t buscfg = {
    .miso_io_num = CONFIG_EXAMPLE_ETH_SPI_MISO_GPIO,
    .mosi_io_num = CONFIG_EXAMPLE_ETH_SPI_MOSI_GPIO,
    .sclk_io_num = CONFIG_EXAMPLE_ETH_SPI_SCLK_GPIO,
    .quadwp_io_num = -1,
    .quadhd_io_num = -1,
```

(continues on next page)

(continued from previous page)

```

};
ESP_ERROR_CHECK(spi_bus_initialize(CONFIG_EXAMPLE_ETH_SPI_HOST, &buscfg, 1));
// Configure SPI device
spi_device_interface_config_t spi_devcfg = {
    .mode = 0,
    .clock_speed_hz = CONFIG_EXAMPLE_ETH_SPI_CLOCK_MHZ * 1000 * 1000,
    .spics_io_num = CONFIG_EXAMPLE_ETH_SPI_CS_GPIO,
    .queue_size = 20
};
/* dm9051 ethernet driver is based on spi driver */
eth_dm9051_config_t dm9051_config = ETH_DM9051_DEFAULT_CONFIG(CONFIG_EXAMPLE_ETH_
↳SPI_HOST, &spi_devcfg);
dm9051_config.int_gpio_num = CONFIG_EXAMPLE_ETH_SPI_INT_GPIO;
esp_eth_mac_t *mac = esp_eth_mac_new_dm9051(&dm9051_config, &mac_config);
esp_eth_phy_t *phy = esp_eth_phy_new_dm9051(&phy_config);

```

**Note:**

- When creating MAC and PHY instance for SPI-Ethernet modules (e.g. DM9051), the constructor function must have the same suffix (e.g. `esp_eth_mac_new_dm9051` and `esp_eth_phy_new_dm9051`). This is because we don't have other choices but the integrated PHY.
- The SPI device configuration (i.e. `spi_device_interface_config_t`) may slightly differ for other Ethernet modules or to meet SPI timing on specific PCB. Please check out your module's spec and the examples in `esp-idf`.

**Install Driver** To install the Ethernet driver, we need to combine the instance of MAC and PHY and set some additional high-level configurations (i.e. not specific to either MAC or PHY) in `esp_eth_config_t`:

- `esp_eth_config_t::mac`: instance that created from MAC generator (e.g. `esp_eth_mac_new_esp32()`).
- `esp_eth_config_t::phy`: instance that created from PHY generator (e.g. `esp_eth_phy_new_ip101()`).
- `esp_eth_config_t::check_link_period_ms`: Ethernet driver starts an OS timer to check the link status periodically, this field is used to set the interval, in milliseconds.
- `esp_eth_config_t::stack_input`: In most of Ethernet IoT applications, any Ethernet frame that received by driver should be passed to upper layer (e.g. TCP/IP stack). This field is set to a function which is responsible to deal with the incoming frames. You can even update this field at runtime via function `esp_eth_update_input_path()` after driver installation.
- `esp_eth_config_t::on_lowlevel_init_done` and `esp_eth_config_t::on_lowlevel_deinit_done`: These two fields are used to specify the hooks which get invoked when low level hardware has been initialized or de-initialized.

ESP-IDF provides a default configuration for driver installation in macro `ETH_DEFAULT_CONFIG`.

```

esp_eth_config_t config = ETH_DEFAULT_CONFIG(mac, phy); // apply default driver_
↳configuration
esp_eth_handle_t eth_handle = NULL; // after driver installed, we will get the_
↳handle of the driver
esp_eth_driver_install(&config, &eth_handle); // install driver

```

Ethernet driver also includes event-driven model, which will send useful and important event to user space. We need to initialize the event loop before installing the Ethernet driver. For more information about event-driven programming, please refer to [ESP Event](#).

```

/** Event handler for Ethernet events */
static void eth_event_handler(void *arg, esp_event_base_t event_base,
                             int32_t event_id, void *event_data)
{

```

(continues on next page)

(continued from previous page)

```

uint8_t mac_addr[6] = {0};
/* we can get the ethernet driver handle from event data */
esp_eth_handle_t eth_handle = *(esp_eth_handle_t *)event_data;

switch (event_id) {
case ETHERNET_EVENT_CONNECTED:
    esp_eth_ioctl(eth_handle, ETH_CMD_G_MAC_ADDR, mac_addr);
    ESP_LOGI(TAG, "Ethernet Link Up");
    ESP_LOGI(TAG, "Ethernet HW Addr %02x:%02x:%02x:%02x:%02x:%02x",
              mac_addr[0], mac_addr[1], mac_addr[2], mac_addr[3], mac_
↳addr[4], mac_addr[5]);
    break;
case ETHERNET_EVENT_DISCONNECTED:
    ESP_LOGI(TAG, "Ethernet Link Down");
    break;
case ETHERNET_EVENT_START:
    ESP_LOGI(TAG, "Ethernet Started");
    break;
case ETHERNET_EVENT_STOP:
    ESP_LOGI(TAG, "Ethernet Stopped");
    break;
default:
    break;
}
}

esp_event_loop_create_default(); // create a default event loop that running in
↳background
esp_event_handler_register(ETH_EVENT, ESP_EVENT_ANY_ID, &eth_event_handler, NULL);
↳// register Ethernet event handler (to deal with user specific stuffs when event
↳like link up/down happened)

```

**Start Ethernet Driver** After driver installation, we can start Ethernet immediately.

```

esp_eth_start(eth_handle); // start Ethernet driver state machine

```

**Connect Driver to TCP/IP Stack** Up until now, we have installed the Ethernet driver. From the view of OSI (Open System Interconnection), we're still on level 2 (i.e. Data Link Layer). We can detect link up and down event, we can gain MAC address in user space, but we can't obtain IP address, let alone send HTTP request. The TCP/IP stack used in ESP-IDF is called LwIP, for more information about it, please refer to [LwIP](#).

To connect Ethernet driver to TCP/IP stack, these three steps need to follow:

1. Create network interface for Ethernet driver
2. Attach the network interface to Ethernet driver
3. Register IP event handlers

More information about network interface, please refer to [Network Interface](#).

```

/** Event handler for IP_EVENT_ETH_GOT_IP */
static void got_ip_event_handler(void *arg, esp_event_base_t event_base,
                                int32_t event_id, void *event_data)
{
    ip_event_got_ip_t *event = (ip_event_got_ip_t *) event_data;
    const esp_netif_ip_info_t *ip_info = &event->ip_info;

    ESP_LOGI(TAG, "Ethernet Got IP Address");
    ESP_LOGI(TAG, "~~~~~");
    ESP_LOGI(TAG, "ETHIP:" IPSTR, IP2STR(&ip_info->ip));
}

```

(continues on next page)

(continued from previous page)

```

ESP_LOGI(TAG, "ETHMASK:" IPSTR, IP2STR(&ip_info->netmask));
ESP_LOGI(TAG, "ETHGW:" IPSTR, IP2STR(&ip_info->gw));
ESP_LOGI(TAG, "~~~~~");
}

esp_netif_init(); // Initialize TCP/IP network interface (should be called only
↳once in application)
esp_netif_config_t cfg = ESP_NETIF_DEFAULT_ETH(); // apply default network
↳interface configuration for Ethernet
esp_netif_t *eth_netif = esp_netif_new(&cfg); // create network interface for
↳Ethernet driver

esp_netif_attach(eth_netif, esp_eth_new_netif_glue(eth_handle)); // attach
↳Ethernet driver to TCP/IP stack
esp_event_handler_register(IP_EVENT, IP_EVENT_ETH_GOT_IP, &got_ip_event_handler,
↳NULL); // register user defined IP event handlers
esp_eth_start(eth_handle); // start Ethernet driver state machine

```

**Warning:** It is recommended to fully initialize the Ethernet driver and network interface prior registering user's Ethernet/IP event handlers, i.e. register the event handlers as the last thing prior starting the Ethernet driver. Such approach ensures that Ethernet/IP events get executed first by the Ethernet driver or network interface and so the system is in expected state when executing user's handlers.

**Misc control of Ethernet driver** The following functions should only be invoked after the Ethernet driver has been installed.

- Stop Ethernet driver: `esp_eth_stop()`
- Update Ethernet data input path: `esp_eth_update_input_path()`
- Misc get/set of Ethernet driver attributes: `esp_eth_ioctl()`

```

/* get MAC address */
uint8_t mac_addr[6];
memset(mac_addr, 0, sizeof(mac_addr));
esp_eth_ioctl(eth_handle, ETH_CMD_G_MAC_ADDR, mac_addr);
ESP_LOGI(TAG, "Ethernet MAC Address: %02x:%02x:%02x:%02x:%02x:%02x",
↳mac_addr[0], mac_addr[1], mac_addr[2], mac_addr[3], mac_addr[4], mac_
↳addr[5]);

/* get PHY address */
int phy_addr = -1;
esp_eth_ioctl(eth_handle, ETH_CMD_G_PHY_ADDR, &phy_addr);
ESP_LOGI(TAG, "Ethernet PHY Address: %d", phy_addr);

```

**Flow control** Ethernet on MCU usually has a limitation in the number of frames it can handle during network congestion, because of the limitation in RAM size. A sending station might be transmitting data faster than the peer end can accept it. Ethernet flow control mechanism allows the receiving node to signal the sender requesting suspension of transmissions until the receiver catches up. The magic behind that is the pause frame, which was defined in IEEE 802.3x.

Pause frame is a special Ethernet frame used to carry the pause command, whose EtherType field is 0x8808, with the Control opcode set to 0x0001. Only stations configured for full-duplex operation may send pause frames. When a station wishes to pause the other end of a link, it sends a pause frame to the 48-bit reserved multicast address of 01-80-C2-00-00-01. The pause frame also includes the period of pause time being requested, in the form of a two-byte integer, ranging from 0 to 65535.

After Ethernet driver installation, the flow control feature is disabled by default. You can enable it by:

```
bool flow_ctrl_enable = true;
esp_eth_ioctl(eth_handle, ETH_CMD_S_FLOW_CTRL, &flow_ctrl_enable);
```

One thing should be kept in mind, is that the pause frame ability will be advertised to peer end by PHY during auto negotiation. Ethernet driver sends pause frame only when both sides of the link support it.

### Application Examples

- Ethernet basic example: [ethernet/basic](#).
- Ethernet iperf example: [ethernet/iperf](#).
- Ethernet to Wi-Fi AP “router” : [ethernet/eth2ap](#).
- Most of protocol examples should also work for Ethernet: [protocols](#).

### Advanced Topics

**Custom PHY Driver** There are multiple PHY manufactures with their wide portfolios of chips available. The ESP-IDF already supports several PHY chips however one can easily get to a point where none of them satisfies user’s actual needs due to either price, features, stock availability etc.

Luckily, a management interface between EMAC and PHY is standardized by IEEE 802.3 in 22.2.4 Management functions section. It defines provisions of so called “MII Management Interface” for the purposes of controlling the PHY and gathering status from the PHY. A set of management registers is defined to control chip behavior, link properties, auto-negotiation configuration etc. This basic management functionality is addressed by [esp\\_eth/src/esp\\_eth\\_phy\\_802\\_3.c](#) in ESP-IDF and so it makes a creation of new custom PHY chip driver quite a simple task.

---

**Note:** Always consult with PHY datasheet since some PHY chips may not comply with IEEE 802.3, Section 22.2.4. It does not mean you are not able to create a custom PHY driver, it will just require more effort. You will have to define all PHY management functions.

---

Majority of PHY management functionality required by the ESP-IDF Ethernet driver is covered by the [esp\\_eth/src/esp\\_eth\\_phy\\_802\\_3.c](#) however, the following may require developing chip specific management functions:

- link status which is almost always chip specific,
- chip initialization, even though it is not strictly required, should be customized to at least ensure that expected chip is used and
- chip specific features configuration.

#### Steps to create custom PHY driver:

1. Define vendor specific registry layout based on PHY datasheet. See [esp\\_eth/src/esp\\_eth\\_phy\\_ip101.c](#) as an example.
2. Prepare derived PHY management object infostructure which
  - must contain at least parent IEEE 802.3 [phy\\_802\\_3\\_t](#) object and
  - optionally contain additional variables needed to support non-IEEE 802.3 or customized functionality. See [esp\\_eth/src/esp\\_eth\\_phy\\_ksz80xx.c](#) as an example.
3. Define chip specific management call-back functions.
4. Initialize parent IEEE 802.3 object and re-assign chip specific management call-back functions.

Once you finish the new custom PHY driver implementation, consider sharing it among with other users via [IDF Component Registry](#).

### API Reference

### Functions

*esp\_err\_t* **esp\_eth\_driver\_install** (const *esp\_eth\_config\_t* \*config, *esp\_eth\_handle\_t* \*out\_hdl)

Install Ethernet driver.

#### Parameters

- **config** –[in] configuration of the Ethernet driver
- **out\_hdl** –[out] handle of Ethernet driver

#### Returns

- ESP\_OK: install esp\_eth driver successfully
- ESP\_ERR\_INVALID\_ARG: install esp\_eth driver failed because of some invalid argument
- ESP\_ERR\_NO\_MEM: install esp\_eth driver failed because there's no memory for driver
- ESP\_FAIL: install esp\_eth driver failed because some other error occurred

*esp\_err\_t* **esp\_eth\_driver\_uninstall** (*esp\_eth\_handle\_t* hdl)

Uninstall Ethernet driver.

---

**Note:** It's not recommended to uninstall Ethernet driver unless it won't get used any more in application code. To uninstall Ethernet driver, you have to make sure, all references to the driver are released. Ethernet driver can only be uninstalled successfully when reference counter equals to one.

---

**Parameters** **hdl** –[in] handle of Ethernet driver

#### Returns

- ESP\_OK: uninstall esp\_eth driver successfully
- ESP\_ERR\_INVALID\_ARG: uninstall esp\_eth driver failed because of some invalid argument
- ESP\_ERR\_INVALID\_STATE: uninstall esp\_eth driver failed because it has more than one reference
- ESP\_FAIL: uninstall esp\_eth driver failed because some other error occurred

*esp\_err\_t* **esp\_eth\_start** (*esp\_eth\_handle\_t* hdl)

Start Ethernet driver **ONLY** in standalone mode (i.e. without TCP/IP stack)

---

**Note:** This API will start driver state machine and internal software timer (for checking link status).

---

**Parameters** **hdl** –[in] handle of Ethernet driver

#### Returns

- ESP\_OK: start esp\_eth driver successfully
- ESP\_ERR\_INVALID\_ARG: start esp\_eth driver failed because of some invalid argument
- ESP\_ERR\_INVALID\_STATE: start esp\_eth driver failed because driver has started already
- ESP\_FAIL: start esp\_eth driver failed because some other error occurred

*esp\_err\_t* **esp\_eth\_stop** (*esp\_eth\_handle\_t* hdl)

Stop Ethernet driver.

---

**Note:** This function does the oppsite operation of `esp_eth_start`.

---

**Parameters** `hdl` –[in] handle of Ethernet driver

**Returns**

- `ESP_OK`: stop `esp_eth` driver successfully
- `ESP_ERR_INVALID_ARG`: stop `esp_eth` driver failed because of some invalid argument
- `ESP_ERR_INVALID_STATE`: stop `esp_eth` driver failed because driver has not started yet
- `ESP_FAIL`: stop `esp_eth` driver failed because some other error occurred

`esp_err_t esp_eth_update_input_path` (`esp_eth_handle_t` hdl, `esp_err_t` (\*stack\_input)(`esp_eth_handle_t` hdl, `uint8_t` \*buffer, `uint32_t` length, `void` \*priv), `void` \*priv)

Update Ethernet data input path (i.e. specify where to pass the input buffer)

---

**Note:** After install driver, Ethernet still don't know where to deliver the input buffer. In fact, this API registers a callback function which get invoked when Ethernet received new packets.

---

**Parameters**

- `hdl` –[in] handle of Ethernet driver
- `stack_input` –[in] function pointer, which does the actual process on incoming packets
- `priv` –[in] private resource, which gets passed to `stack_input` callback without any modification

**Returns**

- `ESP_OK`: update input path successfully
- `ESP_ERR_INVALID_ARG`: update input path failed because of some invalid argument
- `ESP_FAIL`: update input path failed because some other error occurred

`esp_err_t esp_eth_transmit` (`esp_eth_handle_t` hdl, `void` \*buf, `size_t` length)

General Transmit.

**Parameters**

- `hdl` –[in] handle of Ethernet driver
- `buf` –[in] buffer of the packet to transfer
- `length` –[in] length of the buffer to transfer

**Returns**

- `ESP_OK`: transmit frame buffer successfully
- `ESP_ERR_INVALID_ARG`: transmit frame buffer failed because of some invalid argument
- `ESP_ERR_INVALID_STATE`: invalid driver state (e.i. driver is not started)
- `ESP_ERR_TIMEOUT`: transmit frame buffer failed because HW was not get available in predefined period
- `ESP_FAIL`: transmit frame buffer failed because some other error occurred

`esp_err_t esp_eth_transmit_vargs` (`esp_eth_handle_t` hdl, `uint32_t` argc, ...)

Special Transmit with variable number of arguments.

**Parameters**

- `hdl` –[in] handle of Ethernet driver
- `argc` –[in] number variable arguments
- ... –variable arguments

**Returns**

- `ESP_OK`: transmit successfull
- `ESP_ERR_INVALID_STATE`: invalid driver state (e.i. driver is not started)

- `ESP_ERR_TIMEOUT`: transmit frame buffer failed because HW was not get available in predefined period
- `ESP_FAIL`: transmit frame buffer failed because some other error occurred

`esp_err_t esp_eth_ioctl (esp_eth_handle_t hdl, esp_eth_io_cmd_t cmd, void *data)`

Misc IO function of Ethernet driver.

The following common IO control commands are supported:

- `ETH_CMD_S_MAC_ADDR` sets Ethernet interface MAC address. `data` argument is pointer to MAC address buffer with expected size of 6 bytes.
- `ETH_CMD_G_MAC_ADDR` gets Ethernet interface MAC address. `data` argument is pointer to a buffer to which MAC address is to be copied. The buffer size must be at least 6 bytes.
- `ETH_CMD_S_PHY_ADDR` sets PHY address in range of <0-31>. `data` argument is pointer to memory of `uint32_t` datatype from where the configuration option is read.
- `ETH_CMD_G_PHY_ADDR` gets PHY address. `data` argument is pointer to memory of `uint32_t` datatype to which the PHY address is to be stored.
- `ETH_CMD_S_AUTONEGO` enables or disables Ethernet link speed and duplex mode autonegotiation. `data` argument is pointer to memory of `bool` datatype from which the configuration option is read. Preconditions: Ethernet driver needs to be stopped.
- `ETH_CMD_G_AUTONEGO` gets current configuration of the Ethernet link speed and duplex mode autonegotiation. `data` argument is pointer to memory of `bool` datatype to which the current configuration is to be stored.
- `ETH_CMD_S_SPEED` sets the Ethernet link speed. `data` argument is pointer to memory of `eth_speed_t` datatype from which the configuration option is read. Preconditions: Ethernet driver needs to be stopped and auto-negotiation disabled.
- `ETH_CMD_G_SPEED` gets current Ethernet link speed. `data` argument is pointer to memory of `eth_speed_t` datatype to which the speed is to be stored.
- `ETH_CMD_S_PROMISCUOUS` sets/resets Ethernet interface promiscuous mode. `data` argument is pointer to memory of `bool` datatype from which the configuration option is read.
- `ETH_CMD_S_FLOW_CTRL` sets/resets Ethernet interface flow control. `data` argument is pointer to memory of `bool` datatype from which the configuration option is read.
- `ETH_CMD_S_DUPLEX_MODE` sets the Ethernet duplex mode. `data` argument is pointer to memory of `eth_duplex_t` datatype from which the configuration option is read. Preconditions: Ethernet driver needs to be stopped and auto-negotiation disabled.
- `ETH_CMD_G_DUPLEX_MODE` gets current Ethernet link duplex mode. `data` argument is pointer to memory of `eth_duplex_t` datatype to which the duplex mode is to be stored.
- `ETH_CMD_S_PHY_LOOPBACK` sets/resets PHY to/from loopback mode. `data` argument is pointer to memory of `bool` datatype from which the configuration option is read.
- Note that additional control commands may be available for specific MAC or PHY chips. Please consult specific MAC or PHY documentation or driver code.

#### Parameters

- `hdl` –[in] handle of Ethernet driver
- `cmd` –[in] IO control command
- `data` –[inout] address of data for `set` command or address where to store the data when used with `get` command

#### Returns

- `ESP_OK`: process io command successfully
- `ESP_ERR_INVALID_ARG`: process io command failed because of some invalid argument
- `ESP_FAIL`: process io command failed because some other error occurred
- `ESP_ERR_NOT_SUPPORTED`: requested feature is not supported

`esp_err_t esp_eth_increase_reference (esp_eth_handle_t hdl)`

Increase Ethernet driver reference.

---

**Note:** Ethernet driver handle can be obtained by os timer, netif, etc. It's dangerous when thread A is using Ethernet but thread B uninstalls the driver. Using reference counter can prevent such risk, but care should be taken, when you obtain Ethernet driver, this API must be invoked so that the driver won't be uninstalled during your using time.

---

**Parameters** **hdl** –[in] handle of Ethernet driver

**Returns**

- ESP\_OK: increase reference successfully
- ESP\_ERR\_INVALID\_ARG: increase reference failed because of some invalid argument

*esp\_err\_t* **esp\_eth\_decrease\_reference** (*esp\_eth\_handle\_t* hdl)

Decrease Ethernet driver reference.

**Parameters** **hdl** –[in] handle of Ethernet driver

**Returns**

- ESP\_OK: increase reference successfully
- ESP\_ERR\_INVALID\_ARG: increase reference failed because of some invalid argument

## Structures

struct **esp\_eth\_config\_t**

Configuration of Ethernet driver.

## Public Members

*esp\_eth\_mac\_t* \***mac**

Ethernet MAC object.

*esp\_eth\_phy\_t* \***phy**

Ethernet PHY object.

uint32\_t **check\_link\_period\_ms**

Period time of checking Ethernet link status.

*esp\_err\_t* (\***stack\_input**)(*esp\_eth\_handle\_t* eth\_handle, uint8\_t \*buffer, uint32\_t length, void \*priv)

Input frame buffer to user's stack.

**Param eth\_handle** [in] handle of Ethernet driver

**Param buffer** [in] frame buffer that will get input to upper stack

**Param length** [in] length of the frame buffer

**Return**

- ESP\_OK: input frame buffer to upper stack successfully
- ESP\_FAIL: error occurred when inputting buffer to upper stack

*esp\_err\_t* (\***on\_lowlevel\_init\_done**)(*esp\_eth\_handle\_t* eth\_handle)

Callback function invoked when lowlevel initialization is finished.

**Param eth\_handle** [in] handle of Ethernet driver

**Return**

- ESP\_OK: process extra lowlevel initialization successfully
- ESP\_FAIL: error occurred when processing extra lowlevel initialization

*esp\_err\_t* (\***on\_lowlevel\_deinit\_done**)(*esp\_eth\_handle\_t* eth\_handle)

Callback function invoked when lowlevel deinitialization is finished.

**Param eth\_handle [in]** handle of Ethernet driver

**Return**

- ESP\_OK: process extra lowlevel deinitialization successfully
- ESP\_FAIL: error occurred when processing extra lowlevel deinitialization

*esp\_err\_t* (\***read\_phy\_reg**)(*esp\_eth\_handle\_t* eth\_handle, uint32\_t phy\_addr, uint32\_t phy\_reg, uint32\_t \*reg\_value)

Read PHY register.

---

**Note:** Usually the PHY register read/write function is provided by MAC (SMI interface), but if the PHY device is managed by other interface (e.g. I2C), then user needs to implement the corresponding read/write. Setting this to NULL means your PHY device is managed by MAC's SMI interface.

---

**Param eth\_handle [in]** handle of Ethernet driver

**Param phy\_addr [in]** PHY chip address (0~31)

**Param phy\_reg [in]** PHY register index code

**Param reg\_value [out]** PHY register value

**Return**

- ESP\_OK: read PHY register successfully
- ESP\_ERR\_INVALID\_ARG: read PHY register failed because of invalid argument
- ESP\_ERR\_TIMEOUT: read PHY register failed because of timeout
- ESP\_FAIL: read PHY register failed because some other error occurred

*esp\_err\_t* (\***write\_phy\_reg**)(*esp\_eth\_handle\_t* eth\_handle, uint32\_t phy\_addr, uint32\_t phy\_reg, uint32\_t reg\_value)

Write PHY register.

---

**Note:** Usually the PHY register read/write function is provided by MAC (SMI interface), but if the PHY device is managed by other interface (e.g. I2C), then user needs to implement the corresponding read/write. Setting this to NULL means your PHY device is managed by MAC's SMI interface.

---

**Param eth\_handle [in]** handle of Ethernet driver

**Param phy\_addr [in]** PHY chip address (0~31)

**Param phy\_reg [in]** PHY register index code

**Param reg\_value [in]** PHY register value

**Return**

- ESP\_OK: write PHY register successfully
- ESP\_ERR\_INVALID\_ARG: read PHY register failed because of invalid argument
- ESP\_ERR\_TIMEOUT: write PHY register failed because of timeout
- ESP\_FAIL: write PHY register failed because some other error occurred

struct **esp\_eth\_phy\_reg\_rw\_data\_t**

Data structure to Read/Write PHY register via ioctl API.

### Public Members

uint32\_t **reg\_addr**

PHY register address

uint32\_t \***reg\_value\_p**

Pointer to a memory where the register value is read/written

### Macros

**ETH\_DEFAULT\_CONFIG** (emac, ephy)

Default configuration for Ethernet driver.

### Type Definitions

typedef void \***esp\_eth\_handle\_t**

Handle of Ethernet driver.

### Enumerations

enum **esp\_eth\_io\_cmd\_t**

Command list for ioctl API.

*Values:*

enumerator **ETH\_CMD\_G\_MAC\_ADDR**

Get MAC address

enumerator **ETH\_CMD\_S\_MAC\_ADDR**

Set MAC address

enumerator **ETH\_CMD\_G\_PHY\_ADDR**

Get PHY address

enumerator **ETH\_CMD\_S\_PHY\_ADDR**

Set PHY address

enumerator **ETH\_CMD\_G\_AUTONEGO**

Get PHY Auto Negotiation

enumerator **ETH\_CMD\_S\_AUTONEGO**

Set PHY Auto Negotiation

enumerator **ETH\_CMD\_G\_SPEED**

Get Speed

enumerator **ETH\_CMD\_S\_SPEED**

Set Speed

enumerator **ETH\_CMD\_S\_PROMISCUOUS**

Set promiscuous mode

enumerator **ETH\_CMD\_S\_FLOW\_CTRL**

Set flow control

enumerator **ETH\_CMD\_G\_DUPLEX\_MODE**

Get Duplex mode

enumerator **ETH\_CMD\_S\_DUPLEX\_MODE**

Set Duplex mode

enumerator **ETH\_CMD\_S\_PHY\_LOOPBACK**

Set PHY loopback

enumerator **ETH\_CMD\_READ\_PHY\_REG**

Read PHY register

enumerator **ETH\_CMD\_WRITE\_PHY\_REG**

Write PHY register

enumerator **ETH\_CMD\_CUSTOM\_MAC\_CMDS**

enumerator **ETH\_CMD\_CUSTOM\_PHY\_CMDS**

## Header File

- [components/esp\\_eth/include/esp\\_eth\\_com.h](#)

## Structures

struct **esp\_eth\_mediator\_s**

Ethernet mediator.

## Public Members

*esp\_err\_t* (**\*phy\_reg\_read**)(*esp\_eth\_mediator\_t* \*eth, uint32\_t phy\_addr, uint32\_t phy\_reg, uint32\_t \*reg\_value)

Read PHY register.

**Param eth [in]** mediator of Ethernet driver

**Param phy\_addr [in]** PHY Chip address (0~31)

**Param phy\_reg [in]** PHY register index code

**Param reg\_value [out]** PHY register value

**Return**

- ESP\_OK: read PHY register successfully
- ESP\_FAIL: read PHY register failed because some error occurred

*esp\_err\_t* (**\*phy\_reg\_write**)(*esp\_eth\_mediator\_t* \*eth, uint32\_t phy\_addr, uint32\_t phy\_reg, uint32\_t reg\_value)

Write PHY register.

**Param eth [in]** mediator of Ethernet driver

**Param phy\_addr [in]** PHY Chip address (0~31)

**Param phy\_reg [in]** PHY register index code

**Param reg\_value [in]** PHY register value

**Return**

- ESP\_OK: write PHY register successfully

- **ESP\_FAIL**: write PHY register failed because some error occurred

*esp\_err\_t* (**\*stack\_input**)(*esp\_eth\_mediator\_t* \*eth, uint8\_t \*buffer, uint32\_t length)

Deliver packet to upper stack.

**Param eth [in]** mediator of Ethernet driver

**Param buffer [in]** packet buffer

**Param length [in]** length of the packet

**Return**

- **ESP\_OK**: deliver packet to upper stack successfully
- **ESP\_FAIL**: deliver packet failed because some error occurred

*esp\_err\_t* (**\*on\_state\_changed**)(*esp\_eth\_mediator\_t* \*eth, *esp\_eth\_state\_t* state, void \*args)

Callback on Ethernet state changed.

**Param eth [in]** mediator of Ethernet driver

**Param state [in]** new state

**Param args [in]** optional argument for the new state

**Return**

- **ESP\_OK**: process the new state successfully
- **ESP\_FAIL**: process the new state failed because some error occurred

## Type Definitions

typedef struct *esp\_eth\_mediator\_s* **esp\_eth\_mediator\_t**

Ethernet mediator.

## Enumerations

enum **esp\_eth\_state\_t**

Ethernet driver state.

*Values:*

enumerator **ETH\_STATE\_LLINIT**

Lowlevel init done

enumerator **ETH\_STATE\_DEINIT**

Deinit done

enumerator **ETH\_STATE\_LINK**

Link status changed

enumerator **ETH\_STATE\_SPEED**

Speed updated

enumerator **ETH\_STATE\_DUPLEX**

Duplex updated

enumerator **ETH\_STATE\_PAUSE**

Pause ability updated

enum **eth\_event\_t**

Ethernet event declarations.

*Values:*

enumerator **ETHERNET\_EVENT\_START**

Ethernet driver start

enumerator **ETHERNET\_EVENT\_STOP**

Ethernet driver stop

enumerator **ETHERNET\_EVENT\_CONNECTED**

Ethernet got a valid link

enumerator **ETHERNET\_EVENT\_DISCONNECTED**

Ethernet lost a valid link

### Header File

- [components/esp\\_eth/include/esp\\_eth\\_mac.h](#)

### Unions

union **eth\_mac\_clock\_config\_t**

*#include* <esp\_eth\_mac.h> Ethernet MAC Clock Configuration.

### Public Members

struct *eth\_mac\_clock\_config\_t*::[anonymous] **mii**

EMAC MII Clock Configuration

*emac\_rmii\_clock\_mode\_t* **clock\_mode**

RMII Clock Mode Configuration

*emac\_rmii\_clock\_gpio\_t* **clock\_gpio**

RMII Clock GPIO Configuration

struct *eth\_mac\_clock\_config\_t*::[anonymous] **rmii**

EMAC RMII Clock Configuration

### Structures

struct **esp\_eth\_mac\_s**

Ethernet MAC.

### Public Members

*esp\_err\_t* (\***set\_mediator**)(*esp\_eth\_mac\_t* \*mac, *esp\_eth\_mediator\_t* \*eth)

Set mediator for Ethernet MAC.

**Param mac [in]** Ethernet MAC instance

**Param eth [in]** Ethernet mediator

**Return**

- ESP\_OK: set mediator for Ethernet MAC successfully
- ESP\_ERR\_INVALID\_ARG: set mediator for Ethernet MAC failed because of invalid argument

*esp\_err\_t* (\***init**)(*esp\_eth\_mac\_t* \*mac)

Initialize Ethernet MAC.

**Param mac [in]** Ethernet MAC instance

**Return**

- ESP\_OK: initialize Ethernet MAC successfully
- ESP\_ERR\_TIMEOUT: initialize Ethernet MAC failed because of timeout
- ESP\_FAIL: initialize Ethernet MAC failed because some other error occurred

*esp\_err\_t* (\***deinit**)(*esp\_eth\_mac\_t* \*mac)

Deinitialize Ethernet MAC.

**Param mac [in]** Ethernet MAC instance

**Return**

- ESP\_OK: deinitialize Ethernet MAC successfully
- ESP\_FAIL: deinitialize Ethernet MAC failed because some error occurred

*esp\_err\_t* (\***start**)(*esp\_eth\_mac\_t* \*mac)

Start Ethernet MAC.

**Param mac [in]** Ethernet MAC instance

**Return**

- ESP\_OK: start Ethernet MAC successfully
- ESP\_FAIL: start Ethernet MAC failed because some other error occurred

*esp\_err\_t* (\***stop**)(*esp\_eth\_mac\_t* \*mac)

Stop Ethernet MAC.

**Param mac [in]** Ethernet MAC instance

**Return**

- ESP\_OK: stop Ethernet MAC successfully
- ESP\_FAIL: stop Ethernet MAC failed because some error occurred

*esp\_err\_t* (\***transmit**)(*esp\_eth\_mac\_t* \*mac, uint8\_t \*buf, uint32\_t length)

Transmit packet from Ethernet MAC.

---

**Note:** Returned error codes may differ for each specific MAC chip.

---

**Param mac [in]** Ethernet MAC instance

**Param buf [in]** packet buffer to transmit

**Param length [in]** length of packet

**Return**

- ESP\_OK: transmit packet successfully
- ESP\_ERR\_INVALID\_SIZE: number of actually sent bytes differs to expected
- ESP\_FAIL: transmit packet failed because some other error occurred

*esp\_err\_t* (\***transmit\_vargs**)(*esp\_eth\_mac\_t* \*mac, uint32\_t argc, va\_list args)

Transmit packet from Ethernet MAC constructed with special parameters at Layer2.

---

**Note:** Typical intended use case is to make possible to construct a frame from multiple higher layer buffers without a need of buffer reallocations. However, other use cases are not limited.

---

---

**Note:** Returned error codes may differ for each specific MAC chip.

---

**Param mac [in]** Ethernet MAC instance

**Param argc [in]** number variable arguments

**Param args [in]** variable arguments

**Return**

- ESP\_OK: transmit packet successfully
- ESP\_ERR\_INVALID\_SIZE: number of actually sent bytes differs to expected
- ESP\_FAIL: transmit packet failed because some other error occurred

*esp\_err\_t* (\***receive**)(*esp\_eth\_mac\_t* \*mac, uint8\_t \*buf, uint32\_t \*length)

Receive packet from Ethernet MAC.

---

**Note:** Memory of buf is allocated in the Layer2, make sure it get free after process.

---

---

**Note:** Before this function got invoked, the value of “length” should set by user, equals the size of buffer. After the function returned, the value of “length” means the real length of received data.

---

**Param mac [in]** Ethernet MAC instance

**Param buf [out]** packet buffer which will preserve the received frame

**Param length [out]** length of the received packet

**Return**

- ESP\_OK: receive packet successfully
- ESP\_ERR\_INVALID\_ARG: receive packet failed because of invalid argument
- ESP\_ERR\_INVALID\_SIZE: input buffer size is not enough to hold the incoming data. in this case, value of returned “length” indicates the real size of incoming data.
- ESP\_FAIL: receive packet failed because some other error occurred

*esp\_err\_t* (\***read\_phy\_reg**)(*esp\_eth\_mac\_t* \*mac, uint32\_t phy\_addr, uint32\_t phy\_reg, uint32\_t \*reg\_value)

Read PHY register.

**Param mac [in]** Ethernet MAC instance

**Param phy\_addr [in]** PHY chip address (0~31)

**Param phy\_reg [in]** PHY register index code

**Param reg\_value [out]** PHY register value

**Return**

- ESP\_OK: read PHY register successfully
- ESP\_ERR\_INVALID\_ARG: read PHY register failed because of invalid argument
- ESP\_ERR\_INVALID\_STATE: read PHY register failed because of wrong state of MAC
- ESP\_ERR\_TIMEOUT: read PHY register failed because of timeout
- ESP\_FAIL: read PHY register failed because some other error occurred

*esp\_err\_t* (\***write\_phy\_reg**)(*esp\_eth\_mac\_t* \*mac, uint32\_t phy\_addr, uint32\_t phy\_reg, uint32\_t reg\_value)

Write PHY register.

**Param mac [in]** Ethernet MAC instance

**Param phy\_addr [in]** PHY chip address (0~31)

**Param phy\_reg [in]** PHY register index code

**Param reg\_value [in]** PHY register value

**Return**

- ESP\_OK: write PHY register successfully
- ESP\_ERR\_INVALID\_STATE: write PHY register failed because of wrong state of MAC
- ESP\_ERR\_TIMEOUT: write PHY register failed because of timeout
- ESP\_FAIL: write PHY register failed because some other error occurred

*esp\_err\_t* (\***set\_addr**)(*esp\_eth\_mac\_t* \*mac, uint8\_t \*addr)

Set MAC address.

**Param mac [in]** Ethernet MAC instance

**Param addr [in]** MAC address

**Return**

- ESP\_OK: set MAC address successfully
- ESP\_ERR\_INVALID\_ARG: set MAC address failed because of invalid argument
- ESP\_FAIL: set MAC address failed because some other error occurred

*esp\_err\_t* (\***get\_addr**)(*esp\_eth\_mac\_t* \*mac, uint8\_t \*addr)

Get MAC address.

**Param mac [in]** Ethernet MAC instance

**Param addr [out]** MAC address

**Return**

- ESP\_OK: get MAC address successfully
- ESP\_ERR\_INVALID\_ARG: get MAC address failed because of invalid argument
- ESP\_FAIL: get MAC address failed because some other error occurred

*esp\_err\_t* (\***set\_speed**)(*esp\_eth\_mac\_t* \*mac, eth\_speed\_t speed)

Set speed of MAC.

**Param ma:c [in]** Ethernet MAC instance

**Param speed [in]** MAC speed

**Return**

- ESP\_OK: set MAC speed successfully
- ESP\_ERR\_INVALID\_ARG: set MAC speed failed because of invalid argument
- ESP\_FAIL: set MAC speed failed because some other error occurred

*esp\_err\_t* (\***set\_duplex**)(*esp\_eth\_mac\_t* \*mac, eth\_duplex\_t duplex)

Set duplex mode of MAC.

**Param mac [in]** Ethernet MAC instance

**Param duplex [in]** MAC duplex

**Return**

- ESP\_OK: set MAC duplex mode successfully
- ESP\_ERR\_INVALID\_ARG: set MAC duplex failed because of invalid argument
- ESP\_FAIL: set MAC duplex failed because some other error occurred

*esp\_err\_t* (\***set\_link**)(*esp\_eth\_mac\_t* \*mac, eth\_link\_t link)

Set link status of MAC.

**Param mac [in]** Ethernet MAC instance

**Param link [in]** Link status

**Return**

- ESP\_OK: set link status successfully
- ESP\_ERR\_INVALID\_ARG: set link status failed because of invalid argument
- ESP\_FAIL: set link status failed because some other error occurred

*esp\_err\_t* (\***set\_promiscuous**)(*esp\_eth\_mac\_t* \*mac, bool enable)

Set promiscuous of MAC.

**Param mac [in]** Ethernet MAC instance

**Param enable [in]** set true to enable promiscuous mode; set false to disable promiscuous mode

**Return**

- ESP\_OK: set promiscuous mode successfully
- ESP\_FAIL: set promiscuous mode failed because some error occurred

*esp\_err\_t* (\***enable\_flow\_ctrl**)(*esp\_eth\_mac\_t* \*mac, bool enable)

Enable flow control on MAC layer or not.

**Param mac [in]** Ethernet MAC instance

**Param enable [in]** set true to enable flow control; set false to disable flow control

**Return**

- ESP\_OK: set flow control successfully
- ESP\_FAIL: set flow control failed because some error occurred

*esp\_err\_t* (\***set\_peer\_pause\_ability**)(*esp\_eth\_mac\_t* \*mac, uint32\_t ability)

Set the PAUSE ability of peer node.

**Param mac [in]** Ethernet MAC instance

**Param ability [in]** zero indicates that pause function is supported by link partner; non-zero indicates that pause function is not supported by link partner

**Return**

- ESP\_OK: set peer pause ability successfully
- ESP\_FAIL: set peer pause ability failed because some error occurred

*esp\_err\_t* (\***custom\_ioctl**)(*esp\_eth\_mac\_t* \*mac, uint32\_t cmd, void \*data)

Custom IO function of MAC driver. This function is intended to extend common options of *esp\_eth\_ioctl* to cover specifics of MAC chip.

---

**Note:** This function may not be assigned when the MAC chip supports only most common set of configuration options.

---

**Param mac [in]** Ethernet MAC instance

**Param cmd [in]** IO control command

**Param data [inout]** address of data for *set* command or address where to store the data when used with *get* command

**Return**

- ESP\_OK: process io command successfully
- ESP\_ERR\_INVALID\_ARG: process io command failed because of some invalid argument
- ESP\_FAIL: process io command failed because some other error occurred
- ESP\_ERR\_NOT\_SUPPORTED: requested feature is not supported

*esp\_err\_t* (\***del**)(*esp\_eth\_mac\_t* \*mac)

Free memory of Ethernet MAC.

**Param mac [in]** Ethernet MAC instance

**Return**

- ESP\_OK: free Ethernet MAC instance successfully
- ESP\_FAIL: free Ethernet MAC instance failed because some error occurred

struct **eth\_mac\_config\_t**

Configuration of Ethernet MAC object.

### Public Members

uint32\_t **sw\_reset\_timeout\_ms**

Software reset timeout value (Unit: ms)

uint32\_t **rx\_task\_stack\_size**

Stack size of the receive task

uint32\_t **rx\_task\_prio**

Priority of the receive task

uint32\_t **flags**

Flags that specify extra capability for mac driver

### Macros

**ETH\_MAC\_FLAG\_WORK\_WITH\_CACHE\_DISABLE**

MAC driver can work when cache is disabled

**ETH\_MAC\_FLAG\_PIN\_TO\_CORE**

Pin MAC task to the CPU core where driver installation happened

**ETH\_MAC\_DEFAULT\_CONFIG ()**

Default configuration for Ethernet MAC object.

### Type Definitions

typedef struct *esp\_eth\_mac\_s* **esp\_eth\_mac\_t**

Ethernet MAC.

### Enumerations

enum **emac\_rmii\_clock\_mode\_t**

RMII Clock Mode Options.

*Values:*

enumerator **EMAC\_CLK\_DEFAULT**

Default values configured using Kconfig are going to be used when “Default” selected.

enumerator **EMAC\_CLK\_EXT\_IN**

Input RMII Clock from external. EMAC Clock GPIO number needs to be configured when this option is selected.

---

**Note:** MAC will get RMIIClock from outside. Note that ESP32 only supports GPIO0 to input the RMIIClock.

---

enumerator **EMAC\_CLK\_OUT**

Output RMIIClock from internal APLL Clock. EMAC Clock GPIO number needs to be configured when this option is selected.

enum **emac\_rmii\_clock\_gpio\_t**

RMIIClock GPIO number Options.

**Warning:** If you want the Ethernet to work with WiFi, don't select ESP32 as RMIICLK output as it would result in clock instability.

*Values:*

enumerator **EMAC\_CLK\_IN\_GPIO**

MAC will get RMIIClock from outside at this GPIO.

---

**Note:** ESP32 only supports GPIO0 to input the RMIIClock.

---

enumerator **EMAC\_APPL\_CLK\_OUT\_GPIO**

Output RMIIClock from internal APLL Clock available at GPIO0.

---

**Note:** GPIO0 can be set to output a pre-divided PLL clock. Enabling this option will configure GPIO0 to output a 50MHz clock. In fact this clock doesn't have directly relationship with EMAC peripheral. Sometimes this clock may not work well with your PHY chip.

---

enumerator **EMAC\_CLK\_OUT\_GPIO**

Output RMIIClock from internal APLL Clock available at GPIO16.

enumerator **EMAC\_CLK\_OUT\_180\_GPIO**

Inverted Output RMIIClock from internal APLL Clock available at GPIO17.

## Header File

- [components/esp\\_eth/include/esp\\_eth\\_phy.h](#)

## Functions

*esp\_eth\_phy\_t* \***esp\_eth\_phy\_new\_ip101** (const *eth\_phy\_config\_t* \*config)

Create a PHY instance of IP101.

**Parameters** **config** –[in] configuration of PHY

**Returns**

- instance: create PHY instance successfully
- NULL: create PHY instance failed because some error occurred

*esp\_eth\_phy\_t* \***esp\_eth\_phy\_new\_rt18201** (const *eth\_phy\_config\_t* \*config)

Create a PHY instance of RTL8201.

**Parameters** **config** –[in] configuration of PHY

**Returns**

- instance: create PHY instance successfully
- NULL: create PHY instance failed because some error occurred

*esp\_eth\_phy\_t* \***esp\_eth\_phy\_new\_lan87xx** (const *eth\_phy\_config\_t* \*config)

Create a PHY instance of LAN87xx.

**Parameters** *config* –[in] configuration of PHY

**Returns**

- instance: create PHY instance successfully
- NULL: create PHY instance failed because some error occurred

*esp\_eth\_phy\_t* \***esp\_eth\_phy\_new\_dp83848** (const *eth\_phy\_config\_t* \*config)

Create a PHY instance of DP83848.

**Parameters** *config* –[in] configuration of PHY

**Returns**

- instance: create PHY instance successfully
- NULL: create PHY instance failed because some error occurred

*esp\_eth\_phy\_t* \***esp\_eth\_phy\_new\_ksz80xx** (const *eth\_phy\_config\_t* \*config)

Create a PHY instance of KSZ80xx.

The phy model from the KSZ80xx series is detected automatically. If the driver is unable to detect a supported model, NULL is returned.

Currently, the following models are supported: KSZ8001, KSZ8021, KSZ8031, KSZ8041, KSZ8051, KSZ8061, KSZ8081, KSZ8091

**Parameters** *config* –[in] configuration of PHY

**Returns**

- instance: create PHY instance successfully
- NULL: create PHY instance failed because some error occurred

**Structures**

struct **esp\_eth\_phy\_s**

Ethernet PHY.

**Public Members**

*esp\_err\_t* (\***set\_mediator**)(*esp\_eth\_phy\_t* \*phy, *esp\_eth\_mediator\_t* \*mediator)

Set mediator for PHY.

**Param phy** [in] Ethernet PHY instance

**Param mediator** [in] mediator of Ethernet driver

**Return**

- ESP\_OK: set mediator for Ethernet PHY instance successfully
- ESP\_ERR\_INVALID\_ARG: set mediator for Ethernet PHY instance failed because of some invalid arguments

*esp\_err\_t* (\***reset**)(*esp\_eth\_phy\_t* \*phy)

Software Reset Ethernet PHY.

**Param phy** [in] Ethernet PHY instance

**Return**

- ESP\_OK: reset Ethernet PHY successfully
- ESP\_FAIL: reset Ethernet PHY failed because some error occurred

*esp\_err\_t* (\***reset\_hw**)(*esp\_eth\_phy\_t* \*phy)

Hardware Reset Ethernet PHY.

---

**Note:** Hardware reset is mostly done by pull down and up PHY's nRST pin

---

**Param phy [in]** Ethernet PHY instance

**Return**

- ESP\_OK: reset Ethernet PHY successfully
- ESP\_FAIL: reset Ethernet PHY failed because some error occurred

*esp\_err\_t* (\***init**)(*esp\_eth\_phy\_t* \*phy)

Initialize Ethernet PHY.

**Param phy [in]** Ethernet PHY instance

**Return**

- ESP\_OK: initialize Ethernet PHY successfully
- ESP\_FAIL: initialize Ethernet PHY failed because some error occurred

*esp\_err\_t* (\***deinit**)(*esp\_eth\_phy\_t* \*phy)

Deinitialize Ethernet PHY.

**Param phy [in]** Ethernet PHY instance

**Return**

- ESP\_OK: deinitialize Ethernet PHY successfully
- ESP\_FAIL: deinitialize Ethernet PHY failed because some error occurred

*esp\_err\_t* (\***autonego\_ctrl**)(*esp\_eth\_phy\_t* \*phy, *eth\_phy\_autoneg\_cmd\_t* cmd, bool \*autonego\_en\_stat)

Configure auto negotiation.

**Param phy [in]** Ethernet PHY instance

**Param cmd [in]** Configuration command, it is possible to Enable (restart), Disable or get current status of PHY auto negotiation

**Param autonego\_en\_stat [out]** Address where to store current status of auto negotiation configuration

**Return**

- ESP\_OK: restart auto negotiation successfully
- ESP\_FAIL: restart auto negotiation failed because some error occurred
- ESP\_ERR\_INVALID\_ARG: invalid command

*esp\_err\_t* (\***get\_link**)(*esp\_eth\_phy\_t* \*phy)

Get Ethernet PHY link status.

**Param phy [in]** Ethernet PHY instance

**Return**

- ESP\_OK: get Ethernet PHY link status successfully
- ESP\_FAIL: get Ethernet PHY link status failed because some error occurred

*esp\_err\_t* (\***set\_link**)(*esp\_eth\_phy\_t* \*phy, *eth\_link\_t* link)

Set Ethernet PHY link status.

**Param phy [in]** Ethernet PHY instance

**Param link [in]** new link status

**Return**

- ESP\_OK: set Ethernet PHY link status successfully
- ESP\_FAIL: set Ethernet PHY link status failed because some error occurred

*esp\_err\_t* (\***pwrcctl**)(*esp\_eth\_phy\_t* \*phy, bool enable)

Power control of Ethernet PHY.

**Param phy [in]** Ethernet PHY instance

**Param enable [in]** set true to power on Ethernet PHY; ser false to power off Ethernet PHY

**Return**

- ESP\_OK: control Ethernet PHY power successfully
- ESP\_FAIL: control Ethernet PHY power failed because some error occurred

*esp\_err\_t* (\***set\_addr**)(*esp\_eth\_phy\_t* \*phy, uint32\_t addr)

Set PHY chip address.

**Param phy [in]** Ethernet PHY instance

**Param addr [in]** PHY chip address

**Return**

- ESP\_OK: set Ethernet PHY address successfully
- ESP\_FAIL: set Ethernet PHY address failed because some error occurred

*esp\_err\_t* (\***get\_addr**)(*esp\_eth\_phy\_t* \*phy, uint32\_t \*addr)

Get PHY chip address.

**Param phy [in]** Ethernet PHY instance

**Param addr [out]** PHY chip address

**Return**

- ESP\_OK: get Ethernet PHY address successfully
- ESP\_ERR\_INVALID\_ARG: get Ethernet PHY address failed because of invalid argument

*esp\_err\_t* (\***advertise\_pause\_ability**)(*esp\_eth\_phy\_t* \*phy, uint32\_t ability)

Advertise pause function supported by MAC layer.

**Param phy [in]** Ethernet PHY instance

**Param addr [out]** Pause ability

**Return**

- ESP\_OK: Advertise pause ability successfully
- ESP\_ERR\_INVALID\_ARG: Advertise pause ability failed because of invalid argument

*esp\_err\_t* (\***loopback**)(*esp\_eth\_phy\_t* \*phy, bool enable)

Sets the PHY to loopback mode.

**Param phy [in]** Ethernet PHY instance

**Param enable [in]** enables or disables PHY loopback

**Return**

- ESP\_OK: PHY instance loopback mode has been configured successfully
- ESP\_FAIL: PHY instance loopback configuration failed because some error occurred

*esp\_err\_t* (\***set\_speed**)(*esp\_eth\_phy\_t* \*phy, eth\_speed\_t speed)

Sets PHY speed mode.

---

**Note:** Autonegotiation feature needs to be disabled prior to calling this function for the new setting to be applied

---

**Param phy [in]** Ethernet PHY instance

**Param speed [in]** Speed mode to be set

**Return**

- ESP\_OK: PHY instance speed mode has been configured successfully

- ESP\_FAIL: PHY instance speed mode configuration failed because some error occurred

*esp\_err\_t* (\***set\_duplex**)(*esp\_eth\_phy\_t* \*phy, eth\_duplex\_t duplex)

Sets PHY duplex mode.

---

**Note:** Autonegotiation feature needs to be disabled prior to calling this function for the new setting to be applied

---

**Param phy [in]** Ethernet PHY instance

**Param duplex [in]** Duplex mode to be set

**Return**

- ESP\_OK: PHY instance duplex mode has been configured successfully
- ESP\_FAIL: PHY instance duplex mode configuration failed because some error occurred

*esp\_err\_t* (\***custom\_ioctl**)(*esp\_eth\_phy\_t* \*phy, uint32\_t cmd, void \*data)

Custom IO function of PHY driver. This function is intended to extend common options of *esp\_eth\_ioctl* to cover specifics of PHY chip.

---

**Note:** This function may not be assigned when the PHY chip supports only most common set of configuration options.

---

**Param phy [in]** Ethernet PHY instance

**Param cmd [in]** IO control command

**Param data [inout]** address of data for *set* command or address where to store the data when used with *get* command

**Return**

- ESP\_OK: process io command successfully
- ESP\_ERR\_INVALID\_ARG: process io command failed because of some invalid argument
- ESP\_FAIL: process io command failed because some other error occurred
- ESP\_ERR\_NOT\_SUPPORTED: requested feature is not supported

*esp\_err\_t* (\***del**)(*esp\_eth\_phy\_t* \*phy)

Free memory of Ethernet PHY instance.

**Param phy [in]** Ethernet PHY instance

**Return**

- ESP\_OK: free PHY instance successfully
- ESP\_FAIL: free PHY instance failed because some error occurred

struct **eth\_phy\_config\_t**

Ethernet PHY configuration.

### Public Members

int32\_t **phy\_addr**

PHY address, set -1 to enable PHY address detection at initialization stage

uint32\_t **reset\_timeout\_ms**

Reset timeout value (Unit: ms)

uint32\_t **autonego\_timeout\_ms**

Auto-negotiation timeout value (Unit: ms)

int **reset\_gpio\_num**

Reset GPIO number, -1 means no hardware reset

## Macros

**ESP\_ETH\_PHY\_ADDR\_AUTO**

**ETH\_PHY\_DEFAULT\_CONFIG()**

Default configuration for Ethernet PHY object.

## Type Definitions

typedef struct *esp\_eth\_phy\_s* **esp\_eth\_phy\_t**

Ethernet PHY.

## Enumerations

enum **eth\_phy\_autoneg\_cmd\_t**

Auto-negotiation controll commands.

*Values:*

enumerator **ESP\_ETH\_PHY\_AUTONEGO\_RESTART**

enumerator **ESP\_ETH\_PHY\_AUTONEGO\_EN**

enumerator **ESP\_ETH\_PHY\_AUTONEGO\_DIS**

enumerator **ESP\_ETH\_PHY\_AUTONEGO\_G\_STAT**

## Header File

- [components/esp\\_eth/include/esp\\_eth\\_phy\\_802\\_3.h](#)

## Functions

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_set\_mediator** (*phy\_802\_3\_t* \*phy\_802\_3, *esp\_eth\_mediator\_t* \*eth)

Set Ethernet mediator.

### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **eth** –Ethernet mediator pointer

### Returns

- **ESP\_OK**: Ethermet mediator set successfully
- **ESP\_ERR\_INVALID\_ARG**: if **eth** is **NULL**

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_reset** (*phy\_802\_3\_t* \*phy\_802\_3)

Reset PHY.

**Parameters** **phy\_802\_3** –IEEE 802.3 PHY object infostructure

**Returns**

- **ESP\_OK**: Ethernet PHY reset successfully
- **ESP\_FAIL**: reset Ethernet PHY failed because some error occurred

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_autonego\_ctrl** (*phy\_802\_3\_t* \*phy\_802\_3, *eth\_phy\_autoneg\_cmd\_t* cmd, bool \*autonego\_en\_stat)

Control autonegotiation mode of Ethernet PHY.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **cmd** –autonegotiation command enumeration
- **autonego\_en\_stat** –[out] autonegotiation enabled flag

**Returns**

- **ESP\_OK**: Ethernet PHY autonegotiation configured successfully
- **ESP\_FAIL**: Ethernet PHY autonegotiation configuration fail because some error occurred
- **ESP\_ERR\_INVALID\_ARG**: invalid value of **cmd**

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_pwrctl** (*phy\_802\_3\_t* \*phy\_802\_3, bool enable)

Power control of Ethernet PHY.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **enable** –set true to power ON Ethernet PHY; set false to power OFF Ethernet PHY

**Returns**

- **ESP\_OK**: Ethernet PHY power down mode set successfully
- **ESP\_FAIL**: Ethernet PHY power up or power down failed because some error occurred

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_set\_addr** (*phy\_802\_3\_t* \*phy\_802\_3, uint32\_t addr)

Set Ethernet PHY address.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **addr** –new PHY address

**Returns**

- **ESP\_OK**: Ethernet PHY address set

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_get\_addr** (*phy\_802\_3\_t* \*phy\_802\_3, uint32\_t \*addr)

Get Ethernet PHY address.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **addr** –[out] Ethernet PHY address

**Returns**

- **ESP\_OK**: Ethernet PHY address read successfully
- **ESP\_ERR\_INVALID\_ARG**: **addr** pointer is NULL

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_advertise\_pause\_ability** (*phy\_802\_3\_t* \*phy\_802\_3, uint32\_t ability)

Advertise pause function ability.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **ability** –enable or disable pause ability

**Returns**

- **ESP\_OK**: pause ability set successfully
- **ESP\_FAIL**: Advertise pause function ability failed because some error occurred

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_loopback** (*phy\_802\_3\_t* \*phy\_802\_3, bool enable)

Set Ethernet PHY loopback mode.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **enable** –set true to enable loopback; set false to disable loopback

**Returns**

- ESP\_OK: Ethernet PHY loopback mode set successfully
- ESP\_FAIL: Ethernet PHY loopback configuration failed because some error occurred

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_set\_speed** (*phy\_802\_3\_t* \*phy\_802\_3, eth\_speed\_t speed)

Set Ethernet PHY speed.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **speed** –new speed of Ethernet PHY link

**Returns**

- ESP\_OK: Ethernet PHY speed set successfully
- ESP\_FAIL: Set Ethernet PHY speed failed because some error occurred

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_set\_duplex** (*phy\_802\_3\_t* \*phy\_802\_3, eth\_duplex\_t duplex)

Set Ethernet PHY duplex mode.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **duplex** –new duplex mode for Ethernet PHY link

**Returns**

- ESP\_OK: Ethernet PHY duplex mode set successfully
- ESP\_ERR\_INVALID\_STATE: unable to set duplex mode to Half if loopback is enabled
- ESP\_FAIL: Set Ethernet PHY duplex mode failed because some error occurred

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_set\_link** (*phy\_802\_3\_t* \*phy\_802\_3, eth\_link\_t link)

Set Ethernet PHY link status.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **link** –new link status

**Returns**

- ESP\_OK: Ethernet PHY link set successfully

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_init** (*phy\_802\_3\_t* \*phy\_802\_3)

Initialize Ethernet PHY.

**Parameters** **phy\_802\_3** –IEEE 802.3 PHY object infostructure

**Returns**

- ESP\_OK: Ethernet PHY initialized successfully

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_deinit** (*phy\_802\_3\_t* \*phy\_802\_3)

Power off Ethernet PHY.

**Parameters** **phy\_802\_3** –IEEE 802.3 PHY object infostructure

**Returns**

- ESP\_OK: Ethernet PHY powered off successfully

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_del** (*phy\_802\_3\_t* \*phy\_802\_3)

Delete Ethernet PHY infostructure.

**Parameters** **phy\_802\_3** –IEEE 802.3 PHY object infostructure

**Returns**

- ESP\_OK: Ethernet PHY infostructure deleted

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_reset\_hw** (*phy\_802\_3\_t* \*phy\_802\_3, uint32\_t reset\_assert\_us)

Performs hardware reset with specific reset pin assertion time.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **reset\_assert\_us** –Hardware reset pin assertion time

**Returns**

- ESP\_OK: reset Ethernet PHY successfully

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_detect\_phy\_addr** (*esp\_eth\_mediator\_t* \*eth, int \*detected\_addr)

Detect PHY address.

**Parameters**

- **eth** –Mediator of Ethernet driver
- **detected\_addr** –[out] a valid address after detection

**Returns**

- ESP\_OK: detect phy address successfully
- ESP\_ERR\_INVALID\_ARG: invalid parameter
- ESP\_ERR\_NOT\_FOUND: can't detect any PHY device
- ESP\_FAIL: detect phy address failed because some error occurred

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_basic\_phy\_init** (*phy\_802\_3\_t* \*phy\_802\_3)

Performs basic PHY chip initialization.

---

**Note:** It should be called as the first function in PHY specific driver instance

---

**Parameters** **phy\_802\_3** –IEEE 802.3 PHY object infostructure

**Returns**

- ESP\_OK: initialized Ethernet PHY successfully
- ESP\_FAIL: initialization of Ethernet PHY failed because some error occurred
- ESP\_ERR\_INVALID\_ARG: invalid argument
- ESP\_ERR\_NOT\_FOUND: PHY device not detected
- ESP\_ERR\_TIMEOUT: MII Management read/write operation timeout
- ESP\_ERR\_INVALID\_STATE: PHY is in invalid state to perform requested operation

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_basic\_phy\_deinit** (*phy\_802\_3\_t* \*phy\_802\_3)

Performs basic PHY chip de-initialization.

---

**Note:** It should be called as the last function in PHY specific driver instance

---

**Parameters** **phy\_802\_3** –IEEE 802.3 PHY object infostructure

**Returns**

- ESP\_OK: de-initialized Ethernet PHY successfully
- ESP\_FAIL: de-initialization of Ethernet PHY failed because some error occurred
- ESP\_ERR\_TIMEOUT: MII Management read/write operation timeout
- ESP\_ERR\_INVALID\_STATE: PHY is in invalid state to perform requested operation

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_read\_oui** (*phy\_802\_3\_t* \*phy\_802\_3, uint32\_t \*oui)

Reads raw content of OUI field.

**Parameters**

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **oui** –[out] OUI value

**Returns**

- ESP\_OK: OUI field read successfully
- ESP\_FAIL: OUI field read failed because some error occurred
- ESP\_ERR\_INVALID\_ARG: invalid oui argument
- ESP\_ERR\_TIMEOUT: MII Management read/write operation timeout
- ESP\_ERR\_INVALID\_STATE: PHY is in invalid state to perform requested operation

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_read\_manufac\_info** (*phy\_802\_3\_t* \*phy\_802\_3, uint8\_t \*model, uint8\_t \*rev)

Reads manufacturer's model and revision number.

#### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **model** –[out] Manufacturer's model number (can be NULL when not required)
- **rev** –[out] Manufacturer's revision number (can be NULL when not required)

#### Returns

- ESP\_OK: Manufacturer's info read successfully
- ESP\_FAIL: Manufacturer's info read failed because some error occurred
- ESP\_ERR\_TIMEOUT: MII Management read/write operation timeout
- ESP\_ERR\_INVALID\_STATE: PHY is in invalid state to perform requested operation

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_get\_mmd\_addr** (*phy\_802\_3\_t* \*phy\_802\_3, uint8\_t devaddr, uint16\_t \*mmd\_addr)

Reads MDIO device's internal address register.

#### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **devaddr** –Address of MDIO device
- **mmd\_addr** –[out] Current address stored in device's register

#### Returns

- ESP\_OK: Address register read successfully
- ESP\_FAIL: Address register read failed because of some error occurred
- ESP\_ERR\_INVALID\_ARG: Device address provided is out of range (hardware limits device address to 5 bits)

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_set\_mmd\_addr** (*phy\_802\_3\_t* \*phy\_802\_3, uint8\_t devaddr, uint16\_t mmd\_addr)

Write to MDIO device's internal address register.

#### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **devaddr** –Address of MDIO device
- **mmd\_addr** –[out] New value of MDIO device's address register value

#### Returns

- ESP\_OK: Address register written to successfully
- ESP\_FAIL: Address register write failed because of some error occurred
- ESP\_ERR\_INVALID\_ARG: Device address provided is out of range (hardware limits device address to 5 bits)

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_read\_mmd\_data** (*phy\_802\_3\_t* \*phy\_802\_3, uint8\_t devaddr, *esp\_eth\_phy\_802\_3\_mmd\_func\_t* function, uint32\_t \*data)

Read data of MDIO device's memory at address register.

#### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **devaddr** –Address of MDIO device
- **function** –MMD function
- **data** –[out] Data read from the device's memory

#### Returns

- ESP\_OK: Memory read successfully
- ESP\_FAIL: Memory read failed because of some error occurred
- ESP\_ERR\_INVALID\_ARG: Device address provided is out of range (hardware limits device address to 5 bits) or MMD access function is invalid

*esp\_err\_t* **esp\_eth\_phy\_802\_3\_write\_mmd\_data** (*phy\_802\_3\_t* \*phy\_802\_3, uint8\_t devaddr, *esp\_eth\_phy\_802\_3\_mmd\_func\_t* function, uint32\_t data)

Write data to MDIO device's memory at address register.

#### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **devaddr** –Address of MDIO device
- **function** –MMD function
- **data** –[out] Data to write to the device's memory

#### Returns

- ESP\_OK: Memory written successfully
- ESP\_FAIL: Memory write failed because of some error occurred
- ESP\_ERR\_INVALID\_ARG: Device address provided is out of range (hardware limits device address to 5 bits) or MMD access function is invalid

```
esp_err_t esp_eth_phy_802_3_read_mmd_register(phy_802_3_t *phy_802_3, uint8_t devaddr,
                                             uint16_t mmd_addr, uint32_t *data)
```

Set MMD address to mmd\_addr with function MMD\_FUNC\_NOINCR and read contents to \*data.

#### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **devaddr** –Address of MDIO device
- **mmd\_addr** –Address of MDIO device register
- **data** –[out] Data read from the device's memory

#### Returns

- ESP\_OK: Memory read successfully
- ESP\_FAIL: Memory read failed because of some error occurred
- ESP\_ERR\_INVALID\_ARG: Device address provided is out of range (hardware limits device address to 5 bits)

```
esp_err_t esp_eth_phy_802_3_write_mmd_register(phy_802_3_t *phy_802_3, uint8_t devaddr,
                                               uint16_t mmd_addr, uint32_t data)
```

Set MMD address to mmd\_addr with function MMD\_FUNC\_NOINCR and write data.

#### Parameters

- **phy\_802\_3** –IEEE 802.3 PHY object infostructure
- **devaddr** –Address of MDIO device
- **mmd\_addr** –Address of MDIO device register
- **data** –[out] Data to write to the device's memory

#### Returns

- ESP\_OK: Memory written to successfully
- ESP\_FAIL: Memory write failed because of some error occurred
- ESP\_ERR\_INVALID\_ARG: Device address provided is out of range (hardware limits device address to 5 bits)

```
inline phy_802_3_t *esp_eth_phy_into_phy_802_3(esp_eth_phy_t *phy)
```

Returns address to parent IEEE 802.3 PHY object infostructure.

**Parameters** **phy** –Ethernet PHY instance

**Returns** *phy\_802\_3\_t*\*

- address to parent IEEE 802.3 PHY object infostructure

```
esp_err_t esp_eth_phy_802_3_obj_config_init(phy_802_3_t *phy_802_3, const eth_phy_config_t
                                             *config)
```

Initializes configuration of parent IEEE 802.3 PHY object infostructure.

#### Parameters

- **phy\_802\_3** –Address to IEEE 802.3 PHY object infostructure
- **config** –Configuration of the IEEE 802.3 PHY object

#### Returns

- ESP\_OK: configuration initialized successfully
- ESP\_ERR\_INVALID\_ARG: invalid `config` argument

## Structures

struct **phy\_802\_3\_t**

IEEE 802.3 PHY object infostructure.

## Public Members

*esp\_eth\_phy\_t* **parent**

Parent Ethernet PHY instance

*esp\_eth\_mediator\_t* \***eth**

Mediator of Ethernet driver

int **addr**

PHY address

uint32\_t **reset\_timeout\_ms**

Reset timeout value (Unit: ms)

uint32\_t **autonego\_timeout\_ms**

Auto-negotiation timeout value (Unit: ms)

eth\_link\_t **link\_status**

Current Link status

int **reset\_gpio\_num**

Reset GPIO number, -1 means no hardware reset

## Enumerations

enum **esp\_eth\_phy\_802\_3\_mmd\_func\_t**

IEEE 802.3 MMD modes enumeration.

*Values:*

enumerator **MMD\_FUNC\_ADDRESS**

enumerator **MMD\_FUNC\_DATA\_NOINCR**

enumerator **MMD\_FUNC\_DATA\_RWINCR**

enumerator **MMD\_FUNC\_DATA\_WINCR**

## Header File

- [components/esp\\_eth/include/esp\\_eth\\_netif\\_glue.h](#)

### Functions

*esp\_eth\_netif\_glue\_handle\_t* **esp\_eth\_new\_netif\_glue** (*esp\_eth\_handle\_t* eth\_hdl)

Create a netif glue for Ethernet driver.

---

**Note:** netif glue is used to attach io driver to TCP/IP netif

---

**Parameters** **eth\_hdl** –Ethernet driver handle

**Returns** glue object, which inherits esp\_netif\_driver\_base\_t

*esp\_err\_t* **esp\_eth\_del\_netif\_glue** (*esp\_eth\_netif\_glue\_handle\_t* eth\_netif\_glue)

Delete netif glue of Ethernet driver.

**Parameters** **eth\_netif\_glue** –netif glue

**Returns** -ESP\_OK: delete netif glue successfully

### Type Definitions

```
typedef struct esp_eth_netif_glue_t *esp_eth_netif_glue_handle_t
```

Handle of netif glue - an intermediate layer between netif and Ethernet driver.

Code examples for the Ethernet API are provided in the [ethernet](#) directory of ESP-IDF examples.

## 2.5.3 Thread

### Thread

**Introduction** [Thread](#) is a IP-based mesh networking protocol. It' s based on the 802.15.4 physical and MAC layer.

**Application Examples** The [openthread](#) directory of ESP-IDF examples contains the following applications:

- The OpenThread interactive shell [openthread/ot\\_cli](#).
- The Thread border router [openthread/ot\\_br](#).
- The Thread radio co-processor [openthread/ot\\_rcp](#).

**API Reference** For manipulating the Thread network, the OpenThread api shall be used. The OpenThread api docs can be found at the [OpenThread official website](#).

ESP-IDF provides extra apis for launching and managing the OpenThread stack, binding to network interfaces and border routing features.

### Header File

- [components/openthread/include/esp\\_openthread.h](#)

### Functions

*esp\_err\_t* **esp\_openthread\_init** (const *esp\_openthread\_platform\_config\_t* \*init\_config)

Initializes the full OpenThread stack.

---

**Note:** The OpenThread instance will also be initialized in this function.

---

**Parameters** **init\_config** –[in] The initialization configuration.

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NO\_MEM if allocation has failed
- ESP\_ERR\_INVALID\_ARG if radio or host connection mode not supported
- ESP\_ERR\_INVALID\_STATE if already initialized

*esp\_err\_t* **esp\_openthread\_launch\_mainloop** (void)

Launches the OpenThread main loop.

---

**Note:** This function will not return unless error happens when running the OpenThread stack.

---

#### Returns

- ESP\_OK on success
- ESP\_ERR\_NO\_MEM if allocation has failed
- ESP\_FAIL on other failures

*esp\_err\_t* **esp\_openthread\_deinit** (void)

This function performs OpenThread stack and platform driver deinitialization.

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if not initialized

otInstance \***esp\_openthread\_get\_instance** (void)

This function acquires the underlying OpenThread instance.

---

**Note:** This function can be called on other tasks without lock.

---

**Returns** The OpenThread instance pointer

### Header File

- [components/openthread/include/esp\\_openthread\\_types.h](#)

### Structures

struct **esp\_openthread\_mainloop\_context\_t**

This structure represents a context for a select() based mainloop.

#### Public Members

fd\_set **read\_fds**

The read file descriptors

fd\_set **write\_fds**

The write file descriptors

fd\_set **error\_fds**

The error file descriptors

int **max\_fd**

The max file descriptor

struct timeval **timeout**

The timeout

struct **esp\_openthread\_uart\_config\_t**

The uart port config for OpenThread.

### Public Members

*uart\_port\_t* **port**

UART port number

*uart\_config\_t* **uart\_config**

UART configuration, see *uart\_config\_t* docs

int **rx\_pin**

UART RX pin

int **tx\_pin**

UART TX pin

struct **esp\_openthread\_radio\_config\_t**

The OpenThread radio configuration.

### Public Members

*esp\_openthread\_radio\_mode\_t* **radio\_mode**

The radio mode

*esp\_openthread\_uart\_config\_t* **radio\_uart\_config**

The uart configuration to RCP

struct **esp\_openthread\_host\_connection\_config\_t**

The OpenThread host connection configuration.

### Public Members

*esp\_openthread\_host\_connection\_mode\_t* **host\_connection\_mode**

The host connection mode

*esp\_openthread\_uart\_config\_t* **host\_uart\_config**

The uart configuration to host

struct **esp\_openthread\_port\_config\_t**

The OpenThread port specific configuration.

### Public Members

const char \***storage\_partition\_name**

The partition for storing OpenThread dataset

uint8\_t **netif\_queue\_size**

The packet queue size for the network interface

uint8\_t **task\_queue\_size**

The task queue size

struct **esp\_openthread\_platform\_config\_t**

The OpenThread platform configuration.

### Public Members

*esp\_openthread\_radio\_config\_t* **radio\_config**

The radio configuration

*esp\_openthread\_host\_connection\_config\_t* **host\_config**

The host connection configuration

*esp\_openthread\_port\_config\_t* **port\_config**

The port configuration

### Type Definitions

typedef void (\***esp\_openthread\_rcp\_failure\_handler**)(void)

### Enumerations

enum **esp\_openthread\_event\_t**

OpenThread event declarations.

*Values:*

enumerator **OPENTHREAD\_EVENT\_START**

OpenThread stack start

enumerator **OPENTHREAD\_EVENT\_STOP**

OpenThread stack stop

enumerator **OPENTHREAD\_EVENT\_IF\_UP**

OpenThread network interface up

enumerator **OPENTHREAD\_EVENT\_IF\_DOWN**

OpenThread network interface down

enumerator **OPENTHREAD\_EVENT\_GOT\_IP6**

OpenThread stack added IPv6 address

enumerator **OPENTHREAD\_EVENT\_LOST\_IP6**

OpenThread stack removed IPv6 address

enumerator **OPENTHREAD\_EVENT\_MULTICAST\_GROUP\_JOIN**

OpenThread stack joined IPv6 multicast group

enumerator **OPENTHREAD\_EVENT\_MULTICAST\_GROUP\_LEAVE**

OpenThread stack left IPv6 multicast group

enumerator **OPENTHREAD\_EVENT\_TREL\_ADD\_IP6**

OpenThread stack added TREL IPv6 address

enumerator **OPENTHREAD\_EVENT\_TREL\_REMOVE\_IP6**

OpenThread stack removed TREL IPv6 address

enumerator **OPENTHREAD\_EVENT\_TREL\_MULTICAST\_GROUP\_JOIN**

OpenThread stack joined TREL IPv6 multicast group

enum **esp\_openthread\_radio\_mode\_t**

The radio mode of OpenThread.

*Values:*

enumerator **RADIO\_MODE\_NATIVE**

Use the native 15.4 radio

enumerator **RADIO\_MODE\_UART\_RCP**

UART connection to a 15.4 capable radio co-processor (RCP)

enumerator **RADIO\_MODE\_SPI\_RCP**

SPI connection to a 15.4 capable radio co-processor (RCP)

enum **esp\_openthread\_host\_connection\_mode\_t**

How OpenThread connects to the host.

*Values:*

enumerator **HOST\_CONNECTION\_MODE\_NONE**

Disable host connection

enumerator **HOST\_CONNECTION\_MODE\_CLI\_UART**

CLI UART connection to the host

enumerator **HOST\_CONNECTION\_MODE\_RCP\_UART**

RCP UART connection to the host

### Header File

- [components/openthread/include/esp\\_openthread\\_lock.h](#)

## Functions

*esp\_err\_t* **esp\_openthread\_lock\_init** (void)

This function initializes the OpenThread API lock.

### Returns

- ESP\_OK on success
- ESP\_ERR\_NO\_MEM if allocation has failed
- ESP\_ERR\_INVALID\_STATE if already initialized

void **esp\_openthread\_lock\_deinit** (void)

This function deinitializes the OpenThread API lock.

bool **esp\_openthread\_lock\_acquire** (TickType\_t block\_ticks)

This functions acquires the OpenThread API lock.

---

**Note:** Every OT APIs that takes an otInstance argument MUST be protected with this API lock except that the call site is in OT callbacks.

---

**Parameters** **block\_ticks** –[in] The maximum number of RTOS ticks to wait for the lock.

### Returns

- True on lock acquired
- False on failing to acquire the lock with the timeout.

void **esp\_openthread\_lock\_release** (void)

This function releases the OpenThread API lock.

## Header File

- [components/openthread/include/esp\\_openthread\\_netif\\_glue.h](#)

## Functions

void \***esp\_openthread\_netif\_glue\_init** (const *esp\_openthread\_platform\_config\_t* \*config)

This function initializes the OpenThread network interface glue.

**Parameters** **config** –[in] The platform configuration.

### Returns

- glue pointer on success
- NULL on failure

void **esp\_openthread\_netif\_glue\_deinit** (void)

This function deinitializes the OpenThread network interface glue.

*esp\_netif\_t* \***esp\_openthread\_get\_netif** (void)

This function acquires the OpenThread netif.

**Returns** The OpenThread netif or NULL if not initialized.

## Macros

**ESP\_NETIF\_INHERENT\_DEFAULT\_OPENTHREAD** ()

Default configuration reference of OT esp-netif.

**ESP\_NETIF\_DEFAULT\_OPENTHREAD** ()

## Header File

- [components/openthread/include/esp\\_openthread\\_border\\_router.h](#)

## Functions

void **esp\_openthread\_set\_backbone\_netif** (*esp\_netif\_t* \*backbone\_netif)

Sets the backbone interface used for border routing.

---

**Note:** This function must be called before `esp_openthread_init`

---

**Parameters** `backbone_netif` –[in] The backbone network interface (WiFi or ethernet)

*esp\_err\_t* **esp\_openthread\_border\_router\_init** (void)

Initializes the border router features of OpenThread.

---

**Note:** Calling this function will make the device behave as an OpenThread border router. Kconfig option `CONFIG_OPENTHREAD_BORDER_ROUTER` is required.

---

### Returns

- `ESP_OK` on success
- `ESP_ERR_NOT_SUPPORTED` if feature not supported
- `ESP_ERR_INVALID_STATE` if already initialized
- `ESP_FIAL` on other failures

*esp\_err\_t* **esp\_openthread\_border\_router\_deinit** (void)

Deinitializes the border router features of OpenThread.

### Returns

- `ESP_OK` on success
- `ESP_ERR_INVALID_STATE` if not initialized
- `ESP_FIAL` on other failures

*esp\_netif\_t* \***esp\_openthread\_get\_backbone\_netif** (void)

Gets the backbone interface of OpenThread border router.

**Returns** The backbone interface or `NULL` if border router not initialized.

void **esp\_openthread\_register\_rcp\_failure\_handler** (*esp\_openthread\_rcp\_failure\_handler* handler)

Registers the callback for RCP failure.

void **esp\_openthread\_rcp\_deinit** (void)

Deinitializes the connection to RCP.

Thread is an IPv6-based mesh networking technology for IoT. Code examples for the Thread API are provided in the [openthread](#) directory of ESP-IDF examples.

## 2.5.4 ESP-NETIF

### ESP-NETIF

The purpose of ESP-NETIF library is twofold:

- It provides an abstraction layer for the application on top of the TCP/IP stack. This will allow applications to choose between IP stacks in the future.
- The APIs it provides are thread safe, even if the underlying TCP/IP stack APIs are not.

ESP-IDF currently implements ESP-NETIF for the lwIP TCP/IP stack only. However, the adapter itself is TCP/IP implementation agnostic and different implementations are possible.

Some ESP-NETIF API functions are intended to be called by application code, for example to get/set interface IP addresses, configure DHCP. Other functions are intended for internal ESP-IDF use by the network driver layer.

### Data and event flow in the diagram

- . . . . . Initialization line from user code to ESP-NETIF and communication driver
- --<---->-- Data packets going from communication media to TCP/IP stack and back
- \*\*\*\*\* Events aggregated in ESP-NETIF propagates to driver, user code and network stack
- | User settings and runtime configuration

### ESP-NETIF interaction

**A) User code, boiler plate** Overall application interaction with a specific IO driver for communication media and configured TCP/IP network stack is abstracted using ESP-NETIF APIs and outlined as below:

#### A) Initialization code

- 1) Initializes IO driver
- 2) Creates a new instance of ESP-NETIF and configure with
  - ESP-NETIF specific options (flags, behaviour, name)
  - Network stack options (netif init and input functions, not publicly available)
  - IO driver specific options (transmit, free rx buffer functions, IO driver handle)
- 3) Attaches the IO driver handle to the ESP-NETIF instance created in the above steps
- 4) Configures event handlers
  - use default handlers for common interfaces defined in IO drivers; or define a specific handlers for customised behaviour/new interfaces
  - register handlers for app related events (such as IP lost/acquired)

#### B) Interaction with network interfaces using ESP-NETIF API

- Getting and setting TCP/IP related parameters (DHCP, IP, etc)
- Receiving IP events (connect/disconnect)
- Controlling application lifecycle (set interface up/down)

**B) Communication driver, IO driver, media driver** Communication driver plays these two important roles in relation with ESP-NETIF:

- 1) Event handlers: Define behaviour patterns of interaction with ESP-NETIF (for example: ethernet link-up -> turn netif on)
- 2) Glue IO layer: Adapts the input/output functions to use ESP-NETIF transmit, receive and free receive buffer
  - Installs driver\_transmit to appropriate ESP-NETIF object, so that outgoing packets from network stack are passed to the IO driver
  - Calls `esp_netif_receive()` to pass incoming data to network stack

**C) ESP-NETIF** ESP-NETIF is an intermediary between an IO driver and a network stack, connecting packet data path between these two. As that it provides a set of interfaces for attaching a driver to ESP-NETIF object (runtime) and configuring a network stack (compile time). In addition to that a set of API is provided to control network interface lifecycle and its TCP/IP properties. As an overview, the ESP-NETIF public interface could be divided into these 6 groups:

- 1) Initialization APIs (to create and configure ESP-NETIF instance)
- 2) Input/Output API (for passing data between IO driver and network stack)
- 3) Event or Action API
  - Used for network interface lifecycle management
  - ESP-NETIF provides building blocks for designing event handlers
- 4) Setters and Getters for basic network interface properties
- 5) Network stack abstraction: enabling user interaction with TCP/IP stack
  - Set interface up or down

- DHCP server and client API
- DNS API

6) Driver conversion utilities

**D) Network stack** Network stack has no public interaction with application code with regard to public interfaces and shall be fully abstracted by ESP-NETIF API.

**E) ESP-NETIF L2 TAP Interface** The ESP-NETIF L2 TAP interface is ESP-IDF mechanism utilized to access Data Link Layer (L2 per OSI/ISO) for frame reception and transmission from user application. Its typical usage in embedded world might be implementation of non-IP related protocols such as PTP, Wake on LAN and others. Note that only Ethernet (IEEE 802.3) is currently supported.

From user perspective, the ESP-NETIF L2 TAP interface is accessed using file descriptors of VFS which provides a file-like interfacing (using functions like `open()`, `read()`, `write()`, etc). Refer to [Virtual filesystem component](#) to learn more.

There is only one ESP-NETIF L2 TAP interface device (path name) available. However multiple file descriptors with different configuration can be opened at a time since the ESP-NETIF L2 TAP interface can be understood as generic entry point to Layer 2 infrastructure. Important is then specific configuration of particular file descriptor. It can be configured to give an access to specific Network Interface identified by `if_key` (e.g. `ETH_DEF`) and to filter only specific frames based on their type (e.g. Ethernet type in case of IEEE 802.3). Filtering only specific frames is crucial since the ESP-NETIF L2 TAP needs to exist along with IP stack and so the IP related traffic (IP, ARP, etc.) should not be passed directly to the user application. Even though such option is still configurable, it is not recommended in standard use cases. Filtering is also advantageous from a perspective the user's application gets access only to frame types it is interested in and the remaining traffic is either passed to other L2 TAP file descriptors or to IP stack.

### ESP-NETIF L2 TAP Interface Usage Manual

**Initialization** To be able to use the ESP-NETIF L2 TAP interface, it needs to be enabled in Kconfig by [CONFIG\\_ESP\\_NETIF\\_L2\\_TAP](#) first and then registered by `esp_vfs_l2tap_intf_register()` prior usage of any VFS function.

**open()** Once the ESP-NETIF L2 TAP is registered, it can be opened at path name `"/dev/net/tap"`. The same path name can be opened multiple times up to [CONFIG\\_ESP\\_NETIF\\_L2\\_TAP\\_MAX\\_FDS](#) and multiple file descriptors with with different configuration may access the Data Link Layer frames.

The ESP-NETIF L2 TAP can be opened with `O_NONBLOCK` file status flag to the `read()` does not block. Note that the `write()` may block in current implementation when accessing a Network interface since it is a shared resource among multiple ESP-NETIF L2 TAP file descriptors and IP stack, and there is currently no queuing mechanism deployed. The file status flag can be retrieved and modified using `fcntl()`.

On success, `open()` returns the new file descriptor (a nonnegative integer). On error, -1 is returned and `errno` is set to indicate the error.

**ioctl()** The newly opened ESP-NETIF L2 TAP file descriptor needs to be configured prior its usage since it is not bounded to any specific Network Interface and no frame type filter is configured. The following configuration options are available to do so:

- `L2TAP_S_INTF_DEVICE` - bounds the file descriptor to specific Network Interface which is identified by its `if_key`. ESP-NETIF Network Interface `if_key` is passed to `ioctl()` as the third parameter. Note that default Network Interfaces `if_key`'s used in ESP-IDF can be found in [esp\\_netif/include/esp\\_netif\\_defaults.h](#).
- `L2TAP_S_DEVICE_DRV_HNDL` - is other way how to bound the file descriptor to specific Network Interface. In this case the Network interface is identified directly by IO Driver handle (e.g. `esp_eth_handle_t` in case of Ethernet). The IO Driver handle is passed to `ioctl()` as the third parameter.

- `L2TAP_S_RCV_FILTER` - sets the filter to frames with this type to be passed to the file descriptor. In case of Ethernet frames, the frames are to be filtered based on Length/Ethernet type field. In case the filter value is less than or equal to `0x05DC`, the Ethernet type field is considered to represent IEEE802.3 Length Field and all frames with values in interval `<0, 0x05DC>` at that field are to be passed to the file descriptor. The IEEE802.2 logical link control (LLC) resolution is then expected to be performed by user's application. In case the filter value is set greater than `0x05DC`, the Ethernet type field is considered to represent protocol identification and only frames which are equal to the set value are to be passed to the file descriptor.

All above set configuration options have getter counterpart option to read the current settings.

**Warning:** The file descriptor needs to be firstly bounded to specific Network Interface by `L2TAP_S_INTF_DEVICE` or `L2TAP_S_DEVICE_DRV_HNDL` to be `L2TAP_S_RCV_FILTER` option available.

---

**Note:** VLAN tagged frames are currently not recognized. If user needs to process VLAN tagged frames, they need set filter to be equal to VLAN tag (i.e. `0x8100` or `0x88A8`) and process the VLAN tagged frames in user application.

---

---

**Note:** `L2TAP_S_DEVICE_DRV_HNDL` is particularly useful when user's application does not require usage of IP stack and so ESP-NETIF is not required to be initialized too. As a result, Network Interface cannot be identified by its `if_key` and hence it needs to be identified directly by its IO Driver handle.

---

On success, `ioctl()` returns 0. On error, -1 is returned, and `errno` is set to indicate the error.

**EBADF** - not a valid file descriptor.

**EACCES** - option change is denied in this state (e.g. file descriptor has not be bounded to Network interface yet).

**EINVAL** - invalid configuration argument. Ethernet type filter is already used by other file descriptor on that same Network interface.

**ENODEV** - no such Network Interface which is tried to be assigned to the file descriptor exists.

**ENOSYS** - unsupported operation, passed configuration option does not exists.

**fcntl()** `fcntl()` is used to manipulate with properties of opened ESP-NETIF L2 TAP file descriptor.

The following commands manipulate the status flags associated with file descriptor:

- `F_GETFD` - the function returns the file descriptor flags, the third argument is ignored.
- `F_SETFD` - sets the file descriptor flags to the value specified by the third argument. Zero is returned.

On error, -1 is returned, and `errno` is set to indicate the error.

**EBADF** - not a valid file descriptor.

**ENOSYS** - unsupported command.

**read()** Opened and configured ESP-NETIF L2 TAP file descriptor can be accessed by `read()` to get inbound frames. The read operation can be either blocking or non-blocking based on actual state of `O_NONBLOCK` file status flag. When the file status flag is set blocking, the read operation waits until a frame is received and context is switched to other task. When the file status flag is set non-blocking, the read operation returns immediately. In such case, either a frame is returned if it was already queued or the function indicates the queue is empty. The number of queued frames associated with one file descriptor is limited by `CONFIG_ESP_NETIF_L2_TAP_RX_QUEUE_SIZE` Kconfig option. Once the number of queued frames reach configured threshold, the newly arriving frames are dropped until the queue has enough room to accept incoming traffic (Tail Drop queue management).

**WiFi default initialization** The initialization code as well as registering event handlers for default interfaces, such as softAP and station, are provided in separate APIs to facilitate simple startup code for most applications:

- `esp_netif_create_default_wifi_sta()`
- `esp_netif_create_default_wifi_ap()`

Please note that these functions return the `esp_netif` handle, i.e. a pointer to a network interface object allocated and configured with default settings, which as a consequence, means that:

- The created object has to be destroyed if a network de-initialization is provided by an application using `esp_netif_destroy_default_wifi()`.
- These *default* interfaces must not be created multiple times, unless the created handle is deleted using `esp_netif_destroy()`.
- When using Wifi in AP+STA mode, both these interfaces has to be created.

## API Reference

### Header File

- `components/esp_netif/include/esp_netif.h`

### Functions

`esp_err_t esp_netif_init` (void)

Initialize the underlying TCP/IP stack.

---

**Note:** This function should be called exactly once from application code, when the application starts up.

---

#### Returns

- ESP\_OK on success
- ESP\_FAIL if initializing failed

`esp_err_t esp_netif_deinit` (void)

Deinitialize the esp-netif component (and the underlying TCP/IP stack)

Note: Deinitialization **is not** supported yet

#### Returns

- ESP\_ERR\_INVALID\_STATE if esp\_netif not initialized
- ESP\_ERR\_NOT\_SUPPORTED otherwise

`esp_netif_t *esp_netif_new` (const `esp_netif_config_t` \*esp\_netif\_config)

Creates an instance of new esp-netif object based on provided config.

**Parameters** `esp_netif_config` –pointer esp-netif configuration

#### Returns

- pointer to esp-netif object on success
- NULL otherwise

void `esp_netif_destroy` (`esp_netif_t` \*esp\_netif)

Destroys the esp\_netif object.

**Parameters** `esp_netif` –[in] pointer to the object to be deleted

*esp\_err\_t* **esp\_netif\_set\_driver\_config** (*esp\_netif\_t* \*esp\_netif, const *esp\_netif\_driver\_ifconfig\_t* \*driver\_config)

Configures driver related options of esp\_netif object.

**Parameters**

- **esp\_netif** –[inout] pointer to the object to be configured
- **driver\_config** –[in] pointer esp-netif io driver related configuration

**Returns**

- ESP\_OK on success
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS if invalid parameters provided

*esp\_err\_t* **esp\_netif\_attach** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_io\_driver\_handle* driver\_handle)

Attaches esp\_netif instance to the io driver handle.

Calling this function enables connecting specific esp\_netif object with already initialized io driver to update esp\_netif object with driver specific configuration (i.e. calls post\_attach callback, which typically sets io driver callbacks to esp\_netif instance and starts the driver)

**Parameters**

- **esp\_netif** –[inout] pointer to esp\_netif object to be attached
- **driver\_handle** –[in] pointer to the driver handle

**Returns**

- ESP\_OK on success
- ESP\_ERR\_ESP\_NETIF\_DRIVER\_ATTACH\_FAILED if driver's post\_attach callback failed

*esp\_err\_t* **esp\_netif\_receive** (*esp\_netif\_t* \*esp\_netif, void \*buffer, size\_t len, void \*eb)

Passes the raw packets from communication media to the appropriate TCP/IP stack.

This function is called from the configured (peripheral) driver layer. The data are then forwarded as frames to the TCP/IP stack.

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance
- **buffer** –[in] Received data
- **len** –[in] Length of the data frame
- **eb** –[in] Pointer to internal buffer (used in Wi-Fi driver)

**Returns**

- ESP\_OK

void **esp\_netif\_action\_start** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IO driver start event Creates network interface, if AUTOUP enabled turns the interface on, if DHCP enabled starts dhcp server.

---

**Note:** This API can be directly used as event handler

---

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_stop** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IO driver stop event.

---

**Note:** This API can be directly used as event handler

---

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_connected** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IO driver connected event.

---

**Note:** This API can be directly used as event handler

---

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_disconnected** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IO driver disconnected event.

---

**Note:** This API can be directly used as event handler

---

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_got\_ip** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon network got IP event.

---

**Note:** This API can be directly used as event handler

---

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_join\_ip6\_multicast\_group** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IPv6 multicast group join.

---

**Note:** This API can be directly used as event handler

---

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_leave\_ip6\_multicast\_group** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IPv6 multicast group leave.

---

**Note:** This API can be directly used as event handler

---

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_add\_ip6\_address** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IPv6 address added by the underlying stack.

---

**Note:** This API can be directly used as event handler

---

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

void **esp\_netif\_action\_remove\_ip6\_address** (void \*esp\_netif, esp\_event\_base\_t base, int32\_t event\_id, void \*data)

Default building block for network interface action upon IPv6 address removed by the underlying stack.

---

**Note:** This API can be directly used as event handler

---

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **base** –
- **event\_id** –
- **data** –

*esp\_err\_t* **esp\_netif\_set\_default\_netif** (*esp\_netif\_t* \*esp\_netif)

Manual configuration of the default netif.

This API overrides the automatic configuration of the default interface based on the route\_prio. If the selected netif is set default using this API, no other interface could be set-default disregarding its route\_prio number (unless the selected netif gets destroyed).

**Parameters** **esp\_netif** –[in] Handle to esp-netif instance

**Returns** ESP\_OK on success

*esp\_err\_t* **esp\_netif\_join\_ip6\_multicast\_group** (*esp\_netif\_t* \*esp\_netif, const *esp\_ip6\_addr\_t* \*addr)

Cause the TCP/IP stack to join a IPv6 multicast group.

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **addr** –[in] The multicast group to join

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_MLD6\_FAILED
- ESP\_ERR\_NO\_MEM

*esp\_err\_t* **esp\_netif\_leave\_ip6\_multicast\_group** (*esp\_netif\_t* \*esp\_netif, const *esp\_ip6\_addr\_t* \*addr)

Cause the TCP/IP stack to leave a IPv6 multicast group.

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **addr** –[in] The multicast group to leave

#### Returns

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_MLD6\_FAILED
- ESP\_ERR\_NO\_MEM

*esp\_err\_t* **esp\_netif\_set\_mac** (*esp\_netif\_t* \*esp\_netif, uint8\_t mac[])

Set the mac address for the interface instance.

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **mac** –[in] Desired mac address for the related network interface

#### Returns

- ESP\_OK - success
- ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY - interface status error
- ESP\_ERR\_NOT\_SUPPORTED - mac not supported on this interface

*esp\_err\_t* **esp\_netif\_get\_mac** (*esp\_netif\_t* \*esp\_netif, uint8\_t mac[])

Get the mac address for the interface instance.

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **mac** –[out] Resultant mac address for the related network interface

#### Returns

- ESP\_OK - success
- ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY - interface status error
- ESP\_ERR\_NOT\_SUPPORTED - mac not supported on this interface

*esp\_err\_t* **esp\_netif\_set\_hostname** (*esp\_netif\_t* \*esp\_netif, const char \*hostname)

Set the hostname of an interface.

The configured hostname overrides the default configuration value CONFIG\_LWIP\_LOCAL\_HOSTNAME. Please note that when the hostname is altered after interface started/connected the changes would only be reflected once the interface restarts/reconnects

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **hostname** –[in] New hostname for the interface. Maximum length 32 bytes.

#### Returns

- ESP\_OK - success
- ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY - interface status error
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS - parameter error

*esp\_err\_t* **esp\_netif\_get\_hostname** (*esp\_netif\_t* \*esp\_netif, const char \*\*hostname)

Get interface hostname.

#### Parameters

- **esp\_netif** –[in] Handle to esp-netif instance
- **hostname** –[out] Returns a pointer to the hostname. May be NULL if no hostname is set. If set non-NULL, pointer remains valid (and string may change if the hostname changes).

**Returns**

- ESP\_OK - success
- ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY - interface status error
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS - parameter error

bool **esp\_netif\_is\_netif\_up** (*esp\_netif\_t* \*esp\_netif)

Test if supplied interface is up or down.

**Parameters** *esp\_netif* –[in] Handle to esp-netif instance

**Returns**

- true - Interface is up
- false - Interface is down

*esp\_err\_t* **esp\_netif\_get\_ip\_info** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_ip\_info\_t* \*ip\_info)

Get interface's IP address information.

If the interface is up, IP information is read directly from the TCP/IP stack. If the interface is down, IP information is read from a copy kept in the ESP-NETIF instance

**Parameters**

- *esp\_netif* –[in] Handle to esp-netif instance
- *ip\_info* –[out] If successful, IP information will be returned in this argument.

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS

*esp\_err\_t* **esp\_netif\_get\_old\_ip\_info** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_ip\_info\_t* \*ip\_info)

Get interface's old IP information.

Returns an "old" IP address previously stored for the interface when the valid IP changed.

If the IP lost timer has expired (meaning the interface was down for longer than the configured interval) then the old IP information will be zero.

**Parameters**

- *esp\_netif* –[in] Handle to esp-netif instance
- *ip\_info* –[out] If successful, IP information will be returned in this argument.

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS

*esp\_err\_t* **esp\_netif\_set\_ip\_info** (*esp\_netif\_t* \*esp\_netif, const *esp\_netif\_ip\_info\_t* \*ip\_info)

Set interface's IP address information.

This function is mainly used to set a static IP on an interface.

If the interface is up, the new IP information is set directly in the TCP/IP stack.

The copy of IP information kept in the ESP-NETIF instance is also updated (this copy is returned if the IP is queried while the interface is still down.)

---

**Note:** DHCP client/server must be stopped (if enabled for this interface) before setting new IP information.

---

---

**Note:** Calling this interface for may generate a SYSTEM\_EVENT\_STA\_GOT\_IP or SYSTEM\_EVENT\_ETH\_GOT\_IP event.

---

**Parameters**

- *esp\_netif* –[in] Handle to esp-netif instance
- *ip\_info* –[in] IP information to set on the specified interface

**Returns**

- ESP\_OK

- `ESP_ERR_ESP_NETIF_INVALID_PARAMS`
- `ESP_ERR_ESP_NETIF_DHCP_NOT_STOPPED` If DHCP server or client is still running

*esp\_err\_t* `esp_netif_set_old_ip_info` (*esp\_netif\_t* \*esp\_netif, const *esp\_netif\_ip\_info\_t* \*ip\_info)

Set interface old IP information.

This function is called from the DHCP client (if enabled), before a new IP is set. It is also called from the default handlers for the `SYSTEM_EVENT_STA_CONNECTED` and `SYSTEM_EVENT_ETH_CONNECTED` events.

Calling this function stores the previously configured IP, which can be used to determine if the IP changes in the future.

If the interface is disconnected or down for too long, the “IP lost timer” will expire (after the configured interval) and set the old IP information to zero.

#### Parameters

- `esp_netif` –[in] Handle to esp-netif instance
- `ip_info` –[in] Store the old IP information for the specified interface

#### Returns

- `ESP_OK`
- `ESP_ERR_ESP_NETIF_INVALID_PARAMS`

int `esp_netif_get_netif_impl_index` (*esp\_netif\_t* \*esp\_netif)

Get net interface index from network stack implementation.

---

**Note:** This index could be used in `setsockopt()` to bind socket with multicast interface

---

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** implementation specific index of interface represented with supplied `esp_netif`

*esp\_err\_t* `esp_netif_get_netif_impl_name` (*esp\_netif\_t* \*esp\_netif, char \*name)

Get net interface name from network stack implementation.

---

**Note:** This name could be used in `setsockopt()` to bind socket with appropriate interface

---

#### Parameters

- `esp_netif` –[in] Handle to esp-netif instance
- `name` –[out] Interface name as specified in underlying TCP/IP stack. Note that the actual name will be copied to the specified buffer, which must be allocated to hold maximum interface name size (6 characters for lwIP)

#### Returns

- `ESP_OK`
- `ESP_ERR_ESP_NETIF_INVALID_PARAMS`

*esp\_err\_t* `esp_netif_dhcps_option` (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_dhcp\_option\_mode\_t* opt\_op, *esp\_netif\_dhcp\_option\_id\_t* opt\_id, void \*opt\_val, uint32\_t opt\_len)

Set or Get DHCP server option.

#### Parameters

- `esp_netif` –[in] Handle to esp-netif instance
- `opt_op` –[in] `ESP_NETIF_OP_SET` to set an option, `ESP_NETIF_OP_GET` to get an option.
- `opt_id` –[in] Option index to get or set, must be one of the supported enum values.
- `opt_val` –[inout] Pointer to the option parameter.
- `opt_len` –[in] Length of the option parameter.

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STOPPED
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STARTED

*esp\_err\_t* **esp\_netif\_dhcpc\_option** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_dhcp\_option\_mode\_t* opt\_op, *esp\_netif\_dhcp\_option\_id\_t* opt\_id, void \*opt\_val, uint32\_t opt\_len)

Set or Get DHCP client option.

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance
- **opt\_op** –[in] ESP\_NETIF\_OP\_SET to set an option, ESP\_NETIF\_OP\_GET to get an option.
- **opt\_id** –[in] Option index to get or set, must be one of the supported enum values.
- **opt\_val** –[inout] Pointer to the option parameter.
- **opt\_len** –[in] Length of the option parameter.

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STOPPED
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STARTED

*esp\_err\_t* **esp\_netif\_dhcpc\_start** (*esp\_netif\_t* \*esp\_netif)

Start DHCP client (only if enabled in interface object)

---

**Note:** The default event handlers for the SYSTEM\_EVENT\_STA\_CONNECTED and SYSTEM\_EVENT\_ETH\_CONNECTED events call this function.

---

**Parameters** **esp\_netif** –[in] Handle to esp-netif instance

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STARTED
- ESP\_ERR\_ESP\_NETIF\_DHCPC\_START\_FAILED

*esp\_err\_t* **esp\_netif\_dhcpc\_stop** (*esp\_netif\_t* \*esp\_netif)

Stop DHCP client (only if enabled in interface object)

---

**Note:** Calling action\_netif\_stop() will also stop the DHCP Client if it is running.

---

**Parameters** **esp\_netif** –[in] Handle to esp-netif instance

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STOPPED
- ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY

*esp\_err\_t* **esp\_netif\_dhcpc\_get\_status** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_dhcp\_status\_t* \*status)

Get DHCP client status.

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance
- **status** –[out] If successful, the status of DHCP client will be returned in this argument.

**Returns**

- ESP\_OK

*esp\_err\_t* **esp\_netif\_dhcps\_get\_status** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_dhcp\_status\_t* \*status)

Get DHCP Server status.

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance
- **status** –[out] If successful, the status of the DHCP server will be returned in this argument.

**Returns**

- ESP\_OK

*esp\_err\_t* **esp\_netif\_dhcps\_start** (*esp\_netif\_t* \*esp\_netif)

Start DHCP server (only if enabled in interface object)

**Parameters** **esp\_netif** –[in] Handle to esp-netif instance

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STARTED

*esp\_err\_t* **esp\_netif\_dhcps\_stop** (*esp\_netif\_t* \*esp\_netif)

Stop DHCP server (only if enabled in interface object)

**Parameters** **esp\_netif** –[in] Handle to esp-netif instance

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS
- ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STOPPED
- ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY

*esp\_err\_t* **esp\_netif\_dhcps\_get\_clients\_by\_mac** (*esp\_netif\_t* \*esp\_netif, int num, *esp\_netif\_pair\_mac\_ip\_t* \*mac\_ip\_pair)

Populate IP addresses of clients connected to DHCP server listed by their MAC addresses.

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance
- **num** –[in] Number of clients with specified MAC addresses in the array of pairs
- **mac\_ip\_pair** –[inout] Array of pairs of MAC and IP addresses (MAC are inputs, IP outputs)

**Returns**

- ESP\_OK on success
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS on invalid params
- ESP\_ERR\_NOT\_SUPPORTED if DHCP server not enabled

*esp\_err\_t* **esp\_netif\_set\_dns\_info** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_dns\_type\_t* type, *esp\_netif\_dns\_info\_t* \*dns)

Set DNS Server information.

This function behaves differently if DHCP server or client is enabled

If DHCP client is enabled, main and backup DNS servers will be updated automatically from the DHCP lease if the relevant DHCP options are set. Fallback DNS Server is never updated from the DHCP lease and is designed to be set via this API. If DHCP client is disabled, all DNS server types can be set via this API only.

If DHCP server is enabled, the Main DNS Server setting is used by the DHCP server to provide a DNS Server option to DHCP clients (Wi-Fi stations).

- The default Main DNS server is typically the IP of the DHCP server itself.
- This function can override it by setting server type ESP\_NETIF\_DNS\_MAIN.
- Other DNS Server types are not supported for the DHCP server.
- To propagate the DNS info to client, please stop the DHCP server before using this API.

**Parameters**

- **esp\_netif** –[in] Handle to esp-netif instance

- **type** *–[in]* Type of DNS Server to set: ESP\_NETIF\_DNS\_MAIN, ESP\_NETIF\_DNS\_BACKUP, ESP\_NETIF\_DNS\_FALLBACK
- **dns** *–[in]* DNS Server address to set

**Returns**

- ESP\_OK on success
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS invalid params

*esp\_err\_t* **esp\_netif\_get\_dns\_info** (*esp\_netif\_t* \*esp\_netif, *esp\_netif\_dns\_type\_t* type, *esp\_netif\_dns\_info\_t* \*dns)

Get DNS Server information.

Return the currently configured DNS Server address for the specified interface and Server type.

This may be result of a previous call to *esp\_netif\_set\_dns\_info()*. If the interface's DHCP client is enabled, the Main or Backup DNS Server may be set by the current DHCP lease.

**Parameters**

- **esp\_netif** *–[in]* Handle to esp-netif instance
- **type** *–[in]* Type of DNS Server to get: ESP\_NETIF\_DNS\_MAIN, ESP\_NETIF\_DNS\_BACKUP, ESP\_NETIF\_DNS\_FALLBACK
- **dns** *–[out]* DNS Server result is written here on success

**Returns**

- ESP\_OK on success
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS invalid params

*esp\_err\_t* **esp\_netif\_create\_ip6\_linklocal** (*esp\_netif\_t* \*esp\_netif)

Create interface link-local IPv6 address.

Cause the TCP/IP stack to create a link-local IPv6 address for the specified interface.

This function also registers a callback for the specified interface, so that if the link-local address becomes verified as the preferred address then a SYSTEM\_EVENT\_GOT\_IP6 event will be sent.

**Parameters** **esp\_netif** *–[in]* Handle to esp-netif instance

**Returns**

- ESP\_OK
- ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS

*esp\_err\_t* **esp\_netif\_get\_ip6\_linklocal** (*esp\_netif\_t* \*esp\_netif, *esp\_ip6\_addr\_t* \*if\_ip6)

Get interface link-local IPv6 address.

If the specified interface is up and a preferred link-local IPv6 address has been created for the interface, return a copy of it.

**Parameters**

- **esp\_netif** *–[in]* Handle to esp-netif instance
- **if\_ip6** *–[out]* IPv6 information will be returned in this argument if successful.

**Returns**

- ESP\_OK
- ESP\_FAIL If interface is down, does not have a link-local IPv6 address, or the link-local IPv6 address is not a preferred address.

*esp\_err\_t* **esp\_netif\_get\_ip6\_global** (*esp\_netif\_t* \*esp\_netif, *esp\_ip6\_addr\_t* \*if\_ip6)

Get interface global IPv6 address.

If the specified interface is up and a preferred global IPv6 address has been created for the interface, return a copy of it.

**Parameters**

- **esp\_netif** *–[in]* Handle to esp-netif instance
- **if\_ip6** *–[out]* IPv6 information will be returned in this argument if successful.

**Returns**

- ESP\_OK

- **ESP\_FAIL** If interface is down, does not have a global IPv6 address, or the global IPv6 address is not a preferred address.

int **esp\_netif\_get\_all\_ip6** (*esp\_netif\_t* \*esp\_netif, *esp\_ip6\_addr\_t* if\_ip6[])

Get all IPv6 addresses of the specified interface.

**Parameters**

- **esp\_netif** **–[in]** Handle to esp-netif instance
- **if\_ip6** **–[out]** Array of IPv6 addresses will be copied to the argument

**Returns** number of returned IPv6 addresses

void **esp\_netif\_set\_ip4\_addr** (*esp\_ip4\_addr\_t* \*addr, uint8\_t a, uint8\_t b, uint8\_t c, uint8\_t d)

Sets IPv4 address to the specified octets.

**Parameters**

- **addr** **–[out]** IP address to be set
- **a** **–**the first octet (127 for IP 127.0.0.1)
- **b** **–**
- **c** **–**
- **d** **–**

char \***esp\_ip4addr\_ntoa** (const *esp\_ip4\_addr\_t* \*addr, char \*buf, int buflen)

Converts numeric IP address into decimal dotted ASCII representation.

**Parameters**

- **addr** **–**ip address in network order to convert
- **buf** **–**target buffer where the string is stored
- **buflen** **–**length of buf

**Returns** either pointer to buf which now holds the ASCII representation of addr or NULL if buf was too small

uint32\_t **esp\_ip4addr\_aton** (const char \*addr)

Ascii internet address interpretation routine The value returned is in network order.

**Parameters** **addr** **–**IP address in ascii representation (e.g. “127.0.0.1” )

**Returns** ip address in network order

*esp\_err\_t* **esp\_netif\_str\_to\_ip4** (const char \*src, *esp\_ip4\_addr\_t* \*dst)

Converts Ascii internet IPv4 address into esp\_ip4\_addr\_t.

**Parameters**

- **src** **–[in]** IPv4 address in ascii representation (e.g. “127.0.0.1” )
- **dst** **–[out]** Address of the target esp\_ip4\_addr\_t structure to receive converted address

**Returns**

- **ESP\_OK** on success
- **ESP\_FAIL** if conversion failed
- **ESP\_ERR\_INVALID\_ARG** if invalid parameter is passed into

*esp\_err\_t* **esp\_netif\_str\_to\_ip6** (const char \*src, *esp\_ip6\_addr\_t* \*dst)

Converts Ascii internet IPv6 address into esp\_ip4\_addr\_t Zeros in the IP address can be stripped or completely omitted: “2001:db8:85a3:0:0:0:2:1” or “2001:db8::2:1” )

**Parameters**

- **src** **–[in]** IPv6 address in ascii representation (e.g. “2001:0db8:85a3:0000:0000:0000:0002:0001” )
- **dst** **–[out]** Address of the target esp\_ip6\_addr\_t structure to receive converted address

**Returns**

- **ESP\_OK** on success
- **ESP\_FAIL** if conversion failed
- **ESP\_ERR\_INVALID\_ARG** if invalid parameter is passed into

*esp\_netif\_io\_driver\_handle* **esp\_netif\_get\_io\_driver** (*esp\_netif\_t* \*esp\_netif)

Gets media driver handle for this esp-netif instance.

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** opaque pointer of related IO driver

`esp_netif_t *esp_netif_get_handle_from_ifkey` (const char \*if\_key)

Searches over a list of created objects to find an instance with supplied if key.

**Parameters** `if_key` –Textual description of network interface

**Returns** Handle to esp-netif instance

`esp_netif_flags_t esp_netif_get_flags` (`esp_netif_t *esp_netif`)

Returns configured flags for this interface.

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** Configuration flags

const char \*`esp_netif_get_ifkey` (`esp_netif_t *esp_netif`)

Returns configured interface key for this esp-netif instance.

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** Textual description of related interface

const char \*`esp_netif_get_desc` (`esp_netif_t *esp_netif`)

Returns configured interface type for this esp-netif instance.

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** Enumerated type of this interface, such as station, AP, ethernet

int `esp_netif_get_route_prio` (`esp_netif_t *esp_netif`)

Returns configured routing priority number.

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** Integer representing the instance's route-prio, or -1 if invalid parameters

int32\_t `esp_netif_get_event_id` (`esp_netif_t *esp_netif`, `esp_netif_ip_event_type_t event_type`)

Returns configured event for this esp-netif instance and supplied event type.

**Parameters**

- `esp_netif` –[in] Handle to esp-netif instance
- `event_type` –(either get or lost IP)

**Returns** specific event id which is configured to be raised if the interface lost or acquired IP address  
-1 if supplied event\_type is not known

`esp_netif_t *esp_netif_next` (`esp_netif_t *esp_netif`)

Iterates over list of interfaces. Returns first netif if NULL given as parameter.

You can use `esp_netif_next_unsafe()` directly if all the system interfaces are under your control and you can safely iterate over them. Otherwise, iterate over interfaces using `esp_netif_tcpip_exec()`, or use `esp_netif_find_if()` to search in the list of netifs with defined predicate.

---

**Note:** This API doesn't lock the list, nor the TCPIP context, as this it's usually required to get atomic access between iteration steps rather than within a single iteration. Therefore it is recommended to iterate over the interfaces inside `esp_netif_tcpip_exec()`

---

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** First netif from the list if supplied parameter is NULL, next one otherwise

`esp_netif_t *esp_netif_next_unsafe` (`esp_netif_t *esp_netif`)

Iterates over list of interfaces without list locking. Returns first netif if NULL given as parameter.

Used for bulk search loops within TCPIP context, e.g. using `esp_netif_tcpip_exec()`, or if we're sure that the iteration is safe from our application perspective (e.g. no interface is removed between iterations)

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** First netif from the list if supplied parameter is NULL, next one otherwise

`esp_netif_t *esp_netif_find_if(esp_netif_find_predicate_t fn, void *ctx)`

Return a netif pointer for the first interface that meets criteria defined by the callback.

**Parameters**

- **fn** –Predicate function returning true for the desired interface
- **ctx** –Context pointer passed to the predicate, typically a descriptor to compare with

**Returns** valid netif pointer if found, NULL if not

`size_t esp_netif_get_nr_of_ifs(void)`

Returns number of registered esp\_netif objects.

**Returns** Number of esp\_netifs

`void esp_netif_netstack_buf_ref(void *netstack_buf)`

increase the reference counter of net stack buffer

**Parameters** `netstack_buf` –[in] the net stack buffer

`void esp_netif_netstack_buf_free(void *netstack_buf)`

free the netstack buffer

**Parameters** `netstack_buf` –[in] the net stack buffer

`esp_err_t esp_netif_tcpip_exec(esp_netif_callback_fn fn, void *ctx)`

Utility to execute the supplied callback in TCP/IP context.

**Parameters**

- **fn** –Pointer to the callback
- **ctx** –Parameter to the callback

**Returns** The error code (`esp_err_t`) returned by the callback

## Type Definitions

`typedef bool (*esp_netif_find_predicate_t)(esp_netif_t *netif, void *ctx)`

Predicate callback for `esp_netif_find_if()` used to find interface which meets defined criteria.

`typedef esp_err_t (*esp_netif_callback_fn)(void *ctx)`

TCP/IP thread safe callback used with `esp_netif_tcpip_exec()`

## Header File

- `components/esp_netif/include/esp_netif_types.h`

## Structures

`struct esp_netif_dns_info_t`

DNS server info.

## Public Members

`esp_ip_addr_t ip`

IPV4 address of DNS server

`struct esp_netif_ip_info_t`

Event structure for `IP_EVENT_STA_GOT_IP`, `IP_EVENT_ETH_GOT_IP` events

**Public Members***esp\_ip4\_addr\_t* **ip**

Interface IPV4 address

*esp\_ip4\_addr\_t* **netmask**

Interface IPV4 netmask

*esp\_ip4\_addr\_t* **gw**

Interface IPV4 gateway address

struct **esp\_netif\_ip6\_info\_t**

IPV6 IP address information.

**Public Members***esp\_ip6\_addr\_t* **ip**

Interface IPV6 address

struct **ip\_event\_got\_ip\_t**

Event structure for IP\_EVENT\_GOT\_IP event.

**Public Members***esp\_netif\_t* \***esp\_netif**

Pointer to corresponding esp-netif object

*esp\_netif\_ip\_info\_t* **ip\_info**

IP address, netmask, gateway IP address

bool **ip\_changed**

Whether the assigned IP has changed or not

struct **ip\_event\_got\_ip6\_t**

Event structure for IP\_EVENT\_GOT\_IP6 event

**Public Members***esp\_netif\_t* \***esp\_netif**

Pointer to corresponding esp-netif object

*esp\_netif\_ip6\_info\_t* **ip6\_info**

IPv6 address of the interface

int **ip\_index**

IPv6 address index

struct **ip\_event\_add\_ip6\_t**

Event structure for ADD\_IP6 event

### Public Members

*esp\_ip6\_addr\_t* **addr**

The address to be added to the interface

bool **preferred**

The default preference of the address

struct **ip\_event\_ap\_staassigned\_t**

Event structure for IP\_EVENT\_AP\_STAIPASSIGNED event

### Public Members

*esp\_netif\_t* \***esp\_netif**

Pointer to the associated netif handle

*esp\_ip4\_addr\_t* **ip**

IP address which was assigned to the station

uint8\_t **mac**[6]

MAC address of the connected client

struct **bridgeif\_config**

LwIP bridge configuration

### Public Members

uint16\_t **max\_fdb\_dyn\_entries**

maximum number of entries in dynamic forwarding database

uint16\_t **max\_fdb\_sta\_entries**

maximum number of entries in static forwarding database

uint8\_t **max\_ports**

maximum number of ports the bridge can consist of

struct **esp\_netif\_inherent\_config**

ESP-netif inherent config parameters.

### Public Members

*esp\_netif\_flags\_t* **flags**

flags that define esp-netif behavior

uint8\_t **mac**[6]

initial mac address for this interface

const *esp\_netif\_ip\_info\_t* \***ip\_info**

initial ip address for this interface

uint32\_t **get\_ip\_event**

event id to be raised when interface gets an IP

uint32\_t **lost\_ip\_event**

event id to be raised when interface loses its IP

const char \***if\_key**

string identifier of the interface

const char \***if\_desc**

textual description of the interface

int **route\_prio**

numeric priority of this interface to become a default routing if (if other netifs are up). A higher value of route\_prio indicates a higher priority

*bridgeif\_config\_t* \***bridge\_info**

LwIP bridge configuration

struct **esp\_netif\_driver\_base\_s**

ESP-netif driver base handle.

### Public Members

*esp\_err\_t* (\***post\_attach**)(*esp\_netif\_t* \*netif, *esp\_netif\_io\_driver\_handle* h)

post attach function pointer

*esp\_netif\_t* \***netif**

netif handle

struct **esp\_netif\_driver\_ifconfig**

Specific IO driver configuration.

### Public Members

*esp\_netif\_io\_driver\_handle* **handle**

io-driver handle

*esp\_err\_t* (\***transmit**)(void \*h, void \*buffer, size\_t len)

transmit function pointer

*esp\_err\_t* (**\*transmit\_wrap**)(void \*h, void \*buffer, size\_t len, void \*netstack\_buffer)

transmit wrap function pointer

void (**\*driver\_free\_rx\_buffer**)(void \*h, void \*buffer)

free rx buffer function pointer

struct **esp\_netif\_config**

Generic esp\_netif configuration.

### Public Members

const *esp\_netif\_inherent\_config\_t* \***base**

base config

const *esp\_netif\_driver\_ifconfig\_t* \***driver**

driver config

const *esp\_netif\_netstack\_config\_t* \***stack**

stack config

struct **esp\_netif\_pair\_mac\_ip\_t**

DHCP client's addr info (pair of MAC and IP address)

### Public Members

uint8\_t **mac**[6]

Clients MAC address

*esp\_ip4\_addr\_t* **ip**

Clients IP address

### Macros

**ESP\_ERR\_ESP\_NETIF\_BASE**

Definition of ESP-NETIF based errors.

**ESP\_ERR\_ESP\_NETIF\_INVALID\_PARAMS**

**ESP\_ERR\_ESP\_NETIF\_IF\_NOT\_READY**

**ESP\_ERR\_ESP\_NETIF\_DHCP\_START\_FAILED**

**ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STARTED**

**ESP\_ERR\_ESP\_NETIF\_DHCP\_ALREADY\_STOPPED**

**ESP\_ERR\_ESP\_NETIF\_NO\_MEM**

**ESP\_ERR\_ESP\_NETIF\_DHCP\_NOT\_STOPPED**

**ESP\_ERR\_ESP\_NETIF\_DRIVER\_ATTACH\_FAILED**

**ESP\_ERR\_ESP\_NETIF\_INIT\_FAILED**

**ESP\_ERR\_ESP\_NETIF\_DNS\_NOT\_CONFIGURED**

**ESP\_ERR\_ESP\_NETIF\_MLD6\_FAILED**

**ESP\_ERR\_ESP\_NETIF\_IP6\_ADDR\_FAILED**

**ESP\_ERR\_ESP\_NETIF\_DHCP\_START\_FAILED**

**ESP\_NETIF\_BR\_FLOOD**

Definition of ESP-NETIF bridge controll.

**ESP\_NETIF\_BR\_DROP**

**ESP\_NETIF\_BR\_FDW\_CPU**

### Type Definitions

typedef struct esp\_netif\_obj **esp\_netif\_t**

typedef enum *esp\_netif\_flags* **esp\_netif\_flags\_t**

typedef enum *esp\_netif\_ip\_event\_type* **esp\_netif\_ip\_event\_type\_t**

typedef struct *bridgeif\_config* **bridgeif\_config\_t**

LwIP bridge configuration

typedef struct *esp\_netif\_inherent\_config* **esp\_netif\_inherent\_config\_t**

ESP-netif inherent config parameters.

typedef struct *esp\_netif\_config* **esp\_netif\_config\_t**

typedef void \***esp\_netif\_iodriver\_handle**

IO driver handle type.

typedef struct *esp\_netif\_driver\_base\_s* **esp\_netif\_driver\_base\_t**

ESP-netif driver base handle.

typedef struct *esp\_netif\_driver\_ifconfig* **esp\_netif\_driver\_ifconfig\_t**

typedef struct esp\_netif\_netstack\_config **esp\_netif\_netstack\_config\_t**

Specific L3 network stack configuration.

typedef *esp\_err\_t* (**\*esp\_netif\_receive\_t**)(*esp\_netif\_t* \*esp\_netif, void \*buffer, size\_t len, void \*eb)  
ESP-NETIF Receive function type.

### Enumerations

enum **esp\_netif\_dns\_type\_t**

Type of DNS server.

*Values:*

enumerator **ESP\_NETIF\_DNS\_MAIN**

DNS main server address

enumerator **ESP\_NETIF\_DNS\_BACKUP**

DNS backup server address (Wi-Fi STA and Ethernet only)

enumerator **ESP\_NETIF\_DNS\_FALLBACK**

DNS fallback server address (Wi-Fi STA and Ethernet only)

enumerator **ESP\_NETIF\_DNS\_MAX**

enum **esp\_netif\_dhcp\_status\_t**

Status of DHCP client or DHCP server.

*Values:*

enumerator **ESP\_NETIF\_DHCP\_INIT**

DHCP client/server is in initial state (not yet started)

enumerator **ESP\_NETIF\_DHCP\_STARTED**

DHCP client/server has been started

enumerator **ESP\_NETIF\_DHCP\_STOPPED**

DHCP client/server has been stopped

enumerator **ESP\_NETIF\_DHCP\_STATUS\_MAX**

enum **esp\_netif\_dhcp\_option\_mode\_t**

Mode for DHCP client or DHCP server option functions.

*Values:*

enumerator **ESP\_NETIF\_OP\_START**

enumerator **ESP\_NETIF\_OP\_SET**

Set option

enumerator **ESP\_NETIF\_OP\_GET**

Get option

enumerator **ESP\_NETIF\_OP\_MAX**

enum **esp\_netif\_dhcp\_option\_id\_t**

Supported options for DHCP client or DHCP server.

*Values:*

enumerator **ESP\_NETIF\_SUBNET\_MASK**

Network mask

enumerator **ESP\_NETIF\_DOMAIN\_NAME\_SERVER**

Domain name server

enumerator **ESP\_NETIF\_ROUTER\_SOLICITATION\_ADDRESS**

Solicitation router address

enumerator **ESP\_NETIF\_REQUESTED\_IP\_ADDRESS**

Request specific IP address

enumerator **ESP\_NETIF\_IP\_ADDRESS\_LEASE\_TIME**

Request IP address lease time

enumerator **ESP\_NETIF\_IP\_REQUEST\_RETRY\_TIME**

Request IP address retry counter

enumerator **ESP\_NETIF\_VENDOR\_CLASS\_IDENTIFIER**

Vendor Class Identifier of a DHCP client

enumerator **ESP\_NETIF\_VENDOR\_SPECIFIC\_INFO**

Vendor Specific Information of a DHCP server

enum **ip\_event\_t**

IP event declarations

*Values:*

enumerator **IP\_EVENT\_STA\_GOT\_IP**

station got IP from connected AP

enumerator **IP\_EVENT\_STA\_LOST\_IP**

station lost IP and the IP is reset to 0

enumerator **IP\_EVENT\_AP\_STAIPASSIGNED**

soft-AP assign an IP to a connected station

enumerator **IP\_EVENT\_GOT\_IP6**

station or ap or ethernet interface v6IP addr is preferred

enumerator **IP\_EVENT\_ETH\_GOT\_IP**

ethernet got IP from connected AP

enumerator **IP\_EVENT\_ETH\_LOST\_IP**  
ethernet lost IP and the IP is reset to 0

enumerator **IP\_EVENT\_PPP\_GOT\_IP**  
PPP interface got IP

enumerator **IP\_EVENT\_PPP\_LOST\_IP**  
PPP interface lost IP

enum **esp\_netif\_flags**

*Values:*

enumerator **ESP\_NETIF\_DHCP\_CLIENT**

enumerator **ESP\_NETIF\_DHCP\_SERVER**

enumerator **ESP\_NETIF\_FLAG\_AUTOUP**

enumerator **ESP\_NETIF\_FLAG\_GARP**

enumerator **ESP\_NETIF\_FLAG\_EVENT\_IP\_MODIFIED**

enumerator **ESP\_NETIF\_FLAG\_IS\_PPP**

enumerator **ESP\_NETIF\_FLAG\_IS\_BRIDGE**

enumerator **ESP\_NETIF\_FLAG\_MLDV6\_REPORT**

enum **esp\_netif\_ip\_event\_type**

*Values:*

enumerator **ESP\_NETIF\_IP\_EVENT\_GOT\_IP**

enumerator **ESP\_NETIF\_IP\_EVENT\_LOST\_IP**

## Header File

## Functions

*esp\_ip6\_addr\_type\_t* **esp\_netif\_ip6\_get\_addr\_type** (*esp\_ip6\_addr\_t* \*ip6\_addr)

Get the IPv6 address type.

**Parameters** **ip6\_addr** –[in] IPv6 type

**Returns** IPv6 type in form of enum *esp\_ip6\_addr\_type\_t*

static inline void **esp\_netif\_ip\_addr\_copy** (*esp\_ip\_addr\_t* \*dest, const *esp\_ip\_addr\_t* \*src)

Copy IP addresses.

**Parameters**

- **dest** –[out] destination IP
- **src** –[in] source IP

## Structures

struct **esp\_ip6\_addr**

IPv6 address.

### Public Members

uint32\_t **addr**[4]

IPv6 address

uint8\_t **zone**

zone ID

struct **esp\_ip4\_addr**

IPv4 address.

### Public Members

uint32\_t **addr**

IPv4 address

struct **\_ip\_addr**

IP address.

### Public Members

*esp\_ip6\_addr\_t* **ip6**

IPv6 address type

*esp\_ip4\_addr\_t* **ip4**

IPv4 address type

union *\_ip\_addr::*[anonymous] **u\_addr**

IP address union

uint8\_t **type**

ipaddress type

## Macros

## Functions

*esp\_err\_t* **esp\_vfs\_l2tap\_intf\_register** (*l2tap\_vfs\_config\_t* \*config)

Add L2 TAP virtual filesystem driver.

This function must be called prior usage of ESP-NETIF L2 TAP Interface

**Parameters** **config** –L2 TAP virtual filesystem driver configuration. Default base path /dev/net/tap is used when this parameter is NULL.

**Returns** *esp\_err\_t*

- ESP\_OK on success

*esp\_err\_t* **esp\_vfs\_l2tap\_intf\_unregister** (const char \*base\_path)

Removes L2 TAP virtual filesystem driver.

**Parameters** **base\_path** –Base path to the L2 TAP virtual filesystem driver. Default path /dev/net/tap is used when this parameter is NULL.

**Returns** *esp\_err\_t*

- ESP\_OK on success

*esp\_err\_t* **esp\_vfs\_l2tap\_eth\_filter** (*l2tap\_iodriver\_handle* driver\_handle, void \*buff, *size\_t* \*size)

Filters received Ethernet L2 frames into L2 TAP infrastructure.

**Parameters**

- **driver\_handle** –handle of driver at which the frame was received
- **buff** –received L2 frame
- **size** –input length of the L2 frame which is set to 0 when frame is filtered into L2 TAP

**Returns** *esp\_err\_t*

- ESP\_OK is always returned

## Structures

struct **l2tap\_vfs\_config\_t**

L2Tap VFS config parameters.

## Public Members

const char **\*base\_path**  
vfs base path

## Macros

**L2TAP\_VFS\_DEFAULT\_PATH**  
**L2TAP\_VFS\_CONFIG\_DEFAULT()**

## Type Definitions

typedef void **\*l2tap\_iodriver\_handle**

## Enumerations

enum **l2tap\_ioctl\_opt\_t**

*Values:*

enumerator **L2TAP\_S\_RCV\_FILTER**

enumerator **L2TAP\_G\_RCV\_FILTER**

enumerator **L2TAP\_S\_INTF\_DEVICE**

enumerator **L2TAP\_G\_INTF\_DEVICE**

enumerator **L2TAP\_G\_DEVICE\_DRV\_HNDL**

## WiFi default API reference

### Header File

- [components/esp\\_wifi/include/esp\\_wifi\\_default.h](#)

### Functions

*esp\_err\_t* **esp\_netif\_attach\_wifi\_station**(*esp\_netif\_t* \*esp\_netif)

Attaches wifi station interface to supplied netif.

**Parameters** **esp\_netif** –instance to attach the wifi station to

**Returns**

- ESP\_OK on success
- ESP\_FAIL if attach failed

*esp\_err\_t* **esp\_netif\_attach\_wifi\_ap**(*esp\_netif\_t* \*esp\_netif)

Attaches wifi soft AP interface to supplied netif.

**Parameters** **esp\_netif** –instance to attach the wifi AP to

**Returns**

- ESP\_OK on success
- ESP\_FAIL if attach failed

*esp\_err\_t* **esp\_wifi\_set\_default\_wifi\_sta\_handlers** (void)

Sets default wifi event handlers for STA interface.

**Returns**

- ESP\_OK on success, error returned from esp\_event\_handler\_register if failed

*esp\_err\_t* **esp\_wifi\_set\_default\_wifi\_ap\_handlers** (void)

Sets default wifi event handlers for AP interface.

**Returns**

- ESP\_OK on success, error returned from esp\_event\_handler\_register if failed

*esp\_err\_t* **esp\_wifi\_clear\_default\_wifi\_driver\_and\_handlers** (void \*esp\_netif)

Clears default wifi event handlers for supplied network interface.

**Parameters** *esp\_netif* –instance of corresponding if object

**Returns**

- ESP\_OK on success, error returned from esp\_event\_handler\_register if failed

*esp\_netif\_t* \***esp\_netif\_create\_default\_wifi\_ap** (void)

Creates default WIFI AP. In case of any init error this API aborts.

---

**Note:** The API creates esp\_netif object with default WiFi access point config, attaches the netif to wifi and registers wifi handlers to the default event loop. This API uses assert() to check for potential errors, so it could abort the program. (Note that the default event loop needs to be created prior to calling this API)

---

**Returns** pointer to esp-netif instance

*esp\_netif\_t* \***esp\_netif\_create\_default\_wifi\_sta** (void)

Creates default WIFI STA. In case of any init error this API aborts.

---

**Note:** The API creates esp\_netif object with default WiFi station config, attaches the netif to wifi and registers wifi handlers to the default event loop. This API uses assert() to check for potential errors, so it could abort the program. (Note that the default event loop needs to be created prior to calling this API)

---

**Returns** pointer to esp-netif instance

void **esp\_netif\_destroy\_default\_wifi** (void \*esp\_netif)

Destroys default WIFI netif created with esp\_netif\_create\_default\_wifi\_...() API.

---

**Note:** This API unregisters wifi handlers and detaches the created object from the wifi. (this function is a no-operation if esp\_netif is NULL)

---

**Parameters** *esp\_netif* –[in] object to detach from WiFi and destroy

*esp\_netif\_t* \***esp\_netif\_create\_wifi** (*wifi\_interface\_t* wifi\_if, *esp\_netif\_inherent\_config\_t* \*esp\_netif\_config)

Creates esp\_netif WiFi object based on the custom configuration.

**Attention** This API DOES NOT register default handlers!

**Parameters**

- **wifi\_if** –[in] type of wifi interface
- **esp\_netif\_config** –inherent esp-netif configuration pointer

**Returns** pointer to esp-netif instance

```
esp_err_t esp_netif_create_default_wifi_mesh_netifs (esp_netif_t **p_netif_sta, esp_netif_t
                                                    **p_netif_ap)
```

Creates default STA and AP network interfaces for esp-mesh.

Both netifs are almost identical to the default station and softAP, but with DHCP client and server disabled. Please note that the DHCP client is typically enabled only if the device is promoted to a root node.

Returns created interfaces which could be ignored setting parameters to NULL if an application code does not need to save the interface instances for further processing.

**Parameters**

- **p\_netif\_sta** –[out] pointer where the resultant STA interface is saved (if non NULL)
- **p\_netif\_ap** –[out] pointer where the resultant AP interface is saved (if non NULL)

**Returns** ESP\_OK on success

## 2.5.5 IP Network Layer

### ESP-NETIF Custom I/O Driver

This section outlines implementing a new I/O driver with esp-netif connection capabilities. By convention the I/O driver has to register itself as an esp-netif driver and thus holds a dependency on esp-netif component and is responsible for providing data path functions, post-attach callback and in most cases also default event handlers to define network interface actions based on driver' s lifecycle transitions.

**Packet input/output** As shown in the diagram, the following three API functions for the packet data path must be defined for connecting with esp-netif:

- `esp_netif_transmit()`
- `esp_netif_free_rx_buffer()`
- `esp_netif_receive()`

The first two functions for transmitting and freeing the rx buffer are provided as callbacks, i.e. they get called from esp-netif (and its underlying TCP/IP stack) and I/O driver provides their implementation.

The receiving function on the other hand gets called from the I/O driver, so that the driver' s code simply calls `esp_netif_receive()` on a new data received event.

**Post attach callback** A final part of the network interface initialization consists of attaching the esp-netif instance to the I/O driver, by means of calling the following API:

```
esp_err_t esp_netif_attach(esp_netif_t *esp_netif, esp_netif_iodriver_handle_t
↳ driver_handle);
```

It is assumed that the `esp_netif_iodriver_handle` is a pointer to driver' s object, a struct derived from `struct esp_netif_driver_base_s`, so that the first member of I/O driver structure must be this base structure with pointers to

- post-attach function callback
- related esp-netif instance

As a consequence the I/O driver has to create an instance of the struct per below:

```

typedef struct my_netif_driver_s {
    esp_netif_driver_base_t base;           /*!< base structure reserved as...
↪esp-netif driver */
    driver_impl          *h;               /*!< handle of driver...
↪implementation */
} my_netif_driver_t;

```

with actual values of `my_netif_driver_t::base.post_attach` and the actual drivers handle `my_netif_driver_t::h`. So when the `esp_netif_attach()` gets called from the initialization code, the post-attach callback from I/O driver's code gets executed to mutually register callbacks between esp-netif and I/O driver instances. Typically the driver is started as well in the post-attach callback. An example of a simple post-attach callback is outlined below:

```

static esp_err_t my_post_attach_start(esp_netif_t * esp_netif, void * args)
{
    my_netif_driver_t *driver = args;
    const esp_netif_driver_ifconfig_t driver_ifconfig = {
        .driver_free_rx_buffer = my_free_rx_buf,
        .transmit = my_transmit,
        .handle = driver->driver_impl
    };
    driver->base.netif = esp_netif;
    ESP_ERROR_CHECK(esp_netif_set_driver_config(esp_netif, &driver_ifconfig));
    my_driver_start(driver->driver_impl);
    return ESP_OK;
}

```

**Default handlers** I/O drivers also typically provide default definitions of lifecycle behaviour of related network interfaces based on state transitions of I/O drivers. For example *driver start* → *network start*, etc. An example of such a default handler is provided below:

```

esp_err_t my_driver_netif_set_default_handlers(my_netif_driver_t *driver, esp_
↪netif_t * esp_netif)
{
    driver_set_event_handler(driver->driver_impl, esp_netif_action_start, MY_DRV_
↪EVENT_START, esp_netif);
    driver_set_event_handler(driver->driver_impl, esp_netif_action_stop, MY_DRV_
↪EVENT_STOP, esp_netif);
    return ESP_OK;
}

```

**Network stack connection** The packet data path functions for transmitting and freeing the rx buffer (defined in the I/O driver) are called from the esp-netif, specifically from its TCP/IP stack connecting layer.

Note, that IDF provides several network stack configurations for the most common network interfaces, such as for the WiFi station or Ethernet. These configurations are defined in `esp_netif/include/esp_netif_defaults.h` and should be sufficient for most network drivers. (In rare cases, expert users might want to define custom lwIP based interface layers; it is possible, but an explicit dependency to lwIP needs to be set)

The following API reference outlines these network stack interaction with the esp-netif:

## Header File

- `components/esp_netif/include/esp_netif_net_stack.h`

## Functions

`esp_netif_t *esp_netif_get_handle_from_netif_impl (void *dev)`

Returns esp-netif handle.

**Parameters** `dev` –[in] opaque ptr to network interface of specific TCP/IP stack

**Returns** handle to related esp-netif instance

`void *esp_netif_get_netif_impl (esp_netif_t *esp_netif)`

Returns network stack specific implementation handle (if supported)

Note that it is not supported to acquire PPP netif impl pointer and this function will return NULL for esp\_netif instances configured to PPP mode

**Parameters** `esp_netif` –[in] Handle to esp-netif instance

**Returns** handle to related network stack netif handle

`esp_err_t esp_netif_set_link_speed (esp_netif_t *esp_netif, uint32_t speed)`

Set link-speed for the specified network interface.

**Parameters**

- `esp_netif` –[in] Handle to esp-netif instance
- `speed` –[in] Link speed in bit/s

**Returns** ESP\_OK on success

`esp_err_t esp_netif_transmit (esp_netif_t *esp_netif, void *data, size_t len)`

Outputs packets from the TCP/IP stack to the media to be transmitted.

This function gets called from network stack to output packets to IO driver.

**Parameters**

- `esp_netif` –[in] Handle to esp-netif instance
- `data` –[in] Data to be transmitted
- `len` –[in] Length of the data frame

**Returns** ESP\_OK on success, an error passed from the I/O driver otherwise

`esp_err_t esp_netif_transmit_wrap (esp_netif_t *esp_netif, void *data, size_t len, void *netstack_buf)`

Outputs packets from the TCP/IP stack to the media to be transmitted.

This function gets called from network stack to output packets to IO driver.

**Parameters**

- `esp_netif` –[in] Handle to esp-netif instance
- `data` –[in] Data to be transmitted
- `len` –[in] Length of the data frame
- `netstack_buf` –[in] net stack buffer

**Returns** ESP\_OK on success, an error passed from the I/O driver otherwise

`void esp_netif_free_rx_buffer (void *esp_netif, void *buffer)`

Free the rx buffer allocated by the media driver.

This function gets called from network stack when the rx buffer to be freed in IO driver context, i.e. to deallocate a buffer owned by io driver (when data packets were passed to higher levels to avoid copying)

**Parameters**

- `esp_netif` –[in] Handle to esp-netif instance
- `buffer` –[in] Rx buffer pointer

Code examples for TCP/IP socket APIs are provided in the [protocols/sockets](#) directory of ESP-IDF examples.

## 2.5.6 Application Layer

Documentation for Application layer network protocols (above the IP Network layer) are provided in [Application Protocols](#).

## 2.6 Peripherals API

### 2.6.1 Analog to Digital Converter (ADC) Oneshot Mode Driver

#### Introduction

The Analog to Digital Converter is an on-chip sensor which is able to measure analog signals from dedicated analog IO pads.

The ADC on ESP32-C2 can be used in scenario(s) like:

- Generate one-shot ADC conversion result

This guide will introduce ADC oneshot mode conversion.

#### Functional Overview

The following sections of this document cover the typical steps to install and operate an ADC:

- *Resource Allocation* - covers which parameters should be set up to get an ADC handle and how to recycle the resources when ADC finishes working.
- *Unit Configuration* - covers the parameters that should be set up to configure the ADC unit, so as to get ADC conversion raw result.
- *Read Conversion Result* - covers how to get ADC conversion raw result.
- *Hardware Limitations* - describes the ADC related hardware limitations.
- *Power Management* - covers power management related.
- *IRAM Safe* - describes tips on how to read ADC conversion raw result when cache is disabled.
- *Thread Safety* - lists which APIs are guaranteed to be thread safe by the driver.
- *Kconfig Options* - lists the supported Kconfig options that can be used to make a different effect on driver behavior.

**Resource Allocation** The ADC oneshot mode driver is implemented based on ESP32-C2 SAR ADC module. Different ESP chips might have different number of independent ADCs. From oneshot mode driver's point of view, an ADC instance is represented by `adc_oneshot_unit_handle_t`.

To install an ADC instance, set up the required initial configuration structure `adc_oneshot_unit_init_cfg_t`:

- `adc_oneshot_unit_init_cfg_t::unit_id` selects the ADC. Please refer to the [datasheet](#) to know dedicated analog IOs for this ADC.
- `adc_oneshot_unit_init_cfg_t::ulp_mode` sets if the ADC will be working under super low power mode.

After setting up the initial configurations for the ADC, call `adc_oneshot_new_unit()` with the prepared `adc_oneshot_unit_init_cfg_t`. This function will return an ADC unit handle, if the allocation is successful.

This function may fail due to various errors such as invalid arguments, insufficient memory, etc. Specifically, when the to-be-allocated ADC instance is registered already, this function will return `ESP_ERR_NOT_FOUND` error. Number of available ADC(s) is recorded by `SOC_ADC_PERIPH_NUM`.

If a previously created ADC instance is no longer required, you should recycle the ADC instance by calling `adc_oneshot_del_unit()`, related hardware and software resources will be recycled as well.

#### Create an ADC Unit Handle under Normal Oneshot Mode

```
adc_oneshot_unit_handle_t adc1_handle;
adc_oneshot_unit_init_cfg_t init_config1 = {
    .unit_id = ADC_UNIT_1,
    .ulp_mode = ADC_ULP_MODE_DISABLE,
};
ESP_ERROR_CHECK(adc_oneshot_new_unit(&init_config1, &adc1_handle));
```

### Recycle the ADC Unit

```
ESP_ERROR_CHECK(adc_oneshot_del_unit(adc1_handle));
```

**Unit Configuration** After an ADC instance is created, set up the `adc_oneshot_chan_cfg_t` to configure ADC IO to measure analog signal:

- `adc_oneshot_chan_cfg_t::atten`, ADC attenuation. Refer to the On-Chip Sensor chapter in [TRM](#).
- `adc_oneshot_chan_cfg_t::channel`, the IO corresponding ADC channel number. See below note.
- `adc_oneshot_chan_cfg_t::bitwidth`, the bitwidth of the raw conversion result.

**Note:** For the IO corresponding ADC channel number. Check [datasheet](#) to know the ADC IOs. On the other hand, `adc_continuous_io_to_channel()` and `adc_continuous_channel_to_io()` can be used to know the ADC channels and ADC IOs.

To make these settings take effect, call `adc_oneshot_config_channel()` with above configuration structure. Especially, this `adc_oneshot_config_channel()` can be called multiple times to configure different ADC channels. Driver will save these per channel configurations internally.

### Configure Two ADC Channels

```
adc_oneshot_chan_cfg_t config = {
    .channel = EXAMPLE_ADC1_CHAN0,
    .bitwidth = ADC_BITWIDTH_DEFAULT,
    .atten = ADC_ATTEN_DB_12,
};
ESP_ERROR_CHECK(adc_oneshot_config_channel(adc1_handle, &config));

config.channel = EXAMPLE_ADC1_CHAN1;
ESP_ERROR_CHECK(adc_oneshot_config_channel(adc1_handle, &config));
```

**Read Conversion Result** After above configurations, the ADC is ready to measure the analog signal(s) from the configured ADC channel(s). Call `adc_oneshot_read()` to get the conversion raw result of an ADC channel.

- `adc_oneshot_read()` is safer. ADC(s) are shared by some other drivers / peripherals, see [Hardware Limitations](#). This function takes some mutexes, to avoid concurrent hardware usage. Therefore, this function should not be used in an ISR context. This function may fail when the ADC is in use by other drivers / peripherals, and return `ESP_ERR_TIMEOUT`. Under this condition, the ADC raw result is invalid.

These two functions will both fail due to invalid arguments.

The ADC conversion results read from these two functions are raw data. To calculate the voltage based on the ADC raw results, this formula can be used:

$$V_{out} = D_{out} * V_{max} / D_{max} \quad (1)$$

where:

Vout	Digital output result, standing for the voltage.
Dout	ADC raw digital reading result.
Vmax	Maximum measurable input analog voltage, this is related to the ADC attenuation, please refer to the On-Chip Sensor chapter in TRM.
Dmax	Maximum of the output ADC raw digital reading result, which is $2^{\text{bitwidth}}$ , where bitwidth is the <code>adc_oneshot_chan_cfg_t::bitwidth</code> configured before.

To do further calibration to convert the ADC raw result to voltage in mV, please refer to calibration doc [Analog to Digital Converter \(ADC\) Calibration Driver](#).

### Read Raw Result

```
ESP_ERROR_CHECK(adc_oneshot_read(adc1_handle, EXAMPLE_ADC1_CHAN0, &adc_raw[0][0]));
ESP_LOGI(TAG, "ADC%d Channel[%d] Raw Data: %d", ADC_UNIT_1 + 1, EXAMPLE_ADC1_CHAN0,
↪ adc_raw[0][0]);

ESP_ERROR_CHECK(adc_oneshot_read(adc1_handle, EXAMPLE_ADC1_CHAN1, &adc_raw[0][1]));
ESP_LOGI(TAG, "ADC%d Channel[%d] Raw Data: %d", ADC_UNIT_1 + 1, EXAMPLE_ADC1_CHAN1,
↪ adc_raw[0][1]);
```

### Hardware Limitations

- Random Number Generator uses ADC as a input source. When ADC `adc_oneshot_read()` works, the random number generated from RNG will be less random.

**Power Management** When power management is enabled (i.e. `CONFIG_PM_ENABLE` is on), the system clock frequency may be adjusted when the system is in an idle state. However, the ADC oneshot mode driver works in a polling routine, the `adc_oneshot_read()` will poll the CPU until the function returns. During this period of time, the task in which ADC oneshot mode driver resides won't be blocked. Therefore the clock frequency is stable when reading.

**IRAM Safe** By default, all the ADC oneshot mode driver APIs are not supposed to be run when the Cache is disabled (Cache may be disabled due to many reasons, such as Flash writing/erasing, OTA, etc.). If these APIs executes when the Cache is disabled, you will probably see errors like Illegal Instruction or Load/Store Prohibited.

### Thread Safety

- `adc_oneshot_new_unit()`
- `adc_oneshot_config_channel()`
- `adc_oneshot_read()`

Above functions are guaranteed to be thread safe. Therefore, you can call them from different RTOS tasks without protection by extra locks.

- `adc_oneshot_del_unit()` is not thread safe. Besides, concurrently calling this function may result in thread-safe APIs fail.

### Kconfig Options

- `CONFIG_ADC_ONESHOT_CTRL_FUNC_IN_IRAM` controls where to place the ADC fast read function (IRAM or Flash), see [IRAM Safe](#) for more details.

### Application Examples

- ADC oneshot mode example: [peripherals/adc/oneshot\\_read](#).

## API Reference

### Header File

- [components/hal/include/hal/adc\\_types.h](#)

### Structures

struct **adc\_digi\_pattern\_config\_t**  
ADC digital controller pattern configuration.

#### Public Members

uint8\_t **atten**  
Attenuation of this ADC channel.

uint8\_t **channel**  
ADC channel.

uint8\_t **unit**  
ADC unit.

uint8\_t **bit\_width**  
ADC output bit width.

struct **adc\_digi\_output\_data\_t**  
ADC digital controller (DMA mode) output data format. Used to analyze the acquired ADC (DMA) data.

#### Public Members

uint32\_t **data**  
ADC real output data info. Resolution: 12 bit.

uint32\_t **reserved12**  
Reserved12.

uint32\_t **channel**  
ADC channel index info. If (channel < ADC\_CHANNEL\_MAX), The data is valid. If (channel > ADC\_CHANNEL\_MAX), The data is invalid.

uint32\_t **unit**  
ADC unit index info. 0: ADC1; 1: ADC2.

uint32\_t **reserved17\_31**  
Reserved17.

struct *adc\_digi\_output\_data\_t*::[anonymous]::[anonymous] **type2**  
When the configured output format is 12bit.

uint32\_t **val**  
Raw data value

## Enumerations

enum **adc\_unit\_t**

ADC unit.

*Values:*

enumerator **ADC\_UNIT\_1**

SAR ADC 1.

enumerator **ADC\_UNIT\_2**

SAR ADC 2.

enum **adc\_channel\_t**

ADC channels.

*Values:*

enumerator **ADC\_CHANNEL\_0**

ADC channel.

enumerator **ADC\_CHANNEL\_1**

ADC channel.

enumerator **ADC\_CHANNEL\_2**

ADC channel.

enumerator **ADC\_CHANNEL\_3**

ADC channel.

enumerator **ADC\_CHANNEL\_4**

ADC channel.

enumerator **ADC\_CHANNEL\_5**

ADC channel.

enumerator **ADC\_CHANNEL\_6**

ADC channel.

enumerator **ADC\_CHANNEL\_7**

ADC channel.

enumerator **ADC\_CHANNEL\_8**

ADC channel.

enumerator **ADC\_CHANNEL\_9**

ADC channel.

enum **adc\_atten\_t**

ADC attenuation parameter. Different parameters determine the range of the ADC.

*Values:*

enumerator **ADC\_ATTEN\_DB\_0**

No input attenuation, ADC can measure up to approx.

enumerator **ADC\_ATTEN\_DB\_2\_5**

The input voltage of ADC will be attenuated extending the range of measurement by about 2.5 dB.

enumerator **ADC\_ATTEN\_DB\_6**

The input voltage of ADC will be attenuated extending the range of measurement by about 6 dB.

enumerator **ADC\_ATTEN\_DB\_12**

The input voltage of ADC will be attenuated extending the range of measurement by about 12 dB.

enumerator **ADC\_ATTEN\_DB\_11**

This is deprecated, it behaves the same as `ADC_ATTEN_DB_12`

enum **adc\_bitwidth\_t**

*Values:*

enumerator **ADC\_BITWIDTH\_DEFAULT**

Default ADC output bits, max supported width will be selected.

enumerator **ADC\_BITWIDTH\_9**

ADC output width is 9Bit.

enumerator **ADC\_BITWIDTH\_10**

ADC output width is 10Bit.

enumerator **ADC\_BITWIDTH\_11**

ADC output width is 11Bit.

enumerator **ADC\_BITWIDTH\_12**

ADC output width is 12Bit.

enumerator **ADC\_BITWIDTH\_13**

ADC output width is 13Bit.

enum **adc\_ulp\_mode\_t**

*Values:*

enumerator **ADC\_ULP\_MODE\_DISABLE**

ADC ULP mode is disabled.

enumerator **ADC\_ULP\_MODE\_FSM**

ADC is controlled by ULP FSM.

enumerator **ADC\_ULP\_MODE\_RISCV**

ADC is controlled by ULP RISCv.

enum **adc\_digi\_convert\_mode\_t**

ADC digital controller (DMA mode) work mode.

*Values:*

enumerator **ADC\_CONV\_SINGLE\_UNIT\_1**

Only use ADC1 for conversion.

enumerator **ADC\_CONV\_SINGLE\_UNIT\_2**

Only use ADC2 for conversion.

enumerator **ADC\_CONV\_BOTH\_UNIT**

Use Both ADC1 and ADC2 for conversion simultaneously.

enumerator **ADC\_CONV\_ALTER\_UNIT**

Use both ADC1 and ADC2 for conversion by turn. e.g. ADC1 -> ADC2 -> ADC1 -> ADC2 ...

enum **adc\_digi\_output\_format\_t**

ADC digital controller (DMA mode) output data format option.

*Values:*

enumerator **ADC\_DIGI\_OUTPUT\_FORMAT\_TYPE1**

See `adc_digi_output_data_t.type1`

enumerator **ADC\_DIGI\_OUTPUT\_FORMAT\_TYPE2**

See `adc_digi_output_data_t.type2`

### Header File

- [components/esp\\_adc/include/esp\\_adc/adc\\_oneshot.h](#)

### Functions

*esp\_err\_t* **adc\_oneshot\_new\_unit** (const *adc\_oneshot\_unit\_init\_cfg\_t* \*init\_config,  
*adc\_oneshot\_unit\_handle\_t* \*ret\_unit)

Create a handle to a specific ADC unit.

---

**Note:** This API is thread-safe. For more details, see ADC programming guide

---

#### Parameters

- **init\_config** –[in] Driver initial configurations
- **ret\_unit** –[out] ADC unit handle

#### Returns

- **ESP\_OK**: On success
- **ESP\_ERR\_INVALID\_ARG**: Invalid arguments
- **ESP\_ERR\_NO\_MEM**: No memory
- **ESP\_ERR\_NOT\_FOUND**: The ADC peripheral to be claimed is already in use

*esp\_err\_t* **adc\_oneshot\_config\_channel** (*adc\_oneshot\_unit\_handle\_t* handle, *adc\_channel\_t* channel,  
const *adc\_oneshot\_chan\_cfg\_t* \*config)

Set ADC oneshot mode required configurations.

---

**Note:** This API is thread-safe. For more details, see ADC programming guide

---

**Parameters**

- **handle** –[in] ADC handle
- **channel** –[in] ADC channel to be configured
- **config** –[in] ADC configurations

**Returns**

- ESP\_OK: On success
- ESP\_ERR\_INVALID\_ARG: Invalid arguments

*esp\_err\_t* **adc\_oneshot\_read** (*adc\_oneshot\_unit\_handle\_t* handle, *adc\_channel\_t* chan, int \*out\_raw)

Get one ADC conversion raw result.

---

**Note:** This API is thread-safe. For more details, see ADC programming guide

---

---

**Note:** This API should NOT be called in an ISR context

---

**Parameters**

- **handle** –[in] ADC handle
- **chan** –[in] ADC channel
- **out\_raw** –[out] ADC conversion raw result

**Returns**

- ESP\_OK: On success
- ESP\_ERR\_INVALID\_ARG: Invalid arguments
- ESP\_ERR\_TIMEOUT: Timeout, the ADC result is invalid

*esp\_err\_t* **adc\_oneshot\_del\_unit** (*adc\_oneshot\_unit\_handle\_t* handle)

Delete the ADC unit handle.

---

**Note:** This API is thread-safe. For more details, see ADC programming guide

---

**Parameters** **handle** –[in] ADC handle

**Returns**

- ESP\_OK: On success
- ESP\_ERR\_INVALID\_ARG: Invalid arguments
- ESP\_ERR\_NOT\_FOUND: The ADC peripheral to be disclaimed isn't in use

*esp\_err\_t* **adc\_oneshot\_io\_to\_channel** (int io\_num, *adc\_unit\_t* \*unit\_id, *adc\_channel\_t* \*channel)

Get ADC channel from the given GPIO number.

**Parameters**

- **io\_num** –[in] GPIO number
- **unit\_id** –[out] ADC unit
- **channel** –[out] ADC channel

**Returns**

- ESP\_OK: On success
- ESP\_ERR\_INVALID\_ARG: Invalid argument
- ESP\_ERR\_NOT\_FOUND: The IO is not a valid ADC pad

*esp\_err\_t* **adc\_oneshot\_channel\_to\_io**(*adc\_unit\_t* unit\_id, *adc\_channel\_t* channel, int \*io\_num)

Get GPIO number from the given ADC channel.

#### Parameters

- **unit\_id** –[in] ADC unit
- **channel** –[in] ADC channel
- **io\_num** –[out] GPIO number
- – –ESP\_OK: On success
- ESP\_ERR\_INVALID\_ARG: Invalid argument

### Structures

struct **adc\_oneshot\_unit\_init\_cfg\_t**

ADC oneshot driver initial configurations.

#### Public Members

*adc\_unit\_t* **unit\_id**

ADC unit.

*adc\_ulp\_mode\_t* **ulp\_mode**

ADC controlled by ULP, see *adc\_ulp\_mode\_t*

struct **adc\_oneshot\_chan\_cfg\_t**

ADC channel configurations.

#### Public Members

*adc\_atten\_t* **atten**

ADC attenuation.

*adc\_bitwidth\_t* **bitwidth**

ADC conversion result bits.

### Type Definitions

typedef struct *adc\_oneshot\_unit\_ctx\_t* \***adc\_oneshot\_unit\_handle\_t**

Type of ADC unit handle for oneshot mode.

## 2.6.2 Analog to Digital Converter (ADC) Calibration Driver

### Introduction

Based on series of comparisons with the reference voltage, ESP32-C2 ADC determines each bit of the output digital result. Per design the ESP32-C2 ADC reference voltage is 1100 mV, however the true reference voltage can range from 1000 mV to 1200 mV among different chips. This guide will introduce an ADC calibration driver to minimize this difference.

## Functional Overview

The following sections of this document cover the typical steps to install and use the ADC calibration driver:

- *Calibration Scheme Creation* - covers how to create a calibration scheme handle and delete the calibration scheme handle.
- *Calibration Configuration* - covers how to configure the calibration driver to calculate necessary characteristics used for calibration.
- *Result Conversion* - covers how to convert ADC raw result to calibrated result.
- *Thread Safety* - lists which APIs are guaranteed to be thread safe by the driver.
- *Minimize Noise* - describes a general way to minimize the noise.

**Calibration Scheme Creation** The ADC calibration driver provides ADC calibration scheme(s). From calibration driver's point of view, an ADC calibration scheme is created to an ADC calibration handle `adc_cali_handle_t`. `adc_cali_check_scheme()` can be used to know which calibration scheme is supported on the chip. For those users who are already aware of the supported scheme, this step can be skipped. Just call the corresponding function to create the scheme handle.

For those users who use their custom ADC calibration schemes, you could either modify this function `adc_cali_check_scheme()`, or just skip this step and call your custom creation function.

There is no supported calibration scheme yet.

---

**Note:** For users who want to use their custom calibration schemes, you could provide a creation function to create your calibration scheme handle. Check the function table `adc_cali_scheme_t` in `components/esp_adc/interface/adc_cali_interface.h` to know the ESP ADC calibration interface.

---

**Result Conversion** After setting up the calibration characteristics, you can call `adc_cali_raw_to_voltage()` to convert the ADC raw result into calibrated result. The calibrated result is in the unit of mV. This function may fail due to invalid argument. Especially, if this function returns `ESP_ERR_INVALID_STATE`, this means the calibration scheme isn't created. You need to create a calibration scheme handle, use `adc_cali_check_scheme()` to know the supported calibration scheme. On the other hand, you could also provide a custom calibration scheme and create the handle.

## Get Voltage

```
ESP_ERROR_CHECK(adc_cali_raw_to_voltage(adc_cali_handle, adc_raw[0][0], &
↪voltage[0][0]));
ESP_LOGI(TAG, "ADC%d Channel[%d] Cali Voltage: %d mV", ADC_UNIT_1 + 1, EXAMPLE_
↪ADC1_CHAN0, voltage[0][0]);
```

**Thread Safety** The factory function `esp_adc_cali_new_scheme()` is guaranteed to be thread safe by the driver. Therefore, you can call them from different RTOS tasks without protection by extra locks.

Other functions that take the `adc_cali_handle_t` as the first positional parameter are not thread safe, you should avoid calling them from multiple tasks.

**Minimize Noise** The ESP32-C2 ADC can be sensitive to noise leading to large discrepancies in ADC readings. Depending on the usage scenario, you may need to connect a bypass capacitor (e.g. a 100 nF ceramic capacitor) to the ADC input pad in use, to minimize noise. Besides, multisampling may also be used to further mitigate the effects of noise.

## API Reference

### Header File

- [components/esp\\_adc/include/esp\\_adc/adc\\_cali.h](#)

### Functions

*esp\_err\_t* **adc\_cali\_check\_scheme** (*adc\_cali\_scheme\_ver\_t* \*scheme\_mask)

Check the supported ADC calibration scheme.

**Parameters** **scheme\_mask** –[out] Supported ADC calibration scheme(s)

**Returns**

- ESP\_OK: On success
- ESP\_ERR\_INVALID\_ARG: Invalid argument
- ESP\_ERR\_NOT\_SUPPORTED: No supported calibration scheme

*esp\_err\_t* **adc\_cali\_raw\_to\_voltage** (*adc\_cali\_handle\_t* handle, int raw, int \*voltage)

Convert ADC raw data to calibrated voltage.

**Parameters**

- **handle** –[in] ADC calibration handle
- **raw** –[in] ADC raw data
- **voltage** –[out] Calibrated ADC voltage (in mV)

**Returns**

- ESP\_OK: On success
- ESP\_ERR\_INVALID\_ARG: Invalid argument
- ESP\_ERR\_INVALID\_STATE: Invalid state, scheme didn't registered

### Type Definitions

```
typedef struct adc_cali_scheme_t *adc_cali_handle_t
```

ADC calibration handle.

### Enumerations

```
enum adc_cali_scheme_ver_t
```

ADC calibration scheme.

*Values:*

enumerator **ADC\_CALI\_SCHEME\_VER\_LINE\_FITTING**

Line fitting scheme.

enumerator **ADC\_CALI\_SCHEME\_VER\_CURVE\_FITTING**

Curve fitting scheme.

### Header File

- [components/esp\\_adc/include/esp\\_adc/adc\\_cali\\_scheme.h](#)

## 2.6.3 Clock Tree

This section lists definitions of the ESP32-C2's supported root clocks and module clocks. These definitions are commonly used in the driver configuration, to help user select a proper source clock for the peripheral.

## Root Clocks

Root clocks generate reliable clock signals. These clock signals then pass through various gates, muxes, dividers, or multipliers to become the clock sources for every functional module: the CPU core(s), WIFI, BT, the RTC, and the peripherals.

ESP32-C2's root clocks are listed in `soc_root_clk_t`:

- Internal 17.5MHz RC Oscillator (RC\_FAST)  
This RC oscillator generates a ~17.5MHz clock signal output as the RC\_FAST\_CLK. The ~17.5MHz signal output is also passed into a configurable divider, which by default divides the input clock frequency by 256, to generate a RC\_FAST\_D256\_CLK. The exact frequency of RC\_FAST\_CLK can be computed in runtime through calibration on the RC\_FAST\_D256\_CLK.
- External 40MHz Crystal (XTAL)
- Internal 136kHz RC Oscillator (RC\_SLOW)  
This RC oscillator generates a ~136kHz clock signal output as the RC\_SLOW\_CLK. The exact frequency of this clock can be computed in runtime through calibration.
- External Slow Clock - optional (OSC\_SLOW)  
A clock signal generated by an external circuit can be connected to pin0 to be the clock source for the RTC\_SLOW\_CLK. This clock can also be calibrated to get its exact frequency.

Typically, the frequency of the signal generated from a RC oscillator circuit is less accurate and more sensitive to environment comparing to the signal generated from a crystal. ESP32-C2 provides several clock source options for the RTC\_SLOW\_CLK, and users can make the choice based on the requirements for system time accuracy and power consumption (refer to *RTC Timer Clock Sources* for more details).

## Module Clocks

ESP32-C2's available module clocks are listed in `soc_module_clk_t`. Each module clock has a unique ID. You can get more information on each clock by checking the documented enum value.

## API Reference

### Header File

- `components/soc/esp32c2/include/soc/clk_tree_defs.h`

### Macros

#### `SOC_CLK_RC_FAST_FREQ_APPROX`

Approximate RC\_FAST\_CLK frequency in Hz

#### `SOC_CLK_RC_SLOW_FREQ_APPROX`

Approximate RC\_SLOW\_CLK frequency in Hz

#### `SOC_CLK_RC_FAST_D256_FREQ_APPROX`

Approximate RC\_FAST\_D256\_CLK frequency in Hz

#### `SOC_CLK_OSC_SLOW_FREQ_APPROX`

Approximate OSC\_SLOW\_CLK (external slow clock) frequency in Hz

**SOC\_GPTIMER\_CLKS**

Array initializer for all supported clock sources of GPTimer.

The following code can be used to iterate all possible clocks:

```
soc_periph_gptimer_clk_src_t gptimer_clks[] = (soc_periph_gptimer_clk_src_
↪t)SOC_GPTIMER_CLKS;
for (size_t i = 0; i < sizeof(gptimer_clks) / sizeof(gptimer_clks[0]); i++) {
    soc_periph_gptimer_clk_src_t clk = gptimer_clks[i];
    // Test GPTimer with the clock `clk`
}
```

**SOC\_TEMP\_SENSOR\_CLKS**

Array initializer for all supported clock sources of Temperature Sensor.

**SOC\_I2C\_CLKS**

Array initializer for all supported clock sources of I2C.

**Enumerations**enum **soc\_root\_clk\_t**

Root clock.

*Values:*

enumerator **SOC\_ROOT\_CLK\_INT\_RC\_FAST**

Internal 17.5MHz RC oscillator

enumerator **SOC\_ROOT\_CLK\_INT\_RC\_SLOW**

Internal 136kHz RC oscillator

enumerator **SOC\_ROOT\_CLK\_EXT\_XTAL**

External 26/40MHz crystal

enumerator **SOC\_ROOT\_CLK\_EXT\_OSC\_SLOW**

External slow clock signal at pin0, only support 32.768 KHz currently

enum **soc\_cpu\_clk\_src\_t**

CPU\_CLK mux inputs, which are the supported clock sources for the CPU\_CLK.

---

**Note:** Enum values are matched with the register field values on purpose

---

*Values:*

enumerator **SOC\_CPU\_CLK\_SRC\_XTAL**

Select XTAL\_CLK as CPU\_CLK source

enumerator **SOC\_CPU\_CLK\_SRC\_PLL**

Select PLL\_CLK as CPU\_CLK source (PLL\_CLK is the output of 26/40MHz crystal oscillator frequency multiplier, 480MHz)

enumerator **SOC\_CPU\_CLK\_SRC\_RC\_FAST**

Select RC\_FAST\_CLK as CPU\_CLK source

enumerator **SOC\_CPU\_CLK\_SRC\_INVALID**

Invalid CPU\_CLK source

enum **soc\_rtc\_slow\_clk\_src\_t**

RTC\_SLOW\_CLK mux inputs, which are the supported clock sources for the RTC\_SLOW\_CLK.

---

**Note:** Enum values are matched with the register field values on purpose

---

*Values:*

enumerator **SOC\_RTC\_SLOW\_CLK\_SRC\_RC\_SLOW**

Select RC\_SLOW\_CLK as RTC\_SLOW\_CLK source

enumerator **SOC\_RTC\_SLOW\_CLK\_SRC\_OSC\_SLOW**

Select OSC\_SLOW\_CLK (external slow clock) as RTC\_SLOW\_CLK source

enumerator **SOC\_RTC\_SLOW\_CLK\_SRC\_RC\_FAST\_D256**

Select RC\_FAST\_D256\_CLK (referred as FOSC\_DIV or 8m\_d256/8md256 in TRM and reg. description) as RTC\_SLOW\_CLK source

enumerator **SOC\_RTC\_SLOW\_CLK\_SRC\_INVALID**

Invalid RTC\_SLOW\_CLK source

enum **soc\_rtc\_fast\_clk\_src\_t**

RTC\_FAST\_CLK mux inputs, which are the supported clock sources for the RTC\_FAST\_CLK.

---

**Note:** Enum values are matched with the register field values on purpose

---

*Values:*

enumerator **SOC\_RTC\_FAST\_CLK\_SRC\_XTAL\_D2**

Select XTAL\_D2\_CLK (may referred as XTAL\_CLK\_DIV\_2) as RTC\_FAST\_CLK source

enumerator **SOC\_RTC\_FAST\_CLK\_SRC\_XTAL\_DIV**

Alias name for SOC\_RTC\_FAST\_CLK\_SRC\_XTAL\_D2

enumerator **SOC\_RTC\_FAST\_CLK\_SRC\_RC\_FAST**

Select RC\_FAST\_CLK as RTC\_FAST\_CLK source

enumerator **SOC\_RTC\_FAST\_CLK\_SRC\_INVALID**

Invalid RTC\_FAST\_CLK source

enum **soc\_module\_clk\_t**

Supported clock sources for modules (CPU, peripherals, RTC, etc.)

---

**Note:** enum starts from 1, to save 0 for special purpose

---

*Values:*

enumerator **SOC\_MOD\_CLK\_CPU**

CPU\_CLK can be sourced from XTAL, PLL, or RC\_FAST by configuring soc\_cpu\_clk\_src\_t

enumerator **SOC\_MOD\_CLK\_RTC\_FAST**

RTC\_FAST\_CLK can be sourced from XTAL\_D2 or RC\_FAST by configuring soc\_rtc\_fast\_clk\_src\_t

enumerator **SOC\_MOD\_CLK\_RTC\_SLOW**

RTC\_SLOW\_CLK can be sourced from RC\_SLOW, XTAL32K, or RC\_FAST\_D256 by configuring soc\_rtc\_slow\_clk\_src\_t

enumerator **SOC\_MOD\_CLK\_PLL\_F40M**

PLL\_F40M\_CLK is derived from PLL, and has a fixed frequency of 40MHz

enumerator **SOC\_MOD\_CLK\_PLL\_F60M**

PLL\_F60M\_CLK is derived from PLL, and has a fixed frequency of 60MHz

enumerator **SOC\_MOD\_CLK\_PLL\_F80M**

PLL\_F80M\_CLK is derived from PLL, and has a fixed frequency of 80MHz

enumerator **SOC\_MOD\_CLK\_OSC\_SLOW**

OSC\_SLOW\_CLK comes from an external slow clock signal, passing a clock gating to the peripherals

enumerator **SOC\_MOD\_CLK\_RC\_FAST**

RC\_FAST\_CLK comes from the internal 20MHz rc oscillator, passing a clock gating to the peripherals

enumerator **SOC\_MOD\_CLK\_RC\_FAST\_D256**

RC\_FAST\_D256\_CLK comes from the internal 20MHz rc oscillator, divided by 256, and passing a clock gating to the peripherals

enumerator **SOC\_MOD\_CLK\_XTAL**

XTAL\_CLK comes from the external 26/40MHz crystal

enum **soc\_periph\_gptimer\_clk\_src\_t**

Type of GPTimer clock source.

*Values:*

enumerator **GPTIMER\_CLK\_SRC\_PLL\_F40M**

Select PLL\_F40M as the source clock

enumerator **GPTIMER\_CLK\_SRC\_XTAL**

Select XTAL as the source clock

enumerator **GPTIMER\_CLK\_SRC\_DEFAULT**

Select PLL\_F40M as the default choice

enum **soc\_periph\_tg\_clk\_src\_legacy\_t**

Type of Timer Group clock source, reserved for the legacy timer group driver.

*Values:*

enumerator **TIMER\_SRC\_CLK\_PLL\_F40M**

Timer group clock source is PLL\_F40M

enumerator **TIMER\_SRC\_CLK\_XTAL**

Timer group clock source is XTAL

enumerator **TIMER\_SRC\_CLK\_DEFAULT**

Timer group clock source default choice is PLL\_F40M

enum **soc\_periph\_temperature\_sensor\_clk\_src\_t**

Type of Temp Sensor clock source.

*Values:*

enumerator **TEMPERATURE\_SENSOR\_CLK\_SRC\_XTAL**

Select XTAL as the source clock

enumerator **TEMPERATURE\_SENSOR\_CLK\_SRC\_RC\_FAST**

Select RC\_FAST as the source clock

enumerator **TEMPERATURE\_SENSOR\_CLK\_SRC\_DEFAULT**

Select XTAL as the default choice

enum **soc\_periph\_uart\_clk\_src\_legacy\_t**

Type of UART clock source, reserved for the legacy UART driver.

*Values:*

enumerator **UART\_SCLK\_PLL\_F40M**

UART source clock is APB CLK

enumerator **UART\_SCLK\_RTC**

UART source clock is RC\_FAST

enumerator **UART\_SCLK\_XTAL**

UART source clock is XTAL

enumerator **UART\_SCLK\_DEFAULT**

UART source clock default choice is PLL\_F40M

enum **soc\_periph\_i2c\_clk\_src\_t**

Type of I2C clock source.

*Values:*

enumerator **I2C\_CLK\_SRC\_XTAL**

enumerator `I2C_CLK_SRC_RC_FAST`

enumerator `I2C_CLK_SRC_DEFAULT`

## 2.6.4 GPIO & RTC GPIO

### Overview

The ESP32-C2 chip features 21 physical GPIO pins (GPIO0 ~ GPIO20). For chip variants with an SiP flash built in, GPIO11 ~ GPIO17 are dedicated to connecting the SiP flash; therefore, only 14 GPIO pins are available.

Each pin can be used as a general-purpose I/O, or to be connected to an internal peripheral signal. Through GPIO matrix and IO MUX, peripheral input signals can be from any IO pins, and peripheral output signals can be routed to any IO pins. Together these modules provide highly configurable I/O. For more details, see *ESP32-C2 Technical Reference Manual > IO MUX and GPIO Matrix (GPIO, IO\_MUX)* [PDF].

The table below provides more information on pin usage, and please note the comments in the table for GPIOs with restrictions.

GPIO	Analog Function	Comment
GPIO0	ADC1_CH0	RTC
GPIO1	ADC1_CH1	RTC
GPIO2	ADC1_CH2	RTC
GPIO3	ADC1_CH3	RTC
GPIO4	ADC1_CH4	RTC
GPIO5		RTC
GPIO6		
GPIO7		
GPIO8		Strapping pin
GPIO9		Strapping pin
GPIO10		
GPIO11		
GPIO12		SPI0/1
GPIO13		SPI0/1
GPIO14		SPI0/1
GPIO15		SPI0/1
GPIO16		SPI0/1
GPIO17		SPI0/1
GPIO18		
GPIO19		
GPIO20		

### Note:

- Strapping pin: GPIO8 and GPIO9 are strapping pins. For more information, please refer to [ESP8684 datasheet](#).
- SPI0/1: GPIO12-17 are usually used for SPI flash and not recommended for other uses.
- RTC: GPIO0-5 can be used when in Deep-sleep mode.

### Application Example

GPIO output and input interrupt example: [peripherals/gpio/generic\\_gpio](#).

## API Reference - Normal GPIO

### Header File

- `components/driver/include/driver/gpio.h`

### Functions

*esp\_err\_t* **gpio\_config** (const *gpio\_config\_t* \*pGPIOConfig)

GPIO common configuration.

Configure GPIO's Mode, pull-up, PullDown, IntrType

**Parameters** `pGPIOConfig` –Pointer to GPIO configure struct

**Returns**

- `ESP_OK` success
- `ESP_ERR_INVALID_ARG` Parameter error

*esp\_err\_t* **gpio\_reset\_pin** (*gpio\_num\_t* gpio\_num)

Reset an gpio to default state (select gpio function, enable pullup and disable input and output).

---

**Note:** This function also configures the IOMUX for this pin to the GPIO function, and disconnects any other peripheral output configured via GPIO Matrix.

---

**Parameters** `gpio_num` –GPIO number.

**Returns** Always return `ESP_OK`.

*esp\_err\_t* **gpio\_set\_intr\_type** (*gpio\_num\_t* gpio\_num, *gpio\_int\_type\_t* intr\_type)

GPIO set interrupt trigger type.

**Parameters**

- `gpio_num` –GPIO number. If you want to set the trigger type of e.g. of GPIO16, `gpio_num` should be `GPIO_NUM_16` (16);
- `intr_type` –Interrupt type, select from `gpio_int_type_t`

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error

*esp\_err\_t* **gpio\_intr\_enable** (*gpio\_num\_t* gpio\_num)

Enable GPIO module interrupt signal.

---

**Note:** ESP32: Please do not use the interrupt of GPIO36 and GPIO39 when using ADC or Wi-Fi and Bluetooth with sleep mode enabled. Please refer to the comments of `adc1_get_raw`. Please refer to Section 3.11 of [ESP32 ECO and Workarounds for Bugs](#) for the description of this issue. As a workaround, call `adc_power_acquire()` in the app. This will result in higher power consumption (by ~1mA), but will remove the glitches on GPIO36 and GPIO39.

---

**Parameters** `gpio_num` –GPIO number. If you want to enable an interrupt on e.g. GPIO16, `gpio_num` should be `GPIO_NUM_16` (16);

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error

*esp\_err\_t* **gpio\_intr\_disable** (*gpio\_num\_t* gpio\_num)

Disable GPIO module interrupt signal.

---

**Note:** This function is allowed to be executed when Cache is disabled within ISR context, by enabling `CONFIG_GPIO_CTRL_FUNC_IN_IRAM`

---

**Parameters** **gpio\_num** –GPIO number. If you want to disable the interrupt of e.g. GPIO16, `gpio_num` should be `GPIO_NUM_16` (16);

**Returns**

- `ESP_OK` success
- `ESP_ERR_INVALID_ARG` Parameter error

*esp\_err\_t* **gpio\_set\_level** (*gpio\_num\_t* gpio\_num, *uint32\_t* level)

GPIO set output level.

---

**Note:** This function is allowed to be executed when Cache is disabled within ISR context, by enabling `CONFIG_GPIO_CTRL_FUNC_IN_IRAM`

---

**Parameters**

- **gpio\_num** –GPIO number. If you want to set the output level of e.g. GPIO16, `gpio_num` should be `GPIO_NUM_16` (16);
- **level** –Output level. 0: low ; 1: high

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` GPIO number error

*int* **gpio\_get\_level** (*gpio\_num\_t* gpio\_num)

GPIO get input level.

**Warning:** If the pad is not configured for input (or input and output) the returned value is always 0.

**Parameters** **gpio\_num** –GPIO number. If you want to get the logic level of e.g. pin GPIO16, `gpio_num` should be `GPIO_NUM_16` (16);

**Returns**

- 0 the GPIO input level is 0
- 1 the GPIO input level is 1

*esp\_err\_t* **gpio\_set\_direction** (*gpio\_num\_t* gpio\_num, *gpio\_mode\_t* mode)

GPIO set direction.

Configure GPIO direction,such as `output_only`,`input_only`,`output_and_input`

**Parameters**

- **gpio\_num** –Configure GPIO pins number, it should be GPIO number. If you want to set direction of e.g. GPIO16, `gpio_num` should be `GPIO_NUM_16` (16);
- **mode** –GPIO direction

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` GPIO error

*esp\_err\_t* **gpio\_set\_pull\_mode** (*gpio\_num\_t* gpio\_num, *gpio\_pull\_mode\_t* pull)

Configure GPIO pull-up/pull-down resistors.

---

**Note:** ESP32: Only pins that support both input & output have integrated pull-up and pull-down resistors. Input-only GPIOs 34-39 do not.

---

**Parameters**

- **gpio\_num** –GPIO number. If you want to set pull up or down mode for e.g. GPIO16, gpio\_num should be GPIO\_NUM\_16 (16);
- **pull** –GPIO pull up/down mode.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG : Parameter error

*esp\_err\_t* **gpio\_wakeup\_enable** (*gpio\_num\_t* gpio\_num, *gpio\_int\_type\_t* intr\_type)

Enable GPIO wake-up function.

**Parameters**

- **gpio\_num** –GPIO number.
- **intr\_type** –GPIO wake-up type. Only GPIO\_INTR\_LOW\_LEVEL or GPIO\_INTR\_HIGH\_LEVEL can be used.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_wakeup\_disable** (*gpio\_num\_t* gpio\_num)

Disable GPIO wake-up function.

**Parameters** **gpio\_num** –GPIO number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_isr\_register** (void (\*fn)(void\*), void \*arg, int intr\_alloc\_flags, *gpio\_isr\_handle\_t* \*handle)

Register GPIO interrupt handler, the handler is an ISR. The handler will be attached to the same CPU core that this function is running on.

This ISR function is called whenever any GPIO interrupt occurs. See the alternative `gpio_install_isr_service()` and `gpio_isr_handler_add()` API in order to have the driver support per-GPIO ISRs.

To disable or remove the ISR, pass the returned handle to the *interrupt allocation functions*.

**Parameters**

- **fn** –Interrupt handler function.
- **arg** –Parameter for handler function
- **intr\_alloc\_flags** –Flags used to allocate the interrupt. One or multiple (ORred) ESP\_INTR\_FLAG\_\* values. See `esp_intr_alloc.h` for more info.
- **handle** –Pointer to return handle. If non-NULL, a handle for the interrupt will be returned here.

**Returns**

- ESP\_OK Success ;
- ESP\_ERR\_INVALID\_ARG GPIO error
- ESP\_ERR\_NOT\_FOUND No free interrupt found with the specified flags

*esp\_err\_t* **gpio\_pullup\_en** (*gpio\_num\_t* gpio\_num)

Enable pull-up on GPIO.

**Parameters** **gpio\_num** –GPIO number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_pullup\_dis** (*gpio\_num\_t* gpio\_num)

Disable pull-up on GPIO.

**Parameters** *gpio\_num* –GPIO number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpiopulldown\_en** (*gpio\_num\_t* gpio\_num)

Enable pull-down on GPIO.

**Parameters** *gpio\_num* –GPIO number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpiopulldown\_dis** (*gpio\_num\_t* gpio\_num)

Disable pull-down on GPIO.

**Parameters** *gpio\_num* –GPIO number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_install\_isr\_service** (int intr\_alloc\_flags)

Install the GPIO driver's `ETS_GPIO_INTR_SOURCE` ISR handler service, which allows per-pin GPIO interrupt handlers.

This function is incompatible with `gpio_isr_register()` - if that function is used, a single global ISR is registered for all GPIO interrupts. If this function is used, the ISR service provides a global GPIO ISR and individual pin handlers are registered via the `gpio_isr_handler_add()` function.

**Parameters** *intr\_alloc\_flags* –Flags used to allocate the interrupt. One or multiple (ORred) `ESP_INTR_FLAG_*` values. See `esp_intr_alloc.h` for more info.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_NO\_MEM No memory to install this service
- ESP\_ERR\_INVALID\_STATE ISR service already installed.
- ESP\_ERR\_NOT\_FOUND No free interrupt found with the specified flags
- ESP\_ERR\_INVALID\_ARG GPIO error

void **gpio\_uninstall\_isr\_service** (void)

Uninstall the driver's GPIO ISR service, freeing related resources.

*esp\_err\_t* **gpio\_isr\_handler\_add** (*gpio\_num\_t* gpio\_num, *gpio\_isr\_t* isr\_handler, void \*args)

Add ISR handler for the corresponding GPIO pin.

Call this function after using `gpio_install_isr_service()` to install the driver's GPIO ISR handler service.

The pin ISR handlers no longer need to be declared with `IRAM_ATTR`, unless you pass the `ESP_INTR_FLAG_IRAM` flag when allocating the ISR in `gpio_install_isr_service()`.

This ISR handler will be called from an ISR. So there is a stack size limit (configurable as “ISR stack size” in menuconfig). This limit is smaller compared to a global GPIO interrupt handler due to the additional level of indirection.

**Parameters**

- *gpio\_num* –GPIO number
- *isr\_handler* –ISR handler function for the corresponding GPIO number.
- *args* –parameter for ISR handler.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_STATE Wrong state, the ISR service has not been initialized.
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_isr\_handler\_remove** (*gpio\_num\_t* gpio\_num)

Remove ISR handler for the corresponding GPIO pin.

**Parameters** **gpio\_num** –GPIO number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_STATE Wrong state, the ISR service has not been initialized.
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_set\_drive\_capability** (*gpio\_num\_t* gpio\_num, *gpio\_drive\_cap\_t* strength)

Set GPIO pad drive capability.

**Parameters**

- **gpio\_num** –GPIO number, only support output GPIOs
- **strength** –Drive capability of the pad

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_get\_drive\_capability** (*gpio\_num\_t* gpio\_num, *gpio\_drive\_cap\_t* \*strength)

Get GPIO pad drive capability.

**Parameters**

- **gpio\_num** –GPIO number, only support output GPIOs
- **strength** –Pointer to accept drive capability of the pad

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_hold\_en** (*gpio\_num\_t* gpio\_num)

Enable gpio pad hold function.

When the pin is set to hold, the state is latched at that moment and will not change no matter how the internal signals change or how the IO MUX/GPIO configuration is modified (including input enable, output enable, output value, function, and drive strength values). It can be used to retain the pin state through a core reset and system reset triggered by watchdog time-out or Deep-sleep events.

The gpio pad hold function works in both input and output modes, but must be output-capable gpios. If pad hold enabled: in output mode: the output level of the pad will be force locked and can not be changed. in input mode: input read value can still reflect the changes of the input signal.

The state of the digital gpio cannot be held during Deep-sleep, and it will resume to hold at its default pin state when the chip wakes up from Deep-sleep. If the digital gpio also needs to be held during Deep-sleep, `gpio_deep_sleep_hold_en` should also be called.

Power down or call `gpio_hold_dis` will disable this function.

**Parameters** **gpio\_num** –GPIO number, only support output-capable GPIOs

**Returns**

- ESP\_OK Success
- ESP\_ERR\_NOT\_SUPPORTED Not support pad hold function

*esp\_err\_t* **gpio\_hold\_dis** (*gpio\_num\_t* gpio\_num)

Disable gpio pad hold function.

When the chip is woken up from Deep-sleep, the gpio will be set to the default mode, so, the gpio will output the default level if this function is called. If you don't want the level changes, the gpio should be configured to a known state before this function is called. e.g. If you hold gpio18 high during Deep-sleep, after the chip is woken up and `gpio_hold_dis` is called, gpio18 will output low level(because gpio18 is input mode by default). If you don't want this behavior, you should configure gpio18 as output mode and set it to high level before calling `gpio_hold_dis`.

**Parameters** **gpio\_num** –GPIO number, only support output-capable GPIOs

**Returns**

- ESP\_OK Success
- ESP\_ERR\_NOT\_SUPPORTED Not support pad hold function

void **gpio\_deep\_sleep\_hold\_en** (void)

Enable all digital gpio pads hold function during Deep-sleep.

Enabling this feature makes all digital gpio pads be at the holding state during Deep-sleep. The state of each pad holds is its active configuration (not pad's sleep configuration!).

Note that this pad hold feature only works when the chip is in Deep-sleep mode. When the chip is in active mode, the digital gpio state can be changed freely even you have called this function.

After this API is being called, the digital gpio Deep-sleep hold feature will work during every sleep process. You should call `gpio_deep_sleep_hold_dis` to disable this feature.

void **gpio\_deep\_sleep\_hold\_dis** (void)

Disable all digital gpio pads hold function during Deep-sleep.

void **gpio\_iomux\_in** (uint32\_t gpio\_num, uint32\_t signal\_idx)

Set pad input to a peripheral signal through the IOMUX.

#### Parameters

- **gpio\_num** –GPIO number of the pad.
- **signal\_idx** –Peripheral signal id to input. One of the \*\_IN\_IDX signals in `soc/gpio_sig_map.h`.

void **gpio\_iomux\_out** (uint8\_t gpio\_num, int func, bool oen\_inv)

Set peripheral output to an GPIO pad through the IOMUX.

#### Parameters

- **gpio\_num** –gpio\_num GPIO number of the pad.
- **func** –The function number of the peripheral pin to output pin. One of the FUNC\_X\_\* of specified pin (X) in `soc/io_mux_reg.h`.
- **oen\_inv** –True if the output enable needs to be inverted, otherwise False.

*esp\_err\_t* **gpio\_force\_hold\_all** (void)

Force hold all digital and rtc gpio pads.

GPIO force hold, no matter the chip in active mode or sleep modes.

This function will immediately cause all pads to latch the current values of input enable, output enable, output value, function, and drive strength values.

**Warning:** This function will hold flash and UART pins as well. Therefore, this function, and all code run afterwards (till calling `gpio_force_unhold_all` to disable this feature), **MUST** be placed in internal RAM as holding the flash pins will halt SPI flash operation, and holding the UART pins will halt any UART logging.

*esp\_err\_t* **gpio\_force\_unhold\_all** (void)

Force unhold all digital and rtc gpio pads.

*esp\_err\_t* **gpio\_sleep\_sel\_en** (*gpio\_num\_t* gpio\_num)

Enable SLP\_SEL to change GPIO status automatically in lightsleep.

**Parameters** **gpio\_num** –GPIO number of the pad.

#### Returns

- ESP\_OK Success

*esp\_err\_t* **gpio\_sleep\_sel\_dis** (*gpio\_num\_t* gpio\_num)

Disable SLP\_SEL to change GPIO status automatically in lightsleep.

**Parameters** **gpio\_num** –GPIO number of the pad.

#### Returns

- ESP\_OK Success

*esp\_err\_t* **gpio\_sleep\_set\_direction** (*gpio\_num\_t* gpio\_num, *gpio\_mode\_t* mode)

GPIO set direction at sleep.

Configure GPIO direction,such as output\_only,input\_only,output\_and\_input

#### Parameters

- **gpio\_num** –Configure GPIO pins number, it should be GPIO number. If you want to set direction of e.g. GPIO16, gpio\_num should be GPIO\_NUM\_16 (16);
- **mode** –GPIO direction

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG GPIO error

*esp\_err\_t* **gpio\_sleep\_set\_pull\_mode** (*gpio\_num\_t* gpio\_num, *gpio\_pull\_mode\_t* pull)

Configure GPIO pull-up/pull-down resistors at sleep.

---

**Note:** ESP32: Only pins that support both input & output have integrated pull-up and pull-down resistors. Input-only GPIOs 34-39 do not.

---

#### Parameters

- **gpio\_num** –GPIO number. If you want to set pull up or down mode for e.g. GPIO16, gpio\_num should be GPIO\_NUM\_16 (16);
- **pull** –GPIO pull up/down mode.

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG : Parameter error

*esp\_err\_t* **gpio\_deep\_sleep\_wakeup\_enable** (*gpio\_num\_t* gpio\_num, *gpio\_intr\_type\_t* intr\_type)

Enable GPIO deep-sleep wake-up function.

---

**Note:** Called by the SDK. User shouldn't call this directly in the APP.

---

#### Parameters

- **gpio\_num** –GPIO number.
- **intr\_type** –GPIO wake-up type. Only GPIO\_INTR\_LOW\_LEVEL or GPIO\_INTR\_HIGH\_LEVEL can be used.

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **gpio\_deep\_sleep\_wakeup\_disable** (*gpio\_num\_t* gpio\_num)

Disable GPIO deep-sleep wake-up function.

**Parameters** **gpio\_num** –GPIO number

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

## Structures

struct **gpio\_config\_t**

Configuration parameters of GPIO pad for gpio\_config function.

## Public Members

`uint64_t pin_bit_mask`

GPIO pin: set with bit mask, each bit maps to a GPIO

`gpio_mode_t mode`

GPIO mode: set input/output mode

`gpio_pullup_t pull_up_en`

GPIO pull-up

`gpio_pulldown_t pull_down_en`

GPIO pull-down

`gpio_int_type_t intr_type`

GPIO interrupt type

## Macros

`GPIO_PIN_COUNT`

`GPIO_IS_VALID_GPIO` (gpio\_num)

Check whether it is a valid GPIO number.

`GPIO_IS_VALID_OUTPUT_GPIO` (gpio\_num)

Check whether it can be a valid GPIO number of output mode.

`GPIO_IS_VALID_DIGITAL_IO_PAD` (gpio\_num)

Check whether it can be a valid digital I/O pad.

`GPIO_IS_DEEP_SLEEP_WAKEUP_VALID_GPIO` (gpio\_num)

## Type Definitions

typedef `intr_handle_t gpio_isr_handle_t`

typedef void (\*`gpio_isr_t`)(void \*arg)

GPIO interrupt handler.

**Param arg** User registered data

## Header File

enumerator **GPIO\_NUM\_18**  
GPIO18, input and output

enumerator **GPIO\_NUM\_19**  
GPIO19, input and output

enumerator **GPIO\_NUM\_20**  
GPIO20, input and output

enumerator **GPIO\_NUM\_MAX**

enum **gpio\_int\_type\_t**

*Values:*

enumerator **GPIO\_INTR\_DISABLE**  
Disable GPIO interrupt

enumerator **GPIO\_INTR\_POSEDGE**  
GPIO interrupt type : rising edge

enumerator **GPIO\_INTR\_NEGEDGE**  
GPIO interrupt type : falling edge

enumerator **GPIO\_INTR\_ANYEDGE**  
GPIO interrupt type : both rising and falling edge

enumerator **GPIO\_INTR\_LOW\_LEVEL**  
GPIO interrupt type : input low level trigger

enumerator **GPIO\_INTR\_HIGH\_LEVEL**  
GPIO interrupt type : input high level trigger

enumerator **GPIO\_INTR\_MAX**

enum **gpio\_mode\_t**

*Values:*

enumerator **GPIO\_MODE\_DISABLE**

GPIO mode : disable input and output

enumerator **GPIO\_MODE\_INPUT**

GPIO mode : input only

enumerator **GPIO\_MODE\_OUTPUT**

GPIO mode : output only mode

enumerator **GPIO\_MODE\_OUTPUT\_OD**

GPIO mode : output only with open-drain mode

enumerator **GPIO\_MODE\_INPUT\_OUTPUT\_OD**

GPIO mode : output and input with open-drain mode

enumerator **GPIO\_MODE\_INPUT\_OUTPUT**

GPIO mode : output and input mode

enum **gpio\_pullup\_t**

*Values:*

enumerator **GPIO\_PULLUP\_DISABLE**

Disable GPIO pull-up resistor

enumerator **GPIO\_PULLUP\_ENABLE**

Enable GPIO pull-up resistor

enum **gpiopulldown\_t**

*Values:*

enumerator **GPIO\_PULLDOWN\_DISABLE**

Disable GPIO pull-down resistor

enumerator **GPIO\_PULLDOWN\_ENABLE**

Enable GPIO pull-down resistor

enum **gpio\_pull\_mode\_t**

*Values:*

enumerator **GPIO\_PULLUP\_ONLY**

Pad pull up

enumerator **GPIO\_PULLDOWN\_ONLY**

Pad pull down

enumerator **GPIO\_PULLUP\_PULLDOWN**

Pad pull up + pull down

enumerator **GPIO\_FLOATING**

Pad floating

enum **gpio\_drive\_cap\_t**

*Values:*

enumerator **GPIO\_DRIVE\_CAP\_0**

Pad drive capability: weak

enumerator **GPIO\_DRIVE\_CAP\_1**

Pad drive capability: stronger

enumerator **GPIO\_DRIVE\_CAP\_2**

Pad drive capability: medium

enumerator **GPIO\_DRIVE\_CAP\_DEFAULT**

Pad drive capability: medium

enumerator **GPIO\_DRIVE\_CAP\_3**

Pad drive capability: strongest

enumerator **GPIO\_DRIVE\_CAP\_MAX**

## 2.6.5 General Purpose Timer (GPTimer)

### Introduction

GPTimer (General Purpose Timer) is the driver of ESP32-C2 Timer Group peripheral. The hardware timer features high resolution and flexible alarm action. The behavior when the internal counter of a timer reaches a specific target value is called a timer alarm. When a timer alarms, a user registered per-timer callback would be called.

Typically, a general purpose timer can be used in scenarios like:

- Free running as a wall clock, fetching a high-resolution timestamp at any time and any places
- Generate period alarms, trigger events periodically
- Generate one-shot alarm, respond in target time

### Functional Overview

The following sections of this document cover the typical steps to install and operate a timer:

- *Resource Allocation* - covers which parameters should be set up to get a timer handle and how to recycle the resources when GPTimer finishes working.
- *Set and Get Count Value* - covers how to force the timer counting from a start point and how to get the count value at anytime.
- *Set up Alarm Action* - covers the parameters that should be set up to enable the alarm event.
- *Register Event Callbacks* - covers how to hook user specific code to the alarm event callback function.
- *Enable and Disable Timer* - covers how to enable and disable the timer.
- *Start and Stop Timer* - shows some typical use cases that start the timer with different alarm behavior.
- *Power Management* - describes how different source clock selections can affect power consumption.

- *IRAM Safe* - describes tips on how to make the timer interrupt and IO control functions work better along with a disabled cache.
- *Thread Safety* - lists which APIs are guaranteed to be thread safe by the driver.
- *Kconfig Options* - lists the supported Kconfig options that can be used to make a different effect on driver behavior.

**Resource Allocation** Different ESP chips might have different numbers of independent timer groups, and within each group, there could also be several independent timers.<sup>1</sup>

A GPTimer instance is represented by `gptimer_handle_t`. The driver behind will manage all available hardware resources in a pool, so that you do not need to care about which timer and which group it belongs to.

To install a timer instance, there is a configuration structure that needs to be given in advance: `gptimer_config_t`:

- `gptimer_config_t::clk_src` selects the source clock for the timer. The available clocks are listed in `gptimer_clock_source_t`, you can only pick one of them. For the effect on power consumption of different clock source, please refer to Section *Power Management*.
- `gptimer_config_t::direction` sets the counting direction of the timer, supported directions are listed in `gptimer_count_direction_t`, you can only pick one of them.
- `gptimer_config_t::resolution_hz` sets the resolution of the internal counter. Each count step is equivalent to  $1 / \text{resolution\_hz}$  seconds.
- `gptimer_config::intr_priority` sets the priority of the timer interrupt. If it is set to 0, the driver will allocate an interrupt with a default priority. Otherwise, the driver will use the given priority.
- Optional `gptimer_config_t::intr_shared` sets whether or not mark the timer interrupt source as a shared one. For the pros/cons of a shared interrupt, you can refer to *Interrupt Handling*.

With all the above configurations set in the structure, the structure can be passed to `gptimer_new_timer()` which will instantiate the timer instance and return a handle of the timer.

The function can fail due to various errors such as insufficient memory, invalid arguments, etc. Specifically, when there are no more free timers (i.e. all hardware resources have been used up), then `ESP_ERR_NOT_FOUND` will be returned. The total number of available timers is represented by the `SOC_TIMER_GROUP_TOTAL_TIMERS` and its value will depend on the ESP chip.

If a previously created GPTimer instance is no longer required, you should recycle the timer by calling `gptimer_del_timer()`. This will allow the underlying HW timer to be used for other purposes. Before deleting a GPTimer handle, please disable it by `gptimer_disable()` in advance or make sure it has not enabled yet by `gptimer_enable()`.

### Creating a GPTimer Handle with Resolution of 1 MHz

```
gptimer_handle_t gptimer = NULL;
gptimer_config_t timer_config = {
    .clk_src = GPTIMER_CLK_SRC_DEFAULT,
    .direction = GPTIMER_COUNT_UP,
    .resolution_hz = 1 * 1000 * 1000, // 1MHz, 1 tick = 1us
};
ESP_ERROR_CHECK(gptimer_new_timer(&timer_config, &gptimer));
```

**Set and Get Count Value** When the GPTimer is created, the internal counter will be reset to zero by default. The counter value can be updated asynchronously by `gptimer_set_raw_count()`. The maximum count value is dependent on the bit width of the hardware timer, which is also reflected by the SOC macro `SOC_TIMER_GROUP_COUNTER_BIT_WIDTH`. When updating the raw count of an active timer, the timer will immediately start counting from the new value.

Count value can be retrieved by `gptimer_get_raw_count()`, at any time.

<sup>1</sup> Different ESP chip series might have different numbers of GPTimer instances. For more details, please refer to *ESP32-C2 Technical Reference Manual > Chapter Timer Group (TIMG) [PDF]*. The driver will not forbid you from applying for more timers, but it will return error when all available hardware resources are used up. Please always check the return value when doing resource allocation (e.g. `gptimer_new_timer()`).

**Set up Alarm Action** For most of the use cases of GPTimer, you should set up the alarm action before starting the timer, except for the simple wall-clock scenario, where a free running timer is enough. To set up the alarm action, you should configure several members of `gptimer_alarm_config_t` based on how you make use of the alarm event:

- `gptimer_alarm_config_t::alarm_count` sets the target count value that will trigger the alarm event. You should also take the counting direction into consideration when setting the alarm value. Specially, `gptimer_alarm_config_t::alarm_count` and `gptimer_alarm_config_t::reload_count` cannot be set to the same value when `gptimer_alarm_config_t::auto_reload_on_alarm` is true, as keeping reload with a target alarm count is meaningless.
- `gptimer_alarm_config_t::reload_count` sets the count value to be reloaded when the alarm event happens. This configuration only takes effect when `gptimer_alarm_config_t::auto_reload_on_alarm` is set to true.
- `gptimer_alarm_config_t::auto_reload_on_alarm` flag sets whether to enable the auto-reload feature. If enabled, the hardware timer will reload the value of `gptimer_alarm_config_t::reload_count` into counter immediately when an alarm event happens.

To make the alarm configurations take effect, you should call `gptimer_set_alarm_action()`. Especially, if `gptimer_alarm_config_t` is set to NULL, the alarm function will be disabled.

---

**Note:** If an alarm value is set and the timer has already exceeded this value, the alarm will be triggered immediately.

---

**Register Event Callbacks** After the timer starts up, it can generate a specific event (e.g. the “Alarm Event” ) dynamically. If you have some functions that should be called when the event happens, please hook your function to the interrupt service routine by calling `gptimer_register_event_callbacks()`. All supported event callbacks are listed in `gptimer_event_callbacks_t`:

- `gptimer_event_callbacks_t::on_alarm` sets a callback function for alarm events. As this function is called within the ISR context, you must ensure that the function does not attempt to block (e.g., by making sure that only FreeRTOS APIs with `ISR` suffix are called from within the function). The function prototype is declared in `gptimer_alarm_cb_t`.

You can save your own context to `gptimer_register_event_callbacks()` as well, via the parameter `user_data`. The user data will be directly passed to the callback function.

This function will lazy install the interrupt service for the timer but not enable it. So please call this function before `gptimer_enable()`, otherwise the `ESP_ERR_INVALID_STATE` error will be returned. See Section [Enable and Disable Timer](#) for more information.

**Enable and Disable Timer** Before doing IO control to the timer, you needs to enable the timer first, by calling `gptimer_enable()`. This function will:

- Switch the timer driver state from **init** to **enable**.
- Enable the interrupt service if it has been lazy installed by `gptimer_register_event_callbacks()`.
- Acquire a proper power management lock if a specific clock source (e.g. APB clock) is selected. See Section [Power Management](#) for more information.

Calling `gptimer_disable()` will do the opposite, that is, put the timer driver back to the **init** state, disable the interrupts service and release the power management lock.

**Start and Stop Timer** The basic IO operation of a timer is to start and stop. Calling `gptimer_start()` can make the internal counter work, while calling `gptimer_stop()` can make the counter stop working. The following illustrates how to start a timer with or without an alarm event. Calling `gptimer_start()` will transit the driver state from **enable** to **run**, and vice versa. You need to make sure the start and stop functions are used in pairs, otherwise, the functions may return `ESP_ERR_INVALID_STATE`. Most of the time, this error means that the timer is already stopped or in the “start protection” state (i.e. `gptimer_start()` is called but not finished).

### Start Timer as a Wall Clock

```

ESP_ERROR_CHECK(gptimer_enable(gptimer));
ESP_ERROR_CHECK(gptimer_start(gptimer));
// Retrieve the timestamp at any time
uint64_t count;
ESP_ERROR_CHECK(gptimer_get_raw_count(gptimer, &count));

```

### Trigger Period Events

```

typedef struct {
    uint64_t event_count;
} example_queue_element_t;

static bool example_timer_on_alarm_cb(gptimer_handle_t timer, const gptimer_alarm_
↳event_data_t *edata, void *user_ctx)
{
    BaseType_t high_task_awoken = pdFALSE;
    QueueHandle_t queue = (QueueHandle_t)user_ctx;
    // Retrieve the count value from event data
    example_queue_element_t ele = {
        .event_count = edata->count_value
    };
    // Optional: send the event data to other task by OS queue
    // Do not introduce complex logics in callbacks
    // Suggest dealing with event data in the main loop, instead of in this_
↳callback
    xQueueSendFromISR(queue, &ele, &high_task_awoken);
    // return whether we need to yield at the end of ISR
    return high_task_awoken == pdTRUE;
}

gptimer_alarm_config_t alarm_config = {
    .reload_count = 0, // counter will reload with 0 on alarm event
    .alarm_count = 1000000, // period = 1s @resolution 1MHz
    .flags.auto_reload_on_alarm = true, // enable auto-reload
};
ESP_ERROR_CHECK(gptimer_set_alarm_action(gptimer, &alarm_config));

gptimer_event_callbacks_t cbs = {
    .on_alarm = example_timer_on_alarm_cb, // register user callback
};
ESP_ERROR_CHECK(gptimer_register_event_callbacks(gptimer, &cbs, queue));
ESP_ERROR_CHECK(gptimer_enable(gptimer));
ESP_ERROR_CHECK(gptimer_start(gptimer));

```

### Trigger One-Shot Event

```

typedef struct {
    uint64_t event_count;
} example_queue_element_t;

static bool example_timer_on_alarm_cb(gptimer_handle_t timer, const gptimer_alarm_
↳event_data_t *edata, void *user_ctx)
{
    BaseType_t high_task_awoken = pdFALSE;
    QueueHandle_t queue = (QueueHandle_t)user_ctx;
    // Stop timer the sooner the better
    gptimer_stop(timer);
    // Retrieve the count value from event data
    example_queue_element_t ele = {

```

(continues on next page)

(continued from previous page)

```

        .event_count = edata->count_value
    };
    // Optional: send the event data to other task by OS queue
    xQueueSendFromISR(queue, &ele, &high_task_awoken);
    // return whether we need to yield at the end of ISR
    return high_task_awoken == pdTRUE;
}

gptimer_alarm_config_t alarm_config = {
    .alarm_count = 1 * 1000 * 1000, // alarm target = 1s @resolution 1MHz
};
ESP_ERROR_CHECK(gptimer_set_alarm_action(gptimer, &alarm_config));

gptimer_event_callbacks_t cbs = {
    .on_alarm = example_timer_on_alarm_cb, // register user callback
};
ESP_ERROR_CHECK(gptimer_register_event_callbacks(gptimer, &cbs, queue));
ESP_ERROR_CHECK(gptimer_enable(gptimer));
ESP_ERROR_CHECK(gptimer_start(gptimer));

```

**Dynamic Alarm Update** Alarm value can be updated dynamically inside the ISR handler callback, by changing `gptimer_alarm_event_data_t::alarm_value`. Then the alarm value will be updated after the callback function returns.

```

typedef struct {
    uint64_t event_count;
} example_queue_element_t;

static bool example_timer_on_alarm_cb(gptimer_handle_t timer, const gptimer_alarm_
↪event_data_t *edata, void *user_ctx)
{
    BaseType_t high_task_awoken = pdFALSE;
    QueueHandle_t queue = (QueueHandle_t)user_data;
    // Retrieve the count value from event data
    example_queue_element_t ele = {
        .event_count = edata->count_value
    };
    // Optional: send the event data to other task by OS queue
    xQueueSendFromISR(queue, &ele, &high_task_awoken);
    // reconfigure alarm value
    gptimer_alarm_config_t alarm_config = {
        .alarm_count = edata->alarm_value + 1000000, // alarm in next 1s
    };
    gptimer_set_alarm_action(timer, &alarm_config);
    // return whether we need to yield at the end of ISR
    return high_task_awoken == pdTRUE;
}

gptimer_alarm_config_t alarm_config = {
    .alarm_count = 1000000, // initial alarm target = 1s @resolution 1MHz
};
ESP_ERROR_CHECK(gptimer_set_alarm_action(gptimer, &alarm_config));

gptimer_event_callbacks_t cbs = {
    .on_alarm = example_timer_on_alarm_cb, // register user callback
};
ESP_ERROR_CHECK(gptimer_register_event_callbacks(gptimer, &cbs, queue));
ESP_ERROR_CHECK(gptimer_enable(gptimer));
ESP_ERROR_CHECK(gptimer_start(gptimer));

```

**Power Management** There're some power management strategies, which might turn off or change the frequency of GPTimer's source clock to save power consumption. For example, during DFS, APB clock will be scaled down. If light-sleep is also enabled, PLL and XTAL clocks will be powered off. Both of them can result in an inaccurate time keeping.

The driver can prevent the above situation from happening by creating different power management lock according to different clock source. The driver will increase the reference count of that power management lock in the `gptimer_enable()` and decrease it in the `gptimer_disable()`. So we can ensure the clock source is stable between `gptimer_enable()` and `gptimer_disable()`.

**IRAM Safe** By default, the GPTimer interrupt will be deferred when the cache is disabled because of writing or erasing the flash. Thus the alarm interrupt will not get executed in time, which is not expected in a real-time application.

There is a Kconfig option `CONFIG_GPTIMER_ISR_IRAM_SAFE` that will:

- Enable the interrupt being serviced even when the cache is disabled
- Place all functions that used by the ISR into IRAM<sup>2</sup>
- Place driver object into DRAM (in case it is mapped to PSRAM by accident)

This will allow the interrupt to run while the cache is disabled, but will come at the cost of increased IRAM consumption.

There is another Kconfig option `CONFIG_GPTIMER_CTRL_FUNC_IN_IRAM` that can put commonly used IO control functions into IRAM as well. So, these functions can also be executable when the cache is disabled. These IO control functions are as follows:

- `gptimer_start()`
- `gptimer_stop()`
- `gptimer_get_raw_count()`
- `gptimer_set_raw_count()`
- `gptimer_set_alarm_action()`

**Thread Safety** All the APIs provided by the driver are guaranteed to be thread safe, which means you can call them from different RTOS tasks without protection by extra locks. The following functions are allowed to run under ISR context.

- `gptimer_start()`
- `gptimer_stop()`
- `gptimer_get_raw_count()`
- `gptimer_set_raw_count()`
- `gptimer_set_alarm_action()`

### Kconfig Options

- `CONFIG_GPTIMER_CTRL_FUNC_IN_IRAM` controls where to place the GPTimer control functions (IRAM or flash), see Section *IRAM Safe* for more information.
- `CONFIG_GPTIMER_ISR_IRAM_SAFE` controls whether the default ISR handler can work when the cache is disabled, see Section *IRAM Safe* for more information.
- `CONFIG_GPTIMER_ENABLE_DEBUG_LOG` is used to enabled the debug log output. Enable this option will increase the firmware binary size.

### Application Examples

- Typical use cases of GPTimer are listed in the example `peripherals/timer_group/gptimer`.

---

<sup>2</sup> `gptimer_event_callbacks_t::on_alarm` callback and the functions invoked by the callback should also be placed in IRAM, please take care of them by yourself.

## API Reference

### Header File

- `components/driver/include/driver/gptimer.h`

### Functions

*esp\_err\_t* **gptimer\_new\_timer** (const *gptimer\_config\_t* \*config, *gptimer\_handle\_t* \*ret\_timer)

Create a new General Purpose Timer, and return the handle.

---

**Note:** The newly created timer is put in the “init” state.

---

#### Parameters

- **config** –[in] GPTimer configuration
- **ret\_timer** –[out] Returned timer handle

#### Returns

- ESP\_OK: Create GPTimer successfully
- ESP\_ERR\_INVALID\_ARG: Create GPTimer failed because of invalid argument
- ESP\_ERR\_NO\_MEM: Create GPTimer failed because out of memory
- ESP\_ERR\_NOT\_FOUND: Create GPTimer failed because all hardware timers are used up and no more free one
- ESP\_FAIL: Create GPTimer failed because of other error

*esp\_err\_t* **gptimer\_del\_timer** (*gptimer\_handle\_t* timer)

Delete the GPTimer handle.

---

**Note:** A timer must be in the “init” state before it can be deleted.

---

**Parameters** **timer** –[in] Timer handle created by `gptimer_new_timer()`

#### Returns

- ESP\_OK: Delete GPTimer successfully
- ESP\_ERR\_INVALID\_ARG: Delete GPTimer failed because of invalid argument
- ESP\_ERR\_INVALID\_STATE: Delete GPTimer failed because the timer is not in init state
- ESP\_FAIL: Delete GPTimer failed because of other error

*esp\_err\_t* **gptimer\_set\_raw\_count** (*gptimer\_handle\_t* timer, *uint64\_t* value)

Set GPTimer raw count value.

---

**Note:** When updating the raw count of an active timer, the timer will immediately start counting from the new value.

---

**Note:** This function is allowed to run within ISR context

---

**Note:** If `CONFIG_GPTIMER_CTRL_FUNC_IN_IRAM` is enabled, this function will be placed in the IRAM by linker, makes it possible to execute even when the Flash Cache is disabled.

---

#### Parameters

- **timer** –[in] Timer handle created by `gptimer_new_timer()`
- **value** –[in] Count value to be set

**Returns**

- ESP\_OK: Set GPTimer raw count value successfully
- ESP\_ERR\_INVALID\_ARG: Set GPTimer raw count value failed because of invalid argument
- ESP\_FAIL: Set GPTimer raw count value failed because of other error

*esp\_err\_t* **gptimer\_get\_raw\_count** (*gptimer\_handle\_t* timer, uint64\_t \*value)

Get GPTimer raw count value.

---

**Note:** With the raw count value and the resolution set in the *gptimer\_config\_t*, you can convert the count value into seconds.

---

---

**Note:** This function is allowed to run within ISR context

---

---

**Note:** If CONFIG\_GPTIMER\_CTRL\_FUNC\_IN\_IRAM is enabled, this function will be placed in the IRAM by linker, makes it possible to execute even when the Flash Cache is disabled.

---

**Parameters**

- **timer** –[in] Timer handle created by *gptimer\_new\_timer()*
- **value** –[out] Returned GPTimer count value

**Returns**

- ESP\_OK: Get GPTimer raw count value successfully
- ESP\_ERR\_INVALID\_ARG: Get GPTimer raw count value failed because of invalid argument
- ESP\_FAIL: Get GPTimer raw count value failed because of other error

*esp\_err\_t* **gptimer\_register\_event\_callbacks** (*gptimer\_handle\_t* timer, const *gptimer\_event\_callbacks\_t* \*cbs, void \*user\_data)

Set callbacks for GPTimer.

---

**Note:** User registered callbacks are expected to be runnable within ISR context

---

---

**Note:** The first call to this function needs to be before the call to *gptimer\_enable*

---

---

**Note:** User can deregister a previously registered callback by calling this function and setting the callback member in the *cbs* structure to NULL.

---

**Parameters**

- **timer** –[in] Timer handle created by *gptimer\_new\_timer()*
- **cbs** –[in] Group of callback functions
- **user\_data** –[in] User data, which will be passed to callback functions directly

**Returns**

- ESP\_OK: Set event callbacks successfully
- ESP\_ERR\_INVALID\_ARG: Set event callbacks failed because of invalid argument
- ESP\_ERR\_INVALID\_STATE: Set event callbacks failed because the timer is not in init state
- ESP\_FAIL: Set event callbacks failed because of other error

*esp\_err\_t* **gptimer\_set\_alarm\_action** (*gptimer\_handle\_t* timer, const *gptimer\_alarm\_config\_t* \*config)

Set alarm event actions for GPTimer.

---

**Note:** This function is allowed to run within ISR context, so that user can set new alarm action immediately in the ISR callback.

---

---

**Note:** If CONFIG\_GPTIMER\_CTRL\_FUNC\_IN\_IRAM is enabled, this function will be placed in the IRAM by linker, makes it possible to execute even when the Flash Cache is disabled.

---

#### Parameters

- **timer** –[in] Timer handle created by `gptimer_new_timer()`
- **config** –[in] Alarm configuration, especially, set config to NULL means disabling the alarm function

#### Returns

- ESP\_OK: Set alarm action for GPTimer successfully
- ESP\_ERR\_INVALID\_ARG: Set alarm action for GPTimer failed because of invalid argument
- ESP\_FAIL: Set alarm action for GPTimer failed because of other error

*esp\_err\_t* **gptimer\_enable** (*gptimer\_handle\_t* timer)

Enable GPTimer.

---

**Note:** This function will transit the timer state from “init” to “enable” .

---

---

**Note:** This function will enable the interrupt service, if it's lazy installed in `gptimer_register_event_callbacks`.

---

---

**Note:** This function will acquire a PM lock, if a specific source clock (e.g. APB) is selected in the `gptimer_config_t`, while CONFIG\_PM\_ENABLE is enabled.

---

---

**Note:** Enable a timer doesn't mean to start it. See also `gptimer_start()` for how to make the timer start counting.

---

**Parameters** **timer** –[in] Timer handle created by `gptimer_new_timer()`

#### Returns

- ESP\_OK: Enable GPTimer successfully
- ESP\_ERR\_INVALID\_ARG: Enable GPTimer failed because of invalid argument
- ESP\_ERR\_INVALID\_STATE: Enable GPTimer failed because the timer is already enabled
- ESP\_FAIL: Enable GPTimer failed because of other error

*esp\_err\_t* **gptimer\_disable** (*gptimer\_handle\_t* timer)

Disable GPTimer.

---

**Note:** This function will transit the timer state from “enable” to “init” .

---

---

**Note:** This function will disable the interrupt service if it's installed.

---

---

**Note:** This function will release the PM lock if it's acquired in the `gptimer_enable`.

---

---

**Note:** Disable a timer doesn't mean to stop it. See also `gptimer_stop` for how to make the timer stop counting.

---

**Parameters** `timer` –[in] Timer handle created by `gptimer_new_timer()`

**Returns**

- `ESP_OK`: Disable GPTimer successfully
- `ESP_ERR_INVALID_ARG`: Disable GPTimer failed because of invalid argument
- `ESP_ERR_INVALID_STATE`: Disable GPTimer failed because the timer is not enabled yet
- `ESP_FAIL`: Disable GPTimer failed because of other error

*esp\_err\_t* `gptimer_start` (*gptimer\_handle\_t* timer)

Start GPTimer (internal counter starts counting)

---

**Note:** This function will transit the timer state from “enable” to “run” .

---

---

**Note:** This function is allowed to run within ISR context

---

---

**Note:** If `CONFIG_GPTIMER_CTRL_FUNC_IN_IRAM` is enabled, this function will be placed in the IRAM by linker, makes it possible to execute even when the Flash Cache is disabled.

---

**Parameters** `timer` –[in] Timer handle created by `gptimer_new_timer()`

**Returns**

- `ESP_OK`: Start GPTimer successfully
- `ESP_ERR_INVALID_ARG`: Start GPTimer failed because of invalid argument
- `ESP_ERR_INVALID_STATE`: Start GPTimer failed because the timer is not enabled or is already in running
- `ESP_FAIL`: Start GPTimer failed because of other error

*esp\_err\_t* `gptimer_stop` (*gptimer\_handle\_t* timer)

Stop GPTimer (internal counter stops counting)

---

**Note:** This function will transit the timer state from “run” to “enable” .

---

---

**Note:** This function is allowed to run within ISR context

---

---

**Note:** If `CONFIG_GPTIMER_CTRL_FUNC_IN_IRAM` is enabled, this function will be placed in the IRAM by linker, makes it possible to execute even when the Flash Cache is disabled.

---

**Parameters** `timer` –[in] Timer handle created by `gptimer_new_timer()`

**Returns**

- ESP\_OK: Stop GPTimer successfully
- ESP\_ERR\_INVALID\_ARG: Stop GPTimer failed because of invalid argument
- ESP\_ERR\_INVALID\_STATE: Stop GPTimer failed because the timer is not in running.
- ESP\_FAIL: Stop GPTimer failed because of other error

**Structures**

struct **gptimer\_alarm\_event\_data\_t**

GPTimer alarm event data.

**Public Members**

uint64\_t **count\_value**

Current count value

uint64\_t **alarm\_value**

Current alarm value

struct **gptimer\_event\_callbacks\_t**

Group of supported GPTimer callbacks.

---

**Note:** The callbacks are all running under ISR environment

---

---

**Note:** When CONFIG\_GPTIMER\_ISR\_IRAM\_SAFE is enabled, the callback itself and functions called by it should be placed in IRAM.

---

**Public Members**

*gptimer\_alarm\_cb\_t* **on\_alarm**

Timer alarm callback

struct **gptimer\_config\_t**

General Purpose Timer configuration.

**Public Members**

*gptimer\_clock\_source\_t* **clk\_src**

GPTimer clock source

*gptimer\_count\_direction\_t* **direction**

Count direction

uint32\_t **resolution\_hz**

Counter resolution (working frequency) in Hz, hence, the step size of each count tick equals to (1 / resolution\_hz) seconds

int **intr\_priority**

GPTimer interrupt priority, if set to 0, the driver will try to allocate an interrupt with a relative low priority (1,2,3)

uint32\_t **intr\_shared**

Set true, the timer interrupt number can be shared with other peripherals

struct *gptimer\_config\_t*::[anonymous] **flags**

GPTimer config flags

struct **gptimer\_alarm\_config\_t**

General Purpose Timer alarm configuration.

### Public Members

uint64\_t **alarm\_count**

Alarm target count value

uint64\_t **reload\_count**

Alarm reload count value, effect only when `auto_reload_on_alarm` is set to true

uint32\_t **auto\_reload\_on\_alarm**

Reload the count value by hardware, immediately at the alarm event

struct *gptimer\_alarm\_config\_t*::[anonymous] **flags**

Alarm config flags

### Type Definitions

typedef struct gptimer\_t \***gptimer\_handle\_t**

Type of General Purpose Timer handle.

typedef bool (\***gptimer\_alarm\_cb\_t**)(*gptimer\_handle\_t* timer, const *gptimer\_alarm\_event\_data\_t* \*edata, void \*user\_ctx)

Timer alarm callback prototype.

**Param timer [in]** Timer handle created by `gptimer_new_timer()`

**Param edata [in]** Alarm event data, fed by driver

**Param user\_ctx [in]** User data, passed from `gptimer_register_event_callbacks()`

**Return** Whether a high priority task has been waken up by this function

### Header File

- [components/hal/include/hal/timer\\_types.h](#)

### Type Definitions

typedef *soc\_periph\_gptimer\_clk\_src\_t* **gptimer\_clock\_source\_t**

GPTimer clock source.

---

**Note:** User should select the clock source based on the power and resolution requirement

---

## Enumerations

enum `gptimer_count_direction_t`

GPTimer count direction.

*Values:*

enumerator `GPTIMER_COUNT_DOWN`

Decrease count value

enumerator `GPTIMER_COUNT_UP`

Increase count value

## 2.6.6 Dedicated GPIO

### Overview

The dedicated GPIO is designed for CPU interaction with GPIO matrix and IO MUX. Any GPIO that is configured as “dedicated” can be access by CPU instructions directly, which makes it easy to achieve a high GPIO flip speed, and simulate serial/parallel interface in a bit-banging way. As toggling a GPIO in this “CPU Dedicated” way costs few overhead, it would be great for cases like performance measurement using an oscilloscope.

### Create/Destroy GPIO Bundle

A GPIO bundle is a group of GPIOs, which can be manipulated at the same time in one CPU cycle. The maximal number of GPIOs that a bundle can contain is limited by each CPU. What’ s more, the GPIO bundle has a strong relevance to the CPU which it derives from. **Any operations on the GPIO bundle should be put inside a task which is running on the same CPU core to the GPIO bundle belongs to.** Likewise, only those ISRs who are installed on the same CPU core are allowed to do operations on that GPIO bundle.

---

**Note:** Dedicated GPIO is more of a CPU peripheral, so it has a strong relationship with CPU core. It’ s highly recommended to install and operate GPIO bundle in a pin-to-core task. For example, if GPIOA is connected to CPU0, and the dedicated GPIO instruction is issued from CPU1, then it’ s impossible to control GPIOA.

---

To install a GPIO bundle, one needs to call `dedic_gpio_new_bundle()` to allocate the software resources and connect the dedicated channels to user selected GPIOs. Configurations for a GPIO bundle are covered in `dedic_gpio_bundle_config_t` structure:

- `gpio_array`: An array that contains GPIO number.
- `array_size`: Element number of `gpio_array`.
- `flags`: Extra flags to control the behavior of GPIO Bundle.
  - `in_en` and `out_en` are used to select whether to enable the input and output function (note, they can be enabled together).
  - `in_invert` and `out_invert` are used to select whether to invert the GPIO signal.

The following code shows how to install a output only GPIO bundle:

```
// configure GPIO
const int bundleA_gpios[] = {0, 1};
gpio_config_t io_conf = {
    .mode = GPIO_MODE_OUTPUT,
};
for (int i = 0; i < sizeof(bundleA_gpios) / sizeof(bundleA_gpios[0]); i++) {
```

(continues on next page)

(continued from previous page)

```

    io_conf.pin_bit_mask = 1ULL << bundleA_gpios[i];
    gpio_config(&io_conf);
}
// Create bundleA, output only
dedic_gpio_bundle_handle_t bundleA = NULL;
dedic_gpio_bundle_config_t bundleA_config = {
    .gpio_array = bundleA_gpios,
    .array_size = sizeof(bundleA_gpios) / sizeof(bundleA_gpios[0]),
    .flags = {
        .out_en = 1,
    },
};
ESP_ERROR_CHECK(dedic_gpio_new_bundle(&bundleA_config, &bundleA));

```

To uninstall the GPIO bundle, one needs to call `dedic_gpio_del_bundle()`.

**Note:** `dedic_gpio_new_bundle()` doesn't cover any GPIO pad configuration (e.g. pull up/down, drive ability, output/input enable), so before installing a dedicated GPIO bundle, you have to configure the GPIO separately using GPIO driver API (e.g. `gpio_config()`). For more information about GPIO driver, please refer to [GPIO API Reference](#).

## GPIO Bundle Operations

Operations	Functions
Write to GPIOs in the bundle by mask	<code>dedic_gpio_bundle_write()</code>
Read the value that output from the given GPIO bundle	<code>dedic_gpio_bundle_read_out()</code>
Read the value that input to the given GPIO bundle	<code>dedic_gpio_bundle_read_in()</code>

**Note:** Using the above functions might not get a high GPIO flip speed because of the overhead of function calls and the bit operations involved inside. Users can try [Manipulate GPIOs by Writing Assembly Code](#) instead to reduce the overhead but should take care of the thread safety by themselves.

## Manipulate GPIOs by Writing Assembly Code

For advanced users, they can always manipulate the GPIOs by writing assembly code or invoking CPU Low Level APIs. The usual procedure could be:

1. Allocate a GPIO bundle: `dedic_gpio_new_bundle()`
2. Query the mask occupied by that bundle: `dedic_gpio_get_out_mask()` or/and `dedic_gpio_get_in_mask()`
3. Call CPU LL apis (e.g. `dedic_gpio_cpu_ll_write_mask`) or write assembly code with that mask
4. The fastest way of toggling IO is to use the dedicated “set/clear” instructions:
  - Set bits of GPIO: `csrrsi rd, csr, imm[4:0]`
  - Clear bits of GPIO: `csrrci rd, csr, imm[4:0]`
  - Note: Can only control the lowest 4 GPIO channels

For details of supported dedicated GPIO instructions, please refer to [ESP32-C2 Technical Reference Manual > ESP-RISC-V CPU \[PDF\]](#).

Some of the dedicated CPU instructions are also wrapped inside `hal/dedic_gpio_cpu_ll.h` as helper inline functions.

**Note:** Writing assembly code in application could make your code hard to port between targets, because those customized instructions are not guaranteed to remain the same format on different targets.

---

## API Reference

### Header File

- `components/driver/include/driver/dedic_gpio.h`

### Functions

`esp_err_t dedic_gpio_get_out_mask (dedic_gpio_bundle_handle_t bundle, uint32_t *mask)`

Get allocated channel mask.

---

**Note:** Each bundle should have at least one mask (in or/and out), based on bundle configuration.

---

---

**Note:** With the returned mask, user can directly invoke LL function like “`dedic_gpio_cpu_ll_write_mask`” or write assembly code with dedicated GPIO instructions, to get better performance on GPIO manipulation.

---

#### Parameters

- **bundle** –[in] Handle of GPIO bundle that returned from “`dedic_gpio_new_bundle`”
- **mask** –[out] Returned mask value for on specific direction (in or out)

#### Returns

- `ESP_OK`: Get channel mask successfully
- `ESP_ERR_INVALID_ARG`: Get channel mask failed because of invalid argument
- `ESP_FAIL`: Get channel mask failed because of other error

`esp_err_t dedic_gpio_get_in_mask (dedic_gpio_bundle_handle_t bundle, uint32_t *mask)`

`esp_err_t dedic_gpio_new_bundle (const dedic_gpio_bundle_config_t *config, dedic_gpio_bundle_handle_t *ret_bundle)`

Create GPIO bundle and return the handle.

---

**Note:** One has to enable at least input or output mode in “`config`” parameter.

---

#### Parameters

- **config** –[in] Configuration of GPIO bundle
- **ret\_bundle** –[out] Returned handle of the new created GPIO bundle

#### Returns

- `ESP_OK`: Create GPIO bundle successfully
- `ESP_ERR_INVALID_ARG`: Create GPIO bundle failed because of invalid argument
- `ESP_ERR_NO_MEM`: Create GPIO bundle failed because of no capable memory
- `ESP_ERR_NOT_FOUND`: Create GPIO bundle failed because of no enough continuous dedicated channels
- `ESP_FAIL`: Create GPIO bundle failed because of other error

`esp_err_t dedic_gpio_del_bundle (dedic_gpio_bundle_handle_t bundle)`

Destory GPIO bundle.

**Parameters** **bundle** –[in] Handle of GPIO bundle that returned from “`dedic_gpio_new_bundle`”

#### Returns

- `ESP_OK`: Destory GPIO bundle successfully

- `ESP_ERR_INVALID_ARG`: Destory GPIO bundle failed because of invalid argument
- `ESP_FAIL`: Destory GPIO bundle failed because of other error

void **dedic\_gpio\_bundle\_write** (*dedic\_gpio\_bundle\_handle\_t* bundle, uint32\_t mask, uint32\_t value)

Write value to GPIO bundle.

---

**Note:** The mask is seen from the view of GPIO bundle. For example, bundleA contains [GPIO10, GPIO12, GPIO17], to set GPIO17 individually, the mask should be 0x04.

---

---

**Note:** For performance reasons, this function doesn't check the validity of any parameters, and is placed in IRAM.

---

#### Parameters

- **bundle** –[in] Handle of GPIO bundle that returned from “dedic\_gpio\_new\_bundle”
- **mask** –[in] Mask of the GPIOs to be written in the given bundle
- **value** –[in] Value to write to given GPIO bundle, low bit represents low member in the bundle

uint32\_t **dedic\_gpio\_bundle\_read\_out** (*dedic\_gpio\_bundle\_handle\_t* bundle)

Read the value that output from the given GPIO bundle.

---

**Note:** For performance reasons, this function doesn't check the validity of any parameters, and is placed in IRAM.

---

**Parameters** **bundle** –[in] Handle of GPIO bundle that returned from “dedic\_gpio\_new\_bundle”

**Returns** Value that output from the GPIO bundle, low bit represents low member in the bundle

uint32\_t **dedic\_gpio\_bundle\_read\_in** (*dedic\_gpio\_bundle\_handle\_t* bundle)

Read the value that input to the given GPIO bundle.

---

**Note:** For performance reasons, this function doesn't check the validity of any parameters, and is placed in IRAM.

---

**Parameters** **bundle** –[in] Handle of GPIO bundle that returned from “dedic\_gpio\_new\_bundle”

**Returns** Value that input to the GPIO bundle, low bit represents low member in the bundle

## Structures

struct **dedic\_gpio\_bundle\_config\_t**

Type of Dedicated GPIO bundle configuration.

## Public Members

const int \***gpio\_array**

Array of GPIO numbers, `gpio_array[0] ~ gpio_array[size-1] <=> low_dedic_channel_num ~ high_dedic_channel_num`

size\_t **array\_size**  
Number of GPIOs in `gpio_array`

unsigned int **in\_en**  
Enable input

unsigned int **in\_invert**  
Invert input signal

unsigned int **out\_en**  
Enable output

unsigned int **out\_invert**  
Invert output signal

struct *dedic\_gpio\_bundle\_config\_t*::[anonymous] **flags**  
Flags to control specific behaviour of GPIO bundle

### Type Definitions

typedef struct *dedic\_gpio\_bundle\_t* \***dedic\_gpio\_bundle\_handle\_t**  
Type of Dedicated GPIO bundle.

## 2.6.7 Inter-Integrated Circuit (I2C)

### Overview

I2C is a serial, synchronous, half-duplex communication protocol that allows co-existence of multiple masters and slaves on the same bus. The I2C bus consists of two lines: serial data line (SDA) and serial clock (SCL). Both lines require pull-up resistors.

With such advantages as simplicity and low manufacturing cost, I2C is mostly used for communication of low-speed peripheral devices over short distances (within one foot).

ESP32-C2 has 1 I2C controller (also referred to as port), responsible for handling communications on the I2C bus. A single I2C controller can operate as master or slave.

### Driver Features

I2C driver governs communications of devices over the I2C bus. The driver supports the following features:

- Reading and writing bytes in Master mode
- Reading and writing to registers which are in turn read/written by the master

### Driver Usage

The following sections describe typical steps of configuring and operating the I2C driver:

1. *Configuration* - set the initialization parameters (master mode, GPIO pins for SDA and SCL, clock speed, etc.)
2. *Install Driver*- activate the driver on one of the two I2C controllers as a master

3. Depending on whether you configure the driver for a master, choose the appropriate item
  - a) *Communication as Master* - handle communications (master)
4. *Interrupt Handling* - configure and service I2C interrupts
5. *Customized Configuration* - adjust default I2C communication parameters (timings, bit order, etc.)
6. *Error Handling* - how to recognize and handle driver configuration and communication errors
7. *Delete Driver* - release resources used by the I2C driver when communication ends

**Configuration** To establish I2C communication, start by configuring the driver. This is done by setting the parameters of the structure `i2c_config_t`:

- Set I2C **mode of operation** - master from `i2c_mode_t`
- Configure **communication pins**
  - Assign GPIO pins for SDA and SCL signals
  - Set whether to enable ESP32-C2's internal pull-ups
- (Master only) Set I2C **clock speed**

After that, initialize the configuration for a given I2C port. For this, call the function `i2c_param_config()` and pass to it the port number and the structure `i2c_config_t`.

Configuration example (master):

```
int i2c_master_port = 0;
i2c_config_t conf = {
    .mode = I2C_MODE_MASTER,
    .sda_io_num = I2C_MASTER_SDA_IO,           // select GPIO specific to your_
↪project
    .sda_pullup_en = GPIO_PULLUP_ENABLE,
    .scl_io_num = I2C_MASTER_SCL_IO,           // select GPIO specific to your_
↪project
    .scl_pullup_en = GPIO_PULLUP_ENABLE,
    .master.clk_speed = I2C_MASTER_FREQ_HZ,    // select frequency specific to your_
↪project
    .clk_flags = 0,                             // you can use I2C_SCLK_SRC_FLAG_*_
↪flags to choose i2c source clock here
};
```

At this stage, `i2c_param_config()` also sets a few other I2C configuration parameters to default values that are defined by the I2C specification. For more details on the values and how to modify them, see *Customized Configuration*.

**Source Clock Configuration** **Clock sources allocator** is added for supporting different clock sources. The clock allocator will choose one clock source that meets all the requirements of frequency and capability (as requested in `i2c_config_t::clk_flags`).

When `i2c_config_t::clk_flags` is 0, the clock allocator will select only according to the desired frequency. If no special capabilities are needed, such as APB, you can configure the clock allocator to select the source clock only according to the desired frequency. For this, set `i2c_config_t::clk_flags` to 0. For clock characteristics, see the table below.

---

**Note:** A clock is not a valid option, if it doesn't meet the requested capabilities, i.e. any bit of requested capabilities (`clk_flags`) is 0 in the clock's capabilities.

---

Explanations for `i2c_config_t::clk_flags` are as follows:

1. `I2C_SCLK_SRC_FLAG_AWARE_DFS`: Clock's baud rate will not change while APB clock is changing.
2. `I2C_SCLK_SRC_FLAG_LIGHT_SLEEP`: It supports Light-sleep mode, which APB clock cannot do.
3. Some flags may not be supported on ESP32-C2, reading technical reference manual before using it.

**Note:** The clock frequency of SCL in master mode should not be larger than max frequency for SCL mentioned in the table above.

**Note:** The clock frequency of SCL will be influenced by the pull-up resistors and wire capacitance (or might slave capacitance) together. Therefore, users need to choose correct pull-up resistors by themselves to make the frequency accurate. It is recommended by I2C protocol that the pull-up resistors commonly range from 1KOhms to 10KOhms, but different frequencies need different resistors.

Generally speaking, the higher frequency is selected, the smaller resistor should be used (but not less than 1KOhms). This is because high resistor will decline the current, which will lengthen the rising time and reduce the frequency. Usually, range 2KOhms to 5KOhms is what we recommend, but users also might need to make some adjustment depends on their reality.

**Install Driver** After the I2C driver is configured, install it by calling the function `i2c_driver_install()` with the following parameters:

- Port number, one of the two port numbers from `i2c_port_t`
- master, selected from `i2c_mode_t`
- Flags for allocating the interrupt (see `ESP_INTR_FLAG_*` values in `esp_hw_support/include/esp_intr_alloc.h`)

**Communication as Master** After installing the I2C driver, ESP32-C2 is ready to communicate with other I2C devices.

ESP32-C2's I2C controller operating as master is responsible for establishing communication with I2C slave devices and sending commands to trigger a slave to action, for example, to take a measurement and send the readings back to the master.

For better process organization, the driver provides a container, called a “command link”, that should be populated with a sequence of commands and then passed to the I2C controller for execution.

**Master Write** The example below shows how to build a command link for an I2C master to send  $n$  bytes to a slave.

Fig. 3: I2C command link - master write example

The following describes how a command link for a “master write” is set up and what comes inside:

1. Create a command link with `i2c_cmd_link_create()`.  
Then, populate it with the series of data to be sent to the slave:
  - a) **Start bit** - `i2c_master_start()`
  - b) **Slave address** - `i2c_master_write_byte()`. The single byte address is provided as an argument of this function call.
  - c) **Data** - One or more bytes as an argument of `i2c_master_write()`
  - d) **Stop bit** - `i2c_master_stop()`
 Both functions `i2c_master_write_byte()` and `i2c_master_write()` have an additional argument specifying whether the master should ensure that it has received the ACK bit.
2. Trigger the execution of the command link by I2C controller by calling `i2c_master_cmd_begin()`. Once the execution is triggered, the command link cannot be modified.
3. After the commands are transmitted, release the resources used by the command link by calling `i2c_cmd_link_delete()`.

**Master Read** The example below shows how to build a command link for an I2C master to read  $n$  bytes from a slave.

Fig. 4: I2C command link - master read example

Compared to writing data, the command link is populated in Step 4 not with `i2c_master_write...` functions but with `i2c_master_read_byte()` and / or `i2c_master_read()`. Also, the last read in Step 5 is configured so that the master does not provide the ACK bit.

**Indicating Write or Read** After sending a slave address (see Step 3 on both diagrams above), the master either writes or reads from the slave.

The information on what the master will actually do is hidden in the least significant bit of the slave's address.

For this reason, the command link sent by the master to write data to the slave contains the address `(ESP_SLAVE_ADDR << 1) | I2C_MASTER_WRITE` and looks as follows:

```
i2c_master_write_byte(cmd, (ESP_SLAVE_ADDR << 1) | I2C_MASTER_WRITE, ACK_EN);
```

Likewise, the command link to read from the slave looks as follows:

```
i2c_master_write_byte(cmd, (ESP_SLAVE_ADDR << 1) | I2C_MASTER_READ, ACK_EN);
```

**Interrupt Handling** During driver installation, an interrupt handler is installed by default.

**Customized Configuration** As mentioned at the end of Section [Configuration](#), when the function `i2c_param_config()` initializes the driver configuration for an I2C port, it also sets several I2C communication parameters to default values defined in the I2C specification. Some other related parameters are pre-configured in registers of the I2C controller.

All these parameters can be changed to user-defined values by calling dedicated functions given in the table below. Please note that the timing values are defined in APB clock cycles. The frequency of APB is specified in `I2C_APB_CLK_FREQ`.

Table 2: Other Configurable I2C Communication Parameters

Parameters to Change	Function
High time and low time for SCL pulses	<code>i2c_set_period()</code>
SCL and SDA signal timing used during generation of <b>start</b> signals	<code>i2c_set_start_timing()</code>
SCL and SDA signal timing used during generation of <b>stop</b> signals	<code>i2c_set_stop_timing()</code>
Timing relationship between SCL and SDA signals when slave samples, as well as when master toggles	<code>i2c_set_data_timing()</code>
I2C timeout	<code>i2c_set_timeout()</code>
Choice between transmitting / receiving the LSB or MSB first, choose one of the modes defined in <code>i2c_trans_mode_t</code>	<code>i2c_set_data_mode()</code>

Each of the above functions has a `_get_` counterpart to check the currently set value. For example, to check the I2C timeout value, call `i2c_get_timeout()`.

To check the default parameter values which are set during the driver configuration process, please refer to the file `driver/i2c.c` and look for defines with the suffix `_DEFAULT`.

You can also select different pins for SDA and SCL signals and alter the configuration of pull-ups with the function `i2c_set_pin()`. If you want to modify already entered values, use the function `i2c_param_config()`.

---

**Note:** ESP32-C2's internal pull-ups are in the range of tens of kOhm, which is, in most cases, insufficient for use as I2C pull-ups. Users are advised to use external pull-ups with values described in the I2C specification. For help with calculating the resistor values see [TI Application Note](#)

---

**Error Handling** The majority of I2C driver functions either return `ESP_OK` on successful completion or a specific error code on failure. It is a good practice to always check the returned values and implement error handling. The driver also prints out log messages that contain error details, e.g., when checking the validity of entered configuration. For details please refer to the file `driver/i2c.c` and look for defines with the suffix `_ERR_STR`.

Use dedicated interrupts to capture communication failures. For instance, if a slave stretches the clock for too long while preparing the data to send back to master, the interrupt `I2C_TIME_OUT_INT` will be triggered. For detailed information, see [Interrupt Handling](#).

In case of a communication failure, you can reset the internal hardware buffers by calling the functions `i2c_reset_tx_fifo()` and `i2c_reset_rx_fifo()` for the send and receive buffers respectively.

**Delete Driver** When the I2C communication is established with the function `i2c_driver_install()` and is not required for some substantial amount of time, the driver may be deinitialized to release allocated resources by calling `i2c_driver_delete()`.

Before calling `i2c_driver_delete()` to remove i2c driver, please make sure that all threads have stopped using the driver in any way, because this function does not guarantee thread safety.

### Application Example

I2C examples: [peripherals/i2c](#).

## API Reference

### Header File

- `components/driver/include/driver/i2c.h`

### Functions

`esp_err_t i2c_driver_install` (*i2c\_port\_t* i2c\_num, *i2c\_mode\_t* mode, size\_t slv\_rx\_buf\_len, size\_t slv\_tx\_buf\_len, int intr\_alloc\_flags)

Install an I2C driver.

---

**Note:** Not all Espressif chips can support slave mode (e.g. ESP32C2)

---

---

**Note:** In master mode, if the cache is likely to be disabled (such as write flash) and the slave is time-sensitive, `ESP_INTR_FLAG_IRAM` is suggested to be used. In this case, please use the memory allocated from internal RAM in i2c read and write function, because we can not access the psram (if psram is enabled) in interrupt handle function when cache is disabled.

---

#### Parameters

- **i2c\_num** – I2C port number
- **mode** – I2C mode (either master or slave).
- **slv\_rx\_buf\_len** – Receiving buffer size. Only slave mode will use this value, it is ignored in master mode.
- **slv\_tx\_buf\_len** – Sending buffer size. Only slave mode will use this value, it is ignored in master mode.
- **intr\_alloc\_flags** – Flags used to allocate the interrupt. One or multiple (ORred) `ESP_INTR_FLAG_*` values. See `esp_intr_alloc.h` for more info.

#### Returns

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error
- `ESP_FAIL` Driver installation error

`esp_err_t i2c_driver_delete` (*i2c\_port\_t* i2c\_num)

Delete I2C driver.

---

**Note:** This function does not guarantee thread safety. Please make sure that no thread will continuously hold semaphores before calling the delete function.

---

**Parameters** **i2c\_num** – I2C port to delete

#### Returns

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error

`esp_err_t i2c_param_config` (*i2c\_port\_t* i2c\_num, const *i2c\_config\_t* \*i2c\_conf)

Configure an I2C bus with the given configuration.

#### Parameters

- **i2c\_num** – I2C port to configure
- **i2c\_conf** – Pointer to the I2C configuration

#### Returns

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error

*esp\_err\_t* **i2c\_reset\_tx\_fifo** (*i2c\_port\_t* i2c\_num)

reset I2C tx hardware fifo

**Parameters** **i2c\_num** –I2C port number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_reset\_rx\_fifo** (*i2c\_port\_t* i2c\_num)

reset I2C rx fifo

**Parameters** **i2c\_num** –I2C port number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_set\_pin** (*i2c\_port\_t* i2c\_num, int sda\_io\_num, int scl\_io\_num, bool sda\_pullup\_en, bool scl\_pullup\_en, *i2c\_mode\_t* mode)

Configure GPIO pins for I2C SCK and SDA signals.

**Parameters**

- **i2c\_num** –I2C port number
- **sda\_io\_num** –GPIO number for I2C SDA signal
- **scl\_io\_num** –GPIO number for I2C SCL signal
- **sda\_pullup\_en** –Enable the internal pullup for SDA pin
- **scl\_pullup\_en** –Enable the internal pullup for SCL pin
- **mode** –I2C mode

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_master\_write\_to\_device** (*i2c\_port\_t* i2c\_num, uint8\_t device\_address, const uint8\_t \*write\_buffer, size\_t write\_size, TickType\_t ticks\_to\_wait)

Perform a write to a device connected to a particular I2C port. This function is a wrapper to `i2c_master_start()`, `i2c_master_write()`, `i2c_master_read()`, etc...It shall only be called in I2C master mode.

**Parameters**

- **i2c\_num** –I2C port number to perform the transfer on
- **device\_address** –I2C device's 7-bit address
- **write\_buffer** –Bytes to send on the bus
- **write\_size** –Size, in bytes, of the write buffer
- **ticks\_to\_wait** –Maximum ticks to wait before issuing a timeout.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Sending command error, slave hasn't ACK the transfer.
- ESP\_ERR\_INVALID\_STATE I2C driver not installed or not in master mode.
- ESP\_ERR\_TIMEOUT Operation timeout because the bus is busy.

*esp\_err\_t* **i2c\_master\_read\_from\_device** (*i2c\_port\_t* i2c\_num, uint8\_t device\_address, uint8\_t \*read\_buffer, size\_t read\_size, TickType\_t ticks\_to\_wait)

Perform a read to a device connected to a particular I2C port. This function is a wrapper to `i2c_master_start()`, `i2c_master_write()`, `i2c_master_read()`, etc...It shall only be called in I2C master mode.

**Parameters**

- **i2c\_num** –I2C port number to perform the transfer on
- **device\_address** –I2C device's 7-bit address
- **read\_buffer** –Buffer to store the bytes received on the bus
- **read\_size** –Size, in bytes, of the read buffer

- **ticks\_to\_wait** –Maximum ticks to wait before issuing a timeout.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Sending command error, slave hasn't ACK the transfer.
- ESP\_ERR\_INVALID\_STATE I2C driver not installed or not in master mode.
- ESP\_ERR\_TIMEOUT Operation timeout because the bus is busy.

*esp\_err\_t* **i2c\_master\_write\_read\_device** (*i2c\_port\_t* i2c\_num, uint8\_t device\_address, const uint8\_t \*write\_buffer, size\_t write\_size, uint8\_t \*read\_buffer, size\_t read\_size, TickType\_t ticks\_to\_wait)

Perform a write followed by a read to a device on the I2C bus. A repeated start signal is used between the write and read, thus, the bus is not released until the two transactions are finished. This function is a wrapper to `i2c_master_start()`, `i2c_master_write()`, `i2c_master_read()`, etc... It shall only be called in I2C master mode.

**Parameters**

- **i2c\_num** –I2C port number to perform the transfer on
- **device\_address** –I2C device's 7-bit address
- **write\_buffer** –Bytes to send on the bus
- **write\_size** –Size, in bytes, of the write buffer
- **read\_buffer** –Buffer to store the bytes received on the bus
- **read\_size** –Size, in bytes, of the read buffer
- **ticks\_to\_wait** –Maximum ticks to wait before issuing a timeout.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Sending command error, slave hasn't ACK the transfer.
- ESP\_ERR\_INVALID\_STATE I2C driver not installed or not in master mode.
- ESP\_ERR\_TIMEOUT Operation timeout because the bus is busy.

*i2c\_cmd\_handle\_t* **i2c\_cmd\_link\_create\_static** (uint8\_t \*buffer, uint32\_t size)

Create and initialize an I2C commands list with a given buffer. All the allocations for data or signals (START, STOP, ACK, ...) will be performed within this buffer. This buffer must be valid during the whole transaction. After finishing the I2C transactions, it is required to call `i2c_cmd_link_delete_static()`.

---

**Note:** It is **highly** advised to not allocate this buffer on the stack. The size of the data used underneath may increase in the future, resulting in a possible stack overflow as the macro `I2C_LINK_RECOMMENDED_SIZE` would also return a bigger value. A better option is to use a buffer allocated statically or dynamically (with `malloc`).

---

**Parameters**

- **buffer** –Buffer to use for commands allocations
- **size** –Size in bytes of the buffer

**Returns** Handle to the I2C command link or NULL if the buffer provided is too small, please use `I2C_LINK_RECOMMENDED_SIZE` macro to get the recommended size for the buffer.

*i2c\_cmd\_handle\_t* **i2c\_cmd\_link\_create** (void)

Create and initialize an I2C commands list with a given buffer. After finishing the I2C transactions, it is required to call `i2c_cmd_link_delete()` to release and return the resources. The required bytes will be dynamically allocated.

**Returns** Handle to the I2C command link or NULL in case of insufficient dynamic memory.

void **i2c\_cmd\_link\_delete\_static** (*i2c\_cmd\_handle\_t* cmd\_handle)

Free the I2C commands list allocated statically with `i2c_cmd_link_create_static`.

**Parameters** **cmd\_handle** –I2C commands list allocated statically. This handle should be created thanks to `i2c_cmd_link_create_static()` function

void **i2c\_cmd\_link\_delete** (*i2c\_cmd\_handle\_t* cmd\_handle)

Free the I2C commands list.

**Parameters** **cmd\_handle** –I2C commands list. This handle should be created thanks to `i2c_cmd_link_create()` function

*esp\_err\_t* **i2c\_master\_start** (*i2c\_cmd\_handle\_t* cmd\_handle)

Queue a “START signal” to the given commands list. This function shall only be called in I2C master mode. Call `i2c_master_cmd_begin()` to send all the queued commands.

**Parameters** **cmd\_handle** –I2C commands list

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error
- `ESP_ERR_NO_MEM` The static buffer used to create `cmd_handler` is too small
- `ESP_FAIL` No more memory left on the heap

*esp\_err\_t* **i2c\_master\_write\_byte** (*i2c\_cmd\_handle\_t* cmd\_handle, uint8\_t data, bool ack\_en)

Queue a “write byte” command to the commands list. A single byte will be sent on the I2C port. This function shall only be called in I2C master mode. Call `i2c_master_cmd_begin()` to send all queued commands.

**Parameters**

- **cmd\_handle** –I2C commands list
- **data** –Byte to send on the port
- **ack\_en** –Enable ACK signal

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error
- `ESP_ERR_NO_MEM` The static buffer used to create `cmd_handler` is too small
- `ESP_FAIL` No more memory left on the heap

*esp\_err\_t* **i2c\_master\_write** (*i2c\_cmd\_handle\_t* cmd\_handle, const uint8\_t \*data, size\_t data\_len, bool ack\_en)

Queue a “write (multiple) bytes” command to the commands list. This function shall only be called in I2C master mode. Call `i2c_master_cmd_begin()` to send all queued commands.

**Parameters**

- **cmd\_handle** –I2C commands list
- **data** –Bytes to send. This buffer shall remain **valid** until the transaction is finished. If the PSRAM is enabled and `intr_flag` is set to `ESP_INTR_FLAG_IRAM`, `data` should be allocated from internal RAM.
- **data\_len** –Length, in bytes, of the data buffer
- **ack\_en** –Enable ACK signal

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error
- `ESP_ERR_NO_MEM` The static buffer used to create `cmd_handler` is too small
- `ESP_FAIL` No more memory left on the heap

*esp\_err\_t* **i2c\_master\_read\_byte** (*i2c\_cmd\_handle\_t* cmd\_handle, uint8\_t \*data, *i2c\_ack\_type\_t* ack)

Queue a “read byte” command to the commands list. A single byte will be read on the I2C bus. This function shall only be called in I2C master mode. Call `i2c_master_cmd_begin()` to send all queued commands.

**Parameters**

- **cmd\_handle** –I2C commands list
- **data** –Pointer where the received byte will be stored. This buffer shall remain **valid** until the transaction is finished.
- **ack** –ACK signal

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error

- **ESP\_ERR\_NO\_MEM** The static buffer used to create `cmd_handler` is too small
- **ESP\_FAIL** No more memory left on the heap

*esp\_err\_t* **i2c\_master\_read** (*i2c\_cmd\_handle\_t* cmd\_handle, uint8\_t \*data, size\_t data\_len, *i2c\_ack\_type\_t* ack)

Queue a “read (multiple) bytes” command to the commands list. Multiple bytes will be read on the I2C bus. This function shall only be called in I2C master mode. Call `i2c_master_cmd_begin()` to send all queued commands.

#### Parameters

- **cmd\_handle** –I2C commands list
- **data** –Pointer where the received bytes will be stored. This buffer shall remain **valid** until the transaction is finished.
- **data\_len** –Size, in bytes, of the data buffer
- **ack** –ACK signal

#### Returns

- **ESP\_OK** Success
- **ESP\_ERR\_INVALID\_ARG** Parameter error
- **ESP\_ERR\_NO\_MEM** The static buffer used to create `cmd_handler` is too small
- **ESP\_FAIL** No more memory left on the heap

*esp\_err\_t* **i2c\_master\_stop** (*i2c\_cmd\_handle\_t* cmd\_handle)

Queue a “STOP signal” to the given commands list. This function shall only be called in I2C master mode. Call `i2c_master_cmd_begin()` to send all the queued commands.

**Parameters** **cmd\_handle** –I2C commands list

#### Returns

- **ESP\_OK** Success
- **ESP\_ERR\_INVALID\_ARG** Parameter error
- **ESP\_ERR\_NO\_MEM** The static buffer used to create `cmd_handler` is too small
- **ESP\_FAIL** No more memory left on the heap

*esp\_err\_t* **i2c\_master\_cmd\_begin** (*i2c\_port\_t* i2c\_num, *i2c\_cmd\_handle\_t* cmd\_handle, TickType\_t ticks\_to\_wait)

Send all the queued commands on the I2C bus, in master mode. The task will be blocked until all the commands have been sent out. The I2C port is protected by mutex, so this function is thread-safe. This function shall only be called in I2C master mode.

#### Parameters

- **i2c\_num** –I2C port number
- **cmd\_handle** –I2C commands list
- **ticks\_to\_wait** –Maximum ticks to wait before issuing a timeout.

#### Returns

- **ESP\_OK** Success
- **ESP\_ERR\_INVALID\_ARG** Parameter error
- **ESP\_FAIL** Sending command error, slave hasn't ACK the transfer.
- **ESP\_ERR\_INVALID\_STATE** I2C driver not installed or not in master mode.
- **ESP\_ERR\_TIMEOUT** Operation timeout because the bus is busy.

*esp\_err\_t* **i2c\_set\_period** (*i2c\_port\_t* i2c\_num, int high\_period, int low\_period)

Set I2C master clock period.

#### Parameters

- **i2c\_num** –I2C port number
- **high\_period** –Clock cycle number during SCL is high level, `high_period` is a 14 bit value
- **low\_period** –Clock cycle number during SCL is low level, `low_period` is a 14 bit value

#### Returns

- **ESP\_OK** Success
- **ESP\_ERR\_INVALID\_ARG** Parameter error

*esp\_err\_t* **i2c\_get\_period** (*i2c\_port\_t* i2c\_num, int \*high\_period, int \*low\_period)

Get I2C master clock period.

**Parameters**

- **i2c\_num** –I2C port number
- **high\_period** –pointer to get clock cycle number during SCL is high level, will get a 14 bit value
- **low\_period** –pointer to get clock cycle number during SCL is low level, will get a 14 bit value

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_filter\_enable** (*i2c\_port\_t* i2c\_num, uint8\_t cyc\_num)

Enable hardware filter on I2C bus Sometimes the I2C bus is disturbed by high frequency noise(about 20ns), or the rising edge of the SCL clock is very slow, these may cause the master state machine to break. Enable hardware filter can filter out high frequency interference and make the master more stable.

---

**Note:** Enable filter will slow down the SCL clock.

---

**Parameters**

- **i2c\_num** –I2C port number to filter
- **cyc\_num** –the APB cycles need to be filtered (0<= cyc\_num <=7). When the period of a pulse is less than cyc\_num \* APB\_cycle, the I2C controller will ignore this pulse.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_filter\_disable** (*i2c\_port\_t* i2c\_num)

Disable filter on I2C bus.

**Parameters** **i2c\_num** –I2C port number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_set\_start\_timing** (*i2c\_port\_t* i2c\_num, int setup\_time, int hold\_time)

set I2C master start signal timing

**Parameters**

- **i2c\_num** –I2C port number
- **setup\_time** –clock number between the falling-edge of SDA and rising-edge of SCL for start mark, it' s a 10-bit value.
- **hold\_time** –clock num between the falling-edge of SDA and falling-edge of SCL for start mark, it' s a 10-bit value.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_get\_start\_timing** (*i2c\_port\_t* i2c\_num, int \*setup\_time, int \*hold\_time)

get I2C master start signal timing

**Parameters**

- **i2c\_num** –I2C port number
- **setup\_time** –pointer to get setup time
- **hold\_time** –pointer to get hold time

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_set\_stop\_timing** (*i2c\_port\_t* i2c\_num, int setup\_time, int hold\_time)

set I2C master stop signal timing

**Parameters**

- **i2c\_num** –I2C port number
- **setup\_time** –clock num between the rising-edge of SCL and the rising-edge of SDA, it' s a 10-bit value.
- **hold\_time** –clock number after the STOP bit' s rising-edge, it' s a 14-bit value.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_get\_stop\_timing** (*i2c\_port\_t* i2c\_num, int \*setup\_time, int \*hold\_time)

get I2C master stop signal timing

**Parameters**

- **i2c\_num** –I2C port number
- **setup\_time** –pointer to get setup time.
- **hold\_time** –pointer to get hold time.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_set\_data\_timing** (*i2c\_port\_t* i2c\_num, int sample\_time, int hold\_time)

set I2C data signal timing

**Parameters**

- **i2c\_num** –I2C port number
- **sample\_time** –clock number I2C used to sample data on SDA after the rising-edge of SCL, it' s a 10-bit value
- **hold\_time** –clock number I2C used to hold the data after the falling-edge of SCL, it' s a 10-bit value

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_get\_data\_timing** (*i2c\_port\_t* i2c\_num, int \*sample\_time, int \*hold\_time)

get I2C data signal timing

**Parameters**

- **i2c\_num** –I2C port number
- **sample\_time** –pointer to get sample time
- **hold\_time** –pointer to get hold time

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_set\_timeout** (*i2c\_port\_t* i2c\_num, int timeout)

set I2C timeout value

**Parameters**

- **i2c\_num** –I2C port number
- **timeout** –timeout value for I2C bus (unit: APB 80Mhz clock cycle)

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_get\_timeout** (*i2c\_port\_t* i2c\_num, int \*timeout)

get I2C timeout value

**Parameters**

- **i2c\_num** –I2C port number

- **timeout** –pointer to get timeout value

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_set\_data\_mode** (*i2c\_port\_t* i2c\_num, *i2c\_trans\_mode\_t* tx\_trans\_mode, *i2c\_trans\_mode\_t* rx\_trans\_mode)

set I2C data transfer mode

**Parameters**

- **i2c\_num** –I2C port number
- **tx\_trans\_mode** –I2C sending data mode
- **rx\_trans\_mode** –I2C receiving data mode

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **i2c\_get\_data\_mode** (*i2c\_port\_t* i2c\_num, *i2c\_trans\_mode\_t* \*tx\_trans\_mode, *i2c\_trans\_mode\_t* \*rx\_trans\_mode)

get I2C data transfer mode

**Parameters**

- **i2c\_num** –I2C port number
- **tx\_trans\_mode** –pointer to get I2C sending data mode
- **rx\_trans\_mode** –pointer to get I2C receiving data mode

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

**Structures**

struct **i2c\_config\_t**

I2C initialization parameters.

**Public Members**

*i2c\_mode\_t* **mode**

I2C mode

int **sda\_io\_num**

GPIO number for I2C sda signal

int **scl\_io\_num**

GPIO number for I2C scl signal

bool **sda\_pullup\_en**

Internal GPIO pull mode for I2C sda signal

bool **scl\_pullup\_en**

Internal GPIO pull mode for I2C scl signal

uint32\_t **clk\_speed**

I2C clock frequency for master mode, (no higher than 1MHz for now)

```
struct i2c_config_t::[anonymous]::[anonymous] master  
    I2C master config  
  
uint32_t clk_flags  
    Bitwise of I2C_SCLK_SRC_FLAG_**FOR_DFS** for clk source choice
```

## Macros

### **I2C\_APB\_CLK\_FREQ**

I2C source clock is APB clock, 80MHz

### **I2C\_NUM\_MAX**

I2C port max

### **I2C\_NUM\_0**

I2C port 0

### **I2C\_SCLK\_SRC\_FLAG\_FOR\_NOMAL**

Any one clock source that is available for the specified frequency may be chosen

### **I2C\_SCLK\_SRC\_FLAG\_AWARE\_DFS**

For REF tick clock, it won't change with APB.

### **I2C\_SCLK\_SRC\_FLAG\_LIGHT\_SLEEP**

For light sleep mode.

### **I2C\_INTERNAL\_STRUCT\_SIZE**

Minimum size, in bytes, of the internal private structure used to describe I2C commands link.

### **I2C\_LINK\_RECOMMENDED\_SIZE** (TRANSACTIONS)

The following macro is used to determine the recommended size of the buffer to pass to `i2c_cmd_link_create_static()` function. It requires one parameter, `TRANSACTIONS`, describing the number of transactions intended to be performed on the I2C port. For example, if one wants to perform a read on an I2C device register, `TRANSACTIONS` must be at least 2, because the commands required are the following:

- write device register
- read register content

Signals such as “(repeated) start”, “stop”, “nack”, “ack” shall not be counted.

## Type Definitions

```
typedef void *i2c_cmd_handle_t  
    I2C command handle
```

## Header File

- [components/hal/include/hal/i2c\\_types.h](#)

### Type Definitions

typedef int **i2c\_port\_t**  
I2C port number, can be I2C\_NUM\_0 ~ (I2C\_NUM\_MAX-1).

typedef *soc\_periph\_i2c\_clk\_src\_t* **i2c\_clock\_source\_t**  
I2C group clock source.

### Enumerations

enum **i2c\_mode\_t**  
*Values:*  
  
enumerator **I2C\_MODE\_MASTER**  
I2C master mode

enumerator **I2C\_MODE\_MAX**

enum **i2c\_rw\_t**  
*Values:*  
  
enumerator **I2C\_MASTER\_WRITE**  
I2C write data

enumerator **I2C\_MASTER\_READ**  
I2C read data

enum **i2c\_trans\_mode\_t**  
*Values:*  
  
enumerator **I2C\_DATA\_MODE\_MSB\_FIRST**  
I2C data msb first

enumerator **I2C\_DATA\_MODE\_LSB\_FIRST**  
I2C data lsb first

enumerator **I2C\_DATA\_MODE\_MAX**

enum **i2c\_addr\_mode\_t**  
*Values:*  
  
enumerator **I2C\_ADDR\_BIT\_7**  
I2C 7bit address for slave mode

enumerator **I2C\_ADDR\_BIT\_10**  
I2C 10bit address for slave mode

enumerator **I2C\_ADDR\_BIT\_MAX**

enum **i2c\_ack\_type\_t**  
*Values:*

enumerator **I2C\_MASTER\_ACK**

I2C ack for each byte read

enumerator **I2C\_MASTER\_NACK**

I2C nack for each byte read

enumerator **I2C\_MASTER\_LAST\_NACK**

I2C nack for the last byte

enumerator **I2C\_MASTER\_ACK\_MAX**

## 2.6.8 LCD

### Introduction

ESP chips can generate various kinds of timings that needed by common LCDs on the market, like SPI LCD, I80 LCD (a.k.a Intel 8080 parallel LCD), RGB/SRGB LCD, I2C LCD, etc. The `esp_lcd` component is officially to support those LCDs with a group of universal APIs across chips.

### Functional Overview

In `esp_lcd`, an LCD panel is represented by `esp_lcd_panel_handle_t`, which plays the role of an **abstract frame buffer**, regardless of the frame memory is allocated inside ESP chip or in external LCD controller. Based on the location of the frame buffer and the hardware connection interface, the LCD panel drivers are mainly grouped into the following categories:

- Controller based LCD driver involves multiple steps to get a panel handle, like bus allocation, IO device registration and controller driver install. The frame buffer is located in the controller's internal GRAM (Graphical RAM). ESP-IDF provides only a limited number of LCD controller drivers out of the box (e.g., ST7789, SSD1306), *More Controller Based LCD Drivers* are maintained in the [Espressif Component Registry](#).
- *SPI Interfaced LCD* describes the steps to install the SPI LCD IO driver and then get the panel handle.
- *I2C Interfaced LCD* describes the steps to install the I2C LCD IO driver and then get the panel handle.
- *LCD Panel IO Operations* - provides a set of APIs to operate the LCD panel, like turning on/off the display, setting the orientation, etc. These operations are common for either controller-based LCD panel driver or RGB LCD panel driver.

### SPI Interfaced LCD

1. Create an SPI bus. Please refer to *SPI Master API doc* for more details.

```
spi_bus_config_t buscfg = {
    .sclk_io_num = EXAMPLE_PIN_NUM_SCLK,
    .mosi_io_num = EXAMPLE_PIN_NUM_MOSI,
    .miso_io_num = EXAMPLE_PIN_NUM_MISO,
    .quadwp_io_num = -1, // Quad SPI LCD driver is not yet supported
    .quadhd_io_num = -1, // Quad SPI LCD driver is not yet supported
    .max_transfer_sz = EXAMPLE_LCD_H_RES * 80 * sizeof(uint16_t), //
    ↪transfer 80 lines of pixels (assume pixel is RGB565) at most in one
    ↪SPI transaction
};
ESP_ERROR_CHECK(spi_bus_initialize(LCD_HOST, &buscfg, SPI_DMA_CH_
    ↪AUTO)); // Enable the DMA feature
```

2. Allocate an LCD IO device handle from the SPI bus. In this step, you need to provide the following information:

- `esp_lcd_panel_io_spi_config_t::dc_gpio_num`: Sets the gpio number for the DC signal line (some LCD calls this RS line). The LCD driver will use this GPIO to switch between sending command and sending data.
- `esp_lcd_panel_io_spi_config_t::cs_gpio_num`: Sets the gpio number for the CS signal line. The LCD driver will use this GPIO to select the LCD chip. If the SPI bus only has one device attached (i.e. this LCD), you can set the gpio number to `-1` to occupy the bus exclusively.
- `esp_lcd_panel_io_spi_config_t::pclk_hz` sets the frequency of the pixel clock, in Hz. The value should not exceed the range recommended in the LCD spec.
- `esp_lcd_panel_io_spi_config_t::spi_mode` sets the SPI mode. The LCD driver will use this mode to communicate with the LCD. For the meaning of the SPI mode, please refer to the *SPI Master API doc*.
- `esp_lcd_panel_io_spi_config_t::lcd_cmd_bits` and `esp_lcd_panel_io_spi_config_t::lcd_param_bits` set the bit width of the command and parameter that recognized by the LCD controller chip. This is chip specific, you should refer to your LCD spec in advance.
- `esp_lcd_panel_io_spi_config_t::trans_queue_depth` sets the depth of the SPI transaction queue. A bigger value means more transactions can be queued up, but it also consumes more memory.

```

esp_lcd_panel_io_handle_t io_handle = NULL;
esp_lcd_panel_io_spi_config_t io_config = {
    .dc_gpio_num = EXAMPLE_PIN_NUM_LCD_DC,
    .cs_gpio_num = EXAMPLE_PIN_NUM_LCD_CS,
    .pclk_hz = EXAMPLE_LCD_PIXEL_CLOCK_HZ,
    .lcd_cmd_bits = EXAMPLE_LCD_CMD_BITS,
    .lcd_param_bits = EXAMPLE_LCD_PARAM_BITS,
    .spi_mode = 0,
    .trans_queue_depth = 10,
};
// Attach the LCD to the SPI bus
ESP_ERROR_CHECK(esp_lcd_new_panel_io_spi((esp_lcd_spi_bus_handle_t)LCD_
↪HOST, &io_config, &io_handle));

```

3. Install the LCD controller driver. The LCD controller driver is responsible for sending the commands and parameters to the LCD controller chip. In this step, you need to specify the SPI IO device handle that allocated in the last step, and some panel specific configurations:

- `esp_lcd_panel_dev_config_t::reset_gpio_num` sets the LCD's hardware reset GPIO number. If the LCD does not have a hardware reset pin, set this to `-1`.
- `esp_lcd_panel_dev_config_t::rgb_ele_order` sets the R-G-B element order of each color data.
- `esp_lcd_panel_dev_config_t::bits_per_pixel` sets the bit width of the pixel color data. The LCD driver uses this value to calculate the number of bytes to send to the LCD controller chip.
- `esp_lcd_panel_dev_config_t::data_endian` specifies the data endian to be transmitted to the screen. No need to specify for color data within 1 byte, like RGB232. For drivers that do not support specifying data endian, this field would be ignored.

```

esp_lcd_panel_handle_t panel_handle = NULL;
esp_lcd_panel_dev_config_t panel_config = {
    .reset_gpio_num = EXAMPLE_PIN_NUM_RST,
    .rgb_ele_order = LCD_RGB_ELEMENT_ORDER_BGR,
    .bits_per_pixel = 16,
};
// Create LCD panel handle for ST7789, with the SPI IO device handle
ESP_ERROR_CHECK(esp_lcd_new_panel_st7789(io_handle, &panel_config, &
↪panel_handle));

```

## I2C Interfaced LCD

1. Create I2C bus. Please refer to *I2C API doc* for more details.

```
i2c_config_t i2c_conf = {
    .mode = I2C_MODE_MASTER, // I2C LCD is a master node
    .sda_io_num = EXAMPLE_PIN_NUM_SDA,
    .scl_io_num = EXAMPLE_PIN_NUM_SCL,
    .sda_pullup_en = GPIO_PULLUP_ENABLE,
    .scl_pullup_en = GPIO_PULLUP_ENABLE,
    .master.clk_speed = EXAMPLE_LCD_PIXEL_CLOCK_HZ,
};
ESP_ERROR_CHECK(i2c_param_config(I2C_HOST, &i2c_conf));
ESP_ERROR_CHECK(i2c_driver_install(I2C_HOST, I2C_MODE_MASTER, 0, 0,
↳0));
```

2. Allocate an LCD IO device handle from the I2C bus. In this step, you need to provide the following information:

- `esp_lcd_panel_io_i2c_config_t::dev_addr` sets the I2C device address of the LCD controller chip. The LCD driver will use this address to communicate with the LCD controller chip.
- `esp_lcd_panel_io_i2c_config_t::lcd_cmd_bits` and `esp_lcd_panel_io_i2c_config_t::lcd_param_bits` set the bit width of the command and parameter that recognized by the LCD controller chip. This is chip specific, you should refer to your LCD spec in advance.

```
esp_lcd_panel_io_handle_t io_handle = NULL;
esp_lcd_panel_io_i2c_config_t io_config = {
    .dev_addr = EXAMPLE_I2C_HW_ADDR,
    .control_phase_bytes = 1, // refer to LCD spec
    .dc_bit_offset = 6, // refer to LCD spec
    .lcd_cmd_bits = EXAMPLE_LCD_CMD_BITS,
    .lcd_param_bits = EXAMPLE_LCD_CMD_BITS,
};
ESP_ERROR_CHECK(esp_lcd_new_panel_io_i2c((esp_lcd_i2c_bus_handle_t)I2C_
↳HOST, &io_config, &io_handle));
```

3. Install the LCD controller driver. The LCD controller driver is responsible for sending the commands and parameters to the LCD controller chip. In this step, you need to specify the I2C IO device handle that allocated in the last step, and some panel specific configurations:

- `esp_lcd_panel_dev_config_t::reset_gpio_num` sets the LCD's hardware reset GPIO number. If the LCD does not have a hardware reset pin, set this to -1.
- `esp_lcd_panel_dev_config_t::bits_per_pixel` sets the bit width of the pixel color data. The LCD driver will use this value to calculate the number of bytes to send to the LCD controller chip.

```
esp_lcd_panel_handle_t panel_handle = NULL;
esp_lcd_panel_dev_config_t panel_config = {
    .bits_per_pixel = 1,
    .reset_gpio_num = EXAMPLE_PIN_NUM_RST,
};
ESP_ERROR_CHECK(esp_lcd_new_panel_ssd1306(io_handle, &panel_config, &
↳panel_handle));
```

### More Controller Based LCD Drivers

More LCD panel drivers and touch drivers are available in [IDF Component Registry](#). The list of available and planned drivers with links is in this [table](#).

## LCD Panel IO Operations

- `esp_lcd_panel_reset()` can reset the LCD panel.
- Use `esp_lcd_panel_swap_xy()` and `esp_lcd_panel_mirror()`, you can rotate the LCD screen.
- `esp_lcd_panel_disp_on_off()` can turn on or off the LCD screen (different from LCD backlight).
- `esp_lcd_panel_draw_bitmap()` is the most significant function, that will do the magic to draw the user provided color buffer to the LCD screen, where the draw window is also configurable.

## Application Example

LCD examples are located under: [peripherals/lcd](#):

- Universal SPI LCD example with SPI touch - [peripherals/lcd/spi\\_lcd\\_touch](#)
- Jpeg decoding and LCD display - [peripherals/lcd/tjpgd](#)
- i80 controller based LCD and LVGL animation UI - [peripherals/lcd/i80\\_controller](#)
- RGB panel example with scatter chart UI - [peripherals/lcd/rgb\\_panel](#)
- I2C interfaced OLED display scrolling text - [peripherals/lcd/i2c\\_oled](#)

### Enumerations

enum `lcd_rgb_element_order_t`

RGB color endian.

*Values:*

enumerator `LCD_RGB_ELEMENT_ORDER_RGB`

RGB element order: RGB

enumerator `LCD_RGB_ELEMENT_ORDER_BGR`

RGB element order: BGR

enum `lcd_rgb_data_endian_t`

RGB data endian.

*Values:*

enumerator `LCD_RGB_DATA_ENDIAN_BIG`

RGB data endian: MSB first

enumerator `LCD_RGB_DATA_ENDIAN_LITTLE`

RGB data endian: LSB first

enum `lcd_color_space_t`

LCD color space.

*Values:*

enumerator `LCD_COLOR_SPACE_RGB`

Color space: RGB

enumerator **LCD\_COLOR\_SPACE\_YUV**

Color space: YUV

enum **lcd\_color\_range\_t**

LCD color range.

*Values:*

enumerator **LCD\_COLOR\_RANGE\_LIMIT**

Limited color range

enumerator **LCD\_COLOR\_RANGE\_FULL**

Full color range

enum **lcd\_yuv\_sample\_t**

YUV sampling method.

*Values:*

enumerator **LCD\_YUV\_SAMPLE\_422**

YUV 4:2:2 sampling

enumerator **LCD\_YUV\_SAMPLE\_420**

YUV 4:2:0 sampling

enumerator **LCD\_YUV\_SAMPLE\_411**

YUV 4:1:1 sampling

enum **lcd\_yuv\_conv\_std\_t**

The standard used for conversion between RGB and YUV.

*Values:*

enumerator **LCD\_YUV\_CONV\_STD\_BT601**

YUV<->RGB conversion standard: BT.601

enumerator **LCD\_YUV\_CONV\_STD\_BT709**

YUV<->RGB conversion standard: BT.709

### Header File

- [components/esp\\_lcd/include/esp\\_lcd\\_types.h](#)

### Type Definitions

typedef struct esp\_lcd\_panel\_io\_t **\*esp\_lcd\_panel\_io\_handle\_t**

Type of LCD panel IO handle

typedef struct esp\_lcd\_panel\_t **\*esp\_lcd\_panel\_handle\_t**

Type of LCD panel handle

## Header File

- `components/esp_lcd/include/esp_lcd_panel_io.h`

## Functions

*esp\_err\_t* **esp\_lcd\_panel\_io\_rx\_param** (*esp\_lcd\_panel\_io\_handle\_t* io, int lcd\_cmd, void \*param, size\_t param\_size)

Transmit LCD command and receive corresponding parameters.

---

**Note:** Commands sent by this function are short, so they are sent using polling transactions. The function does not return before the command transfer is completed. If any queued transactions sent by `esp_lcd_panel_io_tx_color()` are still pending when this function is called, this function will wait until they are finished and the queue is empty before sending the command(s).

---

### Parameters

- **io** *-[in]* LCD panel IO handle, which is created by other factory API like `esp_lcd_new_panel_io_spi()`
- **lcd\_cmd** *-[in]* The specific LCD command, set to -1 if no command needed
- **param** *-[out]* Buffer for the command data
- **param\_size** *-[in]* Size of `param` buffer

### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_ERR_NOT_SUPPORTED` if read is not supported by transport
- `ESP_OK` on success

*esp\_err\_t* **esp\_lcd\_panel\_io\_tx\_param** (*esp\_lcd\_panel\_io\_handle\_t* io, int lcd\_cmd, const void \*param, size\_t param\_size)

Transmit LCD command and corresponding parameters.

---

**Note:** Commands sent by this function are short, so they are sent using polling transactions. The function does not return before the command transfer is completed. If any queued transactions sent by `esp_lcd_panel_io_tx_color()` are still pending when this function is called, this function will wait until they are finished and the queue is empty before sending the command(s).

---

### Parameters

- **io** *-[in]* LCD panel IO handle, which is created by other factory API like `esp_lcd_new_panel_io_spi()`
- **lcd\_cmd** *-[in]* The specific LCD command, set to -1 if no command needed
- **param** *-[in]* Buffer that holds the command specific parameters, set to `NULL` if no parameter is needed for the command
- **param\_size** *-[in]* Size of `param` in memory, in bytes, set to zero if no parameter is needed for the command

### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_OK` on success

*esp\_err\_t* **esp\_lcd\_panel\_io\_tx\_color** (*esp\_lcd\_panel\_io\_handle\_t* io, int lcd\_cmd, const void \*color, size\_t color\_size)

Transmit LCD RGB data.

---

**Note:** This function will package the command and RGB data into a transaction, and push into a queue. The real transmission is performed in the background (DMA+interrupt). The caller should take care of the lifecycle of the `color` buffer. Recycling of color buffer should be done in the callback `on_color_trans_done()`.

---

**Parameters**

- **io** **-[in]** LCD panel IO handle, which is created by factory API like `esp_lcd_new_panel_io_spi()`
- **lcd\_cmd** **-[in]** The specific LCD command, set to -1 if no command needed
- **color** **-[in]** Buffer that holds the RGB color data
- **color\_size** **-[in]** Size of `color` in memory, in bytes

**Returns**

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_OK` on success

*esp\_err\_t* **esp\_lcd\_panel\_io\_del** (*esp\_lcd\_panel\_io\_handle\_t* io)

Destroy LCD panel IO handle (deinitialize panel and free all corresponding resource)

**Parameters** **io** **-[in]** LCD panel IO handle, which is created by factory API like `esp_lcd_new_panel_io_spi()`

**Returns**

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_OK` on success

*esp\_err\_t* **esp\_lcd\_panel\_io\_register\_event\_callbacks** (*esp\_lcd\_panel\_io\_handle\_t* io, const *esp\_lcd\_panel\_io\_callbacks\_t* \*cbs, void \*user\_ctx)

Register LCD panel IO callbacks.

**Parameters**

- **io** **-[in]** LCD panel IO handle, which is created by factory API like `esp_lcd_new_panel_io_spi()`
- **cbs** **-[in]** structure with all LCD panel IO callbacks
- **user\_ctx** **-[in]** User private data, passed directly to callback's `user_ctx`

**Returns**

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_OK` on success

*esp\_err\_t* **esp\_lcd\_new\_panel\_io\_spi** (*esp\_lcd\_spi\_bus\_handle\_t* bus, const *esp\_lcd\_panel\_io\_spi\_config\_t* \*io\_config, *esp\_lcd\_panel\_io\_handle\_t* \*ret\_io)

Create LCD panel IO handle, for SPI interface.

**Parameters**

- **bus** **-[in]** SPI bus handle
- **io\_config** **-[in]** IO configuration, for SPI interface
- **ret\_io** **-[out]** Returned IO handle

**Returns**

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_ERR_NO_MEM` if out of memory
- `ESP_OK` on success

*esp\_err\_t* **esp\_lcd\_new\_panel\_io\_i2c** (*esp\_lcd\_i2c\_bus\_handle\_t* bus, const *esp\_lcd\_panel\_io\_i2c\_config\_t* \*io\_config, *esp\_lcd\_panel\_io\_handle\_t* \*ret\_io)

Create LCD panel IO handle, for I2C interface.

**Parameters**

- **bus** **-[in]** I2C bus handle
- **io\_config** **-[in]** IO configuration, for I2C interface
- **ret\_io** **-[out]** Returned IO handle

**Returns**

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_ERR_NO_MEM` if out of memory
- `ESP_OK` on success

## Structures

struct **esp\_lcd\_panel\_io\_event\_data\_t**

Type of LCD panel IO event data.

struct **esp\_lcd\_panel\_io\_callbacks\_t**

Type of LCD panel IO callbacks.

## Public Members

*esp\_lcd\_panel\_io\_color\_trans\_done\_cb\_t* **on\_color\_trans\_done**

Callback invoked when color data transfer has finished

struct **esp\_lcd\_panel\_io\_spi\_config\_t**

Panel IO configuration structure, for SPI interface.

## Public Members

int **cs\_gpio\_num**

GPIO used for CS line

int **dc\_gpio\_num**

GPIO used to select the D/C line, set this to -1 if the D/C line is not used

int **spi\_mode**

Traditional SPI mode (0~3)

unsigned int **pclk\_hz**

Frequency of pixel clock

size\_t **trans\_queue\_depth**

Size of internal transaction queue

*esp\_lcd\_panel\_io\_color\_trans\_done\_cb\_t* **on\_color\_trans\_done**

Callback invoked when color data transfer has finished

void **\*user\_ctx**

User private data, passed directly to `on_color_trans_done`'s `user_ctx`

int **lcd\_cmd\_bits**

Bit-width of LCD command

int **lcd\_param\_bits**

Bit-width of LCD parameter

unsigned int **dc\_high\_on\_cmd**

If enabled, DC level = 1 indicates command transfer

unsigned int **dc\_low\_on\_data**

If enabled, DC level = 0 indicates color data transfer

unsigned int **dc\_low\_on\_param**

If enabled, DC level = 0 indicates parameter transfer

unsigned int **octal\_mode**

transmit with octal mode (8 data lines), this mode is used to simulate Intel 8080 timing

unsigned int **quad\_mode**

transmit with quad mode (4 data lines), this mode is useful when transmitting LCD parameters (Only use one line for command)

unsigned int **sio\_mode**

Read and write through a single data line (MOSI)

unsigned int **lsb\_first**

transmit LSB bit first

unsigned int **cs\_high\_active**

CS line is high active

struct *esp\_lcd\_panel\_io\_spi\_config\_t*::[anonymous] **flags**

Extra flags to fine-tune the SPI device

struct **esp\_lcd\_panel\_io\_i2c\_config\_t**

Panel IO configuration structure, for I2C interface.

### Public Members

uint32\_t **dev\_addr**

I2C device address

*esp\_lcd\_panel\_io\_color\_trans\_done\_cb\_t* **on\_color\_trans\_done**

Callback invoked when color data transfer has finished

void \***user\_ctx**

User private data, passed directly to `on_color_trans_done`'s `user_ctx`

size\_t **control\_phase\_bytes**

I2C LCD panel will encode control information (e.g. D/C selection) into control phase, in several bytes

unsigned int **dc\_bit\_offset**

Offset of the D/C selection bit in control phase

int **lcd\_cmd\_bits**

Bit-width of LCD command

int **lcd\_param\_bits**

Bit-width of LCD parameter

unsigned int **dc\_low\_on\_data**

If this flag is enabled, DC line = 0 means transfer data, DC line = 1 means transfer command; vice versa

unsigned int **disable\_control\_phase**

If this flag is enabled, the control phase isn't used

struct *esp\_lcd\_panel\_io\_i2c\_config\_t*::[anonymous] **flags**

Extra flags to fine-tune the I2C device

### Type Definitions

typedef void \***esp\_lcd\_spi\_bus\_handle\_t**

Type of LCD SPI bus handle

typedef void \***esp\_lcd\_i2c\_bus\_handle\_t**

Type of LCD I2C bus handle

typedef struct esp\_lcd\_i80\_bus\_t \***esp\_lcd\_i80\_bus\_handle\_t**

Type of LCD intel 8080 bus handle

typedef bool (\***esp\_lcd\_panel\_io\_color\_trans\_done\_cb\_t**)(*esp\_lcd\_panel\_io\_handle\_t* panel\_io, *esp\_lcd\_panel\_io\_event\_data\_t* \*edata, void \*user\_ctx)

Declare the prototype of the function that will be invoked when panel IO finishes transferring color data.

**Param panel\_io [in]** LCD panel IO handle, which is created by factory API like `esp_lcd_new_panel_io_spi()`

**Param edata [in]** Panel IO event data, fed by driver

**Param user\_ctx [in]** User data, passed from `esp_lcd_panel_io_xxx_config_t`

**Return** Whether a high priority task has been waken up by this function

### Header File

- `components/esp_lcd/include/esp_lcd_panel_ops.h`

### Functions

*esp\_err\_t* **esp\_lcd\_panel\_reset** (*esp\_lcd\_panel\_handle\_t* panel)

Reset LCD panel.

---

**Note:** Panel reset must be called before attempting to initialize the panel using `esp_lcd_panel_init()`.

---

**Parameters panel** **[in]** LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`

**Returns**

- ESP\_OK on success

*esp\_err\_t* **esp\_lcd\_panel\_init** (*esp\_lcd\_panel\_handle\_t* panel)

Initialize LCD panel.

---

**Note:** Before calling this function, make sure the LCD panel has finished the `reset` stage by `esp_lcd_panel_reset()`.

---

**Parameters** **panel** `-[in]` LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`

**Returns**

- ESP\_OK on success

*esp\_err\_t* `esp_lcd_panel_del(esp_lcd_panel_handle_t panel)`

Deinitialize the LCD panel.

**Parameters** **panel** `-[in]` LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`

**Returns**

- ESP\_OK on success

*esp\_err\_t* `esp_lcd_panel_draw_bitmap(esp_lcd_panel_handle_t panel, int x_start, int y_start, int x_end, int y_end, const void *color_data)`

Draw bitmap on LCD panel.

**Parameters**

- **panel** `-[in]` LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`
- **x\_start** `-[in]` Start index on x-axis (x\_start included)
- **y\_start** `-[in]` Start index on y-axis (y\_start included)
- **x\_end** `-[in]` End index on x-axis (x\_end not included)
- **y\_end** `-[in]` End index on y-axis (y\_end not included)
- **color\_data** `-[in]` RGB color data that will be dumped to the specific window range

**Returns**

- ESP\_OK on success

*esp\_err\_t* `esp_lcd_panel_mirror(esp_lcd_panel_handle_t panel, bool mirror_x, bool mirror_y)`

Mirror the LCD panel on specific axis.

---

**Note:** Combined with `esp_lcd_panel_swap_xy()`, one can realize screen rotation

---

**Parameters**

- **panel** `-[in]` LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`
- **mirror\_x** `-[in]` Whether the panel will be mirrored about the x axis
- **mirror\_y** `-[in]` Whether the panel will be mirrored about the y axis

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NOT\_SUPPORTED if this function is not supported by the panel

*esp\_err\_t* `esp_lcd_panel_swap_xy(esp_lcd_panel_handle_t panel, bool swap_axes)`

Swap/Exchange x and y axis.

---

**Note:** Combined with `esp_lcd_panel_mirror()`, one can realize screen rotation

---

**Parameters**

- **panel** `-[in]` LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`
- **swap\_axes** `-[in]` Whether to swap the x and y axis

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NOT\_SUPPORTED if this function is not supported by the panel

*esp\_err\_t* **esp\_lcd\_panel\_set\_gap** (*esp\_lcd\_panel\_handle\_t* panel, int x\_gap, int y\_gap)

Set extra gap in x and y axis.

The gap is the space (in pixels) between the left/top sides of the LCD panel and the first row/column respectively of the actual contents displayed.

---

**Note:** Setting a gap is useful when positioning or centering a frame that is smaller than the LCD.

---

**Parameters**

- **panel** *–[in]* LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`
- **x\_gap** *–[in]* Extra gap on x axis, in pixels
- **y\_gap** *–[in]* Extra gap on y axis, in pixels

**Returns**

- ESP\_OK on success

*esp\_err\_t* **esp\_lcd\_panel\_invert\_color** (*esp\_lcd\_panel\_handle\_t* panel, bool invert\_color\_data)

Invert the color (bit-wise invert the color data line)

**Parameters**

- **panel** *–[in]* LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`
- **invert\_color\_data** *–[in]* Whether to invert the color data

**Returns**

- ESP\_OK on success

*esp\_err\_t* **esp\_lcd\_panel\_disp\_on\_off** (*esp\_lcd\_panel\_handle\_t* panel, bool on\_off)

Turn on or off the display.

**Parameters**

- **panel** *–[in]* LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`
- **on\_off** *–[in]* True to turns on display, False to turns off display

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NOT\_SUPPORTED if this function is not supported by the panel

*esp\_err\_t* **esp\_lcd\_panel\_disp\_off** (*esp\_lcd\_panel\_handle\_t* panel, bool off)

Turn off the display.

**Parameters**

- **panel** *–[in]* LCD panel handle, which is created by other factory API like `esp_lcd_new_panel_st7789()`
- **off** *–[in]* Whether to turn off the screen

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NOT\_SUPPORTED if this function is not supported by the panel

**Header File**

- `components/esp_lcd/include/esp_lcd_panel_rgb.h`

## Header File

- `components/esp_lcd/include/esp_lcd_panel_vendor.h`

## Functions

`esp_err_t esp_lcd_new_panel_st7789` (const `esp_lcd_panel_io_handle_t` io, const `esp_lcd_panel_dev_config_t` \*panel\_dev\_config, `esp_lcd_panel_handle_t` \*ret\_panel)

Create LCD panel for model ST7789.

### Parameters

- `io` –[in] LCD panel IO handle
- `panel_dev_config` –[in] general panel device configuration
- `ret_panel` –[out] Returned LCD panel handle

### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_ERR_NO_MEM` if out of memory
- `ESP_OK` on success

`esp_err_t esp_lcd_new_panel_nt35510` (const `esp_lcd_panel_io_handle_t` io, const `esp_lcd_panel_dev_config_t` \*panel\_dev\_config, `esp_lcd_panel_handle_t` \*ret\_panel)

Create LCD panel for model NT35510.

### Parameters

- `io` –[in] LCD panel IO handle
- `panel_dev_config` –[in] general panel device configuration
- `ret_panel` –[out] Returned LCD panel handle

### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_ERR_NO_MEM` if out of memory
- `ESP_OK` on success

`esp_err_t esp_lcd_new_panel_ssd1306` (const `esp_lcd_panel_io_handle_t` io, const `esp_lcd_panel_dev_config_t` \*panel\_dev\_config, `esp_lcd_panel_handle_t` \*ret\_panel)

Create LCD panel for model SSD1306.

### Parameters

- `io` –[in] LCD panel IO handle
- `panel_dev_config` –[in] general panel device configuration
- `ret_panel` –[out] Returned LCD panel handle

### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_ERR_NO_MEM` if out of memory
- `ESP_OK` on success

## Structures

struct `esp_lcd_panel_dev_config_t`

Configuration structure for panel device.

## Public Members

int `reset_gpio_num`

GPIO used to reset the LCD panel, set to -1 if it's not used

esp\_lcd\_color\_space\_t **color\_space**

*Deprecated:*

Set RGB color space, please use rgb\_ele\_order instead

lcd\_color\_rgb\_endian\_t **rgb\_endian**

*Deprecated:*

Set RGB data endian, please use rgb\_ele\_order instead

[lcd\\_rgb\\_element\\_order\\_t](#) **rgb\_ele\_order**

Set RGB element order, RGB or BGR

[lcd\\_rgb\\_data\\_endian\\_t](#) **data\_endian**

Set the data endian for color data larger than 1 byte

unsigned int **bits\_per\_pixel**

Color depth, in bpp

unsigned int **reset\_active\_high**

Setting this if the panel reset is high level active

struct [esp\\_lcd\\_panel\\_dev\\_config\\_t](#)::[anonymous] **flags**

LCD panel config flags

void \***vendor\_config**

vendor specific configuration, optional, left as NULL if not used

## 2.6.9 LED Control (LEDC)

### Introduction

The LED control (LEDC) peripheral is primarily designed to control the intensity of LEDs, although it can also be used to generate PWM signals for other purposes. It has 6 channels which can generate independent waveforms that can be used, for example, to drive RGB LED devices.

The PWM controller can automatically increase or decrease the duty cycle gradually, allowing for fades without any processor interference.

### Functionality Overview

Setting up a channel of the LEDC is done in three steps. Note that unlike ESP32, ESP32-C2 only supports configuring channels in “low speed” mode.

1. [Timer Configuration](#) by specifying the PWM signal’s frequency and duty cycle resolution.
2. [Channel Configuration](#) by associating it with the timer and GPIO to output the PWM signal.
3. [Change PWM Signal](#) that drives the output in order to change LED’s intensity. This can be done under the full control of software or with hardware fading functions.

As an optional step, it is also possible to set up an interrupt on fade end.

Fig. 5: Key Settings of LED PWM Controller's API

**Timer Configuration** Setting the timer is done by calling the function `ledc_timer_config()` and passing the data structure `ledc_timer_config_t` that contains the following configuration settings:

- Speed mode (value must be `LEDC_LOW_SPEED_MODE`)
- Timer number `ledc_timer_t`
- PWM signal frequency
- Resolution of PWM duty
- Source clock `ledc_clk_cfg_t`

The frequency and the duty resolution are interdependent. The higher the PWM frequency, the lower the duty resolution which is available, and vice versa. This relationship might be important if you are planning to use this API for purposes other than changing the intensity of LEDs. For more details, see Section [Supported Range of Frequency and Duty Resolutions](#).

The source clock can also limit the PWM frequency. The higher the source clock frequency, the higher the maximum PWM frequency can be configured.

Table 3: Characteristics of ESP32-C2 LEDC source clocks

Clock name	Clock freq	Clock capabilities
PLL_60M_CLK	60 MHz	/
RTC20M_CLK	~20 MHz	Dynamic Frequency Scaling compatible, Light sleep compatible
XTAL_CLK	40 MHz	Dynamic Frequency Scaling compatible

---

**Note:**

1. On ESP32-C2, if `RTCxM_CLK` is chosen as the LEDC clock source, an internal calibration will be performed to get the exact frequency of the clock. This ensures the accuracy of output PWM signal frequency.
  2. For ESP32-C2, all timers share one clock source. In other words, it is impossible to use different clock sources for different timers.
-

**Channel Configuration** When the timer is set up, configure the desired channel (one out of `ledc_channel_t`). This is done by calling the function `ledc_channel_config()`.

Similar to the timer configuration, the channel setup function should be passed a structure `ledc_channel_config_t` that contains the channel's configuration parameters.

At this point, the channel should start operating and generating the PWM signal on the selected GPIO, as configured in `ledc_channel_config_t`, with the frequency specified in the timer settings and the given duty cycle. The channel operation (signal generation) can be suspended at any time by calling the function `ledc_stop()`.

**Change PWM Signal** Once the channel starts operating and generating the PWM signal with the constant duty cycle and frequency, there are a couple of ways to change this signal. When driving LEDs, primarily the duty cycle is changed to vary the light intensity.

The following two sections describe how to change the duty cycle using software and hardware fading. If required, the signal's frequency can also be changed; it is covered in Section [Change PWM Frequency](#).

---

**Note:** All the timers and channels in the ESP32-C2's LED PWM Controller only support low speed mode. Any change of PWM settings must be explicitly triggered by software (see below).

---

**Change PWM Duty Cycle Using Software** To set the duty cycle, use the dedicated function `ledc_set_duty()`. After that, call `ledc_update_duty()` to activate the changes. To check the currently set value, use the corresponding `_get_` function `ledc_get_duty()`.

Another way to set the duty cycle, as well as some other channel parameters, is by calling `ledc_channel_config()` covered in Section [Channel Configuration](#).

The range of the duty cycle values passed to functions depends on selected `duty_resolution` and should be from 0 to  $(2^{**} \text{duty\_resolution})$ . For example, if the selected duty resolution is 10, then the duty cycle values can range from 0 to 1024. This provides the resolution of ~ 0.1%.

**Warning:** On ESP32-C2, when channel's binded timer selects its maximum duty resolution, the duty cycle value cannot be set to  $(2^{**} \text{duty\_resolution})$ . Otherwise, the internal duty counter in the hardware will overflow and be messed up.

**Change PWM Duty Cycle using Hardware** The LEDC hardware provides the means to gradually transition from one duty cycle value to another. To use this functionality, enable fading with `ledc_fade_func_install()` and then configure it by calling one of the available fading functions:

- `ledc_set_fade_with_time()`
- `ledc_set_fade_with_step()`
- `ledc_set_fade()`

Start fading with `ledc_fade_start()`. A fade can be operated in blocking or non-blocking mode, please check `ledc_fade_mode_t` for the difference between the two available fade modes. Note that with either fade mode, the next fade or fixed-duty update will not take effect until the last fade finishes or is stopped. `ledc_fade_stop()` has to be called to stop a fade that is in progress.

To get a notification about the completion of a fade operation, a fade end callback function can be registered for each channel by calling `ledc_cb_register()` after the fade service being installed. The fade end callback prototype is defined in `ledc_cb_t`, where you should return a boolean value from the callback function, indicating whether a high priority task is woken up by this callback function. It is worth mentioning, the callback and the function invoked by itself should be placed in IRAM, as the interrupt service routine is in IRAM. `ledc_cb_register()` will print a warning message if it finds the addresses of callback and user context are incorrect.

If not required anymore, fading and an associated interrupt can be disabled with `ledc_fade_func_uninstall()`.

**Change PWM Frequency** The LEDC API provides several ways to change the PWM frequency “on the fly” :

- Set the frequency by calling `ledc_set_freq()`. There is a corresponding function `ledc_get_freq()` to check the current frequency.
- Change the frequency and the duty resolution by calling `ledc_bind_channel_timer()` to bind some other timer to the channel.
- Change the channel’s timer by calling `ledc_channel_config()`.

**More Control Over PWM** There are several lower level timer-specific functions that can be used to change PWM settings:

- `ledc_timer_set()`
- `ledc_timer_rst()`
- `ledc_timer_pause()`
- `ledc_timer_resume()`

The first two functions are called “behind the scenes” by `ledc_channel_config()` to provide a startup of a timer after it is configured.

**Use Interrupts** When configuring an LEDC channel, one of the parameters selected within `ledc_channel_config_t` is `ledc_intr_type_t` which triggers an interrupt on fade completion.

For registration of a handler to address this interrupt, call `ledc_isr_register()`.

### Supported Range of Frequency and Duty Resolutions

The LED PWM Controller is designed primarily to drive LEDs. It provides a large flexibility of PWM duty cycle settings. For instance, the PWM frequency of 5 kHz can have the maximum duty resolution of 13 bits. This means that the duty can be set anywhere from 0 to 100% with a resolution of ~0.012% ( $2^{**} 13 = 8192$  discrete levels of the LED intensity). Note, however, that these parameters depend on the clock signal clocking the LED PWM Controller timer which in turn clocks the channel (see [timer configuration](#) and the *ESP32-C2 Technical Reference Manual > LED PWM Controller (LEDC) [PDF]*).

The LEDC can be used for generating signals at much higher frequencies that are sufficient enough to clock other devices, e.g., a digital camera module. In this case, the maximum available frequency is 40 MHz with duty resolution of 1 bit. This means that the duty cycle is fixed at 50% and cannot be adjusted.

The LEDC API is designed to report an error when trying to set a frequency and a duty resolution that exceed the range of LEDC’s hardware. For example, an attempt to set the frequency to 20 MHz and the duty resolution to 3 bits will result in the following error reported on a serial monitor:

```
E (196) ledc: requested frequency and duty resolution cannot be achieved, try_
↪reducing freq_hz or duty_resolution. div_param=128
```

In such a situation, either the duty resolution or the frequency must be reduced. For example, setting the duty resolution to 2 will resolve this issue and will make it possible to set the duty cycle at 25% steps, i.e., at 25%, 50% or 75%.

The LEDC driver will also capture and report attempts to configure frequency / duty resolution combinations that are below the supported minimum, e.g.:

```
E (196) ledc: requested frequency and duty resolution cannot be achieved, try_
↪increasing freq_hz or duty_resolution. div_param=128000000
```

The duty resolution is normally set using `ledc_timer_bit_t`. This enumeration covers the range from 10 to 15 bits. If a smaller duty resolution is required (from 10 down to 1), enter the equivalent numeric values directly.

## Application Example

The LEDC change duty cycle and fading control example: [peripherals/ledc/ledc\\_fade](#).

The LEDC basic example: [peripherals/ledc/ledc\\_basic](#).

## API Reference

### Header File

- [components/driver/include/driver/ledc.h](#)

### Functions

*esp\_err\_t* **ledc\_channel\_config** (const *ledc\_channel\_config\_t* \*ledc\_conf)

LEDC channel configuration Configure LEDC channel with the given channel/output gpio\_num/interrupt/source timer/frequency(Hz)/LEDC duty resolution.

**Parameters** *ledc\_conf* –Pointer of LEDC channel configure struct

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **ledc\_timer\_config** (const *ledc\_timer\_config\_t* \*timer\_conf)

LEDC timer configuration Configure LEDC timer with the given source timer/frequency(Hz)/duty\_resolution.

**Parameters** *timer\_conf* –Pointer of LEDC timer configure struct

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Can not find a proper pre-divider number base on the given frequency and the current duty\_resolution.

*esp\_err\_t* **ledc\_update\_duty** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel)

LEDC update channel parameters.

---

**Note:** Call this function to activate the LEDC updated parameters. After `ledc_set_duty`, we need to call this function to update the settings. And the new LEDC parameters don't take effect until the next PWM cycle.

---

---

**Note:** `ledc_set_duty`, `ledc_set_duty_with_hpoint` and `ledc_update_duty` are not thread-safe, do not call these functions to control one LEDC channel in different tasks at the same time. A thread-safe version of API is `ledc_set_duty_and_update`

---

#### Parameters

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **ledc\_set\_pin** (int gpio\_num, *ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* ledc\_channel)

Set LEDC output gpio.

---

**Note:** This function only routes the LEDC signal to GPIO through matrix, other LEDC resources initialization are not involved. Please use `ledc_channel_config()` instead to fully configure a LEDC channel.

---

**Parameters**

- **gpio\_num** –The LEDC output gpio
- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **ledc\_channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

`esp_err_t ledc_stop(ledc_mode_t speed_mode, ledc_channel_t channel, uint32_t idle_level)`

LEDC stop. Disable LEDC output, and set idle level.

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`
- **idle\_level** –Set output idle level after LEDC stops.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

`esp_err_t ledc_set_freq(ledc_mode_t speed_mode, ledc_timer_t timer_num, uint32_t freq_hz)`

LEDC set channel frequency (Hz)

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **timer\_num** –LEDC timer index (0-3), select from `ledc_timer_t`
- **freq\_hz** –Set the LEDC frequency

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Can not find a proper pre-divider number base on the given frequency and the current duty\_resolution.

`uint32_t ledc_get_freq(ledc_mode_t speed_mode, ledc_timer_t timer_num)`

LEDC get channel frequency (Hz)

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **timer\_num** –LEDC timer index (0-3), select from `ledc_timer_t`

**Returns**

- 0 error
- Others Current LEDC frequency

`esp_err_t ledc_set_duty_with_hpoint(ledc_mode_t speed_mode, ledc_channel_t channel, uint32_t duty, uint32_t hpoint)`

LEDC set duty and hpoint value Only after calling `ledc_update_duty` will the duty update.

---

**Note:** `ledc_set_duty`, `ledc_set_duty_with_hpoint` and `ledc_update_duty` are not thread-safe, do not call these functions to control one LEDC channel in different tasks at the same time. A thread-safe version of API is

ledc\_set\_duty\_and\_update

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

#### Parameters

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from ledc\_channel\_t
- **duty** –Set the LEDC duty, the range of duty setting is [0, (2\*\*duty\_resolution)]
- **hpoint** –Set the LEDC hpoint value, the range is [0, (2\*\*duty\_resolution)-1]

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

int **ledc\_get\_hpoint** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel)

LEDC get hpoint value, the counter value when the output is set high level.

#### Parameters

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from ledc\_channel\_t

#### Returns

- LEDC\_ERR\_VAL if parameter error
- Others Current hpoint value of LEDC channel

*esp\_err\_t* **ledc\_set\_duty** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, uint32\_t duty)

LEDC set duty This function do not change the hpoint value of this channel. if needed, please call ledc\_set\_duty\_with\_hpoint. only after calling ledc\_update\_duty will the duty update.

---

**Note:** ledc\_set\_duty, ledc\_set\_duty\_with\_hpoint and ledc\_update\_duty are not thread-safe, do not call these functions to control one LEDC channel in different tasks at the same time. A thread-safe version of API is ledc\_set\_duty\_and\_update.

---

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

#### Parameters

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from ledc\_channel\_t
- **duty** –Set the LEDC duty, the range of duty setting is [0, (2\*\*duty\_resolution)]

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

uint32\_t **ledc\_get\_duty** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel)

LEDC get duty This function returns the duty at the present PWM cycle. You shouldn't expect the function to return the new duty in the same cycle of calling ledc\_update\_duty, because duty update doesn't take effect until the next cycle.

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`

**Returns**

- LEDC\_ERR\_DUTY if parameter error
- Others Current LEDC duty

*esp\_err\_t* **ledc\_set\_fade** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, uint32\_t duty, *ledc\_duty\_direction\_t* fade\_direction, uint32\_t step\_num, uint32\_t duty\_cycle\_num, uint32\_t duty\_scale)

LEDC set gradient Set LEDC gradient, After the function calls the `ledc_update_duty` function, the function can take effect.

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`
- **duty** –Set the start of the gradient duty, the range of duty setting is [0, (2\*\*duty\_resolution)]
- **fade\_direction** –Set the direction of the gradient
- **step\_num** –Set the number of the gradient
- **duty\_cycle\_num** –Set how many LEDC tick each time the gradient lasts
- **duty\_scale** –Set gradient change amplitude

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **ledc\_isr\_register** (void (\*fn)(void\*), void \*arg, int intr\_alloc\_flags, *ledc\_isr\_handle\_t* \*handle)

Register LEDC interrupt handler, the handler is an ISR. The handler will be attached to the same CPU core that this function is running on.

**Parameters**

- **fn** –Interrupt handler function.
- **arg** –User-supplied argument passed to the handler function.
- **intr\_alloc\_flags** –Flags used to allocate the interrupt. One or multiple (ORred) `ESP_INTR_FLAG_*` values. See `esp_intr_alloc.h` for more info.
- **handle** –Pointer to return handle. If non-NULL, a handle for the interrupt will be returned here.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_NOT\_FOUND Failed to find available interrupt source

*esp\_err\_t* **ledc\_timer\_set** (*ledc\_mode\_t* speed\_mode, *ledc\_timer\_t* timer\_sel, uint32\_t clock\_divider, uint32\_t duty\_resolution, *ledc\_clk\_src\_t* clk\_src)

Configure LEDC settings.

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **timer\_sel** –Timer index (0-3), there are 4 timers in LEDC module

- **clock\_divider** –Timer clock divide value, the timer clock is divided from the selected clock source
- **duty\_resolution** –Resolution of duty setting in number of bits. The range is [1, SOC\_LEDC\_TIMER\_BIT\_WIDTH]
- **clk\_src** –Select LEDC source clock.

**Returns**

- (-1) Parameter error
- Other Current LEDC duty

*esp\_err\_t* **ledc\_timer\_rst** (*ledc\_mode\_t* speed\_mode, *ledc\_timer\_t* timer\_sel)

Reset LEDC timer.

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **timer\_sel** –LEDC timer index (0-3), select from *ledc\_timer\_t*

**Returns**

- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_OK Success

*esp\_err\_t* **ledc\_timer\_pause** (*ledc\_mode\_t* speed\_mode, *ledc\_timer\_t* timer\_sel)

Pause LEDC timer counter.

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **timer\_sel** –LEDC timer index (0-3), select from *ledc\_timer\_t*

**Returns**

- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_OK Success

*esp\_err\_t* **ledc\_timer\_resume** (*ledc\_mode\_t* speed\_mode, *ledc\_timer\_t* timer\_sel)

Resume LEDC timer.

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **timer\_sel** –LEDC timer index (0-3), select from *ledc\_timer\_t*

**Returns**

- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_OK Success

*esp\_err\_t* **ledc\_bind\_channel\_timer** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, *ledc\_timer\_t* timer\_sel)

Bind LEDC channel with the selected timer.

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel index (0 - LEDC\_CHANNEL\_MAX-1), select from *ledc\_channel\_t*
- **timer\_sel** –LEDC timer index (0-3), select from *ledc\_timer\_t*

**Returns**

- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_OK Success

*esp\_err\_t* **ledc\_set\_fade\_with\_step** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, *uint32\_t* target\_duty, *uint32\_t* scale, *uint32\_t* cycle\_num)

Set LEDC fade function.

---

**Note:** Call `ledc_fade_func_install()` once before calling this function. Call `ledc_fade_start()` after this to start fading.

---

---

**Note:** `ledc_set_fade_with_step`, `ledc_set_fade_with_time` and `ledc_fade_start` are not thread-safe, do not call these functions to control one LEDC channel in different tasks at the same time. A thread-safe version of API is `ledc_set_fade_step_and_start`

---

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

#### Parameters

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel index (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`
- **target\_duty** –Target duty of fading [0, (2\*\*duty\_resolution)]
- **scale** –Controls the increase or decrease step scale.
- **cycle\_num** –increase or decrease the duty every `cycle_num` cycles

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_INVALID\_STATE Channel not initialized
- ESP\_FAIL Fade function init error

*esp\_err\_t* `ledc_set_fade_with_time` (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, *uint32\_t* target\_duty, *int* max\_fade\_time\_ms)

Set LEDC fade function, with a limited time.

---

**Note:** Call `ledc_fade_func_install()` once before calling this function. Call `ledc_fade_start()` after this to start fading.

---

---

**Note:** `ledc_set_fade_with_step`, `ledc_set_fade_with_time` and `ledc_fade_start` are not thread-safe, do not call these functions to control one LEDC channel in different tasks at the same time. A thread-safe version of API is `ledc_set_fade_step_and_start`

---

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

#### Parameters

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel index (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`
- **target\_duty** –Target duty of fading [0, (2\*\*duty\_resolution)]
- **max\_fade\_time\_ms** –The maximum time of the fading ( ms ).

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

- ESP\_ERR\_INVALID\_STATE Channel not initialized
- ESP\_FAIL Fade function init error

*esp\_err\_t* **ledc\_fade\_func\_install** (int intr\_alloc\_flags)

Install LEDC fade function. This function will occupy interrupt of LEDC module.

**Parameters** **intr\_alloc\_flags** –Flags used to allocate the interrupt. One or multiple (ORred) ESP\_INTR\_FLAG\_\* values. See esp\_intr\_alloc.h for more info.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Intr flag error
- ESP\_ERR\_NOT\_FOUND Failed to find available interrupt source
- ESP\_ERR\_INVALID\_STATE Fade function already installed

void **ledc\_fade\_func\_uninstall** (void)

Uninstall LEDC fade function.

*esp\_err\_t* **ledc\_fade\_start** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, *ledc\_fade\_mode\_t* fade\_mode)

Start LEDC fading.

---

**Note:** Call ledc\_fade\_func\_install() once before calling this function. Call this API right after ledc\_set\_fade\_with\_time or ledc\_set\_fade\_with\_step before to start fading.

---

---

**Note:** Starting fade operation with this API is not thread-safe, use with care.

---

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel number
- **fade\_mode** –Whether to block until fading done. See ledc\_types.h ledc\_fade\_mode\_t for more info. Note that this function will not return until fading to the target duty if LEDC\_FADE\_WAIT\_DONE mode is selected.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_STATE Channel not initialized or fade function not installed.
- ESP\_ERR\_INVALID\_ARG Parameter error.

*esp\_err\_t* **ledc\_fade\_stop** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel)

Stop LEDC fading. Duty of the channel will stay at its present vlaue.

---

**Note:** This API can be called if a new fixed duty or a new fade want to be set while the last fade operation is still running in progress.

---

---

**Note:** Call this API will abort the fading operation only if it was started by calling ledc\_fade\_start with LEDC\_FADE\_NO\_WAIT mode.

---

---

**Note:** If a fade was started with LEDC\_FADE\_WAIT\_DONE mode, calling this API afterwards is no use in stopping the fade. Fade will continue until it reaches the target duty.

---

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel number

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_STATE Channel not initialized
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Fade function init error

*esp\_err\_t* **ledc\_set\_duty\_and\_update** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, uint32\_t duty, uint32\_t hpoint)

A thread-safe API to set duty for LEDC channel and return when duty updated.

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel (0 - LEDC\_CHANNEL\_MAX-1), select from *ledc\_channel\_t*
- **duty** –Set the LEDC duty, the range of duty setting is [0, (2\*\*duty\_resolution)]
- **hpoint** –Set the LEDC hpoint value, the range is [0, (2\*\*duty\_resolution)-1]

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_STATE Channel not initialized
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Fade function init error

*esp\_err\_t* **ledc\_set\_fade\_time\_and\_start** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, uint32\_t target\_duty, uint32\_t max\_fade\_time\_ms, *ledc\_fade\_mode\_t* fade\_mode)

A thread-safe API to set and start LEDC fade function, with a limited time.

---

**Note:** Call *ledc\_fade\_func\_install()* once, before calling this function.

---

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel index (0 - LEDC\_CHANNEL\_MAX-1), select from *ledc\_channel\_t*
- **target\_duty** –Target duty of fading [0, (2\*\*duty\_resolution)]
- **max\_fade\_time\_ms** –The maximum time of the fading ( ms ).
- **fade\_mode** –choose blocking or non-blocking mode

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_INVALID\_STATE Channel not initialized
- ESP\_FAIL Fade function init error

*esp\_err\_t* **ledc\_set\_fade\_step\_and\_start** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, uint32\_t target\_duty, uint32\_t scale, uint32\_t cycle\_num, *ledc\_fade\_mode\_t* fade\_mode)

A thread-safe API to set and start LEDC fade function.

---

**Note:** Call `ledc_fade_func_install()` once before calling this function.

---

---

**Note:** For ESP32, hardware does not support any duty change while a fade operation is running in progress on that channel. Other duty operations will have to wait until the fade operation has finished.

---

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel index (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`
- **target\_duty** –Target duty of fading [0, (2\*\*duty\_resolution)]
- **scale** –Controls the increase or decrease step scale.
- **cycle\_num** –increase or decrease the duty every cycle\_num cycles
- **fade\_mode** –choose blocking or non-blocking mode

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_INVALID\_STATE Channel not initialized
- ESP\_FAIL Fade function init error

*esp\_err\_t* **ledc\_cb\_register** (*ledc\_mode\_t* speed\_mode, *ledc\_channel\_t* channel, *ledc\_cbs\_t* \*cbs, void \*user\_arg)

LEDC callback registration function.

---

**Note:** The callback is called from an ISR, it must never attempt to block, and any FreeRTOS API called must be ISR capable.

---

**Parameters**

- **speed\_mode** –Select the LEDC channel group with specified speed mode. Note that not all targets support high speed mode.
- **channel** –LEDC channel index (0 - LEDC\_CHANNEL\_MAX-1), select from `ledc_channel_t`
- **cbs** –Group of LEDC callback functions
- **user\_arg** –user registered data for the callback function

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_INVALID\_STATE Channel not initialized
- ESP\_FAIL Fade function init error

**Structures**

struct **ledc\_channel\_config\_t**

Configuration parameters of LEDC channel for `ledc_channel_config` function.

### Public Members

int **gpio\_num**

the LEDC output `gpio_num`, if you want to use `gpio16`, `gpio_num = 16`

*ledc\_mode\_t* **speed\_mode**

LEDC speed `speed_mode`, high-speed mode (only exists on esp32) or low-speed mode

*ledc\_channel\_t* **channel**

LEDC channel (0 - 7)

*ledc\_intr\_type\_t* **intr\_type**

configure interrupt, Fade interrupt enable or Fade interrupt disable

*ledc\_timer\_t* **timer\_sel**

Select the timer source of channel (0 - 3)

uint32\_t **duty**

LEDC channel duty, the range of duty setting is  $[0, (2^{**}duty\_resolution)]$

int **hpoint**

LEDC channel `hpoint` value, the range is  $[0, (2^{**}duty\_resolution)-1]$

unsigned int **output\_invert**

Enable (1) or disable (0) `gpio` output invert

struct *ledc\_channel\_config\_t*::[anonymous] **flags**

LEDC flags

struct **ledc\_timer\_config\_t**

Configuration parameters of LEDC Timer `timer` for `ledc_timer_config` function.

### Public Members

*ledc\_mode\_t* **speed\_mode**

LEDC speed `speed_mode`, high-speed mode (only exists on esp32) or low-speed mode

*ledc\_timer\_bit\_t* **duty\_resolution**

LEDC channel duty resolution

*ledc\_timer\_t* **timer\_num**

The timer source of channel (0 - 3)

uint32\_t **freq\_hz**

LEDC timer frequency (Hz)

***ledc\_clk\_cfg\_t* clk\_cfg**

Configure LEDC source clock from `ledc_clk_cfg_t`. Note that `LEDC_USE_RTC8M_CLK` and `LEDC_USE_XTAL_CLK` are non-timer-specific clock sources. You can not have one LEDC timer uses `RTC8M_CLK` as the clock source and have another LEDC timer uses `XTAL_CLK` as its clock source. All chips except `esp32` and `esp32s2` do not have timer-specific clock sources, which means clock source for all timers must be the same one.

struct **ledc\_cb\_param\_t**

LEDC callback parameter.

**Public Members*****ledc\_cb\_event\_t* event**

Event name

**uint32\_t speed\_mode**

Speed mode of the LEDC channel group

**uint32\_t channel**

LEDC channel (0 - `LEDC_CHANNEL_MAX-1`)

**uint32\_t duty**

LEDC current duty of the channel, the range of duty is  $[0, (2^{**}duty\_resolution)]$

struct **ledc\_cbs\_t**

Group of supported LEDC callbacks.

---

**Note:** The callbacks are all running under ISR environment

---

**Public Members*****ledc\_cb\_t* fade\_cb**

LEDC `fade_end` callback function

**Macros**

**LEDC\_ERR\_DUTY**

**LEDC\_ERR\_VAL**

**Type Definitions**

typedef *intr\_handle\_t* **ledc\_isr\_handle\_t**

typedef bool (\***ledc\_cb\_t**)(const *ledc\_cb\_param\_t* \*param, void \*user\_arg)

Type of LEDC event callback.

**Param param** LEDC callback parameter

**Param user\_arg** User registered data

**Return** Whether a high priority task has been waken up by this function

### Enumerations

enum **ledc\_cb\_event\_t**

LEDC callback event type.

*Values:*

enumerator **LEDC\_FADE\_END\_EVT**

LEDC fade end event

### Header File

- [components/hal/include/hal/ledc\\_types.h](#)

### Enumerations

enum **ledc\_mode\_t**

*Values:*

enumerator **LEDC\_LOW\_SPEED\_MODE**

LEDC low speed speed\_mode

enumerator **LEDC\_SPEED\_MODE\_MAX**

LEDC speed limit

enum **ledc\_intr\_type\_t**

*Values:*

enumerator **LEDC\_INTR\_DISABLE**

Disable LEDC interrupt

enumerator **LEDC\_INTR\_FADE\_END**

Enable LEDC interrupt

enumerator **LEDC\_INTR\_MAX**

enum **ledc\_duty\_direction\_t**

*Values:*

enumerator **LEDC\_DUTY\_DIR\_DECREASE**

LEDC duty decrease direction

enumerator **LEDC\_DUTY\_DIR\_INCREASE**

LEDC duty increase direction

enumerator **LEDC\_DUTY\_DIR\_MAX**

enum **ledc\_slow\_clk\_sel\_t**

*Values:*

enumerator **LEDC\_SLOW\_CLK\_RTC8M**

LEDC low speed timer clock source is 8MHz RTC clock

enumerator **LEDC\_SLOW\_CLK\_PLL\_DIV**

LEDC low speed timer clock source is a PLL\_DIV clock

enumerator **LEDC\_SLOW\_CLK\_XTAL**

LEDC low speed timer clock source XTAL clock

enum **ledc\_clk\_cfg\_t**

In theory, the following enumeration shall be placed in LEDC driver' s header. However, as the next enumeration, `ledc_clk_src_t`, makes the use of some of these values and to avoid mutual inclusion of the headers, we must define it here.

*Values:*

enumerator **LEDC\_AUTO\_CLK**

The driver will automatically select the source clock based on the giving resolution and duty parameter when init the timer

enumerator **LEDC\_USE\_PLL\_DIV\_CLK**

LEDC timer select the PLL\_DIV clock available to LEDC peripheral as source clock

enumerator **LEDC\_USE\_RTC8M\_CLK**

LEDC timer select RTC8M\_CLK as source clock. Only for low speed channels and this parameter must be the same for all low speed channels

enumerator **LEDC\_USE\_XTAL\_CLK**

LEDC timer select XTAL clock as source clock

enum **ledc\_clk\_src\_t**

*Values:*

enumerator **LEDC\_SCLK**

Selecting this value for `LEDC_TICK_SEL_TIMER` let the hardware take its source clock from `LEDC_CLK_SEL`

enum **ledc\_timer\_t**

*Values:*

enumerator **LEDC\_TIMER\_0**

LEDC timer 0

enumerator **LEDC\_TIMER\_1**

LEDC timer 1

enumerator **LEDC\_TIMER\_2**

LEDC timer 2

enumerator **LEDC\_TIMER\_3**

LEDC timer 3

enumerator **LEDC\_TIMER\_MAX**

enum **ledc\_channel\_t**

*Values:*

enumerator **LEDC\_CHANNEL\_0**

LEDC channel 0

enumerator **LEDC\_CHANNEL\_1**

LEDC channel 1

enumerator **LEDC\_CHANNEL\_2**

LEDC channel 2

enumerator **LEDC\_CHANNEL\_3**

LEDC channel 3

enumerator **LEDC\_CHANNEL\_4**

LEDC channel 4

enumerator **LEDC\_CHANNEL\_5**

LEDC channel 5

enumerator **LEDC\_CHANNEL\_MAX**

enum **ledc\_timer\_bit\_t**

*Values:*

enumerator **LEDC\_TIMER\_1\_BIT**

LEDC PWM duty resolution of 1 bits

enumerator **LEDC\_TIMER\_2\_BIT**

LEDC PWM duty resolution of 2 bits

enumerator **LEDC\_TIMER\_3\_BIT**

LEDC PWM duty resolution of 3 bits

enumerator **LEDC\_TIMER\_4\_BIT**

LEDC PWM duty resolution of 4 bits

enumerator **LEDC\_TIMER\_5\_BIT**

LEDC PWM duty resolution of 5 bits

enumerator **LEDC\_TIMER\_6\_BIT**

LEDC PWM duty resolution of 6 bits

enumerator **LEDC\_TIMER\_7\_BIT**

LEDC PWM duty resolution of 7 bits

enumerator **LEDC\_TIMER\_8\_BIT**

LEDC PWM duty resolution of 8 bits

enumerator **LEDC\_TIMER\_9\_BIT**

LEDC PWM duty resolution of 9 bits

enumerator **LEDC\_TIMER\_10\_BIT**

LEDC PWM duty resolution of 10 bits

enumerator **LEDC\_TIMER\_11\_BIT**

LEDC PWM duty resolution of 11 bits

enumerator **LEDC\_TIMER\_12\_BIT**

LEDC PWM duty resolution of 12 bits

enumerator **LEDC\_TIMER\_13\_BIT**

LEDC PWM duty resolution of 13 bits

enumerator **LEDC\_TIMER\_14\_BIT**

LEDC PWM duty resolution of 14 bits

enumerator **LEDC\_TIMER\_BIT\_MAX**

enum **ledc\_fade\_mode\_t**

*Values:*

enumerator **LEDC\_FADE\_NO\_WAIT**

LEDC fade function will return immediately

enumerator **LEDC\_FADE\_WAIT\_DONE**

LEDC fade function will block until fading to the target duty

enumerator **LEDC\_FADE\_MAX**

## 2.6.10 SD SPI Host Driver

### Overview

The SD SPI host driver allows communicating with one or more SD cards by the SPI Master driver which makes use of the SPI host. Each card is accessed through an SD SPI device represented by an *sdspi\_dev\_handle\_t* spi\_handle returned when attaching the device to an SPI bus by calling *sdspi\_host\_init\_device*. The bus should be already initialized before (by *spi\_bus\_initialize*).

With the help of *SPI Master driver* based on, the SPI bus can be shared among SD cards and other SPI devices. The SPI Master driver will handle exclusive access from different tasks.

The SD SPI driver uses software-controlled CS signal.

### How to Use

Firstly, use the macro `SDSPI_DEVICE_CONFIG_DEFAULT` to initialize a structure `sdmmc_slot_config_t`, which is used to initialize an SD SPI device. This macro will also fill in the default pin mappings, which is same as the pin mappings of SDMMC host driver. Modify the host and pins of the structure to desired value. Then call `sdspi_host_init_device` to initialize the SD SPI device and attach to its bus.

Then use `SDSPI_HOST_DEFAULT` macro to initialize a `sdmmc_host_t` structure, which is used to store the state and configurations of upper layer (SD/SDIO/MMC driver). Modify the `slot` parameter of the structure to the SD SPI device `spi_handle` just returned from `sdspi_host_init_device`. Call `sdmmc_card_init` with the `sdmmc_host_t` to probe and initialize the SD card.

Now you can use SD/SDIO/MMC driver functions to access your card!

### Other Details

Only the following driver's API functions are normally used by most applications:

- `sdspi_host_init()`
- `sdspi_host_init_device()`
- `sdspi_host_remove_device()`
- `sdspi_host_deinit()`

Other functions are mostly used by the protocol level SD/SDIO/MMC driver via function pointers in the `sdmmc_host_t` structure. For more details, see *the SD/SDIO/MMC Driver*.

---

**Note:** SD over SPI does not support speeds above `SDMMC_FREQ_DEFAULT` due to the limitations of the SPI driver.

---

<p><b>Warning:</b> If you want to share the SPI bus among SD card and other SPI devices, there are some restrictions, see <i>Sharing the SPI bus among SD card and other SPI devices</i>.</p>
---

### Related Docs

**Sharing the SPI bus among SD card and other SPI devices** The SD card has a SPI mode, which allows it to be communicated to as a SPI device. But there are some restrictions that we need to pay attention to.

**Pin loading of other devices** When adding more devices onto the same bus, the overall pin loading increases. The loading consists of AC loading (pin capacitor) and DC loading (pull-ups).

**AC loading** SD cards, which are designed for high-speed communications, have small pin capacitors (AC loading) to work until 50MHz. However, the other attached devices will increase the pin's AC loading.

Heavy AC loading of a pin may prevent the pin from being toggled quickly. By using an oscilloscope, you will see the edges of the pin become smoother and not ideal any more (the gradient of the edge is smaller). The setup timing requirements of an SD card may be violated when the card is connected to such bus. Even worse, the clock from the host may not be recognized by the SD card and other SPI devices on the same bus.

This issue may be more obvious if other attached devices are not designed to work at the same frequency as the SD card, because they may have larger pin capacitors.

To see if your pin AC loading is too heavy, you can try the following tests:

(Terminology: **launch edge**: at which clock edge the data start to toggle; **latch edge**: at which clock edge the data is supposed to be sampled by the receiver, for SD cad, it's the rising edge.)

1. Use an oscilloscope to see the clock and compare the data line to the clock. - If you see the clock is not fast enough (for example, the rising/falling edge is longer than 1/4 of the clock cycle), it means the clock is skewed too much. - If you see the data line unstable before the latch edge of the clock, it means the load of the data line is too large.  
You may also observed the corresponding phenomenon (data delayed largely from launching edge of clock) with logic analyzers. But it's not as obvious as with an oscilloscope.
2. Try to use slower clock frequency.  
If the lower frequency can work while the higher frequency can't, it's an indication of the AC loading on the pins is too large.

If the AC loading of the pins is too large, you can either use other faster devices (with lower pin load) or slow down the clock speed.

**DC loading** The pull-ups required by SD cards are usually around 10 kOhm to 50 kOhm, which may be too strong for some other SPI devices.

Check the specification of your device about its DC output current, it should be larger than 700uA, otherwise the device output may not be read correctly.

### Initialization sequence

---

**Note:** If you see any problem in the following steps, please make sure the timing is correct first. You can try to slow down the clock speed (`SDMMC_FREQ_PROBING = 400 KHz` for SD card) to avoid the influence of pin AC loading (see above section).

---

When using an SD card with other SPI devices on the same SPI bus, due to the restrictions of the SD card startup flow, the following initialization sequence should be followed: (See also [storage/sd\\_card](#))

1. Initialize the SPI bus properly by `spi_bus_initialize`.
2. Tie the CS lines of all other devices than the SD card to high. This is to avoid conflicts to the SD card in the following step.  
You can do this by either:
  1. Attach devices to the SPI bus by calling `spi_bus_add_device`. This function will initialize the GPIO that is used as CS to the idle level: high.
  2. Initialize GPIO on the CS pin that needs to be tied up before actually adding a new device.
  3. Rely on the internal/external pull-up (not recommended) to pull-up all the CS pins when the GPIOs of ESP are not initialized yet. You need to check carefully the pull-up is strong enough and there are no other pull-downs that will influence the pull-up (For example, internal pull-down should be enabled).
3. Mount the card to the filesystem by calling `esp_vfs_fat_sdspi_mount`.  
This step will put the SD card into the SPI mode, which SHOULD be done before all other SPI communications on the same bus. Otherwise the card will stay in the SD mode, in which mode it may randomly respond to any SPI communications on the bus, even when its CS line is not addressed.  
If you want to test this behavior, please also note that, once the card is put into SPI mode, it will not return to SD mode before next power cycle, i.e. powered down and powered up again.
4. Now you can talk to other SPI devices freely!

### API Reference

#### Header File

- [components/driver/include/driver/sdspi\\_host.h](#)

## Functions

*esp\_err\_t* **sdspi\_host\_init** (void)

Initialize SD SPI driver.

---

**Note:** This function is not thread safe

---

### Returns

- ESP\_OK on success
- other error codes may be returned in future versions

*esp\_err\_t* **sdspi\_host\_init\_device** (const *sdspi\_device\_config\_t* \*dev\_config, *sdspi\_dev\_handle\_t* \*out\_handle)

Attach and initialize an SD SPI device on the specific SPI bus.

---

**Note:** This function is not thread safe

---

---

**Note:** Initialize the SPI bus by `spi_bus_initialize()` before calling this function.

---

---

**Note:** The SDIO over sdspi needs an extra interrupt line. Call `gpio_install_isr_service()` before this function.

---

### Parameters

- **dev\_config** –pointer to device configuration structure
- **out\_handle** –Output of the handle to the sdspi device.

### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_ARG if `sdspi_host_init_device` has invalid arguments
- ESP\_ERR\_NO\_MEM if memory can not be allocated
- other errors from the underlying `spi_master` and `gpio` drivers

*esp\_err\_t* **sdspi\_host\_remove\_device** (*sdspi\_dev\_handle\_t* handle)

Remove an SD SPI device.

**Parameters** **handle** –Handle of the SD SPI device

**Returns** Always ESP\_OK

*esp\_err\_t* **sdspi\_host\_do\_transaction** (*sdspi\_dev\_handle\_t* handle, *sdmmc\_command\_t* \*cmdinfo)

Send command to the card and get response.

This function returns when command is sent and response is received, or data is transferred, or timeout occurs.

---

**Note:** This function is not thread safe w.r.t. `init/deinit` functions, and bus width/clock speed configuration functions. Multiple tasks can call `sdspi_host_do_transaction` as long as other `sdspi_host_*` functions are not called.

---

### Parameters

- **handle** –Handle of the sdspi device
- **cmdinfo** –pointer to structure describing command and data to transfer

### Returns

- ESP\_OK on success
- ESP\_ERR\_TIMEOUT if response or data transfer has timed out
- ESP\_ERR\_INVALID\_CRC if response or data transfer CRC check has failed

- `ESP_ERR_INVALID_RESPONSE` if the card has sent an invalid response

*esp\_err\_t* **sdspi\_host\_set\_card\_clk** (*sdspi\_dev\_handle\_t* host, uint32\_t freq\_khz)

Set card clock frequency.

Currently only integer fractions of 40MHz clock can be used. For High Speed cards, 40MHz can be used. For Default Speed cards, 20MHz can be used.

---

**Note:** This function is not thread safe

---

#### Parameters

- **host** –Handle of the sdspi device
- **freq\_khz** –card clock frequency, in kHz

#### Returns

- `ESP_OK` on success
- other error codes may be returned in the future

*esp\_err\_t* **sdspi\_host\_deinit** (void)

Release resources allocated using `sdspi_host_init`.

---

**Note:** This function is not thread safe

---

#### Returns

- `ESP_OK` on success
- `ESP_ERR_INVALID_STATE` if `sdspi_host_init` function has not been called

*esp\_err\_t* **sdspi\_host\_io\_int\_enable** (*sdspi\_dev\_handle\_t* handle)

Enable SDIO interrupt.

**Parameters** **handle** –Handle of the sdspi device

#### Returns

- `ESP_OK` on success

*esp\_err\_t* **sdspi\_host\_io\_int\_wait** (*sdspi\_dev\_handle\_t* handle, TickType\_t timeout\_ticks)

Wait for SDIO interrupt until timeout.

#### Parameters

- **handle** –Handle of the sdspi device
- **timeout\_ticks** –Ticks to wait before timeout.

#### Returns

- `ESP_OK` on success

## Structures

struct **sdspi\_device\_config\_t**

Extra configuration for SD SPI device.

## Public Members

*spi\_host\_device\_t* **host\_id**

SPI host to use, `SPIx_HOST` (see `spi_types.h`).

*gpio\_num\_t* **gpio\_cs**

GPIO number of CS signal.

*gpio\_num\_t* **gpio\_cd**

GPIO number of card detect signal.

*gpio\_num\_t* **gpio\_wp**

GPIO number of write protect signal.

*gpio\_num\_t* **gpio\_int**

GPIO number of interrupt line (input) for SDIO card.

## Macros

**SDSPI\_DEFAULT\_HOST**

**SDSPI\_DEFAULT\_DMA**

**SDSPI\_HOST\_DEFAULT ()**

Default *sdmmc\_host\_t* structure initializer for SD over SPI driver.

Uses SPI mode and max frequency set to 20MHz

‘slot’ should be set to an *sdspi* device initialized by *sdspi\_host\_init\_device ()*.

**SDSPI\_SLOT\_NO\_CS**

indicates that card select line is not used

**SDSPI\_SLOT\_NO\_CD**

indicates that card detect line is not used

**SDSPI\_SLOT\_NO\_WP**

indicates that write protect line is not used

**SDSPI\_SLOT\_NO\_INT**

indicates that interrupt line is not used

**SDSPI\_DEVICE\_CONFIG\_DEFAULT ()**

Macro defining default configuration of SD SPI device.

## Type Definitions

typedef int **sdspi\_dev\_handle\_t**

Handle representing an SD SPI device.

### 2.6.11 SPI Master Driver

SPI Master driver is a program that controls ESP32-C2’s SPI peripherals while they function as masters.

## Overview of ESP32-C2' s SPI peripherals

ESP32-C2 integrates 3 SPI peripherals.

- SPI0 and SPI1 are used internally to access the ESP32-C2' s attached flash memory. Both controllers share the same SPI bus signals, and there is an arbiter to determine which can access the bus. Currently, SPI Master driver does not support SPI1 bus.
- SPI2 is a general purpose SPI controller. It has an independent signal bus with the same name. The bus has 6 CS lines to drive up to 6 SPI slaves.

## Terminology

The terms used in relation to the SPI master driver are given in the table below.

Term	Definition
<b>Host</b>	The SPI controller peripheral inside ESP32-C2 that initiates SPI transmissions over the bus, and acts as an SPI Master.
<b>De-vice</b>	SPI slave device. An SPI bus may be connected to one or more Devices. Each Device shares the MOSI, MISO and SCLK signals but is only active on the bus when the Host asserts the Device' s individual CS line.
<b>Bus</b>	A signal bus, common to all Devices connected to one Host. In general, a bus includes the following lines: MISO, MOSI, SCLK, one or more CS lines, and, optionally, QUADWP and QUADHD. So Devices are connected to the same lines, with the exception that each Device has its own CS line. Several Devices can also share one CS line if connected in the daisy-chain manner.
<b>MOSI</b>	Master Out, Slave In, a.k.a. D. Data transmission from a Host to Device. Also data0 signal in Octal/OPI mode.
<b>MISO</b>	Master In, Slave Out, a.k.a. Q. Data transmission from a Device to Host. Also data1 signal in Octal/OPI mode.
<b>SCLK</b>	Serial Clock. Oscillating signal generated by a Host that keeps the transmission of data bits in sync.
<b>CS</b>	Chip Select. Allows a Host to select individual Device(s) connected to the bus in order to send or receive data.
<b>QUADWP</b>	Write Protect signal. Used for 4-bit (qio/qout) transactions. Also for data2 signal in Octal/OPI mode.
<b>QUADHD</b>	Hold signal. Used for 4-bit (qio/qout) transactions. Also for data3 signal in Octal/OPI mode.
<b>DATA4</b>	Data4 signal in Octal/OPI mode.
<b>DATA5</b>	Data5 signal in Octal/OPI mode.
<b>DATA6</b>	Data6 signal in Octal/OPI mode.
<b>DATA7</b>	Data7 signal in Octal/OPI mode.
<b>As- ser- tion</b>	The action of activating a line.
<b>De- asser- tion</b>	The action of returning the line back to inactive (back to idle) status.
<b>Trans- ac- tion</b>	One instance of a Host asserting a CS line, transferring data to and from a Device, and de-asserting the CS line. Transactions are atomic, which means they can never be interrupted by another transaction.
<b>Launch edge</b>	Edge of the clock at which the source register <i>launches</i> the signal onto the line.
<b>Latch edge</b>	Edge of the clock at which the destination register <i>latches in</i> the signal.

## Driver Features

The SPI master driver governs communications of Hosts with Devices. The driver supports the following features:

- Multi-threaded environments
- Transparent handling of DMA transfers while reading and writing data

- Automatic time-division multiplexing of data coming from different Devices on the same signal bus, see [SPI Bus Lock](#).

**Warning:** The SPI master driver has the concept of multiple Devices connected to a single bus (sharing a single ESP32-C2 SPI peripheral). As long as each Device is accessed by only one task, the driver is thread safe. However, if multiple tasks try to access the same SPI Device, the driver is **not thread-safe**. In this case, it is recommended to either:

- Refactor your application so that each SPI peripheral is only accessed by a single task at a time.
- Add a mutex lock around the shared Device using `xSemaphoreCreateMutex`.

## SPI Features

### SPI Master

**SPI Bus Lock** To realize the multiplexing of different devices from different drivers, including SPI Master, SPI Flash, etc., an SPI bus lock is applied on each SPI bus. Drivers can attach their devices onto the bus with the arbitration of the lock.

Each bus lock is initialized with a BG (background) service registered. All devices that request transactions on the bus should wait until the BG is successfully disabled.

- For SPI1 bus, the BG is the cache. The bus lock will disable the cache before device operations start, and enable it again after device releases the lock. No devices on SPI1 is allowed to use ISR, since it is meaningless for the task to yield to other tasks when the cache is disabled. The SPI Master driver hasn't supported SPI1 bus. Only SPI Flash driver can attach to the bus.
- For other buses, the driver may register its ISR as the BG. When a device task requests for exclusive use of the bus, the bus lock will block the task and try to disable ISR. After ISR is successfully disabled, the bus lock will then unblock the device task and allow it to exclusively use the bus. When the task releases the lock, the lock will also try to resume ISR if there are pending transactions in ISR.

### SPI Transactions

An SPI bus transaction consists of five phases which can be found in the table below. Any of these phases can be skipped.

Phase	Description
<b>Command</b>	In this phase, a command (0-16 bit) is written to the bus by the Host.
<b>Address</b>	In this phase, an address (0-32 bit) is transmitted over the bus by the Host.
<b>Write</b>	Host sends data to a Device. This data follows the optional command and address phases and is indistinguishable from them at the electrical level.
<b>Dummy</b>	This phase is configurable and is used to meet the timing requirements.
<b>Read</b>	Device sends data to its Host.

The attributes of a transaction are determined by the bus configuration structure `spi_bus_config_t`, device configuration structure `spi_device_interface_config_t`, and transaction configuration structure `spi_transaction_t`.

An SPI Host can send full-duplex transactions, during which the read and write phases occur simultaneously. The total transaction length is determined by the sum of the following members:

- `spi_device_interface_config_t::command_bits`
- `spi_device_interface_config_t::address_bits`
- `spi_transaction_t::length`

While the member `spi_transaction_t::rxlength` only determines the length of data received into the buffer.

In half-duplex transactions, the read and write phases are not simultaneous (one direction at a time). The lengths of the write and read phases are determined by `spi_transaction_t::length` and `spi_transaction_t::rxlength` respectively.

The command and address phases are optional, as not every SPI device requires a command and/or address. This is reflected in the Device's configuration: if `spi_device_interface_config_t::command_bits` and/or `spi_device_interface_config_t::address_bits` are set to zero, no command or address phase will occur.

The read and write phases can also be optional, as not every transaction requires both writing and reading data. If `spi_transaction_t::rx_buffer` is NULL and `SPI_TRANS_USE_RXDATA` is not set, the read phase is skipped. If `spi_transaction_t::tx_buffer` is NULL and `SPI_TRANS_USE_TXDATA` is not set, the write phase is skipped.

The driver supports two types of transactions: the interrupt transactions and polling transactions. The programmer can choose to use a different transaction type per Device. If your Device requires both transaction types, see [Notes on Sending Mixed Transactions to the Same Device](#).

**Interrupt Transactions** Interrupt transactions will block the transaction routine until the transaction completes, thus allowing the CPU to run other tasks.

An application task can queue multiple transactions, and the driver will automatically handle them one-by-one in the interrupt service routine (ISR). It allows the task to switch to other procedures until all the transactions complete.

**Polling Transactions** Polling transactions do not use interrupts. The routine keeps polling the SPI Host's status bit until the transaction is finished.

All the tasks that use interrupt transactions can be blocked by the queue. At this point, they will need to wait for the ISR to run twice before the transaction is finished. Polling transactions save time otherwise spent on queue handling and context switching, which results in smaller transaction duration. The disadvantage is that the CPU is busy while these transactions are in progress.

The `spi_device_polling_end()` routine needs an overhead of at least 1 us to unblock other tasks when the transaction is finished. It is strongly recommended to wrap a series of polling transactions using the functions `spi_device_acquire_bus()` and `spi_device_release_bus()` to avoid the overhead. For more information, see [Bus Acquiring](#).

**Transaction Line Mode** Supported line modes for ESP32-C2 are listed as follows, to make use of these modes, set the member `flags` in the struct `spi_transaction_t` as shown in the *Transaction Flag* column. If you want to check if corresponding IO pins are set or not, set the member `flags` in the `spi_bus_config_t` as shown in the *Bus IO setting Flag* column.

Mode name	Command Line Width	Address Line Width	Data Line Width	Transaction Flag	Bus IO setting Flag
Normal SPI	1	1	1	0	0
Dual Output	1	1	2	SPI_TRANS_MODE_DIO	SPICOM-MON_BUSFLAG_DUAL
Dual I/O	1	2	2	SPI_TRANS_MODE_DIO   SPI_TRANS_MULTILINE_ADDR	
Quad Output	1	1	4	SPI_TRANS_MODE_QIO	SPICOM-MON_BUSFLAG_QUAD
Quad I/O	1	4	4	SPI_TRANS_MODE_QIO   SPI_TRANS_MULTILINE_ADDR	

**Command and Address Phases** During the command and address phases, the members `spi_transaction_t::cmd` and `spi_transaction_t::addr` are sent to the bus, nothing is read at this time. The default lengths of the command and address phases are set in `spi_device_interface_config_t` by calling `spi_bus_add_device()`. If the flags `SPI_TRANS_VARIABLE_CMD` and `SPI_TRANS_VARIABLE_ADDR` in the member `spi_transaction_t::flags` are not set, the driver automatically sets the length of these phases to default values during Device initialization.

If the lengths of the command and address phases need to be variable, declare the struct `spi_transaction_ext_t`, set the flags `SPI_TRANS_VARIABLE_CMD` and/or `SPI_TRANS_VARIABLE_ADDR` in the member `spi_transaction_ext_t::base` and configure the rest of base as usual. Then the length of each phase will be equal to `spi_transaction_ext_t::command_bits` and `spi_transaction_ext_t::address_bits` set in the struct `spi_transaction_ext_t`.

If the command and address phase need to be as the same number of lines as data phase, you need to set `SPI_TRANS_MULTILINE_CMD` and/or `SPI_TRANS_MULTILINE_ADDR` to the `flags` member in the struct `spi_transaction_t`. Also see [Transaction Line Mode](#).

**Write and Read Phases** Normally, the data that needs to be transferred to or from a Device will be read from or written to a chunk of memory indicated by the members `spi_transaction_t::rx_buffer` and `spi_transaction_t::tx_buffer`. If DMA is enabled for transfers, the buffers are required to be:

1. Allocated in DMA-capable internal memory. If *external PSRAM is enabled*, this means using `pvPortMallocCaps(size, MALLOC_CAP_DMA)`.
2. 32-bit aligned (starting from a 32-bit boundary and having a length of multiples of 4 bytes).

If these requirements are not satisfied, the transaction efficiency will be affected due to the allocation and copying of temporary buffers.

If using more than one data lines to transmit, please set `SPI_DEVICE_HALFDUPLEX` flag for the member `flags` in the struct `spi_device_interface_config_t`. And the member `flags` in the struct `spi_transaction_t` should be set as described in [Transaction Line Mode](#).

---

**Note:** Half-duplex transactions with both read and write phases are not supported. Please use full duplex mode.

---

**Bus Acquiring** Sometimes you might want to send SPI transactions exclusively and continuously so that it takes as little time as possible. For this, you can use bus acquiring, which helps to suspend transactions (both polling or interrupt) to other devices until the bus is released. To acquire and release a bus, use the functions `spi_device_acquire_bus()` and `spi_device_release_bus()`.

### Driver Usage

- Initialize an SPI bus by calling the function `spi_bus_initialize()`. Make sure to set the correct I/O pins in the struct `spi_bus_config_t`. Set the signals that are not needed to `-1`.
- Register a Device connected to the bus with the driver by calling the function `spi_bus_add_device()`. Make sure to configure any timing requirements the device might need with the parameter `dev_config`. You should now have obtained the Device's handle which will be used when sending a transaction to it.
- To interact with the Device, fill one or more `spi_transaction_t` structs with any transaction parameters required. Then send the structs either using a polling transaction or an interrupt transaction:
  - **Interrupt** Either queue all transactions by calling the function `spi_device_queue_trans()` and, at a later time, query the result using the function `spi_device_get_trans_result()`, or handle all requests synchronously by feeding them into `spi_device_transmit()`.
  - **Polling** Call the function `spi_device_polling_transmit()` to send polling transactions. Alternatively, if you want to insert something in between, send the transactions by using `spi_device_polling_start()` and `spi_device_polling_end()`.
- (Optional) To perform back-to-back transactions with a Device, call the function `spi_device_acquire_bus()` before sending transactions and `spi_device_release_bus()` after the transactions have been sent.

- (Optional) To unload the driver for a certain Device, call `spi_bus_remove_device()` with the Device handle as an argument.
- (Optional) To remove the driver for a bus, make sure no more drivers are attached and call `spi_bus_free()`.

The example code for the SPI master driver can be found in the [peripherals/spi\\_master](#) directory of ESP-IDF examples.

**Transactions with Data Not Exceeding 32 Bits** When the transaction data size is equal to or less than 32 bits, it will be sub-optimal to allocate a buffer for the data. The data can be directly stored in the transaction struct instead. For transmitted data, it can be achieved by using the `spi_transaction_t::tx_data` member and setting the `SPI_TRANS_USE_TXDATA` flag on the transmission. For received data, use `spi_transaction_t::rx_data` and set `SPI_TRANS_USE_RXDATA`. In both cases, do not touch the `spi_transaction_t::tx_buffer` or `spi_transaction_t::rx_buffer` members, because they use the same memory locations as `spi_transaction_t::tx_data` and `spi_transaction_t::rx_data`.

**Transactions with Integers Other Than `uint8_t`** An SPI Host reads and writes data into memory byte by byte. By default, data is sent with the most significant bit (MSB) first, as LSB first used in rare cases. If a value less than 8 bits needs to be sent, the bits should be written into memory in the MSB first manner.

For example, if `0b00010` needs to be sent, it should be written into a `uint8_t` variable, and the length for reading should be set to 5 bits. The Device will still receive 8 bits with 3 additional “random” bits, so the reading must be performed correctly.

On top of that, ESP32-C2 is a little-endian chip, which means that the least significant byte of `uint16_t` and `uint32_t` variables is stored at the smallest address. Hence, if `uint16_t` is stored in memory, bits [7:0] are sent first, followed by bits [15:8].

For cases when the data to be transmitted has the size differing from `uint8_t` arrays, the following macros can be used to transform data to the format that can be sent by the SPI driver directly:

- `SPI_SWAP_DATA_TX` for data to be transmitted
- `SPI_SWAP_DATA_RX` for data received

**Notes on Sending Mixed Transactions to the Same Device** To reduce coding complexity, send only one type of transactions (interrupt or polling) to one Device. However, you still can send both interrupt and polling transactions alternately. The notes below explain how to do this.

The polling transactions should be initiated only after all the polling and interrupt transactions are finished.

Since an unfinished polling transaction blocks other transactions, please do not forget to call the function `spi_device_polling_end()` after `spi_device_polling_start()` to allow other transactions or to allow other Devices to use the bus. Remember that if there is no need to switch to other tasks during your polling transaction, you can initiate a transaction with `spi_device_polling_transmit()` so that it will be ended automatically.

In-flight polling transactions are disturbed by the ISR operation to accommodate interrupt transactions. Always make sure that all the interrupt transactions sent to the ISR are finished before you call `spi_device_polling_start()`. To do that, you can keep calling `spi_device_get_trans_result()` until all the transactions are returned.

To have better control of the calling sequence of functions, send mixed transactions to the same Device only within a single task.

### Transfer Speed Considerations

There are three factors limiting the transfer speed:

- Transaction interval

- SPI clock frequency
- Cache miss of SPI functions, including callbacks

The main parameter that determines the transfer speed for large transactions is clock frequency. For multiple small transactions, the transfer speed is mostly determined by the length of transaction intervals.

**Transaction Duration** Transaction duration includes setting up SPI peripheral registers, copying data to FIFOs or setting up DMA links, and the time for SPI transaction.

Interrupt transactions allow appending extra overhead to accommodate the cost of FreeRTOS queues and the time needed for switching between tasks and the ISR.

For **interrupt transactions**, the CPU can switch to other tasks when a transaction is in progress. This saves the CPU time but increases the transaction duration. See [Interrupt Transactions](#). For **polling transactions**, it does not block the task but allows to do polling when the transaction is in progress. For more information, see [Polling Transactions](#).

If DMA is enabled, setting up the linked list requires about 2 us per transaction. When a master is transferring data, it automatically reads the data from the linked list. If DMA is not enabled, the CPU has to write and read each byte from the FIFO by itself. Usually, this is faster than 2 us, but the transaction length is limited to 64 bytes for both write and read.

Typical transaction duration for one byte of data are given below.

- Interrupt Transaction via DMA: 42  $\mu$ s.
- Interrupt Transaction via CPU: 40  $\mu$ s.
- Polling Transaction via DMA: 17  $\mu$ s.
- Polling Transaction via CPU: 15  $\mu$ s.

**SPI Clock Frequency** Transferring each byte takes eight times the clock period  $8/f_{spi}$ .

**Cache Miss** The default config puts only the ISR into the IRAM. Other SPI related functions, including the driver itself and the callback, might suffer from cache misses and will need to wait until the code is read from flash. Select [CONFIG\\_SPI\\_MASTER\\_IN\\_IRAM](#) to put the whole SPI driver into IRAM and put the entire callback(s) and its callee functions into IRAM to prevent cache misses.

For an interrupt transaction, the overall cost is  $20+8n/f_{spi}[MHz]$  [us] for n bytes transferred in one transaction. Hence, the transferring speed is:  $n/(20+8n/f_{spi})$ . An example of transferring speed at 8 MHz clock speed is given in the following table.

Frequency (MHz)	Transaction Interval (us)	Transaction Length (bytes)	Total Time (us)	Total Speed (KBps)
8	25	1	26	38.5
8	25	8	33	242.4
8	25	16	41	490.2
8	25	64	89	719.1
8	25	128	153	836.6

When a transaction length is short, the cost of transaction interval is high. If possible, try to squash several short transactions into one transaction to achieve a higher transfer speed.

Please note that the ISR is disabled during flash operation by default. To keep sending transactions during flash operations, enable [CONFIG\\_SPI\\_MASTER\\_ISR\\_IN\\_IRAM](#) and set [ESP\\_INTR\\_FLAG\\_IRAM](#) in the member [spi\\_bus\\_config\\_t::intr\\_flags](#). In this case, all the transactions queued before starting flash operations will be handled by the ISR in parallel. Also note that the callback of each Device and their callee functions should be in IRAM, or your callback will crash due to cache miss. For more details, see [IRAM-Safe Interrupt Handlers](#).

## Application Example

The code example for using the SPI master half duplex mode to read/write a AT93C46D EEPROM (8-bit mode) can be found in the [peripherals/spi\\_master/hd\\_eeprom](#) directory of ESP-IDF examples.

## API Reference - SPI Common

### Header File

- [components/hal/include/hal/spi\\_types.h](#)

### Structures

struct **spi\_line\_mode\_t**

Line mode of SPI transaction phases: CMD, ADDR, DOUT/DIN.

#### Public Members

uint8\_t **cmd\_lines**

The line width of command phase, e.g. 2-line-cmd-phase.

uint8\_t **addr\_lines**

The line width of address phase, e.g. 1-line-addr-phase.

uint8\_t **data\_lines**

The line width of data phase, e.g. 4-line-data-phase.

### Enumerations

enum **spi\_host\_device\_t**

Enum with the three SPI peripherals that are software-accessible in it.

*Values:*

enumerator **SPI1\_HOST**

SPI1.

enumerator **SPI2\_HOST**

SPI2.

enumerator **SPI\_HOST\_MAX**

invalid host value

enum **spi\_clock\_source\_t**

*Values:*

enumerator **SPI\_CLK\_APB**

Select APB as the source clock.

enumerator **SPI\_CLK\_XTAL**

Select XTAL as the source clock.

enum **spi\_event\_t**

SPI Events.

*Values:*

enumerator **SPI\_EV\_BUF\_TX**

The buffer has sent data to master.

enumerator **SPI\_EV\_BUF\_RX**

The buffer has received data from master.

enumerator **SPI\_EV\_SEND\_DMA\_READY**

Slave has loaded its TX data buffer to the hardware (DMA).

enumerator **SPI\_EV\_SEND**

Master has received certain number of the data, the number is determined by Master.

enumerator **SPI\_EV\_RECV\_DMA\_READY**

Slave has loaded its RX data buffer to the hardware (DMA).

enumerator **SPI\_EV\_RECV**

Slave has received certain number of data from master, the number is determined by Master.

enumerator **SPI\_EV\_CMD9**

Received CMD9 from master.

enumerator **SPI\_EV\_CMDA**

Received CMDA from master.

enumerator **SPI\_EV\_TRANS**

A transaction has done.

enum **spi\_command\_t**

SPI command.

*Values:*

enumerator **SPI\_CMD\_HD\_WRBUF**

enumerator **SPI\_CMD\_HD\_RDBUF**

enumerator **SPI\_CMD\_HD\_WRDMA**

enumerator **SPI\_CMD\_HD\_RDDMA**

enumerator **SPI\_CMD\_HD\_SEG\_END**

enumerator **SPI\_CMD\_HD\_EN\_QPI**

enumerator `SPI_CMD_HD_WR_END`

enumerator `SPI_CMD_HD_INT0`

enumerator `SPI_CMD_HD_INT1`

enumerator `SPI_CMD_HD_INT2`

### Header File

- [components/driver/include/driver/spi\\_common.h](#)

### Functions

*esp\_err\_t* **spi\_bus\_initialize** (*spi\_host\_device\_t* host\_id, const *spi\_bus\_config\_t* \*bus\_config, *spi\_dma\_chan\_t* dma\_chan)

Initialize a SPI bus.

**Warning:** SPI0/1 is not supported

**Warning:** If a DMA channel is selected, any transmit and receive buffer used should be allocated in DMA-capable memory.

**Warning:** The ISR of SPI is always executed on the core which calls this function. Never starve the ISR on this core or the SPI transactions will not be handled.

#### Parameters

- **host\_id** –SPI peripheral that controls this bus
- **bus\_config** –Pointer to a *spi\_bus\_config\_t* struct specifying how the host should be initialized
- **dma\_chan** -- Selecting a DMA channel for an SPI bus allows transactions on the bus with size only limited by the amount of internal memory.
  - Selecting `SPI_DMA_DISABLED` limits the size of transactions.
  - Set to `SPI_DMA_DISABLED` if only the SPI flash uses this bus.
  - Set to `SPI_DMA_CH_AUTO` to let the driver to allocate the DMA channel.

#### Returns

- `ESP_ERR_INVALID_ARG` if configuration is invalid
- `ESP_ERR_INVALID_STATE` if host already is in use
- `ESP_ERR_NOT_FOUND` if there is no available DMA channel
- `ESP_ERR_NO_MEM` if out of memory
- `ESP_OK` on success

*esp\_err\_t* **spi\_bus\_free** (*spi\_host\_device\_t* host\_id)

Free a SPI bus.

**Warning:** In order for this to succeed, all devices have to be removed first.

**Parameters** **host\_id** –SPI peripheral to free

**Returns**

- ESP\_ERR\_INVALID\_ARG if parameter is invalid
- ESP\_ERR\_INVALID\_STATE if bus hasn't been initialized before, or not all devices on the bus are freed
- ESP\_OK on success

## Structures

struct **spi\_bus\_config\_t**

This is a configuration structure for a SPI bus.

You can use this structure to specify the GPIO pins of the bus. Normally, the driver will use the GPIO matrix to route the signals. An exception is made when all signals either can be routed through the IO\_MUX or are -1. In that case, the IO\_MUX is used, allowing for >40MHz speeds.

---

**Note:** Be advised that the slave driver does not use the quadwp/quadhd lines and fields in *spi\_bus\_config\_t* referring to these lines will be ignored and can thus safely be left uninitialized.

---

## Public Members

int **mosi\_io\_num**

GPIO pin for Master Out Slave In (=spi\_d) signal, or -1 if not used.

int **data0\_io\_num**

GPIO pin for spi data0 signal in quad/octal mode, or -1 if not used.

int **miso\_io\_num**

GPIO pin for Master In Slave Out (=spi\_q) signal, or -1 if not used.

int **data1\_io\_num**

GPIO pin for spi data1 signal in quad/octal mode, or -1 if not used.

int **sclk\_io\_num**

GPIO pin for SPI Clock signal, or -1 if not used.

int **quadwp\_io\_num**

GPIO pin for WP (Write Protect) signal, or -1 if not used.

int **data2\_io\_num**

GPIO pin for spi data2 signal in quad/octal mode, or -1 if not used.

int **quadhd\_io\_num**

GPIO pin for HD (Hold) signal, or -1 if not used.

int **data3\_io\_num**

GPIO pin for spi data3 signal in quad/octal mode, or -1 if not used.

int **data4\_io\_num**

GPIO pin for spi data4 signal in octal mode, or -1 if not used.

int **data5\_io\_num**

GPIO pin for spi data5 signal in octal mode, or -1 if not used.

int **data6\_io\_num**

GPIO pin for spi data6 signal in octal mode, or -1 if not used.

int **data7\_io\_num**

GPIO pin for spi data7 signal in octal mode, or -1 if not used.

int **max\_transfer\_sz**

Maximum transfer size, in bytes. Defaults to 4092 if 0 when DMA enabled, or to `SOC_SPI_MAXIMUM_BUFFER_SIZE` if DMA is disabled.

uint32\_t **flags**

Abilities of bus to be checked by the driver. Or-ed value of `SPICOMMON_BUSFLAG_*` flags.

int **intr\_flags**

Interrupt flag for the bus to set the priority, and IRAM attribute, see `esp_intr_alloc.h`. Note that the `EDGE`, `INTRDISABLED` attribute are ignored by the driver. Note that if `ESP_INTR_FLAG_IRAM` is set, ALL the callbacks of the driver, and their callee functions, should be put in the IRAM.

## Macros

**SPI\_MAX\_DMA\_LEN**

**SPI\_SWAP\_DATA\_TX** (DATA, LEN)

Transform unsigned integer of length  $\leq 32$  bits to the format which can be sent by the SPI driver directly.

E.g. to send 9 bits of data, you can:

```
uint16_t data = SPI_SWAP_DATA_TX(0x145, 9);
```

Then points `tx_buffer` to `&data`.

### Parameters

- **DATA** –Data to be sent, can be `uint8_t`, `uint16_t` or `uint32_t`.
- **LEN** –Length of data to be sent, since the SPI peripheral sends from the MSB, this helps to shift the data to the MSB.

**SPI\_SWAP\_DATA\_RX** (DATA, LEN)

Transform received data of length  $\leq 32$  bits to the format of an unsigned integer.

E.g. to transform the data of 15 bits placed in a 4-byte array to integer:

```
uint16_t data = SPI_SWAP_DATA_RX(*(uint32_t*)t->rx_data, 15);
```

### Parameters

- **DATA** –Data to be rearranged, can be `uint8_t`, `uint16_t` or `uint32_t`.
- **LEN** –Length of data received, since the SPI peripheral writes from the MSB, this helps to shift the data to the LSB.

**SPICOMMON\_BUSFLAG\_SLAVE**

Initialize I/O in slave mode.

**SPICOMMON\_BUSFLAG\_MASTER**

Initialize I/O in master mode.

**SPICOMMON\_BUSFLAG\_IOMUX\_PINS**

Check using iomux pins. Or indicates the pins are configured through the IO mux rather than GPIO matrix.

**SPICOMMON\_BUSFLAG\_GPIO\_PINS**

Force the signals to be routed through GPIO matrix. Or indicates the pins are routed through the GPIO matrix.

**SPICOMMON\_BUSFLAG\_SCLK**

Check existing of SCLK pin. Or indicates CLK line initialized.

**SPICOMMON\_BUSFLAG\_MISO**

Check existing of MISO pin. Or indicates MISO line initialized.

**SPICOMMON\_BUSFLAG\_MOSI**

Check existing of MOSI pin. Or indicates MOSI line initialized.

**SPICOMMON\_BUSFLAG\_DUAL**

Check MOSI and MISO pins can output. Or indicates bus able to work under DIO mode.

**SPICOMMON\_BUSFLAG\_WPHD**

Check existing of WP and HD pins. Or indicates WP & HD pins initialized.

**SPICOMMON\_BUSFLAG\_QUAD**

Check existing of MOSI/MISO/WP/HD pins as output. Or indicates bus able to work under QIO mode.

**SPICOMMON\_BUSFLAG\_IO4\_IO7**

Check existing of IO4~IO7 pins. Or indicates IO4~IO7 pins initialized.

**SPICOMMON\_BUSFLAG\_OCTAL**

Check existing of MOSI/MISO/WP/HD/SPIIO4/SPIIO5/SPIIO6/SPIIO7 pins as output. Or indicates bus able to work under octal mode.

**SPICOMMON\_BUSFLAG\_NATIVE\_PINS****Type Definitions**

```
typedef spi_common_dma_t spi_dma_chan_t
```

**Enumerations**

```
enum spi_common_dma_t
```

SPI DMA channels.

*Values:*

```
enumerator SPI_DMA_DISABLED
```

Do not enable DMA for SPI.

enumerator **SPI\_DMA\_CH\_AUTO**

Enable DMA, channel is automatically selected by driver.

## API Reference - SPI Master

### Header File

- [components/driver/include/driver/spi\\_master.h](#)

### Functions

*esp\_err\_t* **spi\_bus\_add\_device** (*spi\_host\_device\_t* host\_id, const *spi\_device\_interface\_config\_t* \*dev\_config, *spi\_device\_handle\_t* \*handle)

Allocate a device on a SPI bus.

This initializes the internal structures for a device, plus allocates a CS pin on the indicated SPI master peripheral and routes it to the indicated GPIO. All SPI master devices have three CS pins and can thus control up to three devices.

---

**Note:** While in general, speeds up to 80MHz on the dedicated SPI pins and 40MHz on GPIO-matrix-routed pins are supported, full-duplex transfers routed over the GPIO matrix only support speeds up to 26MHz.

---

#### Parameters

- **host\_id** –SPI peripheral to allocate device on
- **dev\_config** –SPI interface protocol config for the device
- **handle** –Pointer to variable to hold the device handle

#### Returns

- **ESP\_ERR\_INVALID\_ARG** if parameter is invalid
- **ESP\_ERR\_NOT\_FOUND** if host doesn't have any free CS slots
- **ESP\_ERR\_NO\_MEM** if out of memory
- **ESP\_OK** on success

*esp\_err\_t* **spi\_bus\_remove\_device** (*spi\_device\_handle\_t* handle)

Remove a device from the SPI bus.

**Parameters** **handle** –Device handle to free

#### Returns

- **ESP\_ERR\_INVALID\_ARG** if parameter is invalid
- **ESP\_ERR\_INVALID\_STATE** if device already is freed
- **ESP\_OK** on success

*esp\_err\_t* **spi\_device\_queue\_trans** (*spi\_device\_handle\_t* handle, *spi\_transaction\_t* \*trans\_desc, TickType\_t ticks\_to\_wait)

Queue a SPI transaction for interrupt transaction execution. Get the result by `spi_device_get_trans_result`.

---

**Note:** Normally a device cannot start (queue) polling and interrupt transactions simultaneously.

---

#### Parameters

- **handle** –Device handle obtained using `spi_host_add_dev`
- **trans\_desc** –Description of transaction to execute
- **ticks\_to\_wait** –Ticks to wait until there's room in the queue; use `portMAX_DELAY` to never time out.

#### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid. This can happen if `SPI_TRANS_CS_KEEP_ACTIVE` flag is specified while the bus was not acquired (`spi_device_acquire_bus()` should be called first)
- `ESP_ERR_TIMEOUT` if there was no room in the queue before `ticks_to_wait` expired
- `ESP_ERR_NO_MEM` if allocating DMA-capable temporary buffer failed
- `ESP_ERR_INVALID_STATE` if previous transactions are not finished
- `ESP_OK` on success

`esp_err_t spi_device_get_trans_result` (*spi\_device\_handle\_t* handle, *spi\_transaction\_t* \*\*trans\_desc, TickType\_t ticks\_to\_wait)

Get the result of a SPI transaction queued earlier by `spi_device_queue_trans`.

This routine will wait until a transaction to the given device successfully completed. It will then return the description of the completed transaction so software can inspect the result and e.g. free the memory or re-use the buffers.

#### Parameters

- **handle** –Device handle obtained using `spi_host_add_dev`
- **trans\_desc** –Pointer to variable able to contain a pointer to the description of the transaction that is executed. The descriptor should not be modified until the descriptor is returned by `spi_device_get_trans_result`.
- **ticks\_to\_wait** –Ticks to wait until there's a returned item; use `portMAX_DELAY` to never time out.

#### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_ERR_TIMEOUT` if there was no completed transaction before `ticks_to_wait` expired
- `ESP_OK` on success

`esp_err_t spi_device_transmit` (*spi\_device\_handle\_t* handle, *spi\_transaction\_t* \*trans\_desc)

Send a SPI transaction, wait for it to complete, and return the result.

This function is the equivalent of calling `spi_device_queue_trans()` followed by `spi_device_get_trans_result()`. Do not use this when there is still a transaction separately queued (started) from `spi_device_queue_trans()` or `polling_start/transmit` that hasn't been finalized.

---

**Note:** This function is not thread safe when multiple tasks access the same SPI device. Normally a device cannot start (queue) polling and interrupt transactions simultaneously.

---

#### Parameters

- **handle** –Device handle obtained using `spi_host_add_dev`
- **trans\_desc** –Description of transaction to execute

#### Returns

- `ESP_ERR_INVALID_ARG` if parameter is invalid
- `ESP_OK` on success

`esp_err_t spi_device_polling_start` (*spi\_device\_handle\_t* handle, *spi\_transaction\_t* \*trans\_desc, TickType\_t ticks\_to\_wait)

Immediately start a polling transaction.

---

**Note:** Normally a device cannot start (queue) polling and interrupt transactions simultaneously. Moreover, a device cannot start a new polling transaction if another polling transaction is not finished.

---

#### Parameters

- **handle** –Device handle obtained using `spi_host_add_dev`
- **trans\_desc** –Description of transaction to execute

- **ticks\_to\_wait** –Ticks to wait until there's room in the queue; currently only portMAX\_DELAY is supported.

**Returns**

- ESP\_ERR\_INVALID\_ARG if parameter is invalid. This can happen if SPI\_TRANS\_CS\_KEEP\_ACTIVE flag is specified while the bus was not acquired (`spi_device_acquire_bus()` should be called first)
- ESP\_ERR\_TIMEOUT if the device cannot get control of the bus before `ticks_to_wait` expired
- ESP\_ERR\_NO\_MEM if allocating DMA-capable temporary buffer failed
- ESP\_ERR\_INVALID\_STATE if previous transactions are not finished
- ESP\_OK on success

*esp\_err\_t* **spi\_device\_polling\_end** (*spi\_device\_handle\_t* handle, TickType\_t ticks\_to\_wait)

Poll until the polling transaction ends.

This routine will not return until the transaction to the given device has successfully completed. The task is not blocked, but actively busy-spins for the transaction to be completed.

**Parameters**

- **handle** –Device handle obtained using `spi_host_add_dev`
- **ticks\_to\_wait** –Ticks to wait until there's a returned item; use portMAX\_DELAY to never time out.

**Returns**

- ESP\_ERR\_INVALID\_ARG if parameter is invalid
- ESP\_ERR\_TIMEOUT if the transaction cannot finish before `ticks_to_wait` expired
- ESP\_OK on success

*esp\_err\_t* **spi\_device\_polling\_transmit** (*spi\_device\_handle\_t* handle, *spi\_transaction\_t* \*trans\_desc)

Send a polling transaction, wait for it to complete, and return the result.

This function is the equivalent of calling `spi_device_polling_start()` followed by `spi_device_polling_end()`. Do not use this when there is still a transaction that hasn't been finalized.

---

**Note:** This function is not thread safe when multiple tasks access the same SPI device. Normally a device cannot start (queue) polling and interrupt transactions simultaneously.

---

**Parameters**

- **handle** –Device handle obtained using `spi_host_add_dev`
- **trans\_desc** –Description of transaction to execute

**Returns**

- ESP\_ERR\_INVALID\_ARG if parameter is invalid
- ESP\_ERR\_TIMEOUT if the device cannot get control of the bus
- ESP\_ERR\_NO\_MEM if allocating DMA-capable temporary buffer failed
- ESP\_ERR\_INVALID\_STATE if previous transactions of same device are not finished
- ESP\_OK on success

*esp\_err\_t* **spi\_device\_acquire\_bus** (*spi\_device\_handle\_t* device, TickType\_t wait)

Occupy the SPI bus for a device to do continuous transactions.

Transactions to all other devices will be put off until `spi_device_release_bus` is called.

---

**Note:** The function will wait until all the existing transactions have been sent.

---

**Parameters**

- **device** –The device to occupy the bus.
- **wait** –Time to wait before the the bus is occupied by the device. Currently MUST set to portMAX\_DELAY.

**Returns**

- `ESP_ERR_INVALID_ARG` : `wait` is not set to `portMAX_DELAY`.
- `ESP_OK` : Success.

void **spi\_device\_release\_bus** (*spi\_device\_handle\_t* dev)

Release the SPI bus occupied by the device. All other devices can start sending transactions.

**Parameters** `dev` –The device to release the bus.

int **spi\_get\_actual\_clock** (int fapb, int hz, int duty\_cycle)

Calculate the working frequency that is most close to desired frequency.

**Parameters**

- **fapb** –The frequency of apb clock, should be `APB_CLK_FREQ`.
- **hz** –Desired working frequency
- **duty\_cycle** –Duty cycle of the spi clock

**Returns** Actual working frequency that most fit.

void **spi\_get\_timing** (bool gpio\_is\_used, int input\_delay\_ns, int eff\_clk, int \*dummy\_o, int \*cycles\_remain\_o)

Calculate the timing settings of specified frequency and settings.

---

**Note:** If `**dummy_o` is not zero, it means dummy bits should be applied in half duplex mode, and full duplex mode may not work.

---

**Parameters**

- **gpio\_is\_used** –True if using GPIO matrix, or False if iomux pins are used.
- **input\_delay\_ns** –Input delay from SCLK launch edge to MISO data valid.
- **eff\_clk** –Effective clock frequency (in Hz) from `spi_get_actual_clock()`.
- **dummy\_o** –Address of dummy bits used output. Set to NULL if not needed.
- **cycles\_remain\_o** –Address of cycles remaining (after dummy bits are used) output.
  - -1 If too many cycles remaining, suggest to compensate half a clock.
  - 0 If no remaining cycles or dummy bits are not used.
  - positive value: cycles suggest to compensate.

int **spi\_get\_freq\_limit** (bool gpio\_is\_used, int input\_delay\_ns)

Get the frequency limit of current configurations. SPI master working at this limit is OK, while above the limit, full duplex mode and DMA will not work, and dummy bits will be applied in the half duplex mode.

**Parameters**

- **gpio\_is\_used** –True if using GPIO matrix, or False if native pins are used.
- **input\_delay\_ns** –Input delay from SCLK launch edge to MISO data valid.

**Returns** Frequency limit of current configurations.

*esp\_err\_t* **spi\_bus\_get\_max\_transaction\_len** (*spi\_host\_device\_t* host\_id, size\_t \*max\_bytes)

Get max length (in bytes) of one transaction.

**Parameters**

- **host\_id** –SPI peripheral
- **max\_bytes** –[out] Max length of one transaction, in bytes

**Returns**

- `ESP_OK`: On success
- `ESP_ERR_INVALID_ARG`: Invalid argument

**Structures**

struct **spi\_device\_interface\_config\_t**

This is a configuration for a SPI slave device that is connected to one of the SPI buses.

## Public Members

### uint8\_t **command\_bits**

Default amount of bits in command phase (0-16), used when `SPI_TRANS_VARIABLE_CMD` is not used, otherwise ignored.

### uint8\_t **address\_bits**

Default amount of bits in address phase (0-64), used when `SPI_TRANS_VARIABLE_ADDR` is not used, otherwise ignored.

### uint8\_t **dummy\_bits**

Amount of dummy bits to insert between address and data phase.

### uint8\_t **mode**

SPI mode, representing a pair of (CPOL, CPHA) configuration:

- 0: (0, 0)
- 1: (0, 1)
- 2: (1, 0)
- 3: (1, 1)

### uint16\_t **duty\_cycle\_pos**

Duty cycle of positive clock, in 1/256th increments (128 = 50%/50% duty). Setting this to 0 (=not setting it) is equivalent to setting this to 128.

### uint16\_t **cs\_ena\_pretrans**

Amount of SPI bit-cycles the cs should be activated before the transmission (0-16). This only works on half-duplex transactions.

### uint8\_t **cs\_ena\_posttrans**

Amount of SPI bit-cycles the cs should stay active after the transmission (0-16)

### int **clock\_speed\_hz**

Clock speed, divisors of 80MHz, in Hz. See `SPI_MASTER_FREQ_*`.

### int **input\_delay\_ns**

Maximum data valid time of slave. The time required between SCLK and MISO valid, including the possible clock delay from slave to master. The driver uses this value to give an extra delay before the MISO is ready on the line. Leave at 0 unless you know you need a delay. For better timing performance at high frequency (over 8MHz), it's suggested to have the right value.

### int **spics\_io\_num**

CS GPIO pin for this device, or -1 if not used.

### uint32\_t **flags**

Bitwise OR of `SPI_DEVICE_*` flags.

### int **queue\_size**

Transaction queue size. This sets how many transactions can be 'in the air' (queued using `spi_device_queue_trans` but not yet finished using `spi_device_get_trans_result`) at the same time.

***transaction\_cb\_t pre\_cb***

Callback to be called before a transmission is started.

This callback is called within interrupt context should be in IRAM for best performance, see “Transferring Speed” section in the SPI Master documentation for full details. If not, the callback may crash during flash operation when the driver is initialized with ESP\_INTR\_FLAG\_IRAM.

***transaction\_cb\_t post\_cb***

Callback to be called after a transmission has completed.

This callback is called within interrupt context should be in IRAM for best performance, see “Transferring Speed” section in the SPI Master documentation for full details. If not, the callback may crash during flash operation when the driver is initialized with ESP\_INTR\_FLAG\_IRAM.

**struct spi\_transaction\_t**

This structure describes one SPI transaction. The descriptor should not be modified until the transaction finishes.

**Public Members****uint32\_t flags**

Bitwise OR of SPI\_TRANS\_\* flags.

**uint16\_t cmd**

Command data, of which the length is set in the `command_bits` of *spi\_device\_interface\_config\_t*.

**NOTE: this field, used to be “command” in ESP-IDF 2.1 and before, is re-written to be used in a new way in ESP-IDF 3.0.**

Example: write 0x0123 and `command_bits=12` to send command 0x12, 0x3\_ (in previous version, you may have to write 0x3\_12).

**uint64\_t addr**

Address data, of which the length is set in the `address_bits` of *spi\_device\_interface\_config\_t*.

**NOTE: this field, used to be “address” in ESP-IDF 2.1 and before, is re-written to be used in a new way in ESP-IDF3.0.**

Example: write 0x123400 and `address_bits=24` to send address of 0x12, 0x34, 0x00 (in previous version, you may have to write 0x12340000).

**size\_t length**

Total data length, in bits.

**size\_t rxlength**

Total data length received, should be not greater than `length` in full-duplex mode (0 defaults this to the value of `length`).

**void \*user**

User-defined variable. Can be used to store eg transaction ID.

**const void \*tx\_buffer**

Pointer to transmit buffer, or NULL for no MOSI phase.

uint8\_t **tx\_data**[4]

If SPI\_TRANS\_USE\_TXDATA is set, data set here is sent directly from this variable.

void \***rx\_buffer**

Pointer to receive buffer, or NULL for no MISO phase. Written by 4 bytes-unit if DMA is used.

uint8\_t **rx\_data**[4]

If SPI\_TRANS\_USE\_RXDATA is set, data is received directly to this variable.

struct **spi\_transaction\_ext\_t**

This struct is for SPI transactions which may change their address and command length. Please do set the flags in base to SPI\_TRANS\_VARIABLE\_CMD\_ADR to use the bit length here.

### Public Members

struct *spi\_transaction\_t* **base**

Transaction data, so that pointer to *spi\_transaction\_t* can be converted into *spi\_transaction\_ext\_t*.

uint8\_t **command\_bits**

The command length in this transaction, in bits.

uint8\_t **address\_bits**

The address length in this transaction, in bits.

uint8\_t **dummy\_bits**

The dummy length in this transaction, in bits.

### Macros

**SPI\_MASTER\_FREQ\_8M**

SPI master clock is divided by 80MHz apb clock. Below defines are example frequencies, and are accurate. Be free to specify a random frequency, it will be rounded to closest frequency (to macros below if above 8MHz).  
8MHz

**SPI\_MASTER\_FREQ\_9M**

8.89MHz

**SPI\_MASTER\_FREQ\_10M**

10MHz

**SPI\_MASTER\_FREQ\_11M**

11.43MHz

**SPI\_MASTER\_FREQ\_13M**

13.33MHz

**SPI\_MASTER\_FREQ\_16M**

16MHz

**SPI\_MASTER\_FREQ\_20M**

20MHz

**SPI\_MASTER\_FREQ\_26M**

26.67MHz

**SPI\_MASTER\_FREQ\_40M**

40MHz

**SPI\_MASTER\_FREQ\_80M**

80MHz

**SPI\_DEVICE\_TXBIT\_LSBFIRST**

Transmit command/address/data LSB first instead of the default MSB first.

**SPI\_DEVICE\_RXBIT\_LSBFIRST**

Receive data LSB first instead of the default MSB first.

**SPI\_DEVICE\_BIT\_LSBFIRST**

Transmit and receive LSB first.

**SPI\_DEVICE\_3WIRE**

Use MOSI (=spid) for both sending and receiving data.

**SPI\_DEVICE\_POSITIVE\_CS**

Make CS positive during a transaction instead of negative.

**SPI\_DEVICE\_HALFDUPLEX**

Transmit data before receiving it, instead of simultaneously.

**SPI\_DEVICE\_CLK\_AS\_CS**

Output clock on CS line if CS is active.

**SPI\_DEVICE\_NO\_DUMMY**

There are timing issue when reading at high frequency (the frequency is related to whether iomux pins are used, valid time after slave sees the clock).

- In half-duplex mode, the driver automatically inserts dummy bits before reading phase to fix the timing issue. Set this flag to disable this feature.
- In full-duplex mode, however, the hardware cannot use dummy bits, so there is no way to prevent data being read from getting corrupted. Set this flag to confirm that you' re going to work with output only, or read without dummy bits at your own risk.

**SPI\_DEVICE\_DDRCLK**

**SPI\_TRANS\_MODE\_DIO**

Transmit/receive data in 2-bit mode.

**SPI\_TRANS\_MODE\_QIO**

Transmit/receive data in 4-bit mode.

**SPI\_TRANS\_USE\_RXDATA**

Receive into rx\_data member of *spi\_transaction\_t* instead into memory at rx\_buffer.

**SPI\_TRANS\_USE\_TXDATA**

Transmit tx\_data member of *spi\_transaction\_t* instead of data at tx\_buffer. Do not set tx\_buffer when using this.

**SPI\_TRANS\_MODE\_DIOQIO\_ADDR**

Also transmit address in mode selected by SPI\_MODE\_DIO/SPI\_MODE\_QIO.

**SPI\_TRANS\_VARIABLE\_CMD**

Use the command\_bits in *spi\_transaction\_ext\_t* rather than default value in *spi\_device\_interface\_config\_t*.

**SPI\_TRANS\_VARIABLE\_ADDR**

Use the address\_bits in *spi\_transaction\_ext\_t* rather than default value in *spi\_device\_interface\_config\_t*.

**SPI\_TRANS\_VARIABLE\_DUMMY**

Use the dummy\_bits in *spi\_transaction\_ext\_t* rather than default value in *spi\_device\_interface\_config\_t*.

**SPI\_TRANS\_CS\_KEEP\_ACTIVE**

Keep CS active after data transfer.

**SPI\_TRANS\_MULTILINE\_CMD**

The data lines used at command phase is the same as data phase (otherwise, only one data line is used at command phase)

**SPI\_TRANS\_MODE\_OCT**

Transmit/receive data in 8-bit mode.

**SPI\_TRANS\_MULTILINE\_ADDR**

The data lines used at address phase is the same as data phase (otherwise, only one data line is used at address phase)

**Type Definitions**

```
typedef struct spi_transaction_t spi_transaction_t
```

```
typedef void (*transaction_cb_t)(spi_transaction_t *trans)
```

```
typedef struct spi_device_t *spi_device_handle_t
```

Handle for a device on a SPI bus.

**2.6.12 SPI Slave Driver**

SPI Slave driver is a program that controls ESP32-C2's SPI peripherals while they function as slaves.

## Overview of ESP32-C2's SPI peripherals

ESP32-C2 integrates one general purpose SPI controller which can be used as a slave node driven by an off-chip SPI master. The controller is called SPI2 and has an independent signal bus with the same name.

### Terminology

The terms used in relation to the SPI slave driver are given in the table below.

Term	Definition
Host	The SPI controller peripheral external to ESP32-C2 that initiates SPI transmissions over the bus, and acts as an SPI Master.
Device	SPI slave device (general purpose SPI controller). Each Device shares the MOSI, MISO and SCLK signals but is only active on the bus when the Host asserts the Device's individual CS line.
Bus	A signal bus, common to all Devices connected to one Host. In general, a bus includes the following lines: MISO, MOSI, SCLK, one or more CS lines, and, optionally, QUADWP and QUADHD. So Devices are connected to the same lines, with the exception that each Device has its own CS line. Several Devices can also share one CS line if connected in the daisy-chain manner.
MISO	Master In, Slave Out, a.k.a. Q. Data transmission from a Device to Host.
MOSI	Master Out, Slave In, a.k.a. D. Data transmission from a Host to Device.
SCLK	Serial Clock. Oscillating signal generated by a Host that keeps the transmission of data bits in sync.
CS	Chip Select. Allows a Host to select individual Device(s) connected to the bus in order to send or receive data.
QUADWP	Write Protect signal. Only used for 4-bit (qio/qout) transactions.
QUADHD	Hold signal. Only used for 4-bit (qio/qout) transactions.
Assertion	The action of activating a line. The opposite action of returning the line back to inactive (back to idle) is called <i>de-assertion</i> .
Transaction	One instance of a Host asserting a CS line, transferring data to and from a Device, and de-asserting the CS line. Transactions are atomic, which means they can never be interrupted by another transaction.
Launch Edge	Edge of the clock at which the source register <i>launches</i> the signal onto the line.
Latch Edge	Edge of the clock at which the destination register <i>latches in</i> the signal.

### Driver Features

The SPI slave driver allows using the SPI peripherals as full-duplex Devices. The driver can send/receive transactions up to 64 bytes in length, or utilize DMA to send/receive longer transactions. However, there are some *known issues* related to DMA.

### SPI Transactions

A full-duplex SPI transaction begins when the Host asserts the CS line and starts sending out clock pulses on the SCLK line. Every clock pulse, a data bit is shifted from the Host to the Device on the MOSI line and back on the MISO line at the same time. At the end of the transaction, the Host de-asserts the CS line.

The attributes of a transaction are determined by the configuration structure for an SPI peripheral acting as a slave device `spi_slave_interface_config_t`, and transaction configuration structure `spi_slave_transaction_t`.

As not every transaction requires both writing and reading data, you have a choice to configure the `spi_transaction_t` structure for TX only, RX only, or TX and RX transactions. If `spi_slave_transaction_t::rx_buffer` is set to NULL, the read phase will be skipped. If `spi_slave_transaction_t::tx_buffer` is set to NULL, the write phase will be skipped.

**Note:** A Host should not start a transaction before its Device is ready for receiving data. It is recommended to use another GPIO pin for a handshake signal to sync the Devices. For more details, see [Transaction Interval](#).

---

### Driver Usage

- Initialize an SPI peripheral as a Device by calling the function `cpp:func:spi_slave_initialize`. Make sure to set the correct I/O pins in the struct `bus_config`. Set the unused signals to `-1`.
- Before initiating transactions, fill one or more `spi_slave_transaction_t` structs with the transaction parameters required. Either queue all transactions by calling the function `spi_slave_queue_trans()` and, at a later time, query the result by using the function `spi_slave_get_trans_result()`, or handle all requests individually by feeding them into `spi_slave_transmit()`. The latter two functions will be blocked until the Host has initiated and finished a transaction, causing the queued data to be sent and received.
- (Optional) To unload the SPI slave driver, call `spi_slave_free()`.

### Transaction Data and Master/Slave Length Mismatches

Normally, the data that needs to be transferred to or from a Device is read or written to a chunk of memory indicated by the `spi_slave_transaction_t::rx_buffer` and `spi_slave_transaction_t::tx_buffer`. The SPI driver can be configured to use DMA for transfers, in which case these buffers must be allocated in DMA-capable memory using `pvPortMallocCaps(size, MALLOC_CAP_DMA)`.

The amount of data that the driver can read or write to the buffers is limited by `spi_slave_transaction_t::length`. However, this member does not define the actual length of an SPI transaction. A transaction's length is determined by the clock and CS lines driven by the Host. The actual length of the transmission can be read only after a transaction is finished from the member `spi_slave_transaction_t::trans_len`.

If the length of the transmission is greater than the buffer length, only the initial number of bits specified in the `spi_slave_transaction_t::length` member will be sent and received. In this case, `spi_slave_transaction_t::trans_len` is set to `spi_slave_transaction_t::length` instead of the actual transaction length. To meet the actual transaction length requirements, set `spi_slave_transaction_t::length` to a value greater than the maximum `spi_slave_transaction_t::trans_len` expected. If the transmission length is shorter than the buffer length, only the data equal to the length of the buffer will be transmitted.

### Speed and Timing Considerations

**Transaction Interval** The ESP32-C2 SPI slave peripherals are designed as general purpose Devices controlled by a CPU. As opposed to dedicated slaves, CPU-based SPI Devices have a limited number of pre-defined registers. All transactions must be handled by the CPU, which means that the transfers and responses are not real-time, and there might be noticeable latency.

As a solution, a Device's response rate can be doubled by using the functions `spi_slave_queue_trans()` and then `spi_slave_get_trans_result()` instead of using `spi_slave_transmit()`.

You can also configure a GPIO pin through which the Device will signal to the Host when it is ready for a new transaction. A code example of this can be found in [peripherals/spi\\_slave](#).

**SCLK Frequency Requirements** The SPI slaves are designed to operate at up to 60 MHz. The data cannot be recognized or received correctly if the clock is too fast or does not have a 50% duty cycle.

## Restrictions and Known Issues

1. If DMA is enabled, the rx buffer should be word-aligned (starting from a 32-bit boundary and having a length of multiples of 4 bytes). Otherwise, DMA may write incorrectly or not in a boundary aligned manner. The driver reports an error if this condition is not satisfied.  
Also, a Host should write lengths that are multiples of 4 bytes. The data with inappropriate lengths will be discarded.

## Application Example

The code example for Device/Host communication can be found in the [peripherals/spi\\_slave](#) directory of ESP-IDF examples.

## API Reference

### Header File

- [components/driver/include/driver/spi\\_slave.h](#)

### Functions

*esp\_err\_t* **spi\_slave\_initialize** (*spi\_host\_device\_t* host, const *spi\_bus\_config\_t* \*bus\_config, const *spi\_slave\_interface\_config\_t* \*slave\_config, *spi\_dma\_chan\_t* dma\_chan)

Initialize a SPI bus as a slave interface.

**Warning:** SPI0/1 is not supported

**Warning:** If a DMA channel is selected, any transmit and receive buffer used should be allocated in DMA-capable memory.

**Warning:** The ISR of SPI is always executed on the core which calls this function. Never starve the ISR on this core or the SPI transactions will not be handled.

### Parameters

- **host** –SPI peripheral to use as a SPI slave interface
- **bus\_config** –Pointer to a *spi\_bus\_config\_t* struct specifying how the host should be initialized
- **slave\_config** –Pointer to a *spi\_slave\_interface\_config\_t* struct specifying the details for the slave interface
- **dma\_chan** -- Selecting a DMA channel for an SPI bus allows transactions on the bus with size only limited by the amount of internal memory.
  - Selecting SPI\_DMA\_DISABLED limits the size of transactions.
  - Set to SPI\_DMA\_DISABLED if only the SPI flash uses this bus.
  - Set to SPI\_DMA\_CH\_AUTO to let the driver to allocate the DMA channel.

### Returns

- ESP\_ERR\_INVALID\_ARG if configuration is invalid
- ESP\_ERR\_INVALID\_STATE if host already is in use
- ESP\_ERR\_NOT\_FOUND if there is no available DMA channel
- ESP\_ERR\_NO\_MEM if out of memory
- ESP\_OK on success

*esp\_err\_t* **spi\_slave\_free** (*spi\_host\_device\_t* host)

Free a SPI bus claimed as a SPI slave interface.

**Parameters** **host** –SPI peripheral to free

**Returns**

- **ESP\_ERR\_INVALID\_ARG** if parameter is invalid
- **ESP\_ERR\_INVALID\_STATE** if not all devices on the bus are freed
- **ESP\_OK** on success

*esp\_err\_t* **spi\_slave\_queue\_trans** (*spi\_host\_device\_t* host, const *spi\_slave\_transaction\_t* \*trans\_desc, TickType\_t ticks\_to\_wait)

Queue a SPI transaction for execution.

Queues a SPI transaction to be executed by this slave device. (The transaction queue size was specified when the slave device was initialised via `spi_slave_initialize`.) This function may block if the queue is full (depending on the `ticks_to_wait` parameter). No SPI operation is directly initiated by this function, the next queued transaction will happen when the master initiates a SPI transaction by pulling down CS and sending out clock signals.

This function hands over ownership of the buffers in `trans_desc` to the SPI slave driver; the application is not to access this memory until `spi_slave_queue_trans` is called to hand ownership back to the application.

**Parameters**

- **host** –SPI peripheral that is acting as a slave
- **trans\_desc** –Description of transaction to execute. Not const because we may want to write status back into the transaction description.
- **ticks\_to\_wait** –Ticks to wait until there's room in the queue; use `portMAX_DELAY` to never time out.

**Returns**

- **ESP\_ERR\_INVALID\_ARG** if parameter is invalid
- **ESP\_OK** on success

*esp\_err\_t* **spi\_slave\_get\_trans\_result** (*spi\_host\_device\_t* host, *spi\_slave\_transaction\_t* \*\*trans\_desc, TickType\_t ticks\_to\_wait)

Get the result of a SPI transaction queued earlier.

This routine will wait until a transaction to the given device (queued earlier with `spi_slave_queue_trans`) has successfully completed. It will then return the description of the completed transaction so software can inspect the result and e.g. free the memory or re-use the buffers.

It is mandatory to eventually use this function for any transaction queued by `spi_slave_queue_trans`.

**Parameters**

- **host** –SPI peripheral to that is acting as a slave
- **trans\_desc** –[out] Pointer to variable able to contain a pointer to the description of the transaction that is executed
- **ticks\_to\_wait** –Ticks to wait until there's a returned item; use `portMAX_DELAY` to never time out.

**Returns**

- **ESP\_ERR\_INVALID\_ARG** if parameter is invalid
- **ESP\_OK** on success

*esp\_err\_t* **spi\_slave\_transmit** (*spi\_host\_device\_t* host, *spi\_slave\_transaction\_t* \*trans\_desc, TickType\_t ticks\_to\_wait)

Do a SPI transaction.

Essentially does the same as `spi_slave_queue_trans` followed by `spi_slave_get_trans_result`. Do not use this when there is still a transaction queued that hasn't been finalized using `spi_slave_get_trans_result`.

**Parameters**

- **host** –SPI peripheral to that is acting as a slave

- **trans\_desc** –Pointer to variable able to contain a pointer to the description of the transaction that is executed. Not const because we may want to write status back into the transaction description.
- **ticks\_to\_wait** –Ticks to wait until there's a returned item; use portMAX\_DELAY to never time out.

**Returns**

- ESP\_ERR\_INVALID\_ARG if parameter is invalid
- ESP\_OK on success

**Structures**

struct **spi\_slave\_interface\_config\_t**

This is a configuration for a SPI host acting as a slave device.

**Public Members**

int **spics\_io\_num**

CS GPIO pin for this device.

uint32\_t **flags**

Bitwise OR of SPI\_SLAVE\_\* flags.

int **queue\_size**

Transaction queue size. This sets how many transactions can be 'in the air' (queued using spi\_slave\_queue\_trans but not yet finished using spi\_slave\_get\_trans\_result) at the same time.

uint8\_t **mode**

SPI mode, representing a pair of (CPOL, CPHA) configuration:

- 0: (0, 0)
- 1: (0, 1)
- 2: (1, 0)
- 3: (1, 1)

[\*slave\\_transaction\\_cb\\_t post\\_setup\\_cb\*](#)

Callback called after the SPI registers are loaded with new data.

This callback is called within interrupt context should be in IRAM for best performance, see "Transferring Speed" section in the SPI Master documentation for full details. If not, the callback may crash during flash operation when the driver is initialized with ESP\_INTR\_FLAG\_IRAM.

[\*slave\\_transaction\\_cb\\_t post\\_trans\\_cb\*](#)

Callback called after a transaction is done.

This callback is called within interrupt context should be in IRAM for best performance, see "Transferring Speed" section in the SPI Master documentation for full details. If not, the callback may crash during flash operation when the driver is initialized with ESP\_INTR\_FLAG\_IRAM.

struct **spi\_slave\_transaction\_t**

This structure describes one SPI transaction

**Public Members**

size\_t **length**

Total data length, in bits.

size\_t **trans\_len**

Transaction data length, in bits.

const void \***tx\_buffer**

Pointer to transmit buffer, or NULL for no MOSI phase.

void \***rx\_buffer**

Pointer to receive buffer, or NULL for no MISO phase. When the DMA is enabled, must start at WORD boundary (`rx_buffer%4==0`), and has length of a multiple of 4 bytes.

void \***user**

User-defined variable. Can be used to store eg transaction ID.

## Macros

**SPI\_SLAVE\_TXBIT\_LSBFIRST**

Transmit command/address/data LSB first instead of the default MSB first.

**SPI\_SLAVE\_RXBIT\_LSBFIRST**

Receive data LSB first instead of the default MSB first.

**SPI\_SLAVE\_BIT\_LSBFIRST**

Transmit and receive LSB first.

## Type Definitions

```
typedef struct spi_slave_transaction_t spi_slave_transaction_t
```

```
typedef void (*slave_transaction_cb_t)(spi_slave_transaction_t *trans)
```

## 2.6.13 Temperature Sensor

### Introduction

The ESP32-C2 has a built-in sensor used to measure the chip's internal temperature. The temperature sensor module contains an 8-bit Sigma-Delta ADC and a DAC to compensate for the temperature offset.

Due to restrictions of hardware, the sensor has predefined measurement ranges with specific measurement errors. See the table below for details.

predefined range (°C)	error (°C)
50 ~ 125	< 3
20 ~ 100	< 2
-10 ~ 80	< 1
-30 ~ 50	< 2
-40 ~ 20	< 3

**Note:** The temperature sensor is designed primarily to measure the temperature changes inside the chip. The temperature value depends on factors like microcontroller clock frequency or I/O load. Generally, the chip's internal temperature might be higher than the ambient temperature.

---

### Functional Overview

- *Resource Allocation* - covers which parameters should be set up to get a temperature sensor handle and how to recycle the resources when temperature sensor finishes working.
- *Enable and Disable Temperature Sensor* - covers how to enable and disable the temperature sensor.
- *Get Temperature Value* - covers how to get the real-time temperature value.
- *Power Management* - covers how temperature sensor is affected when changing power mode (i.e. light sleep).
- *Thread Safety* - covers how to make the driver to be thread safe.

**Resource Allocation** The ESP32-C2 has just one built-in temperature sensor hardware. The temperature sensor instance is represented by `temperature_sensor_handle_t`, which is also the bond of the context. It would always be the parameter of the temperature APIs with the information of hardware and configurations, so user can just create a pointer of type `temperature_sensor_handle_t` and passing to APIs as needed.

In order to install a built-in temperature sensor instance, the first thing is to evaluate the temperature range in your detection environment (For example: if the testing environment is in a room, the range you evaluate might be 10 °C ~ 30 °C; if the testing in a lamp bulb, the range you evaluate might be 60 °C ~ 110 °C). Based on that, the following configuration structure should be defined in advance: `temperature_sensor_config_t`:

- `range_min`. The minimum value of testing range you have evaluated.
- `range_max`. The maximum value of testing range you have evaluated.

After the ranges are set, the structure could be passed to `temperature_sensor_install()`, which will instantiate the temperature sensor instance and return a handle.

As mentioned above, different measure ranges have different measurement errors. The user doesn't need to care about the measurement error because we have an internal mechanism to choose the minimum error according to the given range.

If the temperature sensor is no longer needed, you need to call `temperature_sensor_uninstall()` to free the temperature sensor resource.

### Creating a Temperature Sensor Handle

- Step1: Evaluate the testing range. In this example, the range is 20 °C ~ 50 °C.
- Step2: Configure the range and obtain a handle

```
temperature_sensor_handle_t temp_handle = NULL;
temperature_sensor_config_t temp_sensor = {
    .range_min = 20,
    .range_max = 50,
};
ESP_ERROR_CHECK(temperature_sensor_install(&temp_sensor, &temp_handle));
```

### Enable and Disable Temperature Sensor

1. Enable the temperature sensor by calling `temperature_sensor_enable()`. The internal temperature sensor circuit will start to work. The driver state will transit from init to enable.
2. To Disable the temperature sensor, please call `temperature_sensor_disable()`.

**Get Temperature Value** After the temperature sensor is enabled by `temperature_sensor_enable()`, user can get the current temperature by calling `temperature_sensor_get_celsius()`.

```
// Enable temperature sensor
ESP_ERROR_CHECK(temperature_sensor_enable(temp_handle));
// Get converted sensor data
float tsens_out;
ESP_ERROR_CHECK(temperature_sensor_get_celsius(temp_handle, &tsens_out));
printf("Temperature in %f °C\n", tsens_out);
// Disable the temperature sensor if it's not needed and save the power
ESP_ERROR_CHECK(temperature_sensor_disable(temp_handle));
```

**Power Management** When power management is enabled (i.e. `CONFIG_PM_ENABLE` is on), temperature sensor will still keep working because it uses XTAL clock (on ESP32-C3) or RTC clock (on ESP32-S2/S3).

**Thread Safety** In temperature sensor we don't add any protection to keep the thread safe. Because from the common usage, temperature sensor should only be called in one task. If you must use this driver in different tasks, please add extra locks to protect it.

### Unexpected Behaviors

1. The value user gets from the chip is usually different from the ambient temperature. It is because the temperature sensor is built inside the chip. To some extent, it measures the temperature of the chip.
2. When installing the temperature sensor, the driver gives a 'the boundary you gave cannot meet the range of internal temperature sensor' error feedback. It is because the built-in temperature sensor has testing limit. The error due to setting `temperature_sensor_config_t`:
  - (1) Totally out of range, like 200 °C ~ 300 °C.
  - (2) Cross the boundary of each predefined measurement. like 40 °C ~ 110 °C.

### Application Example

- Temperature sensor reading example: [peripherals/temp\\_sensor](#).

### API Reference

#### Header File

- `components/driver/include/driver/temperature_sensor.h`

#### Functions

`esp_err_t temperature_sensor_install` (const `temperature_sensor_config_t` \*tsens\_config, `temperature_sensor_handle_t` \*ret\_tsens)

Install temperature sensor driver.

##### Parameters

- `tsens_config` –Pointer to config structure.
- `ret_tsens` –Return the pointer of temperature sensor handle.

##### Returns

- `ESP_OK` if succeed

`esp_err_t temperature_sensor_uninstall` (`temperature_sensor_handle_t` tsens)

Uninstall the temperature sensor driver.

**Parameters** `tsens` –The handle created by `temperature_sensor_install()`.

##### Returns

- `ESP_OK` if succeed.

*esp\_err\_t* **temperature\_sensor\_enable** (*temperature\_sensor\_handle\_t* tsens)

Enable the temperature sensor.

**Parameters** *tsens* –The handle created by `temperature_sensor_install()`.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_STATE if temperature sensor is enabled already.

*esp\_err\_t* **temperature\_sensor\_disable** (*temperature\_sensor\_handle\_t* tsens)

Disable temperature sensor.

**Parameters** *tsens* –The handle created by `temperature_sensor_install()`.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_STATE if temperature sensor is not enabled yet.

*esp\_err\_t* **temperature\_sensor\_get\_celsius** (*temperature\_sensor\_handle\_t* tsens, float \*out\_celsius)

Read temperature sensor data that is converted to degrees Celsius.

---

**Note:** Should not be called from interrupt.

---

**Parameters**

- *tsens* –The handle created by `temperature_sensor_install()`.
- *out\_celsius* –The measure output value.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG invalid arguments
- ESP\_ERR\_INVALID\_STATE Temperature sensor is not enabled yet.
- ESP\_FAIL Parse the sensor data into ambient temperature failed (e.g. out of the range).

## Structures

struct **temperature\_sensor\_config\_t**

Configuration of measurement range for the temperature sensor.

---

**Note:** If you see the log the boundary you gave cannot meet the range of internal temperature sensor. You may need to refer to predefined range listed `doc/api-reference/peripherals/Temperature sensor`.

---

## Public Members

int **range\_min**

the minimum value of the temperature you want to test

int **range\_max**

the maximum value of the temperature you want to test

temperature\_sensor\_clk\_src\_t **clk\_src**

the clock source of the temperature sensor.

## Macros

**TEMPERATURE\_SENSOR\_CONFIG\_DEFAULT** (min, max)

*temperature\_sensor\_config\_t* default constructure

## Type Definitions

```
typedef struct temperature_sensor_obj_t *temperature_sensor_handle_t
```

Type of temperature sensor driver handle.

## 2.6.14 Universal Asynchronous Receiver/Transmitter (UART)

### Overview

A Universal Asynchronous Receiver/Transmitter (UART) is a hardware feature that handles communication (i.e., timing requirements and data framing) using widely-adopted asynchronous serial communication interfaces, such as RS232, RS422, RS485. A UART provides a widely adopted and cheap method to realize full-duplex or half-duplex data exchange among different devices.

The ESP32-C2 chip has two UART controllers (also referred to as port), each featuring an identical set of registers to simplify programming and for more flexibility.

Each UART controller is independently configurable with parameters such as baud rate, data bit length, bit ordering, number of stop bits, parity bit etc. All the controllers are compatible with UART-enabled devices from various manufacturers and can also support Infrared Data Association protocols (IrDA).

### Functional Overview

The following overview describes how to establish communication between an ESP32-C2 and other UART devices using the functions and data types of the UART driver. The overview reflects a typical programming workflow and is broken down into the sections provided below:

1. *Setting Communication Parameters* - Setting baud rate, data bits, stop bits, etc.
2. *Setting Communication Pins* - Assigning pins for connection to a device.
3. *Driver Installation* - Allocating ESP32-C2's resources for the UART driver.
4. *Running UART Communication* - Sending / receiving data
5. *Using Interrupts* - Triggering interrupts on specific communication events
6. *Deleting a Driver* - Freeing allocated resources if a UART communication is no longer required

Steps 1 to 3 comprise the configuration stage. Step 4 is where the UART starts operating. Steps 5 and 6 are optional.

The UART driver's functions identify each of the UART controllers using `uart_port_t`. This identification is needed for all the following function calls.

**Setting Communication Parameters** UART communication parameters can be configured all in a single step or individually in multiple steps.

**Single Step** Call the function `uart_param_config()` and pass to it a `uart_config_t` structure. The `uart_config_t` structure should contain all the required parameters. See the example below.

```
const uart_port_t uart_num = UART_NUM_1;
uart_config_t uart_config = {
    .baud_rate = 115200,
    .data_bits = UART_DATA_8_BITS,
    .parity = UART_PARITY_DISABLE,
    .stop_bits = UART_STOP_BITS_1,
    .flow_ctrl = UART_HW_FLOWCTRL_CTS_RTS,
    .rx_flow_ctrl_thresh = 122,
};
// Configure UART parameters
ESP_ERROR_CHECK(uart_param_config(uart_num, &uart_config));
```

For more information on how to configure the hardware flow control options, please refer to [peripherals/uart/uart\\_echo](#).

**Multiple Steps** Configure specific parameters individually by calling a dedicated function from the table given below. These functions are also useful if re-configuring a single parameter.

Table 4: Functions for Configuring specific parameters individually

Parameter to Configure	Function
Baud rate	<code>uart_set_baudrate()</code>
Number of transmitted bits	<code>uart_set_word_length()</code> selected out of <code>uart_word_length_t</code>
Parity control	<code>uart_set_parity()</code> selected out of <code>uart_parity_t</code>
Number of stop bits	<code>uart_set_stop_bits()</code> selected out of <code>uart_stop_bits_t</code>
Hardware flow control mode	<code>uart_set_hw_flow_ctrl()</code> selected out of <code>uart_hw_flowcontrol_t</code>
Communication mode	<code>uart_set_mode()</code> selected out of <code>uart_mode_t</code>

Each of the above functions has a `_get_` counterpart to check the currently set value. For example, to check the current baud rate value, call `uart_get_baudrate()`.

**Setting Communication Pins** After setting communication parameters, configure the physical GPIO pins to which the other UART device will be connected. For this, call the function `uart_set_pin()` and specify the GPIO pin numbers to which the driver should route the Tx, Rx, RTS, and CTS signals. If you want to keep a currently allocated pin number for a specific signal, pass the macro `UART_PIN_NO_CHANGE`.

The same macro should be specified for pins that will not be used.

```
// Set UART pins (TX: IO4, RX: IO5, RTS: IO18, CTS: IO19)
ESP_ERROR_CHECK(uart_set_pin(UART_NUM_1, 4, 5, 18, 19));
```

**Driver Installation** Once the communication pins are set, install the driver by calling `uart_driver_install()` and specify the following parameters:

- Size of Tx ring buffer
- Size of Rx ring buffer
- Event queue handle and size
- Flags to allocate an interrupt

The function will allocate the required internal resources for the UART driver.

```
// Setup UART buffered IO with event queue
const int uart_buffer_size = (1024 * 2);
QueueHandle_t uart_queue;
// Install UART driver using an event queue here
ESP_ERROR_CHECK(uart_driver_install(UART_NUM_1, uart_buffer_size, \
                                   uart_buffer_size, 10, &uart_queue, 0));
```

Once this step is complete, you can connect the external UART device and check the communication.

**Running UART Communication** Serial communication is controlled by each UART controller's finite state machine (FSM).

The process of sending data involves the following steps:

1. Write data into Tx FIFO buffer
2. FSM serializes the data
3. FSM sends the data out

The process of receiving data is similar, but the steps are reversed:

1. FSM processes an incoming serial stream and parallelizes it
2. FSM writes the data into Rx FIFO buffer
3. Read the data from Rx FIFO buffer

Therefore, an application will be limited to writing and reading data from a respective buffer using `uart_write_bytes()` and `uart_read_bytes()` respectively, and the FSM will do the rest.

**Transmitting** After preparing the data for transmission, call the function `uart_write_bytes()` and pass the data buffer's address and data length to it. The function will copy the data to the Tx ring buffer (either immediately or after enough space is available), and then exit. When there is free space in the Tx FIFO buffer, an interrupt service routine (ISR) moves the data from the Tx ring buffer to the Tx FIFO buffer in the background. The code below demonstrates the use of this function.

```
// Write data to UART.
char* test_str = "This is a test string.\n";
uart_write_bytes(uart_num, (const char*)test_str, strlen(test_str));
```

The function `uart_write_bytes_with_break()` is similar to `uart_write_bytes()` but adds a serial break signal at the end of the transmission. A 'serial break signal' means holding the Tx line low for a period longer than one data frame.

```
// Write data to UART, end with a break signal.
uart_write_bytes_with_break(uart_num, "test break\n", strlen("test break\n"), 100);
```

Another function for writing data to the Tx FIFO buffer is `uart_tx_chars()`. Unlike `uart_write_bytes()`, this function will not block until space is available. Instead, it will write all data which can immediately fit into the hardware Tx FIFO, and then return the number of bytes that were written.

There is a 'companion' function `uart_wait_tx_done()` that monitors the status of the Tx FIFO buffer and returns once it is empty.

```
// Wait for packet to be sent
const uart_port_t uart_num = UART_NUM_1;
ESP_ERROR_CHECK(uart_wait_tx_done(uart_num, 100)); // wait timeout is 100 RTOS_
↳ticks (TickType_t)
```

**Receiving** Once the data is received by the UART and saved in the Rx FIFO buffer, it needs to be retrieved using the function `uart_read_bytes()`. Before reading data, you can check the number of bytes available in the Rx FIFO buffer by calling `uart_get_buffered_data_len()`. An example of using these functions is given below.

```
// Read data from UART.
const uart_port_t uart_num = UART_NUM_1;
uint8_t data[128];
int length = 0;
ESP_ERROR_CHECK(uart_get_buffered_data_len(uart_num, (size_t*)&length));
length = uart_read_bytes(uart_num, data, length, 100);
```

If the data in the Rx FIFO buffer is no longer needed, you can clear the buffer by calling `uart_flush()`.

**Software Flow Control** If the hardware flow control is disabled, you can manually set the RTS and DTR signal levels by using the functions `uart_set_rts()` and `uart_set_dtr()` respectively.

**Communication Mode Selection** The UART controller supports a number of communication modes. A mode can be selected using the function `uart_set_mode()`. Once a specific mode is selected, the UART driver will handle the behavior of a connected UART device accordingly. As an example, it can control the RS485 driver chip using the RTS line to allow half-duplex RS485 communication.

```
// Setup UART in rs485 half duplex mode
ESP_ERROR_CHECK(uart_set_mode(uart_num, UART_MODE_RS485_HALF_DUPLEX));
```

**Using Interrupts** There are many interrupts that can be generated following specific UART states or detected errors. The full list of available interrupts is provided in *ESP32-C2 Technical Reference Manual > UART Controller (UART) > UART Interrupts* and *UHCI Interrupts* [PDF]. You can enable or disable specific interrupts by calling `uart_enable_intr_mask()` or `uart_disable_intr_mask()` respectively.

The `uart_driver_install()` function installs the driver's internal interrupt handler to manage the Tx and Rx ring buffers and provides high-level API functions like events (see below).

The API provides a convenient way to handle specific interrupts discussed in this document by wrapping them into dedicated functions:

- **Event detection:** There are several events defined in `uart_event_type_t` that may be reported to a user application using the FreeRTOS queue functionality. You can enable this functionality when calling `uart_driver_install()` described in *Driver Installation*. An example of using Event detection can be found in `peripherals/uart/uart_events`.
- **FIFO space threshold or transmission timeout reached:** The Tx and Rx FIFO buffers can trigger an interrupt when they are filled with a specific number of characters, or on a timeout of sending or receiving data. To use these interrupts, do the following:
  - Configure respective threshold values of the buffer length and timeout by entering them in the structure `uart_intr_config_t` and calling `uart_intr_config()`
  - Enable the interrupts using the functions `uart_enable_tx_intr()` and `uart_enable_rx_intr()`
  - Disable these interrupts using the corresponding functions `uart_disable_tx_intr()` or `uart_disable_rx_intr()`
- **Pattern detection:** An interrupt triggered on detecting a 'pattern' of the same character being received/sent repeatedly for a number of times. This functionality is demonstrated in the example `peripherals/uart/uart_events`. It can be used, e.g., to detect a command string followed by a specific number of identical characters (the 'pattern') added at the end of the command string. The following functions are available:
  - Configure and enable this interrupt using `uart_enable_pattern_det_baud_intr()`
  - Disable the interrupt using `uart_disable_pattern_det_intr()`

**Macros** The API also defines several macros. For example, `UART_FIFO_LEN` defines the length of hardware FIFO buffers; `UART_BITRATE_MAX` gives the maximum baud rate supported by the UART controllers, etc.

**Deleting a Driver** If the communication established with `uart_driver_install()` is no longer required, the driver can be removed to free allocated resources by calling `uart_driver_delete()`.

## Overview of RS485 specific communication options

**Note:** The following section will use `[UART_REGISTER_NAME].[UART_FIELD_BIT]` to refer to UART register fields/bits. For more information on a specific option bit, see *ESP32-C2 Technical Reference Manual > UART Controller (UART) > Register Summary* [PDF]. Use the register name to navigate to the register description and then find the field/bit.

- `UART_RS485_CONF_REG.UART_RS485_EN`: setting this bit enables RS485 communication mode support.
- `UART_RS485_CONF_REG.UART_RS485TX_RX_EN`: if this bit is set, the transmitter's output signal loops back to the receiver's input signal.
- `UART_RS485_CONF_REG.UART_RS485RXBY_TX_EN`: if this bit is set, the transmitter will still be sending data if the receiver is busy (remove collisions automatically by hardware).

The ESP32-C2's RS485 UART hardware can detect signal collisions during transmission of a datagram and generate the interrupt `UART_RS485_CLASH_INT` if this interrupt is enabled. The term collision means that a transmitted datagram is not equal to the one received on the other end. Data collisions are usually associated with the presence of other active devices on the bus or might occur due to bus errors.

(continued from previous page)

This circuit does not allow for collision detection. It suppresses the null bytes that the hardware receives when the bit `UART_RS485_CONF_REG.UART_RS485TX_RX_EN` is set. The bit `UART_RS485_CONF_REG.UART_RS485RXBY_TX_EN` is not applicable in this case.

### Circuit C: Auto Switching Transmitter/Receiver

This galvanically isolated circuit does not require RTS pin control by a software application or driver because it controls the transceiver direction automatically. However, it requires suppressing null bytes during transmission by setting `UART_RS485_CONF_REG.UART_RS485RXBY_TX_EN` to 1 and `UART_RS485_CONF_REG.UART_RS485TX_RX_EN` to 0. This setup can work in any RS485 UART mode or even in `UART_MODE_UART`.

### Application Examples

The table below describes the code examples available in the directory [peripherals/uart/](#).

Code Example	Description
<a href="#">peripherals/uart/uart_echo</a>	Configuring UART settings, installing the UART driver, and reading/writing over the UART1 interface.
<a href="#">peripherals/uart/uart_events</a>	Reporting various communication events, using pattern detection interrupts.
<a href="#">peripherals/uart/uart_async_rxtxtasks</a>	Transmitting and receiving data in two separate FreeRTOS tasks over the same UART.
<a href="#">peripherals/uart/uart_select</a>	Using synchronous I/O multiplexing for UART file descriptors.
<a href="#">peripherals/uart/uart_echo_rs485</a>	Setting up UART driver to communicate over RS485 interface in half-duplex mode. This example is similar to <a href="#">peripherals/uart/uart_echo</a> but allows communication through an RS485 interface chip connected to ESP32-C2 pins.
<a href="#">peripherals/uart/nmea0183_parser</a>	Obtaining GPS information by parsing NMEA0183 statements received from GPS via the UART peripheral.

## API Reference

### Header File

- `components/driver/include/driver/uart.h`

### Functions

*esp\_err\_t* **uart\_driver\_install** (*uart\_port\_t* uart\_num, int rx\_buffer\_size, int tx\_buffer\_size, int queue\_size, *QueueHandle\_t* \*uart\_queue, int intr\_alloc\_flags)

Install UART driver and set the UART to the default configuration.

UART ISR handler will be attached to the same CPU core that this function is running on.

---

**Note:** Rx\_buffer\_size should be greater than UART\_FIFO\_LEN. Tx\_buffer\_size should be either zero or greater than UART\_FIFO\_LEN.

---

#### Parameters

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **rx\_buffer\_size** –UART RX ring buffer size.
- **tx\_buffer\_size** –UART TX ring buffer size. If set to zero, driver will not use TX buffer, TX function will block task until all data have been sent out.
- **queue\_size** –UART event queue size/depth.
- **uart\_queue** –UART event queue handle (out param). On success, a new queue handle is written here to provide access to UART events. If set to NULL, driver will not use an event queue.
- **intr\_alloc\_flags** –Flags used to allocate the interrupt. One or multiple (ORred) ESP\_INTR\_FLAG\_\* values. See esp\_intr\_alloc.h for more info. Do not set ESP\_INTR\_FLAG\_IRAM here (the driver's ISR handler is not located in IRAM)

#### Returns

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_driver\_delete** (*uart\_port\_t* uart\_num)

Uninstall UART driver.

**Parameters** **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

#### Returns

- ESP\_OK Success
- ESP\_FAIL Parameter error

bool **uart\_is\_driver\_installed** (*uart\_port\_t* uart\_num)

Checks whether the driver is installed or not.

**Parameters** **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

#### Returns

- true driver is installed
- false driver is not installed

*esp\_err\_t* **uart\_set\_word\_length** (*uart\_port\_t* uart\_num, *uart\_word\_length\_t* data\_bit)

Set UART data bits.

#### Parameters

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **data\_bit** –UART data bits

#### Returns

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_get\_word\_length** (*uart\_port\_t* uart\_num, *uart\_word\_length\_t* \*data\_bit)

Get the UART data bit configuration.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **data\_bit** –Pointer to accept value of UART data bits.

**Returns**

- ESP\_FAIL Parameter error
- ESP\_OK Success, result will be put in (\*data\_bit)

*esp\_err\_t* **uart\_set\_stop\_bits** (*uart\_port\_t* uart\_num, *uart\_stop\_bits\_t* stop\_bits)

Set UART stop bits.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **stop\_bits** –UART stop bits

**Returns**

- ESP\_OK Success
- ESP\_FAIL Fail

*esp\_err\_t* **uart\_get\_stop\_bits** (*uart\_port\_t* uart\_num, *uart\_stop\_bits\_t* \*stop\_bits)

Get the UART stop bit configuration.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **stop\_bits** –Pointer to accept value of UART stop bits.

**Returns**

- ESP\_FAIL Parameter error
- ESP\_OK Success, result will be put in (\*stop\_bit)

*esp\_err\_t* **uart\_set\_parity** (*uart\_port\_t* uart\_num, *uart\_parity\_t* parity\_mode)

Set UART parity mode.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **parity\_mode** –the enum of uart parity configuration

**Returns**

- ESP\_FAIL Parameter error
- ESP\_OK Success

*esp\_err\_t* **uart\_get\_parity** (*uart\_port\_t* uart\_num, *uart\_parity\_t* \*parity\_mode)

Get the UART parity mode configuration.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **parity\_mode** –Pointer to accept value of UART parity mode.

**Returns**

- ESP\_FAIL Parameter error
- ESP\_OK Success, result will be put in (\*parity\_mode)

*esp\_err\_t* **uart\_get\_sclk\_freq** (*uart\_sclk\_t* sclk, uint32\_t \*out\_freq\_hz)

Get the frequency of a clock source for the UART.

**Parameters**

- **sclk** –Clock source
- **out\_freq\_hz** –[out] Output of frequency, in Hz

**Returns**

- ESP\_ERR\_INVALID\_ARG: if the clock source is not supported
- otherwise ESP\_OK

*esp\_err\_t* **uart\_set\_baudrate** (*uart\_port\_t* uart\_num, uint32\_t baudrate)

Set UART baud rate.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **baudrate** –UART baud rate.

**Returns**

- ESP\_FAIL Parameter error
- ESP\_OK Success

*esp\_err\_t* **uart\_get\_baudrate** (*uart\_port\_t* uart\_num, uint32\_t \*baudrate)

Get the UART baud rate configuration.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **baudrate** –Pointer to accept value of UART baud rate

**Returns**

- ESP\_FAIL Parameter error
- ESP\_OK Success, result will be put in (\*baudrate)

*esp\_err\_t* **uart\_set\_line\_inverse** (*uart\_port\_t* uart\_num, uint32\_t inverse\_mask)

Set UART line inverse mode.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **inverse\_mask** –Choose the wires that need to be inverted. Using the ORred mask of `uart_signal_inv_t`

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_set\_hw\_flow\_ctrl** (*uart\_port\_t* uart\_num, *uart\_hw\_flowcontrol\_t* flow\_ctrl, uint8\_t rx\_thresh)

Set hardware flow control.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **flow\_ctrl** –Hardware flow control mode
- **rx\_thresh** –Threshold of Hardware RX flow control (0 ~ UART\_FIFO\_LEN). Only when UART\_HW\_FLOWCTRL\_RTS is set, will the rx\_thresh value be set.

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_set\_sw\_flow\_ctrl** (*uart\_port\_t* uart\_num, bool enable, uint8\_t rx\_thresh\_xon, uint8\_t rx\_thresh\_xoff)

Set software flow control.

**Parameters**

- **uart\_num** –UART\_NUM\_0, UART\_NUM\_1 or UART\_NUM\_2
- **enable** –switch on or off
- **rx\_thresh\_xon** –low water mark
- **rx\_thresh\_xoff** –high water mark

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_get\_hw\_flow\_ctrl** (*uart\_port\_t* uart\_num, *uart\_hw\_flowcontrol\_t* \*flow\_ctrl)

Get the UART hardware flow control configuration.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **flow\_ctrl** –Option for different flow control mode.

**Returns**

- ESP\_FAIL Parameter error

- ESP\_OK Success, result will be put in (\*flow\_ctrl)

*esp\_err\_t* **uart\_clear\_intr\_status** (*uart\_port\_t* uart\_num, uint32\_t clr\_mask)

Clear UART interrupt status.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **clr\_mask** –Bit mask of the interrupt status to be cleared.

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_enable\_intr\_mask** (*uart\_port\_t* uart\_num, uint32\_t enable\_mask)

Set UART interrupt enable.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **enable\_mask** –Bit mask of the enable bits.

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_disable\_intr\_mask** (*uart\_port\_t* uart\_num, uint32\_t disable\_mask)

Clear UART interrupt enable bits.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **disable\_mask** –Bit mask of the disable bits.

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_enable\_rx\_intr** (*uart\_port\_t* uart\_num)

Enable UART RX interrupt (RX\_FULL & RX\_TIMEOUT INTERRUPT)

**Parameters** **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_disable\_rx\_intr** (*uart\_port\_t* uart\_num)

Disable UART RX interrupt (RX\_FULL & RX\_TIMEOUT INTERRUPT)

**Parameters** **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_disable\_tx\_intr** (*uart\_port\_t* uart\_num)

Disable UART TX interrupt (TX\_FULL & TX\_TIMEOUT INTERRUPT)

**Parameters** **uart\_num** –UART port number

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_enable\_tx\_intr** (*uart\_port\_t* uart\_num, int enable, int thresh)

Enable UART TX interrupt (TX\_FULL & TX\_TIMEOUT INTERRUPT)

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **enable** –1: enable; 0: disable
- **thresh** –Threshold of TX interrupt, 0 ~ UART\_FIFO\_LEN

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_set\_pin** (*uart\_port\_t* uart\_num, int tx\_io\_num, int rx\_io\_num, int rts\_io\_num, int cts\_io\_num)

Assign signals of a UART peripheral to GPIO pins.

---

**Note:** If the GPIO number configured for a UART signal matches one of the IOMUX signals for that GPIO, the signal will be connected directly via the IOMUX. Otherwise the GPIO and signal will be connected via the GPIO Matrix. For example, if on an ESP32 the call `uart_set_pin(0, 1, 3, -1, -1)` is performed, as GPIO1 is UART0's default TX pin and GPIO3 is UART0's default RX pin, both will be connected to respectively U0TXD and U0RXD through the IOMUX, totally bypassing the GPIO matrix. The check is performed on a per-pin basis. Thus, it is possible to have RX pin binded to a GPIO through the GPIO matrix, whereas TX is binded to its GPIO through the IOMUX.

---

---

**Note:** Internal signal can be output to multiple GPIO pads. Only one GPIO pad can connect with input signal.

---

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **tx\_io\_num** –UART TX pin GPIO number.
- **rx\_io\_num** –UART RX pin GPIO number.
- **rts\_io\_num** –UART RTS pin GPIO number.
- **cts\_io\_num** –UART CTS pin GPIO number.

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_set\_rts** (*uart\_port\_t* uart\_num, int level)

Manually set the UART RTS pin level.

---

**Note:** UART must be configured with hardware flow control disabled.

---

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **level** –1: RTS output low (active); 0: RTS output high (block)

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_set\_dtr** (*uart\_port\_t* uart\_num, int level)

Manually set the UART DTR pin level.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **level** –1: DTR output low; 0: DTR output high

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_set\_tx\_idle\_num** (*uart\_port\_t* uart\_num, uint16\_t idle\_num)

Set UART idle interval after tx FIFO is empty.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

- **idle\_num** –idle interval after tx FIFO is empty(unit: the time it takes to send one bit under current baudrate)

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_param\_config** (*uart\_port\_t* uart\_num, const *uart\_config\_t* \*uart\_config)

Set UART configuration parameters.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **uart\_config** –UART parameter settings

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_intr\_config** (*uart\_port\_t* uart\_num, const *uart\_intr\_config\_t* \*intr\_conf)

Configure UART interrupts.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **intr\_conf** –UART interrupt settings

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_wait\_tx\_done** (*uart\_port\_t* uart\_num, TickType\_t ticks\_to\_wait)

Wait until UART TX FIFO is empty.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **ticks\_to\_wait** –Timeout, count in RTOS ticks

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error
- ESP\_ERR\_TIMEOUT Timeout

int **uart\_tx\_chars** (*uart\_port\_t* uart\_num, const char \*buffer, uint32\_t len)

Send data to the UART port from a given buffer and length.

This function will not wait for enough space in TX FIFO. It will just fill the available TX FIFO and return when the FIFO is full.

---

**Note:** This function should only be used when UART TX buffer is not enabled.

---

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **buffer** –data buffer address
- **len** –data length to send

**Returns**

- (-1) Parameter error
- OTHERS (>=0) The number of bytes pushed to the TX FIFO

int **uart\_write\_bytes** (*uart\_port\_t* uart\_num, const void \*src, size\_t size)

Send data to the UART port from a given buffer and length,.

If the UART driver's parameter 'tx\_buffer\_size' is set to zero: This function will not return until all the data have been sent out, or at least pushed into TX FIFO.

Otherwise, if the 'tx\_buffer\_size' > 0, this function will return after copying all the data to tx ring buffer, UART ISR will then move data from the ring buffer to TX FIFO gradually.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **src** –data buffer address
- **size** –data length to send

**Returns**

- (-1) Parameter error
- OTHERS (>=0) The number of bytes pushed to the TX FIFO

int **uart\_write\_bytes\_with\_break** (*uart\_port\_t* uart\_num, const void \*src, size\_t size, int brk\_len)

Send data to the UART port from a given buffer and length,.

If the UART driver' s parameter 'tx\_buffer\_size' is set to zero: This function will not return until all the data and the break signal have been sent out. After all data is sent out, send a break signal.

Otherwise, if the 'tx\_buffer\_size' > 0, this function will return after copying all the data to tx ring buffer, UART ISR will then move data from the ring buffer to TX FIFO gradually. After all data sent out, send a break signal.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **src** –data buffer address
- **size** –data length to send
- **brk\_len** –break signal duration(unit: the time it takes to send one bit at current baudrate)

**Returns**

- (-1) Parameter error
- OTHERS (>=0) The number of bytes pushed to the TX FIFO

int **uart\_read\_bytes** (*uart\_port\_t* uart\_num, void \*buf, uint32\_t length, TickType\_t ticks\_to\_wait)

UART read bytes from UART buffer.

**Parameters**

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **buf** –pointer to the buffer.
- **length** –data length
- **ticks\_to\_wait** –sTimeout, count in RTOS ticks

**Returns**

- (-1) Error
- OTHERS (>=0) The number of bytes read from UART FIFO

*esp\_err\_t* **uart\_flush** (*uart\_port\_t* uart\_num)

Alias of `uart_flush_input`. UART ring buffer flush. This will discard all data in the UART RX buffer.

---

**Note:** Instead of waiting the data sent out, this function will clear UART rx buffer. In order to send all the data in tx FIFO, we can use `uart_wait_tx_done` function.

---

**Parameters** **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

**Returns**

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_flush\_input** (*uart\_port\_t* uart\_num)

Clear input buffer, discard all the data is in the ring-buffer.

---

**Note:** In order to send all the data in tx FIFO, we can use `uart_wait_tx_done` function.

---

**Parameters** **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

**Returns**

- ESP\_OK Success

- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_get\_buffered\_data\_len** (*uart\_port\_t* uart\_num, size\_t \*size)

UART get RX ring buffer cached data length.

#### Parameters

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **size** –Pointer of size\_t to accept cached data length

#### Returns

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_get\_tx\_buffer\_free\_size** (*uart\_port\_t* uart\_num, size\_t \*size)

UART get TX ring buffer free space size.

#### Parameters

- **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).
- **size** –Pointer of size\_t to accept the free space size

#### Returns

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **uart\_disable\_pattern\_det\_intr** (*uart\_port\_t* uart\_num)

UART disable pattern detect function. Designed for applications like ‘AT commands’. When the hardware detects a series of one same character, the interrupt will be triggered.

**Parameters** **uart\_num** –UART port number, the max port number is (UART\_NUM\_MAX -1).

#### Returns

- ESP\_OK Success
- ESP\_FAIL Parameter error

*esp\_err\_t* **uart\_enable\_pattern\_det\_baud\_intr** (*uart\_port\_t* uart\_num, char pattern\_chr, uint8\_t chr\_num, int chr\_tout, int post\_idle, int pre\_idle)

UART enable pattern detect function. Designed for applications like ‘AT commands’. When the hardware detect a series of one same character, the interrupt will be triggered.

#### Parameters

- **uart\_num** –UART port number.
- **pattern\_chr** –character of the pattern.
- **chr\_num** –number of the character, 8bit value.
- **chr\_tout** –timeout of the interval between each pattern characters, 16bit value, unit is the baud-rate cycle you configured. When the duration is more than this value, it will not take this data as at\_cmd char.
- **post\_idle** –idle time after the last pattern character, 16bit value, unit is the baud-rate cycle you configured. When the duration is less than this value, it will not take the previous data as the last at\_cmd char
- **pre\_idle** –idle time before the first pattern character, 16bit value, unit is the baud-rate cycle you configured. When the duration is less than this value, it will not take this data as the first at\_cmd char.

#### Returns

- ESP\_OK Success
- ESP\_FAIL Parameter error

int **uart\_pattern\_pop\_pos** (*uart\_port\_t* uart\_num)

Return the nearest detected pattern position in buffer. The positions of the detected pattern are saved in a queue, this function will dequeue the first pattern position and move the pointer to next pattern position.

The following APIs will modify the pattern position info: `uart_flush_input`, `uart_read_bytes`, `uart_driver_delete`, `uart_pop_pattern_pos` It is the application’s responsibility to ensure atomic access to the pattern queue and the rx data buffer when using pattern detect feature.

---

**Note:** If the RX buffer is full and flow control is not enabled, the detected pattern may not be found in the rx buffer due to overflow.

---

**Parameters** `uart_num` –UART port number, the max port number is (UART\_NUM\_MAX -1).

**Returns**

- (-1) No pattern found for current index or parameter error
- others the pattern position in rx buffer.

`int uart_pattern_get_pos (uart_port_t uart_num)`

Return the nearest detected pattern position in buffer. The positions of the detected pattern are saved in a queue, This function do nothing to the queue.

The following APIs will modify the pattern position info: `uart_flush_input`, `uart_read_bytes`, `uart_driver_delete`, `uart_pop_pattern_pos` It is the application' s responsibility to ensure atomic access to the pattern queue and the rx data buffer when using pattern detect feature.

---

**Note:** If the RX buffer is full and flow control is not enabled, the detected pattern may not be found in the rx buffer due to overflow.

---

**Parameters** `uart_num` –UART port number, the max port number is (UART\_NUM\_MAX -1).

**Returns**

- (-1) No pattern found for current index or parameter error
- others the pattern position in rx buffer.

`esp_err_t uart_pattern_queue_reset (uart_port_t uart_num, int queue_length)`

Allocate a new memory with the given length to save record the detected pattern position in rx buffer.

**Parameters**

- `uart_num` –UART port number, the max port number is (UART\_NUM\_MAX -1).
- `queue_length` –Max queue length for the detected pattern. If the queue length is not large enough, some pattern positions might be lost. Set this value to the maximum number of patterns that could be saved in data buffer at the same time.

**Returns**

- `ESP_ERR_NO_MEM` No enough memory
- `ESP_ERR_INVALID_STATE` Driver not installed
- `ESP_FAIL` Parameter error
- `ESP_OK` Success

`esp_err_t uart_set_mode (uart_port_t uart_num, uart_mode_t mode)`

UART set communication mode.

---

**Note:** This function must be executed after `uart_driver_install()`, when the driver object is initialized.

---

**Parameters**

- `uart_num` –Uart number to configure, the max port number is (UART\_NUM\_MAX -1).
- `mode` –UART UART mode to set

**Returns**

- `ESP_OK` Success
- `ESP_ERR_INVALID_ARG` Parameter error

*esp\_err\_t* **uart\_set\_rx\_full\_threshold** (*uart\_port\_t* uart\_num, int threshold)

Set uart threshold value for RX fifo full.

---

**Note:** If application is using higher baudrate and it is observed that bytes in hardware RX fifo are overwritten then this threshold can be reduced

---

**Parameters**

- **uart\_num** –UART\_NUM\_0, UART\_NUM\_1 or UART\_NUM\_2
- **threshold** –Threshold value above which RX fifo full interrupt is generated

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_INVALID\_STATE Driver is not installed

*esp\_err\_t* **uart\_set\_tx\_empty\_threshold** (*uart\_port\_t* uart\_num, int threshold)

Set uart threshold values for TX fifo empty.

**Parameters**

- **uart\_num** –UART\_NUM\_0, UART\_NUM\_1 or UART\_NUM\_2
- **threshold** –Threshold value below which TX fifo empty interrupt is generated

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_INVALID\_STATE Driver is not installed

*esp\_err\_t* **uart\_set\_rx\_timeout** (*uart\_port\_t* uart\_num, const uint8\_t tout\_thresh)

UART set threshold timeout for TOUT feature.

**Parameters**

- **uart\_num** –Uart number to configure, the max port number is (UART\_NUM\_MAX -1).
- **tout\_thresh** –This parameter defines timeout threshold in uart symbol periods. The maximum value of threshold is 126. tout\_thresh = 1, defines TOUT interrupt timeout equal to transmission time of one symbol (~11 bit) on current baudrate. If the time is expired the UART\_RXFIFO\_TOUT\_INT interrupt is triggered. If tout\_thresh == 0, the TOUT feature is disabled.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_ERR\_INVALID\_STATE Driver is not installed

*esp\_err\_t* **uart\_get\_collision\_flag** (*uart\_port\_t* uart\_num, bool \*collision\_flag)

Returns collision detection flag for RS485 mode Function returns the collision detection flag into variable pointed by collision\_flag. \*collision\_flag = true, if collision detected else it is equal to false. This function should be executed when actual transmission is completed (after uart\_write\_bytes()).

**Parameters**

- **uart\_num** –Uart number to configure the max port number is (UART\_NUM\_MAX -1).
- **collision\_flag** –Pointer to variable of type bool to return collision flag.

**Returns**

- ESP\_OK Success
- ESP\_ERR\_INVALID\_ARG Parameter error

*esp\_err\_t* **uart\_set\_wakeup\_threshold** (*uart\_port\_t* uart\_num, int wakeup\_threshold)

Set the number of RX pin signal edges for light sleep wakeup.

UART can be used to wake up the system from light sleep. This feature works by counting the number of positive edges on RX pin and comparing the count to the threshold. When the count exceeds the threshold, system is woken up from light sleep. This function allows setting the threshold value.

Stop bit and parity bits (if enabled) also contribute to the number of edges. For example, letter ‘a’ with ASCII code 97 is encoded as 0100001101 on the wire (with 8n1 configuration), start and stop bits included. This sequence has 3 positive edges (transitions from 0 to 1). Therefore, to wake up the system when ‘a’ is sent, set `wakeup_threshold=3`.

The character that triggers wakeup is not received by UART (i.e. it can not be obtained from UART FIFO). Depending on the baud rate, a few characters after that will also not be received. Note that when the chip enters and exits light sleep mode, APB frequency will be changing. To make sure that UART has correct baud rate all the time, select `UART_SCLK_REF_TICK` or `UART_SCLK_XTAL` as UART clock source in [uart\\_config\\_t::source\\_clk](#).

---

**Note:** in ESP32, the wakeup signal can only be input via IO\_MUX (i.e. GPIO3 should be configured as `function_1` to wake up UART0, GPIO9 should be configured as `function_5` to wake up UART1), UART2 does not support light sleep wakeup feature.

---

#### Parameters

- **uart\_num** –UART number, the max port number is (`UART_NUM_MAX -1`).
- **wakeup\_threshold** –number of RX edges for light sleep wakeup, value is 3 .. 0x3ff.

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_ARG if `uart_num` is incorrect or `wakeup_threshold` is outside of [3, 0x3ff] range.

*esp\_err\_t* **uart\_get\_wakeup\_threshold** (*uart\_port\_t* uart\_num, int \*out\_wakeup\_threshold)

Get the number of RX pin signal edges for light sleep wakeup.

See description of `uart_set_wakeup_threshold` for the explanation of UART wakeup feature.

#### Parameters

- **uart\_num** –UART number, the max port number is (`UART_NUM_MAX -1`).
- **out\_wakeup\_threshold** –[out] output, set to the current value of wakeup threshold for the given UART.

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_ARG if `out_wakeup_threshold` is NULL

*esp\_err\_t* **uart\_wait\_tx\_idle\_polling** (*uart\_port\_t* uart\_num)

Wait until UART tx memory empty and the last char send ok (polling mode).

•

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Driver not installed

**Parameters** `uart_num` –UART number

*esp\_err\_t* **uart\_set\_loop\_back** (*uart\_port\_t* uart\_num, bool loop\_back\_en)

Configure TX signal loop back to RX module, just for the test usage.

•

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_ARG Parameter error
- ESP\_FAIL Driver not installed

**Parameters**

- **uart\_num** –UART number
- **loop\_back\_en** –Set ture to enable the loop back function, else set it false.

void **uart\_set\_always\_rx\_timeout** (*uart\_port\_t* uart\_num, bool always\_rx\_timeout\_en)

Configure behavior of UART RX timeout interrupt.

When always\_rx\_timeout is true, timeout interrupt is triggered even if FIFO is full. This function can cause extra timeout interrupts triggered only to send the timeout event. Call this function only if you want to ensure timeout interrupt will always happen after a byte stream.

**Parameters**

- **uart\_num** –UART number
- **always\_rx\_timeout\_en** –Set to false enable the default behavior of timeout interrupt, set it to true to always trigger timeout interrupt.

**Structures**

struct **uart\_intr\_config\_t**

UART interrupt configuration parameters for `uart_intr_config` function.

**Public Members**

uint32\_t **intr\_enable\_mask**

UART interrupt enable mask, choose from `UART_XXXX_INT_ENA_M` under `UART_INT_ENA_REG(i)`, connect with bit-or operator

uint8\_t **rx\_timeout\_thresh**

UART timeout interrupt threshold (unit: time of sending one byte)

uint8\_t **txfifo\_empty\_intr\_thresh**

UART TX empty interrupt threshold.

uint8\_t **rxfifo\_full\_thresh**

UART RX full interrupt threshold.

struct **uart\_event\_t**

Event structure used in UART event queue.

**Public Members**

*uart\_event\_type\_t* **type**

UART event type

size\_t **size**

UART data size for `UART_DATA` event

bool **timeout\_flag**

UART data read timeout flag for `UART_DATA` event (no new data received during configured RX TOUT) If the event is caused by FIFO-full interrupt, then there will be no event with the timeout flag before the next byte coming.

## Macros

**UART\_NUM\_0**

UART port 0

**UART\_NUM\_1**

UART port 1

**UART\_NUM\_MAX**

UART port max

**UART\_PIN\_NO\_CHANGE**

**UART\_FIFO\_LEN**

Length of the UART HW FIFO.

**UART\_BITRATE\_MAX**

Maximum configurable bitrate.

## Type Definitions

typedef *intr\_handle\_t* **uart\_isr\_handle\_t**

## Enumerations

enum **uart\_event\_type\_t**

UART event types used in the ring buffer.

*Values:*

enumerator **UART\_DATA**

UART data event

enumerator **UART\_BREAK**

UART break event

enumerator **UART\_BUFFER\_FULL**

UART RX buffer full event

enumerator **UART\_FIFO\_OVF**

UART FIFO overflow event

enumerator **UART\_FRAME\_ERR**

UART RX frame error event

enumerator **UART\_PARITY\_ERR**

UART RX parity event

enumerator **UART\_DATA\_BREAK**

UART TX data and break event

enumerator **UART\_PATTERN\_DET**

UART pattern detected

enumerator **UART\_WAKEUP**

UART wakeup event

enumerator **UART\_EVENT\_MAX**

UART event max index

### Header File

- [components/hal/include/hal/uart\\_types.h](#)

### Structures

struct **uart\_at\_cmd\_t**

UART AT cmd char configuration parameters Note that this function may different on different chip. Please refer to the TRM at configuration.

#### Public Members

uint8\_t **cmd\_char**

UART AT cmd char

uint8\_t **char\_num**

AT cmd char repeat number

uint32\_t **gap\_tout**

gap time(in baud-rate) between AT cmd char

uint32\_t **pre\_idle**

the idle time(in baud-rate) between the non AT char and first AT char

uint32\_t **post\_idle**

the idle time(in baud-rate) between the last AT char and the none AT char

struct **uart\_sw\_flowctrl\_t**

UART software flow control configuration parameters.

#### Public Members

uint8\_t **xon\_char**

Xon flow control char

uint8\_t **xoff\_char**

Xoff flow control char

uint8\_t **xon\_thrd**

If the software flow control is enabled and the data amount in rxfifo is less than xon\_thrd, an xon\_char will be sent

uint8\_t **xoff\_thrd**

If the software flow control is enabled and the data amount in rxfifo is more than xoff\_thrd, an xoff\_char will be sent

struct **uart\_config\_t**

UART configuration parameters for uart\_param\_config function.

### Public Members

int **baud\_rate**

UART baud rate

*uart\_word\_length\_t* **data\_bits**

UART byte size

*uart\_parity\_t* **parity**

UART parity mode

*uart\_stop\_bits\_t* **stop\_bits**

UART stop bits

*uart\_hw\_flowcontrol\_t* **flow\_ctrl**

UART HW flow control mode (cts/rts)

uint8\_t **rx\_flow\_ctrl\_thresh**

UART HW RTS threshold

*uart\_sclk\_t* **source\_clk**

UART source clock selection

### Type Definitions

typedef int **uart\_port\_t**

UART port number, can be UART\_NUM\_0 ~ (UART\_NUM\_MAX -1).

typedef *soc\_periph\_uart\_clk\_src\_legacy\_t* **uart\_sclk\_t**

UART source clock.

### Enumerations

enum **uart\_mode\_t**

UART mode selection.

*Values:*

enumerator **UART\_MODE\_UART**

mode: regular UART mode

enumerator **UART\_MODE\_RS485\_HALF\_DUPLEX**

mode: half duplex RS485 UART mode control by RTS pin

enumerator **UART\_MODE\_IRDA**

mode: IRDA UART mode

enumerator **UART\_MODE\_RS485\_COLLISION\_DETECT**

mode: RS485 collision detection UART mode (used for test purposes)

enumerator **UART\_MODE\_RS485\_APP\_CTRL**

mode: application control RS485 UART mode (used for test purposes)

enum **uart\_word\_length\_t**

UART word length constants.

*Values:*

enumerator **UART\_DATA\_5\_BITS**

word length: 5bits

enumerator **UART\_DATA\_6\_BITS**

word length: 6bits

enumerator **UART\_DATA\_7\_BITS**

word length: 7bits

enumerator **UART\_DATA\_8\_BITS**

word length: 8bits

enumerator **UART\_DATA\_BITS\_MAX**

enum **uart\_stop\_bits\_t**

UART stop bits number.

*Values:*

enumerator **UART\_STOP\_BITS\_1**

stop bit: 1bit

enumerator **UART\_STOP\_BITS\_1\_5**

stop bit: 1.5bits

enumerator **UART\_STOP\_BITS\_2**

stop bit: 2bits

enumerator **UART\_STOP\_BITS\_MAX**

enum **uart\_parity\_t**

UART parity constants.

*Values:*

enumerator **UART\_PARITY\_DISABLE**

Disable UART parity

enumerator **UART\_PARITY\_EVEN**

Enable UART even parity

enumerator **UART\_PARITY\_ODD**

Enable UART odd parity

enum **uart\_hw\_flowcontrol\_t**

UART hardware flow control modes.

*Values:*

enumerator **UART\_HW\_FLOWCTRL\_DISABLE**

disable hardware flow control

enumerator **UART\_HW\_FLOWCTRL\_RTS**

enable RX hardware flow control (rts)

enumerator **UART\_HW\_FLOWCTRL\_CTS**

enable TX hardware flow control (cts)

enumerator **UART\_HW\_FLOWCTRL\_CTS\_RTS**

enable hardware flow control

enumerator **UART\_HW\_FLOWCTRL\_MAX**

enum **uart\_signal\_inv\_t**

UART signal bit map.

*Values:*

enumerator **UART\_SIGNAL\_INV\_DISABLE**

Disable UART signal inverse

enumerator **UART\_SIGNAL\_IRDA\_TX\_INV**

inverse the UART irda\_tx signal

enumerator **UART\_SIGNAL\_IRDA\_RX\_INV**

inverse the UART irda\_rx signal

enumerator **UART\_SIGNAL\_RXD\_INV**

inverse the UART rxd signal

enumerator **UART\_SIGNAL\_CTS\_INV**

inverse the UART cts signal

enumerator **UART\_SIGNAL\_DSR\_INV**

inverse the UART dsr signal

enumerator **UART\_SIGNAL\_TXD\_INV**

inverse the UART txd signal

enumerator **UART\_SIGNAL\_RTS\_INV**

inverse the UART rts signal

enumerator **UART\_SIGNAL\_DTR\_INV**

inverse the UART dtr signal

**GPIO Lookup Macros** The UART peripherals have dedicated IO\_MUX pins to which they are connected directly. However, signals can also be routed to other pins using the less direct GPIO matrix. To use direct routes, you need to know which pin is a dedicated IO\_MUX pin for a UART channel. GPIO Lookup Macros simplify the process of finding and assigning IO\_MUX pins. You choose a macro based on either the IO\_MUX pin number, or a required UART channel name, and the macro will return the matching counterpart for you. See some examples below.

---

**Note:** These macros are useful if you need very high UART baud rates (over 40 MHz), which means you will have to use IO\_MUX pins only. In other cases, these macros can be ignored, and you can use the GPIO Matrix as it allows you to configure any GPIO pin for any UART function.

---

1. `UART_NUM_2_TXD_DIRECT_GPIO_NUM` returns the IO\_MUX pin number of UART channel 2 TXD pin (pin 17)
2. `UART_GPIO19_DIRECT_CHANNEL` returns the UART number of GPIO 19 when connected to the UART peripheral via IO\_MUX (this is `UART_NUM_0`)
3. `UART_CTS_GPIO19_DIRECT_CHANNEL` returns the UART number of GPIO 19 when used as the UART CTS pin via IO\_MUX (this is `UART_NUM_0`). Similar to the above macro but specifies the pin function which is also part of the IO\_MUX assignment.

### Header File

- `components/soc/esp32c2/include/soc/uart_channel.h`

### Macros

`UART_GPIO20_DIRECT_CHANNEL`

`UART_NUM_0_TXD_DIRECT_GPIO_NUM`

`UART_GPIO19_DIRECT_CHANNEL`

`UART_NUM_0_RXD_DIRECT_GPIO_NUM`

`UART_TXD_GPIO20_DIRECT_CHANNEL`

`UART_RXD_GPIO19_DIRECT_CHANNEL`

Code examples for this API section are provided in the [peripherals](#) directory of ESP-IDF examples.

## 2.7 Project Configuration

### 2.7.1 Introduction

ESP-IDF uses `kconfiglib` which is a Python-based extension to the `Kconfig` system which provides a compile-time project configuration mechanism. `Kconfig` is based around options of several types: integer, string, boolean. `Kconfig` files specify dependencies between options, default values of the options, the way the options are grouped together, etc.

For the complete list of available features please see `Kconfig` and `kconfiglib` extentions.

### 2.7.2 Project Configuration Menu

Application developers can open a terminal-based project configuration menu with the `idf.py menuconfig` build target.

After being updated, this configuration is saved inside `sdkconfig` file in the project root directory. Based on `sd-kconfig`, application build targets will generate `sdkconfig.h` file in the build directory, and will make `sdkconfig` options available to the project build system and source files.

### 2.7.3 Using `sdkconfig.defaults`

In some cases, such as when `sdkconfig` file is under revision control, the fact that `sdkconfig` file gets changed by the build system may be inconvenient. The build system offers a way to avoid this, in the form of `sdkconfig.defaults` file. This file is never touched by the build system, and can be created manually or automatically. It can contain all the options which matter for the given application and are different from the default ones. The format is the same as that of the `sdkconfig` file. `sdkconfig.defaults` can be created manually when one remembers all the changed configurations. Otherwise, the file can be generated automatically by running the `idf.py save-defconfig` command.

Once `sdkconfig.defaults` is created, `sdkconfig` can be deleted and added to the ignore list of the revision control system (e.g. `.gitignore` file for `git`). Project build targets will automatically create `sdkconfig` file, populated with the settings from `sdkconfig.defaults` file, and the rest of the settings will be set to their default values. Note that the build process will not override settings that are already in `sdkconfig` by ones from `sdkconfig.defaults`. For more information, see [Custom `sdkconfig` defaults](#).

### 2.7.4 `Kconfig` Formatting Rules

The following attributes of `Kconfig` files are standardized:

- Within any menu, option names should have a consistent prefix. The prefix length is currently set to at least 3 characters.
- The indentation style is 4 characters created by spaces. All sub-items belonging to a parent item are indented by one level deeper. For example, `menu` is indented by 0 characters, the `config` inside of the menu by 4 characters, the help of the `config` by 8 characters and the text of the help by 12 characters.
- No trailing spaces are allowed at the end of the lines.
- The maximum length of options is set to 40 characters.
- The maximum length of lines is set to 120 characters.

#### Format checker

`tools/ci/check_kconfigs.py` is provided for checking the `Kconfig` formatting rules. The checker checks all `Kconfig` and `Kconfig.projbuild` files in the ESP-IDF directory and generates a new file with suffix `.new` with some recommendations how to fix issues (if there are any). Please note that the checker cannot correct all rules and the responsibility of the developer is to check and make final corrections in order to pass the tests. For example,

indentations will be corrected if there isn't some misleading previous formatting but it cannot come up with a common prefix for options inside a menu.

## 2.7.5 Backward Compatibility of Kconfig Options

The standard `Kconfig` tools ignore unknown options in `sdkconfig`. So if a developer has custom settings for options which are renamed in newer ESP-IDF releases then the given setting for the option would be silently ignored. Therefore, several features have been adopted to avoid this:

1. `confgen.py` is used by the tool chain to pre-process `sdkconfig` files before anything else, for example `menuconfig`, would read them. As the consequence, the settings for old options will be kept and not ignored.
2. `confgen.py` recursively finds all `sdkconfig.rename` files in ESP-IDF directory which contain old and new `Kconfig` option names. Old options are replaced by new ones in the `sdkconfig` file. Renames that should only appear for a single target can be placed in a target specific rename file: `sdkconfig.rename.TARGET`, where `TARGET` is the target name, e.g. `sdkconfig.rename.esp32s2`.
3. `confgen.py` post-processes `sdkconfig` files and generates all build outputs (`sdkconfig.h`, `sdkconfig.make`, `auto.conf`) by adding a list of compatibility statements, i.e. value of the old option is set the value of the new option (after modification). This is done in order to not break customer codes where old option might still be used.
4. *Deprecated options and their replacements* are automatically generated by `confgen.py`.

## 2.7.6 Configuration Options Reference

Subsequent sections contain the list of available ESP-IDF options, automatically generated from `Kconfig` files. Note that depending on the options selected, some options listed here may not be visible by default in the interface of `menuconfig`.

By convention, all option names are upper case with underscores. When `Kconfig` generates `sdkconfig` and `sdkconfig.h` files, option names are prefixed with `CONFIG_`. So if an option `ENABLE_FOO` is defined in a `Kconfig` file and selected in `menuconfig`, then `sdkconfig` and `sdkconfig.h` files will have `CONFIG_ENABLE_FOO` defined. In this reference, option names are also prefixed with `CONFIG_`, same as in the source code.

### Build type

Contains:

- `CONFIG_APP_BUILD_TYPE`
- `CONFIG_APP_REPRODUCIBLE_BUILD`
- `CONFIG_APP_NO_BLOBS`

### `CONFIG_APP_BUILD_TYPE`

Application build type

Found in: *Build type*

Select the way the application is built.

By default, the application is built as a binary file in a format compatible with the ESP-IDF bootloader. In addition to this application, 2nd stage bootloader is also built. Application and bootloader binaries can be written into flash and loaded/executed from there.

Another option, useful for only very small and limited applications, is to only link the `.elf` file of the application, such that it can be loaded directly into RAM over JTAG. Note that since IRAM and DRAM sizes are very limited, it is not possible to build any complex application this way. However for kinds of testing and debugging, this option may provide faster iterations, since the application does not need to be written into flash. Note that at the moment, ESP-IDF does not contain all the startup code required to initialize the CPUs and ROM memory (data/bss). Therefore it is necessary to execute a bit of ROM code prior to executing the application. A `gdbinit` file may look as follows (for ESP32):

```
# Connect to a running instance of OpenOCD target remote :3333 # Reset and halt the target
mon reset halt # Run to a specific point in ROM code, # where most of initialization is
complete. thb *0x40007d54 c # Load the application into RAM load # Run till app_main th
app_main c
```

Execute this gdbinit file as follows:

```
xtensa-esp32-elf-gdb build/app-name.elf -x gdbinit
```

Example gdbinit files for other targets can be found in `tools/test_apps/system/gdb_loadable_elf/`

Recommended `sdkconfig.defaults` for building loadable ELF files is as follows. `CONFIG_APP_BUILD_TYPE_ELF_RAM` is required, other options help reduce application memory footprint.

```
CONFIG_APP_BUILD_TYPE_ELF_RAM=y CONFIG_VFS_SUPPORT_TERMIOS=
CONFIG_NEWLIB_NANO_FORMAT=y CONFIG_ESP_SYSTEM_PANIC_PRINT_HALT=y
CONFIG_ESP_DEBUG_STUBS_ENABLE= CONFIG_ESP_ERR_TO_NAME_LOOKUP=
```

**Available options:**

- Default (binary application + 2nd stage bootloader) (`APP_BUILD_TYPE_APP_2NDBOOT`)
- ELF file, loadable into RAM (EXPERIMENTAL)) (`APP_BUILD_TYPE_ELF_RAM`)

## CONFIG\_APP\_REPRODUCIBLE\_BUILD

Enable reproducible build

*Found in:* [Build type](#)

If enabled, all date, time, and path information would be eliminated. A `.gdbinit` file would be create automatically. (or will be append if you have one already)

**Default value:**

- No (disabled)

## CONFIG\_APP\_NO\_BLOBS

No Binary Blobs

*Found in:* [Build type](#)

If enabled, this disables the linking of binary libraries in the application build. Note that after enabling this Wi-Fi/Bluetooth will not work.

**Default value:**

- No (disabled)

## Bootloader config

Contains:

- [CONFIG\\_BOOTLOADER\\_LOG\\_LEVEL](#)
- [CONFIG\\_BOOTLOADER\\_COMPILER\\_OPTIMIZATION](#)
- [CONFIG\\_BOOTLOADER\\_APP\\_ROLLBACK\\_ENABLE](#)
- [CONFIG\\_BOOTLOADER\\_REGION\\_PROTECTION\\_ENABLE](#)
- [CONFIG\\_BOOTLOADER\\_APP\\_TEST](#)
- [CONFIG\\_BOOTLOADER\\_FACTORY\\_RESET](#)
- [CONFIG\\_BOOTLOADER\\_HOLD\\_TIME\\_GPIO](#)
- [CONFIG\\_BOOTLOADER\\_CUSTOM\\_RESERVE\\_RTC](#)
- [Serial Flash Configurations](#)
- [CONFIG\\_BOOTLOADER\\_SKIP\\_VALIDATE\\_ALWAYS](#)
- [CONFIG\\_BOOTLOADER\\_SKIP\\_VALIDATE\\_ON\\_POWER\\_ON](#)

- [CONFIG\\_BOOTLOADER\\_SKIP\\_VALIDATE\\_IN\\_DEEP\\_SLEEP](#)
- [CONFIG\\_BOOTLOADER\\_WDT\\_ENABLE](#)
- [CONFIG\\_BOOTLOADER\\_VDDSDIO\\_BOOST](#)

## CONFIG\_BOOTLOADER\_COMPILER\_OPTIMIZATION

Bootloader optimization Level

*Found in: [Bootloader config](#)*

This option sets compiler optimization level (gcc -O argument) for the bootloader.

- The default “Size” setting will add the -Os flag to CFLAGS.
- The “Debug” setting will add the -Og flag to CFLAGS.
- The “Performance” setting will add the -O2 flag to CFLAGS.
- The “None” setting will add the -O0 flag to CFLAGS.

Note that custom optimization levels may be unsupported.

### Available options:

- Size (-Os) (BOOTLOADER\_COMPILER\_OPTIMIZATION\_SIZE)
- Debug (-Og) (BOOTLOADER\_COMPILER\_OPTIMIZATION\_DEBUG)
- Optimize for performance (-O2) (BOOTLOADER\_COMPILER\_OPTIMIZATION\_PERF)
- Debug without optimization (-O0) (BOOTLOADER\_COMPILER\_OPTIMIZATION\_NONE)

## CONFIG\_BOOTLOADER\_LOG\_LEVEL

Bootloader log verbosity

*Found in: [Bootloader config](#)*

Specify how much output to see in bootloader logs.

### Available options:

- No output (BOOTLOADER\_LOG\_LEVEL\_NONE)
- Error (BOOTLOADER\_LOG\_LEVEL\_ERROR)
- Warning (BOOTLOADER\_LOG\_LEVEL\_WARN)
- Info (BOOTLOADER\_LOG\_LEVEL\_INFO)
- Debug (BOOTLOADER\_LOG\_LEVEL\_DEBUG)
- Verbose (BOOTLOADER\_LOG\_LEVEL\_VERBOSE)

## Serial Flash Configurations

 Contains:

- [CONFIG\\_BOOTLOADER\\_FLASH\\_DC\\_AWARE](#)
- [CONFIG\\_BOOTLOADER\\_FLASH\\_XMC\\_SUPPORT](#)

## CONFIG\_BOOTLOADER\_FLASH\_DC\_AWARE

Allow app adjust Dummy Cycle bits in SPI Flash for higher frequency (READ HELP FIRST)

*Found in: [Bootloader config](#) > [Serial Flash Configurations](#)*

This will force 2nd bootloader to be loaded by DOUT mode, and will restore Dummy Cycle setting by resetting the Flash

## CONFIG\_BOOTLOADER\_FLASH\_XMC\_SUPPORT

Enable the support for flash chips of XMC (READ DOCS FIRST)

*Found in: [Bootloader config](#) > [Serial Flash Configurations](#)*

Perform the startup flow recommended by XMC. Please consult XMC for the details of this flow. XMC chips will be forbidden to be used, when this option is disabled.

DON'T DISABLE THIS UNLESS YOU KNOW WHAT YOU ARE DOING.

comment “Features below require specific hardware (READ DOCS FIRST!)”

**Default value:**

- Yes (enabled)

### CONFIG\_BOOTLOADER\_VDDSDIO\_BOOST

VDDSDIO LDO voltage

*Found in: [Bootloader config](#)*

If this option is enabled, and VDDSDIO LDO is set to 1.8V (using eFuse or MTDI bootstrapping pin), bootloader will change LDO settings to output 1.9V instead. This helps prevent flash chip from browning out during flash programming operations.

This option has no effect if VDDSDIO is set to 3.3V, or if the internal VDDSDIO regulator is disabled via eFuse.

**Available options:**

- 1.8V (BOOTLOADER\_VDDSDIO\_BOOST\_1\_8V)
- 1.9V (BOOTLOADER\_VDDSDIO\_BOOST\_1\_9V)

### CONFIG\_BOOTLOADER\_FACTORY\_RESET

GPIO triggers factory reset

*Found in: [Bootloader config](#)*

Allows to reset the device to factory settings: - clear one or more data partitions; - boot from “factory” partition. The factory reset will occur if there is a GPIO input held at the configured level while device starts up. See settings below.

**Default value:**

- No (disabled)

### CONFIG\_BOOTLOADER\_NUM\_PIN\_FACTORY\_RESET

Number of the GPIO input for factory reset

*Found in: [Bootloader config](#) > [CONFIG\\_BOOTLOADER\\_FACTORY\\_RESET](#)*

The selected GPIO will be configured as an input with internal pull-up enabled (note that on some SoCs, not all pins have an internal pull-up, consult the hardware datasheet for details.) To trigger a factory reset, this GPIO must be held high or low (as configured) on startup.

**Default value:**

- 4 if [CONFIG\\_BOOTLOADER\\_FACTORY\\_RESET](#)

### CONFIG\_BOOTLOADER\_FACTORY\_RESET\_PIN\_LEVEL

Factory reset GPIO level

*Found in: [Bootloader config](#) > [CONFIG\\_BOOTLOADER\\_FACTORY\\_RESET](#)*

Pin level for factory reset, can be triggered on low or high.

**Available options:**

- Reset on GPIO low (BOOTLOADER\_FACTORY\_RESET\_PIN\_LOW)
- Reset on GPIO high (BOOTLOADER\_FACTORY\_RESET\_PIN\_HIGH)

### CONFIG\_BOOTLOADER\_OTA\_DATA\_ERASE

Clear OTA data on factory reset (select factory partition)

Found in: *Bootloader config* > *CONFIG\_BOOTLOADER\_FACTORY\_RESET*

The device will boot from “factory” partition (or OTA slot 0 if no factory partition is present) after a factory reset.

### CONFIG\_BOOTLOADER\_DATA\_FACTORY\_RESET

Comma-separated names of partitions to clear on factory reset

Found in: *Bootloader config* > *CONFIG\_BOOTLOADER\_FACTORY\_RESET*

Allows customers to select which data partitions will be erased while factory reset.

Specify the names of partitions as a comma-delimited with optional spaces for readability. (Like this: “nvs, phy\_init, …” ) Make sure that the name specified in the partition table and here are the same. Partitions of type “app” cannot be specified here.

**Default value:**

- “nvs” if *CONFIG\_BOOTLOADER\_FACTORY\_RESET*

### CONFIG\_BOOTLOADER\_APP\_TEST

GPIO triggers boot from test app partition

Found in: *Bootloader config*

Allows to run the test app from “TEST” partition. A boot from “test” partition will occur if there is a GPIO input pulled low while device starts up. See settings below.

**Default value:**

- No (disabled) if *CONFIG\_BOOTLOADER\_APP\_ANTI\_ROLLBACK*

### CONFIG\_BOOTLOADER\_NUM\_PIN\_APP\_TEST

Number of the GPIO input to boot TEST partition

Found in: *Bootloader config* > *CONFIG\_BOOTLOADER\_APP\_TEST*

The selected GPIO will be configured as an input with internal pull-up enabled. To trigger a test app, this GPIO must be pulled low on reset. After the GPIO input is deactivated and the device reboots, the old application will boot. (factory or OTA[x]). Note that GPIO34-39 do not have an internal pullup and an external one must be provided.

**Range:**

- from 0 to 39 if *CONFIG\_BOOTLOADER\_APP\_TEST*

**Default value:**

- 18 if *CONFIG\_BOOTLOADER\_APP\_TEST*

### CONFIG\_BOOTLOADER\_APP\_TEST\_PIN\_LEVEL

App test GPIO level

Found in: *Bootloader config* > *CONFIG\_BOOTLOADER\_APP\_TEST*

Pin level for app test, can be triggered on low or high.

**Available options:**

- Enter test app on GPIO low (BOOTLOADER\_APP\_TEST\_PIN\_LOW)
- Enter test app on GPIO high (BOOTLOADER\_APP\_TEST\_PIN\_HIGH)

### CONFIG\_BOOTLOADER\_HOLD\_TIME\_GPIO

Hold time of GPIO for reset/test mode (seconds)

*Found in: [Bootloader config](#)*

The GPIO must be held low continuously for this period of time after reset before a factory reset or test partition boot (as applicable) is performed.

**Default value:**

- 5 if `CONFIG_BOOTLOADER_FACTORY_RESET` || `CONFIG_BOOTLOADER_APP_TEST`

### CONFIG\_BOOTLOADER\_REGION\_PROTECTION\_ENABLE

Enable protection for unmapped memory regions

*Found in: [Bootloader config](#)*

Protects the unmapped memory regions of the entire address space from unintended accesses. This will ensure that an exception will be triggered whenever the CPU performs a memory operation on unmapped regions of the address space.

**Default value:**

- Yes (enabled)

### CONFIG\_BOOTLOADER\_WDT\_ENABLE

Use RTC watchdog in start code

*Found in: [Bootloader config](#)*

Tracks the execution time of startup code. If the execution time is exceeded, the RTC\_WDT will restart system. It is also useful to prevent a lock up in start code caused by an unstable power source. NOTE: Tracks the execution time starts from the bootloader code - re-set timeout, while selecting the source for `slow_clk` - and ends calling `app_main`. Re-set timeout is needed due to WDT uses a `SLOW_CLK` clock source. After changing a frequency `slow_clk` a time of WDT needs to re-set for new frequency. `slow_clk` depends on `RTC_CLK_SRC` (`INTERNAL_RC` or `EXTERNAL_CRYSTAL`).

**Default value:**

- Yes (enabled)

### CONFIG\_BOOTLOADER\_WDT\_DISABLE\_IN\_USER\_CODE

Allows RTC watchdog disable in user code

*Found in: [Bootloader config](#) > [CONFIG\\_BOOTLOADER\\_WDT\\_ENABLE](#)*

If this option is set, the ESP-IDF app must explicitly reset, feed, or disable the `rtc_wdt` in the app's own code. If this option is not set (default), then `rtc_wdt` will be disabled by ESP-IDF before calling the `app_main()` function.

Use function `rtc_wdt_feed()` for resetting counter of `rtc_wdt`. Use function `rtc_wdt_disable()` for disabling `rtc_wdt`.

**Default value:**

- No (disabled)

### CONFIG\_BOOTLOADER\_WDT\_TIME\_MS

Timeout for RTC watchdog (ms)

*Found in: [Bootloader config](#) > [CONFIG\\_BOOTLOADER\\_WDT\\_ENABLE](#)*

Verify that this parameter is correct and more then the execution time. Pay attention to options such as reset to factory, trigger test partition and encryption on boot - these options can increase the execution time. Note: RTC\_WDT will reset while encryption operations will be performed.

**Range:**

- from 0 to 120000

**Default value:**

- 9000

### CONFIG\_BOOTLOADER\_APP\_ROLLBACK\_ENABLE

Enable app rollback support

*Found in:* [Bootloader config](#)

After updating the app, the bootloader runs a new app with the “ESP\_OTA\_IMG\_PENDING\_VERIFY” state set. This state prevents the re-run of this app. After the first boot of the new app in the user code, the function should be called to confirm the operability of the app or vice versa about its non-operability. If the app is working, then it is marked as valid. Otherwise, it is marked as not valid and rolls back to the previous working app. A reboot is performed, and the app is booted before the software update. Note: If during the first boot a new app the power goes out or the WDT works, then roll back will happen. Rollback is possible only between the apps with the same security versions.

**Default value:**

- No (disabled)

### CONFIG\_BOOTLOADER\_APP\_ANTI\_ROLLBACK

Enable app anti-rollback support

*Found in:* [Bootloader config](#) > [CONFIG\\_BOOTLOADER\\_APP\\_ROLLBACK\\_ENABLE](#)

This option prevents rollback to previous firmware/application image with lower security version.

**Default value:**

- No (disabled) if [CONFIG\\_BOOTLOADER\\_APP\\_ROLLBACK\\_ENABLE](#)

### CONFIG\_BOOTLOADER\_APP\_SECURE\_VERSION

eFuse secure version of app

*Found in:* [Bootloader config](#) > [CONFIG\\_BOOTLOADER\\_APP\\_ROLLBACK\\_ENABLE](#) > [CONFIG\\_BOOTLOADER\\_APP\\_ANTI\\_ROLLBACK](#)

The secure version is the sequence number stored in the header of each firmware. The security version is set in the bootloader, version is recorded in the eFuse field as the number of set ones. The allocated number of bits in the efuse field for storing the security version is limited (see [BOOTLOADER\\_APP\\_SEC\\_VER\\_SIZE\\_EFUSE\\_FIELD](#) option).

Bootloader: When bootloader selects an app to boot, an app is selected that has a security version greater or equal that recorded in eFuse field. The app is booted with a higher (or equal) secure version.

The security version is worth increasing if in previous versions there is a significant vulnerability and their use is not acceptable.

Your partition table should has a scheme with ota\_0 + ota\_1 (without factory).

**Default value:**

- 0 if [CONFIG\\_BOOTLOADER\\_APP\\_ANTI\\_ROLLBACK](#)

**CONFIG\_BOOTLOADER\_APP\_SEC\_VER\_SIZE\_EFUSE\_FIELD**

Size of the efuse secure version field

*Found in:* `Bootloader config > CONFIG_BOOTLOADER_APP_ROLLBACK_ENABLE > CONFIG_BOOTLOADER_APP_ANTI_ROLLBACK`

The size of the efuse secure version field. Its length is limited to 32 bits for ESP32 and 16 bits for ESP32-S2. This determines how many times the security version can be increased.

**Range:**

- from 1 to 4 if `CONFIG_BOOTLOADER_APP_ANTI_ROLLBACK`
- from 1 to 16 if `CONFIG_BOOTLOADER_APP_ANTI_ROLLBACK`

**Default value:**

- 4 if `CONFIG_BOOTLOADER_APP_ANTI_ROLLBACK`
- 16 if `CONFIG_BOOTLOADER_APP_ANTI_ROLLBACK`

**CONFIG\_BOOTLOADER\_EFUSE\_SECURE\_VERSION\_EMULATE**

Emulate operations with efuse secure version(only test)

*Found in:* `Bootloader config > CONFIG_BOOTLOADER_APP_ROLLBACK_ENABLE > CONFIG_BOOTLOADER_APP_ANTI_ROLLBACK`

This option allows to emulate read/write operations with all eFuses and efuse secure version. It allows to test anti-rollback implementation without permanent write eFuse bits. There should be an entry in partition table with following details: `emul_efuse, data, efuse, , 0x2000`.

This option enables: `EFUSE_VIRTUAL` and `EFUSE_VIRTUAL_KEEP_IN_FLASH`.

**Default value:**

- No (disabled) if `CONFIG_BOOTLOADER_APP_ANTI_ROLLBACK`

**CONFIG\_BOOTLOADER\_SKIP\_VALIDATE\_IN\_DEEP\_SLEEP**

Skip image validation when exiting deep sleep

*Found in:* `Bootloader config`

This option disables the normal validation of an image coming out of deep sleep (checksums, SHA256, and signature). This is a trade-off between wakeup performance from deep sleep, and image integrity checks.

Only enable this if you know what you are doing. It should not be used in conjunction with using `deep_sleep()` entry and changing the active OTA partition as this would skip the validation upon first load of the new OTA partition.

It is possible to enable this option with Secure Boot if “allow insecure options” is enabled, however it’s strongly recommended to NOT enable it as it may allow a Secure Boot bypass.

**Default value:**

- No (disabled) if `SOC_RTC_FAST_MEM_SUPPORTED && ((CONFIG_SECURE_BOOT && CONFIG_SECURE_BOOT_INSECURE) || CONFIG_SECURE_BOOT)`

**CONFIG\_BOOTLOADER\_SKIP\_VALIDATE\_ON\_POWER\_ON**

Skip image validation from power on reset (READ HELP FIRST)

*Found in:* `Bootloader config`

Some applications need to boot very quickly from power on. By default, the entire app binary is read from flash and verified which takes up a significant portion of the boot time.

Enabling this option will skip validation of the app when the SoC boots from power on. Note that in this case it’s not possible for the bootloader to detect if an app image is corrupted in the flash, therefore it’s

s not possible to safely fall back to a different app partition. Flash corruption of this kind is unlikely but can happen if there is a serious firmware bug or physical damage.

Following other reset types, the bootloader will still validate the app image. This increases the chances that flash corruption resulting in a crash can be detected following soft reset, and the bootloader will fall back to a valid app image. To increase the chances of successfully recovering from a flash corruption event, keep the option `BOOTLOADER_WDT_ENABLE` enabled and consider also enabling `BOOTLOADER_WDT_DISABLE_IN_USER_CODE` - then manually disable the RTC Watchdog once the app is running. In addition, enable both the Task and Interrupt watchdog timers with reset options set.

**Default value:**

- No (disabled)

### **CONFIG\_BOOTLOADER\_SKIP\_VALIDATE\_ALWAYS**

Skip image validation always (READ HELP FIRST)

*Found in: [Bootloader config](#)*

Selecting this option prevents the bootloader from ever validating the app image before booting it. Any flash corruption of the selected app partition will make the entire SoC unbootable.

Although flash corruption is a very rare case, it is not recommended to select this option. Consider selecting “Skip image validation from power on reset” instead. However, if boot time is the only important factor then it can be enabled.

**Default value:**

- No (disabled)

### **CONFIG\_BOOTLOADER\_CUSTOM\_RESERVE\_RTC**

Reserve RTC FAST memory for custom purposes

*Found in: [Bootloader config](#)*

This option allows the customer to place data in the RTC FAST memory, this area remains valid when rebooted, except for power loss. This memory is located at a fixed address and is available for both the bootloader and the application. (The application and bootloader must be compiled with the same option). The RTC FAST memory has access only through `PRO_CPU`.

**Default value:**

- No (disabled) if `SOC_RTC_FAST_MEM_SUPPORTED`

### **CONFIG\_BOOTLOADER\_CUSTOM\_RESERVE\_RTC\_IN\_CRC**

Include custom memory in the CRC calculation

*Found in: [Bootloader config](#) > [CONFIG\\_BOOTLOADER\\_CUSTOM\\_RESERVE\\_RTC](#)*

This option allows the customer to use the legacy bootloader behavior when the RTC FAST memory CRC calculation takes place. When this option is enabled, the allocated user custom data will be taken into account in the CRC calculation. This means that any change to the custom data would need a CRC update to prevent the bootloader from marking this data as corrupted. If this option is disabled, the custom data will not be taken into account when calculating the RTC FAST memory CRC. The user custom data can be changed freely, without the need to update the CRC. THIS OPTION MUST BE THE SAME FOR BOTH THE BOOTLOADER AND THE APPLICATION BUILDS.

**Default value:**

- No (disabled) if [CONFIG\\_BOOTLOADER\\_CUSTOM\\_RESERVE\\_RTC](#)

## CONFIG\_BOOTLOADER\_CUSTOM\_RESERVE\_RTC\_SIZE

Size in bytes for custom purposes

Found in: *Bootloader config* > *CONFIG\_BOOTLOADER\_CUSTOM\_RESERVE\_RTC*

This option reserves in RTC FAST memory the area for custom purposes. If you want to create your own bootloader and save more information in this area of memory, you can increase it. It must be a multiple of 4 bytes. This area (*rtc\_retain\_mem\_t*) is reserved and has access from the bootloader and an application.

**Default value:**

- 0 if *CONFIG\_BOOTLOADER\_CUSTOM\_RESERVE\_RTC*

## Security features

Contains:

- *CONFIG\_SECURE\_BOOT\_INSECURE*
- *CONFIG\_SECURE\_SIGNED\_APPS\_SCHEME*
- *CONFIG\_SECURE\_SIGNED\_ON\_BOOT\_NO\_SECURE\_BOOT*
- *CONFIG\_SECURE\_FLASH\_CHECK\_ENC\_EN\_IN\_APP*
- *CONFIG\_SECURE\_BOOT\_ECDSA\_KEY\_LEN\_SIZE*
- *CONFIG\_SECURE\_BOOT\_ENABLE\_AGGRESSIVE\_KEY\_REVOKE*
- *CONFIG\_SECURE\_FLASH\_ENC\_ENABLED*
- *CONFIG\_SECURE\_BOOT*
- *CONFIG\_SECURE\_FLASH\_ENCRYPT\_ONLY\_IMAGE\_LEN\_IN\_APP\_PART*
- *CONFIG\_SECURE\_BOOTLOADER\_KEY\_ENCODING*
- *Potentially insecure options*
- *CONFIG\_SECURE\_SIGNED\_APPS\_NO\_SECURE\_BOOT*
- *CONFIG\_SECURE\_BOOT\_VERIFICATION\_KEY*
- *CONFIG\_SECURE\_BOOTLOADER\_MODE*
- *CONFIG\_SECURE\_BOOT\_BUILD\_SIGNED\_BINARIES*
- *CONFIG\_SECURE\_UART\_ROM\_DL\_MODE*
- *CONFIG\_SECURE\_SIGNED\_ON\_UPDATE\_NO\_SECURE\_BOOT*

## CONFIG\_SECURE\_SIGNED\_APPS\_NO\_SECURE\_BOOT

Require signed app images

Found in: *Security features*

Require apps to be signed to verify their integrity.

This option uses the same app signature scheme as hardware secure boot, but unlike hardware secure boot it does not prevent the bootloader from being physically updated. This means that the device can be secured against remote network access, but not physical access. Compared to using hardware Secure Boot this option is much simpler to implement.

## CONFIG\_SECURE\_SIGNED\_APPS\_SCHEME

App Signing Scheme

Found in: *Security features*

Select the Secure App signing scheme. Depends on the Chip Revision. There are two secure boot versions:

1. **Secure boot V1**
  - Legacy custom secure boot scheme. Supported in ESP32 SoC.
2. **Secure boot V2**

- RSA based secure boot scheme. Supported in ESP32-ECO3 (ESP32 Chip Revision 3 onwards), ESP32-S2, ESP32-C3, ESP32-S3 SoCs.
- ECDSA based secure boot scheme. Supported in ESP32-C2 SoC.

**Available options:**

- ECDSA (SECURE\_SIGNED\_APPS\_ECDSA\_SCHEME)  
Embeds the ECDSA public key in the bootloader and signs the application with an ECDSA key. Refer to the documentation before enabling.
- RSA (SECURE\_SIGNED\_APPS\_RSA\_SCHEME)  
Appends the RSA-3072 based Signature block to the application. Refer to <Secure Boot Version 2 documentation link> before enabling.
- ECDSA (V2) (SECURE\_SIGNED\_APPS\_ECDSA\_V2\_SCHEME)  
For Secure boot V2 (e.g., ESP32-C2 SoC), appends ECDSA based signature block to the application. Refer to documentation before enabling.

**CONFIG\_SECURE\_BOOT\_ECDSA\_KEY\_LEN\_SIZE**

ECDSA key size

*Found in: Security features*

Select the ECDSA key size. Two key sizes are supported

- 192 bit key using NISTP192 curve
- 256 bit key using NISTP256 curve (Recommended)

The advantage of using 256 bit key is the extra randomness which makes it difficult to be bruteforced compared to 192 bit key. At present, both key sizes are practically implausible to bruteforce.

**Available options:**

- Using ECC curve NISTP192 (SECURE\_BOOT\_ECDSA\_KEY\_LEN\_192\_BITS)
- Using ECC curve NISTP256 (Recommended) (SECURE\_BOOT\_ECDSA\_KEY\_LEN\_256\_BITS)

**CONFIG\_SECURE\_SIGNED\_ON\_BOOT\_NO\_SECURE\_BOOT**

Bootloader verifies app signatures

*Found in: Security features*

If this option is set, the bootloader will be compiled with code to verify that an app is signed before booting it.

If hardware secure boot is enabled, this option is always enabled and cannot be disabled. If hardware secure boot is not enabled, this option doesn't add significant security by itself so most users will want to leave it disabled.

**Default value:**

- No (disabled) if `CONFIG_SECURE_SIGNED_APPS_NO_SECURE_BOOT` && `SECURE_SIGNED_APPS_ECDSA_SCHEME`

**CONFIG\_SECURE\_SIGNED\_ON\_UPDATE\_NO\_SECURE\_BOOT**

Verify app signature on update

*Found in: Security features*

If this option is set, any OTA updated apps will have the signature verified before being considered valid.

When enabled, the signature is automatically checked whenever the `esp_ota_ops.h` APIs are used for OTA updates, or `esp_image_format.h` APIs are used to verify apps.

If hardware secure boot is enabled, this option is always enabled and cannot be disabled. If hardware secure boot is not enabled, this option still adds significant security against network-based attackers by preventing spoofing of OTA updates.

**Default value:**

- Yes (enabled) if `CONFIG_SECURE_SIGNED_APPS_NO_SECURE_BOOT`

**CONFIG\_SECURE\_BOOT**

Enable hardware Secure Boot in bootloader (READ DOCS FIRST)

*Found in: [Security features](#)*

Build a bootloader which enables Secure Boot on first boot.

Once enabled, Secure Boot will not boot a modified bootloader. The bootloader will only load a partition table or boot an app if the data has a verified digital signature. There are implications for reflashing updated apps once secure boot is enabled.

When enabling secure boot, JTAG and ROM BASIC Interpreter are permanently disabled by default.

**Default value:**

- No (disabled)

**CONFIG\_SECURE\_BOOT\_VERSION**

Select secure boot version

*Found in: [Security features](#) > [CONFIG\\_SECURE\\_BOOT](#)*

Select the Secure Boot Version. Depends on the Chip Revision. Secure Boot V2 is the new RSA / ECDSA based secure boot scheme.

- RSA based scheme is supported in ESP32 (Revision 3 onwards), ESP32-S2, ESP32-C3 (ECO3), ESP32-S3.
- ECDSA based scheme is supported in ESP32-C2 SoC.

Please note that, RSA or ECDSA secure boot is property of specific SoC based on its HW design, supported crypto accelerators, die-size, cost and similar parameters. Please note that RSA scheme has requirement for bigger key sizes but at the same time it is comparatively faster than ECDSA verification.

Secure Boot V1 is the AES based (custom) secure boot scheme supported in ESP32 SoC.

**Available options:**

- Enable Secure Boot version 1 (`SECURE_BOOT_V1_ENABLED`)  
Build a bootloader which enables secure boot version 1 on first boot. Refer to the Secure Boot section of the ESP-IDF Programmer's Guide for this version before enabling.
- Enable Secure Boot version 2 (`SECURE_BOOT_V2_ENABLED`)  
Build a bootloader which enables Secure Boot version 2 on first boot. Refer to Secure Boot V2 section of the ESP-IDF Programmer's Guide for this version before enabling.

**CONFIG\_SECURE\_BOOTLOADER\_MODE**

Secure bootloader mode

*Found in: [Security features](#)*

**Available options:**

- One-time flash (`SECURE_BOOTLOADER_ONE_TIME_FLASH`)  
On first boot, the bootloader will generate a key which is not readable externally or by software. A digest is generated from the bootloader image itself. This digest will be verified on each subsequent boot.  
Enabling this option means that the bootloader cannot be changed after the first time it is booted.
- Reflashable (`SECURE_BOOTLOADER_REFLASHABLE`)  
Generate a reusable secure bootloader key, derived (via SHA-256) from the secure boot signing key.

This allows the secure bootloader to be re-flashed by anyone with access to the secure boot signing key.

This option is less secure than one-time flash, because a leak of the digest key from one device allows reflashing of any device that uses it.

### **CONFIG\_SECURE\_BOOT\_BUILD\_SIGNED\_BINARIES**

Sign binaries during build

*Found in: [Security features](#)*

Once secure boot or signed app requirement is enabled, app images are required to be signed.

If enabled (default), these binary files are signed as part of the build process. The file named in “Secure boot private signing key” will be used to sign the image.

If disabled, unsigned app/partition data will be built. They must be signed manually using `espsecure.py`. Version 1 to enable ECDSA Based Secure Boot and Version 2 to enable RSA based Secure Boot. (for example, on a remote signing server.)

### **CONFIG\_SECURE\_BOOT\_SIGNING\_KEY**

Secure boot private signing key

*Found in: [Security features](#) > [CONFIG\\_SECURE\\_BOOT\\_BUILD\\_SIGNED\\_BINARIES](#)*

Path to the key file used to sign app images.

Key file is an ECDSA private key (NIST256p curve) in PEM format for Secure Boot V1. Key file is an RSA private key in PEM format for Secure Boot V2.

Path is evaluated relative to the project directory.

You can generate a new signing key by running the following command: `espsecure.py generate_signing_key secure_boot_signing_key.pem`

See the Secure Boot section of the ESP-IDF Programmer’s Guide for this version for details.

#### **Default value:**

- “secure\_boot\_signing\_key.pem” if [CONFIG\\_SECURE\\_BOOT\\_BUILD\\_SIGNED\\_BINARIES](#)

### **CONFIG\_SECURE\_BOOT\_VERIFICATION\_KEY**

Secure boot public signature verification key

*Found in: [Security features](#)*

Path to a public key file used to verify signed images. Secure Boot V1: This ECDSA public key is compiled into the bootloader and/or app, to verify app images.

Key file is in raw binary format, and can be extracted from a PEM formatted private key using the `espsecure.py extract_public_key` command.

Refer to the Secure Boot section of the ESP-IDF Programmer’s Guide for this version before enabling.

### **CONFIG\_SECURE\_BOOT\_ENABLE\_AGGRESSIVE\_KEY\_REVOKE**

Enable Aggressive key revoke strategy

*Found in: [Security features](#)*

If this option is set, ROM bootloader will revoke the public key digest burned in efuse block if it fails to verify the signature of software bootloader with it. Revocation of keys does not happen when enabling secure boot. Once secure boot is enabled, key revocation checks will be done on subsequent boot-up, while verifying the software bootloader

This feature provides a strong resistance against physical attacks on the device.

NOTE: Once a digest slot is revoked, it can never be used again to verify an image. This can lead to permanent bricking of the device, in case all keys are revoked because of signature verification failure.

**Default value:**

- No (disabled) if `CONFIG_SECURE_BOOT` && `SOC_SUPPORT_SECURE_BOOT_REVOKE_KEY`

## **CONFIG\_SECURE\_BOOTLOADER\_KEY\_ENCODING**

Hardware Key Encoding

*Found in: Security features*

In reflashable secure bootloader mode, a hardware key is derived from the signing key (with SHA-256) and can be written to eFuse with `espefuse.py`.

Normally this is a 256-bit key, but if 3/4 Coding Scheme is used on the device then the eFuse key is truncated to 192 bits.

This configuration item doesn't change any firmware code, it only changes the size of key binary which is generated at build time.

**Available options:**

- No encoding (256 bit key) (`SECURE_BOOTLOADER_KEY_ENCODING_256BIT`)
- 3/4 encoding (192 bit key) (`SECURE_BOOTLOADER_KEY_ENCODING_192BIT`)

## **CONFIG\_SECURE\_BOOT\_INSECURE**

Allow potentially insecure options

*Found in: Security features*

You can disable some of the default protections offered by secure boot, in order to enable testing or a custom combination of security features.

Only enable these options if you are very sure.

Refer to the Secure Boot section of the ESP-IDF Programmer's Guide for this version before enabling.

**Default value:**

- No (disabled) if `CONFIG_SECURE_BOOT`

## **CONFIG\_SECURE\_FLASH\_ENC\_ENABLED**

Enable flash encryption on boot (READ DOCS FIRST)

*Found in: Security features*

If this option is set, flash contents will be encrypted by the bootloader on first boot.

Note: After first boot, the system will be permanently encrypted. Re-flashing an encrypted system is complicated and not always possible.

Read *Flash Encryption* before enabling.

**Default value:**

- No (disabled)

## **CONFIG\_SECURE\_FLASH\_ENCRYPTION\_KEYSIZE**

Size of generated AES-XTS key

*Found in: Security features > CONFIG\_SECURE\_FLASH\_ENC\_ENABLED*

Size of generated AES-XTS key.

- AES-128 uses a 256-bit key (32 bytes) derived from 128 bits (16 bytes) burned in half Efuse key block. Internally, it calculates SHA256(128 bits)
- AES-128 uses a 256-bit key (32 bytes) which occupies one Efuse key block.
- AES-256 uses a 512-bit key (64 bytes) which occupies two Efuse key blocks.

This setting is ignored if either type of key is already burned to Efuse before the first boot. In this case, the pre-burned key is used and no new key is generated.

**Available options:**

- AES-128 key derived from 128 bits (SHA256(128 bits)) (SECURE\_FLASH\_ENCRYPTION\_AES128\_DERIVED)
- AES-128 (256-bit key) (SECURE\_FLASH\_ENCRYPTION\_AES128)
- AES-256 (512-bit key) (SECURE\_FLASH\_ENCRYPTION\_AES256)

## CONFIG\_SECURE\_FLASH\_ENCRYPTION\_MODE

Enable usage mode

Found in: *Security features* > *CONFIG\_SECURE\_FLASH\_ENC\_ENABLED*

By default Development mode is enabled which allows ROM download mode to perform flash encryption operations (plaintext is sent to the device, and it encrypts it internally and writes ciphertext to flash.) This mode is not secure, it's possible for an attacker to write their own chosen plaintext to flash.

Release mode should always be selected for production or manufacturing. Once enabled it's no longer possible for the device in ROM Download Mode to use the flash encryption hardware.

Refer to the Flash Encryption section of the ESP-IDF Programmer's Guide for details.

**Available options:**

- Development (NOT SECURE) (SECURE\_FLASH\_ENCRYPTION\_MODE\_DEVELOPMENT)
- Release (SECURE\_FLASH\_ENCRYPTION\_MODE\_RELEASE)

### Potentially insecure options

 Contains:

- *CONFIG\_SECURE\_BOOT\_V2\_ALLOW\_EFUSE\_RD\_DIS*
- *CONFIG\_SECURE\_BOOT\_ALLOW\_SHORT\_APP\_PARTITION*
- *CONFIG\_SECURE\_BOOT\_ALLOW\_JTAG*
- *CONFIG\_SECURE\_FLASH\_UART\_BOOTLOADER\_ALLOW\_ENC*
- *CONFIG\_SECURE\_FLASH\_UART\_BOOTLOADER\_ALLOW\_CACHE*
- *CONFIG\_SECURE\_BOOT\_ALLOW\_UNUSED\_DIGEST\_SLOTS*
- *CONFIG\_SECURE\_FLASH\_REQUIRE\_ALREADY\_ENABLED*

## CONFIG\_SECURE\_BOOT\_ALLOW\_JTAG

Allow JTAG Debugging

Found in: *Security features* > *Potentially insecure options*

If not set (default), the bootloader will permanently disable JTAG (across entire chip) on first boot when either secure boot or flash encryption is enabled.

Setting this option leaves JTAG on for debugging, which negates all protections of flash encryption and some of the protections of secure boot.

Only set this option in testing environments.

**Default value:**

- No (disabled) if *CONFIG\_SECURE\_BOOT\_INSECURE* || SECURE\_FLASH\_ENCRYPTION\_MODE\_DEVELOPMENT

### CONFIG\_SECURE\_BOOT\_ALLOW\_SHORT\_APP\_PARTITION

Allow app partition length not 64KB aligned

*Found in: Security features > Potentially insecure options*

If not set (default), app partition size must be a multiple of 64KB. App images are padded to 64KB length, and the bootloader checks any trailing bytes after the signature (before the next 64KB boundary) have not been written. This is because flash cache maps entire 64KB pages into the address space. This prevents an attacker from appending unverified data after the app image in the flash, causing it to be mapped into the address space.

Setting this option allows the app partition length to be unaligned, and disables padding of the app image to this length. It is generally not recommended to set this option, unless you have a legacy partitioning scheme which doesn't support 64KB aligned partition lengths.

### CONFIG\_SECURE\_BOOT\_V2\_ALLOW\_EFUSE\_RD\_DIS

Allow additional read protecting of efuses

*Found in: Security features > Potentially insecure options*

If not set (default, recommended), on first boot the bootloader will burn the WR\_DIS\_RD\_DIS efuse when Secure Boot is enabled. This prevents any more efuses from being read protected.

If this option is set, it will remain possible to write the EFUSE\_RD\_DIS efuse field after Secure Boot is enabled. This may allow an attacker to read-protect the BLK2 efuse (for ESP32) and BLOCK4-BLOCK10 (i.e. BLOCK\_KEY0-BLOCK\_KEY5)(for other chips) holding the public key digest, causing an immediate denial of service and possibly allowing an additional fault injection attack to bypass the signature protection.

NOTE: Once a BLOCK is read-protected, the application will read all zeros from that block

NOTE: If “UART ROM download mode (Permanently disabled (recommended))” or “UART ROM download mode (Permanently switch to Secure mode (recommended))” is set, then it is NOT possible to read/write efuses using espfuse.py utility. However, efuse can be read/written from the application

### CONFIG\_SECURE\_BOOT\_ALLOW\_UNUSED\_DIGEST\_SLOTS

Leave unused digest slots available (not revoke)

*Found in: Security features > Potentially insecure options*

If not set (default), during startup in the app all unused digest slots will be revoked. To revoke unused slot will be called esp\_efuse\_set\_digest\_revoke(num\_digest) for each digest. Revoking unused digest slots makes ensures that no trusted keys can be added later by an attacker. If set, it means that you have a plan to use unused digests slots later.

**Default value:**

- No (disabled) if `CONFIG_SECURE_BOOT_INSECURE` &&  
`SOC_EFUSE_REVOKE_BOOT_KEY_DIGESTS`

### CONFIG\_SECURE\_FLASH\_UART\_BOOTLOADER\_ALLOW\_ENC

Leave UART bootloader encryption enabled

*Found in: Security features > Potentially insecure options*

If not set (default), the bootloader will permanently disable UART bootloader encryption access on first boot. If set, the UART bootloader will still be able to access hardware encryption.

It is recommended to only set this option in testing environments.

**Default value:**

- No (disabled) if `SECURE_FLASH_ENCRYPTION_MODE_DEVELOPMENT`

### **CONFIG\_SECURE\_FLASH\_UART\_BOOTLOADER\_ALLOW\_CACHE**

Leave UART bootloader flash cache enabled

*Found in: [Security features](#) > [Potentially insecure options](#)*

If not set (default), the bootloader will permanently disable UART bootloader flash cache access on first boot. If set, the UART bootloader will still be able to access the flash cache.

Only set this option in testing environments.

**Default value:**

- No (disabled) if `SECURE_FLASH_ENCRYPTION_MODE_DEVELOPMENT`

### **CONFIG\_SECURE\_FLASH\_REQUIRE\_ALREADY\_ENABLED**

Require flash encryption to be already enabled

*Found in: [Security features](#) > [Potentially insecure options](#)*

If not set (default), and flash encryption is not yet enabled in eFuses, the 2nd stage bootloader will enable flash encryption: generate the flash encryption key and program eFuses. If this option is set, and flash encryption is not yet enabled, the bootloader will error out and reboot. If flash encryption is enabled in eFuses, this option does not change the bootloader behavior.

Only use this option in testing environments, to avoid accidentally enabling flash encryption on the wrong device. The device needs to have flash encryption already enabled using `espefuse.py`.

**Default value:**

- No (disabled) if `SECURE_FLASH_ENCRYPTION_MODE_DEVELOPMENT`

### **CONFIG\_SECURE\_FLASH\_ENCRYPT\_ONLY\_IMAGE\_LEN\_IN\_APP\_PART**

Encrypt only the app image that is present in the partition of type app

*Found in: [Security features](#)*

If set, optimise encryption time for the partition of type APP, by only encrypting the app image that is present in the partition, instead of the whole partition. The image length used for encryption is derived from the image metadata, which includes the size of the app image, checksum, hash and also the signature sector when secure boot is enabled.

If not set (default), the whole partition of type APP would be encrypted, which increases the encryption time but might be useful if there is any custom data appended to the firmware image.

**Default value:**

- No (disabled) if `CONFIG_SECURE_FLASH_ENC_ENABLED` && `CONFIG_SECURE_FLASH_REQUIRE_ALREADY_ENABLED`

### **CONFIG\_SECURE\_FLASH\_CHECK\_ENC\_EN\_IN\_APP**

Check Flash Encryption enabled on app startup

*Found in: [Security features](#)*

If set (default), in an app during startup code, there is a check of the flash encryption eFuse bit is on (as the bootloader should already have set it). The app requires this bit is on to continue work otherwise abort.

If not set, the app does not care if the flash encryption eFuse bit is set or not.

**Default value:**

- Yes (enabled) if `CONFIG_SECURE_FLASH_ENC_ENABLED`

## CONFIG\_SECURE\_UART\_ROM\_DL\_MODE

UART ROM download mode

Found in: *Security features*

### Available options:

- UART ROM download mode (Permanently disabled (recommended)) (SECURE\_DISABLE\_ROM\_DL\_MODE)  
If set, during startup the app will burn an eFuse bit to permanently disable the UART ROM Download Mode. This prevents any future use of esptool.py, espefuse.py and similar tools. Once disabled, if the SoC is booted with strapping pins set for ROM Download Mode then an error is printed instead.  
It is recommended to enable this option in any production application where Flash Encryption and/or Secure Boot is enabled and access to Download Mode is not required.  
It is also possible to permanently disable Download Mode by calling `esp_efuse_disable_rom_download_mode()` at runtime.
- UART ROM download mode (Permanently switch to Secure mode (recommended)) (SECURE\_ENABLE\_SECURE\_ROM\_DL\_MODE)  
If set, during startup the app will burn an eFuse bit to permanently switch the UART ROM Download Mode into a separate Secure Download mode. This option can only work if Download Mode is not already disabled by eFuse.  
Secure Download mode limits the use of Download Mode functions to update SPI config, changing baud rate, basic flash write and a command to return a summary of currently enabled security features (*get\_security\_info*).  
Secure Download mode is not compatible with the esptool.py flasher stub feature, espefuse.py, read/writing memory or registers, encrypted download, or any other features that interact with unsupported Download Mode commands.  
Secure Download mode should be enabled in any application where Flash Encryption and/or Secure Boot is enabled. Disabling this option does not immediately cancel the benefits of the security features, but it increases the potential “attack surface” for an attacker to try and bypass them with a successful physical attack.  
It is also possible to enable secure download mode at runtime by calling `esp_efuse_enable_rom_secure_download_mode()`  
Note: Secure Download mode is not available for ESP32 (includes revisions till ECO3).
- UART ROM download mode (Enabled (not recommended)) (SECURE\_INSECURE\_ALLOW\_DL\_MODE)  
This is a potentially insecure option. Enabling this option will allow the full UART download mode to stay enabled. This option SHOULD NOT BE ENABLED for production use cases.

## Application manager

Contains:

- `CONFIG_APP_EXCLUDE_PROJECT_NAME_VAR`
- `CONFIG_APP_EXCLUDE_PROJECT_VER_VAR`
- `CONFIG_APP_PROJECT_VER_FROM_CONFIG`
- `CONFIG_APP_RETRIEVE_LEN_ELF_SHA`
- `CONFIG_APP_COMPILE_TIME_DATE`

## CONFIG\_APP\_COMPILE\_TIME\_DATE

Use time/date stamp for app

Found in: *Application manager*

If set, then the app will be built with the current time/date stamp. It is stored in the app description structure. If not set, time/date stamp will be excluded from app image. This can be useful for getting the same binary image files made from the same source, but at different times.

**Default value:**

- Yes (enabled)

### **CONFIG\_APP\_EXCLUDE\_PROJECT\_VER\_VAR**

Exclude PROJECT\_VER from firmware image

*Found in: Application manager*

The PROJECT\_VER variable from the build system will not affect the firmware image. This value will not be contained in the esp\_app\_desc structure.

**Default value:**

- No (disabled)

### **CONFIG\_APP\_EXCLUDE\_PROJECT\_NAME\_VAR**

Exclude PROJECT\_NAME from firmware image

*Found in: Application manager*

The PROJECT\_NAME variable from the build system will not affect the firmware image. This value will not be contained in the esp\_app\_desc structure.

**Default value:**

- No (disabled)

### **CONFIG\_APP\_PROJECT\_VER\_FROM\_CONFIG**

Get the project version from Kconfig

*Found in: Application manager*

If this is enabled, then config item APP\_PROJECT\_VER will be used for the variable PROJECT\_VER. Other ways to set PROJECT\_VER will be ignored.

**Default value:**

- No (disabled)

### **CONFIG\_APP\_PROJECT\_VER**

Project version

*Found in: Application manager > CONFIG\_APP\_PROJECT\_VER\_FROM\_CONFIG*

Project version

**Default value:**

- 1 if *CONFIG\_APP\_PROJECT\_VER\_FROM\_CONFIG*

### **CONFIG\_APP\_RETRIEVE\_LEN\_ELF\_SHA**

The length of APP ELF SHA is stored in RAM(chars)

*Found in: Application manager*

At startup, the app will read this many hex characters from the embedded APP ELF SHA-256 hash value and store it in static RAM. This ensures the app ELF SHA-256 value is always available if it needs to be printed by the panic handler code. Changing this value will change the size of a static buffer, in bytes.

**Range:**

- from 8 to 64

**Default value:**

- 16

## Boot ROM Behavior

Contains:

- [\*CONFIG\\_BOOT\\_ROM\\_LOG\\_SCHEME\*](#)

### CONFIG\_BOOT\_ROM\_LOG\_SCHEME

Permanently change Boot ROM output

*Found in: [Boot ROM Behavior](#)*

Controls the Boot ROM log behavior. The rom log behavior can only be changed for once, specific eFuse bit(s) will be burned at app boot stage.

#### Available options:

- Always Log (BOOT\_ROM\_LOG\_ALWAYS\_ON)  
Always print ROM logs, this is the default behavior.
- Permanently disable logging (BOOT\_ROM\_LOG\_ALWAYS\_OFF)  
Don't print ROM logs.
- Log on GPIO High (BOOT\_ROM\_LOG\_ON\_GPIO\_HIGH)  
Print ROM logs when GPIO level is high during start up. The GPIO number is chip dependent, e.g. on ESP32-S2, the control GPIO is GPIO46.
- Log on GPIO Low (BOOT\_ROM\_LOG\_ON\_GPIO\_LOW)  
Print ROM logs when GPIO level is low during start up. The GPIO number is chip dependent, e.g. on ESP32-S2, the control GPIO is GPIO46.

## Serial flasher config

Contains:

- [\*CONFIG\\_ESPTOOLPY\\_AFTER\*](#)
- [\*CONFIG\\_ESPTOOLPY\\_BEFORE\*](#)
- [\*CONFIG\\_ESPTOOLPY\\_HEADER\\_FLASHSIZE\\_UPDATE\*](#)
- [\*CONFIG\\_ESPTOOLPY\\_NO\\_STUB\*](#)
- [\*CONFIG\\_ESPTOOLPY\\_FLASH\\_SAMPLE\\_MODE\*](#)
- [\*CONFIG\\_ESPTOOLPY\\_FLASHSIZE\*](#)
- [\*CONFIG\\_ESPTOOLPY\\_FLASHMODE\*](#)
- [\*CONFIG\\_ESPTOOLPY\\_FLASHFREQ\*](#)

### CONFIG\_ESPTOOLPY\_NO\_STUB

Disable download stub

*Found in: [Serial flasher config](#)*

The flasher tool sends a precompiled download stub first by default. That stub allows things like compressed downloads and more. Usually you should not need to disable that feature

#### Default value:

- No (disabled)

### CONFIG\_ESPTOOLPY\_FLASHMODE

Flash SPI mode

*Found in: [Serial flasher config](#)*

Mode the flash chip is flashed in, as well as the default mode for the binary to run in.

#### Available options:

- QIO (ESPTOOLPY\_FLASHMODE\_QIO)

- QOUT (ESPTOOLPY\_FLASHMODE\_QOUT)
- DIO (ESPTOOLPY\_FLASHMODE\_DIO)
- DOUT (ESPTOOLPY\_FLASHMODE\_DOUT)
- OPI (ESPTOOLPY\_FLASHMODE\_OPI)

### CONFIG\_ESPTOOLPY\_FLASH\_SAMPLE\_MODE

Flash Sampling Mode

*Found in: Serial flasher config*

**Available options:**

- STR Mode (ESPTOOLPY\_FLASH\_SAMPLE\_MODE\_STR)
- DTR Mode (ESPTOOLPY\_FLASH\_SAMPLE\_MODE\_DTR)

### CONFIG\_ESPTOOLPY\_FLASHFREQ

Flash SPI speed

*Found in: Serial flasher config*

**Available options:**

- 120 MHz (READ DOCS FIRST) (ESPTOOLPY\_FLASHFREQ\_120M)
  - Optional feature for QSPI Flash. Read docs and enable `CONFIG_SPI_FLASH_HPM_ENA` first!
- 80 MHz (ESPTOOLPY\_FLASHFREQ\_80M)
- 60 MHz (ESPTOOLPY\_FLASHFREQ\_60M)
- 48 MHz (ESPTOOLPY\_FLASHFREQ\_48M)
- 40 MHz (ESPTOOLPY\_FLASHFREQ\_40M)
- 30 MHz (ESPTOOLPY\_FLASHFREQ\_30M)
- 26 MHz (ESPTOOLPY\_FLASHFREQ\_26M)
- 24 MHz (ESPTOOLPY\_FLASHFREQ\_24M)
- 20 MHz (ESPTOOLPY\_FLASHFREQ\_20M)
- 15 MHz (ESPTOOLPY\_FLASHFREQ\_15M)

### CONFIG\_ESPTOOLPY\_FLASHSIZE

Flash size

*Found in: Serial flasher config*

SPI flash size, in megabytes

**Available options:**

- 1 MB (ESPTOOLPY\_FLASHSIZE\_1MB)
- 2 MB (ESPTOOLPY\_FLASHSIZE\_2MB)
- 4 MB (ESPTOOLPY\_FLASHSIZE\_4MB)
- 8 MB (ESPTOOLPY\_FLASHSIZE\_8MB)
- 16 MB (ESPTOOLPY\_FLASHSIZE\_16MB)
- 32 MB (ESPTOOLPY\_FLASHSIZE\_32MB)
- 64 MB (ESPTOOLPY\_FLASHSIZE\_64MB)
- 128 MB (ESPTOOLPY\_FLASHSIZE\_128MB)

### CONFIG\_ESPTOOLPY\_HEADER\_FLASHSIZE\_UPDATE

Detect flash size when flashing bootloader

*Found in: Serial flasher config*

If this option is set, flashing the project will automatically detect the flash size of the target chip and update the bootloader image before it is flashed.

Enabling this option turns off the image protection against corruption by a SHA256 digest. Updating the bootloader image before flashing would invalidate the digest.

**Default value:**

- No (disabled)

### CONFIG\_ESPTOOLPY\_BEFORE

Before flashing

*Found in: [Serial flasher config](#)*

Configure whether esptool.py should reset the ESP32 before flashing.

Automatic resetting depends on the RTS & DTR signals being wired from the serial port to the ESP32. Most USB development boards do this internally.

**Available options:**

- Reset to bootloader (ESPTOOLPY\_BEFORE\_RESET)
- No reset (ESPTOOLPY\_BEFORE\_NORESET)

### CONFIG\_ESPTOOLPY\_AFTER

After flashing

*Found in: [Serial flasher config](#)*

Configure whether esptool.py should reset the ESP32 after flashing.

Automatic resetting depends on the RTS & DTR signals being wired from the serial port to the ESP32. Most USB development boards do this internally.

**Available options:**

- Reset after flashing (ESPTOOLPY\_AFTER\_RESET)
- Stay in bootloader (ESPTOOLPY\_AFTER\_NORESET)

### Partition Table

Contains:

- [CONFIG\\_PARTITION\\_TABLE\\_CUSTOM\\_FILENAME](#)
- [CONFIG\\_PARTITION\\_TABLE\\_MD5](#)
- [CONFIG\\_PARTITION\\_TABLE\\_OFFSET](#)
- [CONFIG\\_PARTITION\\_TABLE\\_TYPE](#)

### CONFIG\_PARTITION\_TABLE\_TYPE

Partition Table

*Found in: [Partition Table](#)*

The partition table to flash to the ESP32. The partition table determines where apps, data and other resources are expected to be found.

The predefined partition table CSV descriptions can be found in the components/partition\_table directory. These are mostly intended for example and development use, it's expected that for production use you will copy one of these CSV files and create a custom partition CSV for your application.

**Available options:**

- Single factory app, no OTA (PARTITION\_TABLE\_SINGLE\_APP)  
This is the default partition table, designed to fit into a 2MB or larger flash with a single 1MB app partition.  
The corresponding CSV file in the IDF directory is components/partition\_table/partitions\_singleapp.csv

- This partition table is not suitable for an app that needs OTA (over the air update) capability.
- Single factory app (large), no OTA (PARTITION\_TABLE\_SINGLE\_APP\_LARGE)  
This is a variation of the default partition table, that expands the 1MB app partition size to 1.5MB to fit more code.  
The corresponding CSV file in the IDF directory is components/partition\_table/partitions\_singleapp\_large.csv
  - This partition table is not suitable for an app that needs OTA (over the air update) capability.
  - Factory app, two OTA definitions (PARTITION\_TABLE\_TWO\_OTA)  
This is a basic OTA-enabled partition table with a factory app partition plus two OTA app partitions. All are 1MB, so this partition table requires 4MB or larger flash size.  
The corresponding CSV file in the IDF directory is components/partition\_table/partitions\_two\_ota.csv
  - Custom partition table CSV (PARTITION\_TABLE\_CUSTOM)  
Specify the path to the partition table CSV to use for your project.  
Consult the Partition Table section in the ESP-IDF Programmers Guide for more information.
  - Single factory app, no OTA, encrypted NVS (PARTITION\_TABLE\_SINGLE\_APP\_ENCRYPTED\_NVS)  
This is a variation of the default “Single factory app, no OTA” partition table that supports encrypted NVS when using flash encryption. See the Flash Encryption section in the ESP-IDF Programmers Guide for more information.  
The corresponding CSV file in the IDF directory is components/partition\_table/partitions\_singleapp\_encr\_nvs.csv
  - Single factory app (large), no OTA, encrypted NVS (PARTITION\_TABLE\_SINGLE\_APP\_LARGE\_ENC\_NVS)  
This is a variation of the “Single factory app (large), no OTA” partition table that supports encrypted NVS when using flash encryption. See the Flash Encryption section in the ESP-IDF Programmers Guide for more information.  
The corresponding CSV file in the IDF directory is components/partition\_table/partitions\_singleapp\_large\_encr\_nvs.csv
  - Factory app, two OTA definitions, encrypted NVS (PARTITION\_TABLE\_TWO\_OTA\_ENCRYPTED\_NVS)  
This is a variation of the “Factory app, two OTA definitions” partition table that supports encrypted NVS when using flash encryption. See the Flash Encryption section in the ESP-IDF Programmers Guide for more information.  
The corresponding CSV file in the IDF directory is components/partition\_table/partitions\_two\_ota\_encr\_nvs.csv

### CONFIG\_PARTITION\_TABLE\_CUSTOM\_FILENAME

Custom partition CSV file

*Found in:* [Partition Table](#)

Name of the custom partition CSV filename. This path is evaluated relative to the project root directory.

**Default value:**

- “partitions.csv”

### CONFIG\_PARTITION\_TABLE\_OFFSET

Offset of partition table

*Found in:* [Partition Table](#)

The address of partition table (by default 0x8000). Allows you to move the partition table, it gives more space for the bootloader. Note that the bootloader and app will both need to be compiled with the same PARTITION\_TABLE\_OFFSET value.

This number should be a multiple of 0x1000.

Note that partition offsets in the partition table CSV file may need to be changed if this value is set to a higher value. To have each partition offset adapt to the configured partition table offset, leave all partition offsets blank in the CSV file.

**Default value:**

- “0x8000”

### CONFIG\_PARTITION\_TABLE\_MD5

Generate an MD5 checksum for the partition table

*Found in: Partition Table*

Generate an MD5 checksum for the partition table for protecting the integrity of the table. The generation should be turned off for legacy bootloaders which cannot recognize the MD5 checksum in the partition table.

**Default value:**

- Yes (enabled)

### Compiler options

Contains:

- *CONFIG\_COMPILER\_OPTIMIZATION\_ASSERTION\_LEVEL*
- *CONFIG\_COMPILER\_FLOAT\_LIB\_FROM*
- *CONFIG\_COMPILER\_OPTIMIZATION\_CHECKS\_SILENT*
- *CONFIG\_COMPILER\_DUMP\_RTL\_FILES*
- *CONFIG\_COMPILER\_SAVE\_RESTORE\_LIBCALLS*
- *CONFIG\_COMPILER\_WARN\_WRITE\_STRINGS*
- *CONFIG\_COMPILER\_CXX\_EXCEPTIONS*
- *CONFIG\_COMPILER\_CXX\_RTTI*
- *CONFIG\_COMPILER\_OPTIMIZATION*
- *CONFIG\_COMPILER\_HIDE\_PATHS\_MACROS*
- *CONFIG\_COMPILER\_STACK\_CHECK\_MODE*

### CONFIG\_COMPILER\_OPTIMIZATION

Optimization Level

*Found in: Compiler options*

This option sets compiler optimization level (gcc -O argument) for the app.

- The “Default” setting will add the -Og flag to CFLAGS.
- The “Size” setting will add the -Os flag to CFLAGS.
- The “Performance” setting will add the -O2 flag to CFLAGS.
- The “None” setting will add the -O0 flag to CFLAGS.

The “Size” setting cause the compiled code to be smaller and faster, but may lead to difficulties of correlating code addresses to source file lines when debugging.

The “Performance” setting causes the compiled code to be larger and faster, but will be easier to correlated code addresses to source file lines.

“None” with -O0 produces compiled code without optimization.

Note that custom optimization levels may be unsupported.

Compiler optimization for the IDF bootloader is set separately, see the `BOOT-LOADER_COMPILER_OPTIMIZATION` setting.

**Available options:**

- Debug (-Og) (`COMPILER_OPTIMIZATION_DEFAULT`)

- Optimize for size (-Os) (COMPILER\_OPTIMIZATION\_SIZE)
- Optimize for performance (-O2) (COMPILER\_OPTIMIZATION\_PERF)
- Debug without optimization (-O0) (COMPILER\_OPTIMIZATION\_NONE)

### CONFIG\_COMPILER\_OPTIMIZATION\_ASSERTION\_LEVEL

Assertion level

*Found in: [Compiler options](#)*

Assertions can be:

- Enabled. Failure will print verbose assertion details. This is the default.
- Set to “silent” to save code size (failed assertions will abort() but user needs to use the aborting address to find the line number with the failed assertion.)
- Disabled entirely (not recommended for most configurations.) -DNDEBUG is added to CPPFLAGS in this case.

#### Available options:

- Enabled (COMPILER\_OPTIMIZATION\_ASSERTIONS\_ENABLE)  
Enable assertions. Assertion content and line number will be printed on failure.
- Silent (saves code size) (COMPILER\_OPTIMIZATION\_ASSERTIONS\_SILENT)  
Enable silent assertions. Failed assertions will abort(), user needs to use the aborting address to find the line number with the failed assertion.
- Disabled (sets -DNDEBUG) (COMPILER\_OPTIMIZATION\_ASSERTIONS\_DISABLE)  
If assertions are disabled, -DNDEBUG is added to CPPFLAGS.

### CONFIG\_COMPILER\_FLOAT\_LIB\_FROM

Compiler float lib source

*Found in: [Compiler options](#)*

In the soft-fp part of libgcc, riscv version is written in C, and handles all edge cases in IEEE754, which makes it larger and performance is slow.

RVfplib is an optimized RISC-V library for FP arithmetic on 32-bit integer processors, for single and double-precision FP. RVfplib is “fast” , but it has a few exceptions from IEEE 754 compliance.

#### Available options:

- libgcc (COMPILER\_FLOAT\_LIB\_FROM\_GCCLIB)
- librvfp (COMPILER\_FLOAT\_LIB\_FROM\_RVFPLIB)

### CONFIG\_COMPILER\_OPTIMIZATION\_CHECKS\_SILENT

Disable messages in ESP\_RETURN\_ON\_\* and ESP\_EXIT\_ON\_\* macros

*Found in: [Compiler options](#)*

If enabled, the error messages will be discarded in following check macros: -  
ESP\_RETURN\_ON\_ERROR - ESP\_EXIT\_ON\_ERROR - ESP\_RETURN\_ON\_FALSE -  
ESP\_EXIT\_ON\_FALSE

#### Default value:

- No (disabled)

### CONFIG\_COMPILER\_HIDE\_PATHS\_MACROS

Replace ESP-IDF and project paths in binaries

*Found in: [Compiler options](#)*

When expanding the \_\_FILE\_\_ and \_\_BASE\_FILE\_\_ macros, replace paths inside ESP-IDF with paths relative to the placeholder string “IDF” , and convert paths inside the project directory to relative paths.

This allows building the project with assertions or other code that embeds file paths, without the binary containing the exact path to the IDF or project directories.

This option passes `-fmacro-prefix-map` options to the GCC command line. To replace additional paths in your binaries, modify the project `CMakeLists.txt` file to pass custom `-fmacro-prefix-map` or `-file-prefix-map` arguments.

**Default value:**

- Yes (enabled)

## CONFIG\_COMPILER\_CXX\_EXCEPTIONS

Enable C++ exceptions

*Found in: [Compiler options](#)*

Enabling this option compiles all IDF C++ files with exception support enabled.

Disabling this option disables C++ exception support in all compiled files, and any `libstdc++` code which throws an exception will abort instead.

Enabling this option currently adds an additional ~500 bytes of heap overhead when an exception is thrown in user code for the first time.

**Default value:**

- No (disabled)

Contains:

- [CONFIG\\_COMPILER\\_CXX\\_EXCEPTIONS\\_EMG\\_POOL\\_SIZE](#)

## CONFIG\_COMPILER\_CXX\_EXCEPTIONS\_EMG\_POOL\_SIZE

Emergency Pool Size

*Found in: [Compiler options](#) > [CONFIG\\_COMPILER\\_CXX\\_EXCEPTIONS](#)*

Size (in bytes) of the emergency memory pool for C++ exceptions. This pool will be used to allocate memory for thrown exceptions when there is not enough memory on the heap.

**Default value:**

- 0 if [CONFIG\\_COMPILER\\_CXX\\_EXCEPTIONS](#)

## CONFIG\_COMPILER\_CXX\_RTTI

Enable C++ run-time type info (RTTI)

*Found in: [Compiler options](#)*

Enabling this option compiles all C++ files with RTTI support enabled. This increases binary size (typically by tens of kB) but allows using `dynamic_cast` conversion and `typeid` operator.

**Default value:**

- No (disabled)

## CONFIG\_COMPILER\_STACK\_CHECK\_MODE

Stack smashing protection mode

*Found in: [Compiler options](#)*

Stack smashing protection mode. Emit extra code to check for buffer overflows, such as stack smashing attacks. This is done by adding a guard variable to functions with vulnerable objects. The guards are initialized when a function is entered and then checked when the function exits. If a guard check fails, program is halted. Protection has the following modes:

- In NORMAL mode (GCC flag: `-fstack-protector`) only functions that call `alloca`, and functions with buffers larger than 8 bytes are protected.
- STRONG mode (GCC flag: `-fstack-protector-strong`) is like NORMAL, but includes additional functions to be protected –those that have local array definitions, or have references to local frame addresses.
- In OVERALL mode (GCC flag: `-fstack-protector-all`) all functions are protected.

Modes have the following impact on code performance and coverage:

- performance: NORMAL > STRONG > OVERALL
- coverage: NORMAL < STRONG < OVERALL

The performance impact includes increasing the amount of stack memory required for each task.

**Available options:**

- None (COMPILER\_STACK\_CHECK\_MODE\_NONE)
- Normal (COMPILER\_STACK\_CHECK\_MODE\_NORM)
- Strong (COMPILER\_STACK\_CHECK\_MODE\_STRONG)
- Overall (COMPILER\_STACK\_CHECK\_MODE\_ALL)

### CONFIG\_COMPILER\_WARN\_WRITE\_STRINGS

Enable `-Wwrite-strings` warning flag

*Found in: [Compiler options](#)*

Adds `-Wwrite-strings` flag for the C/C++ compilers.

For C, this gives string constants the type `const char[]` so that copying the address of one into a non-const `char *` pointer produces a warning. This warning helps to find at compile time code that tries to write into a string constant.

For C++, this warns about the deprecated conversion from string literals to `char *`.

**Default value:**

- No (disabled)

### CONFIG\_COMPILER\_SAVE\_RESTORE\_LIBCALLS

Enable `-msave-restore` flag to reduce code size

*Found in: [Compiler options](#)*

Adds `-msave-restore` to C/C++ compilation flags.

When this flag is enabled, compiler will call library functions to save/restore registers in function prologues/epilogues. This results in lower overall code size, at the expense of slightly reduced performance.

This option can be enabled for RISC-V targets only.

### CONFIG\_COMPILER\_DUMP\_RTL\_FILES

Dump RTL files during compilation

*Found in: [Compiler options](#)*

If enabled, RTL files will be produced during compilation. These files can be used by other tools, for example to calculate call graphs.

### Component config

Contains:

- [ADC and ADC Calibration](#)

**Application Level Tracing** Contains:

- *CONFIG\_APPTRACE\_DESTINATION1*
- *CONFIG\_APPTRACE\_DESTINATION2*
- *FreeRTOS System View Tracing*
- *CONFIG\_APPTRACE\_GCOV\_ENABLE*
- *CONFIG\_APPTRACE\_BUF\_SIZE*
- *CONFIG\_APPTRACE\_PENDING\_DATA\_SIZE\_MAX*

- `CONFIG_APPTRACE_POSTMORTEM_FLUSH_THRESH`
- `CONFIG_APPTRACE_ONPANIC_HOST_FLUSH_TMO`
- `CONFIG_APPTRACE_UART_BAUDRATE`
- `CONFIG_APPTRACE_UART_RX_GPIO`
- `CONFIG_APPTRACE_UART_RX_BUFF_SIZE`
- `CONFIG_APPTRACE_UART_TASK_PRIO`
- `CONFIG_APPTRACE_UART_TX_MSG_SIZE`
- `CONFIG_APPTRACE_UART_TX_GPIO`
- `CONFIG_APPTRACE_UART_TX_BUFF_SIZE`

### **CONFIG\_APPTRACE\_DESTINATION1**

Data Destination 1

*Found in: Component config > Application Level Tracing*

Select destination for application trace: JTAG or none (to disable).

**Available options:**

- JTAG (`APPTRACE_DEST_JTAG`)
- None (`APPTRACE_DEST_NONE`)

### **CONFIG\_APPTRACE\_DESTINATION2**

Data Destination 2

*Found in: Component config > Application Level Tracing*

Select destination for application trace: UART(XX) or none (to disable).

**Available options:**

- UART0 (`APPTRACE_DEST_UART0`)
- UART1 (`APPTRACE_DEST_UART1`)
- UART2 (`APPTRACE_DEST_UART2`)
- USB\_CDC (`APPTRACE_DEST_USB_CDC`)
- None (`APPTRACE_DEST_UART_NONE`)

### **CONFIG\_APPTRACE\_UART\_TX\_GPIO**

UART TX on GPIO#

*Found in: Component config > Application Level Tracing*

This GPIO is used for UART TX pin.

### **CONFIG\_APPTRACE\_UART\_RX\_GPIO**

UART RX on GPIO#

*Found in: Component config > Application Level Tracing*

This GPIO is used for UART RX pin.

### **CONFIG\_APPTRACE\_UART\_BAUDRATE**

UART baud rate

*Found in: Component config > Application Level Tracing*

This baud rate is used for UART.

The app's maximum baud rate depends on the UART clock source. If Power Management is disabled, the UART clock source is the APB clock and all baud rates in the available range will be sufficiently accurate. If Power Management is enabled, REF\_TICK clock source is used so the baud rate is divided

from 1MHz. Baud rates above 1Mbps are not possible and values between 500Kbps and 1Mbps may not be accurate.

#### **CONFIG\_APPTRACE\_UART\_RX\_BUFF\_SIZE**

UART RX ring buffer size

*Found in: [Component config](#) > [Application Level Tracing](#)*

Size of the UART input ring buffer. This size related to the baudrate, system tick frequency and amount of data to transfer. The data placed to this buffer before sent out to the interface.

#### **CONFIG\_APPTRACE\_UART\_TX\_BUFF\_SIZE**

UART TX ring buffer size

*Found in: [Component config](#) > [Application Level Tracing](#)*

Size of the UART output ring buffer. This size related to the baudrate, system tick frequency and amount of data to transfer.

#### **CONFIG\_APPTRACE\_UART\_TX\_MSG\_SIZE**

UART TX message size

*Found in: [Component config](#) > [Application Level Tracing](#)*

Maximum size of the single message to transfer.

#### **CONFIG\_APPTRACE\_UART\_TASK\_PRIO**

UART Task Priority

*Found in: [Component config](#) > [Application Level Tracing](#)*

UART task priority. In case of high events rate, this parameter could be changed up to (config-MAX\_PRIORITIES-1).

**Range:**

- from 1 to 32

**Default value:**

- 1

#### **CONFIG\_APPTRACE\_ONPANIC\_HOST\_FLUSH\_TMO**

Timeout for flushing last trace data to host on panic

*Found in: [Component config](#) > [Application Level Tracing](#)*

Timeout for flushing last trace data to host in case of panic. In ms. Use -1 to disable timeout and wait forever.

#### **CONFIG\_APPTRACE\_POSTMORTEM\_FLUSH\_THRESH**

Threshold for flushing last trace data to host on panic

*Found in: [Component config](#) > [Application Level Tracing](#)*

Threshold for flushing last trace data to host on panic in post-mortem mode. This is minimal amount of data needed to perform flush. In bytes.

**CONFIG\_APPTRACE\_BUF\_SIZE**

Size of the apptrace buffer

*Found in: [Component config](#) > [Application Level Tracing](#)*

Size of the memory buffer for trace data in bytes.

**CONFIG\_APPTRACE\_PENDING\_DATA\_SIZE\_MAX**

Size of the pending data buffer

*Found in: [Component config](#) > [Application Level Tracing](#)*

Size of the buffer for events in bytes. It is useful for buffering events from the time critical code (scheduler, ISRs etc). If this parameter is 0 then events will be discarded when main HW buffer is full.

**FreeRTOS SystemView Tracing** Contains:

- [CONFIG\\_APPTRACE\\_SV\\_CPU](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_ISR\\_ENTER\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_ISR\\_EXIT\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_ISR\\_TO\\_SCHED\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_MAX\\_TASKS](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_IDLE\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TASK\\_CREATE\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TASK\\_START\\_EXEC\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TASK\\_START\\_READY\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TASK\\_STOP\\_EXEC\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TASK\\_STOP\\_READY\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TASK\\_TERMINATE\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TIMER\\_ENTER\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_TIMER\\_EXIT\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_TS\\_SOURCE](#)
- [CONFIG\\_APPTRACE\\_SV\\_EVT\\_OVERFLOW\\_ENABLE](#)
- [CONFIG\\_APPTRACE\\_SV\\_BUF\\_WAIT\\_TMO](#)

**CONFIG\_APPTRACE\_SV\_ENABLE**

SystemView Tracing Enable

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#)*

Enables support for SEGGER SystemView tracing functionality.

**CONFIG\_APPTRACE\_SV\_DEST**

SystemView destination

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#) > [CONFIG\\_APPTRACE\\_SV\\_ENABLE](#)*

SystemView will transfer data through defined interface.

**Available options:**

- Data destination JTAG ([APPTRACE\\_SV\\_DEST\\_JTAG](#))  
Send SEGGER SystemView events through JTAG interface.
- Data destination UART ([APPTRACE\\_SV\\_DEST\\_UART](#))  
Send SEGGER SystemView events through UART interface.

### CONFIG\_APPTRACE\_SV\_CPU

CPU to trace

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#)*

Define the CPU to trace by SystemView.

**Available options:**

- CPU0 (APPTRACE\_SV\_DEST\_CPU\_0)  
Send SEGGER SystemView events for Pro CPU.
- CPU1 (APPTRACE\_SV\_DEST\_CPU\_1)  
Send SEGGER SystemView events for App CPU.

### CONFIG\_APPTRACE\_SV\_TS\_SOURCE

Timer to use as timestamp source

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#)*

SystemView needs to use a hardware timer as the source of timestamps when tracing. This option selects the timer for it.

**Available options:**

- CPU cycle counter (CCOUNT) (APPTRACE\_SV\_TS\_SOURCE\_CCOUNT)
- General Purpose Timer (Timer Group) (APPTRACE\_SV\_TS\_SOURCE\_GPTIMER)
- esp\_timer high resolution timer (APPTRACE\_SV\_TS\_SOURCE\_ESP\_TIMER)

### CONFIG\_APPTRACE\_SV\_MAX\_TASKS

Maximum supported tasks

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#)*

Configures maximum supported tasks in sysview debug

### CONFIG\_APPTRACE\_SV\_BUF\_WAIT\_TMO

Trace buffer wait timeout

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#)*

Configures timeout (in us) to wait for free space in trace buffer. Set to -1 to wait forever and avoid lost events.

### CONFIG\_APPTRACE\_SV\_EVT\_OVERFLOW\_ENABLE

Trace Buffer Overflow Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#)*

Enables “Trace Buffer Overflow” event.

### CONFIG\_APPTRACE\_SV\_EVT\_ISR\_ENTER\_ENABLE

ISR Enter Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS SystemView Tracing](#)*

Enables “ISR Enter” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_ISR\_EXIT\_ENABLE**

ISR Exit Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “ISR Exit” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_ISR\_TO\_SCHED\_ENABLE**

ISR Exit to Scheduler Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “ISR to Scheduler” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TASK\_START\_EXEC\_ENABLE**

Task Start Execution Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “Task Start Execution” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TASK\_STOP\_EXEC\_ENABLE**

Task Stop Execution Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “Task Stop Execution” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TASK\_START\_READY\_ENABLE**

Task Start Ready State Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “Task Start Ready State” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TASK\_STOP\_READY\_ENABLE**

Task Stop Ready State Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “Task Stop Ready State” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TASK\_CREATE\_ENABLE**

Task Create Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “Task Create” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TASK\_TERMINATE\_ENABLE**

Task Terminate Event

*Found in: [Component config](#) > [Application Level Tracing](#) > [FreeRTOS System View Tracing](#)*

Enables “Task Terminate” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_IDLE\_ENABLE**

System Idle Event

*Found in: Component config > Application Level Tracing > FreeRTOS System View Tracing*

Enables “System Idle” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TIMER\_ENTER\_ENABLE**

Timer Enter Event

*Found in: Component config > Application Level Tracing > FreeRTOS System View Tracing*

Enables “Timer Enter” event.

### **CONFIG\_APPTRACE\_SV\_EVT\_TIMER\_EXIT\_ENABLE**

Timer Exit Event

*Found in: Component config > Application Level Tracing > FreeRTOS System View Tracing*

Enables “Timer Exit” event.

### **CONFIG\_APPTRACE\_GCOV\_ENABLE**

GCOV to Host Enable

*Found in: Component config > Application Level Tracing*

Enables support for GCOV data transfer to host.

### **CONFIG\_APPTRACE\_GCOV\_DUMP\_TASK\_STACK\_SIZE**

Gcov dump task stack size

*Found in: Component config > Application Level Tracing > CONFIG\_APPTRACE\_GCOV\_ENABLE*

Configures stack size of Gcov dump task

#### **Default value:**

- 2048 if *CONFIG\_APPTRACE\_GCOV\_ENABLE*

**Bluetooth** Contains:

- *Bluedroid Options*
- *CONFIG\_BT\_ENABLED*
- *Common Options*
- *Controller Options*
- *CONFIG\_BT\_HCI\_LOG\_DEBUG\_EN*
- *NimBLE Options*
- *CONFIG\_BT\_RELEASE\_IRAM*

### **CONFIG\_BT\_ENABLED**

Bluetooth

*Found in: Component config > Bluetooth*

Select this option to enable Bluetooth and show the submenu with Bluetooth configuration choices.

## CONFIG\_BT\_HOST

Host

Found in: *Component config > Bluetooth > CONFIG\_BT\_ENABLED*

This helps to choose Bluetooth host stack

### Available options:

- Bluedroid - Dual-mode (BT\_BLUEDROID\_ENABLED)  
This option is recommended for classic Bluetooth or for dual-mode usecases
- NimBLE - BLE only (BT\_NIMBLE\_ENABLED)  
This option is recommended for BLE only usecases to save on memory
- Disabled (BT\_CONTROLLER\_ONLY)  
This option is recommended when you want to communicate directly with the controller (without any host) or when you are using any other host stack not supported by Espressif (not mentioned here).

## CONFIG\_BT\_CONTROLLER

Controller

Found in: *Component config > Bluetooth > CONFIG\_BT\_ENABLED*

This helps to choose Bluetooth controller stack

### Available options:

- Enabled (BT\_CONTROLLER\_ENABLED)  
This option is recommended for Bluetooth controller usecases
- Disabled (BT\_CONTROLLER\_DISABLED)  
This option is recommended for Bluetooth Host only usecases

### Bluedroid Options

 Contains:

- *CONFIG\_BT\_ABORT\_WHEN\_ALLOCATION\_FAILS*
- *CONFIG\_BT\_BLE\_HOST\_QUEUE\_CONG\_CHECK*
- *CONFIG\_BT\_BLUEDROID\_MEM\_DEBUG*
- *CONFIG\_BT\_BTU\_TASK\_STACK\_SIZE*
- *CONFIG\_BT\_BTC\_TASK\_STACK\_SIZE*
- *CONFIG\_BT\_BLE\_ENABLED*
- *BT\_DEBUG\_LOG\_LEVEL*
- *CONFIG\_BT\_ACL\_CONNECTIONS*
- *CONFIG\_BT\_SMP\_MAX BONDS*
- *CONFIG\_BT\_ALLOCATION\_FROM\_SPIRAM\_FIRST*
- *CONFIG\_BT\_STACK\_NO\_LOG*
- *CONFIG\_BT\_BLE\_42\_FEATURES\_SUPPORTED*
- *CONFIG\_BT\_BLE\_50\_FEATURES\_SUPPORTED*
- *CONFIG\_BT\_BLE\_HIGH\_DUTY\_ADV\_INTERVAL*
- *CONFIG\_BT\_MULTI\_CONNECTION\_ENBALE*
- *CONFIG\_BT\_BLE\_FEAT\_PERIODIC\_ADV\_SYNC\_TRANSFER*
- *CONFIG\_BT\_BLE\_FEAT\_CREATE\_SYNC\_ENH*
- *CONFIG\_BT\_BLE\_FEAT\_PERIODIC\_ADV\_ENH*
- *CONFIG\_BT\_MAX\_DEVICE\_NAME\_LEN*
- *CONFIG\_BT\_BLE\_ACT\_SCAN\_REP\_ADV\_SCAN*
- *CONFIG\_BT\_BLUEDROID\_PINNED\_TO\_CORE\_CHOICE*
- *CONFIG\_BT\_BLE\_ESTAB\_LINK\_CONN\_TOUT*
- *CONFIG\_BT\_BLE\_RPA\_TIMEOUT*
- *CONFIG\_BT\_BLE\_RPA\_SUPPORTED*
- *CONFIG\_BT\_BLE\_DYNAMIC\_ENV\_MEMORY*

### CONFIG\_BT\_BTC\_TASK\_STACK\_SIZE

Bluetooth event (callback to application) task stack size

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This select btc task stack size

**Default value:**

- 3072 if BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_BLUEDROID\_PINNED\_TO\_CORE\_CHOICE

The cpu core which Bluedroid run

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Which the cpu core to run Bluedroid. Can choose core0 and core1. Can not specify no-affinity.

**Available options:**

- Core 0 (PRO CPU) (BT\_BLUEDROID\_PINNED\_TO\_CORE\_0)
- Core 1 (APP CPU) (BT\_BLUEDROID\_PINNED\_TO\_CORE\_1)

### CONFIG\_BT\_BTU\_TASK\_STACK\_SIZE

Bluetooth Bluedroid Host Stack task stack size

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This select btu task stack size

**Default value:**

- 4352 if BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_BLUEDROID\_MEM\_DEBUG

Bluedroid memory debug

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Bluedroid memory debug

**Default value:**

- No (disabled) if BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_BLE\_ENABLED

Bluetooth Low Energy

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This enables Bluetooth Low Energy

**Default value:**

- Yes (enabled) if BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATTS\_ENABLE

Include GATT server module(GATTS)

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#)*

This option can be disabled when the app work only on gatt client mode

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_BLE\\_ENABLED](#) && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATTS\_PPCP\_CHAR\_GAP

Enable Peripheral Preferred Connection Parameters characteristic in GAP service

*Found in: Component config > Bluetooth > Bluedroid Options > CONFIG\_BT\_BLE\_ENABLED > CONFIG\_BT\_GATTS\_ENABLE*

This enables “Peripheral Preferred Connection Parameters” characteristic (UUID: 0x2A04) in GAP service that has connection parameters like min/max connection interval, slave latency and supervision timeout multiplier

**Default value:**

- No (disabled) if *CONFIG\_BT\_GATTS\_ENABLE* && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_BLE\_BLUFI\_ENABLE

Include blufi function

*Found in: Component config > Bluetooth > Bluedroid Options > CONFIG\_BT\_BLE\_ENABLED > CONFIG\_BT\_GATTS\_ENABLE*

This option can be close when the app does not require blufi function.

**Default value:**

- No (disabled) if *CONFIG\_BT\_GATTS\_ENABLE* && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATT\_MAX\_SR\_PROFILES

Max GATT Server Profiles

*Found in: Component config > Bluetooth > Bluedroid Options > CONFIG\_BT\_BLE\_ENABLED > CONFIG\_BT\_GATTS\_ENABLE*

Maximum GATT Server Profiles Count

**Range:**

- from 1 to 32 if *CONFIG\_BT\_GATTS\_ENABLE* && BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

**Default value:**

- 8 if *CONFIG\_BT\_GATTS\_ENABLE* && BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATT\_MAX\_SR\_ATTRIBUTES

Max GATT Service Attributes

*Found in: Component config > Bluetooth > Bluedroid Options > CONFIG\_BT\_BLE\_ENABLED > CONFIG\_BT\_GATTS\_ENABLE*

Maximum GATT Service Attributes Count

**Range:**

- from 1 to 500 if *CONFIG\_BT\_GATTS\_ENABLE* && BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

**Default value:**

- 100 if *CONFIG\_BT\_GATTS\_ENABLE* && BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATTS\_SEND\_SERVICE\_CHANGE\_MODE

GATTS Service Change Mode

*Found in: Component config > Bluetooth > Bluedroid Options > CONFIG\_BT\_BLE\_ENABLED > CONFIG\_BT\_GATTS\_ENABLE*

Service change indication mode for GATT Server.

**Available options:**

- GATTS manually send service change indication (BT\_GATTS\_SEND\_SERVICE\_CHANGE\_MANUAL)  
Manually send service change indication through API  
`esp_ble_gatts_send_service_change_indication()`
- GATTS automatically send service change indication (BT\_GATTS\_SEND\_SERVICE\_CHANGE\_AUTO)  
Let Bluetooth handle the service change indication internally

### **CONFIG\_BT\_GATTS\_ROBUST\_CACHING\_ENABLED**

Enable Robust Caching on Server Side

*Found in: [Component config](#) > [Bluetooth](#) > [Bluetooth Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#) > [CONFIG\\_BT\\_GATTS\\_ENABLE](#)*

This option enables the GATT robust caching feature on the server. If turned on, the Client Supported Features characteristic, Database Hash characteristic, and Server Supported Features characteristic will be included in the GAP SERVICE.

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_GATTS\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

### **CONFIG\_BT\_GATTS\_DEVICE\_NAME\_WRITABLE**

Allow to write device name by GATT clients

*Found in: [Component config](#) > [Bluetooth](#) > [Bluetooth Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#) > [CONFIG\\_BT\\_GATTS\\_ENABLE](#)*

Enabling this option allows remote GATT clients to write device name

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_GATTS\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

### **CONFIG\_BT\_GATTS\_APPEARANCE\_WRITABLE**

Allow to write appearance by GATT clients

*Found in: [Component config](#) > [Bluetooth](#) > [Bluetooth Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#) > [CONFIG\\_BT\\_GATTS\\_ENABLE](#)*

Enabling this option allows remote GATT clients to write appearance

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_GATTS\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

### **CONFIG\_BT\_GATTC\_ENABLE**

Include GATT client module(GATTC)

*Found in: [Component config](#) > [Bluetooth](#) > [Bluetooth Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#)*

This option can be close when the app work only on gatt server mode

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_BLE\\_ENABLED](#) && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATTC\_MAX\_CACHE\_CHAR

Max gattc cache characteristic for discover

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#) > [CONFIG\\_BT\\_GATTC\\_ENABLE](#)*

Maximum GATTC cache characteristic count

**Range:**

- from 1 to 500 if [CONFIG\\_BT\\_GATTC\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

**Default value:**

- 40 if [CONFIG\\_BT\\_GATTC\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATTC\_NOTIF\_REG\_MAX

Max gattc notify(indication) register number

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#) > [CONFIG\\_BT\\_GATTC\\_ENABLE](#)*

Maximum GATTC notify(indication) register number

**Range:**

- from 1 to 64 if [CONFIG\\_BT\\_GATTC\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

**Default value:**

- 5 if [CONFIG\\_BT\\_GATTC\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATTC\_CACHE\_NVS\_FLASH

Save gattc cache data to nvs flash

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#) > [CONFIG\\_BT\\_GATTC\\_ENABLE](#)*

This select can save gattc cache data to nvs flash

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_GATTC\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_GATTC\_CONNECT\_RETRY\_COUNT

The number of attempts to reconnect if the connection establishment failed

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#) > [CONFIG\\_BT\\_GATTC\\_ENABLE](#)*

The number of attempts to reconnect if the connection establishment failed

**Range:**

- from 0 to 255 if [CONFIG\\_BT\\_GATTC\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

**Default value:**

- 3 if [CONFIG\\_BT\\_GATTC\\_ENABLE](#) && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_BLE\_SMP\_ENABLE

Include BLE security module(SMP)

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [CONFIG\\_BT\\_BLE\\_ENABLED](#)*

This option can be close when the app not used the ble security connect.

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_BLE\\_ENABLED](#) && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_SMP\_SLAVE\_CON\_PARAMS\_UPD\_ENABLE

Slave enable connection parameters update during pairing

*Found in: Component config > Bluetooth > Bluedroid Options > CONFIG\_BT\_BLE\_ENABLED > CONFIG\_BT\_BLE\_SMP\_ENABLE*

In order to reduce the pairing time, slave actively initiates connection parameters update during pairing.

**Default value:**

- No (disabled) if *CONFIG\_BT\_BLE\_SMP\_ENABLE* && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_BLE\_SMP\_ID\_RESET\_ENABLE

Reset device identity when all bonding records are deleted

*Found in: Component config > Bluetooth > Bluedroid Options > CONFIG\_BT\_BLE\_ENABLED > CONFIG\_BT\_BLE\_SMP\_ENABLE*

There are tracking risks associated with using a fixed or static IRK. If enabled this option, Bluedroid will assign a new randomly-generated IRK when all pairing and bonding records are deleted. This would decrease the ability of a previously paired peer to be used to determine whether a device with which it previously shared an IRK is within range.

**Default value:**

- No (disabled) if *CONFIG\_BT\_BLE\_SMP\_ENABLE* && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_STACK\_NO\_LOG

Disable BT debug logs (minimize bin size)

*Found in: Component config > Bluetooth > Bluedroid Options*

This select can save the rodata code size

**Default value:**

- No (disabled) if BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### BT DEBUG LOG LEVEL Contains:

- *CONFIG\_BT\_LOG\_A2D\_TRACE\_LEVEL*
- *CONFIG\_BT\_LOG\_APPL\_TRACE\_LEVEL*
- *CONFIG\_BT\_LOG\_AVCT\_TRACE\_LEVEL*
- *CONFIG\_BT\_LOG\_AVDT\_TRACE\_LEVEL*
- *CONFIG\_BT\_LOG\_AVRC\_TRACE\_LEVEL*
- *CONFIG\_BT\_LOG\_BLUFI\_TRACE\_LEVEL*

### CONFIG\_BT\_LOG\_HCI\_TRACE\_LEVEL

HCI layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for HCI layer

**Available options:**

- NONE (BT\_LOG\_HCI\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_HCI\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_HCI\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_HCI\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_HCI\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_HCI\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_HCI\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_BTM\_TRACE\_LEVEL

BTM layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for BTM layer

**Available options:**

- NONE (BT\_LOG\_BTM\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_BTM\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_BTM\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_BTM\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_BTM\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_BTM\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_BTM\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_L2CAP\_TRACE\_LEVEL

L2CAP layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for L2CAP layer

**Available options:**

- NONE (BT\_LOG\_L2CAP\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_L2CAP\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_L2CAP\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_L2CAP\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_L2CAP\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_L2CAP\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_L2CAP\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_RFCOMM\_TRACE\_LEVEL

RFCOMM layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for RFCOMM layer

**Available options:**

- NONE (BT\_LOG\_RFCOMM\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_RFCOMM\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_RFCOMM\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_RFCOMM\_TRACE\_LEVEL\_API)

- EVENT (BT\_LOG\_RFCOMM\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_RFCOMM\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_RFCOMM\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_SDP\_TRACE\_LEVEL

SDP layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for SDP layer

**Available options:**

- NONE (BT\_LOG\_SDP\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_SDP\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_SDP\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_SDP\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_SDP\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_SDP\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_SDP\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_GAP\_TRACE\_LEVEL

GAP layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for GAP layer

**Available options:**

- NONE (BT\_LOG\_GAP\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_GAP\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_GAP\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_GAP\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_GAP\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_GAP\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_GAP\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_BNEP\_TRACE\_LEVEL

BNEP layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for BNEP layer

**Available options:**

- NONE (BT\_LOG\_BNEP\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_BNEP\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_BNEP\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_BNEP\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_BNEP\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_BNEP\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_BNEP\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_PAN\_TRACE\_LEVEL

PAN layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for PAN layer

**Available options:**

- NONE (BT\_LOG\_PAN\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_PAN\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_PAN\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_PAN\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_PAN\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_PAN\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_PAN\_TRACE\_LEVEL\_VERBOSE)

### **CONFIG\_BT\_LOG\_A2D\_TRACE\_LEVEL**

A2D layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for A2D layer

**Available options:**

- NONE (BT\_LOG\_A2D\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_A2D\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_A2D\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_A2D\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_A2D\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_A2D\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_A2D\_TRACE\_LEVEL\_VERBOSE)

### **CONFIG\_BT\_LOG\_AVDT\_TRACE\_LEVEL**

AVDT layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for AVDT layer

**Available options:**

- NONE (BT\_LOG\_AVDT\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_AVDT\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_AVDT\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_AVDT\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_AVDT\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_AVDT\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_AVDT\_TRACE\_LEVEL\_VERBOSE)

### **CONFIG\_BT\_LOG\_AVCT\_TRACE\_LEVEL**

AVCT layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for AVCT layer

**Available options:**

- NONE (BT\_LOG\_AVCT\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_AVCT\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_AVCT\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_AVCT\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_AVCT\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_AVCT\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_AVCT\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_AVRC\_TRACE\_LEVEL

AVRC layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for AVRC layer

**Available options:**

- NONE (BT\_LOG\_AVRC\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_AVRC\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_AVRC\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_AVRC\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_AVRC\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_AVRC\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_AVRC\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_MCA\_TRACE\_LEVEL

MCA layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for MCA layer

**Available options:**

- NONE (BT\_LOG\_MCA\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_MCA\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_MCA\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_MCA\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_MCA\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_MCA\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_MCA\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_HID\_TRACE\_LEVEL

HID layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for HID layer

**Available options:**

- NONE (BT\_LOG\_HID\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_HID\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_HID\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_HID\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_HID\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_HID\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_HID\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_APPL\_TRACE\_LEVEL

APPL layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for APPL layer

**Available options:**

- NONE (BT\_LOG\_APPL\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_APPL\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_APPL\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_APPL\_TRACE\_LEVEL\_API)

- EVENT (BT\_LOG\_APPL\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_APPL\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_APPL\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_GATT\_TRACE\_LEVEL

GATT layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for GATT layer

**Available options:**

- NONE (BT\_LOG\_GATT\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_GATT\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_GATT\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_GATT\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_GATT\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_GATT\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_GATT\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_SMP\_TRACE\_LEVEL

SMP layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for SMP layer

**Available options:**

- NONE (BT\_LOG\_SMP\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_SMP\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_SMP\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_SMP\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_SMP\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_SMP\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_SMP\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_BTIF\_TRACE\_LEVEL

BTIF layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for BTIF layer

**Available options:**

- NONE (BT\_LOG\_BTIF\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_BTIF\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_BTIF\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_BTIF\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_BTIF\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_BTIF\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_BTIF\_TRACE\_LEVEL\_VERBOSE)

### CONFIG\_BT\_LOG\_BTC\_TRACE\_LEVEL

BTC layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for BTC layer

**Available options:**

- NONE (BT\_LOG\_BTC\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_BTC\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_BTC\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_BTC\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_BTC\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_BTC\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_BTC\_TRACE\_LEVEL\_VERBOSE)

**CONFIG\_BT\_LOG\_OSI\_TRACE\_LEVEL**

OSI layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for OSI layer

**Available options:**

- NONE (BT\_LOG\_OSI\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_OSI\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_OSI\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_OSI\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_OSI\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_OSI\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_OSI\_TRACE\_LEVEL\_VERBOSE)

**CONFIG\_BT\_LOG\_BLUFI\_TRACE\_LEVEL**

BLUFI layer

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#) > [BT DEBUG LOG LEVEL](#)*

Define BT trace level for BLUFI layer

**Available options:**

- NONE (BT\_LOG\_BLUFI\_TRACE\_LEVEL\_NONE)
- ERROR (BT\_LOG\_BLUFI\_TRACE\_LEVEL\_ERROR)
- WARNING (BT\_LOG\_BLUFI\_TRACE\_LEVEL\_WARNING)
- API (BT\_LOG\_BLUFI\_TRACE\_LEVEL\_API)
- EVENT (BT\_LOG\_BLUFI\_TRACE\_LEVEL\_EVENT)
- DEBUG (BT\_LOG\_BLUFI\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BT\_LOG\_BLUFI\_TRACE\_LEVEL\_VERBOSE)

**CONFIG\_BT\_ACL\_CONNECTIONS**

BT/BLE MAX ACL CONNECTIONS(1~9)

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Maximum BT/BLE connection count. The ESP32-C3/S3 chip supports a maximum of 10 instances, including ADV, SCAN and connections. The ESP32-C3/S3 chip can connect up to 9 devices if ADV or SCAN uses only one. If ADV and SCAN are both used, The ESP32-C3/S3 chip is connected to a maximum of 8 devices. Because Bluetooth cannot reclaim used instances once ADV or SCAN is used.

**Range:**

- from 1 to 9 if BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

**Default value:**

- 4 if BT\_BLUEDROID\_ENABLED && BT\_BLUEDROID\_ENABLED

### CONFIG\_BT\_MULTI\_CONNECTION\_ENBALE

Enable BLE multi-connections

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Enable this option if there are multiple connections

**Default value:**

- Yes (enabled) if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_ALLOCATION\_FROM\_SPIRAM\_FIRST

BT/BLE will first malloc the memory from the PSRAM

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This select can save the internal RAM if there have the PSRAM

**Default value:**

- No (disabled) if `BT_BLUEDROID_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_DYNAMIC\_ENV\_MEMORY

Use dynamic memory allocation in BT/BLE stack

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This select can make the allocation of memory will become more flexible

**Default value:**

- No (disabled) if `BT_BLUEDROID_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_HOST\_QUEUE\_CONG\_CHECK

BLE queue congestion check

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

When scanning and scan duplicate is not enabled, if there are a lot of adv packets around or application layer handling adv packets is slow, it will cause the controller memory to run out. if enabled, adv packets will be lost when host queue is congested.

**Default value:**

- No (disabled) if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_SMP\_MAX BONDS

BT/BLE maximum bond device count

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

The number of security records for peer devices.

### CONFIG\_BT\_BLE\_ACT\_SCAN\_REP\_ADV\_SCAN

Report adv data and scan response individually when BLE active scan

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Originally, when doing BLE active scan, Bluedroid will not report adv to application layer until receive scan response. This option is used to disable the behavior. When enable this option, Bluedroid will report adv data or scan response to application layer immediately.

# Memory reserved at start of DRAM for Bluetooth stack

**Default value:**

- No (disabled) if `BT_BLUEDROID_ENABLED` && `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_ESTAB\_LINK\_CONN\_TOUT

Timeout of BLE connection establishment

*Found in: Component config > Bluetooth > Bluedroid Options*

Bluetooth Connection establishment maximum time, if connection time exceeds this value, the connection establishment fails, `ESP_GATTC_OPEN_EVT` or `ESP_GATTS_OPEN_EVT` is triggered.

**Range:**

- from 1 to 60 if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

**Default value:**

- 30 if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_MAX\_DEVICE\_NAME\_LEN

length of bluetooth device name

*Found in: Component config > Bluetooth > Bluedroid Options*

Bluetooth Device name length shall be no larger than 248 octets, If the broadcast data cannot contain the complete device name, then only the shortname will be displayed, the rest parts that can't fit in will be truncated.

**Range:**

- from 32 to 248 if `BT_BLUEDROID_ENABLED` && `BT_BLUEDROID_ENABLED`

**Default value:**

- 32 if `BT_BLUEDROID_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_RPA\_SUPPORTED

Update RPA to Controller

*Found in: Component config > Bluetooth > Bluedroid Options*

This enables controller RPA list function. For ESP32, ESP32 only support network privacy mode. If this option is enabled, ESP32 will only accept advertising packets from peer devices that contain private address, HW will not receive the advertising packets contain identity address after IRK changed. If this option is disabled, address resolution will be performed in the host, so the functions that require controller to resolve address in the white list cannot be used. This option is disabled by default on ESP32, please enable or disable this option according to your own needs.

For other BLE chips, devices support network privacy mode and device privacy mode, users can switch the two modes according to their own needs. So this option is enabled by default.

**Default value:**

- No (disabled) if `BT_BLUEDROID_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_RPA\_TIMEOUT

Timeout of resolvable private address

*Found in: Component config > Bluetooth > Bluedroid Options*

This set RPA timeout of Controller and Host. Default is 900 s (15 minutes). Range is 1 s to 1 hour (3600 s).

**Range:**

- from 1 to 3600 if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

**Default value:**

- 900 if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_50\_FEATURES\_SUPPORTED

Enable BLE 5.0 features

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Enabling this option activates BLE 5.0 features. This option is universally supported in chips that support BLE, except for ESP32.

**Default value:**

- Yes (enabled) if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_42\_FEATURES\_SUPPORTED

Enable BLE 4.2 features

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This enables BLE 4.2 features.

**Default value:**

- No (disabled) if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_FEAT\_PERIODIC\_ADV\_SYNC\_TRANSFER

Enable BLE periodic advertising sync transfer feature

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This enables BLE periodic advertising sync transfer feature

**Default value:**

- No (disabled) if `CONFIG_BT_BLE_50_FEATURES_SUPPORTED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_FEAT\_PERIODIC\_ADV\_ENH

Enable periodic adv enhancements(adi support)

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Enable the periodic advertising enhancements

**Default value:**

- No (disabled) if `CONFIG_BT_BLE_50_FEATURES_SUPPORTED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_FEAT\_CREATE\_SYNC\_ENH

Enable create sync enhancements(reporting disable and duplicate filtering enable support)

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

Enable the create sync enhancements

**Default value:**

- No (disabled) if `CONFIG_BT_BLE_50_FEATURES_SUPPORTED` && `BT_BLUEDROID_ENABLED`

### CONFIG\_BT\_BLE\_HIGH\_DUTY\_ADV\_INTERVAL

Enable BLE high duty advertising interval feature

*Found in: [Component config](#) > [Bluetooth](#) > [Bluedroid Options](#)*

This enable BLE high duty advertising interval feature

**Default value:**

- No (disabled) if `CONFIG_BT_BLE_ENABLED` && `BT_BLUEDROID_ENABLED`

**CONFIG\_BT\_ABORT\_WHEN\_ALLOCATION\_FAILS**

Abort when memory allocation fails in BT/BLE stack

*Found in: Component config > Bluetooth > Bluedroid Options*

This enables abort when memory allocation fails

**Default value:**

- No (disabled) if `BT_BLUEDROID_ENABLED` && `BT_BLUEDROID_ENABLED`

**NimBLE Options** Contains:

- `CONFIG_BT_NIMBLE_SVC_GAP_DEVICE_NAME`
- `CONFIG_BT_NIMBLE_HS_STOP_TIMEOUT_MS`
- `CONFIG_BT_NIMBLE_HOST_QUEUE_CONG_CHECK`
- `CONFIG_BT_NIMBLE_WHITELIST_SIZE`
- `CONFIG_BT_NIMBLE_BLE_GATT_BLOB_TRANSFER`
- `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT`
- `CONFIG_BT_NIMBLE_ROLE_BROADCASTER`
- `CONFIG_BT_NIMBLE_ROLE_CENTRAL`
- `CONFIG_BT_NIMBLE_HIGH_DUTY_ADV_ITVL`
- `CONFIG_BT_NIMBLE_MESH`
- `CONFIG_BT_NIMBLE_ROLE_OBSERVER`
- `CONFIG_BT_NIMBLE_ROLE_PERIPHERAL`
- `CONFIG_BT_NIMBLE_SECURITY_ENABLE`
- `CONFIG_BT_NIMBLE_BLUFI_ENABLE`
- `CONFIG_BT_NIMBLE_ENABLE_CONN_REATTEMPT`
- `CONFIG_BT_NIMBLE_USE_ESP_TIMER`
- `CONFIG_BT_NIMBLE_DEBUG`
- `CONFIG_BT_NIMBLE_HS_FLOW_CTRL`
- `CONFIG_BT_NIMBLE_VS_SUPPORT`
- `CONFIG_BT_NIMBLE_ENC_ADV_DATA`
- `CONFIG_BT_NIMBLE_SVC_GAP_APPEARANCE`
- `CONFIG_BT_NIMBLE_GAP_DEVICE_NAME_MAX_LEN`
- `CONFIG_BT_NIMBLE_MAX BONDS`
- `CONFIG_BT_NIMBLE_MAX CCCDS`
- `CONFIG_BT_NIMBLE_MAX CONNECTIONS`
- `CONFIG_BT_NIMBLE_L2CAP_COC_MAX_NUM`
- `CONFIG_BT_NIMBLE_GATT_MAX_PROCS`
- `CONFIG_BT_NIMBLE_MEM_ALLOC_MODE`
- *Memory Settings*
- `CONFIG_BT_NIMBLE_LOG_LEVEL`
- `CONFIG_BT_NIMBLE_HOST_TASK_STACK_SIZE`
- `CONFIG_BT_NIMBLE_CRYPTOSTACK_MBEDTLS`
- `CONFIG_BT_NIMBLE_NVS_PERSIST`
- `CONFIG_BT_NIMBLE_ATT_PREFERRED_MTU`
- `CONFIG_BT_NIMBLE_SMP_ID_RESET`
- `CONFIG_BT_NIMBLE_RPA_TIMEOUT`
- `CONFIG_BT_NIMBLE_PINNED_TO_CORE_CHOICE`
- `CONFIG_BT_NIMBLE_TEST_THROUGHPUT_TEST`

**CONFIG\_BT\_NIMBLE\_MEM\_ALLOC\_MODE**

Memory allocation strategy

*Found in: Component config > Bluetooth > NimBLE Options*

Allocation strategy for NimBLE host stack, essentially provides ability to allocate all required dynamic allocations from,

- Internal DRAM memory only
- External SPIRAM memory only
- Either internal or external memory based on default malloc() behavior in ESP-IDF
- Internal IRAM memory wherever applicable else internal DRAM

**Available options:**

- Internal memory (BT\_NIMBLE\_MEM\_ALLOC\_MODE\_INTERNAL)
- External SPIRAM (BT\_NIMBLE\_MEM\_ALLOC\_MODE\_EXTERNAL)
- Default alloc mode (BT\_NIMBLE\_MEM\_ALLOC\_MODE\_DEFAULT)
- Internal IRAM (BT\_NIMBLE\_MEM\_ALLOC\_MODE\_IRAM\_8BIT)  
Allows to use IRAM memory region as 8bit accessible region.  
Every unaligned (8bit or 16bit) access will result in an exception and incur penalty of certain clock cycles per unaligned read/write.

### CONFIG\_BT\_NIMBLE\_LOG\_LEVEL

NimBLE Host log verbosity

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Select NimBLE log level. Please make a note that the selected NimBLE log verbosity can not exceed the level set in “Component config → Log output → Default log verbosity” .

**Available options:**

- No logs (BT\_NIMBLE\_LOG\_LEVEL\_NONE)
- Error logs (BT\_NIMBLE\_LOG\_LEVEL\_ERROR)
- Warning logs (BT\_NIMBLE\_LOG\_LEVEL\_WARNING)
- Info logs (BT\_NIMBLE\_LOG\_LEVEL\_INFO)
- Debug logs (BT\_NIMBLE\_LOG\_LEVEL\_DEBUG)

### CONFIG\_BT\_NIMBLE\_MAX\_CONNECTIONS

Maximum number of concurrent connections

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Defines maximum number of concurrent BLE connections. For ESP32, user is expected to configure BTDM\_CTRL\_BLE\_MAX\_CONN from controller menu along with this option. Similarly for ESP32-C3 or ESP32-S3, user is expected to configure BT\_CTRL\_BLE\_MAX\_ACT from controller menu. For ESP32C2, ESP32C6 and ESP32H2, each connection will take about 1k DRAM.

**Range:**

- from 1 to 2 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED
- from 1 to 9 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

**Default value:**

- 2 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MAX BONDS

Maximum number of bonds to save across reboots

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Defines maximum number of bonds to save for peer security and our security

**Default value:**

- 3 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MAX\_CCCDS

Maximum number of CCC descriptors to save across reboots

*Found in: Component config > Bluetooth > NimBLE Options*

Defines maximum number of CCC descriptors to save

**Default value:**

- 8 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_L2CAP\_COC\_MAX\_NUM

Maximum number of connection oriented channels

*Found in: Component config > Bluetooth > NimBLE Options*

Defines maximum number of BLE Connection Oriented Channels. When set to (0), BLE COC is not compiled in

**Range:**

- from 0 to 9 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

**Default value:**

- 0 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_PINNED\_TO\_CORE\_CHOICE

The CPU core on which NimBLE host will run

*Found in: Component config > Bluetooth > NimBLE Options*

The CPU core on which NimBLE host will run. You can choose Core 0 or Core 1. Cannot specify no-affinity

**Available options:**

- Core 0 (PRO CPU) (BT\_NIMBLE\_PINNED\_TO\_CORE\_0)
- Core 1 (APP CPU) (BT\_NIMBLE\_PINNED\_TO\_CORE\_1)

### CONFIG\_BT\_NIMBLE\_HOST\_TASK\_STACK\_SIZE

NimBLE Host task stack size

*Found in: Component config > Bluetooth > NimBLE Options*

This configures stack size of NimBLE host task

**Default value:**

- 5120 if `CONFIG_BLE_MESH` && BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED
- 4096 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_ROLE\_CENTRAL

Enable BLE Central role

*Found in: Component config > Bluetooth > NimBLE Options*

Enables central role

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_ROLE\_PERIPHERAL

Enable BLE Peripheral role

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enable peripheral role

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_ROLE\_BROADCASTER

Enable BLE Broadcaster role

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enables broadcaster role

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_ROLE\_OBSERVER

Enable BLE Observer role

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enables observer role

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_NVS\_PERSIST

Persist the BLE Bonding keys in NVS

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enable this flag to make bonding persistent across device reboots

**Default value:**

- No (disabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_SMP\_ID\_RESET

Reset device identity when all bonding records are deleted

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

There are tracking risks associated with using a fixed or static IRK. If enabled this option, Bluedroid will assign a new randomly-generated IRK when all pairing and bonding records are deleted. This would decrease the ability of a previously paired peer to be used to determine whether a device with which it previously shared an IRK is within range.

**Default value:**

- No (disabled) if BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_SECURITY\_ENABLE

Enable BLE SM feature

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enable BLE sm feature

**Default value:**

- Yes (enabled) if `BT_NIMBLE_ENABLED` && `BT_NIMBLE_ENABLED`

Contains:

- [CONFIG\\_BT\\_NIMBLE\\_LL\\_CFG\\_FEAT\\_LE\\_ENCRYPTION](#)
- [CONFIG\\_BT\\_NIMBLE\\_SM\\_LEGACY](#)
- [CONFIG\\_BT\\_NIMBLE\\_SM\\_SC](#)

### CONFIG\_BT\_NIMBLE\_SM\_LEGACY

Security manager legacy pairing

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_SECURITY\\_ENABLE](#)

Enable security manager legacy pairing

**Default value:**

- Yes (enabled) if `CONFIG_BT_NIMBLE_SECURITY_ENABLE` && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_SM\_SC

Security manager secure connections (4.2)

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_SECURITY\\_ENABLE](#)

Enable security manager secure connections

**Default value:**

- Yes (enabled) if `CONFIG_BT_NIMBLE_SECURITY_ENABLE` && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_SM\_SC\_DEBUG\_KEYS

Use predefined public-private key pair

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_SECURITY\\_ENABLE](#) > [CONFIG\\_BT\\_NIMBLE\\_SM\\_SC](#)

If this option is enabled, SM uses predefined DH key pair as described in Core Specification, Vol. 3, Part H, 2.3.5.6.1. This allows to decrypt air traffic easily and thus should only be used for debugging.

**Default value:**

- No (disabled) if `CONFIG_BT_NIMBLE_SECURITY_ENABLE` && `CONFIG_BT_NIMBLE_SM_SC` && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_LL\_CFG\_FEAT\_LE\_ENCRYPTION

Enable LE encryption

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_SECURITY\\_ENABLE](#)

Enable encryption connection

**Default value:**

- Yes (enabled) if `CONFIG_BT_NIMBLE_SECURITY_ENABLE` && `BT_NIMBLE_ENABLED` && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_DEBUG

Enable extra runtime asserts and host debugging

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

This enables extra runtime asserts and host debugging

**Default value:**

- No (disabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_SVC\_GAP\_DEVICE\_NAME

BLE GAP default device name

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

The Device Name characteristic shall contain the name of the device as an UTF-8 string. This name can be changed by using API `ble_svc_gap_device_name_set()`

**Default value:**

- “nimble” if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_GAP\_DEVICE\_NAME\_MAX\_LEN

Maximum length of BLE device name in octets

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Device Name characteristic value shall be 0 to 248 octets in length

**Default value:**

- 31 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_ATT\_PREFERRED\_MTU

Preferred MTU size in octets

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

This is the default value of ATT MTU indicated by the device during an ATT MTU exchange. This value can be changed using API `ble_att_set_preferred_mtu()`

**Default value:**

- 256 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_SVC\_GAP\_APPEARANCE

External appearance of the device

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Standard BLE GAP Appearance value in HEX format e.g. 0x02C0

**Default value:**

- 0 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

**Memory Settings** Contains:

- [CONFIG\\_BT\\_NIMBLE\\_ACL\\_BUF\\_COUNT](#)
- [CONFIG\\_BT\\_NIMBLE\\_ACL\\_BUF\\_SIZE](#)
- [CONFIG\\_BT\\_NIMBLE\\_HCI\\_EVT\\_BUF\\_SIZE](#)
- [CONFIG\\_BT\\_NIMBLE\\_HCI\\_EVT\\_HI\\_BUF\\_COUNT](#)
- [CONFIG\\_BT\\_NIMBLE\\_HCI\\_EVT\\_LO\\_BUF\\_COUNT](#)
- [CONFIG\\_BT\\_NIMBLE\\_MSYS\\_1\\_BLOCK\\_COUNT](#)

- [CONFIG\\_BT\\_NIMBLE\\_MSYS\\_1\\_BLOCK\\_SIZE](#)
- [CONFIG\\_BT\\_NIMBLE\\_MSYS\\_2\\_BLOCK\\_COUNT](#)
- [CONFIG\\_BT\\_NIMBLE\\_MSYS\\_2\\_BLOCK\\_SIZE](#)

### **CONFIG\_BT\_NIMBLE\_MSYS\_1\_BLOCK\_COUNT**

MSYS\_1 Block Count

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

MSYS is a system level mbuf registry. For prepare write & prepare responses Mbufs are allocated out of msys\_1 pool. For NIMBLE\_MESH enabled cases, this block count is increased by 8 than user defined count.

**Default value:**

- 24 if BT\_NIMBLE\_ENABLED
- 12 if BT\_NIMBLE\_ENABLED

### **CONFIG\_BT\_NIMBLE\_MSYS\_1\_BLOCK\_SIZE**

MSYS\_1 Block Size

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

Dynamic memory size of block 1

**Default value:**

- 128 if BT\_NIMBLE\_ENABLED
- 256 if BT\_NIMBLE\_ENABLED

### **CONFIG\_BT\_NIMBLE\_MSYS\_2\_BLOCK\_COUNT**

MSYS\_2 Block Count

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

Dynamic memory count

**Default value:**

- 24 if BT\_NIMBLE\_ENABLED

### **CONFIG\_BT\_NIMBLE\_MSYS\_2\_BLOCK\_SIZE**

MSYS\_2 Block Size

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

Dynamic memory size of block 2

**Default value:**

- 320 if BT\_NIMBLE\_ENABLED

### **CONFIG\_BT\_NIMBLE\_ACL\_BUF\_COUNT**

ACL Buffer count

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

The number of ACL data buffers.

**Default value:**

- 24 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_ACL\_BUF\_SIZE

ACL Buffer size

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

This is the maximum size of the data portion of HCI ACL data packets. It does not include the HCI data header (of 4 bytes)

**Default value:**

- 255 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_HCI\_EVT\_BUF\_SIZE

HCI Event Buffer size

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

This is the size of each HCI event buffer in bytes. In case of extended advertising, packets can be fragmented. 257 bytes is the maximum size of a packet.

**Default value:**

- 257 if `CONFIG_BT_NIMBLE_EXT_ADV` && BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED
- 70 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_HCI\_EVT\_HI\_BUF\_COUNT

High Priority HCI Event Buffer count

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

This is the high priority HCI events' buffer size. High-priority event buffers are for everything except advertising reports. If there are no free high-priority event buffers then host will try to allocate a low-priority buffer instead

**Default value:**

- 30 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_HCI\_EVT\_LO\_BUF\_COUNT

Low Priority HCI Event Buffer count

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [Memory Settings](#)*

This is the low priority HCI events' buffer size. Low-priority event buffers are only used for advertising reports. If there are no free low-priority event buffers, then an incoming advertising report will get dropped

**Default value:**

- 8 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_GATT\_MAX\_PROCS

Maximum number of GATT client procedures

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Maximum number of GATT client procedures that can be executed.

**Default value:**

- 4 if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

**CONFIG\_BT\_NIMBLE\_HS\_FLOW\_CTRL**

Enable Host Flow control

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enable Host Flow control

**Default value:**

- No (disabled) if `BT_NIMBLE_ENABLED` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_HS\_FLOW\_CTRL\_ITVL**

Host Flow control interval

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_HS\\_FLOW\\_CTRL](#)*

Host flow control interval in msec

**Default value:**

- 1000 if `CONFIG_BT_NIMBLE_HS_FLOW_CTRL` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_HS\_FLOW\_CTRL\_THRESH**

Host Flow control threshold

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_HS\\_FLOW\\_CTRL](#)*

Host flow control threshold, if the number of free buffers are at or below this threshold, send an immediate number-of-completed-packets event

**Default value:**

- 2 if `CONFIG_BT_NIMBLE_HS_FLOW_CTRL` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_HS\_FLOW\_CTRL\_TX\_ON\_DISCONNECT**

Host Flow control on disconnect

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_HS\\_FLOW\\_CTRL](#)*

Enable this option to send number-of-completed-packets event to controller after disconnection

**Default value:**

- Yes (enabled) if `CONFIG_BT_NIMBLE_HS_FLOW_CTRL` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_RPA\_TIMEOUT**

RPA timeout in seconds

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Time interval between RPA address change.

**Range:**

- from 1 to 41400 if `BT_NIMBLE_ENABLED` && `BT_NIMBLE_ENABLED`

**Default value:**

- 900 if `BT_NIMBLE_ENABLED` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_MESH**

Enable BLE mesh functionality

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enable BLE Mesh example present in upstream mynewt-nimble and not maintained by Espressif.

IDF maintains ESP-BLE-MESH as the official Mesh solution. Please refer to ESP-BLE-MESH guide at: `./doc../esp32/api-guides/esp-ble-mesh/ble-mesh-index`

**Default value:**

- No (disabled) if `BT_NIMBLE_ENABLED` && `BT_NIMBLE_ENABLED`

Contains:

- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_PROVISIONER](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_PROV](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_GATT\\_PROXY](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_FRIEND](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_LOW\\_POWER](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_PROXY](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_RELAY](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_DEVICE\\_NAME](#)
- [CONFIG\\_BT\\_NIMBLE\\_MESH\\_NODE\\_COUNT](#)

### CONFIG\_BT\_NIMBLE\_MESH\_PROXY

Enable mesh proxy functionality

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)

Enable proxy. This is automatically set whenever `NIMBLE_MESH_PB_GATT` or `NIMBLE_MESH_GATT_PROXY` is set

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_MESH\_PROV

Enable BLE mesh provisioning

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)

Enable mesh provisioning

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_MESH\_PB\_ADV

Enable mesh provisioning over advertising bearer

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH\\_PROV](#)

Enable this option to allow the device to be provisioned over the advertising bearer

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH\\_PROV](#) && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_MESH\_PB\_GATT

Enable mesh provisioning over GATT bearer

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH\\_PROV](#)

Enable this option to allow the device to be provisioned over the GATT bearer

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH\\_PROV](#) && `BT_NIMBLE_ENABLED`

### CONFIG\_BT\_NIMBLE\_MESH\_GATT\_PROXY

Enable GATT Proxy functionality

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)*

This option enables support for the Mesh GATT Proxy Service, i.e. the ability to act as a proxy between a Mesh GATT Client and a Mesh network

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MESH\_RELAY

Enable mesh relay functionality

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)*

Support for acting as a Mesh Relay Node

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MESH\_LOW\_POWER

Enable mesh low power mode

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)*

Enable this option to be able to act as a Low Power Node

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MESH\_FRIEND

Enable mesh friend functionality

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)*

Enable this option to be able to act as a Friend Node

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MESH\_DEVICE\_NAME

Set mesh device name

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)*

This value defines Bluetooth Mesh device/node name

**Default value:**

- “nimble-mesh-node” if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MESH\_NODE\_COUNT

Set mesh node count

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)*

Defines mesh node count.

**Default value:**

- 1 if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_MESH\_PROVISIONER

Enable BLE mesh provisioner

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_MESH](#)*

Enable mesh provisioner.

**Default value:**

- 0 if [CONFIG\\_BT\\_NIMBLE\\_MESH](#) && [BT\\_NIMBLE\\_ENABLED](#)

### CONFIG\_BT\_NIMBLE\_CRYPTO\_STACK\_MBEDTLS

Override TinyCrypt with mbedTLS for crypto computations

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enable this option to choose mbedTLS instead of TinyCrypt for crypto computations.

**Default value:**

- Yes (enabled) if [BT\\_NIMBLE\\_ENABLED](#) && [BT\\_NIMBLE\\_ENABLED](#)

### CONFIG\_BT\_NIMBLE\_HS\_STOP\_TIMEOUT\_MS

BLE host stop timeout in msec

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

BLE Host stop procedure timeout in milliseconds.

**Default value:**

- 2000 if [BT\\_NIMBLE\\_ENABLED](#) && [BT\\_NIMBLE\\_ENABLED](#)

### CONFIG\_BT\_NIMBLE\_ENABLE\_CONN\_REATTEMPT

Enable connection reattempts on connection establishment error

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Enable to make the NimBLE host to reattempt GAP connection on connection establishment failure.

**Default value:**

- Yes (enabled) if [BT\\_NIMBLE\\_ENABLED](#)

### CONFIG\_BT\_NIMBLE\_MAX\_CONN\_REATTEMPT

Maximum number connection reattempts

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_CONN\\_REATTEMPT](#)*

Defines maximum number of connection reattempts.

**Range:**

- from 1 to 255 if [BT\\_NIMBLE\\_ENABLED](#) && [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_CONN\\_REATTEMPT](#) && [BT\\_NIMBLE\\_ENABLED](#)

**Default value:**

- 3 if [BT\\_NIMBLE\\_ENABLED](#) && [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_CONN\\_REATTEMPT](#) && [BT\\_NIMBLE\\_ENABLED](#)

## CONFIG\_BT\_NIMBLE\_50\_FEATURE\_SUPPORT

Enable BLE 5 feature

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)

Enable BLE 5 feature

**Default value:**

- Yes (enabled) if `BT_NIMBLE_ENABLED` && `BT_NIMBLE_ENABLED`

Contains:

- [CONFIG\\_BT\\_NIMBLE\\_LL\\_CFG\\_FEAT\\_LE\\_2M\\_PHY](#)
- [CONFIG\\_BT\\_NIMBLE\\_LL\\_CFG\\_FEAT\\_LE\\_CODED\\_PHY](#)
- [CONFIG\\_BT\\_NIMBLE\\_EXT\\_ADV](#)
- [CONFIG\\_BT\\_NIMBLE\\_EXT\\_SCAN](#)
- [CONFIG\\_BT\\_NIMBLE\\_BLE\\_POWER\\_CONTROL](#)

## CONFIG\_BT\_NIMBLE\_LL\_CFG\_FEAT\_LE\_2M\_PHY

Enable 2M Phy

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#)

Enable 2M-PHY

**Default value:**

- Yes (enabled) if `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

## CONFIG\_BT\_NIMBLE\_LL\_CFG\_FEAT\_LE\_CODED\_PHY

Enable coded Phy

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#)

Enable coded-PHY

**Default value:**

- Yes (enabled) if `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

## CONFIG\_BT\_NIMBLE\_EXT\_ADV

Enable extended advertising

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#)

Enable this option to do extended advertising. Extended advertising will be supported from BLE 5.0 onwards.

**Default value:**

- No (disabled) if `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

## CONFIG\_BT\_NIMBLE\_MAX\_EXT\_ADV\_INSTANCES

Maximum number of extended advertising instances.

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) > [CONFIG\\_BT\\_NIMBLE\\_EXT\\_ADV](#)

Change this option to set maximum number of extended advertising instances. Minimum there is always one instance of advertising. Enter how many more advertising instances you want. For ESP32C2, ESP32C6 and ESP32H2, each extended advertising instance will take about 0.5k DRAM.

**Range:**

- from 0 to 4 if `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

**Default value:**

- 1 if `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`
- 0 if `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_EXT\_ADV\_MAX\_SIZE**

Maximum length of the advertising data.

*Found in:*     *Component* *config* > *Bluetooth* > *NimBLE Options* > *CONFIG\_BT\_NIMBLE\_50\_FEATURE\_SUPPORT* > *CONFIG\_BT\_NIMBLE\_EXT\_ADV*

Defines the length of the extended adv data. The value should not exceed 1650.

**Range:**

- from 0 to 1650 if `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

**Default value:**

- 1650 if `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`
- 0 if `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_ENABLE\_PERIODIC\_ADV**

Enable periodic advertisement.

*Found in:*     *Component* *config* > *Bluetooth* > *NimBLE Options* > *CONFIG\_BT\_NIMBLE\_50\_FEATURE\_SUPPORT* > *CONFIG\_BT\_NIMBLE\_EXT\_ADV*

Enable this option to start periodic advertisement.

**Default value:**

- Yes (enabled) if `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_EXT_ADV` && `CONFIG_BT_NIMBLE_50_FEATURE_SUPPORT` && `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_NIMBLE\_PERIODIC\_ADV\_ENH**

Periodic adv enhancements(adi support)

*Found in:*     *Component* *config* > *Bluetooth* > *NimBLE Options* > *CONFIG\_BT\_NIMBLE\_50\_FEATURE\_SUPPORT* > *CONFIG\_BT\_NIMBLE\_EXT\_ADV* > *CONFIG\_BT\_NIMBLE\_ENABLE\_PERIODIC\_ADV*

Enable the periodic advertising enhancements

**CONFIG\_BT\_NIMBLE\_PERIODIC\_ADV\_SYNC\_TRANSFER**

Enable Transfer Sync Events

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) > [CONFIG\\_BT\\_NIMBLE\\_EXT\\_ADV](#) > [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_ADV](#)

This enables controller transfer periodic sync events to host

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_ADV](#) && [CONFIG\\_BT\\_NIMBLE\\_EXT\\_ADV](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

### CONFIG\_BT\_NIMBLE\_EXT\_SCAN

Enable extended scanning

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#)

Enable this option to do extended scanning.

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [CONFIG\\_BT\\_NIMBLE\\_ROLE\\_OBSERVER](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

### CONFIG\_BT\_NIMBLE\_ENABLE\_PERIODIC\_SYNC

Enable periodic sync

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) > [CONFIG\\_BT\\_NIMBLE\\_EXT\\_SCAN](#)

Enable this option to receive periodic advertisement.

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_NIMBLE\\_EXT\\_SCAN](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

### CONFIG\_BT\_NIMBLE\_MAX\_PERIODIC\_SYNCS

Maximum number of periodic advertising syncs

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) > [CONFIG\\_BT\\_NIMBLE\\_EXT\\_SCAN](#) > [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#)

Set this option to set the upper limit for number of periodic sync connections. This should be less than maximum connections allowed by controller.

**Range:**

- from 0 to 3 if [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)
- from 0 to 8 if [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

**Default value:**

- 1 if [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_ADV](#) && [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)
- 0 if [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

**CONFIG\_BT\_NIMBLE\_MAX\_PERIODIC\_ADVERTISER\_LIST**

Maximum number of periodic advertiser list

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) > [CONFIG\\_BT\\_NIMBLE\\_EXT\\_SCAN](#) > [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#)

Set this option to set the upper limit for number of periodic advertiser list.

**Range:**

- from 1 to 5 if [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

**Default value:**

- 5 if [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [CONFIG\\_BT\\_NIMBLE\\_ENABLE\\_PERIODIC\\_SYNC](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

**CONFIG\_BT\_NIMBLE\_BLE\_POWER\_CONTROL**

Enable support for BLE Power Control

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#) > [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#)

Set this option to enable the Power Control feature

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [SOC\\_BLE\\_POWER\\_CONTROL\\_SUPPORTED](#) && [CONFIG\\_BT\\_NIMBLE\\_50\\_FEATURE\\_SUPPORT](#) && [BT\\_NIMBLE\\_ENABLED](#)

**CONFIG\_BT\_NIMBLE\_WHITELIST\_SIZE**

BLE white list size

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)

BLE list size

**Range:**

- from 1 to 15 if [BT\\_NIMBLE\\_ENABLED](#) && [BT\\_NIMBLE\\_ENABLED](#)

**Default value:**

- 12 if [BT\\_NIMBLE\\_ENABLED](#) && [BT\\_NIMBLE\\_ENABLED](#)

**CONFIG\_BT\_NIMBLE\_TEST\_THROUGHPUT\_TEST**

Throughput Test Mode enable

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)

Enable the throughput test mode

**Default value:**

- No (disabled) if [BT\\_NIMBLE\\_ENABLED](#)

**CONFIG\_BT\_NIMBLE\_BLUFI\_ENABLE**

Enable blufi functionality

*Found in:* [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)

Set this option to enable blufi functionality.

**Default value:**

- No (disabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_USE\_ESP\_TIMER

Enable Esp Timer for Nimble

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

Set this option to use Esp Timer which has higher priority timer instead of FreeRTOS timer

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_BLE\_GATT\_BLOB\_TRANSFER

Blob transfer

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

This option is used when data to be sent is more than 512 bytes. For peripheral role, BT\_NIMBLE\_MSYS\_1\_BLOCK\_COUNT needs to be increased according to the need.

### CONFIG\_BT\_NIMBLE\_HIGH\_DUTY\_ADV\_ITVL

Enable BLE high duty advertising interval feature

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

This enable BLE high duty advertising interval feature

### CONFIG\_BT\_NIMBLE\_HOST\_QUEUE\_CONG\_CHECK

BLE queue congestion check

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

When scanning and scan duplicate is not enabled, if there are a lot of adv packets around or application layer handling adv packets is slow, it will cause the controller memory to run out. if enabled, adv packets will be lost when host queue is congested.

**Default value:**

- No (disabled) if BT\_NIMBLE\_ENABLED && BT\_NIMBLE\_ENABLED

### CONFIG\_BT\_NIMBLE\_VS\_SUPPORT

Enable support for VSC and VSE

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

This option is used to enable support for sending Vendor Specific HCI commands and handling Vendor Specific HCI Events.

### CONFIG\_BT\_NIMBLE\_ENC\_ADV\_DATA

Encrypted Advertising Data

*Found in: [Component config](#) > [Bluetooth](#) > [NimBLE Options](#)*

This option is used to enable encrypted advertising data.

## CONFIG\_BT\_NIMBLE\_MAX\_EADS

Maximum number of EAD devices to save across reboots

Found in: *Component config > Bluetooth > NimBLE Options > CONFIG\_BT\_NIMBLE\_ENC\_ADV\_DATA*

Defines maximum number of encrypted advertising data key material to save

**Default value:**

- 10 if BT\_NIMBLE\_ENABLED && CONFIG\_BT\_NIMBLE\_ENC\_ADV\_DATA && BT\_NIMBLE\_ENABLED

**Controller Options** Contains:

- CONFIG\_BT\_CTRL\_BLE\_ADV\_REPORT\_FLOW\_CTRL\_SUPP
- CONFIG\_BT\_LE\_DFT\_TX\_POWER\_LEVEL\_DBM
- CONFIG\_BT\_LE\_LL\_DUP\_SCAN\_LIST\_COUNT
- CONFIG\_BT\_LE\_LL\_RESOLV\_LIST\_SIZE
- CONFIG\_BT\_LE\_LP\_CLK\_SRC
- CONFIG\_BT\_LE\_LL\_SCA
- CONFIG\_BT\_LE\_WHITELIST\_SIZE
- CONFIG\_BT\_LE\_CCA\_RSSI\_THRESH
- CONFIG\_BT\_LE\_COEX\_PHY\_CODED\_TX\_RX\_TLIM
- CONFIG\_BT\_LE\_CONTROLLER\_LOG\_ENABLED
- CONFIG\_BT\_LE\_CONTROLLER\_TASK\_STACK\_SIZE
- CONFIG\_BT\_LE\_50\_FEATURE\_SUPPORT
- CONFIG\_BT\_LE\_ROLE\_BROADCASTER\_ENABLE
- CONFIG\_BT\_LE\_ROLE\_CENTROL\_ENABLE
- CONFIG\_BT\_LE\_ROLE\_OBSERVER\_ENABLE
- CONFIG\_BT\_LE\_ROLE\_PERIPHERAL\_ENABLE
- CONFIG\_BT\_LE\_SLEEP\_ENABLE
- CONFIG\_BT\_LE\_SECURITY\_ENABLE
- CONFIG\_BT\_LE\_FEAT\_LL\_ENCRYPTION
- CONFIG\_BT\_LE\_DTM\_ENABLED
- CONFIG\_BT\_LE\_TX\_CCA\_ENABLED
- HCI Config
- CONFIG\_BT\_LE\_MAX\_CONNECTIONS
- Memory Settings
- CONFIG\_BT\_LE\_CRYPTO\_STACK\_MBEDTLS
- CONFIG\_BT\_CTRL\_RUN\_IN\_FLASH\_ONLY
- CONFIG\_BT\_LE\_USE\_ESP\_TIMER

**HCI Config** Contains:

- CONFIG\_BT\_LE\_HCI\_INTERFACE
- CONFIG\_BT\_LE\_HCI\_TRANS\_TASK\_STACK\_SIZE
- CONFIG\_BT\_LE\_HCI\_UART\_BAUD
- CONFIG\_BT\_LE\_HCI\_UART\_CTS\_PIN
- CONFIG\_BT\_LE\_HCI\_UART\_FLOWCTRL
- CONFIG\_BT\_LE\_HCI\_UART\_PORT
- CONFIG\_BT\_LE\_HCI\_UART\_RTS\_PIN
- CONFIG\_BT\_LE\_HCI\_UART\_RX\_PIN
- CONFIG\_BT\_LE\_HCI\_UART\_TX\_PIN
- CONFIG\_BT\_LE\_HCI\_UART\_PARITY
- CONFIG\_BT\_LE\_HCI\_UART\_RX\_BUFFER\_SIZE
- CONFIG\_BT\_LE\_HCI\_UART\_TX\_BUFFER\_SIZE

## CONFIG\_BT\_LE\_HCI\_INTERFACE

HCI mode

*Found in: Component config > Bluetooth > Controller Options > HCI Config*

**Available options:**

- VHCI (BT\_LE\_HCI\_INTERFACE\_USE\_RAM)  
Use RAM as HCI interface
- UART(H4) (BT\_LE\_HCI\_INTERFACE\_USE\_UART)  
Use UART as HCI interface

### **CONFIG\_BT\_LE\_HCI\_UART\_PORT**

HCI UART port

*Found in: Component config > Bluetooth > Controller Options > HCI Config*

Set the port number of HCI UART

**Default value:**

- 1 if BT\_LE\_HCI\_INTERFACE\_USE\_UART && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_HCI\_UART\_FLOWCTRL**

HCI uart Hardware Flow ctrl

*Found in: Component config > Bluetooth > Controller Options > HCI Config*

**Default value:**

- No (disabled) if BT\_LE\_HCI\_INTERFACE\_USE\_UART && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_HCI\_UART\_TX\_PIN**

HCI uart Tx gpio

*Found in: Component config > Bluetooth > Controller Options > HCI Config*

**Default value:**

- 19 if BT\_LE\_HCI\_INTERFACE\_USE\_UART && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_HCI\_UART\_RX\_PIN**

HCI uart Rx gpio

*Found in: Component config > Bluetooth > Controller Options > HCI Config*

**Default value:**

- 10 if BT\_LE\_HCI\_INTERFACE\_USE\_UART && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_HCI\_UART\_RTS\_PIN**

HCI uart RTS gpio

*Found in: Component config > Bluetooth > Controller Options > HCI Config*

**Default value:**

- 4 if CONFIG\_BT\_LE\_HCI\_UART\_FLOWCTRL && BT\_CONTROLLER\_ENABLED

**CONFIG\_BT\_LE\_HCI\_UART\_CTS\_PIN**

HCI uart CTS gpio

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [HCI Config](#)*

**Default value:**

- 5 if `CONFIG_BT_LE_HCI_UART_FLOWCTRL` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_HCI\_UART\_BAUD**

HCI uart baudrate

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [HCI Config](#)*

HCI uart baud rate 115200 ~ 1000000

**Default value:**

- 921600 if `BT_LE_HCI_INTERFACE_USE_UART` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_HCI\_UART\_PARITY**

select uart parity

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [HCI Config](#)*

**Available options:**

- `PARITY_DISABLE` (`BT_LE_HCI_UART_UART_PARITY_DISABLE`)  
`UART_PARITY_DISABLE`
- `PARITY_EVEN` (`BT_LE_HCI_UART_UART_PARITY_EVEN`)  
`UART_PARITY_EVEN`
- `PARITY_ODD` (`BT_LE_HCI_UART_UART_PARITY_ODD`)  
`UART_PARITY_ODD`

**CONFIG\_BT\_LE\_HCI\_UART\_RX\_BUFFER\_SIZE**

The size of rx ring buffer memory

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [HCI Config](#)*

The size of rx ring buffer memory

**Default value:**

- 512 if `BT_LE_HCI_INTERFACE_USE_RAM` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_HCI\_UART\_TX\_BUFFER\_SIZE**

The size of tx ring buffer memory

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [HCI Config](#)*

The size of tx ring buffer memory

**Default value:**

- 256 if `BT_LE_HCI_INTERFACE_USE_RAM` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_HCI\_TRANS\_TASK\_STACK\_SIZE**

HCI transport task stack size

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [HCI Config](#)*

This configures stack size of hci transport task

**Default value:**

- 1024 if `BT_LE_HCI_INTERFACE_USE_RAM` && `BT_CONTROLLER_ENABLED`

## CONFIG\_BT\_LE\_50\_FEATURE\_SUPPORT

Enable BLE 5 feature

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#)

Enable BLE 5 feature

### Default value:

- Yes (enabled) if `BT_NIMBLE_ENABLED` && `BT_CONTROLLER_ENABLED`

Contains:

- [CONFIG\\_BT\\_LE\\_LL\\_CFG\\_FEAT\\_LE\\_2M\\_PHY](#)
- [CONFIG\\_BT\\_LE\\_LL\\_CFG\\_FEAT\\_LE\\_CODED\\_PHY](#)
- [CONFIG\\_BT\\_LE\\_EXT\\_ADV](#)
- [CONFIG\\_BT\\_LE\\_EXT\\_SCAN](#)

## CONFIG\_BT\_LE\_LL\_CFG\_FEAT\_LE\_2M\_PHY

Enable 2M Phy

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_50\\_FEATURE\\_SUPPORT](#)

Enable 2M-PHY

### Default value:

- Yes (enabled) if `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

## CONFIG\_BT\_LE\_LL\_CFG\_FEAT\_LE\_CODED\_PHY

Enable coded Phy

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_50\\_FEATURE\\_SUPPORT](#)

Enable coded-PHY

### Default value:

- Yes (enabled) if `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

## CONFIG\_BT\_LE\_EXT\_ADV

Enable extended advertising

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_50\\_FEATURE\\_SUPPORT](#)

Enable this option to do extended advertising. Extended advertising will be supported from BLE 5.0 onwards.

### Default value:

- Yes (enabled) if `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

## CONFIG\_BT\_LE\_MAX\_EXT\_ADV\_INSTANCES

Maximum number of extended advertising instances.

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_50\\_FEATURE\\_SUPPORT](#) > [CONFIG\\_BT\\_LE\\_EXT\\_ADV](#)

Change this option to set maximum number of extended advertising instances. Minimum there is always one instance of advertising. Enter how many more advertising instances you want. Each extended advertising instance will take about 0.5k DRAM.

**Range:**

- from 0 to 4 if `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**Default value:**

- 1 if `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_EXT\_ADV\_MAX\_SIZE**

Maximum length of the advertising data.

*Found in:* `Component config` > `Bluetooth` > `Controller Options` > `CONFIG_BT_LE_50_FEATURE_SUPPORT` > `CONFIG_BT_LE_EXT_ADV`

Defines the length of the extended adv data. The value should not exceed 1650.

**Range:**

- from 0 to 1650 if `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**Default value:**

- 1650 if `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_ENABLE\_PERIODIC\_ADV**

Enable periodic advertisement.

*Found in:* `Component config` > `Bluetooth` > `Controller Options` > `CONFIG_BT_LE_50_FEATURE_SUPPORT` > `CONFIG_BT_LE_EXT_ADV`

Enable this option to start periodic advertisement.

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_PERIODIC\_ADV\_SYNC\_TRANSFER**

Enable Transfer Sync Events

*Found in:* `Component config` > `Bluetooth` > `Controller Options` > `CONFIG_BT_LE_50_FEATURE_SUPPORT` > `CONFIG_BT_LE_EXT_ADV` > `CONFIG_BT_LE_ENABLE_PERIODIC_ADV`

This enables controller transfer periodic sync events to host

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_ENABLE_PERIODIC_ADV` && `CONFIG_BT_LE_EXT_ADV` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_EXT\_SCAN**

Enable extended scanning

*Found in:* `Component config` > `Bluetooth` > `Controller Options` > `CONFIG_BT_LE_50_FEATURE_SUPPORT`

Enable this option to do extended scanning.

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `CONFIG_BT_LE_ROLE_OBSERVER_ENABLE` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_ENABLE\_PERIODIC\_SYNC**

Enable periodic sync

*Found in:* `Component config` > `Bluetooth` > `Controller Options` > `CONFIG_BT_LE_50_FEATURE_SUPPORT` > `CONFIG_BT_LE_EXT_SCAN`

Enable this option to receive periodic advertisement.

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_EXT_SCAN` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_MAX\_PERIODIC\_SYNCS**

Maximum number of periodic advertising syncs

*Found in:* `Component config` > `Bluetooth` > `Controller Options` > `CONFIG_BT_LE_50_FEATURE_SUPPORT` > `CONFIG_BT_LE_EXT_SCAN` > `CONFIG_BT_LE_ENABLE_PERIODIC_SYNC`

Set this option to set the upper limit for number of periodic sync connections. This should be less than maximum connections allowed by controller.

**Range:**

- from 0 to 3 if `CONFIG_BT_LE_ENABLE_PERIODIC_SYNC` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**Default value:**

- 1 if `CONFIG_BT_LE_ENABLE_PERIODIC_ADV` && `CONFIG_BT_LE_ENABLE_PERIODIC_SYNC` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`
- 0 if `CONFIG_BT_LE_ENABLE_PERIODIC_SYNC` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_MAX\_PERIODIC\_ADVERTISER\_LIST**

Maximum number of periodic advertiser list

*Found in:* `Component config` > `Bluetooth` > `Controller Options` > `CONFIG_BT_LE_50_FEATURE_SUPPORT` > `CONFIG_BT_LE_EXT_SCAN` > `CONFIG_BT_LE_ENABLE_PERIODIC_SYNC`

Set this option to set the upper limit for number of periodic advertiser list.

**Range:**

- from 1 to 5 if `CONFIG_BT_LE_ENABLE_PERIODIC_SYNC` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**Default value:**

- 5 if `CONFIG_BT_LE_ENABLE_PERIODIC_SYNC` && `CONFIG_BT_LE_50_FEATURE_SUPPORT` && `BT_CONTROLLER_ENABLED`

**Memory Settings** Contains:

- `CONFIG_BT_LE_ACL_BUF_COUNT`
- `CONFIG_BT_LE_ACL_BUF_SIZE`
- `CONFIG_BT_LE_HCI_EVT_BUF_SIZE`
- `CONFIG_BT_LE_HCI_EVT_HI_BUF_COUNT`

- [CONFIG\\_BT\\_LE\\_HCI\\_EVT\\_LO\\_BUF\\_COUNT](#)
- [CONFIG\\_BT\\_LE\\_MSYS\\_1\\_BLOCK\\_COUNT](#)
- [CONFIG\\_BT\\_LE\\_MSYS\\_1\\_BLOCK\\_SIZE](#)
- [CONFIG\\_BT\\_LE\\_MSYS\\_2\\_BLOCK\\_COUNT](#)
- [CONFIG\\_BT\\_LE\\_MSYS\\_2\\_BLOCK\\_SIZE](#)

### **CONFIG\_BT\_LE\_MSYS\_1\_BLOCK\_COUNT**

MSYS\_1 Block Count

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

MSYS is a system level mbuf registry. For prepare write & prepare responses MBUFs are allocated out of msys\_1 pool. For NIMBLE\_MESH enabled cases, this block count is increased by 8 than user defined count.

**Default value:**

- 12 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_MSYS\_1\_BLOCK\_SIZE**

MSYS\_1 Block Size

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

Dynamic memory size of block 1

**Default value:**

- 256 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_MSYS\_2\_BLOCK\_COUNT**

MSYS\_2 Block Count

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

Dynamic memory count

**Default value:**

- 24 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_MSYS\_2\_BLOCK\_SIZE**

MSYS\_2 Block Size

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

Dynamic memory size of block 2

**Default value:**

- 320 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_ACL\_BUF\_COUNT**

ACL Buffer count

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

The number of ACL data buffers.

**Default value:**

- 10 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_ACL\_BUF\_SIZE

ACL Buffer size

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

This is the maximum size of the data portion of HCI ACL data packets. It does not include the HCI data header (of 4 bytes)

**Default value:**

- 255 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_HCI\_EVT\_BUF\_SIZE

HCI Event Buffer size

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

This is the size of each HCI event buffer in bytes. In case of extended advertising, packets can be fragmented. 257 bytes is the maximum size of a packet.

**Default value:**

- 257 if [CONFIG\\_BT\\_LE\\_EXT\\_ADV](#) && BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED
- 70 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_HCI\_EVT\_HI\_BUF\_COUNT

High Priority HCI Event Buffer count

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

This is the high priority HCI events' buffer size. High-priority event buffers are for everything except advertising reports. If there are no free high-priority event buffers then host will try to allocate a low-priority buffer instead

**Default value:**

- 30 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_HCI\_EVT\_LO\_BUF\_COUNT

Low Priority HCI Event Buffer count

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [Memory Settings](#)*

This is the low priority HCI events' buffer size. Low-priority event buffers are only used for advertising reports. If there are no free low-priority event buffers, then an incoming advertising report will get dropped

**Default value:**

- 8 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_CONTROLLER\_TASK\_STACK\_SIZE

Controller task stack size

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#)*

This configures stack size of NimBLE controller task

**Default value:**

- 5120 if [CONFIG\\_BLE\\_MESH](#) && BT\_CONTROLLER\_ENABLED
- 4096 if BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_CONTROLLER\_LOG\_ENABLED

Controller log enable

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#)

Enable controller log

**Default value:**

- No (disabled) if BT\_CONTROLLER\_ENABLED

Contains:

- [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_DUMP\\_ONLY](#)
- [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_CTRL\\_ENABLED](#)
- [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_HCI\\_ENABLED](#)
- [CONFIG\\_BT\\_LE\\_LOG\\_HCI\\_BUF\\_SIZE](#)
- [CONFIG\\_BT\\_LE\\_LOG\\_CTRL\\_BUF1\\_SIZE](#)
- [CONFIG\\_BT\\_LE\\_LOG\\_CTRL\\_BUF2\\_SIZE](#)
- [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_STORAGE\\_ENABLE](#)

### CONFIG\_BT\_LE\_CONTROLLER\_LOG\_CTRL\_ENABLED

enable controller log module

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#)

Enable controller log module

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#) && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_CONTROLLER\_LOG\_HCI\_ENABLED

enable HCI log module

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#)

Enable hci log module

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#) && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_CONTROLLER\_LOG\_DUMP\_ONLY

Controller log dump mode only

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#)

Only operate in dump mode

**Default value:**

- Yes (enabled) if [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#) && BT\_CONTROLLER\_ENABLED

**CONFIG\_BT\_LE\_CONTROLLER\_LOG\_STORAGE\_ENABLE**

Store ble controller logs to flash(Experimental)

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#)

Store ble controller logs to flash memory.

**Default value:**

- No (disabled) if [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_DUMP\\_ONLY](#) && [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#) && [BT\\_CONTROLLER\\_ENABLED](#)

**CONFIG\_BT\_LE\_CONTROLLER\_LOG\_PARTITION\_SIZE**

size of ble controller log partition(Multiples of 4K)

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_STORAGE\\_ENABLE](#)

The size of ble controller log partition shall be a multiples of 4K. The name of log partition shall be “bt\_ctrl\_log” . The partition type shall be ESP\_PARTITION\_TYPE\_DATA. The partition sub\_type shall be ESP\_PARTITION\_SUBTYPE\_ANY.

**Default value:**

- 65536 if [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_STORAGE\\_ENABLE](#) && [BT\\_CONTROLLER\\_ENABLED](#)

**CONFIG\_BT\_LE\_LOG\_CTRL\_BUF1\_SIZE**

size of the first BLE controller LOG buffer

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#)

Configure the size of the first BLE controller LOG buffer.

**Default value:**

- 4096 if [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#) && [BT\\_CONTROLLER\\_ENABLED](#)

**CONFIG\_BT\_LE\_LOG\_CTRL\_BUF2\_SIZE**

size of the second BLE controller LOG buffer

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#)

Configure the size of the second BLE controller LOG buffer.

**Default value:**

- 1024 if [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#) && [BT\\_CONTROLLER\\_ENABLED](#)

**CONFIG\_BT\_LE\_LOG\_HCI\_BUF\_SIZE**

size of the BLE HCI LOG buffer

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_LE\\_CONTROLLER\\_LOG\\_ENABLED](#)

Configure the size of the BLE HCI LOG buffer.

**Default value:**

- 4096 if `CONFIG_BT_LE_CONTROLLER_LOG_ENABLED` &&  
BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_LL\_RESOLV\_LIST\_SIZE

BLE LL Resolving list size

*Found in: Component config > Bluetooth > Controller Options*

Configure the size of resolving list used in link layer.

**Range:**

- from 1 to 5 if BT\_CONTROLLER\_ENABLED

**Default value:**

- 4 if BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_SECURITY\_ENABLE

Enable BLE SM feature

*Found in: Component config > Bluetooth > Controller Options*

Enable BLE sm feature

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

Contains:

- `CONFIG_BT_LE_LL_CFG_FEAT_LE_ENCRYPTION`
- `CONFIG_BT_LE_SM_LEGACY`
- `CONFIG_BT_LE_SM_SC`

### CONFIG\_BT\_LE\_SM\_LEGACY

Security manager legacy pairing

*Found in: Component config > Bluetooth > Controller Options > CONFIG\_BT\_LE\_SECURITY\_ENABLE*

Enable security manager legacy pairing

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_SECURITY_ENABLE` &&  
BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_SM\_SC

Security manager secure connections (4.2)

*Found in: Component config > Bluetooth > Controller Options > CONFIG\_BT\_LE\_SECURITY\_ENABLE*

Enable security manager secure connections

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_SECURITY_ENABLE` &&  
BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_SM\_SC\_DEBUG\_KEYS

Use predefined public-private key pair

*Found in: Component config > Bluetooth > Controller Options > CONFIG\_BT\_LE\_SECURITY\_ENABLE > CONFIG\_BT\_LE\_SM\_SC*

If this option is enabled, SM uses predefined DH key pair as described in Core Specification, Vol. 3, Part H, 2.3.5.6.1. This allows to decrypt air traffic easily and thus should only be used for debugging.

**Default value:**

- No (disabled) if `CONFIG_BT_LE_SECURITY_ENABLE` && `CONFIG_BT_LE_SM_SC` && `BT_CONTROLLER_ENABLED`

### **CONFIG\_BT\_LE\_LL\_CFG\_FEAT\_LE\_ENCRYPTION**

Enable LE encryption

*Found in: Component config > Bluetooth > Controller Options > CONFIG\_BT\_LE\_SECURITY\_ENABLE*

Enable encryption connection

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_SECURITY_ENABLE` && `BT_CONTROLLER_ENABLED`

### **CONFIG\_BT\_LE\_CRYPTO\_STACK\_MBEDTLS**

Override TinyCrypt with mbedTLS for crypto computations

*Found in: Component config > Bluetooth > Controller Options*

Enable this option to choose mbedTLS instead of TinyCrypt for crypto computations.

**Default value:**

- Yes (enabled) if `BT_NIMBLE_ENABLED` && `BT_CONTROLLER_ENABLED`

### **CONFIG\_BT\_LE\_WHITELIST\_SIZE**

BLE white list size

*Found in: Component config > Bluetooth > Controller Options*

BLE list size

**Range:**

- from 1 to 15 if `BT_NIMBLE_ENABLED` && `BT_CONTROLLER_ENABLED`

**Default value:**

- 12 if `BT_NIMBLE_ENABLED` && `BT_CONTROLLER_ENABLED`

### **CONFIG\_BT\_LE\_LL\_DUP\_SCAN\_LIST\_COUNT**

BLE duplicate scan list count

*Found in: Component config > Bluetooth > Controller Options*

config the max count of duplicate scan list

**Range:**

- from 1 to 100 if `BT_CONTROLLER_ENABLED`

**Default value:**

- 20 if `BT_CONTROLLER_ENABLED`

### **CONFIG\_BT\_LE\_LL\_SCA**

BLE Sleep clock accuracy

*Found in: Component config > Bluetooth > Controller Options*

Sleep clock accuracy of our device (in ppm)

**Range:**

- from 0 to 500 if BT\_CONTROLLER\_ENABLED

**Default value:**

- 60 if BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_MAX\_CONNECTIONS

Maximum number of concurrent connections

*Found in: Component config > Bluetooth > Controller Options*

Defines maximum number of concurrent BLE connections. For ESP32, user is expected to configure BTDM\_CTRL\_BLE\_MAX\_CONN from controller menu along with this option. Similarly for ESP32-C3 or ESP32-S3, user is expected to configure BT\_CTRL\_BLE\_MAX\_ACT from controller menu. Each connection will take about 1k DRAM.

**Range:**

- from 1 to 2 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

**Default value:**

- 2 if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_COEX\_PHY\_CODED\_TX\_RX\_TLIM

Coexistence: limit on MAX Tx/Rx time for coded-PHY connection

*Found in: Component config > Bluetooth > Controller Options*

When using PHY-Coded in BLE connection, limitation on max tx/rx time can be applied to better avoid dramatic performance deterioration of Wi-Fi.

**Available options:**

- Force Enable (BT\_LE\_COEX\_PHY\_CODED\_TX\_RX\_TLIM\_EN)  
Always enable the limitation on max tx/rx time for Coded-PHY connection
- Force Disable (BT\_LE\_COEX\_PHY\_CODED\_TX\_RX\_TLIM\_DIS)  
Disable the limitation on max tx/rx time for Coded-PHY connection

### CONFIG\_BT\_LE\_SLEEP\_ENABLE

Enable BLE sleep

*Found in: Component config > Bluetooth > Controller Options*

Enable BLE sleep

**Default value:**

- No (disabled) if BT\_CONTROLLER\_ENABLED

### CONFIG\_BT\_LE\_LP\_CLK\_SRC

BLE low power clock source

*Found in: Component config > Bluetooth > Controller Options*

**Available options:**

- Use main XTAL as RTC clock source (BT\_LE\_LP\_CLK\_SRC\_MAIN\_XTAL)  
User main XTAL as RTC clock source. This option is recommended if external 32.768k XTAL is not available. Using the external 32.768 kHz XTAL will have lower current consumption in light sleep compared to using the main XTAL.
- Use system RTC slow clock source (BT\_LE\_LP\_CLK\_SRC\_DEFAULT)  
Use the same slow clock source as system RTC Using any clock source other than external 32.768 kHz XTAL at pin0 supports only legacy ADV and SCAN due to low clock accuracy.

**CONFIG\_BT\_LE\_USE\_ESP\_TIMER**

Use Esp Timer for callout

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#)*

Set this option to use Esp Timer which has higher priority timer instead of FreeRTOS timer

**Default value:**

- Yes (enabled) if `BT_NIMBLE_ENABLED` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_CTRL\_BLE\_ADV\_REPORT\_FLOW\_CTRL\_SUPP**

BLE adv report flow control supported

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#)*

The function is mainly used to enable flow control for advertising reports. When it is enabled, advertising reports will be discarded by the controller if the number of unprocessed advertising reports exceeds the size of BLE adv report flow control.

**Default value:**

- Yes (enabled) if `CONFIG_BT_LE_ROLE_OBSERVER_ENABLE` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_CTRL\_BLE\_ADV\_REPORT\_FLOW\_CTRL\_NUM**

BLE adv report flow control number

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_CTRL\\_BLE\\_ADV\\_REPORT\\_FLOW\\_CTRL\\_SUPP](#)*

The number of unprocessed advertising report that bluetooth host can save. If you set `BT_CTRL_BLE_ADV_REPORT_FLOW_CTRL_NUM` to a small value, this may cause adv packets lost. If you set `BT_CTRL_BLE_ADV_REPORT_FLOW_CTRL_NUM` to a large value, bluetooth host may cache a lot of adv packets and this may cause system memory run out. For example, if you set it to 50, the maximum memory consumed by host is  $35 * 50$  bytes. Please set `BT_CTRL_BLE_ADV_REPORT_FLOW_CTRL_NUM` according to your system free memory and handle adv packets as fast as possible, otherwise it will cause adv packets lost.

**Range:**

- from 50 to 1000 if `CONFIG_BT_CTRL_BLE_ADV_REPORT_FLOW_CTRL_SUPP` && `BT_CONTROLLER_ENABLED`

**Default value:**

- 100 if `CONFIG_BT_CTRL_BLE_ADV_REPORT_FLOW_CTRL_SUPP` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_CTRL\_BLE\_ADV\_REPORT\_DISCARD\_THRSHOLD**

BLE adv lost event threshold value

*Found in: [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_CTRL\\_BLE\\_ADV\\_REPORT\\_FLOW\\_CTRL\\_SUPP](#)*

When adv report flow control is enabled, The ADV lost event will be generated when the number of ADV packets lost in the controller reaches this threshold. It is better to set a larger value. If you set `BT_CTRL_BLE_ADV_REPORT_DISCARD_THRSHOLD` to a small value or printf every adv lost event, it may cause adv packets lost more.

**Range:**

- from 1 to 1000 if `CONFIG_BT_CTRL_BLE_ADV_REPORT_FLOW_CTRL_SUPP` && `BT_CONTROLLER_ENABLED`

**Default value:**

- 20 if `CONFIG_BT_CTRL_BLE_ADV_REPORT_FLOW_CTRL_SUPP` &&  
BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_TX\_CCA\_ENABLED**

Enable TX CCA feature

*Found in: Component config > Bluetooth > Controller Options*

Enable CCA feature to cancel sending the packet if the signal power is stronger than CCA threshold.

**Default value:**

- No (disabled) if BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_DTM\_ENABLED**

Enable Direct Test Mode (DTM) feature

*Found in: Component config > Bluetooth > Controller Options*

**Default value:**

- No (disabled) if BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_CCA\_RSSI\_THRESH**

CCA RSSI threshold value

*Found in: Component config > Bluetooth > Controller Options*

Power threshold of CCA in unit of -1 dBm.

**Range:**

- from 20 to 100 if `CONFIG_BT_LE_TX_CCA_ENABLED` &&  
BT\_CONTROLLER\_ENABLED

**Default value:**

- 20 if `CONFIG_BT_LE_TX_CCA_ENABLED` && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_FEAT\_LL\_ENCRYPTION**

Enable controller ACL encryption

*Found in: Component config > Bluetooth > Controller Options*

**Default value:**

- Yes (enabled) if BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_ROLE\_CONTROL\_ENABLE**

Enable BLE Control role function

*Found in: Component config > Bluetooth > Controller Options*

Enable control role function.

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

### **CONFIG\_BT\_LE\_ROLE\_PERIPHERAL\_ENABLE**

Enable BLE Peripheral role function

*Found in: Component config > Bluetooth > Controller Options*

Enable Peripheral role function.

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

**CONFIG\_BT\_LE\_ROLE\_BROADCASTER\_ENABLE**

Enable BLE Broadcaster role function

*Found in: Component config > Bluetooth > Controller Options*

Enable broadcaster role function.

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

**CONFIG\_BT\_LE\_ROLE\_OBSERVER\_ENABLE**

Enable BLE Observer role function

*Found in: Component config > Bluetooth > Controller Options*

Enable observer role function.

**Default value:**

- Yes (enabled) if BT\_NIMBLE\_ENABLED && BT\_CONTROLLER\_ENABLED

**CONFIG\_BT\_LE\_DFT\_TX\_POWER\_LEVEL\_DBM**

BLE default Tx power level(dBm)

*Found in: Component config > Bluetooth > Controller Options*

Specify default Tx power level(dBm).

**Available options:**

- -24dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N24)
- -21dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N21)
- -18dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N18)
- -15dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N15)
- -12dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N12)
- **-9dBm** (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N9)
- **-6dBm** (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N6)
- **-3dBm** (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N3)
- 0dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_N0)
- **+3dBm** (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_P3)
- **+6dBm** (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_P6)
- **+9dBm** (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_P9)
- +12dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_P12)
- +15dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_P15)
- +18dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_P18)
- +20dBm (BT\_LE\_DFT\_TX\_POWER\_LEVEL\_P20)

**CONFIG\_BT\_CTRL\_RUN\_IN\_FLASH\_ONLY**

Reduce BLE IRAM usage (READ DOCS FIRST) (EXPERIMENTAL)

*Found in: Component config > Bluetooth > Controller Options*

Move most IRAM into flash. This will increase the usage of flash and reduce ble performance. Because the code is moved to the flash, the execution speed of the code is reduced. To have a small impact on performance, you need to enable flash suspend (SPI\_FLASH\_AUTO\_SUSPEND).

- Only one Tx-Rx can be performed in each connection interval. Therefore, reduce the connection interval as much as possible to improve the throughput. If you want higher connection performance, you can enable `BT_LE_PLACE_CONN_RELATED_INTO_IRAM` to put the connection-related code into iram.
- For `HCI_LE_Extended_Create_Connection` command, only 1M phy's connection parameters will be applied. Other phys' will be ignored.
- For extended scanning, we may be unable to receive the extended adv with 300us MAFS.

**Default value:**

- No (disabled) if `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_LE\_PLACE\_CONN\_RELATED\_INTO\_IRAM**

Place the connection-related code into IRAM

*Found in:* [Component config](#) > [Bluetooth](#) > [Controller Options](#) > [CONFIG\\_BT\\_CTRL\\_RUN\\_IN\\_FLASH\\_ONLY](#)

**Default value:**

- No (disabled) if `CONFIG_BT_CTRL_RUN_IN_FLASH_ONLY` && `BT_CONTROLLER_ENABLED`

**CONFIG\_BT\_RELEASE\_IRAM**

Release Bluetooth text (READ DOCS FIRST)

*Found in:* [Component config](#) > [Bluetooth](#)

This option release Bluetooth text section and merge Bluetooth data, bss & text into a large free heap region when `esp_bt_mem_release` is called, total saving ~21kB or more of IRAM. ESP32-C2 only 3 configurable PMP entries available, rest of them are hard-coded. We cannot split the memory into 3 different regions (IRAM, BLE-IRAM, DRAM). So this option will disable the PMP (`ESP_SYSTEM_PMP_IDRAM_SPLIT`)

**CONFIG\_BT\_HCI\_LOG\_DEBUG\_EN**

Enable Bluetooth HCI debug mode

*Found in:* [Component config](#) > [Bluetooth](#)

This option is used to enable bluetooth debug mode, which saves the hci layer data stream.

**Default value:**

- No (disabled) if `BT_BLUEDROID_ENABLED` || `BT_NIMBLE_ENABLED`

**CONFIG\_BT\_HCI\_LOG\_DATA\_BUFFER\_SIZE**

Size of the cache used for HCI data in Bluetooth HCI debug mode (N\*1024 bytes)

*Found in:* [Component config](#) > [Bluetooth](#) > [CONFIG\\_BT\\_HCI\\_LOG\\_DEBUG\\_EN](#)

This option is to configure the buffer size of the hci data steam cache in hci debug mode. This is a ring buffer, the new data will overwrite the oldest data if the buffer is full.

**Range:**

- from 1 to 100 if `CONFIG_BT_HCI_LOG_DEBUG_EN`

**Default value:**

- 5 if `CONFIG_BT_HCI_LOG_DEBUG_EN`

### CONFIG\_BT\_HCI\_LOG\_ADV\_BUFFER\_SIZE

Size of the cache used for adv report in Bluetooth HCI debug mode (N\*1024 bytes)

*Found in: Component config > Bluetooth > CONFIG\_BT\_HCI\_LOG\_DEBUG\_EN*

This option is to configure the buffer size of the hci adv report cache in hci debug mode. This is a ring buffer, the new data will overwrite the oldest data if the buffer is full.

**Range:**

- from 1 to 100 if *CONFIG\_BT\_HCI\_LOG\_DEBUG\_EN*

**Default value:**

- 8 if *CONFIG\_BT\_HCI\_LOG\_DEBUG\_EN*

**Common Options** Contains:

- *CONFIG\_BT\_ALARM\_MAX\_NUM*

### CONFIG\_BT\_ALARM\_MAX\_NUM

Maximum number of Bluetooth alarms

*Found in: Component config > Bluetooth > Common Options*

This option decides the maximum number of alarms which could be used by Bluetooth host.

**Default value:**

- 50

### CONFIG\_BLE\_MESH

ESP BLE Mesh Support

*Found in: Component config*

This option enables ESP BLE Mesh support. The specific features that are available may depend on other features that have been enabled in the stack, such as Bluetooth Support, Bluedroid Support & GATT support.

Contains:

- *BLE Mesh and BLE coexistence support*
- *CONFIG\_BLE\_MESH\_GATT\_PROXY\_CLIENT*
- *CONFIG\_BLE\_MESH\_GATT\_PROXY\_SERVER*
- *BLE Mesh NET BUF DEBUG LOG LEVEL*
- *CONFIG\_BLE\_MESH\_PROV*
- *CONFIG\_BLE\_MESH\_PROXY*
- *BLE Mesh specific test option*
- *BLE Mesh STACK DEBUG LOG LEVEL*
- *CONFIG\_BLE\_MESH\_NO\_LOG*
- *CONFIG\_BLE\_MESH\_IVU\_DIVIDER*
- *CONFIG\_BLE\_MESH\_FAST\_PROV*
- *CONFIG\_BLE\_MESH\_FREERTOS\_STATIC\_ALLOC*
- *CONFIG\_BLE\_MESH\_EXPERIMENTAL*
- *CONFIG\_BLE\_MESH\_CRPL*
- *CONFIG\_BLE\_MESH\_RX\_SDU\_MAX*
- *CONFIG\_BLE\_MESH\_MODEL\_KEY\_COUNT*
- *CONFIG\_BLE\_MESH\_APP\_KEY\_COUNT*
- *CONFIG\_BLE\_MESH\_MODEL\_GROUP\_COUNT*
- *CONFIG\_BLE\_MESH\_LABEL\_COUNT*
- *CONFIG\_BLE\_MESH\_SUBNET\_COUNT*
- *CONFIG\_BLE\_MESH\_TX\_SEG\_MAX*
- *CONFIG\_BLE\_MESH\_RX\_SEG\_MSG\_COUNT*

- `CONFIG_BLE_MESH_TX_SEG_MSG_COUNT`
- `CONFIG_BLE_MESH_MEM_ALLOC_MODE`
- `CONFIG_BLE_MESH_MSG_CACHE_SIZE`
- `CONFIG_BLE_MESH_NOT_RELAY_REPLAY_MSG`
- `CONFIG_BLE_MESH_ADV_BUF_COUNT`
- `CONFIG_BLE_MESH_PB_GATT`
- `CONFIG_BLE_MESH_PB_ADV`
- `CONFIG_BLE_MESH_IVU_RECOVERY_IVI`
- `CONFIG_BLE_MESH_RELAY`
- `CONFIG_BLE_MESH_SETTINGS`
- `CONFIG_BLE_MESH_DEINIT`
- `CONFIG_BLE_MESH_USE_DUPLICATE_SCAN`
- Support for BLE Mesh Client/Server models
- Support for BLE Mesh Foundation models
- `CONFIG_BLE_MESH_NODE`
- `CONFIG_BLE_MESH_PROVISIONER`
- `CONFIG_BLE_MESH_FRIEND`
- `CONFIG_BLE_MESH_LOW_POWER`
- `CONFIG_BLE_MESH_HCI_5_0`
- `CONFIG_BLE_MESH_RANDOM_ADV_INTERVAL`
- `CONFIG_BLE_MESH_IV_UPDATE_TEST`
- `CONFIG_BLE_MESH_CLIENT_MSG_TIMEOUT`

### **CONFIG\_BLE\_MESH\_HCI\_5\_0**

Support sending 20ms non-connectable adv packets

*Found in: Component config > CONFIG\_BLE\_MESH*

It is a temporary solution and needs further modifications.

**Default value:**

- Yes (enabled) if `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_RANDOM\_ADV\_INTERVAL**

Support using random adv interval for mesh packets

*Found in: Component config > CONFIG\_BLE\_MESH*

Enable this option to allow using random advertising interval for mesh packets. And this could help avoid collision of advertising packets.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_USE\_DUPLICATE\_SCAN**

Support Duplicate Scan in BLE Mesh

*Found in: Component config > CONFIG\_BLE\_MESH*

Enable this option to allow using specific duplicate scan filter in BLE Mesh, and Scan Duplicate Type must be set by choosing the option in the Bluetooth Controller section in menuconfig, which is “Scan Duplicate By Device Address and Advertising Data” .

**Default value:**

- Yes (enabled) if `CONFIG_BLE_MESH`

## CONFIG\_BLE\_MESH\_MEM\_ALLOC\_MODE

Memory allocation strategy

Found in: *Component config* > *CONFIG\_BLE\_MESH*

Allocation strategy for BLE Mesh stack, essentially provides ability to allocate all required dynamic allocations from,

- Internal DRAM memory only
- External SPIRAM memory only
- Either internal or external memory based on default malloc() behavior in ESP-IDF
- Internal IRAM memory wherever applicable else internal DRAM

Recommended mode here is always internal (\*), since that is most preferred from security perspective. But if application requirement does not allow sufficient free internal memory then alternate mode can be selected.

(\*) In case of ESP32-S2/ESP32-S3, hardware allows encryption of external SPIRAM contents provided hardware flash encryption feature is enabled. In that case, using external SPIRAM allocation strategy is also safe choice from security perspective.

### Available options:

- Internal DRAM (BLE\_MESH\_MEM\_ALLOC\_MODE\_INTERNAL)
- External SPIRAM (BLE\_MESH\_MEM\_ALLOC\_MODE\_EXTERNAL)
- Default alloc mode (BLE\_MESH\_MEM\_ALLOC\_MODE\_DEFAULT)  
Enable this option to use the default memory allocation strategy when external SPIRAM is enabled. See the SPIRAM options for more details.
- Internal IRAM (BLE\_MESH\_MEM\_ALLOC\_MODE\_IRAM\_8BIT)  
Allows to use IRAM memory region as 8bit accessible region. Every unaligned (8bit or 16bit) access will result in an exception and incur penalty of certain clock cycles per unaligned read/write.

## CONFIG\_BLE\_MESH\_FREERTOS\_STATIC\_ALLOC

Enable FreeRTOS static allocation

Found in: *Component config* > *CONFIG\_BLE\_MESH*

Enable this option to use FreeRTOS static allocation APIs for BLE Mesh, which provides the ability to use different dynamic memory (i.e. SPIRAM or IRAM) for FreeRTOS objects. If this option is disabled, the FreeRTOS static allocation APIs will not be used, and internal DRAM will be allocated for FreeRTOS objects.

### Default value:

- No (disabled) if ESP32\_IRAM\_AS\_8BIT\_ACCESSIBLE\_MEMORY && *CONFIG\_BLE\_MESH*

## CONFIG\_BLE\_MESH\_FREERTOS\_STATIC\_ALLOC\_MODE

Memory allocation for FreeRTOS objects

Found in: *Component config* > *CONFIG\_BLE\_MESH* > *CONFIG\_BLE\_MESH\_FREERTOS\_STATIC\_ALLOC*

Choose the memory to be used for FreeRTOS objects.

### Available options:

- External SPIRAM (BLE\_MESH\_FREERTOS\_STATIC\_ALLOC\_EXTERNAL)  
If enabled, BLE Mesh allocates dynamic memory from external SPIRAM for FreeRTOS objects, i.e. mutex, queue, and task stack. External SPIRAM can only be used for task stack when SPIRAM\_ALLOW\_STACK\_EXTERNAL\_MEMORY is enabled. See the SPIRAM options for more details.

- Internal IRAM (BLE\_MESH\_FREERTOS\_STATIC\_ALLOC\_IRAM\_8BIT)  
If enabled, BLE Mesh allocates dynamic memory from internal IRAM for FreeRTOS objects, i.e. mutex, queue. Note: IRAM region cannot be used as task stack.

### CONFIG\_BLE\_MESH\_DEINIT

Support de-initialize BLE Mesh stack

*Found in: Component config > CONFIG\_BLE\_MESH*

If enabled, users can use the function `esp_ble_mesh_deinit()` to de-initialize the whole BLE Mesh stack.

**Default value:**

- Yes (enabled) if *CONFIG\_BLE\_MESH*

### BLE Mesh and BLE coexistence support

 Contains:

- *CONFIG\_BLE\_MESH\_SUPPORT\_BLE\_SCAN*
- *CONFIG\_BLE\_MESH\_SUPPORT\_BLE\_ADV*

### CONFIG\_BLE\_MESH\_SUPPORT\_BLE\_ADV

Support sending normal BLE advertising packets

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh and BLE coexistence support*

When selected, users can send normal BLE advertising packets with specific API.

**Default value:**

- No (disabled) if *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_BLE\_ADV\_BUF\_COUNT

Number of advertising buffers for BLE advertising packets

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh and BLE coexistence support > CONFIG\_BLE\_MESH\_SUPPORT\_BLE\_ADV*

Number of advertising buffers for BLE packets available.

**Range:**

- from 1 to 255 if *CONFIG\_BLE\_MESH\_SUPPORT\_BLE\_ADV* && *CONFIG\_BLE\_MESH*

**Default value:**

- 3 if *CONFIG\_BLE\_MESH\_SUPPORT\_BLE\_ADV* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_SUPPORT\_BLE\_SCAN

Support scanning normal BLE advertising packets

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh and BLE coexistence support*

When selected, users can register a callback and receive normal BLE advertising packets in the application layer.

**Default value:**

- No (disabled) if *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_FAST\_PROV

Enable BLE Mesh Fast Provisioning

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Enable this option to allow BLE Mesh fast provisioning solution to be used. When there are multiple unprovisioned devices around, fast provisioning can greatly reduce the time consumption of the whole provisioning process. When this option is enabled, and after an unprovisioned device is provisioned into a node successfully, it can be changed to a temporary Provisioner.

**Default value:**

- No (disabled) if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_NODE

Support for BLE Mesh Node

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Enable the device to be provisioned into a node. This option should be enabled when an unprovisioned device is going to be provisioned into a node and communicate with other nodes in the BLE Mesh network.

### CONFIG\_BLE\_MESH\_PROVISIONER

Support for BLE Mesh Provisioner

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Enable the device to be a Provisioner. The option should be enabled when a device is going to act as a Provisioner and provision unprovisioned devices into the BLE Mesh network.

### CONFIG\_BLE\_MESH\_WAIT\_FOR\_PROV\_MAX\_DEV\_NUM

Maximum number of unprovisioned devices that can be added to device queue

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#)*

This option specifies how many unprovisioned devices can be added to device queue for provisioning. Users can use this option to define the size of the queue in the bottom layer which is used to store unprovisioned device information (e.g. Device UUID, address).

**Range:**

- from 1 to 100 if [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#) && [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 10 if [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#) && [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_MAX\_PROV\_NODES

Maximum number of devices that can be provisioned by Provisioner

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#)*

This option specifies how many devices can be provisioned by a Provisioner. This value indicates the maximum number of unprovisioned devices which can be provisioned by a Provisioner. For instance, if the value is 6, it means the Provisioner can provision up to 6 unprovisioned devices. Theoretically a Provisioner without the limitation of its memory can provision up to 32766 unprovisioned devices, here we limit the maximum number to 100 just to limit the memory used by a Provisioner. The bigger the value is, the more memory it will cost by a Provisioner to store the information of nodes.

**Range:**

- from 1 to 1000 if [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#) && [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 10 if `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_PBA\_SAME\_TIME**

Maximum number of PB-ADV running at the same time by Provisioner

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_PROVISIONER*

This option specifies how many devices can be provisioned at the same time using PB-ADV. For example, if the value is 2, it means a Provisioner can provision two unprovisioned devices with PB-ADV at the same time.

**Range:**

- from 1 to 10 if `CONFIG_BLE_MESH_PB_ADV` && `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

**Default value:**

- 2 if `CONFIG_BLE_MESH_PB_ADV` && `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_PBG\_SAME\_TIME**

Maximum number of PB-GATT running at the same time by Provisioner

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_PROVISIONER*

This option specifies how many devices can be provisioned at the same time using PB-GATT. For example, if the value is 2, it means a Provisioner can provision two unprovisioned devices with PB-GATT at the same time.

**Range:**

- from 1 to 5 if `CONFIG_BLE_MESH_PB_GATT` && `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

**Default value:**

- 1 if `CONFIG_BLE_MESH_PB_GATT` && `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_PROVISIONER\_SUBNET\_COUNT**

Maximum number of mesh subnets that can be created by Provisioner

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_PROVISIONER*

This option specifies how many subnets per network a Provisioner can create. Indeed, this value decides the number of network keys which can be added by a Provisioner.

**Range:**

- from 1 to 4096 if `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

**Default value:**

- 3 if `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_PROVISIONER\_APP\_KEY\_COUNT**

Maximum number of application keys that can be owned by Provisioner

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_PROVISIONER*

This option specifies how many application keys the Provisioner can have. Indeed, this value decides the number of the application keys which can be added by a Provisioner.

**Range:**

- from 1 to 4096 if `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

**Default value:**

- 3 if `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH`

### CONFIG\_BLE\_MESH\_PROVISIONER\_RECV\_HB

Support receiving Heartbeat messages

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#)

When this option is enabled, Provisioner can call specific functions to enable or disable receiving Heartbeat messages and notify them to the application layer.

**Default value:**

- No (disabled) if [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#) && [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_PROVISIONER\_RECV\_HB\_FILTER\_SIZE

Maximum number of filter entries for receiving Heartbeat messages

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#) > [CONFIG\\_BLE\\_MESH\\_PROVISIONER\\_RECV\\_HB](#)

This option specifies how many heartbeat filter entries Provisioner supports. The heartbeat filter (acceptlist or rejectlist) entries are used to store a list of SRC and DST which can be used to decide if a heartbeat message will be processed and notified to the application layer by Provisioner. Note: The filter is an empty rejectlist by default.

**Range:**

- from 1 to 1000 if [CONFIG\\_BLE\\_MESH\\_PROVISIONER\\_RECV\\_HB](#) && [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#) && [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 3 if [CONFIG\\_BLE\\_MESH\\_PROVISIONER\\_RECV\\_HB](#) && [CONFIG\\_BLE\\_MESH\\_PROVISIONER](#) && [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_PROV

BLE Mesh Provisioning support

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#)

Enable this option to support BLE Mesh Provisioning functionality. For BLE Mesh, this option should be always enabled.

**Default value:**

- Yes (enabled) if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_PB\_ADV

Provisioning support using the advertising bearer (PB-ADV)

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#)

Enable this option to allow the device to be provisioned over the advertising bearer. This option should be enabled if PB-ADV is going to be used during provisioning procedure.

**Default value:**

- Yes (enabled) if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_UNPROVISIONED\_BEACON\_INTERVAL

Interval between two consecutive Unprovisioned Device Beacon

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_PB\\_ADV](#)

This option specifies the interval of sending two consecutive unprovisioned device beacon, users can use this option to change the frequency of sending unprovisioned device beacon. For example, if the value is 5, it means the unprovisioned device beacon will send every 5 seconds. When the option of BLE\_MESH\_FAST\_PROV is selected, the value is better to be 3 seconds, or less.

**Range:**

- from 1 to 100 if `CONFIG_BLE_MESH_NODE` && `CONFIG_BLE_MESH_PB_ADV` && `CONFIG_BLE_MESH`

**Default value:**

- 5 if `CONFIG_BLE_MESH_NODE` && `CONFIG_BLE_MESH_PB_ADV` && `CONFIG_BLE_MESH`
- 3 if `CONFIG_BLE_MESH_FAST_PROV` && `CONFIG_BLE_MESH_NODE` && `CONFIG_BLE_MESH_PB_ADV` && `CONFIG_BLE_MESH`

### CONFIG\_BLE\_MESH\_PB\_GATT

Provisioning support using GATT (PB-GATT)

*Found in:* `Component config` > `CONFIG_BLE_MESH`

Enable this option to allow the device to be provisioned over GATT. This option should be enabled if PB-GATT is going to be used during provisioning procedure.

# Virtual option enabled whenever any Proxy protocol is needed

### CONFIG\_BLE\_MESH\_PROXY

BLE Mesh Proxy protocol support

*Found in:* `Component config` > `CONFIG_BLE_MESH`

Enable this option to support BLE Mesh Proxy protocol used by PB-GATT and other proxy pdu transmission.

**Default value:**

- Yes (enabled) if `CONFIG_BLE_MESH`

### CONFIG\_BLE\_MESH\_GATT\_PROXY\_SERVER

BLE Mesh GATT Proxy Server

*Found in:* `Component config` > `CONFIG_BLE_MESH`

This option enables support for Mesh GATT Proxy Service, i.e. the ability to act as a proxy between a Mesh GATT Client and a Mesh network. This option should be enabled if a node is going to be a Proxy Server.

**Default value:**

- Yes (enabled) if `CONFIG_BLE_MESH_NODE` && `CONFIG_BLE_MESH`

### CONFIG\_BLE\_MESH\_NODE\_ID\_TIMEOUT

Node Identity advertising timeout

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_GATT_PROXY_SERVER`

This option determines for how long the local node advertises using Node Identity. The given value is in seconds. The specification limits this to 60 seconds and lists it as the recommended value as well. So leaving the default value is the safest option. When an unprovisioned device is provisioned successfully and becomes a node, it will start to advertise using Node Identity during the time set by this option. And after that, Network ID will be advertised.

**Range:**

- from 1 to 60 if `CONFIG_BLE_MESH_GATT_PROXY_SERVER` && `CONFIG_BLE_MESH`

**Default value:**

- 60 if `CONFIG_BLE_MESH_GATT_PROXY_SERVER` && `CONFIG_BLE_MESH`

### CONFIG\_BLE\_MESH\_PROXY\_FILTER\_SIZE

Maximum number of filter entries per Proxy Client

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_GATT\_PROXY\_SERVER*

This option specifies how many Proxy Filter entries the local node supports. The entries of Proxy filter (whitelist or blacklist) are used to store a list of addresses which can be used to decide which messages will be forwarded to the Proxy Client by the Proxy Server.

**Range:**

- from 1 to 32767 if *CONFIG\_BLE\_MESH\_GATT\_PROXY\_SERVER* && *CONFIG\_BLE\_MESH*

**Default value:**

- 4 if *CONFIG\_BLE\_MESH\_GATT\_PROXY\_SERVER* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_GATT\_PROXY\_CLIENT

BLE Mesh GATT Proxy Client

*Found in: Component config > CONFIG\_BLE\_MESH*

This option enables support for Mesh GATT Proxy Client. The Proxy Client can use the GATT bearer to send mesh messages to a node that supports the advertising bearer.

**Default value:**

- No (disabled) if *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_SETTINGS

Store BLE Mesh configuration persistently

*Found in: Component config > CONFIG\_BLE\_MESH*

When selected, the BLE Mesh stack will take care of storing/restoring the BLE Mesh configuration persistently in flash. If the device is a BLE Mesh node, when this option is enabled, the configuration of the device will be stored persistently, including unicast address, NetKey, AppKey, etc. And if the device is a BLE Mesh Provisioner, the information of the device will be stored persistently, including the information of provisioned nodes, NetKey, AppKey, etc.

**Default value:**

- No (disabled) if *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_STORE\_TIMEOUT

Delay (in seconds) before storing anything persistently

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_SETTINGS*

This value defines in seconds how soon any pending changes are actually written into persistent storage (flash) after a change occurs. The option allows nodes to delay a certain period of time to save proper information to flash. The default value is 0, which means information will be stored immediately once there are updates.

**Range:**

- from 0 to 1000000 if *CONFIG\_BLE\_MESH\_SETTINGS* && *CONFIG\_BLE\_MESH*

**Default value:**

- 0 if *CONFIG\_BLE\_MESH\_SETTINGS* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_SEQ\_STORE\_RATE

How often the sequence number gets updated in storage

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_SETTINGS](#)*

This value defines how often the local sequence number gets updated in persistent storage (i.e. flash). e.g. a value of 100 means that the sequence number will be stored to flash on every 100th increment. If the node sends messages very frequently a higher value makes more sense, whereas if the node sends infrequently a value as low as 0 (update storage for every increment) can make sense. When the stack gets initialized it will add sequence number to the last stored one, so that it starts off with a value that's guaranteed to be larger than the last one used before power off.

**Range:**

- from 0 to 1000000 if [CONFIG\\_BLE\\_MESH\\_SETTINGS](#) && [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 0 if [CONFIG\\_BLE\\_MESH\\_SETTINGS](#) && [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_RPL\_STORE\_TIMEOUT

Minimum frequency that the RPL gets updated in storage

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_SETTINGS](#)*

This value defines in seconds how soon the RPL (Replay Protection List) gets written to persistent storage after a change occurs. If the node receives messages frequently, then a large value is recommended. If the node receives messages rarely, then the value can be as low as 0 (which means the RPL is written into the storage immediately). Note that if the node operates in a security-sensitive case, and there is a risk of sudden power-off, then a value of 0 is strongly recommended. Otherwise, a power loss before RPL being written into the storage may introduce message replay attacks and system security will be in a vulnerable state.

**Range:**

- from 0 to 1000000 if [CONFIG\\_BLE\\_MESH\\_SETTINGS](#) && [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 0 if [CONFIG\\_BLE\\_MESH\\_SETTINGS](#) && [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_SETTINGS\_BACKWARD\_COMPATIBILITY

A specific option for settings backward compatibility

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_SETTINGS](#)*

This option is created to solve the issue of failure in recovering node information after mesh stack updates. In the old version mesh stack, there is no key of “mesh/role” in nvs. In the new version mesh stack, key of “mesh/role” is added in nvs, recovering node information needs to check “mesh/role” key in nvs and implements selective recovery of mesh node information. Therefore, there may be failure in recovering node information during node restarting after OTA.

The new version mesh stack adds the option of “mesh/role” because we have added the support of storing Provisioner information, while the old version only supports storing node information.

If users are updating their nodes from old version to new version, we recommend enabling this option, so that system could set the flag in advance before recovering node information and make sure the node information recovering could work as expected.

**Default value:**

- No (disabled) if [CONFIG\\_BLE\\_MESH\\_NODE](#) && [CONFIG\\_BLE\\_MESH\\_SETTINGS](#) && [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_SPECIFIC\_PARTITION

Use a specific NVS partition for BLE Mesh

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [CONFIG\\_BLE\\_MESH\\_SETTINGS](#)*

When selected, the mesh stack will use a specified NVS partition instead of default NVS partition. Note that the specified partition must be registered with NVS using `nvs_flash_init_partition()` API, and the partition must exist in the csv file. When Provisioner needs to store a large amount of nodes' information in the flash (e.g. more than 20), this option is recommended to be enabled.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH_SETTINGS` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_PARTITION\_NAME**

Name of the NVS partition for BLE Mesh

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_SETTINGS` > `CONFIG_BLE_MESH_SPECIFIC_PARTITION`

This value defines the name of the specified NVS partition used by the mesh stack.

**Default value:**

- “ble\_mesh” if `CONFIG_BLE_MESH_SPECIFIC_PARTITION` && `CONFIG_BLE_MESH_SETTINGS` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_USE\_MULTIPLE\_NAMESPACE**

Support using multiple NVS namespaces by Provisioner

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_SETTINGS`

When selected, Provisioner can use different NVS namespaces to store different instances of mesh information. For example, if in the first room, Provisioner uses NetKey A, AppKey A and provisions three devices, these information will be treated as mesh information instance A. When the Provisioner moves to the second room, it uses NetKey B, AppKey B and provisions two devices, then the information will be treated as mesh information instance B. Here instance A and instance B will be stored in different namespaces. With this option enabled, Provisioner needs to use specific functions to open the corresponding NVS namespace, restore the mesh information, release the mesh information or erase the mesh information.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH_PROVISIONER` && `CONFIG_BLE_MESH_SETTINGS` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_MAX\_NVS\_NAMESPACE**

Maximum number of NVS namespaces

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_SETTINGS` > `CONFIG_BLE_MESH_USE_MULTIPLE_NAMESPACE`

This option specifies the maximum NVS namespaces supported by Provisioner.

**Range:**

- from 1 to 255 if `CONFIG_BLE_MESH_USE_MULTIPLE_NAMESPACE` && `CONFIG_BLE_MESH_SETTINGS` && `CONFIG_BLE_MESH`

**Default value:**

- 2 if `CONFIG_BLE_MESH_USE_MULTIPLE_NAMESPACE` && `CONFIG_BLE_MESH_SETTINGS` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_SUBNET\_COUNT**

Maximum number of mesh subnets per network

*Found in:* `Component config` > `CONFIG_BLE_MESH`

This option specifies how many subnets a Mesh network can have at the same time. Indeed, this value decides the number of the network keys which can be owned by a node.

**Range:**

- from 1 to 4096 if *CONFIG\_BLE\_MESH*

**Default value:**

- 3 if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_APP\_KEY\_COUNT**

Maximum number of application keys per network

*Found in: Component config > CONFIG\_BLE\_MESH*

This option specifies how many application keys the device can store per network. Indeed, this value decides the number of the application keys which can be owned by a node.

**Range:**

- from 1 to 4096 if *CONFIG\_BLE\_MESH*

**Default value:**

- 3 if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_MODEL\_KEY\_COUNT**

Maximum number of application keys per model

*Found in: Component config > CONFIG\_BLE\_MESH*

This option specifies the maximum number of application keys to which each model can be bound.

**Range:**

- from 1 to 4096 if *CONFIG\_BLE\_MESH*

**Default value:**

- 3 if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_MODEL\_GROUP\_COUNT**

Maximum number of group address subscriptions per model

*Found in: Component config > CONFIG\_BLE\_MESH*

This option specifies the maximum number of addresses to which each model can be subscribed.

**Range:**

- from 1 to 4096 if *CONFIG\_BLE\_MESH*

**Default value:**

- 3 if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_LABEL\_COUNT**

Maximum number of Label UUIDs used for Virtual Addresses

*Found in: Component config > CONFIG\_BLE\_MESH*

This option specifies how many Label UUIDs can be stored. Indeed, this value decides the number of the Virtual Addresses can be supported by a node.

**Range:**

- from 0 to 4096 if *CONFIG\_BLE\_MESH*

**Default value:**

- 3 if *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_CRPL

Maximum capacity of the replay protection list

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

This option specifies the maximum capacity of the replay protection list. It is similar to Network message cache size, but has a different purpose. The replay protection list is used to prevent a node from replay attack, which will store the source address and sequence number of the received mesh messages. For Provisioner, the replay protection list size should not be smaller than the maximum number of nodes whose information can be stored. And the element number of each node should also be taken into consideration. For example, if Provisioner can provision up to 20 nodes and each node contains two elements, then the replay protection list size of Provisioner should be at least 40.

**Range:**

- from 2 to 65535 if [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 10 if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_NOT\_RELAY\_REPLAY\_MSG

Not relay replayed messages in a mesh network

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

There may be many expired messages in a complex mesh network that would be considered replayed messages. Enable this option will refuse to relay such messages, which could help to reduce invalid packets in the mesh network. However, it should be noted that enabling this option may result in packet loss in certain environments. Therefore, users need to decide whether to enable this option according to the actual usage situation.

**Default value:**

- No (disabled) if [CONFIG\\_BLE\\_MESH\\_EXPERIMENTAL](#) && [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_MSG\_CACHE\_SIZE

Network message cache size

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Number of messages that are cached for the network. This helps prevent unnecessary decryption operations and unnecessary relays. This option is similar to Replay protection list, but has a different purpose. A node is not required to cache the entire Network PDU and may cache only part of it for tracking, such as values for SRC/SEQ or others.

**Range:**

- from 2 to 65535 if [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 10 if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_ADV\_BUF\_COUNT

Number of advertising buffers

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Number of advertising buffers available. The transport layer reserves ADV\_BUF\_COUNT - 3 buffers for outgoing segments. The maximum outgoing SDU size is 12 times this value (out of which 4 or 8 bytes are used for the Transport Layer MIC). For example, 5 segments means the maximum SDU size is 60 bytes, which leaves 56 bytes for application layer data using a 4-byte MIC, or 52 bytes using an 8-byte MIC.

**Range:**

- from 6 to 256 if [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 60 if `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_IVU\_DIVIDER**

Divider for IV Update state refresh timer

*Found in:* `Component config` > `CONFIG_BLE_MESH`

When the IV Update state enters Normal operation or IV Update in Progress, we need to keep track of how many hours has passed in the state, since the specification requires us to remain in the state at least for 96 hours (Update in Progress has an additional upper limit of 144 hours).

In order to fulfill the above requirement, even if the node might be powered off once in a while, we need to store persistently how many hours the node has been in the state. This doesn't necessarily need to happen every hour (thanks to the flexible duration range). The exact cadence will depend a lot on the ways that the node will be used and what kind of power source it has.

Since there is no single optimal answer, this configuration option allows specifying a divider, i.e. how many intervals the 96 hour minimum gets split into. After each interval the duration that the node has been in the current state gets stored to flash. E.g. the default value of 4 means that the state is saved every 24 hours (96 / 4).

**Range:**

- from 2 to 96 if `CONFIG_BLE_MESH`

**Default value:**

- 4 if `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_IVU\_RECOVERY\_IVI**

Recovery the IV index when the latest whole IV update procedure is missed

*Found in:* `Component config` > `CONFIG_BLE_MESH`

According to Section 3.10.5 of Mesh Specification v1.0.1. If a node in Normal Operation receives a Secure Network beacon with an IV index equal to the last known IV index+1 and the IV Update Flag set to 0, the node may update its IV without going to the IV Update in Progress state, or it may initiate an IV Index Recovery procedure (Section 3.10.6), or it may ignore the Secure Network beacon. The node makes the choice depending on the time since last IV update and the likelihood that the node has missed the Secure Network beacons with the IV update Flag. When the above situation is encountered, this option can be used to decide whether to perform the IV index recovery procedure.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_TX\_SEG\_MSG\_COUNT**

Maximum number of simultaneous outgoing segmented messages

*Found in:* `Component config` > `CONFIG_BLE_MESH`

Maximum number of simultaneous outgoing multi-segment and/or reliable messages. The default value is 1, which means the device can only send one segmented message at a time. And if another segmented message is going to be sent, it should wait for the completion of the previous one. If users are going to send multiple segmented messages at the same time, this value should be configured properly.

**Range:**

- from 1 to if `CONFIG_BLE_MESH`

**Default value:**

- 1 if `CONFIG_BLE_MESH`

### CONFIG\_BLE\_MESH\_RX\_SEG\_MSG\_COUNT

Maximum number of simultaneous incoming segmented messages

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Maximum number of simultaneous incoming multi-segment and/or reliable messages. The default value is 1, which means the device can only receive one segmented message at a time. And if another segmented message is going to be received, it should wait for the completion of the previous one. If users are going to receive multiple segmented messages at the same time, this value should be configured properly.

**Range:**

- from 1 to 255 if [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 1 if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_RX\_SDU\_MAX

Maximum incoming Upper Transport Access PDU length

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Maximum incoming Upper Transport Access PDU length. Leave this to the default value, unless you really need to optimize memory usage.

**Range:**

- from 36 to 384 if [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 384 if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_TX\_SEG\_MAX

Maximum number of segments in outgoing messages

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Maximum number of segments supported for outgoing messages. This value should typically be fine-tuned based on what models the local node supports, i.e. what's the largest message payload that the node needs to be able to send. This value affects memory and call stack consumption, which is why the default is lower than the maximum that the specification would allow (32 segments).

The maximum outgoing SDU size is 12 times this number (out of which 4 or 8 bytes is used for the Transport Layer MIC). For example, 5 segments means the maximum SDU size is 60 bytes, which leaves 56 bytes for application layer data using a 4-byte MIC and 52 bytes using an 8-byte MIC.

Be sure to specify a sufficient number of advertising buffers when setting this option to a higher value. There must be at least three more advertising buffers ([BLE\\_MESH\\_ADV\\_BUF\\_COUNT](#)) as there are outgoing segments.

**Range:**

- from 2 to 32 if [CONFIG\\_BLE\\_MESH](#)

**Default value:**

- 32 if [CONFIG\\_BLE\\_MESH](#)

### CONFIG\_BLE\_MESH\_RELAY

Relay support

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#)*

Support for acting as a Mesh Relay Node. Enabling this option will allow a node to support the Relay feature, and the Relay feature can still be enabled or disabled by proper configuration messages. Disabling this option will let a node not support the Relay feature.

**Default value:**

- Yes (enabled) if `CONFIG_BLE_MESH_NODE` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_RELAY\_ADV\_BUF**

Use separate advertising buffers for relay packets

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_RELAY`

When selected, self-send packets will be put in a high-priority queue and relay packets will be put in a low-priority queue.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH_RELAY` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_RELAY\_ADV\_BUF\_COUNT**

Number of advertising buffers for relay packets

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_RELAY` > `CONFIG_BLE_MESH_RELAY_ADV_BUF`

Number of advertising buffers for relay packets available.

**Range:**

- from 6 to 256 if `CONFIG_BLE_MESH_RELAY_ADV_BUF` && `CONFIG_BLE_MESH_RELAY` && `CONFIG_BLE_MESH`

**Default value:**

- 60 if `CONFIG_BLE_MESH_RELAY_ADV_BUF` && `CONFIG_BLE_MESH_RELAY` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_LOW\_POWER**

Support for Low Power features

*Found in:* `Component config` > `CONFIG_BLE_MESH`

Enable this option to operate as a Low Power Node. If low power consumption is required by a node, this option should be enabled. And once the node enters the mesh network, it will try to find a Friend node and establish a friendship.

**CONFIG\_BLE\_MESH\_LPN\_ESTABLISHMENT**

Perform Friendship establishment using low power

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_LOW_POWER`

Perform the Friendship establishment using low power with the help of a reduced scan duty cycle. The downside of this is that the node may miss out on messages intended for it until it has successfully set up Friendship with a Friend node. When this option is enabled, the node will stop scanning for a period of time after a Friend Request or Friend Poll is sent, so as to reduce more power consumption.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_LPN\_AUTO**

Automatically start looking for Friend nodes once provisioned

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_LOW_POWER`

Once provisioned, automatically enable LPN functionality and start looking for Friend nodes. If this option is disabled LPN mode needs to be manually enabled by calling `bt_mesh_lpn_set(true)`. When an

unprovisioned device is provisioned successfully and becomes a node, enabling this option will trigger the node starts to send Friend Request at a certain period until it finds a proper Friend node.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_LPN\_AUTO\_TIMEOUT**

Time from last received message before going to LPN mode

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_LOW_POWER` > `CONFIG_BLE_MESH_LPN_AUTO`

Time in seconds from the last received message, that the node waits out before starting to look for Friend nodes.

**Range:**

- from 0 to 3600 if `CONFIG_BLE_MESH_LPN_AUTO` && `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- 15 if `CONFIG_BLE_MESH_LPN_AUTO` && `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_LPN\_RETRY\_TIMEOUT**

Retry timeout for Friend requests

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_LOW_POWER`

Time in seconds between Friend Requests, if a previous Friend Request did not yield any acceptable Friend Offers.

**Range:**

- from 1 to 3600 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- 6 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_LPN\_RSSI\_FACTOR**

RSSIFactor, used in Friend Offer Delay calculation

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_LOW_POWER`

The contribution of the RSSI, measured by the Friend node, used in Friend Offer Delay calculations. 0 = 1, 1 = 1.5, 2 = 2, 3 = 2.5. RSSIFactor, one of the parameters carried by Friend Request sent by Low Power node, which is used to calculate the Friend Offer Delay.

**Range:**

- from 0 to 3 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- 0 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_LPN\_RECV\_WIN\_FACTOR**

ReceiveWindowFactor, used in Friend Offer Delay calculation

*Found in:* `Component config` > `CONFIG_BLE_MESH` > `CONFIG_BLE_MESH_LOW_POWER`

The contribution of the supported Receive Window used in Friend Offer Delay calculations. 0 = 1, 1 = 1.5, 2 = 2, 3 = 2.5. ReceiveWindowFactor, one of the parameters carried by Friend Request sent by Low Power node, which is used to calculate the Friend Offer Delay.

**Range:**

- from 0 to 3 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- 0 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_LPN\_MIN\_QUEUE\_SIZE**

Minimum size of the acceptable friend queue (MinQueueSizeLog)

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_LOW\_POWER*

The MinQueueSizeLog field is defined as  $\log_2(N)$ , where N is the minimum number of maximum size Lower Transport PDUs that the Friend node can store in its Friend Queue. As an example, MinQueueSizeLog value 1 gives  $N = 2$ , and value 7 gives  $N = 128$ .

**Range:**

- from 1 to 7 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- 1 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_LPN\_RECV\_DELAY**

Receive delay requested by the local node

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_LOW\_POWER*

The ReceiveDelay is the time between the Low Power node sending a request and listening for a response. This delay allows the Friend node time to prepare the response. The value is in units of milliseconds.

**Range:**

- from 10 to 255 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- 100 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_LPN\_POLL\_TIMEOUT**

The value of the PollTimeout timer

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_LOW\_POWER*

PollTimeout timer is used to measure time between two consecutive requests sent by a Low Power node. If no requests are received the Friend node before the PollTimeout timer expires, then the friendship is considered terminated. The value is in units of 100 milliseconds, so e.g. a value of 300 means 30 seconds. The smaller the value, the faster the Low Power node tries to get messages from corresponding Friend node and vice versa.

**Range:**

- from 10 to 244735 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- 300 if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_LPN\_INIT\_POLL\_TIMEOUT**

The starting value of the PollTimeout timer

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_LOW\_POWER*

The initial value of the PollTimeout timer when Friendship is to be established for the first time. After this, the timeout gradually grows toward the actual PollTimeout, doubling in value for each iteration. The value is in units of 100 milliseconds, so e.g. a value of 300 means 30 seconds.

**Range:**

- from 10 to if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

**Default value:**

- if `CONFIG_BLE_MESH_LOW_POWER` && `CONFIG_BLE_MESH`

### CONFIG\_BLE\_MESH\_LPN\_SCAN\_LATENCY

Latency for enabling scanning

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_LOW\_POWER*

Latency (in milliseconds) is the time it takes to enable scanning. In practice, it means how much time in advance of the Receive Window, the request to enable scanning is made.

**Range:**

- from 0 to 50 if *CONFIG\_BLE\_MESH\_LOW\_POWER* && *CONFIG\_BLE\_MESH*

**Default value:**

- 10 if *CONFIG\_BLE\_MESH\_LOW\_POWER* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_LPN\_GROUPS

Number of groups the LPN can subscribe to

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_LOW\_POWER*

Maximum number of groups to which the LPN can subscribe.

**Range:**

- from 0 to 16384 if *CONFIG\_BLE\_MESH\_LOW\_POWER* && *CONFIG\_BLE\_MESH*

**Default value:**

- 8 if *CONFIG\_BLE\_MESH\_LOW\_POWER* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_LPN\_SUB\_ALL\_NODES\_ADDR

Automatically subscribe all nodes address

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_LOW\_POWER*

Automatically subscribe all nodes address when friendship established.

**Default value:**

- No (disabled) if *CONFIG\_BLE\_MESH\_LOW\_POWER* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_FRIEND

Support for Friend feature

*Found in: Component config > CONFIG\_BLE\_MESH*

Enable this option to be able to act as a Friend Node.

### CONFIG\_BLE\_MESH\_FRIEND\_RECV\_WIN

Friend Receive Window

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_FRIEND*

Receive Window in milliseconds supported by the Friend node.

**Range:**

- from 1 to 255 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

**Default value:**

- 255 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_FRIEND\_QUEUE\_SIZE

Minimum number of buffers supported per Friend Queue

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_FRIEND*

Minimum number of buffers available to be stored for each local Friend Queue. This option decides the size of each buffer which can be used by a Friend node to store messages for each Low Power node.

**Range:**

- from 2 to 65536 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

**Default value:**

- 16 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_FRIEND\_SUB\_LIST\_SIZE

Friend Subscription List Size

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_FRIEND*

Size of the Subscription List that can be supported by a Friend node for a Low Power node. And Low Power node can send Friend Subscription List Add or Friend Subscription List Remove messages to the Friend node to add or remove subscription addresses.

**Range:**

- from 0 to 1023 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

**Default value:**

- 3 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_FRIEND\_LPN\_COUNT

Number of supported LPN nodes

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_FRIEND*

Number of Low Power Nodes with which a Friend can have Friendship simultaneously. A Friend node can have friendship with multiple Low Power nodes at the same time, while a Low Power node can only establish friendship with only one Friend node at the same time.

**Range:**

- from 1 to 1000 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

**Default value:**

- 2 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_FRIEND\_SEG\_RX

Number of incomplete segment lists per LPN

*Found in: Component config > CONFIG\_BLE\_MESH > CONFIG\_BLE\_MESH\_FRIEND*

Number of incomplete segment lists tracked for each Friends' LPN. In other words, this determines from how many elements can segmented messages destined for the Friend queue be received simultaneously.

**Range:**

- from 1 to 1000 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

**Default value:**

- 1 if *CONFIG\_BLE\_MESH\_FRIEND* && *CONFIG\_BLE\_MESH*

### CONFIG\_BLE\_MESH\_NO\_LOG

Disable BLE Mesh debug logs (minimize bin size)

*Found in: Component config > CONFIG\_BLE\_MESH*

Select this to save the BLE Mesh related rodata code size. Enabling this option will disable the output of BLE Mesh debug log.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH` && `CONFIG_BLE_MESH`

**BLE Mesh STACK DEBUG LOG LEVEL** Contains:

- `CONFIG_BLE_MESH_STACK_TRACE_LEVEL`

**CONFIG\_BLE\_MESH\_STACK\_TRACE\_LEVEL**

BLE\_MESH\_STACK

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh STACK DEBUG LOG LEVEL*

Define BLE Mesh trace level for BLE Mesh stack.

**Available options:**

- NONE (BLE\_MESH\_TRACE\_LEVEL\_NONE)
- ERROR (BLE\_MESH\_TRACE\_LEVEL\_ERROR)
- WARNING (BLE\_MESH\_TRACE\_LEVEL\_WARNING)
- INFO (BLE\_MESH\_TRACE\_LEVEL\_INFO)
- DEBUG (BLE\_MESH\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BLE\_MESH\_TRACE\_LEVEL\_VERBOSE)

**BLE Mesh NET BUF DEBUG LOG LEVEL** Contains:

- `CONFIG_BLE_MESH_NET_BUF_TRACE_LEVEL`

**CONFIG\_BLE\_MESH\_NET\_BUF\_TRACE\_LEVEL**

BLE\_MESH\_NET\_BUF

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh NET BUF DEBUG LOG LEVEL*

Define BLE Mesh trace level for BLE Mesh net buffer.

**Available options:**

- NONE (BLE\_MESH\_NET\_BUF\_TRACE\_LEVEL\_NONE)
- ERROR (BLE\_MESH\_NET\_BUF\_TRACE\_LEVEL\_ERROR)
- WARNING (BLE\_MESH\_NET\_BUF\_TRACE\_LEVEL\_WARNING)
- INFO (BLE\_MESH\_NET\_BUF\_TRACE\_LEVEL\_INFO)
- DEBUG (BLE\_MESH\_NET\_BUF\_TRACE\_LEVEL\_DEBUG)
- VERBOSE (BLE\_MESH\_NET\_BUF\_TRACE\_LEVEL\_VERBOSE)

**CONFIG\_BLE\_MESH\_CLIENT\_MSG\_TIMEOUT**

Timeout(ms) for client message response

*Found in: Component config > CONFIG\_BLE\_MESH*

Timeout value used by the node to get response of the acknowledged message which is sent by the client model. This value indicates the maximum time that a client model waits for the response of the sent acknowledged messages. If a client model uses 0 as the timeout value when sending acknowledged messages, then the default value will be used which is four seconds.

**Range:**

- from 100 to 1200000 if `CONFIG_BLE_MESH`

**Default value:**

- 4000 if `CONFIG_BLE_MESH`

**Support for BLE Mesh Foundation models** Contains:

- *CONFIG\_BLE\_MESH\_CFG\_CLI*
- *CONFIG\_BLE\_MESH\_HEALTH\_CLI*
- *CONFIG\_BLE\_MESH\_HEALTH\_SRV*

**CONFIG\_BLE\_MESH\_CFG\_CLI**

Configuration Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Foundation models*

Enable support for Configuration Client model.

**CONFIG\_BLE\_MESH\_HEALTH\_CLI**

Health Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Foundation models*

Enable support for Health Client model.

**CONFIG\_BLE\_MESH\_HEALTH\_SRV**

Health Server model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Foundation models*

Enable support for Health Server model.

**Default value:**

- Yes (enabled) if *CONFIG\_BLE\_MESH*

**Support for BLE Mesh Client/Server models** Contains:

- *CONFIG\_BLE\_MESH\_GENERIC\_BATTERY\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_DEF\_TRANS\_TIME\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_LEVEL\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_LOCATION\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_ONOFF\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_POWER\_LEVEL\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_POWER\_ONOFF\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_PROPERTY\_CLI*
- *CONFIG\_BLE\_MESH\_GENERIC\_SERVER*
- *CONFIG\_BLE\_MESH\_LIGHT\_CTL\_CLI*
- *CONFIG\_BLE\_MESH\_LIGHT\_HSL\_CLI*
- *CONFIG\_BLE\_MESH\_LIGHT\_LC\_CLI*
- *CONFIG\_BLE\_MESH\_LIGHT\_LIGHTNESS\_CLI*
- *CONFIG\_BLE\_MESH\_LIGHT\_XYL\_CLI*
- *CONFIG\_BLE\_MESH\_LIGHTING\_SERVER*
- *CONFIG\_BLE\_MESH\_SCENE\_CLI*
- *CONFIG\_BLE\_MESH\_SCHEDULER\_CLI*
- *CONFIG\_BLE\_MESH\_SENSOR\_CLI*
- *CONFIG\_BLE\_MESH\_SENSOR\_SERVER*
- *CONFIG\_BLE\_MESH\_TIME\_SCENE\_SERVER*
- *CONFIG\_BLE\_MESH\_TIME\_CLI*

### **CONFIG\_BLE\_MESH\_GENERIC\_ONOFF\_CLI**

Generic OnOff Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic OnOff Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_LEVEL\_CLI**

Generic Level Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic Level Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_DEF\_TRANS\_TIME\_CLI**

Generic Default Transition Time Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic Default Transition Time Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_POWER\_ONOFF\_CLI**

Generic Power OnOff Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic Power OnOff Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_POWER\_LEVEL\_CLI**

Generic Power Level Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic Power Level Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_BATTERY\_CLI**

Generic Battery Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic Battery Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_LOCATION\_CLI**

Generic Location Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic Location Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_PROPERTY\_CLI**

Generic Property Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic Property Client model.

### **CONFIG\_BLE\_MESH\_SENSOR\_CLI**

Sensor Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Sensor Client model.

### **CONFIG\_BLE\_MESH\_TIME\_CLI**

Time Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Time Client model.

### **CONFIG\_BLE\_MESH\_SCENE\_CLI**

Scene Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Scene Client model.

### **CONFIG\_BLE\_MESH\_SCHEDULER\_CLI**

Scheduler Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Scheduler Client model.

### **CONFIG\_BLE\_MESH\_LIGHT\_LIGHTNESS\_CLI**

Light Lightness Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Light Lightness Client model.

### **CONFIG\_BLE\_MESH\_LIGHT\_CTL\_CLI**

Light CTL Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Light CTL Client model.

### **CONFIG\_BLE\_MESH\_LIGHT\_HSL\_CLI**

Light HSL Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Light HSL Client model.

### **CONFIG\_BLE\_MESH\_LIGHT\_XYL\_CLI**

Light XYL Client model

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [Support for BLE Mesh Client/Server models](#)*

Enable support for Light XYL Client model.

### **CONFIG\_BLE\_MESH\_LIGHT\_LC\_CLI**

Light LC Client model

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Light LC Client model.

### **CONFIG\_BLE\_MESH\_GENERIC\_SERVER**

Generic server models

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Generic server models.

**Default value:**

- Yes (enabled) if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_SENSOR\_SERVER**

Sensor server models

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Sensor server models.

**Default value:**

- Yes (enabled) if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_TIME\_SCENE\_SERVER**

Time and Scenes server models

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Time and Scenes server models.

**Default value:**

- Yes (enabled) if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_LIGHTING\_SERVER**

Lighting server models

*Found in: Component config > CONFIG\_BLE\_MESH > Support for BLE Mesh Client/Server models*

Enable support for Lighting server models.

**Default value:**

- Yes (enabled) if *CONFIG\_BLE\_MESH*

### **CONFIG\_BLE\_MESH\_IV\_UPDATE\_TEST**

Test the IV Update Procedure

*Found in: Component config > CONFIG\_BLE\_MESH*

This option removes the 96 hour limit of the IV Update Procedure and lets the state to be changed at any time. If IV Update test mode is going to be used, this option should be enabled.

**Default value:**

- No (disabled) if *CONFIG\_BLE\_MESH*

**BLE Mesh specific test option** Contains:

- `CONFIG_BLE_MESH_DEBUG`
- `CONFIG_BLE_MESH_SHELL`
- `CONFIG_BLE_MESH_BQB_TEST`
- `CONFIG_BLE_MESH_SELF_TEST`
- `CONFIG_BLE_MESH_TEST_AUTO_ENTER_NETWORK`
- `CONFIG_BLE_MESH_TEST_USE_WHITE_LIST`

### **CONFIG\_BLE\_MESH\_SELF\_TEST**

Perform BLE Mesh self-tests

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh specific test option*

This option adds extra self-tests which are run every time BLE Mesh networking is initialized.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_BQB\_TEST**

Enable BLE Mesh specific internal test

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh specific test option*

This option is used to enable some internal functions for auto-pts test.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_TEST\_AUTO\_ENTER\_NETWORK**

Unprovisioned device enters mesh network automatically

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh specific test option*

With this option enabled, an unprovisioned device can automatically enter mesh network using a specific test function without the provisioning procedure. And on the Provisioner side, a test function needs to be invoked to add the node information into the mesh stack.

**Default value:**

- Yes (enabled) if `CONFIG_BLE_MESH_SELF_TEST` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_TEST\_USE\_WHITE\_LIST**

Use white list to filter mesh advertising packets

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh specific test option*

With this option enabled, users can use white list to filter mesh advertising packets while scanning.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH_SELF_TEST` && `CONFIG_BLE_MESH`

### **CONFIG\_BLE\_MESH\_SHELL**

Enable BLE Mesh shell

*Found in: Component config > CONFIG\_BLE\_MESH > BLE Mesh specific test option*

Activate shell module that provides BLE Mesh commands to the console.

**Default value:**

- No (disabled) if `CONFIG_BLE_MESH`

**CONFIG\_BLE\_MESH\_DEBUG**

Enable BLE Mesh debug logs

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#)*

Enable debug logs for the BLE Mesh functionality.

**Default value:**

- No (disabled) if [CONFIG\\_BLE\\_MESH](#)

**CONFIG\_BLE\_MESH\_DEBUG\_NET**

Network layer debug

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)*

Enable Network layer debug logs for the BLE Mesh functionality.

**CONFIG\_BLE\_MESH\_DEBUG\_TRANS**

Transport layer debug

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)*

Enable Transport layer debug logs for the BLE Mesh functionality.

**CONFIG\_BLE\_MESH\_DEBUG\_BEACON**

Beacon debug

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)*

Enable Beacon-related debug logs for the BLE Mesh functionality.

**CONFIG\_BLE\_MESH\_DEBUG\_CRYPTO**

Crypto debug

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)*

Enable cryptographic debug logs for the BLE Mesh functionality.

**CONFIG\_BLE\_MESH\_DEBUG\_PROV**

Provisioning debug

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)*

Enable Provisioning debug logs for the BLE Mesh functionality.

**CONFIG\_BLE\_MESH\_DEBUG\_ACCESS**

Access layer debug

*Found in: [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)*

Enable Access layer debug logs for the BLE Mesh functionality.

### CONFIG\_BLE\_MESH\_DEBUG\_MODEL

Foundation model debug

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)

Enable Foundation Models debug logs for the BLE Mesh functionality.

### CONFIG\_BLE\_MESH\_DEBUG\_ADV

Advertising debug

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)

Enable advertising debug logs for the BLE Mesh functionality.

### CONFIG\_BLE\_MESH\_DEBUG\_LOW\_POWER

Low Power debug

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)

Enable Low Power debug logs for the BLE Mesh functionality.

### CONFIG\_BLE\_MESH\_DEBUG\_FRIEND

Friend debug

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)

Enable Friend debug logs for the BLE Mesh functionality.

### CONFIG\_BLE\_MESH\_DEBUG\_PROXY

Proxy debug

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#) > [BLE Mesh specific test option](#) > [CONFIG\\_BLE\\_MESH\\_DEBUG](#)

Enable Proxy protocol debug logs for the BLE Mesh functionality.

### CONFIG\_BLE\_MESH\_EXPERIMENTAL

Make BLE Mesh experimental features visible

*Found in:* [Component config](#) > [CONFIG\\_BLE\\_MESH](#)

Make BLE Mesh Experimental features visible. Experimental features list: - CONFIG\_BLE\_MESH\_NOT\_RELAY\_REPLAY\_MSG

**Default value:**

- No (disabled) if [CONFIG\\_BLE\\_MESH](#)

**Driver Configurations** Contains:

- [GPIO Configuration](#)
- [GPTimer Configuration](#)
- [I2S Configuration](#)
- [Legacy ADC Configuration](#)
- [MCPWM Configuration](#)

- [PCNT Configuration](#)
- [RMT Configuration](#)
- [Sigma Delta Modulator Configuration](#)
- [SPI Configuration](#)
- [Temperature sensor Configuration](#)
- [TWAI Configuration](#)
- [UART Configuration](#)

**Legacy ADC Configuration** Contains:

- [CONFIG\\_ADC\\_DISABLE\\_DAC](#)
- [Legacy ADC Calibration Configuration](#)
- [CONFIG\\_ADC\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### **CONFIG\_ADC\_DISABLE\_DAC**

Disable DAC when ADC2 is used on GPIO 25 and 26

*Found in: [Component config](#) > [Driver Configurations](#) > [Legacy ADC Configuration](#)*

If this is set, the ADC2 driver will disable the output of the DAC corresponding to the specified channel. This is the default value.

For testing, disable this option so that we can measure the output of DAC by internal ADC.

**Default value:**

- Yes (enabled) if SOC\_DAC\_SUPPORTED

### **CONFIG\_ADC\_SUPPRESS\_DEPRECATED\_WARN**

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [Legacy ADC Configuration](#)*

Whether to suppress the deprecation warnings when using legacy adc driver (driver/adc.h). If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled)

**Legacy ADC Calibration Configuration** Contains:

- [CONFIG\\_ADC\\_CALI\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### **CONFIG\_ADC\_CALI\_SUPPRESS\_DEPRECATED\_WARN**

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [Legacy ADC Configuration](#) > [Legacy ADC Calibration Configuration](#)*

Whether to suppress the deprecation warnings when using legacy adc calibration driver (esp\_adc\_cal.h). If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled)

**SPI Configuration** Contains:

- [CONFIG\\_SPI\\_MASTER\\_ISR\\_IN\\_IRAM](#)
- [CONFIG\\_SPI\\_SLAVE\\_ISR\\_IN\\_IRAM](#)
- [CONFIG\\_SPI\\_MASTER\\_IN\\_IRAM](#)
- [CONFIG\\_SPI\\_SLAVE\\_IN\\_IRAM](#)

**CONFIG\_SPI\_MASTER\_IN\_IRAM**

Place transmitting functions of SPI master into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [SPI Configuration](#)*

Normally only the ISR of SPI master is placed in the IRAM, so that it can work without the flash when interrupt is triggered. For other functions, there's some possibility that the flash cache miss when running inside and out of SPI functions, which may increase the interval of SPI transactions. Enable this to put `queue\_trans`, `get\_trans\_result` and `transmit` functions into the IRAM to avoid possible cache miss.

During unit test, this is enabled to measure the ideal case of api.

**Default value:**

- No (disabled)

**CONFIG\_SPI\_MASTER\_ISR\_IN\_IRAM**

Place SPI master ISR function into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [SPI Configuration](#)*

Place the SPI master ISR in to IRAM to avoid possible cache miss.

Also you can forbid the ISR being disabled during flash writing access, by add `ESP_INTR_FLAG_IRAM` when initializing the driver.

**Default value:**

- Yes (enabled)

**CONFIG\_SPI\_SLAVE\_IN\_IRAM**

Place transmitting functions of SPI slave into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [SPI Configuration](#)*

Normally only the ISR of SPI slave is placed in the IRAM, so that it can work without the flash when interrupt is triggered. For other functions, there's some possibility that the flash cache miss when running inside and out of SPI functions, which may increase the interval of SPI transactions. Enable this to put `queue\_trans`, `get\_trans\_result` and `transmit` functions into the IRAM to avoid possible cache miss.

**Default value:**

- No (disabled)

**CONFIG\_SPI\_SLAVE\_ISR\_IN\_IRAM**

Place SPI slave ISR function into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [SPI Configuration](#)*

Place the SPI slave ISR in to IRAM to avoid possible cache miss.

Also you can forbid the ISR being disabled during flash writing access, by add `ESP_INTR_FLAG_IRAM` when initializing the driver.

**Default value:**

- Yes (enabled)

**TWAI Configuration** Contains:

- [CONFIG\\_TWAI\\_ISR\\_IN\\_IRAM](#)

### **CONFIG\_TWAI\_ISR\_IN\_IRAM**

Place TWAI ISR function into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [TWAI Configuration](#)*

Place the TWAI ISR in to IRAM. This will allow the ISR to avoid cache misses, and also be able to run whilst the cache is disabled (such as when writing to SPI Flash). Note that if this option is enabled: - Users should also set the ESP\_INTR\_FLAG\_IRAM in the driver configuration structure when installing the driver (see docs for specifics). - Alert logging (i.e., setting of the TWAI\_ALERT\_AND\_LOG flag) will have no effect.

**Default value:**

- No (disabled) if SOC\_TWAI\_SUPPORTED

**Temperature sensor Configuration** Contains:

- [CONFIG\\_TEMP\\_SENSOR\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_TEMP\\_SENSOR\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### **CONFIG\_TEMP\_SENSOR\_SUPPRESS\_DEPRECATED\_WARN**

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [Temperature sensor Configuration](#)*

Whether to suppress the deprecation warnings when using legacy temperature sensor driver (driver/temp\_sensor.h). If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled)

### **CONFIG\_TEMP\_SENSOR\_ENABLE\_DEBUG\_LOG**

Enable debug log

*Found in: [Component config](#) > [Driver Configurations](#) > [Temperature sensor Configuration](#)*

Whether to enable the debug log message for temperature sensor driver. Note that, this option only controls the temperature sensor driver log, won't affect other drivers.

**Default value:**

- No (disabled)

**UART Configuration** Contains:

- [CONFIG\\_UART\\_ISR\\_IN\\_IRAM](#)

### CONFIG\_UART\_ISR\_IN\_IRAM

Place UART ISR function into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [UART Configuration](#)*

If this option is not selected, UART interrupt will be disabled for a long time and may cause data lost when doing spi flash operation.

**Default value:**

- No (disabled) if [CONFIG\\_RINGBUF\\_PLACE\\_ISR\\_FUNCTIONS\\_INTO\\_FLASH](#)

### GPIO Configuration

 Contains:

- [CONFIG\\_GPIO\\_CTRL\\_FUNC\\_IN\\_IRAM](#)

### CONFIG\_GPIO\_CTRL\_FUNC\_IN\_IRAM

Place GPIO control functions into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [GPIO Configuration](#)*

Place GPIO control functions (like `intr_disable/set_level`) into IRAM, so that these functions can be IRAM-safe and able to be called in the other IRAM interrupt context.

**Default value:**

- No (disabled)

### Sigma Delta Modulator Configuration

 Contains:

- [CONFIG\\_SDM\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_SDM\\_CTRL\\_FUNC\\_IN\\_IRAM](#)
- [CONFIG\\_SDM\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### CONFIG\_SDM\_CTRL\_FUNC\_IN\_IRAM

Place SDM control functions into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [Sigma Delta Modulator Configuration](#)*

Place SDM control functions (like `set_duty`) into IRAM, so that these functions can be IRAM-safe and able to be called in the other IRAM interrupt context. Enabling this option can improve driver performance as well.

**Default value:**

- No (disabled) if `SOC_SDM_SUPPORTED`

### CONFIG\_SDM\_SUPPRESS\_DEPRECATED\_WARN

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [Sigma Delta Modulator Configuration](#)*

Whether to suppress the deprecation warnings when using legacy sigma delta driver. If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled) if `SOC_SDM_SUPPORTED`

### CONFIG\_SDM\_ENABLE\_DEBUG\_LOG

Enable debug log

*Found in: [Component config](#) > [Driver Configurations](#) > [Sigma Delta Modulator Configuration](#)*

Whether to enable the debug log message for SDM driver. Note that, this option only controls the SDM driver log, won't affect other drivers.

**Default value:**

- No (disabled) if SOC\_SDM\_SUPPORTED

### GPTimer Configuration

 Contains:

- [CONFIG\\_GPTIMER\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_GPTIMER\\_ISR\\_IRAM\\_SAFE](#)
- [CONFIG\\_GPTIMER\\_CTRL\\_FUNC\\_IN\\_IRAM](#)
- [CONFIG\\_GPTIMER\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### CONFIG\_GPTIMER\_CTRL\_FUNC\_IN\_IRAM

Place GPTimer control functions into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [GPTimer Configuration](#)*

Place GPTimer control functions (like start/stop) into IRAM, so that these functions can be IRAM-safe and able to be called in the other IRAM interrupt context. Enabling this option can improve driver performance as well.

**Default value:**

- No (disabled)

### CONFIG\_GPTIMER\_ISR\_IRAM\_SAFE

GPTimer ISR IRAM-Safe

*Found in: [Component config](#) > [Driver Configurations](#) > [GPTimer Configuration](#)*

Ensure the GPTimer interrupt is IRAM-Safe by allowing the interrupt handler to be executable when the cache is disabled (e.g. SPI Flash write).

**Default value:**

- No (disabled)

### CONFIG\_GPTIMER\_SUPPRESS\_DEPRECATED\_WARN

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [GPTimer Configuration](#)*

Whether to suppress the deprecation warnings when using legacy timer group driver (driver/timer.h). If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled)

### CONFIG\_GPTIMER\_ENABLE\_DEBUG\_LOG

Enable debug log

*Found in: [Component config](#) > [Driver Configurations](#) > [GPTimer Configuration](#)*

Whether to enable the debug log message for GPTimer driver. Note that, this option only controls the GPTimer driver log, won't affect other drivers.

**Default value:**

- No (disabled)

**PCNT Configuration** Contains:

- [CONFIG\\_PCNT\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_PCNT\\_ISR\\_IRAM\\_SAFE](#)
- [CONFIG\\_PCNT\\_CTRL\\_FUNC\\_IN\\_IRAM](#)
- [CONFIG\\_PCNT\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### **CONFIG\_PCNT\_CTRL\_FUNC\_IN\_IRAM**

Place PCNT control functions into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [PCNT Configuration](#)*

Place PCNT control functions (like start/stop) into IRAM, so that these functions can be IRAM-safe and able to be called in the other IRAM interrupt context. Enabling this option can improve driver performance as well.

**Default value:**

- No (disabled) if SOC\_PCNT\_SUPPORTED

### **CONFIG\_PCNT\_ISR\_IRAM\_SAFE**

PCNT ISR IRAM-Safe

*Found in: [Component config](#) > [Driver Configurations](#) > [PCNT Configuration](#)*

Ensure the PCNT interrupt is IRAM-Safe by allowing the interrupt handler to be executable when the cache is disabled (e.g. SPI Flash write).

**Default value:**

- No (disabled) if SOC\_PCNT\_SUPPORTED

### **CONFIG\_PCNT\_SUPPRESS\_DEPRECATED\_WARN**

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [PCNT Configuration](#)*

Whether to suppress the deprecation warnings when using legacy PCNT driver (driver/pcnt.h). If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled) if SOC\_PCNT\_SUPPORTED

### **CONFIG\_PCNT\_ENABLE\_DEBUG\_LOG**

Enable debug log

*Found in: [Component config](#) > [Driver Configurations](#) > [PCNT Configuration](#)*

Whether to enable the debug log message for PCNT driver. Note that, this option only controls the PCNT driver log, won't affect other drivers.

**Default value:**

- No (disabled) if SOC\_PCNT\_SUPPORTED

**RMT Configuration** Contains:

- [CONFIG\\_RMT\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_RMT\\_RECV\\_FUNC\\_IN\\_IRAM](#)
- [CONFIG\\_RMT\\_ISR\\_IRAM\\_SAFE](#)
- [CONFIG\\_RMT\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

**CONFIG\_RMT\_ISR\_IRAM\_SAFE**

RMT ISR IRAM-Safe

*Found in: [Component config](#) > [Driver Configurations](#) > [RMT Configuration](#)*

Ensure the RMT interrupt is IRAM-Safe by allowing the interrupt handler to be executable when the cache is disabled (e.g. SPI Flash write).

**Default value:**

- No (disabled) if SOC\_RMT\_SUPPORTED

**CONFIG\_RMT\_RECV\_FUNC\_IN\_IRAM**

Place RMT receive function into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [RMT Configuration](#)*

Place RMT receive function into IRAM, so that the receive function can be IRAM-safe and able to be called when the flash cache is disabled. Enabling this option can improve driver performance as well.

**Default value:**

- No (disabled) if SOC\_RMT\_SUPPORTED

**CONFIG\_RMT\_SUPPRESS\_DEPRECATED\_WARN**

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [RMT Configuration](#)*

Whether to suppress the deprecation warnings when using legacy rmt driver (driver/rmt.h). If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled) if SOC\_RMT\_SUPPORTED

**CONFIG\_RMT\_ENABLE\_DEBUG\_LOG**

Enable debug log

*Found in: [Component config](#) > [Driver Configurations](#) > [RMT Configuration](#)*

Whether to enable the debug log message for RMT driver. Note that, this option only controls the RMT driver log, won't affect other drivers.

**Default value:**

- No (disabled) if SOC\_RMT\_SUPPORTED

**MCPWM Configuration** Contains:

- [CONFIG\\_MCPWM\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_MCPWM\\_CTRL\\_FUNC\\_IN\\_IRAM](#)
- [CONFIG\\_MCPWM\\_ISR\\_IRAM\\_SAFE](#)
- [CONFIG\\_MCPWM\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### CONFIG\_MCPWM\_ISR\_IRAM\_SAFE

Place MCPWM ISR function into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [MCPWM Configuration](#)*

This will ensure the MCPWM interrupt handle is IRAM-Safe, allow to avoid flash cache misses, and also be able to run whilst the cache is disabled. (e.g. SPI Flash write)

**Default value:**

- No (disabled) if SOC\_MCPWM\_SUPPORTED

### CONFIG\_MCPWM\_CTRL\_FUNC\_IN\_IRAM

Place MCPWM control functions into IRAM

*Found in: [Component config](#) > [Driver Configurations](#) > [MCPWM Configuration](#)*

Place MCPWM control functions (like set\_compare\_value) into IRAM, so that these functions can be IRAM-safe and able to be called in the other IRAM interrupt context. Enabling this option can improve driver performance as well.

**Default value:**

- No (disabled) if SOC\_MCPWM\_SUPPORTED

### CONFIG\_MCPWM\_SUPPRESS\_DEPRECATED\_WARN

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [MCPWM Configuration](#)*

Whether to suppress the deprecation warnings when using legacy MCPWM driver (driver/mcpwm.h). If you want to continue using the legacy driver, and don't want to see related deprecation warnings, you can enable this option.

**Default value:**

- No (disabled) if SOC\_MCPWM\_SUPPORTED

### CONFIG\_MCPWM\_ENABLE\_DEBUG\_LOG

Enable debug log

*Found in: [Component config](#) > [Driver Configurations](#) > [MCPWM Configuration](#)*

Whether to enable the debug log message for MCPWM driver. Note that, this option only controls the MCPWM driver log, won't affect other drivers.

**Default value:**

- No (disabled) if SOC\_MCPWM\_SUPPORTED

**I2S Configuration** Contains:

- [CONFIG\\_I2S\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_I2S\\_ISR\\_IRAM\\_SAFE](#)
- [CONFIG\\_I2S\\_SUPPRESS\\_DEPRECATED\\_WARN](#)

### CONFIG\_I2S\_ISR\_IRAM\_SAFE

I2S ISR IRAM-Safe

*Found in: [Component config](#) > [Driver Configurations](#) > [I2S Configuration](#)*

Ensure the I2S interrupt is IRAM-Safe by allowing the interrupt handler to be executable when the cache is disabled (e.g. SPI Flash write).

**Default value:**

- No (disabled) if SOC\_I2S\_SUPPORTED

**CONFIG\_I2S\_SUPPRESS\_DEPRECATED\_WARN**

Suppress legacy driver deprecated warning

*Found in: [Component config](#) > [Driver Configurations](#) > [I2S Configuration](#)*

Enable this option will suppress the deprecation warnings of using APIs in legacy I2S driver.

**Default value:**

- No (disabled) if SOC\_I2S\_SUPPORTED

**CONFIG\_I2S\_ENABLE\_DEBUG\_LOG**

Enable I2S debug log

*Found in: [Component config](#) > [Driver Configurations](#) > [I2S Configuration](#)*

Whether to enable the debug log message for I2S driver. Note that, this option only controls the I2S driver log, will not affect other drivers.

**Default value:**

- No (disabled) if SOC\_I2S\_SUPPORTED

**eFuse Bit Manager** Contains:

- [CONFIG\\_EFUSE\\_VIRTUAL](#)
- [CONFIG\\_EFUSE\\_CUSTOM\\_TABLE](#)

**CONFIG\_EFUSE\_CUSTOM\_TABLE**

Use custom eFuse table

*Found in: [Component config](#) > [eFuse Bit Manager](#)*

Allows to generate a structure for eFuse from the CSV file.

**Default value:**

- No (disabled)

**CONFIG\_EFUSE\_CUSTOM\_TABLE\_FILENAME**

Custom eFuse CSV file

*Found in: [Component config](#) > [eFuse Bit Manager](#) > [CONFIG\\_EFUSE\\_CUSTOM\\_TABLE](#)*

Name of the custom eFuse CSV filename. This path is evaluated relative to the project root directory.

**Default value:**

- “main/esp\_efuse\_custom\_table.csv” if [CONFIG\\_EFUSE\\_CUSTOM\\_TABLE](#)

**CONFIG\_EFUSE\_VIRTUAL**

Simulate eFuse operations in RAM

*Found in: [Component config](#) > [eFuse Bit Manager](#)*

If “n” - No virtual mode. All eFuse operations are real and use eFuse registers. If “y” - The virtual mode is enabled and all eFuse operations (read and write) are redirected to RAM instead of eFuse registers, all permanent changes (via eFuse) are disabled. Log output will state changes that would be applied, but they will not be.

During startup, the eFuses are copied into RAM. This mode is useful for fast tests.

**Default value:**

- No (disabled)

**CONFIG\_EFUSE\_VIRTUAL\_KEEP\_IN\_FLASH**

Keep eFuses in flash

*Found in: Component config > eFuse Bit Manager > CONFIG\_EFUSE\_VIRTUAL*

In addition to the “Simulate eFuse operations in RAM” option, this option just adds a feature to keep eFuses after reboots in flash memory. To use this mode the partition\_table should have the *efuse* partition. partition.csv: “efuse\_em, data, efuse, , 0x2000,”

During startup, the eFuses are copied from flash or, in case if flash is empty, from real eFuse to RAM and then update flash. This mode is useful when need to keep changes after reboot (testing secure\_boot and flash\_encryption).

**ESP-TLS** Contains:

- *CONFIG\_ESP\_TLS\_INSECURE*
- *CONFIG\_ESP\_TLS\_LIBRARY\_CHOOSE*
- *CONFIG\_ESP\_TLS\_CLIENT\_SESSION\_TICKETS*
- *CONFIG\_ESP\_DEBUG\_WOLFSSL*
- *CONFIG\_ESP\_TLS\_SERVER*
- *CONFIG\_ESP\_TLS\_PSK\_VERIFICATION*
- *CONFIG\_ESP\_WOLFSSL\_SMALL\_CERT\_VERIFY*
- *CONFIG\_ESP\_TLS\_USE\_DS\_PERIPHERAL*

**CONFIG\_ESP\_TLS\_LIBRARY\_CHOOSE**

Choose SSL/TLS library for ESP-TLS (See help for more Info)

*Found in: Component config > ESP-TLS*

The ESP-TLS APIs support multiple backend TLS libraries. Currently mbedTLS and WolfSSL are supported. Different TLS libraries may support different features and have different resource usage. Consult the ESP-TLS documentation in ESP-IDF Programming guide for more details.

**Available options:**

- mbedTLS (ESP\_TLS\_USING\_MBEDTLS)
- wolfSSL (License info in wolfSSL directory README) (ESP\_TLS\_USING\_WOLFSSL)

**CONFIG\_ESP\_TLS\_USE\_DS\_PERIPHERAL**

Use Digital Signature (DS) Peripheral with ESP-TLS

*Found in: Component config > ESP-TLS*

Enable use of the Digital Signature Peripheral for ESP-TLS. The DS peripheral can only be used when it is appropriately configured for TLS. Consult the ESP-TLS documentation in ESP-IDF Programming Guide for more details.

**Default value:**

- Yes (enabled) if ESP\_TLS\_USING\_MBEDTLS && SOC\_DIG\_SIGN\_SUPPORTED

**CONFIG\_ESP\_TLS\_CLIENT\_SESSION\_TICKETS**

Enable client session tickets

*Found in: Component config > ESP-TLS*

Enable session ticket support as specified in RFC5077.

### CONFIG\_ESP\_TLS\_SERVER

Enable ESP-TLS Server

*Found in:* [Component config](#) > [ESP-TLS](#)

Enable support for creating server side SSL/TLS session, available for mbedTLS as well as wolfSSL TLS library.

### CONFIG\_ESP\_TLS\_SERVER\_SESSION\_TICKETS

Enable server session tickets

*Found in:* [Component config](#) > [ESP-TLS](#) > [CONFIG\\_ESP\\_TLS\\_SERVER](#)

Enable session ticket support as specified in RFC5077

### CONFIG\_ESP\_TLS\_SERVER\_SESSION\_TICKET\_TIMEOUT

Server session ticket timeout in seconds

*Found in:* [Component config](#) > [ESP-TLS](#) > [CONFIG\\_ESP\\_TLS\\_SERVER](#) > [CONFIG\\_ESP\\_TLS\\_SERVER\\_SESSION\\_TICKETS](#)

Sets the session ticket timeout used in the tls server.

**Default value:**

- 86400 if [CONFIG\\_ESP\\_TLS\\_SERVER\\_SESSION\\_TICKETS](#)

### CONFIG\_ESP\_TLS\_SERVER\_CERT\_SELECT\_HOOK

Certificate selection hook

*Found in:* [Component config](#) > [ESP-TLS](#) > [CONFIG\\_ESP\\_TLS\\_SERVER](#)

Ability to configure and use a certificate selection callback during server handshake, to select a certificate to present to the client based on the TLS extensions supplied in the client hello (alpn, sni, etc).

### CONFIG\_ESP\_TLS\_SERVER\_MIN\_AUTH\_MODE\_OPTIONAL

ESP-TLS Server: Set minimum Certificate Verification mode to Optional

*Found in:* [Component config](#) > [ESP-TLS](#) > [CONFIG\\_ESP\\_TLS\\_SERVER](#)

When this option is enabled, the peer (here, the client) certificate is checked by the server, however the handshake continues even if verification failed. By default, the peer certificate is not checked and ignored by the server.

`mbedtls_ssl_get_verify_result()` can be called after the handshake is complete to retrieve status of verification.

### CONFIG\_ESP\_TLS\_PSK\_VERIFICATION

Enable PSK verification

*Found in:* [Component config](#) > [ESP-TLS](#)

Enable support for pre shared key ciphers, supported for both mbedTLS as well as wolfSSL TLS library.

### CONFIG\_ESP\_TLS\_INSECURE

Allow potentially insecure options

Found in: [Component config](#) > [ESP-TLS](#)

You can enable some potentially insecure options. These options should only be used for testing purposes. Only enable these options if you are very sure.

### CONFIG\_ESP\_TLS\_SKIP\_SERVER\_CERT\_VERIFY

Skip server certificate verification by default (WARNING: ONLY FOR TESTING PURPOSE, READ HELP)

Found in: [Component config](#) > [ESP-TLS](#) > [CONFIG\\_ESP\\_TLS\\_INSECURE](#)

After enabling this option the esp-tls client will skip the server certificate verification by default. Note that this option will only modify the default behaviour of esp-tls client regarding server cert verification. The default behaviour should only be applicable when no other option regarding the server cert verification is opted in the esp-tls config (e.g. `cert_bundle_attach`, `use_global_ca_store` etc.). WARNING : Enabling this option comes with a potential risk of establishing a TLS connection with a server which has a fake identity, provided that the server certificate is not provided either through API or other mechanism like `ca_store` etc.

### CONFIG\_ESP\_WOLFSSL\_SMALL\_CERT\_VERIFY

Enable SMALL\_CERT\_VERIFY

Found in: [Component config](#) > [ESP-TLS](#)

Enables server verification with Intermediate CA cert, does not authenticate full chain of trust up to the root CA cert (After Enabling this option client only needs to have Intermediate CA certificate of the server to authenticate server, root CA cert is not necessary).

**Default value:**

- Yes (enabled) if `ESP_TLS_USING_WOLFSSL`

### CONFIG\_ESP\_DEBUG\_WOLFSSL

Enable debug logs for wolfSSL

Found in: [Component config](#) > [ESP-TLS](#)

Enable detailed debug prints for wolfSSL SSL library.

### ADC and ADC Calibration

 Contains:

- [ADC Calibration Configurations](#)
- [CONFIG\\_ADC\\_CONTINUOUS\\_ISR\\_IRAM\\_SAFE](#)
- [CONFIG\\_ADC\\_DISABLE\\_DAC\\_OUTPUT](#)
- [CONFIG\\_ADC\\_ONESHOT\\_CTRL\\_FUNC\\_IN\\_IRAM](#)

### CONFIG\_ADC\_ONESHOT\_CTRL\_FUNC\_IN\_IRAM

Place ISR version ADC oneshot mode read function into IRAM

Found in: [Component config](#) > [ADC and ADC Calibration](#)

Place ISR version ADC oneshot mode read function into IRAM.

**Default value:**

- No (disabled)

### CONFIG\_ADC\_CONTINUOUS\_ISR\_IRAM\_SAFE

ADC continuous mode driver ISR IRAM-Safe

*Found in: [Component config > ADC and ADC Calibration](#)*

Ensure the ADC continuous mode ISR is IRAM-Safe. When enabled, the ISR handler will be available when the cache is disabled.

**Default value:**

- No (disabled) if SOC\_ADC\_DMA\_SUPPORTED

### ADC Calibration Configurations

### CONFIG\_ADC\_DISABLE\_DAC\_OUTPUT

Disable DAC when ADC2 is in use

*Found in: [Component config > ADC and ADC Calibration](#)*

By default, this is set. The ADC oneshot driver will disable the output of the corresponding DAC channels: ESP32: IO25 and IO26 ESP32S2: IO17 and IO18

Disable this option so as to measure the output of DAC by internal ADC, for test usage.

**Default value:**

- Yes (enabled) if SOC\_DAC\_SUPPORTED

### Common ESP-related Contains:

- [CONFIG\\_ESP\\_ERR\\_TO\\_NAME\\_LOOKUP](#)

### CONFIG\_ESP\_ERR\_TO\_NAME\_LOOKUP

Enable lookup of error code strings

*Found in: [Component config > Common ESP-related](#)*

Functions `esp_err_to_name()` and `esp_err_to_name_r()` return string representations of error codes from a pre-generated lookup table. This option can be used to turn off the use of the look-up table in order to save memory but this comes at the price of sacrificing distinguishable (meaningful) output string representations.

**Default value:**

- Yes (enabled)

### Ethernet Contains:

- [CONFIG\\_ETH\\_TRANSMIT\\_MUTEX](#)
- [CONFIG\\_ETH\\_USE\\_OPENETH](#)
- [CONFIG\\_ETH\\_USE\\_SPI\\_ETHERNET](#)

### CONFIG\_ETH\_USE\_SPI\_ETHERNET

Support SPI to Ethernet Module

*Found in: [Component config > Ethernet](#)*

ESP-IDF can also support some SPI-Ethernet modules.

**Default value:**

- Yes (enabled)

Contains:

- [CONFIG\\_ETH\\_SPI\\_ETHERNET\\_DM9051](#)
- [CONFIG\\_ETH\\_SPI\\_ETHERNET\\_KSZ8851SNL](#)
- [CONFIG\\_ETH\\_SPI\\_ETHERNET\\_W5500](#)

### **CONFIG\_ETH\_SPI\_ETHERNET\_DM9051**

Use DM9051

*Found in:* [Component config](#) > [Ethernet](#) > [CONFIG\\_ETH\\_USE\\_SPI\\_ETHERNET](#)

DM9051 is a fast Ethernet controller with an SPI interface. It's also integrated with a 10/100M PHY and MAC. Select this to enable DM9051 driver.

### **CONFIG\_ETH\_SPI\_ETHERNET\_W5500**

Use W5500 (MAC RAW)

*Found in:* [Component config](#) > [Ethernet](#) > [CONFIG\\_ETH\\_USE\\_SPI\\_ETHERNET](#)

W5500 is a HW TCP/IP embedded Ethernet controller. TCP/IP stack, 10/100 Ethernet MAC and PHY are embedded in a single chip. However the driver in ESP-IDF only enables the RAW MAC mode, making it compatible with the software TCP/IP stack. Say yes to enable W5500 driver.

### **CONFIG\_ETH\_SPI\_ETHERNET\_KSZ8851SNL**

Use KSZ8851SNL

*Found in:* [Component config](#) > [Ethernet](#) > [CONFIG\\_ETH\\_USE\\_SPI\\_ETHERNET](#)

The KSZ8851SNL is a single-chip Fast Ethernet controller consisting of a 10/100 physical layer transceiver (PHY), a MAC, and a Serial Peripheral Interface (SPI). Select this to enable KSZ8851SNL driver.

### **CONFIG\_ETH\_USE\_OPENETH**

Support OpenCores Ethernet MAC (for use with QEMU)

*Found in:* [Component config](#) > [Ethernet](#)

OpenCores Ethernet MAC driver can be used when an ESP-IDF application is executed in QEMU. This driver is not supported when running on a real chip.

**Default value:**

- No (disabled)

Contains:

- [CONFIG\\_ETH\\_OPENETH\\_DMA\\_RX\\_BUFFER\\_NUM](#)
- [CONFIG\\_ETH\\_OPENETH\\_DMA\\_TX\\_BUFFER\\_NUM](#)

### **CONFIG\_ETH\_OPENETH\_DMA\_RX\_BUFFER\_NUM**

Number of Ethernet DMA Rx buffers

*Found in:* [Component config](#) > [Ethernet](#) > [CONFIG\\_ETH\\_USE\\_OPENETH](#)

Number of DMA receive buffers, each buffer is 1600 bytes.

**Range:**

- from 1 to 64 if [CONFIG\\_ETH\\_USE\\_OPENETH](#)

**Default value:**

- 4 if [CONFIG\\_ETH\\_USE\\_OPENETH](#)

### CONFIG\_ETH\_OPENETH\_DMA\_TX\_BUFFER\_NUM

Number of Ethernet DMA Tx buffers

*Found in: [Component config](#) > [Ethernet](#) > [CONFIG\\_ETH\\_USE\\_OPENETH](#)*

Number of DMA transmit buffers, each buffer is 1600 bytes.

**Range:**

- from 1 to 64 if [CONFIG\\_ETH\\_USE\\_OPENETH](#)

**Default value:**

- 1 if [CONFIG\\_ETH\\_USE\\_OPENETH](#)

### CONFIG\_ETH\_TRANSMIT\_MUTEX

Enable Transmit Mutex

*Found in: [Component config](#) > [Ethernet](#)*

Prevents multiple accesses when Ethernet interface is used as shared resource and multiple functionalities might try to access it at a time.

**Default value:**

- No (disabled)

**Event Loop Library** Contains:

- [CONFIG\\_ESP\\_EVENT\\_LOOP\\_PROFILING](#)
- [CONFIG\\_ESP\\_EVENT\\_POST\\_FROM\\_ISR](#)

### CONFIG\_ESP\_EVENT\_LOOP\_PROFILING

Enable event loop profiling

*Found in: [Component config](#) > [Event Loop Library](#)*

Enables collections of statistics in the event loop library such as the number of events posted to/received by an event loop, number of callbacks involved, number of events dropped to a full event loop queue, run time of event handlers, and number of times/run time of each event handler.

**Default value:**

- No (disabled)

### CONFIG\_ESP\_EVENT\_POST\_FROM\_ISR

Support posting events from ISRs

*Found in: [Component config](#) > [Event Loop Library](#)*

Enable posting events from interrupt handlers.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_EVENT\_POST\_FROM\_IRAM\_ISR

Support posting events from ISRs placed in IRAM

*Found in: [Component config](#) > [Event Loop Library](#) > [CONFIG\\_ESP\\_EVENT\\_POST\\_FROM\\_ISR](#)*

Enable posting events from interrupt handlers placed in IRAM. Enabling this option places API functions `esp_event_post` and `esp_event_post_to` in IRAM.

**Default value:**

- Yes (enabled)

**GDB Stub** Contains:

- [CONFIG\\_ESP\\_GDBSTUB\\_SUPPORT\\_TASKS](#)

### **CONFIG\_ESP\_GDBSTUB\_SUPPORT\_TASKS**

Enable listing FreeRTOS tasks through GDB Stub

*Found in:* [Component config](#) > [GDB Stub](#)

If enabled, GDBStub can supply the list of FreeRTOS tasks to GDB. Thread list can be queried from GDB using 'info threads' command. Note that if GDB task lists were corrupted, this feature may not work. If GDBStub fails, try disabling this feature.

### **CONFIG\_ESP\_GDBSTUB\_MAX\_TASKS**

Maximum number of tasks supported by GDB Stub

*Found in:* [Component config](#) > [GDB Stub](#) > [CONFIG\\_ESP\\_GDBSTUB\\_SUPPORT\\_TASKS](#)

Set the number of tasks which GDB Stub will support.

**Default value:**

- 32 if [CONFIG\\_ESP\\_GDBSTUB\\_SUPPORT\\_TASKS](#)

**ESP HTTP client** Contains:

- [CONFIG\\_ESP\\_HTTP\\_CLIENT\\_ENABLE\\_BASIC\\_AUTH](#)
- [CONFIG\\_ESP\\_HTTP\\_CLIENT\\_ENABLE\\_DIGEST\\_AUTH](#)
- [CONFIG\\_ESP\\_HTTP\\_CLIENT\\_ENABLE\\_HTTPS](#)

### **CONFIG\_ESP\_HTTP\_CLIENT\_ENABLE\_HTTPS**

Enable https

*Found in:* [Component config](#) > [ESP HTTP client](#)

This option will enable https protocol by linking esp-tls library and initializing SSL transport

**Default value:**

- Yes (enabled)

### **CONFIG\_ESP\_HTTP\_CLIENT\_ENABLE\_BASIC\_AUTH**

Enable HTTP Basic Authentication

*Found in:* [Component config](#) > [ESP HTTP client](#)

This option will enable HTTP Basic Authentication. It is disabled by default as Basic auth uses unencrypted encoding, so it introduces a vulnerability when not using TLS

**Default value:**

- No (disabled)

### **CONFIG\_ESP\_HTTP\_CLIENT\_ENABLE\_DIGEST\_AUTH**

Enable HTTP Digest Authentication

*Found in:* [Component config](#) > [ESP HTTP client](#)

This option will enable HTTP Digest Authentication. It is enabled by default, but use of this configuration is not recommended as the password can be derived from the exchange, so it introduces a vulnerability when not using TLS

**Default value:**

- No (disabled)

**HTTP Server** Contains:

- `CONFIG_HTTPD_QUEUE_WORK_BLOCKING`
- `CONFIG_HTTPD_PURGE_BUF_LEN`
- `CONFIG_HTTPD_LOG_PURGE_DATA`
- `CONFIG_HTTPD_MAX_REQ_HDR_LEN`
- `CONFIG_HTTPD_MAX_URI_LEN`
- `CONFIG_HTTPD_ERR_RESP_NO_DELAY`
- `CONFIG_HTTPD_WS_SUPPORT`

**CONFIG\_HTTPD\_MAX\_REQ\_HDR\_LEN**

Max HTTP Request Header Length

*Found in: [Component config](#) > [HTTP Server](#)*

This sets the maximum supported size of headers section in HTTP request packet to be processed by the server

**Default value:**

- 512

**CONFIG\_HTTPD\_MAX\_URI\_LEN**

Max HTTP URI Length

*Found in: [Component config](#) > [HTTP Server](#)*

This sets the maximum supported size of HTTP request URI to be processed by the server

**Default value:**

- 512

**CONFIG\_HTTPD\_ERR\_RESP\_NO\_DELAY**

Use TCP\_NODELAY socket option when sending HTTP error responses

*Found in: [Component config](#) > [HTTP Server](#)*

Using TCP\_NODELAY socket option ensures that HTTP error response reaches the client before the underlying socket is closed. Please note that turning this off may cause multiple test failures

**Default value:**

- Yes (enabled)

**CONFIG\_HTTPD\_PURGE\_BUF\_LEN**

Length of temporary buffer for purging data

*Found in: [Component config](#) > [HTTP Server](#)*

This sets the size of the temporary buffer used to receive and discard any remaining data that is received from the HTTP client in the request, but not processed as part of the server HTTP request handler.

If the remaining data is larger than the available buffer size, the buffer will be filled in multiple iterations. The buffer should be small enough to fit on the stack, but large enough to avoid excessive iterations.

**Default value:**

- 32

### CONFIG\_HTTPD\_LOG\_PURGE\_DATA

Log purged content data at Debug level

*Found in: [Component config](#) > [HTTP Server](#)*

Enabling this will log discarded binary HTTP request data at Debug level. For large content data this may not be desirable as it will clutter the log.

**Default value:**

- No (disabled)

### CONFIG\_HTTPD\_WS\_SUPPORT

WebSocket server support

*Found in: [Component config](#) > [HTTP Server](#)*

This sets the WebSocket server support.

**Default value:**

- No (disabled)

### CONFIG\_HTTPD\_QUEUE\_WORK\_BLOCKING

httpd\_queue\_work as blocking API

*Found in: [Component config](#) > [HTTP Server](#)*

This makes httpd\_queue\_work() API to wait until a message space is available on UDP control socket. It internally uses a counting semaphore with count set to `LWIP_UDP_RECVMBOX_SIZE` to achieve this. This config will slightly change API behavior to block until message gets delivered on control socket.

### ESP HTTPS OTA Contains:

- [CONFIG\\_ESP\\_HTTPS\\_OTA\\_ALLOW\\_HTTP](#)
- [CONFIG\\_ESP\\_HTTPS\\_OTA\\_DECRYPT\\_CB](#)

### CONFIG\_ESP\_HTTPS\_OTA\_DECRYPT\_CB

Provide decryption callback

*Found in: [Component config](#) > [ESP HTTPS OTA](#)*

Exposes an additional callback whereby firmware data could be decrypted before being processed by OTA update component. This can help to integrate external encryption related format and removal of such encapsulation layer from firmware image.

**Default value:**

- No (disabled)

### CONFIG\_ESP\_HTTPS\_OTA\_ALLOW\_HTTP

Allow HTTP for OTA (WARNING: ONLY FOR TESTING PURPOSE, READ HELP)

*Found in: [Component config](#) > [ESP HTTPS OTA](#)*

It is highly recommended to keep HTTPS (along with server certificate validation) enabled. Enabling this option comes with potential risk of: - Non-encrypted communication channel with server - Accepting firmware upgrade image from server with fake identity

**Default value:**

- No (disabled)

**ESP HTTPS server** Contains:

- *CONFIG\_ESP\_HTTPS\_SERVER\_ENABLE*

### **CONFIG\_ESP\_HTTPS\_SERVER\_ENABLE**

Enable ESP\_HTTPS\_SERVER component

*Found in: Component config > ESP HTTPS server*

Enable ESP HTTPS server component

**Hardware Settings** Contains:

- *Chip revision*
- *GDMA Configuration*
- *MAC Config*
- *Main XTAL Config*
- *Peripheral Control*
- *RTC Clock Config*
- *Sleep Config*

**Chip revision** Contains:

- *CONFIG\_ESP32C2\_REV2\_DEVELOPMENT*
- *CONFIG\_ESP32C2\_REV\_MIN*

### **CONFIG\_ESP32C2\_REV\_MIN**

Minimum Supported ESP32-C2 Revision

*Found in: Component config > Hardware Settings > Chip revision*

Required minimum chip revision. ESP-IDF will check for it and reject to boot if the chip revision fails the check. This ensures the chip used will have some modifications (features, or bugfixes).

The compiled binary will only support chips above this revision, this will also help to reduce binary size.

**Available options:**

- Rev v1.0 (ECO1) (ESP32C2\_REV\_MIN\_1)
- Rev v1.1 (ECO2) (ESP32C2\_REV\_MIN\_1\_1)
- Rev v2.0 (ECO4) (ESP32C2\_REV\_MIN\_200)

### **CONFIG\_ESP32C2\_REV2\_DEVELOPMENT**

Develop on ESP32-C2 v2.0 (Preview)

*Found in: Component config > Hardware Settings > Chip revision*

**Default value:**

- Yes (enabled)

**MAC Config** Contains:

- *CONFIG\_ESP32C2\_UNIVERSAL\_MAC\_ADDRESSES*

## CONFIG\_ESP32C2\_UNIVERSAL\_MAC\_ADDRESSES

Number of universally administered (by IEEE) MAC address

*Found in: [Component config](#) > [Hardware Settings](#) > [MAC Config](#)*

Configure the number of universally administered (by IEEE) MAC addresses.

During initialization, MAC addresses for each network interface are generated or derived from a single base MAC address.

If the number of universal MAC addresses is four, all four interfaces (WiFi station, WiFi softap, Bluetooth and Ethernet) receive a universally administered MAC address. These are generated sequentially by adding 0, 1, 2 and 3 (respectively) to the final octet of the base MAC address.

If the number of universal MAC addresses is two, only two interfaces (WiFi station and Bluetooth) receive a universally administered MAC address. These are generated sequentially by adding 0 and 1 (respectively) to the base MAC address. The remaining two interfaces (WiFi softap and Ethernet) receive local MAC addresses. These are derived from the universal WiFi station and Bluetooth MAC addresses, respectively.

When using the default (Espressif-assigned) base MAC address, either setting can be used. When using a custom universal MAC address range, the correct setting will depend on the allocation of MAC addresses in this range (either 2 or 4 per device.)

Note that ESP32-C2 has no integrated Ethernet MAC. Although it's possible to use the `esp_read_mac()` API to return a MAC for Ethernet, this can only be used with an external MAC peripheral.

### Available options:

- Two (`ESP32C2_UNIVERSAL_MAC_ADDRESSES_TWO`)
- Four (`ESP32C2_UNIVERSAL_MAC_ADDRESSES_FOUR`)

**Sleep Config** Contains:

- [CONFIG\\_ESP\\_SLEEP\\_GPIO\\_ENABLE\\_INTERNAL\\_RESISTORS](#)
- [CONFIG\\_ESP\\_SLEEP\\_GPIO\\_RESET\\_WORKAROUND](#)
- [CONFIG\\_ESP\\_SLEEP\\_POWER\\_DOWN\\_FLASH](#)
- [CONFIG\\_ESP\\_SLEEP\\_MSPI\\_NEED\\_ALL\\_IO\\_PU](#)
- [CONFIG\\_ESP\\_SLEEP\\_FLASH\\_LEAKAGE\\_WORKAROUND](#)
- [CONFIG\\_ESP\\_SLEEP\\_PSRAM\\_LEAKAGE\\_WORKAROUND](#)

## CONFIG\_ESP\_SLEEP\_POWER\_DOWN\_FLASH

Power down flash in light sleep when there is no SPIRAM

*Found in: [Component config](#) > [Hardware Settings](#) > [Sleep Config](#)*

If enabled, chip will try to power down flash as part of `esp_light_sleep_start()`, which costs more time when chip wakes up. Can only be enabled if there is no SPIRAM configured.

This option will power down flash under a strict but relatively safe condition. Also, it is possible to power down flash under a relaxed condition by using `esp_sleep_pd_config()` to set `ESP_PD_DOMAIN_VDDSDIO` to `ESP_PD_OPTION_OFF`. It should be noted that there is a risk in powering down flash, you can refer *ESP-IDF Programming Guide/API Reference/System API/Sleep Modes/Power-down of Flash* for more details.

### Default value:

- No (disabled) if SPIRAM

## CONFIG\_ESP\_SLEEP\_FLASH\_LEAKAGE\_WORKAROUND

Pull-up Flash CS pin in light sleep

*Found in: [Component config](#) > [Hardware Settings](#) > [Sleep Config](#)*

All IOs will be set to isolate(floating) state by default during sleep. Since the power supply of SPI Flash is not lost during lightsleep, if its CS pin is recognized as low level(selected state) in the floating state, there will be a large current leakage, and the data in Flash may be corrupted by random signals on other SPI pins. Select this option will set the CS pin of Flash to PULL-UP state during sleep, but this will increase the sleep current about 10 uA. If you are developing with esp32xx modules, you must select this option, but if you are developing with chips, you can also pull up the CS pin of SPI Flash in the external circuit to save power consumption caused by internal pull-up during sleep. (!!! Don't deselected this option if you don't have external SPI Flash CS pin pullups.)

**Default value:**

- Yes (enabled) if `CONFIG_ESP_SLEEP_POWER_DOWN_FLASH`

**CONFIG\_ESP\_SLEEP\_PSRAM\_LEAKAGE\_WORKAROUND**

Pull-up PSRAM CS pin in light sleep

*Found in: Component config > Hardware Settings > Sleep Config*

All IOs will be set to isolate(floating) state by default during sleep. Since the power supply of PSRAM is not lost during lightsleep, if its CS pin is recognized as low level(selected state) in the floating state, there will be a large current leakage, and the data in PSRAM may be corrupted by random signals on other SPI pins. Select this option will set the CS pin of PSRAM to PULL-UP state during sleep, but this will increase the sleep current about 10 uA. If you are developing with esp32xx modules, you must select this option, but if you are developing with chips, you can also pull up the CS pin of PSRAM in the external circuit to save power consumption caused by internal pull-up during sleep. (!!! Don't deselected this option if you don't have external PSRAM CS pin pullups.)

**Default value:**

- Yes (enabled) if SPIRAM

**CONFIG\_ESP\_SLEEP\_MSPI\_NEED\_ALL\_IO\_PU**

Pull-up all SPI pins in light sleep

*Found in: Component config > Hardware Settings > Sleep Config*

To reduce leakage current, some types of SPI Flash/RAM only need to pull up the CS pin during light sleep. But there are also some kinds of SPI Flash/RAM that need to pull up all pins. It depends on the SPI Flash/RAM chip used.

**Default value:**

- Yes (enabled) if `CONFIG_ESP_SLEEP_POWER_DOWN_FLASH` && `(CONFIG_ESP_SLEEP_PSRAM_LEAKAGE_WORKAROUND || CONFIG_ESP_SLEEP_FLASH_LEAKAGE_WORKAROUND)`

**CONFIG\_ESP\_SLEEP\_GPIO\_RESET\_WORKAROUND**

light sleep GPIO reset workaround

*Found in: Component config > Hardware Settings > Sleep Config*

esp32c2, esp32c3 and esp32s3 will reset at wake-up if GPIO is received a small electrostatic pulse during light sleep, with specific condition

- GPIO needs to be configured as input-mode only
- The pin receives a small electrostatic pulse, and reset occurs when the pulse voltage is higher than 6 V

For GPIO set to input mode only, it is not a good practice to leave it open/floating, The hardware design needs to controlled it with determined supply or ground voltage is necessary.

This option provides a software workaround for this issue. Configure to isolate all GPIO pins in sleep state.

**Default value:**

- Yes (enabled)

**CONFIG\_ESP\_SLEEP\_GPIO\_ENABLE\_INTERNAL\_RESISTORS**

Allow to enable internal pull-up/downs for the Deep-Sleep wakeup IOs

*Found in: [Component config](#) > [Hardware Settings](#) > [Sleep Config](#)*

When using rtc gpio wakeup source during deepsleep without external pull-up/downs, you may want to make use of the internal ones.

**Default value:**

- Yes (enabled)

**RTC Clock Config** Contains:

- [CONFIG\\_RTC\\_CLK\\_CAL\\_CYCLES](#)
- [CONFIG\\_RTC\\_CLK\\_SRC](#)

**CONFIG\_RTC\_CLK\_SRC**

RTC clock source

*Found in: [Component config](#) > [Hardware Settings](#) > [RTC Clock Config](#)*

Choose which clock is used as RTC clock source.

**Available options:**

- Internal 136kHz RC oscillator (RTC\_CLK\_SRC\_INT\_RC)
- External 32kHz oscillator at pin0 (RTC\_CLK\_SRC\_EXT\_OSC)
- Internal 17.5MHz oscillator, divided by 256 (RTC\_CLK\_SRC\_INT\_8MD256)

**CONFIG\_RTC\_CLK\_CAL\_CYCLES**

Number of cycles for RTC\_SLOW\_CLK calibration

*Found in: [Component config](#) > [Hardware Settings](#) > [RTC Clock Config](#)*

When the startup code initializes RTC\_SLOW\_CLK, it can perform calibration by comparing the RTC\_SLOW\_CLK frequency with main XTAL frequency. This option sets the number of RTC\_SLOW\_CLK cycles measured by the calibration routine. Higher numbers increase calibration precision, which may be important for applications which spend a lot of time in deep sleep. Lower numbers reduce startup time.

When this option is set to 0, clock calibration will not be performed at startup, and approximate clock frequencies will be assumed:

- 150000 Hz if internal RC oscillator is used as clock source. For this use value 1024.
- **32768 Hz if the 32k crystal oscillator is used. For this use value 3000 or more.** In case more value will help improve the definition of the launch of the crystal. If the crystal could not start, it will be switched to internal RC.

**Range:**

- from 0 to 8190 if RTC\_CLK\_SRC\_EXT\_OSC || RTC\_CLK\_SRC\_INT\_8MD256
- from 0 to 32766

**Default value:**

- 3000 if RTC\_CLK\_SRC\_EXT\_OSC || RTC\_CLK\_SRC\_INT\_8MD256
- 1024

**Peripheral Control** Contains:

- [CONFIG\\_PERIPH\\_CTRL\\_FUNC\\_IN\\_IRAM](#)

### CONFIG\_PERIPH\_CTRL\_FUNC\_IN\_IRAM

Place peripheral control functions into IRAM

*Found in: [Component config](#) > [Hardware Settings](#) > [Peripheral Control](#)*

Place peripheral control functions (e.g. `periph_module_reset`) into IRAM, so that these functions can be IRAM-safe and able to be called in the other IRAM interrupt context.

**Default value:**

- No (disabled)

**GDMA Configuration** Contains:

- [CONFIG\\_GDMA\\_ISR\\_IRAM\\_SAFE](#)
- [CONFIG\\_GDMA\\_CTRL\\_FUNC\\_IN\\_IRAM](#)

### CONFIG\_GDMA\_CTRL\_FUNC\_IN\_IRAM

Place GDMA control functions into IRAM

*Found in: [Component config](#) > [Hardware Settings](#) > [GDMA Configuration](#)*

Place GDMA control functions (like start/stop/append/reset) into IRAM, so that these functions can be IRAM-safe and able to be called in the other IRAM interrupt context. Enabling this option can improve driver performance as well.

**Default value:**

- No (disabled)

### CONFIG\_GDMA\_ISR\_IRAM\_SAFE

GDMA ISR IRAM-Safe

*Found in: [Component config](#) > [Hardware Settings](#) > [GDMA Configuration](#)*

This will ensure the GDMA interrupt handler is IRAM-Safe, allow to avoid flash cache misses, and also be able to run whilst the cache is disabled. (e.g. SPI Flash write).

**Default value:**

- No (disabled)

**Main XTAL Config** Contains:

- [CONFIG\\_XTAL\\_FREQ\\_SEL](#)

### CONFIG\_XTAL\_FREQ\_SEL

Main XTAL frequency

*Found in: [Component config](#) > [Hardware Settings](#) > [Main XTAL Config](#)*

This option selects the operating frequency of the XTAL (crystal) clock used to drive the ESP target. The selected value MUST reflect the frequency of the given hardware.

Note: The `XTAL_FREQ_AUTO` option allows the ESP target to automatically estimating XTAL clock's operating frequency. However, this feature is only supported on the ESP32. The ESP32 uses the internal 8MHz as a reference when estimating. Due to the internal oscillator's frequency being temperature dependent, usage of the `XTAL_FREQ_AUTO` is not recommended in applications that operate in high ambient temperatures or use high-temperature qualified chips and modules.

**Available options:**

- 24 MHz (`XTAL_FREQ_24`)
- 26 MHz (`XTAL_FREQ_26`)

- 32 MHz (XTAL\_FREQ\_32)
- 40 MHz (XTAL\_FREQ\_40)
- Autodetect (XTAL\_FREQ\_AUTO)

**LCD and Touch Panel** Contains:

- [LCD Peripheral Configuration](#)

**LCD Peripheral Configuration** Contains:

- [CONFIG\\_LCD\\_ENABLE\\_DEBUG\\_LOG](#)
- [CONFIG\\_LCD\\_PANEL\\_IO\\_FORMAT\\_BUF\\_SIZE](#)
- [CONFIG\\_LCD\\_RGB\\_RESTART\\_IN\\_VSYNC](#)
- [CONFIG\\_LCD\\_RGB\\_ISR\\_IRAM\\_SAFE](#)

### **CONFIG\_LCD\_PANEL\_IO\_FORMAT\_BUF\_SIZE**

LCD panel io format buffer size

*Found in: [Component config](#) > [LCD and Touch Panel](#) > [LCD Peripheral Configuration](#)*

LCD driver allocates an internal buffer to transform the data into a proper format, because of the endian order mismatch. This option is to set the size of the buffer, in bytes.

**Default value:**

- 32

### **CONFIG\_LCD\_ENABLE\_DEBUG\_LOG**

Enable debug log

*Found in: [Component config](#) > [LCD and Touch Panel](#) > [LCD Peripheral Configuration](#)*

Whether to enable the debug log message for LCD driver. Note that, this option only controls the LCD driver log, won't affect other drivers.

**Default value:**

- No (disabled)

### **CONFIG\_LCD\_RGB\_ISR\_IRAM\_SAFE**

RGB LCD ISR IRAM-Safe

*Found in: [Component config](#) > [LCD and Touch Panel](#) > [LCD Peripheral Configuration](#)*

Ensure the LCD interrupt is IRAM-Safe by allowing the interrupt handler to be executable when the cache is disabled (e.g. SPI Flash write). If you want the LCD driver to keep flushing the screen even when cache ops disabled, you can enable this option. Note, this will also increase the IRAM usage.

**Default value:**

- No (disabled) if SOC\_LCD\_RGB\_SUPPORTED

### **CONFIG\_LCD\_RGB\_RESTART\_IN\_VSYNC**

Restart transmission in VSYNC

*Found in: [Component config](#) > [LCD and Touch Panel](#) > [LCD Peripheral Configuration](#)*

Reset the GDMA channel every VBlank to stop permanent desyncs from happening. Only need to enable it when in your application, the DMA can't deliver data as fast as the LCD consumes it.

**Default value:**

- No (disabled) if SOC\_LCD\_RGB\_SUPPORTED

**ESP NETIF Adapter** Contains:

- [CONFIG\\_ESP\\_NETIF\\_BRIDGE\\_EN](#)
- [CONFIG\\_ESP\\_NETIF\\_L2\\_TAP](#)
- [CONFIG\\_ESP\\_NETIF\\_IP\\_LOST\\_TIMER\\_INTERVAL](#)
- [CONFIG\\_ESP\\_NETIF\\_USE\\_TCPIP\\_STACK\\_LIB](#)
- [CONFIG\\_ESP\\_NETIF\\_RECEIVE\\_REPORT\\_ERRORS](#)

### **CONFIG\_ESP\_NETIF\_IP\_LOST\_TIMER\_INTERVAL**

IP Address lost timer interval (seconds)

*Found in: [Component config](#) > [ESP NETIF Adapter](#)*

The value of 0 indicates the IP lost timer is disabled, otherwise the timer is enabled.

The IP address may be lost because of some reasons, e.g. when the station disconnects from soft-AP, or when DHCP IP renew fails etc. If the IP lost timer is enabled, it will be started everytime the IP is lost. Event SYSTEM\_EVENT\_STA\_LOST\_IP will be raised if the timer expires. The IP lost timer is stopped if the station get the IP again before the timer expires.

**Range:**

- from 0 to 65535

**Default value:**

- 120

### **CONFIG\_ESP\_NETIF\_USE\_TCPIP\_STACK\_LIB**

TCP/IP Stack Library

*Found in: [Component config](#) > [ESP NETIF Adapter](#)*

Choose the TCP/IP Stack to work, for example, LwIP, uIP, etc.

**Available options:**

- LwIP (ESP\_NETIF\_TCPIP\_LWIP)  
lwIP is a small independent implementation of the TCP/IP protocol suite.
- Loopback (ESP\_NETIF\_LOOPBACK)  
Dummy implementation of esp-netif functionality which connects driver transmit to receive function. This option is for testing purpose only

### **CONFIG\_ESP\_NETIF\_RECEIVE\_REPORT\_ERRORS**

Use esp\_err\_t to report errors from esp\_netif\_receive

*Found in: [Component config](#) > [ESP NETIF Adapter](#)*

Enable if esp\_netif\_receive() should return error code. This is useful to inform upper layers that packet input to TCP/IP stack failed, so the upper layers could implement flow control. This option is disabled by default due to backward compatibility and will be enabled in v6.0 (IDF-7194)

**Default value:**

- No (disabled)

### **CONFIG\_ESP\_NETIF\_L2\_TAP**

Enable netif L2 TAP support

*Found in: [Component config](#) > [ESP NETIF Adapter](#)*

A user program can read/write link layer (L2) frames from/to ESP TAP device. The ESP TAP device can be currently associated only with Ethernet physical interfaces.

### CONFIG\_ESP\_NETIF\_L2\_TAP\_MAX\_FDS

Maximum number of opened L2 TAP File descriptors

*Found in: Component config > ESP NETIF Adapter > CONFIG\_ESP\_NETIF\_L2\_TAP*

Maximum number of opened File descriptors (FD's) associated with ESP TAP device. ESP TAP FD's take up a certain amount of memory, and allowing fewer FD's to be opened at the same time conserves memory.

**Range:**

- from 1 to 10 if *CONFIG\_ESP\_NETIF\_L2\_TAP*

**Default value:**

- 5 if *CONFIG\_ESP\_NETIF\_L2\_TAP*

### CONFIG\_ESP\_NETIF\_L2\_TAP\_RX\_QUEUE\_SIZE

Size of L2 TAP Rx queue

*Found in: Component config > ESP NETIF Adapter > CONFIG\_ESP\_NETIF\_L2\_TAP*

Maximum number of frames queued in opened File descriptor. Once the queue is full, the newly arriving frames are dropped until the queue has enough room to accept incoming traffic (Tail Drop queue management).

**Range:**

- from 1 to 100 if *CONFIG\_ESP\_NETIF\_L2\_TAP*

**Default value:**

- 20 if *CONFIG\_ESP\_NETIF\_L2\_TAP*

### CONFIG\_ESP\_NETIF\_BRIDGE\_EN

Enable LwIP IEEE 802.1D bridge

*Found in: Component config > ESP NETIF Adapter*

Enable LwIP IEEE 802.1D bridge support in ESP-NETIF. Note that “Number of clients store data in netif” (LWIP\_NUM\_NETIF\_CLIENT\_DATA) option needs to be properly configured to be LwIP bridge available!

**Default value:**

- No (disabled)

**PHY** Contains:

- *CONFIG\_ESP\_PHY\_CALIBRATION\_MODE*
- *CONFIG\_ESP\_PHY\_IMPROVE\_RX\_11B*
- *CONFIG\_ESP\_PHY\_MAX\_WIFI\_TX\_POWER*
- *CONFIG\_ESP\_PHY\_REDUCE\_TX\_POWER*
- *CONFIG\_ESP\_PHY\_CALIBRATION\_AND\_DATA\_STORAGE*
- *CONFIG\_ESP\_PHY\_INIT\_DATA\_IN\_PARTITION*

### CONFIG\_ESP\_PHY\_CALIBRATION\_AND\_DATA\_STORAGE

Store phy calibration data in NVS

*Found in: Component config > PHY*

If this option is enabled, NVS will be initialized and calibration data will be loaded from there. PHY calibration will be skipped on deep sleep wakeup. If calibration data is not found, full calibration will be performed and stored in NVS. Normally, only partial calibration will be performed. If this option is disabled, full calibration will be performed.

If it's easy that your board calibrate bad data, choose 'n'. Two cases for example, you should choose 'n': 1.If your board is easy to be booted up with antenna disconnected. 2.Because of your board design, each time when you do calibration, the result are too unstable. If unsure, choose 'y'.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_PHY\_INIT\_DATA\_IN\_PARTITION

Use a partition to store PHY init data

*Found in:* [Component config > PHY](#)

If enabled, PHY init data will be loaded from a partition. When using a custom partition table, make sure that PHY data partition is included (type: 'data', subtype: 'phy'). With default partition tables, this is done automatically. If PHY init data is stored in a partition, it has to be flashed there, otherwise runtime error will occur.

If this option is not enabled, PHY init data will be embedded into the application binary.

If unsure, choose 'n'.

**Default value:**

- No (disabled)

Contains:

- [CONFIG\\_ESP\\_PHY\\_DEFAULT\\_INIT\\_IF\\_INVALID](#)
- [CONFIG\\_ESP\\_PHY\\_MULTIPLE\\_INIT\\_DATA\\_BIN](#)

### CONFIG\_ESP\_PHY\_DEFAULT\_INIT\_IF\_INVALID

Reset default PHY init data if invalid

*Found in:* [Component config > PHY > CONFIG\\_ESP\\_PHY\\_INIT\\_DATA\\_IN\\_PARTITION](#)

If enabled, PHY init data will be restored to default if it cannot be verified successfully to avoid endless bootloops.

If unsure, choose 'n'.

**Default value:**

- No (disabled) if [CONFIG\\_ESP\\_PHY\\_INIT\\_DATA\\_IN\\_PARTITION](#)

### CONFIG\_ESP\_PHY\_MULTIPLE\_INIT\_DATA\_BIN

Support multiple PHY init data bin

*Found in:* [Component config > PHY > CONFIG\\_ESP\\_PHY\\_INIT\\_DATA\\_IN\\_PARTITION](#)

If enabled, the corresponding PHY init data type can be automatically switched according to the country code. China's PHY init data bin is used by default. Can be modified by country information in API `esp_wifi_set_country()`. The priority of switching the PHY init data type is: 1. Country configured by API `esp_wifi_set_country()` and the parameter policy is `WIFI_COUNTRY_POLICY_MANUAL`. 2. Country notified by the connected AP. 3. Country configured by API `esp_wifi_set_country()` and the parameter policy is `WIFI_COUNTRY_POLICY_AUTO`.

**Default value:**

- No (disabled) if [CONFIG\\_ESP\\_PHY\\_INIT\\_DATA\\_IN\\_PARTITION](#) && [CONFIG\\_ESP\\_PHY\\_INIT\\_DATA\\_IN\\_PARTITION](#)

### CONFIG\_ESP\_PHY\_MULTIPLE\_INIT\_DATA\_BIN\_EMBED

Support embedded multiple phy init data bin to app bin

*Found in:* *Component config > PHY > CONFIG\_ESP\_PHY\_INIT\_DATA\_IN\_PARTITION > CONFIG\_ESP\_PHY\_MULTIPLE\_INIT\_DATA\_BIN*

If enabled, multiple phy init data bin will embedded into app bin If not enabled, multiple phy init data bin will still leave alone, and need to be flashed by users.

**Default value:**

- No (disabled) if *CONFIG\_ESP\_PHY\_MULTIPLE\_INIT\_DATA\_BIN* && *CONFIG\_ESP\_PHY\_INIT\_DATA\_IN\_PARTITION*

### CONFIG\_ESP\_PHY\_INIT\_DATA\_ERROR

Terminate operation when PHY init data error

*Found in:* *Component config > PHY > CONFIG\_ESP\_PHY\_INIT\_DATA\_IN\_PARTITION > CONFIG\_ESP\_PHY\_MULTIPLE\_INIT\_DATA\_BIN*

If enabled, when an error occurs while the PHY init data is updated, the program will terminate and restart. If not enabled, the PHY init data will not be updated when an error occurs.

**Default value:**

- No (disabled) if *CONFIG\_ESP\_PHY\_MULTIPLE\_INIT\_DATA\_BIN* && *CONFIG\_ESP\_PHY\_INIT\_DATA\_IN\_PARTITION*

### CONFIG\_ESP\_PHY\_MAX\_WIFI\_TX\_POWER

Max WiFi TX power (dBm)

*Found in:* *Component config > PHY*

Set maximum transmit power for WiFi radio. Actual transmit power for high data rates may be lower than this setting.

**Range:**

- from 10 to 20

**Default value:**

- 20

### CONFIG\_ESP\_PHY\_REDUCE\_TX\_POWER

Reduce PHY TX power when brownout reset

*Found in:* *Component config > PHY*

When brownout reset occurs, reduce PHY TX power to keep the code running.

**Default value:**

- No (disabled)

### CONFIG\_ESP\_PHY\_CALIBRATION\_MODE

Calibration mode

*Found in:* *Component config > PHY*

Select PHY calibration mode. During RF initialization, the partial calibration method is used by default for RF calibration. Full calibration takes about 100ms more than partial calibration. If boot duration is not critical, it is suggested to use the full calibration method. No calibration method is only used when the device wakes up from deep sleep.

**Available options:**

- Calibration partial (ESP\_PHY\_RF\_CAL\_PARTIAL)
- Calibration none (ESP\_PHY\_RF\_CAL\_NONE)
- Calibration full (ESP\_PHY\_RF\_CAL\_FULL)

### CONFIG\_ESP\_PHY\_IMPROVE\_RX\_11B

Improve Wi-Fi receive 11b pkts

*Found in: [Component config](#) > [PHY](#)*

This is a workaround to improve Wi-Fi receive 11b pkts for some modules using AC-DC power supply with high interference, enable this option will sacrifice Wi-Fi OFDM receive performance. But to guarantee 11b receive performance serves as a bottom line in this case.

**Default value:**

- No (disabled)

**Power Management** Contains:

- [CONFIG\\_PM\\_SLP\\_DISABLE\\_GPIO](#)
- [CONFIG\\_PM\\_SLP\\_IRAM\\_OPT](#)
- [CONFIG\\_PM\\_RTOS\\_IDLE\\_OPT](#)
- [CONFIG\\_PM\\_ENABLE](#)

### CONFIG\_PM\_ENABLE

Support for power management

*Found in: [Component config](#) > [Power Management](#)*

If enabled, application is compiled with support for power management. This option has run-time overhead (increased interrupt latency, longer time to enter idle state), and it also reduces accuracy of RTOS ticks and timers used for timekeeping. Enable this option if application uses power management APIs.

**Default value:**

- No (disabled) if [CONFIG\\_FREERTOS\\_SMP](#)

### CONFIG\_PM\_DFS\_INIT\_AUTO

Enable dynamic frequency scaling (DFS) at startup

*Found in: [Component config](#) > [Power Management](#) > [CONFIG\\_PM\\_ENABLE](#)*

If enabled, startup code configures dynamic frequency scaling. Max CPU frequency is set to DEFAULT\_CPU\_FREQ\_MHZ setting, min frequency is set to XTAL frequency. If disabled, DFS will not be active until the application configures it using esp\_pm\_configure function.

**Default value:**

- No (disabled) if [CONFIG\\_PM\\_ENABLE](#)

### CONFIG\_PM\_PROFILING

Enable profiling counters for PM locks

*Found in: [Component config](#) > [Power Management](#) > [CONFIG\\_PM\\_ENABLE](#)*

If enabled, esp\_pm\_\* functions will keep track of the amount of time each of the power management locks has been held, and esp\_pm\_dump\_locks function will print this information. This feature can be used to analyze which locks are preventing the chip from going into a lower power state, and see what time the chip spends in each power saving mode. This feature does incur some run-time overhead, so should typically be disabled in production builds.

**Default value:**

- No (disabled) if [CONFIG\\_PM\\_ENABLE](#)

### CONFIG\_PM\_TRACE

Enable debug tracing of PM using GPIOs

*Found in: [Component config](#) > [Power Management](#) > [CONFIG\\_PM\\_ENABLE](#)*

If enabled, some GPIOs will be used to signal events such as RTOS ticks, frequency switching, entry/exit from idle state. Refer to `pm_trace.c` file for the list of GPIOs. This feature is intended to be used when analyzing/debugging behavior of power management implementation, and should be kept disabled in applications.

**Default value:**

- No (disabled) if [CONFIG\\_PM\\_ENABLE](#)

### CONFIG\_PM\_SLP\_IRAM\_OPT

Put lightsleep related codes in internal RAM

*Found in: [Component config](#) > [Power Management](#)*

If enabled, about 1.8KB of lightsleep related source code would be in IRAM and chip would sleep longer for 760us at most each time. This feature is intended to be used when lower power consumption is needed while there is enough place in IRAM to place source code.

**Default value:**

- No (disabled)

### CONFIG\_PM\_RTOS\_IDLE\_OPT

Put RTOS IDLE related codes in internal RAM

*Found in: [Component config](#) > [Power Management](#)*

If enabled, about 260B of RTOS\_IDLE related source code would be in IRAM and chip would sleep longer for 40us at most each time. This feature is intended to be used when lower power consumption is needed while there is enough place in IRAM to place source code.

### CONFIG\_PM\_SLP\_DISABLE\_GPIO

Disable all GPIO when chip at sleep

*Found in: [Component config](#) > [Power Management](#)*

This feature is intended to disable all GPIO pins at automatic sleep to get a lower power mode. If enabled, chips will disable all GPIO pins at automatic sleep to reduce about 200~300 uA current. If you want to specifically use some pins normally as chip wakes when chip sleeps, you can call ‘`gpio_sleep_sel_dis`’ to disable this feature on those pins. You can also keep this feature on and call ‘`gpio_sleep_set_direction`’ and ‘`gpio_sleep_set_pull_mode`’ to have a different GPIO configuration at sleep. Warning: If you want to enable this option on ESP32, you should enable [GPIO\\_ESP32\\_SUPPORT\\_SWITCH\\_SLP\\_PULL](#) at first, otherwise you will not be able to switch pullup/pulldown mode.

### ESP PSRAM

**ESP Ringbuf** Contains:

- [CONFIG\\_RINGBUF\\_PLACE\\_FUNCTIONS\\_INTO\\_FLASH](#)

## CONFIG\_RINGBUF\_PLACE\_FUNCTIONS\_INTO\_FLASH

Place non-ISR ringbuf functions into flash

*Found in: Component config > ESP Ringbuf*

Place non-ISR ringbuf functions (like xRingbufferCreate/xRingbufferSend) into flash. This frees up IRAM, but the functions can no longer be called when the cache is disabled.

**Default value:**

- No (disabled)

## CONFIG\_RINGBUF\_PLACE\_ISR\_FUNCTIONS\_INTO\_FLASH

Place ISR ringbuf functions into flash

*Found in: Component config > ESP Ringbuf > CONFIG\_RINGBUF\_PLACE\_FUNCTIONS\_INTO\_FLASH*

Place ISR ringbuf functions (like xRingbufferSendFromISR/xRingbufferReceiveFromISR) into flash. This frees up IRAM, but the functions can no longer be called when the cache is disabled or from an IRAM interrupt context.

This option is not compatible with ESP-IDF drivers which are configured to run the ISR from an IRAM context, e.g. CONFIG\_UART\_ISR\_IN\_IRAM.

**Default value:**

- No (disabled) if *CONFIG\_RINGBUF\_PLACE\_FUNCTIONS\_INTO\_FLASH*

**ESP System Settings** Contains:

- *CONFIG\_ESP\_SYSTEM\_RTC\_EXT\_XTAL\_BOOTSTRAP\_CYCLES*
- *Brownout Detector*
- *Cache config*

## CONFIG\_ESP\_DEFAULT\_CPU\_FREQ\_MHZ

CPU frequency

*Found in: Component config > ESP System Settings*

CPU frequency to be set on application startup.

**Available options:**

- 40 MHz (ESP\_DEFAULT\_CPU\_FREQ\_MHZ\_40)
- 80 MHz (ESP\_DEFAULT\_CPU\_FREQ\_MHZ\_80)
- 120 MHz (ESP\_DEFAULT\_CPU\_FREQ\_MHZ\_120)

**Cache config** Contains:

- [CONFIG\\_ESP32C2\\_INSTRUCTION\\_CACHE\\_WRAP](#)

### CONFIG\_ESP32C2\_INSTRUCTION\_CACHE\_WRAP

Instruction cache wrap

*Found in: [Component config](#) > [ESP System Settings](#) > [Cache config](#)*

If enabled, instruction cache will use wrap mode to read spi flash. The wrap length is fixed to 32B

### CONFIG\_ESP\_SYSTEM\_PANIC

Panic handler behaviour

*Found in: [Component config](#) > [ESP System Settings](#)*

If FreeRTOS detects unexpected behaviour or an unhandled exception, the panic handler is invoked. Configure the panic handler's action here.

**Available options:**

- Print registers and halt (ESP\_SYSTEM\_PANIC\_PRINT\_HALT)  
Outputs the relevant registers over the serial port and halt the processor. Needs a manual reset to restart.
- Print registers and reboot (ESP\_SYSTEM\_PANIC\_PRINT\_REBOOT)  
Outputs the relevant registers over the serial port and immediately reset the processor.
- Silent reboot (ESP\_SYSTEM\_PANIC\_SILENT\_REBOOT)  
Just resets the processor without outputting anything
- GDBStub on panic (ESP\_SYSTEM\_PANIC\_GDBSTUB)  
Invoke gdbstub on the serial port, allowing for gdb to attach to it to do a postmortem of the crash.
- GDBStub at runtime (ESP\_SYSTEM\_GDBSTUB\_RUNTIME)  
Invoke gdbstub on the serial port, allowing for gdb to attach to it and to do a debug on runtime.

### CONFIG\_ESP\_SYSTEM\_RTC\_EXT\_XTAL\_BOOTSTRAP\_CYCLES

Bootstrap cycles for external 32kHz crystal

*Found in: [Component config](#) > [ESP System Settings](#)*

To reduce the startup time of an external RTC crystal, we bootstrap it with a 32kHz square wave for a fixed number of cycles. Setting 0 will disable bootstrapping (if disabled, the crystal may take longer to start up or fail to oscillate under some conditions).

If this value is too high, a faulty crystal may initially start and then fail. If this value is too low, an otherwise good crystal may not start.

To accurately determine if the crystal has started, set a larger “Number of cycles for RTC\_SLOW\_CLK calibration” (about 3000).

### CONFIG\_ESP\_SYSTEM\_ALLOW\_RTC\_FAST\_MEM\_AS\_HEAP

Enable RTC fast memory for dynamic allocations

*Found in: [Component config](#) > [ESP System Settings](#)*

This config option allows to add RTC fast memory region to system heap with capability similar to that of DRAM region but without DMA. This memory will be consumed first per heap initialization order by early startup services and scheduler related code. Speed wise RTC fast memory operates on APB clock and hence does not have much performance impact.

### CONFIG\_ESP\_SYSTEM\_USE\_EH\_FRAME

Generate and use eh\_frame for backtracing

*Found in: [Component config](#) > [ESP System Settings](#)*

Generate DWARF information for each function of the project. These information will be parsed and used to perform backtracing when panics occur. Activating this option will activate asynchronous frame unwinding and generation of both .eh\_frame and .eh\_frame\_hdr sections, resulting in a bigger binary size (20% to 100% larger). The main purpose of this option is to be able to have a backtrace parsed and printed by the program itself, regardless of the serial monitor used. This option shall NOT be used for production.

**Default value:**

- No (disabled)

**Memory protection** Contains:

- [CONFIG\\_ESP\\_SYSTEM\\_PMP\\_IDRAM\\_SPLIT](#)
- [CONFIG\\_ESP\\_SYSTEM\\_MEMPROT\\_FEATURE](#)

### CONFIG\_ESP\_SYSTEM\_PMP\_IDRAM\_SPLIT

Enable IRAM/DRAM split protection

*Found in: [Component config](#) > [ESP System Settings](#) > [Memory protection](#)*

If enabled, the CPU watches all the memory access and raises an exception in case of any memory violation. This feature automatically splits the SRAM memory, using PMP, into data and instruction segments and sets Read/Execute permissions for the instruction part (below given splitting address) and Read/Write permissions for the data part (above the splitting address). The memory protection is effective on all access through the IRAM0 and DRAM0 buses.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_SYSTEM\_MEMPROT\_FEATURE

Enable memory protection

*Found in: [Component config](#) > [ESP System Settings](#) > [Memory protection](#)*

If enabled, the permission control module watches all the memory access and fires the panic handler if a permission violation is detected. This feature automatically splits the SRAM memory into data and instruction segments and sets Read/Execute permissions for the instruction part (below given splitting address) and Read/Write permissions for the data part (above the splitting address). The memory protection is effective on all access through the IRAM0 and DRAM0 buses.

**Default value:**

- Yes (enabled) if SOC\_MEMPROT\_SUPPORTED

### CONFIG\_ESP\_SYSTEM\_MEMPROT\_FEATURE\_LOCK

Lock memory protection settings

*Found in:* [Component config](#) > [ESP System Settings](#) > [Memory protection](#) > [CONFIG\\_ESP\\_SYSTEM\\_MEMPROT\\_FEATURE](#)

Once locked, memory protection settings cannot be changed anymore. The lock is reset only on the chip startup.

**Default value:**

- Yes (enabled) if [CONFIG\\_ESP\\_SYSTEM\\_MEMPROT\\_FEATURE](#)

### CONFIG\_ESP\_SYSTEM\_EVENT\_QUEUE\_SIZE

System event queue size

*Found in:* [Component config](#) > [ESP System Settings](#)

Config system event queue size in different application.

**Default value:**

- 32

### CONFIG\_ESP\_SYSTEM\_EVENT\_TASK\_STACK\_SIZE

Event loop task stack size

*Found in:* [Component config](#) > [ESP System Settings](#)

Config system event task stack size in different application.

**Default value:**

- 2304

### CONFIG\_ESP\_MAIN\_TASK\_STACK\_SIZE

Main task stack size

*Found in:* [Component config](#) > [ESP System Settings](#)

Configure the “main task” stack size. This is the stack of the task which calls `app_main()`. If `app_main()` returns then this task is deleted and its stack memory is freed.

**Default value:**

- 3584

### CONFIG\_ESP\_MAIN\_TASK\_AFFINITY

Main task core affinity

*Found in:* [Component config](#) > [ESP System Settings](#)

Configure the “main task” core affinity. This is the used core of the task which calls `app_main()`. If `app_main()` returns then this task is deleted.

**Available options:**

- CPU0 (`ESP_MAIN_TASK_AFFINITY_CPU0`)
- CPU1 (`ESP_MAIN_TASK_AFFINITY_CPU1`)
- No affinity (`ESP_MAIN_TASK_AFFINITY_NO_AFFINITY`)

### CONFIG\_ESP\_MINIMAL\_SHARED\_STACK\_SIZE

Minimal allowed size for shared stack

*Found in: [Component config](#) > [ESP System Settings](#)*

Minimal value of size, in bytes, accepted to execute a expression with shared stack.

**Default value:**

- 2048

### CONFIG\_ESP\_CONSOLE\_UART

Channel for console output

*Found in: [Component config](#) > [ESP System Settings](#)*

Select where to send console output (through stdout and stderr).

- Default is to use UART0 on pre-defined GPIOs.
- If “Custom” is selected, UART0 or UART1 can be chosen, and any pins can be selected.
- If “None” is selected, there will be no console output on any UART, except for initial output from ROM bootloader. This ROM output can be suppressed by GPIO strapping or EFUSE, refer to chip datasheet for details.
- On chips with USB OTG peripheral, “USB CDC” option redirects output to the CDC port. This option uses the CDC driver in the chip ROM. This option is incompatible with TinyUSB stack.
- On chips with an USB serial/JTAG debug controller, selecting the option for that redirects output to the CDC/ACM (serial port emulation) component of that device.

**Available options:**

- Default: UART0 (ESP\_CONSOLE\_UART\_DEFAULT)
- USB CDC (ESP\_CONSOLE\_USB\_CDC)
- USB Serial/JTAG Controller (ESP\_CONSOLE\_USB\_SERIAL\_JTAG)
- Custom UART (ESP\_CONSOLE\_UART\_CUSTOM)
- None (ESP\_CONSOLE\_NONE)

### CONFIG\_ESP\_CONSOLE\_UART\_NUM

UART peripheral to use for console output (0-1)

*Found in: [Component config](#) > [ESP System Settings](#)*

This UART peripheral is used for console output from the ESP-IDF Bootloader and the app.

If the configuration is different in the Bootloader binary compared to the app binary, UART is reconfigured after the bootloader exits and the app starts.

Due to an ESP32 ROM bug, UART2 is not supported for console output via `esp_rom_printf`.

**Available options:**

- UART0 (ESP\_CONSOLE\_UART\_CUSTOM\_NUM\_0)
- UART1 (ESP\_CONSOLE\_UART\_CUSTOM\_NUM\_1)

### CONFIG\_ESP\_CONSOLE\_UART\_TX\_GPIO

UART TX on GPIO#

*Found in: [Component config](#) > [ESP System Settings](#)*

This GPIO is used for console UART TX output in the ESP-IDF Bootloader and the app (including boot log output and default standard output and standard error of the app).

If the configuration is different in the Bootloader binary compared to the app binary, UART is reconfigured after the bootloader exits and the app starts.

**Range:**

- from 0 to 46 if `ESP_CONSOLE_UART_CUSTOM`

**Default value:**

- 20 if `ESP_CONSOLE_UART_CUSTOM`
- 43 if `ESP_CONSOLE_UART_CUSTOM`

### **CONFIG\_ESP\_CONSOLE\_UART\_RX\_GPIO**

UART RX on GPIO#

*Found in: [Component config](#) > [ESP System Settings](#)*

This GPIO is used for UART RX input in the ESP-IDF Bootloader and the app (including default standard input of the app).

Note: The default ESP-IDF Bootloader configures this pin but doesn't read anything from the UART.

If the configuration is different in the Bootloader binary compared to the app binary, UART is reconfigured after the bootloader exits and the app starts.

**Range:**

- from 0 to 46 if `ESP_CONSOLE_UART_CUSTOM`

**Default value:**

- 19 if `ESP_CONSOLE_UART_CUSTOM`
- 44 if `ESP_CONSOLE_UART_CUSTOM`

### **CONFIG\_ESP\_CONSOLE\_UART\_BAUDRATE**

UART console baud rate

*Found in: [Component config](#) > [ESP System Settings](#)*

This baud rate is used by both the ESP-IDF Bootloader and the app (including boot log output and default standard input/output/error of the app).

The app's maximum baud rate depends on the UART clock source. If Power Management is disabled, the UART clock source is the APB clock and all baud rates in the available range will be sufficiently accurate. If Power Management is enabled, REF\_TICK clock source is used so the baud rate is divided from 1MHz. Baud rates above 1Mbps are not possible and values between 500Kbps and 1Mbps may not be accurate.

If the configuration is different in the Bootloader binary compared to the app binary, UART is reconfigured after the bootloader exits and the app starts.

**Range:**

- from 1200 to 4000000 if `CONFIG_PM_ENABLE`
- from 1200 to 1000000 if `CONFIG_PM_ENABLE`

**Default value:**

- 74880 if `XTAL_FREQ_26`
- 115200

### **CONFIG\_ESP\_INT\_WDT**

Interrupt watchdog

*Found in: [Component config](#) > [ESP System Settings](#)*

This watchdog timer can detect if the FreeRTOS tick interrupt has not been called for a certain time, either because a task turned off interrupts and did not turn them on for a long time, or because an interrupt handler did not return. It will try to invoke the panic handler first and failing that reset the SoC.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_INT\_WDT\_TIMEOUT\_MS

Interrupt watchdog timeout (ms)

*Found in: [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_INT\\_WDT](#)*

The timeout of the watchdog, in milliseconds. Make this higher than the FreeRTOS tick rate.

**Range:**

- from 10 to 10000

**Default value:**

- 300

### CONFIG\_ESP\_INT\_WDT\_CHECK\_CPU1

Also watch CPU1 tick interrupt

*Found in: [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_INT\\_WDT](#)*

Also detect if interrupts on CPU 1 are disabled for too long.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_TASK\_WDT\_EN

Enable Task Watchdog Timer

*Found in: [Component config](#) > [ESP System Settings](#)*

The Task Watchdog Timer can be used to make sure individual tasks are still running. Enabling this option will enable the Task Watchdog Timer. It can be either initialized automatically at startup or initialized after startup (see Task Watchdog Timer API Reference)

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_TASK\_WDT\_INIT

Initialize Task Watchdog Timer on startup

*Found in: [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_EN](#)*

Enabling this option will cause the Task Watchdog Timer to be initialized automatically at startup.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_TASK\_WDT\_PANIC

Invoke panic handler on Task Watchdog timeout

*Found in: [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_EN](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_INIT](#)*

If this option is enabled, the Task Watchdog Timer will be configured to trigger the panic handler when it times out. This can also be configured at run time (see Task Watchdog Timer API Reference)

**Default value:**

- No (disabled)

### CONFIG\_ESP\_TASK\_WDT\_TIMEOUT\_S

Task Watchdog timeout period (seconds)

*Found in:* [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_EN](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_INIT](#)

Timeout period configuration for the Task Watchdog Timer in seconds. This is also configurable at run time (see Task Watchdog Timer API Reference)

**Range:**

- from 1 to 60

**Default value:**

- 5

### CONFIG\_ESP\_TASK\_WDT\_CHECK\_IDLE\_TASK\_CPU0

Watch CPU0 Idle Task

*Found in:* [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_EN](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_INIT](#)

If this option is enabled, the Task Watchdog Timer will watch the CPU0 Idle Task. Having the Task Watchdog watch the Idle Task allows for detection of CPU starvation as the Idle Task not being called is usually a symptom of CPU starvation. Starvation of the Idle Task is detrimental as FreeRTOS household tasks depend on the Idle Task getting some runtime every now and then.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_TASK\_WDT\_CHECK\_IDLE\_TASK\_CPU1

Watch CPU1 Idle Task

*Found in:* [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_EN](#) > [CONFIG\\_ESP\\_TASK\\_WDT\\_INIT](#)

If this option is enabled, the Task Watchdog Timer will watch the CPU1 Idle Task.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_XT\_WDT

Initialize XTAL32K watchdog timer on startup

*Found in:* [Component config](#) > [ESP System Settings](#)

This watchdog timer can detect oscillation failure of the XTAL32K\_CLK. When such a failure is detected the hardware can be set up to automatically switch to BACKUP32K\_CLK and generate an interrupt.

### CONFIG\_ESP\_XT\_WDT\_TIMEOUT

XTAL32K watchdog timeout period

*Found in:* [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_XT\\_WDT](#)

Timeout period configuration for the XTAL32K watchdog timer based on RTC\_CLK.

**Range:**

- from 1 to 255 if [CONFIG\\_ESP\\_XT\\_WDT](#)

**Default value:**

- 200 if [CONFIG\\_ESP\\_XT\\_WDT](#)

### CONFIG\_ESP\_XT\_WDT\_BACKUP\_CLK\_ENABLE

Automatically switch to BACKUP32K\_CLK when timer expires

*Found in: [Component config](#) > [ESP System Settings](#) > [CONFIG\\_ESP\\_XT\\_WDT](#)*

Enable this to automatically switch to BACKUP32K\_CLK as the source of RTC\_SLOW\_CLK when the watchdog timer expires.

**Default value:**

- Yes (enabled) if [CONFIG\\_ESP\\_XT\\_WDT](#)

### CONFIG\_ESP\_PANIC\_HANDLER\_IRAM

Place panic handler code in IRAM

*Found in: [Component config](#) > [ESP System Settings](#)*

If this option is disabled (default), the panic handler code is placed in flash not IRAM. This means that if ESP-IDF crashes while flash cache is disabled, the panic handler will automatically re-enable flash cache before running GDB Stub or Core Dump. This adds some minor risk, if the flash cache status is also corrupted during the crash.

If this option is enabled, the panic handler code (including required UART functions) is placed in IRAM. This may be necessary to debug some complex issues with crashes while flash cache is disabled (for example, when writing to SPI flash) or when flash cache is corrupted when an exception is triggered.

**Default value:**

- No (disabled)

### CONFIG\_ESP\_DEBUG\_STUBS\_ENABLE

OpenOCD debug stubs

*Found in: [Component config](#) > [ESP System Settings](#)*

Debug stubs are used by OpenOCD to execute pre-compiled onboard code which does some useful debugging stuff, e.g. GCOV data dump.

**Default value:**

- “COMPILER\_OPTIMIZATION\_LEVEL\_DEBUG” if `ESP32_TRAX` &&  
`ESP32S2_TRAX` && `ESP32S3_TRAX`

### CONFIG\_ESP\_DEBUG\_OCDAWARE

Make exception and panic handlers JTAG/OCD aware

*Found in: [Component config](#) > [ESP System Settings](#)*

The FreeRTOS panic and unhandled exception handlers can detect a JTAG OCD debugger and instead of panicking, have the debugger stop on the offending instruction.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_SYSTEM\_CHECK\_INT\_LEVEL

Interrupt level to use for Interrupt Watchdog and other system checks

*Found in: [Component config](#) > [ESP System Settings](#)*

Interrupt level to use for Interrupt Watchdog and other system checks.

**Available options:**

- Level 5 interrupt (`ESP_SYSTEM_CHECK_INT_LEVEL_5`)  
Using level 5 interrupt for Interrupt Watchdog and other system checks.

- Level 4 interrupt (ESP\_SYSTEM\_CHECK\_INT\_LEVEL\_4)  
Using level 4 interrupt for Interrupt Watchdog and other system checks.

**Brownout Detector** Contains:

- [CONFIG\\_ESP\\_BROWNOUT\\_DET](#)

### CONFIG\_ESP\_BROWNOUT\_DET

Hardware brownout detect & reset

*Found in: [Component config](#) > [ESP System Settings](#) > [Brownout Detector](#)*

The ESP32-C2 has a built-in brownout detector which can detect if the voltage is lower than a specific value. If this happens, it will reset the chip in order to prevent unintended behaviour.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_BROWNOUT\_DET\_LVL\_SEL

Brownout voltage level

*Found in: [Component config](#) > [ESP System Settings](#) > [Brownout Detector](#) > [CONFIG\\_ESP\\_BROWNOUT\\_DET](#)*

The brownout detector will reset the chip when the supply voltage is approximately below this level. Note that there may be some variation of brownout voltage level between each chip.

#The voltage levels here are estimates, more work needs to be done to figure out the exact voltages #of the brownout threshold levels.

**Available options:**

- 2.51V (ESP\_BROWNOUT\_DET\_LVL\_SEL\_7)
- 2.64V (ESP\_BROWNOUT\_DET\_LVL\_SEL\_6)
- 2.76V (ESP\_BROWNOUT\_DET\_LVL\_SEL\_5)
- 2.92V (ESP\_BROWNOUT\_DET\_LVL\_SEL\_4)
- 3.10V (ESP\_BROWNOUT\_DET\_LVL\_SEL\_3)
- 3.27V (ESP\_BROWNOUT\_DET\_LVL\_SEL\_2)

### CONFIG\_ESP\_SYSTEM\_BBPLL\_RECALIB

Re-calibration BBPLL at startup

*Found in: [Component config](#) > [ESP System Settings](#)*

This configuration helps to address an BBPLL inaccurate issue when boot from certain bootloader version, which may increase about the boot-up time by about 200 us. Disable this when your bootloader is built with ESP-IDF version v5.2 and above.

**Default value:**

- Yes (enabled)

**IPC (Inter-Processor Call)** Contains:

- [CONFIG\\_ESP\\_IPC\\_TASK\\_STACK\\_SIZE](#)
- [CONFIG\\_ESP\\_IPC\\_USES\\_CALLERS\\_PRIORITY](#)

### CONFIG\_ESP\_IPC\_TASK\_STACK\_SIZE

Inter-Processor Call (IPC) task stack size

*Found in: [Component config > IPC \(Inter-Processor Call\)](#)*

Configure the IPC tasks stack size. An IPC task runs on each core (in dual core mode), and allows for cross-core function calls. See IPC documentation for more details. The default IPC stack size should be enough for most common simple use cases. However, users can increase/decrease the stack size to their needs.

**Range:**

- from 512 to 65536

**Default value:**

- 1024

### CONFIG\_ESP\_IPC\_USES\_CALLERS\_PRIORITY

IPC runs at caller's priority

*Found in: [Component config > IPC \(Inter-Processor Call\)](#)*

If this option is not enabled then the IPC task will keep behavior same as prior to that of ESP-IDF v4.0, hence IPC task will run at (configMAX\_PRIORITIES - 1) priority.

**Default value:**

- Yes (enabled)

**High resolution timer (esp\_timer)** Contains:

- [CONFIG\\_ESP\\_TIMER\\_PROFILING](#)
- [CONFIG\\_ESP\\_TIMER\\_TASK\\_STACK\\_SIZE](#)
- [CONFIG\\_ESP\\_TIMER\\_INTERRUPT\\_LEVEL](#)
- [CONFIG\\_ESP\\_TIMER\\_SUPPORTS\\_ISR\\_DISPATCH\\_METHOD](#)

### CONFIG\_ESP\_TIMER\_PROFILING

Enable esp\_timer profiling features

*Found in: [Component config > High resolution timer \(esp\\_timer\)](#)*

If enabled, esp\_timer\_dump will dump information such as number of times the timer was started, number of times the timer has triggered, and the total time it took for the callback to run. This option has some effect on timer performance and the amount of memory used for timer storage, and should only be used for debugging/testing purposes.

**Default value:**

- No (disabled)

### CONFIG\_ESP\_TIMER\_TASK\_STACK\_SIZE

High-resolution timer task stack size

*Found in: [Component config > High resolution timer \(esp\\_timer\)](#)*

Configure the stack size of “timer\_task” task. This task is used to dispatch callbacks of timers created using ets\_timer and esp\_timer APIs. If you are seeing stack overflow errors in timer task, increase this value.

Note that this is not the same as FreeRTOS timer task. To configure FreeRTOS timer task size, see “FreeRTOS timer task stack size” option in “FreeRTOS” menu.

**Range:**

- from 2048 to 65536

**Default value:**

- 3584

**CONFIG\_ESP\_TIMER\_INTERRUPT\_LEVEL**

Interrupt level

*Found in: Component config > High resolution timer (esp\_timer)*

It sets the interrupt level for esp\_timer ISR in range 1..3. A higher level (3) helps to decrease the ISR esp\_timer latency.

**Range:**

- from 1 to 1

**Default value:**

- 1

**CONFIG\_ESP\_TIMER\_SUPPORTS\_ISR\_DISPATCH\_METHOD**

Support ISR dispatch method

*Found in: Component config > High resolution timer (esp\_timer)*

Allows using ESP\_TIMER\_ISR dispatch method (ESP\_TIMER\_TASK dispatch method is also available). - ESP\_TIMER\_TASK - Timer callbacks are dispatched from a high-priority esp\_timer task. - ESP\_TIMER\_ISR - Timer callbacks are dispatched directly from the timer interrupt handler. The ISR dispatch can be used, in some cases, when a callback is very simple or need a lower-latency.

**Default value:**

- No (disabled)

**Wi-Fi** Contains:

- *CONFIG\_ESP\_WIFI\_ENTERPRISE\_SUPPORT*
- *CONFIG\_ESP32\_WIFI\_ENABLE\_WPA3\_OWE\_STA*
- *CONFIG\_ESP32\_WIFI\_ENABLE\_WPA3\_SAE*
- *CONFIG\_ESP\_WIFI\_WPS\_PASSPHRASE*
- *CONFIG\_ESP32\_WIFI\_SOFTAP\_BEACON\_MAX\_LEN*
- *CONFIG\_ESP32\_WIFI\_CACHE\_TX\_BUFFER\_NUM*
- *CONFIG\_ESP32\_WIFI\_DYNAMIC\_RX\_BUFFER\_NUM*
- *CONFIG\_ESP32\_WIFI\_DYNAMIC\_TX\_BUFFER\_NUM*
- *CONFIG\_ESP\_WIFI\_RX\_MGMT\_BUF\_NUM\_DEF*
- *CONFIG\_ESP32\_WIFI\_STATIC\_RX\_BUFFER\_NUM*
- *CONFIG\_ESP32\_WIFI\_STATIC\_TX\_BUFFER\_NUM*
- *CONFIG\_ESP\_WIFI\_ESPNOW\_MAX\_ENCRYPT\_NUM*
- *CONFIG\_ESP\_WIFI\_STA\_DISCONNECTED\_PM\_ENABLE*
- *CONFIG\_ESP32\_WIFI\_SW\_COEXIST\_ENABLE*
- *CONFIG\_ESP\_WIFI\_MGMT\_RX\_BUFFER*
- *CONFIG\_ESP32\_WIFI\_TX\_BUFFER*
- *CONFIG\_ESP32\_WIFI\_AMPDU\_RX\_ENABLED*
- *CONFIG\_ESP32\_WIFI\_AMPDU\_TX\_ENABLED*
- *CONFIG\_ESP32\_WIFI\_AMSDU\_TX\_ENABLED*
- *CONFIG\_ESP32\_WIFI\_CSI\_ENABLED*
- *CONFIG\_ESP\_WIFI\_EXTERNAL\_COEXIST\_ENABLE*
- *CONFIG\_ESP\_WIFI\_FTM\_ENABLE*
- *CONFIG\_ESP\_WIFI\_GCMP\_SUPPORT*
- *CONFIG\_ESP\_WIFI\_GMAC\_SUPPORT*
- *CONFIG\_ESP32\_WIFI\_IRAM\_OPT*
- *CONFIG\_ESP32\_WIFI\_MGMT\_SBUF\_NUM*
- *CONFIG\_ESP32\_WIFI\_NVS\_ENABLED*

- `CONFIG_ESP32_WIFI_RX_IRAM_OPT`
- `CONFIG_ESP_WIFI_SLP_BEACON_LOST_OPT`
- `CONFIG_ESP_WIFI_SLP_IRAM_OPT`
- `CONFIG_ESP_WIFI_SOFTAP_SUPPORT`
- `CONFIG_ESP32_WIFI_TASK_CORE_ID`

### **CONFIG\_ESP32\_WIFI\_SW\_COEXIST\_ENABLE**

Software controls WiFi/Bluetooth coexistence

*Found in:* [Component config > Wi-Fi](#)

If enabled, WiFi & Bluetooth coexistence is controlled by software rather than hardware. Recommended for heavy traffic scenarios. Both coexistence configuration options are automatically managed, no user intervention is required. If only Bluetooth is used, it is recommended to disable this option to reduce binary file size.

**Default value:**

- Yes (enabled) if `CONFIG_BT_ENABLED`

### **CONFIG\_ESP\_COEX\_POWER\_MANAGEMENT**

Support power management under coexistence

*Found in:* [Component config > Wi-Fi > CONFIG\\_ESP32\\_WIFI\\_SW\\_COEXIST\\_ENABLE](#)

If enabled, coexist power management will be enabled.

**Default value:**

- No (disabled) if `CONFIG_ESP32_WIFI_SW_COEXIST_ENABLE`

### **CONFIG\_ESP32\_WIFI\_STATIC\_RX\_BUFFER\_NUM**

Max number of WiFi static RX buffers

*Found in:* [Component config > Wi-Fi](#)

Set the number of WiFi static RX buffers. Each buffer takes approximately 1.6KB of RAM. The static rx buffers are allocated when `esp_wifi_init` is called, they are not freed until `esp_wifi_deinit` is called.

WiFi hardware use these buffers to receive all 802.11 frames. A higher number may allow higher throughput but increases memory use. If `ESP32_WIFI_AMPDU_RX_ENABLED` is enabled, this value is recommended to set equal or bigger than `ESP32_WIFI_RX_BA_WIN` in order to achieve better throughput and compatibility with both stations and APs.

**Range:**

- from 2 to 25

**Default value:**

- 10 if `SPIRAM_TRY_ALLOCATE_WIFI_LWIP`
- 16 if `SPIRAM_TRY_ALLOCATE_WIFI_LWIP`

### **CONFIG\_ESP32\_WIFI\_DYNAMIC\_RX\_BUFFER\_NUM**

Max number of WiFi dynamic RX buffers

*Found in:* [Component config > Wi-Fi](#)

Set the number of WiFi dynamic RX buffers, 0 means unlimited RX buffers will be allocated (provided sufficient free RAM). The size of each dynamic RX buffer depends on the size of the received data frame.

For each received data frame, the WiFi driver makes a copy to an RX buffer and then delivers it to the high layer TCP/IP stack. The dynamic RX buffer is freed after the higher layer has successfully received the data frame.

For some applications, WiFi data frames may be received faster than the application can process them. In these cases we may run out of memory if RX buffer number is unlimited (0).

If a dynamic RX buffer limit is set, it should be at least the number of static RX buffers.

**Range:**

- from 0 to 128 if `CONFIG_LWIP_WND_SCALE`
- from 0 to 1024 if `CONFIG_LWIP_WND_SCALE`

**Default value:**

- 32

## CONFIG\_ESP32\_WIFI\_TX\_BUFFER

Type of WiFi TX buffers

*Found in: [Component config](#) > [Wi-Fi](#)*

Select type of WiFi TX buffers:

If “Static” is selected, WiFi TX buffers are allocated when WiFi is initialized and released when WiFi is de-initialized. The size of each static TX buffer is fixed to about 1.6KB.

If “Dynamic” is selected, each WiFi TX buffer is allocated as needed when a data frame is delivered to the WiFi driver from the TCP/IP stack. The buffer is freed after the data frame has been sent by the WiFi driver. The size of each dynamic TX buffer depends on the length of each data frame sent by the TCP/IP layer.

If PSRAM is enabled, “Static” should be selected to guarantee enough WiFi TX buffers. If PSRAM is disabled, “Dynamic” should be selected to improve the utilization of RAM.

**Available options:**

- Static (`ESP32_WIFI_STATIC_TX_BUFFER`)
- Dynamic (`ESP32_WIFI_DYNAMIC_TX_BUFFER`)

## CONFIG\_ESP32\_WIFI\_STATIC\_TX\_BUFFER\_NUM

Max number of WiFi static TX buffers

*Found in: [Component config](#) > [Wi-Fi](#)*

Set the number of WiFi static TX buffers. Each buffer takes approximately 1.6KB of RAM. The static RX buffers are allocated when `esp_wifi_init()` is called, they are not released until `esp_wifi_deinit()` is called.

For each transmitted data frame from the higher layer TCP/IP stack, the WiFi driver makes a copy of it in a TX buffer. For some applications especially UDP applications, the upper layer can deliver frames faster than WiFi layer can transmit. In these cases, we may run out of TX buffers.

**Range:**

- from 1 to 64 if `ESP32_WIFI_STATIC_TX_BUFFER`

**Default value:**

- 16 if `ESP32_WIFI_STATIC_TX_BUFFER`

## CONFIG\_ESP32\_WIFI\_CACHE\_TX\_BUFFER\_NUM

Max number of WiFi cache TX buffers

*Found in: [Component config](#) > [Wi-Fi](#)*

Set the number of WiFi cache TX buffer number.

For each TX packet from uplayer, such as LWIP etc, WiFi driver needs to allocate a static TX buffer and makes a copy of uplayer packet. If WiFi driver fails to allocate the static TX buffer, it caches the uplayer packets to a dedicated buffer queue, this option is used to configure the size of the cached TX queue.

**Range:**

- from 16 to 128 if SPIRAM

**Default value:**

- 32 if SPIRAM

**CONFIG\_ESP32\_WIFI\_DYNAMIC\_TX\_BUFFER\_NUM**

Max number of WiFi dynamic TX buffers

*Found in: [Component config](#) > [Wi-Fi](#)*

Set the number of WiFi dynamic TX buffers. The size of each dynamic TX buffer is not fixed, it depends on the size of each transmitted data frame.

For each transmitted frame from the higher layer TCP/IP stack, the WiFi driver makes a copy of it in a TX buffer. For some applications, especially UDP applications, the upper layer can deliver frames faster than WiFi layer can transmit. In these cases, we may run out of TX buffers.

**Range:**

- from 1 to 128

**Default value:**

- 32

**CONFIG\_ESP\_WIFI\_MGMT\_RX\_BUFFER**

Type of WiFi RX MGMT buffers

*Found in: [Component config](#) > [Wi-Fi](#)*

Select type of WiFi RX MGMT buffers:

If “Static” is selected, WiFi RX MGMT buffers are allocated when WiFi is initialized and released when WiFi is de-initialized. The size of each static RX MGMT buffer is fixed to about 500 Bytes.

If “Dynamic” is selected, each WiFi RX MGMT buffer is allocated as needed when a MGMT data frame is received. The MGMT buffer is freed after the MGMT data frame has been processed by the WiFi driver.

**Available options:**

- Static (ESP\_WIFI\_STATIC\_RX\_MGMT\_BUFFER)
- Dynamic (ESP\_WIFI\_DYNAMIC\_RX\_MGMT\_BUFFER)

**CONFIG\_ESP\_WIFI\_RX\_MGMT\_BUF\_NUM\_DEF**

Max number of WiFi RX MGMT buffers

*Found in: [Component config](#) > [Wi-Fi](#)*

Set the number of WiFi RX\_MGMT buffers.

For Management buffers, the number of dynamic and static management buffers is the same. In order to prevent memory fragmentation, the management buffer type should be set to static first.

**Range:**

- from 1 to 10

**Default value:**

- 5

**CONFIG\_ESP32\_WIFI\_CSI\_ENABLED**

WiFi CSI(Channel State Information)

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to enable CSI(Channel State Information) feature. CSI takes about CONFIG\_ESP32\_WIFI\_STATIC\_RX\_BUFFER\_NUM KB of RAM. If CSI is not used, it is better to disable this feature in order to save memory.

### CONFIG\_ESP32\_WIFI\_AMPDU\_TX\_ENABLED

WiFi AMPDU TX

*Found in: Component config > Wi-Fi*

Select this option to enable AMPDU TX feature

**Default value:**

- Yes (enabled)

### CONFIG\_ESP32\_WIFI\_TX\_BA\_WIN

WiFi AMPDU TX BA window size

*Found in: Component config > Wi-Fi > CONFIG\_ESP32\_WIFI\_AMPDU\_TX\_ENABLED*

Set the size of WiFi Block Ack TX window. Generally a bigger value means higher throughput but more memory. Most of time we should NOT change the default value unless special reason, e.g. test the maximum UDP TX throughput with iperf etc. For iperf test in shieldbox, the recommended value is 9~12.

**Range:**

- from 2 to 32

**Default value:**

- 6

### CONFIG\_ESP32\_WIFI\_AMPDU\_RX\_ENABLED

WiFi AMPDU RX

*Found in: Component config > Wi-Fi*

Select this option to enable AMPDU RX feature

**Default value:**

- Yes (enabled)

### CONFIG\_ESP32\_WIFI\_RX\_BA\_WIN

WiFi AMPDU RX BA window size

*Found in: Component config > Wi-Fi > CONFIG\_ESP32\_WIFI\_AMPDU\_RX\_ENABLED*

Set the size of WiFi Block Ack RX window. Generally a bigger value means higher throughput and better compatibility but more memory. Most of time we should NOT change the default value unless special reason, e.g. test the maximum UDP RX throughput with iperf etc. For iperf test in shieldbox, the recommended value is 9~12. If PSRAM is used and WiFi memory is preferred to allocate in PSRAM first, the default and minimum value should be 16 to achieve better throughput and compatibility with both stations and APs.

**Range:**

- from 2 to 32

**Default value:**

- 6 if SPIRAM\_TRY\_ALLOCATE\_WIFI\_LWIP && CONFIG\_ESP32\_WIFI\_AMPDU\_RX\_ENABLED
- 16 if SPIRAM\_TRY\_ALLOCATE\_WIFI\_LWIP && CONFIG\_ESP32\_WIFI\_AMPDU\_RX\_ENABLED

**CONFIG\_ESP32\_WIFI\_AMSDU\_TX\_ENABLED**

WiFi AMSDU TX

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to enable AMSDU TX feature

**Default value:**

- No (disabled) if SPIRAM

**CONFIG\_ESP32\_WIFI\_NVS\_ENABLED**

WiFi NVS flash

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to enable WiFi NVS flash

**Default value:**

- Yes (enabled)

**CONFIG\_ESP32\_WIFI\_TASK\_CORE\_ID**

WiFi Task Core ID

*Found in: [Component config](#) > [Wi-Fi](#)*

Pinned WiFi task to core 0 or core 1.

**Available options:**

- Core 0 (ESP32\_WIFI\_TASK\_PINNED\_TO\_CORE\_0)
- Core 1 (ESP32\_WIFI\_TASK\_PINNED\_TO\_CORE\_1)

**CONFIG\_ESP32\_WIFI\_SOFTAP\_BEACON\_MAX\_LEN**

Max length of WiFi SoftAP Beacon

*Found in: [Component config](#) > [Wi-Fi](#)*

ESP-MESH utilizes beacon frames to detect and resolve root node conflicts (see documentation). However the default length of a beacon frame can simultaneously hold only five root node identifier structures, meaning that a root node conflict of up to five nodes can be detected at one time. In the occurrence of more root nodes conflict involving more than five root nodes, the conflict resolution process will detect five of the root nodes, resolve the conflict, and re-detect more root nodes. This process will repeat until all root node conflicts are resolved. However this process can generally take a very long time.

To counter this situation, the beacon frame length can be increased such that more root nodes can be detected simultaneously. Each additional root node will require 36 bytes and should be added on top of the default beacon frame length of 752 bytes. For example, if you want to detect 10 root nodes simultaneously, you need to set the beacon frame length as 932 (752+36\*5).

Setting a longer beacon length also assists with debugging as the conflicting root nodes can be identified more quickly.

**Range:**

- from 752 to 1256

**Default value:**

- 752

### CONFIG\_ESP32\_WIFI\_MGMT\_SBUF\_NUM

WiFi mgmt short buffer number

*Found in: [Component config](#) > [Wi-Fi](#)*

Set the maximum number of Wi-Fi management short buffers. These buffers are dynamically allocated, with their size determined by the length of the management packet to be sent. When a management packet is less than 64 bytes, the Wi-Fi driver classifies it as a short management packet and assigns it to one of these buffers.

**Range:**

- from 6 to 32

**Default value:**

- 32

### CONFIG\_ESP32\_WIFI\_IRAM\_OPT

WiFi IRAM speed optimization

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to place frequently called Wi-Fi library functions in IRAM. When this option is disabled, more than 10Kbytes of IRAM memory will be saved but Wi-Fi throughput will be reduced.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP32\_WIFI\_RX\_IRAM\_OPT

WiFi RX IRAM speed optimization

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to place frequently called Wi-Fi library RX functions in IRAM. When this option is disabled, more than 17Kbytes of IRAM memory will be saved but Wi-Fi performance will be reduced.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP32\_WIFI\_ENABLE\_WPA3\_SAE

Enable WPA3-Personal

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to allow the device to establish a WPA3-Personal connection with eligible AP' s. PMF (Protected Management Frames) is a prerequisite feature for a WPA3 connection, it needs to be explicitly configured before attempting connection. Please refer to the Wi-Fi Driver API Guide for details.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP32\_WIFI\_ENABLE\_WPA3\_OWE\_STA

Enable OWE STA

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to allow the device to establish OWE connection with eligible AP' s. PMF (Protected Management Frames) is a prerequisite feature for a WPA3 connection, it needs to be explicitly configured before attempting connection. Please refer to the Wi-Fi Driver API Guide for details.

**Default value:**

- Yes (enabled)

### **CONFIG\_ESP\_WIFI\_SLP\_IRAM\_OPT**

WiFi SLP IRAM speed optimization

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to place called Wi-Fi library TBTT process and receive beacon functions in IRAM. Some functions can be put in IRAM either by `ESP32_WIFI_IRAM_OPT` and `ESP32_WIFI_RX_IRAM_OPT`, or this one. If already enabled `ESP32_WIFI_IRAM_OPT`, the other 7.3KB IRAM memory would be taken by this option. If already enabled `ESP32_WIFI_RX_IRAM_OPT`, the other 1.3KB IRAM memory would be taken by this option. If neither of them are enabled, the other 7.4KB IRAM memory would be taken by this option. Wi-Fi power-save mode average current would be reduced if this option is enabled.

### **CONFIG\_ESP\_WIFI\_SLP\_DEFAULT\_MIN\_ACTIVE\_TIME**

Minimum active time

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_SLP\\_IRAM\\_OPT](#)*

The minimum timeout for waiting to receive data, unit: milliseconds.

**Range:**

- from 8 to 60 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_IRAM\\_OPT](#)

**Default value:**

- 50 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_IRAM\\_OPT](#)

### **CONFIG\_ESP\_WIFI\_SLP\_DEFAULT\_MAX\_ACTIVE\_TIME**

Maximum keep alive time

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_SLP\\_IRAM\\_OPT](#)*

The maximum time that wifi keep alive, unit: seconds.

**Range:**

- from 10 to 60 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_IRAM\\_OPT](#)

**Default value:**

- 10 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_IRAM\\_OPT](#)

### **CONFIG\_ESP\_WIFI\_FTM\_ENABLE**

WiFi FTM

*Found in: [Component config](#) > [Wi-Fi](#)*

Enable feature Fine Timing Measurement for calculating WiFi Round-Trip-Time (RTT).

**Default value:**

- No (disabled)

### **CONFIG\_ESP\_WIFI\_FTM\_INITIATOR\_SUPPORT**

FTM Initiator support

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_FTM\\_ENABLE](#)*

**Default value:**

- Yes (enabled) if [CONFIG\\_ESP\\_WIFI\\_FTM\\_ENABLE](#)

### CONFIG\_ESP\_WIFI\_FTM\_RESPONDER\_SUPPORT

FTM Responder support

Found in: *Component config* > *Wi-Fi* > *CONFIG\_ESP\_WIFI\_FTM\_ENABLE*

**Default value:**

- Yes (enabled) if *CONFIG\_ESP\_WIFI\_FTM\_ENABLE*

### CONFIG\_ESP\_WIFI\_STA\_DISCONNECTED\_PM\_ENABLE

Power Management for station at disconnected

Found in: *Component config* > *Wi-Fi*

Select this option to enable power\_management for station when disconnected. Chip will do modem-sleep when rf module is not in use any more.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_WIFI\_EXTERNAL\_COEXIST\_ENABLE

WiFi External Coexistence

Found in: *Component config* > *Wi-Fi*

If enabled, HW External coexistence arbitration is managed by GPIO pins. It can support three types of wired combinations so far which are 1-wired/2-wired/3-wired. User can select GPIO pins in application code with configure interfaces.

This function depends on BT-off because currently we do not support external coex and internal coex simultaneously.

**Default value:**

- No (disabled) if *CONFIG\_BT\_ENABLED* || *NIMBLE\_ENABLED*

### CONFIG\_ESP\_WIFI\_GCMP\_SUPPORT

WiFi GCMP Support(GCMP128 and GCMP256)

Found in: *Component config* > *Wi-Fi*

Select this option to enable GCMP support. GCMP support is compulsory for WiFi Suite-B support.

### CONFIG\_ESP\_WIFI\_GMAC\_SUPPORT

WiFi GMAC Support(GMAC128 and GMAC256)

Found in: *Component config* > *Wi-Fi*

Select this option to enable GMAC support. GMAC support is compulsory for WiFi 192 bit certification.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_WIFI\_SOFTAP\_SUPPORT

WiFi SoftAP Support

Found in: *Component config* > *Wi-Fi*

WiFi module can be compiled without SoftAP to save code size.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_WIFI\_SLP\_BEACON\_LOST\_OPT

Wifi sleep optimize when beacon lost

*Found in: [Component config](#) > [Wi-Fi](#)*

Enable wifi sleep optimization when beacon loss occurs and immediately enter sleep mode when the WiFi module detects beacon loss.

### CONFIG\_ESP\_WIFI\_SLP\_BEACON\_LOST\_TIMEOUT

Beacon loss timeout

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)*

Timeout time for close rf phy when beacon loss occurs, Unit: 1024 microsecond.

**Range:**

- from 5 to 100 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

**Default value:**

- 10 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

### CONFIG\_ESP\_WIFI\_SLP\_BEACON\_LOST\_THRESHOLD

Maximum number of consecutive lost beacons allowed

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)*

Maximum number of consecutive lost beacons allowed, WiFi keeps Rx state when the number of consecutive beacons lost is greater than the given threshold.

**Range:**

- from 0 to 8 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

**Default value:**

- 3 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

### CONFIG\_ESP\_WIFI\_SLP\_PHY\_ON\_DELTA\_EARLY\_TIME

Delta early time for RF PHY on

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)*

Delta early time for rf phy on, When the beacon is lost, the next rf phy on will be earlier the time specified by the configuration item, Unit: 32 microsecond.

**Range:**

- from 0 to 100 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

**Default value:**

- 2 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

### CONFIG\_ESP\_WIFI\_SLP\_PHY\_OFF\_DELTA\_TIMEOUT\_TIME

Delta timeout time for RF PHY off

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)*

Delta timeout time for rf phy off, When the beacon is lost, the next rf phy off will be delayed for the time specified by the configuration item. Unit: 1024 microsecond.

**Range:**

- from 0 to 8 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

**Default value:**

- 2 if [CONFIG\\_ESP\\_WIFI\\_SLP\\_BEACON\\_LOST\\_OPT](#)

### CONFIG\_ESP\_WIFI\_ESPNOW\_MAX\_ENCRYPT\_NUM

Maximum espnow encrypt peers number

*Found in: [Component config](#) > [Wi-Fi](#)*

Maximum number of encrypted peers supported by espnow. The number of hardware keys for encryption is fixed. And the espnow and SoftAP share the same hardware keys. So this configuration will affect the maximum connection number of SoftAP. Maximum espnow encrypted peers number + maximum number of connections of SoftAP = Max hardware keys number.

When using ESP mesh, this value should be set to a maximum of 6.

**Range:**

- from 0 to 4
- from 0 to 17

**Default value:**

- 2
- 7

### CONFIG\_ESP\_WIFI\_WPS\_PASSPHRASE

Get WPA2 passphrase in WPS config

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this option to get passphrase during WPS configuration. This option fakes the virtual display capabilities to get the configuration in passphrase mode. Not recommended to be used since WPS credentials should not be shared to other devices, making it in readable format increases that risk, also passphrase requires pbkdf2 to convert in psk.

**Default value:**

- No (disabled)

### CONFIG\_ESP\_WIFI\_ENTERPRISE\_SUPPORT

Enable enterprise option

*Found in: [Component config](#) > [Wi-Fi](#)*

Select this to enable/disable enterprise connection support.

disabling this will reduce binary size. disabling this will disable the use of any esp\_wifi\_sta\_wpa2\_ent\_\* (as APIs will be meaningless)

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_WIFI\_ENT\_FREE\_DYNAMIC\_BUFFER

Free dynamic buffers during WiFi enterprise connection

*Found in: [Component config](#) > [Wi-Fi](#) > [CONFIG\\_ESP\\_WIFI\\_ENTERPRISE\\_SUPPORT](#)*

Select this configuration to free dynamic buffers during WiFi enterprise connection. This will enable chip to reduce heap consumption during WiFi enterprise connection.

**Default value:**

- Yes (enabled)
- No (disabled)

**Core dump** Contains:

- `CONFIG_ESP_COREDUMP_CHECK_BOOT`
- `CONFIG_ESP_COREDUMP_DATA_FORMAT`
- `CONFIG_ESP_COREDUMP_CHECKSUM`
- `CONFIG_ESP_COREDUMP_TO_FLASH_OR_UART`
- `CONFIG_ESP_COREDUMP_UART_DELAY`
- `CONFIG_ESP_COREDUMP_LOGS`
- `CONFIG_ESP_COREDUMP_DECODE`
- `CONFIG_ESP_COREDUMP_MAX_TASKS_NUM`
- `CONFIG_ESP_COREDUMP_STACK_SIZE`
- `CONFIG_ESP_COREDUMP_SUMMARY_STACKDUMP_SIZE`

## **CONFIG\_ESP\_COREDUMP\_TO\_FLASH\_OR\_UART**

Data destination

*Found in: [Component config](#) > [Core dump](#)*

Select place to store core dump: flash, uart or none (to disable core dumps generation).

Core dumps to Flash are not available if PSRAM is used for task stacks.

If core dump is configured to be stored in flash and custom partition table is used add corresponding entry to your CSV. For examples, please see predefined partition table CSV descriptions in the `components/partition_table` directory.

**Available options:**

- Flash (`ESP_COREDUMP_ENABLE_TO_FLASH`)
- UART (`ESP_COREDUMP_ENABLE_TO_UART`)
- None (`ESP_COREDUMP_ENABLE_TO_NONE`)

## **CONFIG\_ESP\_COREDUMP\_DATA\_FORMAT**

Core dump data format

*Found in: [Component config](#) > [Core dump](#)*

Select the data format for core dump.

**Available options:**

- Binary format (`ESP_COREDUMP_DATA_FORMAT_BIN`)
- ELF format (`ESP_COREDUMP_DATA_FORMAT_ELF`)

## **CONFIG\_ESP\_COREDUMP\_CHECKSUM**

Core dump data integrity check

*Found in: [Component config](#) > [Core dump](#)*

Select the integrity check for the core dump.

**Available options:**

- Use CRC32 for integrity verification (`ESP_COREDUMP_CHECKSUM_CRC32`)
- Use SHA256 for integrity verification (`ESP_COREDUMP_CHECKSUM_SHA256`)

## **CONFIG\_ESP\_COREDUMP\_CHECK\_BOOT**

Check core dump data integrity on boot

*Found in: [Component config](#) > [Core dump](#)*

When enabled, if any data are found on the flash core dump partition, they will be checked by calculating their checksum.

**Default value:**

- Yes (enabled) if ESP\_COREDUMP\_ENABLE\_TO\_FLASH

**CONFIG\_ESP\_COREDUMP\_LOGS**

Enable coredump logs for debugging

*Found in: [Component config](#) > [Core dump](#)*

Enable/disable coredump logs. Logs strings from espcoredump component are placed in DRAM. Disabling these helps to save ~5KB of internal memory.

**CONFIG\_ESP\_COREDUMP\_MAX\_TASKS\_NUM**

Maximum number of tasks

*Found in: [Component config](#) > [Core dump](#)*

Maximum number of tasks snapshots in core dump.

**CONFIG\_ESP\_COREDUMP\_UART\_DELAY**

Delay before print to UART

*Found in: [Component config](#) > [Core dump](#)*

Config delay (in ms) before printing core dump to UART. Delay can be interrupted by pressing Enter key.

**Default value:**

- 0 if ESP\_COREDUMP\_ENABLE\_TO\_UART

**CONFIG\_ESP\_COREDUMP\_STACK\_SIZE**

Reserved stack size

*Found in: [Component config](#) > [Core dump](#)*

Size of the memory to be reserved for core dump stack. If 0 core dump process will run on the stack of crashed task/ISR, otherwise special stack will be allocated. To ensure that core dump itself will not overflow task/ISR stack set this to the value above 800. NOTE: It eats DRAM.

**CONFIG\_ESP\_COREDUMP\_SUMMARY\_STACKDUMP\_SIZE**

Size of the stack dump buffer

*Found in: [Component config](#) > [Core dump](#)*

Size of the buffer that would be reserved for extracting backtrace info summary. This buffer will contain the stack dump of the crashed task. This dump is useful in generating backtrace

**Range:**

- from 512 to 4096 if ESP\_COREDUMP\_DATA\_FORMAT\_ELF && ESP\_COREDUMP\_ENABLE\_TO\_FLASH

**Default value:**

- 1024 if ESP\_COREDUMP\_DATA\_FORMAT\_ELF && ESP\_COREDUMP\_ENABLE\_TO\_FLASH

## CONFIG\_ESP\_COREDUMP\_DECODE

Handling of UART core dumps in IDF Monitor

*Found in: [Component config](#) > [Core dump](#)*

### Available options:

- Decode and show summary (info\_corefile) (ESP\_COREDUMP\_DECODE\_INFO)
- Don't decode (ESP\_COREDUMP\_DECODE\_DISABLE)

## FAT Filesystem support

 Contains:

- [CONFIG\\_FATFS\\_API\\_ENCODING](#)
- [CONFIG\\_FATFS\\_USE\\_FASTSEEK](#)
- [CONFIG\\_FATFS\\_CHOOSE\\_TYPE](#)
- [CONFIG\\_FATFS\\_LONG\\_FILENAMES](#)
- [CONFIG\\_FATFS\\_MAX\\_LFN](#)
- [CONFIG\\_FATFS\\_FS\\_LOCK](#)
- [CONFIG\\_FATFS\\_VOLUME\\_COUNT](#)
- [CONFIG\\_FATFS\\_CHOOSE\\_CODEPAGE](#)
- [CONFIG\\_FATFS\\_ALLOC\\_PREFER\\_EXTRAM](#)
- [CONFIG\\_FATFS\\_SECTOR\\_SIZE](#)
- [CONFIG\\_FATFS\\_SECTORS\\_PER\\_CLUSTER](#)
- [CONFIG\\_FATFS\\_TIMEOUT\\_MS](#)
- [CONFIG\\_FATFS\\_PER\\_FILE\\_CACHE](#)

## CONFIG\_FATFS\_VOLUME\_COUNT

Number of volumes

*Found in: [Component config](#) > [FAT Filesystem support](#)*

Number of volumes (logical drives) to use.

### Range:

- from 1 to 10

### Default value:

- 2

## CONFIG\_FATFS\_SECTOR\_SIZE

Sector size

*Found in: [Component config](#) > [FAT Filesystem support](#)*

Specify the size of the sector in bytes for FATFS partition generator.

### Available options:

- 512 (FATFS\_SECTOR\_512)
- 1024 (FATFS\_SECTOR\_1024)
- 2048 (FATFS\_SECTOR\_2048)
- 4096 (FATFS\_SECTOR\_4096)

## CONFIG\_FATFS\_SECTORS\_PER\_CLUSTER

Sectors per cluster

*Found in: [Component config](#) > [FAT Filesystem support](#)*

This value specifies how many sectors there are in one cluster.

### Available options:

- 1 (FATFS\_SECTORS\_PER\_CLUSTER\_1)

- 2 (FATFS\_SECTORS\_PER\_CLUSTER\_2)
- 4 (FATFS\_SECTORS\_PER\_CLUSTER\_4)
- 8 (FATFS\_SECTORS\_PER\_CLUSTER\_8)
- 16 (FATFS\_SECTORS\_PER\_CLUSTER\_16)
- 32 (FATFS\_SECTORS\_PER\_CLUSTER\_32)
- 64 (FATFS\_SECTORS\_PER\_CLUSTER\_64)
- 128 (FATFS\_SECTORS\_PER\_CLUSTER\_128)

### CONFIG\_FATFS\_CHOOSE\_CODEPAGE

OEM Code Page

*Found in: [Component config](#) > [FAT Filesystem support](#)*

OEM code page used for file name encodings.

If “Dynamic” is selected, code page can be chosen at runtime using `f_setcp` function. Note that choosing this option will increase application size by ~480kB.

**Available options:**

- Dynamic (all code pages supported) (FATFS\_CODEPAGE\_DYNAMIC)
- US (CP437) (FATFS\_CODEPAGE\_437)
- Arabic (CP720) (FATFS\_CODEPAGE\_720)
- Greek (CP737) (FATFS\_CODEPAGE\_737)
- KBL (CP771) (FATFS\_CODEPAGE\_771)
- Baltic (CP775) (FATFS\_CODEPAGE\_775)
- Latin 1 (CP850) (FATFS\_CODEPAGE\_850)
- Latin 2 (CP852) (FATFS\_CODEPAGE\_852)
- Cyrillic (CP855) (FATFS\_CODEPAGE\_855)
- Turkish (CP857) (FATFS\_CODEPAGE\_857)
- Portugese (CP860) (FATFS\_CODEPAGE\_860)
- Icelandic (CP861) (FATFS\_CODEPAGE\_861)
- Hebrew (CP862) (FATFS\_CODEPAGE\_862)
- Canadian French (CP863) (FATFS\_CODEPAGE\_863)
- Arabic (CP864) (FATFS\_CODEPAGE\_864)
- Nordic (CP865) (FATFS\_CODEPAGE\_865)
- Russian (CP866) (FATFS\_CODEPAGE\_866)
- Greek 2 (CP869) (FATFS\_CODEPAGE\_869)
- Japanese (DBCS) (CP932) (FATFS\_CODEPAGE\_932)
- Simplified Chinese (DBCS) (CP936) (FATFS\_CODEPAGE\_936)
- Korean (DBCS) (CP949) (FATFS\_CODEPAGE\_949)
- Traditional Chinese (DBCS) (CP950) (FATFS\_CODEPAGE\_950)

### CONFIG\_FATFS\_CHOOSE\_TYPE

FAT type

*Found in: [Component config](#) > [FAT Filesystem support](#)*

If user specifies automatic detection of the FAT type, the FATFS generator will determine the type by the size.

**Available options:**

- Select a suitable FATFS type automatically. (FATFS\_AUTO\_TYPE)
- FAT12 (FATFS\_FAT12)
- FAT16 (FATFS\_FAT16)

### CONFIG\_FATFS\_LONG\_FILENAMES

Long filename support

*Found in: [Component config](#) > [FAT Filesystem support](#)*

Support long filenames in FAT. Long filename data increases memory usage. FATFS can be configured to store the buffer for long filename data in stack or heap (Currently not supported by FATFS partition generator).

**Available options:**

- No long filenames (FATFS\_LFN\_NONE)
- Long filename buffer in heap (FATFS\_LFN\_HEAP)
- Long filename buffer on stack (FATFS\_LFN\_STACK)

### CONFIG\_FATFS\_MAX\_LFN

Max long filename length

*Found in: [Component config](#) > [FAT Filesystem support](#)*

Maximum long filename length. Can be reduced to save RAM.

**Range:**

- from 12 to 255

**Default value:**

- 255

### CONFIG\_FATFS\_API\_ENCODING

API character encoding

*Found in: [Component config](#) > [FAT Filesystem support](#)*

Choose encoding for character and string arguments/returns when using FATFS APIs. The encoding of arguments will usually depend on text editor settings.

**Available options:**

- API uses ANSI/OEM encoding (FATFS\_API\_ENCODING\_ANSI\_OEM)
- API uses UTF-8 encoding (FATFS\_API\_ENCODING\_UTF\_8)

### CONFIG\_FATFS\_FS\_LOCK

Number of simultaneously open files protected by lock function

*Found in: [Component config](#) > [FAT Filesystem support](#)*

This option sets the FATFS configuration value `_FS_LOCK`. The option `_FS_LOCK` switches file lock function to control duplicated file open and illegal operation to open objects.

\* 0: Disable file lock function. To avoid volume corruption, application should avoid illegal open, remove and rename to the open objects.

\* >0: Enable file lock function. The value defines how many files/sub-directories can be opened simultaneously under file lock control.

Note that the file lock control is independent of re-entrancy.

**Range:**

- from 0 to 65535

**Default value:**

- 0

### CONFIG\_FATFS\_TIMEOUT\_MS

Timeout for acquiring a file lock, ms

*Found in: [Component config](#) > [FAT Filesystem support](#)*

This option sets FATFS configuration value `_FS_TIMEOUT`, scaled to milliseconds. Sets the number of milliseconds FATFS will wait to acquire a mutex when operating on an open file. For example, if one task is performing a lengthy operation, another task will wait for the first task to release the lock, and time out after amount of time set by this option.

**Default value:**

- 10000

### **CONFIG\_FATFS\_PER\_FILE\_CACHE**

Use separate cache for each file

*Found in: [Component config](#) > [FAT Filesystem support](#)*

This option affects FATFS configuration value `_FS_TINY`.

If this option is set, `_FS_TINY` is 0, and each open file has its own cache, size of the cache is equal to the `_MAX_SS` variable (512 or 4096 bytes). This option uses more RAM if more than 1 file is open, but needs less reads and writes to the storage for some operations.

If this option is not set, `_FS_TINY` is 1, and single cache is used for all open files, size is also equal to `_MAX_SS` variable. This reduces the amount of heap used when multiple files are open, but increases the number of read and write operations which FATFS needs to make.

**Default value:**

- Yes (enabled)

### **CONFIG\_FATFS\_ALLOC\_PREFER\_EXTRAM**

Prefer external RAM when allocating FATFS buffers

*Found in: [Component config](#) > [FAT Filesystem support](#)*

When the option is enabled, internal buffers used by FATFS will be allocated from external RAM. If the allocation from external RAM fails, the buffer will be allocated from the internal RAM. Disable this option if optimizing for performance. Enable this option if optimizing for internal memory size.

**Default value:**

- Yes (enabled) if `SPIRAM_USE_CAPS_ALLOC` || `SPIRAM_USE_MALLOC`

### **CONFIG\_FATFS\_USE\_FASTSEEK**

Enable fast seek algorithm when using lseek function through VFS FAT

*Found in: [Component config](#) > [FAT Filesystem support](#)*

The fast seek feature enables fast backward/long seek operations without FAT access by using an in-memory CLMT (cluster link map table). Please note, fast-seek is only allowed for read-mode files, if a file is opened in write-mode, the seek mechanism will automatically fallback to the default implementation.

**Default value:**

- No (disabled)

### **CONFIG\_FATFS\_FAST\_SEEK\_BUFFER\_SIZE**

Fast seek CLMT buffer size

*Found in: [Component config](#) > [FAT Filesystem support](#) > [CONFIG\\_FATFS\\_USE\\_FASTSEEK](#)*

If fast seek algorithm is enabled, this defines the size of CLMT buffer used by this algorithm in 32-bit word units. This value should be chosen based on prior knowledge of maximum elements of each file entry would store.

**Default value:**

- 64 if `CONFIG_FATFS_USE_FASTSEEK`

**FreeRTOS** Contains:

- *Kernel*
- *Port*

**Kernel** Contains:

- `CONFIG_FREERTOS_CHECK_STACKOVERFLOW`
- `CONFIG_FREERTOS_ENABLE_BACKWARD_COMPATIBILITY`
- `CONFIG_FREERTOS_GENERATE_RUN_TIME_STATS`
- `CONFIG_FREERTOS_MAX_TASK_NAME_LEN`
- `CONFIG_FREERTOS_IDLE_TASK_STACKSIZE`
- `CONFIG_FREERTOS_THREAD_LOCAL_STORAGE_POINTERS`
- `CONFIG_FREERTOS_QUEUE_REGISTRY_SIZE`
- `CONFIG_FREERTOS_HZ`
- `CONFIG_FREERTOS_TIMER_QUEUE_LENGTH`
- `CONFIG_FREERTOS_TIMER_TASK_PRIORITY`
- `CONFIG_FREERTOS_TIMER_TASK_STACK_DEPTH`
- `CONFIG_FREERTOS_USE_IDLE_HOOK`
- `CONFIG_FREERTOS_OPTIMIZED_SCHEDULER`
- `CONFIG_FREERTOS_USE_TICK_HOOK`
- `CONFIG_FREERTOS_USE_TICKLESS_IDLE`
- `CONFIG_FREERTOS_USE_TRACE_FACILITY`
- `CONFIG_FREERTOS_UNICORE`
- `CONFIG_FREERTOS_SMP`
- `CONFIG_FREERTOS_USE_MINIMAL_IDLE_HOOK`

### **CONFIG\_FREERTOS\_SMP**

Run the Amazon SMP FreeRTOS kernel instead (FEATURE UNDER DEVELOPMENT)

*Found in:* *Component config > FreeRTOS > Kernel*

Amazon has released an SMP version of the FreeRTOS Kernel which can be found via the following link: <https://github.com/FreeRTOS/FreeRTOS-Kernel/tree/smp>

IDF has added an experimental port of this SMP kernel located in `components/freertos/FreeRTOS-Kernel-SMP`. Enabling this option will cause IDF to use the Amazon SMP kernel. Note that THIS FEATURE IS UNDER ACTIVE DEVELOPMENT, users use this at their own risk.

Leaving this option disabled will mean the IDF FreeRTOS kernel is used instead, which is located in: `components/freertos/FreeRTOS-Kernel`. Both kernel versions are SMP capable, but differ in their implementation and features.

**Default value:**

- No (disabled)

### **CONFIG\_FREERTOS\_UNICORE**

Run FreeRTOS only on first core

*Found in:* *Component config > FreeRTOS > Kernel*

This version of FreeRTOS normally takes control of all cores of the CPU. Select this if you only want to start it on the first core. This is needed when e.g. another process needs complete control over the second core.

## CONFIG\_FREERTOS\_HZ

configTICK\_RATE\_HZ

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Sets the FreeRTOS tick interrupt frequency in Hz (see configTICK\_RATE\_HZ documentation for more details).

**Range:**

- from 1 to 1000

**Default value:**

- 100

## CONFIG\_FREERTOS\_OPTIMIZED\_SCHEDULER

configUSE\_PORT\_OPTIMISED\_TASK\_SELECTION

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enables port specific task selection method. This option can will speed up the search of ready tasks when scheduling (see configUSE\_PORT\_OPTIMISED\_TASK\_SELECTION documentation for more details).

**Default value:**

- Yes (enabled)

## CONFIG\_FREERTOS\_CHECK\_STACKOVERFLOW

configCHECK\_FOR\_STACK\_OVERFLOW

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enables FreeRTOS to check for stack overflows (see configCHECK\_FOR\_STACK\_OVERFLOW documentation for more details).

Note: If users do not provide their own `vApplicationStackOverflowHook()` function, a default function will be provided by ESP-IDF.

**Available options:**

- No checking (FREERTOS\_CHECK\_STACKOVERFLOW\_NONE)  
Do not check for stack overflows (configCHECK\_FOR\_STACK\_OVERFLOW = 0)
- Check by stack pointer value (Method 1) (FREERTOS\_CHECK\_STACKOVERFLOW\_PTRVAL)  
Check for stack overflows on each context switch by checking if the stack pointer is in a valid range. Quick but does not detect stack overflows that happened between context switches (configCHECK\_FOR\_STACK\_OVERFLOW = 1)
- Check using canary bytes (Method 2) (FREERTOS\_CHECK\_STACKOVERFLOW\_CANARY)  
Places some magic bytes at the end of the stack area and on each context switch, check if these bytes are still intact. More thorough than just checking the pointer, but also slightly slower. (configCHECK\_FOR\_STACK\_OVERFLOW = 2)

## CONFIG\_FREERTOS\_THREAD\_LOCAL\_STORAGE\_POINTERS

configNUM\_THREAD\_LOCAL\_STORAGE\_POINTERS

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Set the number of thread local storage pointers in each task (see configNUM\_THREAD\_LOCAL\_STORAGE\_POINTERS documentation for more details).

Note: In ESP-IDF, this value must be at least 1. Index 0 is reserved for use by the pthreads API thread-local-storage. Other indexes can be used for any desired purpose.

**Range:**

- from 1 to 256

**Default value:**

- 1

**CONFIG\_FREERTOS\_IDLE\_TASK\_STACKSIZE**

configMINIMAL\_STACK\_SIZE (Idle task stack size)

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Sets the idle task stack size in bytes (see configMINIMAL\_STACK\_SIZE documentation for more details).

Note:

- ESP-IDF specifies stack sizes in bytes instead of words.
- The default size is enough for most use cases.
- The stack size may need to be increased above the default if the app installs idle or thread local storage cleanup hooks that use a lot of stack memory.
- Conversely, the stack size can be reduced to the minimum if non of the idle features are used.

**Range:**

- from 768 to 32768

**Default value:**

- 1536

**CONFIG\_FREERTOS\_USE\_IDLE\_HOOK**

configUSE\_IDLE\_HOOK

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enables the idle task application hook (see configUSE\_IDLE\_HOOK documentation for more details).

Note:

- The application must provide the hook function `void vApplicationIdleHook( void );`
- `vApplicationIdleHook()` is called from FreeRTOS idle task(s)
- The FreeRTOS idle hook is NOT the same as the ESP-IDF Idle Hook, but both can be enabled simultaneously.

**Default value:**

- No (disabled)

**CONFIG\_FREERTOS\_USE\_MINIMAL\_IDLE\_HOOK**

Use FreeRTOS minimal idle hook

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enables the minimal idle task application hook (see configUSE\_IDLE\_HOOK documentation for more details).

Note:

- The application must provide the hook function `void vApplicationMinimalIdleHook( void );`
- `vApplicationMinimalIdleHook()` is called from FreeRTOS minimal idle task(s)

**Default value:**

- No (disabled) if [CONFIG\\_FREERTOS\\_SMP](#)

### CONFIG\_FREERTOS\_USE\_TICK\_HOOK

configUSE\_TICK\_HOOK

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enables the tick hook (see configUSE\_TICK\_HOOK documentation for more details).

Note:

- The application must provide the hook function `void vApplicationTickHook( void ) ;`
- `vApplicationTickHook()` is called from FreeRTOS' s tick handling function `xTaskIncrementTick()`
- The FreeRTOS tick hook is NOT the same as the ESP-IDF Tick Interrupt Hook, but both can be enabled simultaneously.

**Default value:**

- No (disabled)

### CONFIG\_FREERTOS\_MAX\_TASK\_NAME\_LEN

configMAX\_TASK\_NAME\_LEN

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Sets the maximum number of characters for task names (see configMAX\_TASK\_NAME\_LEN documentation for more details).

Note: For most uses, the default of 16 characters is sufficient.

**Range:**

- from 1 to 256

**Default value:**

- 16

### CONFIG\_FREERTOS\_ENABLE\_BACKWARD\_COMPATIBILITY

configENABLE\_BACKWARD\_COMPATIBILITY

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enable backward compatibility with APIs prior to FreeRTOS v8.0.0. (see configENABLE\_BACKWARD\_COMPATIBILITY documentation for more details).

**Default value:**

- No (disabled)

### CONFIG\_FREERTOS\_TIMER\_TASK\_PRIORITY

configTIMER\_TASK\_PRIORITY

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Sets the timer task' s priority (see configTIMER\_TASK\_PRIORITY documentation for more details).

**Range:**

- from 1 to 25

**Default value:**

- 1

### CONFIG\_FREERTOS\_TIMER\_TASK\_STACK\_DEPTH

configTIMER\_TASK\_STACK\_DEPTH

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Set the timer task's stack size (see configTIMER\_TASK\_STACK\_DEPTH documentation for more details).

**Range:**

- from 1536 to 32768

**Default value:**

- 2048

### CONFIG\_FREERTOS\_TIMER\_QUEUE\_LENGTH

configTIMER\_QUEUE\_LENGTH

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Set the timer task's command queue length (see configTIMER\_QUEUE\_LENGTH documentation for more details).

**Range:**

- from 5 to 20

**Default value:**

- 10

### CONFIG\_FREERTOS\_QUEUE\_REGISTRY\_SIZE

configQUEUE\_REGISTRY\_SIZE

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Set the size of the queue registry (see configQUEUE\_REGISTRY\_SIZE documentation for more details).

Note: A value of 0 will disable queue registry functionality

**Range:**

- from 0 to 20

**Default value:**

- 0

### CONFIG\_FREERTOS\_USE\_TRACE\_FACILITY

configUSE\_TRACE\_FACILITY

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enables additional structure members and functions to assist with execution visualization and tracing (see configUSE\_TRACE\_FACILITY documentation for more details).

**Default value:**

- No (disabled)

### CONFIG\_FREERTOS\_USE\_STATS\_FORMATTING\_FUNCTIONS

configUSE\_STATS\_FORMATTING\_FUNCTIONS

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#) > [CONFIG\\_FREERTOS\\_USE\\_TRACE\\_FACILITY](#)*

Set configUSE\_TRACE\_FACILITY and configUSE\_STATS\_FORMATTING\_FUNCTIONS to 1 to include the vTaskList() and vTaskGetRunTimeStats() functions in the build (see configUSE\_STATS\_FORMATTING\_FUNCTIONS documentation for more details).

**Default value:**

- No (disabled) if [CONFIG\\_FREERTOS\\_USE\\_TRACE\\_FACILITY](#)

**CONFIG\_FREERTOS\_VTASKLIST\_INCLUDE\_COREID**

Enable display of xCoreID in vTaskList

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#) > [CONFIG\\_FREERTOS\\_USE\\_TRACE\\_FACILITY](#) > [CONFIG\\_FREERTOS\\_USE\\_STATS\\_FORMATTING\\_FUNCTIONS](#)*

If enabled, this will include an extra column when vTaskList is called to display the CoreID the task is pinned to (0,1) or -1 if not pinned.

**Default value:**

- No (disabled) if [CONFIG\\_FREERTOS\\_USE\\_STATS\\_FORMATTING\\_FUNCTIONS](#)

**CONFIG\_FREERTOS\_GENERATE\_RUN\_TIME\_STATS**

configGENERATE\_RUN\_TIME\_STATS

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

Enables collection of run time statistics for each task (see configGENERATE\_RUN\_TIME\_STATS documentation for more details).

Note: The clock used for run time statistics can be configured in FREERTOS\_RUN\_TIME\_STATS\_CLK.

**Default value:**

- No (disabled)

**CONFIG\_FREERTOS\_USE\_TICKLESS\_IDLE**

configUSE\_TICKLESS\_IDLE

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#)*

If power management support is enabled, FreeRTOS will be able to put the system into light sleep mode when no tasks need to run for a number of ticks. This number can be set using FREERTOS\_IDLE\_TIME\_BEFORE\_SLEEP option. This feature is also known as “automatic light sleep”.

Note that timers created using esp\_timer APIs may prevent the system from entering sleep mode, even when no tasks need to run. To skip unnecessary wake-up initialize a timer with the “skip\_unhandled\_events” option as true.

If disabled, automatic light sleep support will be disabled.

**Default value:**

- No (disabled) if [CONFIG\\_PM\\_ENABLE](#)

**CONFIG\_FREERTOS\_IDLE\_TIME\_BEFORE\_SLEEP**

configEXPECTED\_IDLE\_TIME\_BEFORE\_SLEEP

*Found in: [Component config](#) > [FreeRTOS](#) > [Kernel](#) > [CONFIG\\_FREERTOS\\_USE\\_TICKLESS\\_IDLE](#)*

FreeRTOS will enter light sleep mode if no tasks need to run for this number of ticks.

**Range:**

- from 2 to 4294967295 if [CONFIG\\_FREERTOS\\_USE\\_TICKLESS\\_IDLE](#)

**Default value:**

- 3 if [CONFIG\\_FREERTOS\\_USE\\_TICKLESS\\_IDLE](#)

**Port** Contains:

- `CONFIG_FREERTOS_CHECK_MUTEX_GIVEN_BY_OWNER`
- `CONFIG_FREERTOS_RUN_TIME_STATS_CLK`
- `CONFIG_FREERTOS_INTERRUPT_BACKTRACE`
- `CONFIG_FREERTOS_WATCHPOINT_END_OF_STACK`
- `CONFIG_FREERTOS_ENABLE_STATIC_TASK_CLEAN_UP`
- `CONFIG_FREERTOS_ENABLE_TASK_SNAPSHOT`
- `CONFIG_FREERTOS_TLSP_DELETION_CALLBACKS`
- `CONFIG_FREERTOS_ASSERT_ON_UNTESTED_FUNCTION`
- `CONFIG_FREERTOS_ISR_STACKSIZE`
- `CONFIG_FREERTOS_PLACE_FUNCTIONS_INTO_FLASH`
- `CONFIG_FREERTOS_PLACE_SNAPSHOT_FUNS_INTO_FLASH`
- `CONFIG_FREERTOS_CHECK_PORT_CRITICAL_COMPLIANCE`
- `CONFIG_FREERTOS_CORETIMER`
- `CONFIG_FREERTOS_TASK_FUNCTION_WRAPPER`

### **CONFIG\_FREERTOS\_TASK\_FUNCTION\_WRAPPER**

Wrap task functions

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

If enabled, all FreeRTOS task functions will be enclosed in a wrapper function. If a task function mistakenly returns (i.e. does not delete), the call flow will return to the wrapper function. The wrapper function will then log an error and abort the application. This option is also required for GDB backtraces and C++ exceptions to work correctly inside top-level task functions.

**Default value:**

- Yes (enabled)

### **CONFIG\_FREERTOS\_WATCHPOINT\_END\_OF\_STACK**

Enable stack overflow debug watchpoint

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

FreeRTOS can check if a stack has overflowed its bounds by checking either the value of the stack pointer or by checking the integrity of canary bytes. (See `FREERTOS_CHECK_STACKOVERFLOW` for more information.) These checks only happen on a context switch, and the situation that caused the stack overflow may already be long gone by then. This option will use the last debug memory watchpoint to allow breaking into the debugger (or panic'ing) as soon as any of the last 32 bytes on the stack of a task are overwritten. The side effect is that using gdb, you effectively have one hardware watchpoint less because the last one is overwritten as soon as a task switch happens.

Another consequence is that due to alignment requirements of the watchpoint, the usable stack size decreases by up to 60 bytes. This is because the watchpoint region has to be aligned to its size and the size for the stack watchpoint in IDF is 32 bytes.

This check only triggers if the stack overflow writes within 32 bytes near the end of the stack, rather than overshooting further, so it is worth combining this approach with one of the other stack overflow check methods.

When this watchpoint is hit, gdb will stop with a SIGTRAP message. When no JTAG OCD is attached, esp-idf will panic on an unhandled debug exception.

**Default value:**

- No (disabled)

### **CONFIG\_FREERTOS\_TLSP\_DELETION\_CALLBACKS**

Enable thread local storage pointers deletion callbacks

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

ESP-IDF provides users with the ability to free TLSP memory by registering TLSP deletion callbacks. These callbacks are automatically called by FreeRTOS when a task is deleted. When this option is turned on, the memory reserved for TLSPs in the TCB is doubled to make space for storing the deletion callbacks. If the user does not wish to use TLSP deletion callbacks then this option could be turned off to save space in the TCB memory.

**Default value:**

- Yes (enabled) if `CONFIG_FREERTOS_SMP` && `CONFIG_FREERTOS_THREAD_LOCAL_STORAGE_POINTERS > 0`

### **CONFIG\_FREERTOS\_ENABLE\_STATIC\_TASK\_CLEAN\_UP**

Enable static task clean up hook

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

Enable this option to make FreeRTOS call the static task clean up hook when a task is deleted.

Note: Users will need to provide a `void vPortCleanUpTCB ( void *pxTCB )` callback

**Default value:**

- No (disabled) if `CONFIG_FREERTOS_SMP`

### **CONFIG\_FREERTOS\_CHECK\_MUTEX\_GIVEN\_BY\_OWNER**

Check that mutex semaphore is given by owner task

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

If enabled, assert that when a mutex semaphore is given, the task giving the semaphore is the task which is currently holding the mutex.

**Default value:**

- Yes (enabled)

### **CONFIG\_FREERTOS\_ISR\_STACKSIZE**

ISR stack size

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

The interrupt handlers have their own stack. The size of the stack can be defined here. Each processor has its own stack, so the total size occupied will be twice this.

**Range:**

- from 2096 to 32768 if `ESP_COREDUMP_DATA_FORMAT_ELF`
- from 1536 to 32768

**Default value:**

- 2096 if `ESP_COREDUMP_DATA_FORMAT_ELF`
- 1536

### **CONFIG\_FREERTOS\_INTERRUPT\_BACKTRACE**

Enable backtrace from interrupt to task context

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

If this option is enabled, interrupt stack frame will be modified to point to the code of the interrupted task as its return address. This helps the debugger (or the panic handler) show a backtrace from the interrupt to the task which was interrupted. This also works for nested interrupts: higher level interrupt

stack can be traced back to the lower level interrupt. This option adds 4 instructions to the interrupt dispatching code.

**Default value:**

- Yes (enabled)

## CONFIG\_FREERTOS\_CORETIMER

Tick timer source (Xtensa Only)

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

FreeRTOS needs a timer with an associated interrupt to use as the main tick source to increase counters, run timers and do pre-emptive multitasking with. There are multiple timers available to do this, with different interrupt priorities.

**Available options:**

- Timer 0 (int 6, level 1) (FREERTOS\_CORETIMER\_0)  
Select this to use timer 0
- Timer 1 (int 15, level 3) (FREERTOS\_CORETIMER\_1)  
Select this to use timer 1
- SYSTIMER 0 (level 1) (FREERTOS\_CORETIMER\_SYSTIMER\_LVL1)  
Select this to use systimer with the 1 interrupt priority.
- SYSTIMER 0 (level 3) (FREERTOS\_CORETIMER\_SYSTIMER\_LVL3)  
Select this to use systimer with the 3 interrupt priority.

## CONFIG\_FREERTOS\_RUN\_TIME\_STATS\_CLK

Choose the clock source for run time stats

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

Choose the clock source for FreeRTOS run time stats. Options are CPU0's CPU Clock or the ESP Timer. Both clock sources are 32 bits. The CPU Clock can run at a higher frequency hence provide a finer resolution but will overflow much quicker. Note that run time stats are only valid until the clock source overflows.

**Available options:**

- Use ESP TIMER for run time stats (FREERTOS\_RUN\_TIME\_STATS\_USING\_ESP\_TIMER)  
ESP Timer will be used as the clock source for FreeRTOS run time stats. The ESP Timer runs at a frequency of 1MHz regardless of Dynamic Frequency Scaling. Therefore the ESP Timer will overflow in approximately 4290 seconds.
- Use CPU Clock for run time stats (FREERTOS\_RUN\_TIME\_STATS\_USING\_CPU\_CLK)  
CPU Clock will be used as the clock source for the generation of run time stats. The CPU Clock has a frequency dependent on ESP\_DEFAULT\_CPU\_FREQ\_MHZ and Dynamic Frequency Scaling (DFS). Therefore the CPU Clock frequency can fluctuate between 80 to 240MHz. Run time stats generated using the CPU Clock represents the number of CPU cycles each task is allocated and DOES NOT reflect the amount of time each task runs for (as CPU clock frequency can change). If the CPU clock consistently runs at the maximum frequency of 240MHz, it will overflow in approximately 17 seconds.

## CONFIG\_FREERTOS\_PLACE\_FUNCTIONS\_INTO\_FLASH

Place FreeRTOS functions into Flash

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

When enabled the selected Non-ISR FreeRTOS functions will be placed into Flash memory instead of IRAM. This saves up to 8KB of IRAM depending on which functions are used.

**Default value:**

- No (disabled)

### CONFIG\_FREERTOS\_PLACE\_SNAPSHOT\_FUNS\_INTO\_FLASH

Place task snapshot functions into flash

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

When enabled, the functions related to snapshots, such as `vTaskGetSnapshot` or `uxTaskGetSnapshotAll`, will be placed in flash. Note that if enabled, these functions cannot be called when cache is disabled.

**Default value:**

- No (disabled) if `CONFIG_FREERTOS_ENABLE_TASK_SNAPSHOT` && `CONFIG_ESP_PANIC_HANDLER_IRAM`

### CONFIG\_FREERTOS\_CHECK\_PORT\_CRITICAL\_COMPLIANCE

Tests compliance with Vanilla FreeRTOS `port*_CRITICAL` calls

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

If enabled, context of `port*_CRITICAL` calls (ISR or Non-ISR) would be checked to be in compliance with Vanilla FreeRTOS. e.g Calling `port*_CRITICAL` from ISR context would cause assert failure

**Default value:**

- No (disabled)

### CONFIG\_FREERTOS\_ASSERT\_ON\_UNTESTED\_FUNCTION

Halt when an SMP-untested function is called

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

Some functions in FreeRTOS have not been thoroughly tested yet when moving to the SMP implementation of FreeRTOS. When this option is enabled, these functions will throw an `assert()`.

**Default value:**

- Yes (enabled)

### CONFIG\_FREERTOS\_ENABLE\_TASK\_SNAPSHOT

Enable task snapshot functions

*Found in: [Component config](#) > [FreeRTOS](#) > [Port](#)*

When enabled, the functions related to snapshots, such as `vTaskGetSnapshot` or `uxTaskGetSnapshotAll`, are compiled and linked. Task snapshots are used by Task Watchdog (TWDT), GDB Stub and Core dump.

**Default value:**

- Yes (enabled)

### Hardware Abstraction Layer (HAL) and Low Level (LL) Contains:

- [CONFIG\\_HAL\\_DEFAULT\\_ASSERTION\\_LEVEL](#)
- [CONFIG\\_HAL\\_LOG\\_LEVEL](#)
- [CONFIG\\_HAL\\_SYSTIMER\\_USE\\_ROM\\_IMPL](#)
- [CONFIG\\_HAL\\_WDT\\_USE\\_ROM\\_IMPL](#)

### CONFIG\_HAL\_DEFAULT\_ASSERTION\_LEVEL

Default HAL assertion level

*Found in: [Component config](#) > [Hardware Abstraction Layer \(HAL\) and Low Level \(LL\)](#)*

Set the assert behavior / level for HAL component. HAL component assert level can be set separately, but the level can't exceed the system assertion level. e.g. If the system assertion is disabled, then the

HAL assertion can't be enabled either. If the system assertion is enable, then the HAL assertion can still be disabled by this Kconfig option.

**Available options:**

- Same as system assertion level (HAL\_ASSERTION\_EQUALS\_SYSTEM)
- Disabled (HAL\_ASSERTION\_DISABLE)
- Silent (HAL\_ASSERTION\_SILENT)
- Enabled (HAL\_ASSERTION\_ENABLE)

**CONFIG\_HAL\_LOG\_LEVEL**

HAL layer log verbosity

*Found in: Component config > Hardware Abstraction Layer (HAL) and Low Level (LL)*

Specify how much output to see in HAL logs.

**Available options:**

- No output (HAL\_LOG\_LEVEL\_NONE)
- Error (HAL\_LOG\_LEVEL\_ERROR)
- Warning (HAL\_LOG\_LEVEL\_WARN)
- Info (HAL\_LOG\_LEVEL\_INFO)
- Debug (HAL\_LOG\_LEVEL\_DEBUG)
- Verbose (HAL\_LOG\_LEVEL\_VERBOSE)

**CONFIG\_HAL\_SYSTIMER\_USE\_ROM\_IMPL**

Use ROM implementation of SysTimer HAL driver

*Found in: Component config > Hardware Abstraction Layer (HAL) and Low Level (LL)*

Enable this flag to use HAL functions from ROM instead of ESP-IDF.

If keeping this as “n” in your project, you will have less free IRAM. If making this as “y” in your project, you will increase free IRAM, but you will lose the possibility to debug this module, and some new features will be added and bugs will be fixed in the IDF source but cannot be synced to ROM.

**Default value:**

- Yes (enabled)

**CONFIG\_HAL\_WDT\_USE\_ROM\_IMPL**

Use ROM implementation of WDT HAL driver

*Found in: Component config > Hardware Abstraction Layer (HAL) and Low Level (LL)*

Enable this flag to use HAL functions from ROM instead of ESP-IDF.

If keeping this as “n” in your project, you will have less free IRAM. If making this as “y” in your project, you will increase free IRAM, but you will lose the possibility to debug this module, and some new features will be added and bugs will be fixed in the IDF source but cannot be synced to ROM.

**Default value:**

- Yes (enabled)

**Heap memory debugging** Contains:

- [CONFIG\\_HEAP\\_ABORT\\_WHEN\\_ALLOCATION\\_FAILS](#)
- [CONFIG\\_HEAP\\_TASK\\_TRACKING](#)
- [CONFIG\\_HEAP\\_CORRUPTION\\_DETECTION](#)
- [CONFIG\\_HEAP\\_TRACING\\_DEST](#)
- [CONFIG\\_HEAP\\_TRACING\\_STACK\\_DEPTH](#)
- [CONFIG\\_HEAP\\_TLFS\\_CHECK\\_PATCH](#)

- [CONFIG\\_HEAP\\_TLSF\\_USE\\_ROM\\_IMPL](#)

## CONFIG\_HEAP\_CORRUPTION\_DETECTION

Heap corruption detection

*Found in: [Component config](#) > [Heap memory debugging](#)*

Enable heap poisoning features to detect heap corruption caused by out-of-bounds access to heap memory.

See the “Heap Memory Debugging” page of the IDF documentation for a description of each level of heap corruption detection.

### Available options:

- Basic (no poisoning) (HEAP\_POISONING\_DISABLED)
- Light impact (HEAP\_POISONING\_LIGHT)
- Comprehensive (HEAP\_POISONING\_COMPREHENSIVE)

## CONFIG\_HEAP\_TRACING\_DEST

Heap tracing

*Found in: [Component config](#) > [Heap memory debugging](#)*

Enables the heap tracing API defined in esp\_heap\_trace.h.

This function causes a moderate increase in IRAM code size and a minor increase in heap function (malloc/free/realloc) CPU overhead, even when the tracing feature is not used. So it's best to keep it disabled unless tracing is being used.

### Available options:

- Disabled (HEAP\_TRACING\_OFF)
- Standalone (HEAP\_TRACING\_STANDALONE)
- Host-based (HEAP\_TRACING\_TOHOST)

## CONFIG\_HEAP\_TRACING\_STACK\_DEPTH

Heap tracing stack depth

*Found in: [Component config](#) > [Heap memory debugging](#)*

Number of stack frames to save when tracing heap operation callers.

More stack frames uses more memory in the heap trace buffer (and slows down allocation), but can provide useful information.

## CONFIG\_HEAP\_TASK\_TRACKING

Enable heap task tracking

*Found in: [Component config](#) > [Heap memory debugging](#)*

Enables tracking the task responsible for each heap allocation.

This function depends on heap poisoning being enabled and adds four more bytes of overhead for each block allocated.

## CONFIG\_HEAP\_ABORT\_WHEN\_ALLOCATION\_FAILS

Abort if memory allocation fails

*Found in: [Component config](#) > [Heap memory debugging](#)*

When enabled, if a memory allocation operation fails it will cause a system abort.

**Default value:**

- No (disabled)

**CONFIG\_HEAP\_TLSF\_USE\_ROM\_IMPL**

Use ROM implementation of heap tlsf library

*Found in: [Component config](#) > [Heap memory debugging](#)*

Enable this flag to use heap functions from ROM instead of ESP-IDF.

If keeping this as “n” in your project, you will have less free IRAM. If making this as “y” in your project, you will increase free IRAM, but you will lose the possibility to debug this module, and some new features will be added and bugs will be fixed in the IDF source but cannot be synced to ROM.

**Default value:**

- Yes (enabled)

**CONFIG\_HEAP\_TLSF\_CHECK\_PATCH**

Patch the `tlsf_check_pool()` for ROM HEAP TLSF implementation

*Found in: [Component config](#) > [Heap memory debugging](#)*

ROM does not contain the patch of `tlsf_check_pool()` allowing perform the integrity checking on used blocks. The patch to allow such check needs to be applied.

**Default value:**

- Yes (enabled)

**Log output** Contains:

- [CONFIG\\_LOG\\_DEFAULT\\_LEVEL](#)
- [CONFIG\\_LOG\\_TIMESTAMP\\_SOURCE](#)
- [CONFIG\\_LOG\\_MAXIMUM\\_LEVEL](#)
- [CONFIG\\_LOG\\_COLORS](#)

**CONFIG\_LOG\_DEFAULT\_LEVEL**

Default log verbosity

*Found in: [Component config](#) > [Log output](#)*

Specify how much output to see in logs by default. You can set lower verbosity level at runtime using `esp_log_level_set` function.

By default, this setting limits which log statements are compiled into the program. For example, selecting “Warning” would mean that changing log level to “Debug” at runtime will not be possible. To allow increasing log level above the default at runtime, see the next option.

**Available options:**

- No output (`LOG_DEFAULT_LEVEL_NONE`)
- Error (`LOG_DEFAULT_LEVEL_ERROR`)
- Warning (`LOG_DEFAULT_LEVEL_WARN`)
- Info (`LOG_DEFAULT_LEVEL_INFO`)
- Debug (`LOG_DEFAULT_LEVEL_DEBUG`)
- Verbose (`LOG_DEFAULT_LEVEL_VERBOSE`)

## CONFIG\_LOG\_MAXIMUM\_LEVEL

Maximum log verbosity

*Found in: [Component config](#) > [Log output](#)*

This config option sets the highest log verbosity that it's possible to select at runtime by calling `esp_log_level_set()`. This level may be higher than the default verbosity level which is set when the app starts up.

This can be used enable debugging output only at a critical point, for a particular tag, or to minimize startup time but then enable more logs once the firmware has loaded.

Note that increasing the maximum available log level will increase the firmware binary size.

This option only applies to logging from the app, the bootloader log level is fixed at compile time to the separate “Bootloader log verbosity” setting.

### Available options:

- Same as default (LOG\_MAXIMUM\_EQUALS\_DEFAULT)
- Error (LOG\_MAXIMUM\_LEVEL\_ERROR)
- Warning (LOG\_MAXIMUM\_LEVEL\_WARN)
- Info (LOG\_MAXIMUM\_LEVEL\_INFO)
- Debug (LOG\_MAXIMUM\_LEVEL\_DEBUG)
- Verbose (LOG\_MAXIMUM\_LEVEL\_VERBOSE)

## CONFIG\_LOG\_COLORS

Use ANSI terminal colors in log output

*Found in: [Component config](#) > [Log output](#)*

Enable ANSI terminal color codes in bootloader output.

In order to view these, your terminal program must support ANSI color codes.

### Default value:

- Yes (enabled)

## CONFIG\_LOG\_TIMESTAMP\_SOURCE

Log Timestamps

*Found in: [Component config](#) > [Log output](#)*

Choose what sort of timestamp is displayed in the log output:

- Milliseconds since boot is calculated from the RTOS tick count multiplied by the tick period. This time will reset after a software reboot. e.g. (90000)
- System time is taken from POSIX time functions which use the chip's RTC and high resolution timers to maintain an accurate time. The system time is initialized to 0 on startup, it can be set with an SNTP sync, or with POSIX time functions. This time will not reset after a software reboot. e.g. (00:01:30.000)
- NOTE: Currently this will not get used in logging from binary blobs (i.e WiFi & Bluetooth libraries), these will always print milliseconds since boot.

### Available options:

- Milliseconds Since Boot (LOG\_TIMESTAMP\_SOURCE\_RTOS)
- System Time (LOG\_TIMESTAMP\_SOURCE\_SYSTEM)

**LWIP** Contains:

- [CONFIG\\_LWIP\\_CHECK\\_THREAD\\_SAFETY](#)
- [Checksums](#)
- [CONFIG\\_LWIP\\_DHCP\\_COARSE\\_TIMER\\_SECS](#)

- *DHCP server*
- *CONFIG\_LWIP\_DHCP\_OPTIONS\_LEN*
- *CONFIG\_LWIP\_DHCP\_DISABLE\_CLIENT\_ID*
- *CONFIG\_LWIP\_DHCP\_DISABLE\_VENDOR\_CLASS\_ID*

- *SNTP*
- *CONFIG\_LWIP\_USE\_ONLY\_LWIP\_SELECT*
- *CONFIG\_LWIP\_NETIF\_LOOPBACK*
- *TCP*
- *CONFIG\_LWIP\_TCPIP\_TASK\_AFFINITY*
- *CONFIG\_LWIP\_TCPIP\_TASK\_STACK\_SIZE*
- *CONFIG\_LWIP\_TCPIP\_RECVMBOX\_SIZE*

- [CONFIG\\_LWIP\\_IP\\_DEFAULT\\_TTL](#)
- [UDP](#)
- [CONFIG\\_LWIP\\_IPV6\\_RDNSS\\_MAX\\_DNS\\_SERVERS](#)

### CONFIG\_LWIP\_LOCAL\_HOSTNAME

Local netif hostname

*Found in: [Component config](#) > [LWIP](#)*

The default name this device will report to other devices on the network. Could be updated at runtime with `esp_netif_set_hostname()`

**Default value:**

- “espressif”

### CONFIG\_LWIP\_NETIF\_API

Enable usage of standard POSIX APIs in LWIP

*Found in: [Component config](#) > [LWIP](#)*

If this feature is enabled, standard POSIX APIs: `if_indextoname()`, `if_nametoindex()` could be used to convert network interface index to name instead of IDF specific esp-netif APIs (such as `esp_netif_get_netif_impl_name()`)

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_TCPIP\_TASK\_PPIO

LWIP TCP/IP Task Priority

*Found in: [Component config](#) > [LWIP](#)*

LWIP tcpip task priority. In case of high throughput, this parameter could be changed up to (`config-MAX_PRIORITIES-1`).

**Range:**

- from 1 to 24

**Default value:**

- 18

### CONFIG\_LWIP\_TCPIP\_CORE\_LOCKING

Enable tcpip core locking

*Found in: [Component config](#) > [LWIP](#)*

If Enable tcpip core locking,Creates a global mutex that is held during TCPIP thread operations.Can be locked by client code to perform lwIP operations without changing into TCPIP thread using callbacks. See `LOCK_TCPIP_CORE()` and `UNLOCK_TCPIP_CORE()`.

If disable tcpip core locking,TCP IP will perform tasks through context switching

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_TCPIP\_CORE\_LOCKING\_INPUT

Enable tcpip core locking input

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_TCPIP\\_CORE\\_LOCKING](#)*

when LWIP\_TCPIP\_CORE\_LOCKING is enabled, this lets tcpip\_input() grab the mutex for input packets as well, instead of allocating a message and passing it to tcpip\_thread.

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_TCPIP\\_CORE\\_LOCKING](#)

### CONFIG\_LWIP\_CHECK\_THREAD\_SAFETY

Checks that lwip API runs in expected context

*Found in: [Component config](#) > [LWIP](#)*

Enable to check that the project does not violate lwip thread safety. If enabled, all lwip functions that require thread awareness run an assertion to verify that the TCP/IP core functionality is either locked or accessed from the correct thread.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_DNS\_SUPPORT\_MDNS\_QUERIES

Enable mDNS queries in resolving host name

*Found in: [Component config](#) > [LWIP](#)*

If this feature is enabled, standard API such as gethostbyname support .local addresses by sending one shot multicast mDNS query

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_L2\_TO\_L3\_COPY

Enable copy between Layer2 and Layer3 packets

*Found in: [Component config](#) > [LWIP](#)*

If this feature is enabled, all traffic from layer2(WIFI Driver) will be copied to a new buffer before sending it to layer3(LWIP stack), freeing the layer2 buffer. Please be notified that the total layer2 receiving buffer is fixed and ESP32 currently supports 25 layer2 receiving buffer, when layer2 buffer runs out of memory, then the incoming packets will be dropped in hardware. The layer3 buffer is allocated from the heap, so the total layer3 receiving buffer depends on the available heap size, when heap runs out of memory, no copy will be sent to layer3 and packet will be dropped in layer2. Please make sure you fully understand the impact of this feature before enabling it.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_IRAM\_OPTIMIZATION

Enable LWIP IRAM optimization

*Found in: [Component config](#) > [LWIP](#)*

If this feature is enabled, some functions relating to RX/TX in LWIP will be put into IRAM, it can improve UDP/TCP throughput by >10% for single core mode, it doesn't help too much for dual core mode. On the other hand, it needs about 10KB IRAM for these optimizations.

If this feature is disabled, all lwip functions will be put into FLASH.

**Default value:**

- No (disabled)

**CONFIG\_LWIP\_TIMERS\_ONDEMAND**

Enable LWIP Timers on demand

*Found in: [Component config](#) > [LWIP](#)*

If this feature is enabled, IGMP and MLD6 timers will be activated only when joining groups or receiving QUERY packets.

This feature will reduce the power consumption for applications which do not use IGMP and MLD6.

**Default value:**

- Yes (enabled)

**CONFIG\_LWIP\_MAX\_SOCKETS**

Max number of open sockets

*Found in: [Component config](#) > [LWIP](#)*

Sockets take up a certain amount of memory, and allowing fewer sockets to be open at the same time conserves memory. Specify the maximum amount of sockets here. The valid value is from 1 to 16.

**Range:**

- from 1 to 16

**Default value:**

- 10

**CONFIG\_LWIP\_USE\_ONLY\_LWIP\_SELECT**

Support LWIP socket select() only (DEPRECATED)

*Found in: [Component config](#) > [LWIP](#)*

This option is deprecated. Do not use this option, use VFS\_SUPPORT\_SELECT instead.

**Default value:**

- No (disabled)

**CONFIG\_LWIP\_SO\_LINGER**

Enable SO\_LINGER processing

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows SO\_LINGER processing. `l_onoff = 1`, `l_linger` can set the timeout.

If `l_linger=0`, When a connection is closed, TCP will terminate the connection. This means that TCP will discard any data packets stored in the socket send buffer and send an RST to the peer.

If `l_linger!=0`, Then `closesocket()` calls to block the process until the remaining data packets has been sent or timed out.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_SO\_REUSE

Enable SO\_REUSEADDR option

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows binding to a port which remains in TIME\_WAIT.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_SO\_REUSE\_RXTOALL

SO\_REUSEADDR copies broadcast/multicast to all matches

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_SO\\_REUSE](#)*

Enabling this option means that any incoming broadcast or multicast packet will be copied to all of the local sockets that it matches (may be more than one if SO\_REUSEADDR is set on the socket.)

This increases memory overhead as the packets need to be copied, however they are only copied per matching socket. You can safely disable it if you don't plan to receive broadcast or multicast traffic on more than one socket at a time.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_SO\_RCVBUF

Enable SO\_RCVBUF option

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows checking for available data on a netconn.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_NETBUF\_RECVINFO

Enable IP\_PKTINFO option

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows checking for the destination address of a received IPv4 Packet.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_IP\_DEFAULT\_TTL

The value for Time-To-Live used by transport layers

*Found in: [Component config](#) > [LWIP](#)*

Set value for Time-To-Live used by transport layers.

**Range:**

- from 1 to 255

**Default value:**

- 64

### CONFIG\_LWIP\_IP4\_FRAG

Enable fragment outgoing IP4 packets

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows fragmenting outgoing IP4 packets if their size exceeds MTU.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_IP6\_FRAG

Enable fragment outgoing IP6 packets

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows fragmenting outgoing IP6 packets if their size exceeds MTU.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_IP4\_REASSEMBLY

Enable reassembly incoming fragmented IP4 packets

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows reassembling incoming fragmented IP4 packets.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_IP6\_REASSEMBLY

Enable reassembly incoming fragmented IP6 packets

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows reassembling incoming fragmented IP6 packets.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_IP\_FORWARD

Enable IP forwarding

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows packets forwarding across multiple interfaces.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_IPV4\_NAPT

Enable NAT (new/experimental)

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_IP\\_FORWARD](#)*

Enabling this option allows Network Address and Port Translation.

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_IP\\_FORWARD](#)

### CONFIG\_LWIP\_STATS

Enable LWIP statistics

*Found in: [Component config > LWIP](#)*

Enabling this option allows LWIP statistics

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_ESP\_GRATUITOUS\_ARP

Send gratuitous ARP periodically

*Found in: [Component config > LWIP](#)*

Enable this option allows to send gratuitous ARP periodically.

This option solve the compatibility issues.If the ARP table of the AP is old, and the AP doesn't send ARP request to update it's ARP table, this will lead to the STA sending IP packet fail. Thus we send gratuitous ARP periodically to let AP update it's ARP table.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_GARP\_TMR\_INTERVAL

GARP timer interval(seconds)

*Found in: [Component config > LWIP > CONFIG\\_LWIP\\_ESP\\_GRATUITOUS\\_ARP](#)*

Set the timer interval for gratuitous ARP. The default value is 60s

**Default value:**

- 60

### CONFIG\_LWIP\_ESP\_MLDV6\_REPORT

Send mldv6 report periodically

*Found in: [Component config > LWIP](#)*

Enable this option allows to send mldv6 report periodically.

This option solve the issue that failed to receive multicast data. Some routers fail to forward multicast packets. To solve this problem, send multicast mldv6 report to routers regularly.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_MLDV6\_TMR\_INTERVAL

mldv6 report timer interval(seconds)

*Found in: [Component config > LWIP > CONFIG\\_LWIP\\_ESP\\_MLDV6\\_REPORT](#)*

Set the timer interval for mldv6 report. The default value is 30s

**Default value:**

- 40

### CONFIG\_LWIP\_TCPIP\_RECVMBOX\_SIZE

TCPIP task receive mail box size

Found in: *Component config > LWIP*

Set TCPIP task receive mail box size. Generally bigger value means higher throughput but more memory. The value should be bigger than UDP/TCP mail box size.

**Range:**

- from 6 to 64 if *CONFIG\_LWIP\_WND\_SCALE*
- from 6 to 1024 if *CONFIG\_LWIP\_WND\_SCALE*

**Default value:**

- 32

### CONFIG\_LWIP\_DHCP\_DOES\_ARP\_CHECK

DHCP: Perform ARP check on any offered address

Found in: *Component config > LWIP*

Enabling this option performs a check (via ARP request) if the offered IP address is not already in use by another host on the network.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_DHCP\_DISABLE\_CLIENT\_ID

DHCP: Disable Use of HW address as client identification

Found in: *Component config > LWIP*

This option could be used to disable DHCP client identification with its MAC address. (Client id is used by DHCP servers to uniquely identify clients and are included in the DHCP packets as an option 61) Set this option to “y” in order to exclude option 61 from DHCP packets.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_DHCP\_DISABLE\_VENDOR\_CLASS\_ID

DHCP: Disable Use of vendor class identification

Found in: *Component config > LWIP*

This option could be used to disable DHCP client vendor class identification. Set this option to “y” in order to exclude option 60 from DHCP packets.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_DHCP\_RESTORE\_LAST\_IP

DHCP: Restore last IP obtained from DHCP server

Found in: *Component config > LWIP*

When this option is enabled, DHCP client tries to re-obtain last valid IP address obtained from DHCP server. Last valid DHCP configuration is stored in nvs and restored after reset/power-up. If IP is still available, there is no need for sending discovery message to DHCP server and save some time.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_DHCP\_OPTIONS\_LEN

DHCP total option length

*Found in: [Component config](#) > [LWIP](#)*

Set total length of outgoing DHCP option msg. Generally bigger value means it can carry more options and values. If your code meets LWIP\_ASSERT due to option value is too long. Please increase the LWIP\_DHCP\_OPTIONS\_LEN value.

**Range:**

- from 68 to 255

**Default value:**

- 68
- 108

### CONFIG\_LWIP\_NUM\_NETIF\_CLIENT\_DATA

Number of clients store data in netif

*Found in: [Component config](#) > [LWIP](#)*

Number of clients that may store data in client\_data member array of struct netif.

**Range:**

- from 0 to 256

**Default value:**

- 0

### CONFIG\_LWIP\_DHCP\_COARSE\_TIMER\_SECS

DHCP coarse timer interval(s)

*Found in: [Component config](#) > [LWIP](#)*

Set DHCP coarse interval in seconds. A higher value will be less precise but cost less power consumption.

**Range:**

- from 1 to 10

**Default value:**

- 1

**DHCP server** Contains:

- [CONFIG\\_LWIP\\_DHCPS](#)

### CONFIG\_LWIP\_DHCPS

DHCPS: Enable IPv4 Dynamic Host Configuration Protocol Server (DHCPS)

*Found in: [Component config](#) > [LWIP](#) > [DHCP server](#)*

Enabling this option allows the device to run the DHCP server (to dynamically assign IPv4 addresses to clients).

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_DHCPS\_LEASE\_UNIT

Multiplier for lease time, in seconds

*Found in: Component config > LWIP > DHCP server > CONFIG\_LWIP\_DHCPS*

The DHCP server is calculating lease time multiplying the sent and received times by this number of seconds per unit. The default is 60, that equals one minute.

**Range:**

- from 1 to 3600

**Default value:**

- 60

### CONFIG\_LWIP\_DHCPS\_MAX\_STATION\_NUM

Maximum number of stations

*Found in: Component config > LWIP > DHCP server > CONFIG\_LWIP\_DHCPS*

The maximum number of DHCP clients that are connected to the server. After this number is exceeded, DHCP server removes of the oldest device from it's address pool, without notification.

**Range:**

- from 1 to 64

**Default value:**

- 8

### CONFIG\_LWIP\_AUTOIP

Enable IPV4 Link-Local Addressing (AUTOIP)

*Found in: Component config > LWIP*

Enabling this option allows the device to self-assign an address in the 169.256/16 range if none is assigned statically or via DHCP.

See RFC 3927.

**Default value:**

- No (disabled)

Contains:

- *CONFIG\_LWIP\_AUTOIP\_TRIES*
- *CONFIG\_LWIP\_AUTOIP\_MAX\_CONFLICTS*
- *CONFIG\_LWIP\_AUTOIP\_RATE\_LIMIT\_INTERVAL*

### CONFIG\_LWIP\_AUTOIP\_TRIES

DHCP Probes before self-assigning IPv4 LL address

*Found in: Component config > LWIP > CONFIG\_LWIP\_AUTOIP*

DHCP client will send this many probes before self-assigning a link local address.

From LWIP help: "This can be set as low as 1 to get an AutoIP address very quickly, but you should be prepared to handle a changing IP address when DHCP overrides AutoIP." (In the case of ESP-IDF, this means multiple SYSTEM\_EVENT\_STA\_GOT\_IP events.)

**Range:**

- from 1 to 100 if *CONFIG\_LWIP\_AUTOIP*

**Default value:**

- 2 if *CONFIG\_LWIP\_AUTOIP*

### CONFIG\_LWIP\_AUTOIP\_MAX\_CONFLICTS

Max IP conflicts before rate limiting

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_AUTOIP](#)*

If the AUTOIP functionality detects this many IP conflicts while self-assigning an address, it will go into a rate limited mode.

**Range:**

- from 1 to 100 if [CONFIG\\_LWIP\\_AUTOIP](#)

**Default value:**

- 9 if [CONFIG\\_LWIP\\_AUTOIP](#)

### CONFIG\_LWIP\_AUTOIP\_RATE\_LIMIT\_INTERVAL

Rate limited interval (seconds)

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_AUTOIP](#)*

If rate limiting self-assignment requests, wait this long between each request.

**Range:**

- from 5 to 120 if [CONFIG\\_LWIP\\_AUTOIP](#)

**Default value:**

- 20 if [CONFIG\\_LWIP\\_AUTOIP](#)

### CONFIG\_LWIP\_IPV6

Enable IPv6

*Found in: [Component config](#) > [LWIP](#)*

Enable IPv6 function. If not use IPv6 function, set this option to n. If disabling LWIP\_IPV6 then some other components (coap and asio) will no longer be available.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_IPV6\_AUTOCONFIG

Enable IPV6 stateless address autoconfiguration (SLAAC)

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_IPV6](#)*

Enabling this option allows the devices to IPV6 stateless address autoconfiguration (SLAAC).

See RFC 4862.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_IPV6\_NUM\_ADDRESSES

Number of IPv6 addresses on each network interface

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_IPV6](#)*

The maximum number of IPv6 addresses on each interface. Any additional addresses will be discarded.

**Default value:**

- 3

### CONFIG\_LWIP\_IPV6\_FORWARD

Enable IPv6 forwarding between interfaces

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_IPV6](#)*

Forwarding IPv6 packets between interfaces is only required when acting as a router.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_IPV6\_RDNSS\_MAX\_DNS\_SERVERS

Use IPv6 Router Advertisement Recursive DNS Server Option

*Found in: [Component config](#) > [LWIP](#)*

Use IPv6 Router Advertisement Recursive DNS Server Option (as per RFC 6106) to copy a defined maximum number of DNS servers to the DNS module. Set this option to a number of desired DNS servers advertised in the RA protocol. This feature is disabled when set to 0.

**Default value:**

- 0 if [CONFIG\\_LWIP\\_IPV6\\_AUTOCONFIG](#)

### CONFIG\_LWIP\_IPV6\_DHCP6

Enable DHCPv6 stateless address autoconfiguration

*Found in: [Component config](#) > [LWIP](#)*

Enable DHCPv6 for IPv6 stateless address autoconfiguration. Note that the dhcpv6 client has to be started using `dhcp6_enable_stateless(netif)`; Note that the stateful address autoconfiguration is not supported.

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_IPV6\\_AUTOCONFIG](#)

### CONFIG\_LWIP\_NETIF\_STATUS\_CALLBACK

Enable status callback for network interfaces

*Found in: [Component config](#) > [LWIP](#)*

Enable callbacks when the network interface is up/down and addresses are changed.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_NETIF\_LOOPBACK

Support per-interface loopback

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option means that if a packet is sent with a destination address equal to the interface's own IP address, it will "loop back" and be received by this interface. Disabling this option disables support of loopback interface in lwIP

**Default value:**

- Yes (enabled)

Contains:

- [CONFIG\\_LWIP\\_LOOPBACK\\_MAX\\_PBUFS](#)

## CONFIG\_LWIP\_LOOPBACK\_MAX\_PBUFS

Max queued loopback packets per interface

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_NETIF\\_LOOPBACK](#)*

Configure the maximum number of packets which can be queued for loopback on a given interface. Reducing this number may cause packets to be dropped, but will avoid filling memory with queued packet data.

**Range:**

- from 0 to 16

**Default value:**

- 8

## TCP Contains:

- [CONFIG\\_LWIP\\_TCP\\_WND\\_DEFAULT](#)
- [CONFIG\\_LWIP\\_TCP\\_SND\\_BUF\\_DEFAULT](#)

- [CONFIG\\_LWIP\\_TCP\\_TMR\\_INTERVAL](#)

## CONFIG\_LWIP\_MAX\_ACTIVE\_TCP

Maximum active TCP Connections

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

The maximum number of simultaneously active TCP connections. The practical maximum limit is determined by available heap memory at runtime.

Changing this value by itself does not substantially change the memory usage of LWIP, except for preventing new TCP connections after the limit is reached.

**Range:**

- from 1 to 1024

**Default value:**

- 16

## CONFIG\_LWIP\_MAX\_LISTENING\_TCP

Maximum listening TCP Connections

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

The maximum number of simultaneously listening TCP connections. The practical maximum limit is determined by available heap memory at runtime.

Changing this value by itself does not substantially change the memory usage of LWIP, except for preventing new listening TCP connections after the limit is reached.

**Range:**

- from 1 to 1024

**Default value:**

- 16

**CONFIG\_LWIP\_TCP\_HIGH\_SPEED\_RETRANSMISSION**

TCP high speed retransmissions

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Speed up the TCP retransmission interval. If disabled, it is recommended to change the number of SYN retransmissions to 6, and TCP initial rto time to 3000.

**Default value:**

- Yes (enabled)

**CONFIG\_LWIP\_TCP\_MAXRTX**

Maximum number of retransmissions of data segments

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set maximum number of retransmissions of data segments.

**Range:**

- from 3 to 12

**Default value:**

- 12

**CONFIG\_LWIP\_TCP\_SYNMAXRTX**

Maximum number of retransmissions of SYN segments

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set maximum number of retransmissions of SYN segments.

**Range:**

- from 3 to 12

**Default value:**

- 6
- 12

**CONFIG\_LWIP\_TCP\_MSS**

Maximum Segment Size (MSS)

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set maximum segment size for TCP transmission.

Can be set lower to save RAM, the default value 1460(ipv4)/1440(ipv6) will give best throughput. IPv4 TCP\_MSS Range: 576 <= TCP\_MSS <= 1460 IPv6 TCP\_MSS Range: 1220 <= TCP\_MSS <= 1440

**Range:**

- from 536 to 1460

**Default value:**

- 1440

### CONFIG\_LWIP\_TCP\_TMR\_INTERVAL

TCP timer interval(ms)

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set TCP timer interval in milliseconds.

Can be used to speed connections on bad networks. A lower value will redeliver unacked packets faster.

**Default value:**

- 250

### CONFIG\_LWIP\_TCP\_MSL

Maximum segment lifetime (MSL)

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set maximum segment lifetime in milliseconds.

**Default value:**

- 60000

### CONFIG\_LWIP\_TCP\_FIN\_WAIT\_TIMEOUT

Maximum FIN segment lifetime

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set maximum segment lifetime in milliseconds.

**Default value:**

- 20000

### CONFIG\_LWIP\_TCP\_SND\_BUF\_DEFAULT

Default send buffer size

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set default send buffer size for new TCP sockets.

Per-socket send buffer size can be changed at runtime with `lwip_setsockopt(s, TCP_SNDBUF, ...)`.

This value must be at least 2x the MSS size, and the default is 4x the default MSS size.

Setting a smaller default SNDBUF size can save some RAM, but will decrease performance.

**Range:**

- from 2440 to 65535 if [CONFIG\\_LWIP\\_WND\\_SCALE](#)
- from 2440 to 1024000 if [CONFIG\\_LWIP\\_WND\\_SCALE](#)

**Default value:**

- 5760

### CONFIG\_LWIP\_TCP\_WND\_DEFAULT

Default receive window size

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set default TCP receive window size for new TCP sockets.

Per-socket receive window size can be changed at runtime with `lwip_setsockopt(s, TCP_WINDOW, ...)`.

Setting a smaller default receive window size can save some RAM, but will significantly decrease performance.

**Range:**

- from 2440 to 65535 if *CONFIG\_LWIP\_WND\_SCALE*
- from 2440 to 1024000 if *CONFIG\_LWIP\_WND\_SCALE*

**Default value:**

- 5760

### CONFIG\_LWIP\_TCP\_RECVMBOX\_SIZE

Default TCP receive mail box size

*Found in: Component config > LWIP > TCP*

Set TCP receive mail box size. Generally bigger value means higher throughput but more memory. The recommended value is:  $LWIP\_TCP\_WND\_DEFAULT/TCP\_MSS + 2$ , e.g. if  $LWIP\_TCP\_WND\_DEFAULT=14360$ ,  $TCP\_MSS=1436$ , then the recommended receive mail box size is  $(14360/1436 + 2) = 12$ .

TCP receive mail box is a per socket mail box, when the application receives packets from TCP socket, LWIP core firstly posts the packets to TCP receive mail box and the application then fetches the packets from mail box. It means LWIP can cache maximum *LWIP\_TCP\_RECVMBOX\_SIZE* packets for each TCP socket, so the maximum possible cached TCP packets for all TCP sockets is *LWIP\_TCP\_RECVMBOX\_SIZE* multiples the maximum TCP socket number. In other words, the bigger *LWIP\_TCP\_RECVMBOX\_SIZE* means more memory. On the other hand, if the receive mail box is too small, the mail box may be full. If the mail box is full, the LWIP drops the packets. So generally we need to make sure the TCP receive mail box is big enough to avoid packet drop between LWIP core and application.

**Range:**

- from 6 to 64 if *CONFIG\_LWIP\_WND\_SCALE*
- from 6 to 1024 if *CONFIG\_LWIP\_WND\_SCALE*

**Default value:**

- 6

### CONFIG\_LWIP\_TCP\_QUEUE\_OOSEQ

Queue incoming out-of-order segments

*Found in: Component config > LWIP > TCP*

Queue incoming out-of-order segments for later use.

Disable this option to save some RAM during TCP sessions, at the expense of increased retransmissions if segments arrive out of order.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_TCP\_OOSEQ\_TIMEOUT

Timeout for each pbuf queued in TCP OOSEQ, in RTOs.

*Found in: Component config > LWIP > TCP > CONFIG\_LWIP\_TCP\_QUEUE\_OOSEQ*

The timeout value is  $TCP\_OOSEQ\_TIMEOUT * RTO$ .

**Range:**

- from 1 to 30

**Default value:**

- 6

## CONFIG\_LWIP\_TCP\_OOSEQ\_MAX\_PBUFS

The maximum number of pbufs queued on OOSEQ per pcb

Found in: *Component config* > *LWIP* > *TCP* > [CONFIG\\_LWIP\\_TCP\\_QUEUE\\_OOSEQ](#)

If LWIP\_TCP\_OOSEQ\_MAX\_PBUFS = 0, TCP will not control the number of OOSEQ pbufs.

In a poor network environment, many out-of-order tcp pbufs will be received. These out-of-order pbufs will be cached in the TCP out-of-order queue which will cause Wi-Fi/Ethernet fail to release RX buffer in time. It is possible that all RX buffers for MAC layer are used by OOSEQ.

Control the number of out-of-order pbufs to ensure that the MAC layer has enough RX buffer to receive packets.

In the Wi-Fi scenario, recommended OOSEQ PBUFS Range:  $0 \leq \text{TCP\_OOSEQ\_MAX\_PBUFS} \leq \text{CONFIG\_ESP\_WIFI\_DYNAMIC\_RX\_BUFFER\_NUM}/(\text{MAX\_TCP\_NUMBER} + 1)$

In the Ethernet scenario, recommended Ethernet OOSEQ PBUFS Range:  $0 \leq \text{TCP\_OOSEQ\_MAX\_PBUFS} \leq \text{CONFIG\_ETH\_DMA\_RX\_BUFFER\_NUM}/(\text{MAX\_TCP\_NUMBER} + 1)$

Within the recommended value range, the larger the value, the better the performance.

MAX\_TCP\_NUMBER represent Maximum number of TCP connections in Wi-Fi(STA+SoftAP) and Ethernet scenario.

**Range:**

- from 0 to 12

**Default value:**

- 4 if SPIRAM\_TRY\_ALLOCATE\_WIFI\_LWIP && [CONFIG\\_LWIP\\_TCP\\_QUEUE\\_OOSEQ](#)
- 0 if SPIRAM\_TRY\_ALLOCATE\_WIFI\_LWIP && [CONFIG\\_LWIP\\_TCP\\_QUEUE\\_OOSEQ](#)

## CONFIG\_LWIP\_TCP\_SACK\_OUT

Support sending selective acknowledgements

Found in: *Component config* > *LWIP* > *TCP* > [CONFIG\\_LWIP\\_TCP\\_QUEUE\\_OOSEQ](#)

TCP will support sending selective acknowledgements (SACKs).

**Default value:**

- No (disabled)

## CONFIG\_LWIP\_TCP\_OVERSIZE

Pre-allocate transmit PBUF size

Found in: *Component config* > *LWIP* > *TCP*

Allows enabling “oversize” allocation of TCP transmission pbufs ahead of time, which can reduce the length of pbuf chains used for transmission.

This will not make a difference to sockets where Nagle’s algorithm is disabled.

Default value of MSS is fine for most applications, 25% MSS may save some RAM when only transmitting small amounts of data. Disabled will have worst performance and fragmentation characteristics, but uses least RAM overall.

**Available options:**

- MSS (LWIP\_TCP\_OVERSIZE\_MSS)
- 25% MSS (LWIP\_TCP\_OVERSIZE\_QUARTER\_MSS)
- Disabled (LWIP\_TCP\_OVERSIZE\_DISABLE)

### CONFIG\_LWIP\_WND\_SCALE

Support TCP window scale

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Enable this feature to support TCP window scaling.

**Default value:**

- No (disabled) if SPIRAM\_TRY\_ALLOCATE\_WIFI\_LWIP

### CONFIG\_LWIP\_TCP\_RCV\_SCALE

Set TCP receiving window scaling factor

*Found in: [Component config](#) > [LWIP](#) > [TCP](#) > [CONFIG\\_LWIP\\_WND\\_SCALE](#)*

Enable this feature to support TCP window scaling.

**Range:**

- from 0 to 14 if [CONFIG\\_LWIP\\_WND\\_SCALE](#)

**Default value:**

- 0 if [CONFIG\\_LWIP\\_WND\\_SCALE](#)

### CONFIG\_LWIP\_TCP\_RTO\_TIME

Default TCP rto time

*Found in: [Component config](#) > [LWIP](#) > [TCP](#)*

Set default TCP rto time for a reasonable initial rto. In bad network environment, recommend set value of rto time to 1500.

**Default value:**

- 3000
- 1500

**UDP** Contains:

- [CONFIG\\_LWIP\\_UDP\\_RECVMBOX\\_SIZE](#)
- [CONFIG\\_LWIP\\_MAX\\_UDP\\_PCBS](#)

### CONFIG\_LWIP\_MAX\_UDP\_PCBS

Maximum active UDP control blocks

*Found in: [Component config](#) > [LWIP](#) > [UDP](#)*

The maximum number of active UDP “connections” (ie UDP sockets sending/receiving data). The practical maximum limit is determined by available heap memory at runtime.

**Range:**

- from 1 to 1024

**Default value:**

- 16

### CONFIG\_LWIP\_UDP\_RECVMBOX\_SIZE

Default UDP receive mail box size

*Found in: [Component config](#) > [LWIP](#) > [UDP](#)*

Set UDP receive mail box size. The recommended value is 6.

UDP receive mail box is a per socket mail box, when the application receives packets from UDP socket, LWIP core firstly posts the packets to UDP receive mail box and the application then fetches the packets from mail box. It means LWIP can cache maximum `UDP_RECCVMBOX_SIZE` packets for each UDP socket, so the maximum possible cached UDP packets for all UDP sockets is `UDP_RECCVMBOX_SIZE` multiplies the maximum UDP socket number. In other words, the bigger `UDP_RECCVMBOX_SIZE` means more memory. On the other hand, if the receive mail box is too small, the mail box may be full. If the mail box is full, the LWIP drops the packets. So generally we need to make sure the UDP receive mail box is big enough to avoid packet drop between LWIP core and application.

**Range:**

- from 6 to 64

**Default value:**

- 6

**Checksums** Contains:

- [CONFIG\\_LWIP\\_CHECKSUM\\_CHECK\\_ICMP](#)
- [CONFIG\\_LWIP\\_CHECKSUM\\_CHECK\\_IP](#)
- [CONFIG\\_LWIP\\_CHECKSUM\\_CHECK\\_UDP](#)

### **CONFIG\_LWIP\_CHECKSUM\_CHECK\_IP**

Enable LWIP IP checksums

*Found in:* [Component config](#) > [LWIP](#) > [Checksums](#)

Enable checksum checking for received IP messages

**Default value:**

- No (disabled)

### **CONFIG\_LWIP\_CHECKSUM\_CHECK\_UDP**

Enable LWIP UDP checksums

*Found in:* [Component config](#) > [LWIP](#) > [Checksums](#)

Enable checksum checking for received UDP messages

**Default value:**

- No (disabled)

### **CONFIG\_LWIP\_CHECKSUM\_CHECK\_ICMP**

Enable LWIP ICMP checksums

*Found in:* [Component config](#) > [LWIP](#) > [Checksums](#)

Enable checksum checking for received ICMP messages

**Default value:**

- Yes (enabled)

### **CONFIG\_LWIP\_TCPIP\_TASK\_STACK\_SIZE**

TCP/IP Task Stack Size

*Found in:* [Component config](#) > [LWIP](#)

Configure TCP/IP task stack size, used by LWIP to process multi-threaded TCP/IP operations. Setting this stack too small will result in stack overflow crashes.

**Range:**

- from 2048 to 65536

**Default value:**

- 3072

### CONFIG\_LWIP\_TCPIP\_TASK\_AFFINITY

TCP/IP task affinity

*Found in: [Component config](#) > [LWIP](#)*

Allows setting LwIP tasks affinity, i.e. whether the task is pinned to CPU0, pinned to CPU1, or allowed to run on any CPU. Currently this applies to “TCP/IP” task and “Ping” task.

**Available options:**

- No affinity (LWIP\_TCPIP\_TASK\_AFFINITY\_NO\_AFFINITY)
- CPU0 (LWIP\_TCPIP\_TASK\_AFFINITY\_CPU0)
- CPU1 (LWIP\_TCPIP\_TASK\_AFFINITY\_CPU1)

### CONFIG\_LWIP\_PPP\_SUPPORT

Enable PPP support (new/experimental)

*Found in: [Component config](#) > [LWIP](#)*

Enable PPP stack. Now only PPP over serial is possible.

PPP over serial support is experimental and unsupported.

**Default value:**

- No (disabled)

Contains:

- [CONFIG\\_LWIP\\_PPP\\_ENABLE\\_IPV6](#)

### CONFIG\_LWIP\_PPP\_ENABLE\_IPV6

Enable IPV6 support for PPP connections (IPV6CP)

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_PPP\\_SUPPORT](#)*

Enable IPV6 support in PPP for the local link between the DTE (processor) and DCE (modem). There are some modems which do not support the IPV6 addressing in the local link. If they are requested for IPV6CP negotiation, they may time out. This would in turn fail the configuration for the whole link. If your modem is not responding correctly to PPP Phase Network, try to disable IPV6 support.

**Default value:**

- Yes (enabled) if [CONFIG\\_LWIP\\_PPP\\_SUPPORT](#) && [CONFIG\\_LWIP\\_IPV6](#)

### CONFIG\_LWIP\_IPV6\_MEMP\_NUM\_ND6\_QUEUE

Max number of IPv6 packets to queue during MAC resolution

*Found in: [Component config](#) > [LWIP](#)*

Config max number of IPv6 packets to queue during MAC resolution.

**Range:**

- from 3 to 20

**Default value:**

- 3

### CONFIG\_LWIP\_IPV6\_ND6\_NUM\_NEIGHBORS

Max number of entries in IPv6 neighbor cache

*Found in: [Component config](#) > [LWIP](#)*

Config max number of entries in IPv6 neighbor cache

**Range:**

- from 3 to 10

**Default value:**

- 5

### CONFIG\_LWIP\_ND6

LWIP NDP6 Enable/Disable

*Found in: [Component config](#) > [LWIP](#)*

This option is used to disable the Network Discovery Protocol (NDP) if it is not required. Please use this option with caution, as the NDP is essential for IPv6 functionality within a local network.

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_FORCE\_ROUTER\_FORWARDING

LWIP Force Router Forwarding Enable/Disable

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_ND6](#)*

This option is used to set the the router flag for the NA packets. When enabled, the router flag in NA packet will always set to 1, otherwise, never set router flag for NA packets.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_PPP\_NOTIFY\_PHASE\_SUPPORT

Enable Notify Phase Callback

*Found in: [Component config](#) > [LWIP](#)*

Enable to set a callback which is called on change of the internal PPP state machine.

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_PPP\\_SUPPORT](#)

### CONFIG\_LWIP\_PPP\_PAP\_SUPPORT

Enable PAP support

*Found in: [Component config](#) > [LWIP](#)*

Enable Password Authentication Protocol (PAP) support

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_PPP\\_SUPPORT](#)

### CONFIG\_LWIP\_PPP\_CHAP\_SUPPORT

Enable CHAP support

*Found in: [Component config](#) > [LWIP](#)*

Enable Challenge Handshake Authentication Protocol (CHAP) support

**Default value:**

- No (disabled) if `CONFIG_LWIP_PPP_SUPPORT`

### **CONFIG\_LWIP\_PPP\_MSCHAP\_SUPPORT**

Enable MSCHAP support

*Found in: Component config > LWIP*

Enable Microsoft version of the Challenge-Handshake Authentication Protocol (MSCHAP) support

**Default value:**

- No (disabled) if `CONFIG_LWIP_PPP_SUPPORT`

### **CONFIG\_LWIP\_PPP\_MPPE\_SUPPORT**

Enable MPPE support

*Found in: Component config > LWIP*

Enable Microsoft Point-to-Point Encryption (MPPE) support

**Default value:**

- No (disabled) if `CONFIG_LWIP_PPP_SUPPORT`

### **CONFIG\_LWIP\_ENABLE\_LCP\_ECHO**

Enable LCP ECHO

*Found in: Component config > LWIP*

Enable LCP echo keepalive requests

**Default value:**

- No (disabled) if `CONFIG_LWIP_PPP_SUPPORT`

### **CONFIG\_LWIP\_LCP\_ECHOINTERVAL**

Echo interval (s)

*Found in: Component config > LWIP > CONFIG\_LWIP\_ENABLE\_LCP\_ECHO*

Interval in seconds between keepalive LCP echo requests, 0 to disable.

**Range:**

- from 0 to 1000000 if `CONFIG_LWIP_ENABLE_LCP_ECHO`

**Default value:**

- 3 if `CONFIG_LWIP_ENABLE_LCP_ECHO`

### **CONFIG\_LWIP\_LCP\_MAXECHOFAILS**

Maximum echo failures

*Found in: Component config > LWIP > CONFIG\_LWIP\_ENABLE\_LCP\_ECHO*

Number of consecutive unanswered echo requests before failure is indicated.

**Range:**

- from 0 to 100000 if `CONFIG_LWIP_ENABLE_LCP_ECHO`

**Default value:**

- 3 if `CONFIG_LWIP_ENABLE_LCP_ECHO`

### CONFIG\_LWIP\_PPP\_DEBUG\_ON

Enable PPP debug log output

*Found in: [Component config](#) > [LWIP](#)*

Enable PPP debug log output

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_PPP\\_SUPPORT](#)

### CONFIG\_LWIP\_SLIP\_SUPPORT

Enable SLIP support (new/experimental)

*Found in: [Component config](#) > [LWIP](#)*

Enable SLIP stack. Now only SLIP over serial is possible.

SLIP over serial support is experimental and unsupported.

**Default value:**

- No (disabled)

Contains:

- [CONFIG\\_LWIP\\_SLIP\\_DEBUG\\_ON](#)

### CONFIG\_LWIP\_SLIP\_DEBUG\_ON

Enable SLIP debug log output

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_SLIP\\_SUPPORT](#)*

Enable SLIP debug log output

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_SLIP\\_SUPPORT](#)

**ICMP** Contains:

- [CONFIG\\_LWIP\\_ICMP](#)
- [CONFIG\\_LWIP\\_BROADCAST\\_PING](#)
- [CONFIG\\_LWIP\\_MULTICAST\\_PING](#)

### CONFIG\_LWIP\_ICMP

ICMP: Enable ICMP

*Found in: [Component config](#) > [LWIP](#) > [ICMP](#)*

Enable ICMP module for check network stability

**Default value:**

- Yes (enabled)

### CONFIG\_LWIP\_MULTICAST\_PING

Respond to multicast pings

*Found in: [Component config](#) > [LWIP](#) > [ICMP](#)*

**Default value:**

- No (disabled)

## CONFIG\_LWIP\_BROADCAST\_PING

Respond to broadcast pings

*Found in: [Component config](#) > [LWIP](#) > [ICMP](#)*

**Default value:**

- No (disabled)

## LWIP RAW API

 Contains:

- [CONFIG\\_LWIP\\_MAX\\_RAW\\_PCBS](#)

## CONFIG\_LWIP\_MAX\_RAW\_PCBS

Maximum LWIP RAW PCBs

*Found in: [Component config](#) > [LWIP](#) > [LWIP RAW API](#)*

The maximum number of simultaneously active LWIP RAW protocol control blocks. The practical maximum limit is determined by available heap memory at runtime.

**Range:**

- from 1 to 1024

**Default value:**

- 16

## SNTP

 Contains:

- [CONFIG\\_LWIP\\_SNTP\\_MAX\\_SERVERS](#)
- [CONFIG\\_LWIP\\_SNTP\\_UPDATE\\_DELAY](#)
- [CONFIG\\_LWIP\\_DHCP\\_GET\\_NTP\\_SRV](#)

## CONFIG\_LWIP\_SNTP\_MAX\_SERVERS

Maximum number of NTP servers

*Found in: [Component config](#) > [LWIP](#) > [SNTP](#)*

Set maximum number of NTP servers used by LwIP SNTP module. First argument of `sntp_setserver/sntp_setservername` functions is limited to this value.

**Range:**

- from 1 to 16

**Default value:**

- 1

## CONFIG\_LWIP\_DHCP\_GET\_NTP\_SRV

Request NTP servers from DHCP

*Found in: [Component config](#) > [LWIP](#) > [SNTP](#)*

If enabled, LWIP will add 'NTP' to Parameter-Request Option sent via DHCP-request. DHCP server might reply with an NTP server address in option 42. SNTP callback for such replies should be set accordingly (see `sntp_servermode_dhcp()` func.)

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_DHCP\_MAX\_NTP\_SERVERS

Maximum number of NTP servers acquired via DHCP

*Found in:* [Component config](#) > [LWIP](#) > [SNTP](#) > [CONFIG\\_LWIP\\_DHCP\\_GET\\_NTP\\_SRV](#)

Set maximum number of NTP servers acquired via DHCP-offer. Should be less or equal to “Maximum number of NTP servers”, any extra servers would be just ignored.

**Range:**

- from 1 to 16 if [CONFIG\\_LWIP\\_DHCP\\_GET\\_NTP\\_SRV](#)

**Default value:**

- 1 if [CONFIG\\_LWIP\\_DHCP\\_GET\\_NTP\\_SRV](#)

### CONFIG\_LWIP\_SNTP\_UPDATE\_DELAY

Request interval to update time (ms)

*Found in:* [Component config](#) > [LWIP](#) > [SNTP](#)

This option allows you to set the time update period via SNTP. Default is 1 hour. Must not be below 15 seconds by specification. (SNTPv4 RFC 4330 enforces a minimum update time of 15 seconds).

**Range:**

- from 15000 to 4294967295

**Default value:**

- 3600000

### CONFIG\_LWIP\_BRIDGEIF\_MAX\_PORTS

Maximum number of bridge ports

*Found in:* [Component config](#) > [LWIP](#)

Set maximum number of ports a bridge can consists of.

**Range:**

- from 1 to 63

**Default value:**

- 7

**DNS** Contains:

- [CONFIG\\_LWIP\\_FALLBACK\\_DNS\\_SERVER\\_SUPPORT](#)
- [CONFIG\\_LWIP\\_DNS\\_MAX\\_SERVERS](#)

### CONFIG\_LWIP\_DNS\_MAX\_SERVERS

Maximum number of DNS servers

*Found in:* [Component config](#) > [LWIP](#) > [DNS](#)

Set maximum number of DNS servers. If fallback DNS servers are supported, the number of DNS servers needs to be greater than or equal to 3.

**Range:**

- from 1 to 4

**Default value:**

- 3

### CONFIG\_LWIP\_FALLBACK\_DNS\_SERVER\_SUPPORT

Enable DNS fallback server support

*Found in:* [Component config](#) > [LWIP](#) > [DNS](#)

Enable this feature to support DNS fallback server.

**Default value:**

- No (disabled)

### CONFIG\_LWIP\_FALLBACK\_DNS\_SERVER\_ADDRESS

DNS fallback server address

*Found in:* [Component config](#) > [LWIP](#) > [DNS](#) > [CONFIG\\_LWIP\\_FALLBACK\\_DNS\\_SERVER\\_SUPPORT](#)

This option allows you to config dns fallback server address.

**Default value:**

- “114.114.114.114” if [CONFIG\\_LWIP\\_FALLBACK\\_DNS\\_SERVER\\_SUPPORT](#)

### CONFIG\_LWIP\_ESP\_LWIP\_ASSERT

Enable LWIP ASSERT checks

*Found in:* [Component config](#) > [LWIP](#)

Enable this option keeps LWIP assertion checks enabled. It is recommended to keep this option enabled.

If asserts are disabled for the entire project, they are also disabled for LWIP and this option is ignored.

**Default value:**

- Yes (enabled) if [COMPILER\\_OPTIMIZATION\\_ASSERTIONS\\_DISABLE](#)

**Hooks** Contains:

- [CONFIG\\_LWIP\\_HOOK\\_ND6\\_GET\\_GW](#)
- [CONFIG\\_LWIP\\_HOOK\\_IP6\\_INPUT](#)
- [CONFIG\\_LWIP\\_HOOK\\_IP6\\_ROUTE](#)
- [CONFIG\\_LWIP\\_HOOK\\_NETCONN\\_EXTERNAL\\_RESOLVE](#)
- [CONFIG\\_LWIP\\_HOOK\\_TCP\\_ISN](#)

### CONFIG\_LWIP\_HOOK\_TCP\_ISN

TCP ISN Hook

*Found in:* [Component config](#) > [LWIP](#) > [Hooks](#)

Enables to define a TCP ISN hook to randomize initial sequence number in TCP connection. The default TCP ISN algorithm used in IDF (standardized in RFC 6528) produces ISN by combining an MD5 of the new TCP id and a stable secret with the current time. This is because the lwIP implementation (*tcp\_next\_isn*) is not very strong, as it does not take into consideration any platform specific entropy source.

Set to [LWIP\\_HOOK\\_TCP\\_ISN\\_CUSTOM](#) to provide custom implementation. Set to [LWIP\\_HOOK\\_TCP\\_ISN\\_NONE](#) to use lwIP implementation.

**Available options:**

- No hook declared ([LWIP\\_HOOK\\_TCP\\_ISN\\_NONE](#))
- Default implementation ([LWIP\\_HOOK\\_TCP\\_ISN\\_DEFAULT](#))
- Custom implementation ([LWIP\\_HOOK\\_TCP\\_ISN\\_CUSTOM](#))

## CONFIG\_LWIP\_HOOK\_IP6\_ROUTE

IPv6 route Hook

*Found in: [Component config](#) > [LWIP](#) > [Hooks](#)*

Enables custom IPv6 route hook. Setting this to “default” provides weak implementation stub that could be overwritten in application code. Setting this to “custom” provides hook’s declaration only and expects the application to implement it.

**Available options:**

- No hook declared (LWIP\_HOOK\_IP6\_ROUTE\_NONE)
- Default (weak) implementation (LWIP\_HOOK\_IP6\_ROUTE\_DEFAULT)
- Custom implementation (LWIP\_HOOK\_IP6\_ROUTE\_CUSTOM)

## CONFIG\_LWIP\_HOOK\_ND6\_GET\_GW

IPv6 get gateway Hook

*Found in: [Component config](#) > [LWIP](#) > [Hooks](#)*

Enables custom IPv6 route hook. Setting this to “default” provides weak implementation stub that could be overwritten in application code. Setting this to “custom” provides hook’s declaration only and expects the application to implement it.

**Available options:**

- No hook declared (LWIP\_HOOK\_ND6\_GET\_GW\_NONE)
- Default (weak) implementation (LWIP\_HOOK\_ND6\_GET\_GW\_DEFAULT)
- Custom implementation (LWIP\_HOOK\_ND6\_GET\_GW\_CUSTOM)

## CONFIG\_LWIP\_HOOK\_NETCONN\_EXTERNAL\_RESOLVE

Netconn external resolve Hook

*Found in: [Component config](#) > [LWIP](#) > [Hooks](#)*

Enables custom DNS resolve hook. Setting this to “default” provides weak implementation stub that could be overwritten in application code. Setting this to “custom” provides hook’s declaration only and expects the application to implement it.

**Available options:**

- No hook declared (LWIP\_HOOK\_NETCONN\_EXT\_RESOLVE\_NONE)
- Default (weak) implementation (LWIP\_HOOK\_NETCONN\_EXT\_RESOLVE\_DEFAULT)
- Custom implementation (LWIP\_HOOK\_NETCONN\_EXT\_RESOLVE\_CUSTOM)

## CONFIG\_LWIP\_HOOK\_IP6\_INPUT

IPv6 packet input

*Found in: [Component config](#) > [LWIP](#) > [Hooks](#)*

Enables custom IPv6 packet input. Setting this to “default” provides weak implementation stub that could be overwritten in application code. Setting this to “custom” provides hook’s declaration only and expects the application to implement it.

**Available options:**

- No hook declared (LWIP\_HOOK\_IP6\_INPUT\_NONE)
- Default (weak) implementation (LWIP\_HOOK\_IP6\_INPUT\_DEFAULT)
- Custom implementation (LWIP\_HOOK\_IP6\_INPUT\_CUSTOM)

## CONFIG\_LWIP\_DEBUG

Enable LWIP Debug

*Found in: [Component config](#) > [LWIP](#)*

Enabling this option allows different kinds of lwIP debug output.

All lwIP debug features increase the size of the final binary.

**Default value:**

- No (disabled)

Contains:

- [CONFIG\\_LWIP\\_API\\_LIB\\_DEBUG](#)
- [CONFIG\\_LWIP\\_BRIDGEIF\\_FDB\\_DEBUG](#)
- [CONFIG\\_LWIP\\_BRIDGEIF\\_FW\\_DEBUG](#)
- [CONFIG\\_LWIP\\_BRIDGEIF\\_DEBUG](#)
- [CONFIG\\_LWIP\\_DHCP\\_DEBUG](#)
- [CONFIG\\_LWIP\\_DHCP\\_STATE\\_DEBUG](#)
- [CONFIG\\_LWIP\\_DNS\\_DEBUG](#)
- [CONFIG\\_LWIP\\_ETHARP\\_DEBUG](#)
- [CONFIG\\_LWIP\\_ICMP\\_DEBUG](#)
- [CONFIG\\_LWIP\\_ICMP6\\_DEBUG](#)
- [CONFIG\\_LWIP\\_IP\\_DEBUG](#)
- [CONFIG\\_LWIP\\_IP6\\_DEBUG](#)
- [CONFIG\\_LWIP\\_NETIF\\_DEBUG](#)
- [CONFIG\\_LWIP\\_PBUF\\_DEBUG](#)
- [CONFIG\\_LWIP\\_SNTP\\_DEBUG](#)
- [CONFIG\\_LWIP\\_SOCKETS\\_DEBUG](#)
- [CONFIG\\_LWIP\\_TCP\\_DEBUG](#)
- [CONFIG\\_LWIP\\_DEBUG\\_ESP\\_LOG](#)

## CONFIG\_LWIP\_DEBUG\_ESP\_LOG

Route LWIP debugs through ESP\_LOG interface

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_DEBUG](#)*

Enabling this option routes all enabled LWIP debugs through ESP\_LOGD.

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_DEBUG](#)

## CONFIG\_LWIP\_NETIF\_DEBUG

Enable netif debug messages

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_DEBUG](#)*

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_DEBUG](#)

## CONFIG\_LWIP\_PBUF\_DEBUG

Enable pbuf debug messages

*Found in: [Component config](#) > [LWIP](#) > [CONFIG\\_LWIP\\_DEBUG](#)*

**Default value:**

- No (disabled) if [CONFIG\\_LWIP\\_DEBUG](#)

### **CONFIG\_LWIP\_ETHARP\_DEBUG**

Enable etharp debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_API\_LIB\_DEBUG**

Enable api lib debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_SOCKETS\_DEBUG**

Enable socket debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_IP\_DEBUG**

Enable IP debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_ICMP\_DEBUG**

Enable ICMP debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG* && *CONFIG\_LWIP\_ICMP*

### **CONFIG\_LWIP\_DHCP\_STATE\_DEBUG**

Enable DHCP state tracking

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_DHCP\_DEBUG**

Enable DHCP debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_IP6\_DEBUG**

Enable IP6 debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_ICMP6\_DEBUG**

Enable ICMP6 debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_TCP\_DEBUG**

Enable TCP debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_SNTP\_DEBUG**

Enable SNTP debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_DNS\_DEBUG**

Enable DNS debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_BRIDGEIF\_DEBUG**

Enable bridge generic debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

### **CONFIG\_LWIP\_BRIDGEIF\_FDB\_DEBUG**

Enable bridge FDB debug messages

*Found in: Component config > LWIP > CONFIG\_LWIP\_DEBUG*

**Default value:**

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

## CONFIG\_LWIP\_BRIDGEIF\_FW\_DEBUG

Enable bridge forwarding debug messages

Found in: *Component config* > *LWIP* > *CONFIG\_LWIP\_DEBUG*

### Default value:

- No (disabled) if *CONFIG\_LWIP\_DEBUG*

**MBEDTLS** Contains:

- *CONFIG\_MBEDTLS\_ASYMMETRIC\_CONTENT\_LEN*
- *Certificate Bundle*
- *Certificates*
- *CONFIG\_MBEDTLS\_CHACHA20\_C*
- *CONFIG\_MBEDTLS\_DHM\_C*
- *CONFIG\_MBEDTLS\_ECP\_C*
- *CONFIG\_MBEDTLS\_ECDH\_C*
- *CONFIG\_MBEDTLS\_ECJPAKE\_C*
- *CONFIG\_MBEDTLS\_ECP\_DP\_BP256R1\_ENABLED*
- *CONFIG\_MBEDTLS\_ECP\_DP\_BP384R1\_ENABLED*
- *CONFIG\_MBEDTLS\_ECP\_DP\_BP512R1\_ENABLED*
- *CONFIG\_MBEDTLS\_CMAC\_C*
- *CONFIG\_MBEDTLS\_ECP\_DP\_CURVE25519\_ENABLED*
- *CONFIG\_MBEDTLS\_ECDSA\_DETERMINISTIC*
- *CONFIG\_MBEDTLS\_ECP\_FIXED\_POINT\_OPTIM*
- *CONFIG\_MBEDTLS\_HARDWARE\_AES*
- *CONFIG\_MBEDTLS\_HARDWARE\_ECC*

- *CONFIG\_MBEDTLS\_HKDF\_C*
- *MBEDTLS v3.x related*
- *CONFIG\_MBEDTLS\_MEM\_ALLOC\_MODE*
- *CONFIG\_MBEDTLS\_ECP\_NIST\_OPTIM*
- *CONFIG\_MBEDTLS\_POLY1305\_C*
- *CONFIG\_MBEDTLS\_SSL\_ALPN*
- *CONFIG\_MBEDTLS\_SSL\_PROTO\_DTLS*
- *CONFIG\_MBEDTLS\_SSL\_PROTO\_GMTSSL1\_1*
- *CONFIG\_MBEDTLS\_SSL\_PROTO\_TLS1\_2*
- *CONFIG\_MBEDTLS\_SSL\_RENEGOTIATION*
- *Symmetric Ciphers*

- *TLS Key Exchange Methods*
- *CONFIG\_MBEDTLS\_SSL\_MAX\_CONTENT\_LEN*
- *CONFIG\_MBEDTLS\_TLS\_MODE*
- *CONFIG\_MBEDTLS\_CLIENT\_SSL\_SESSION\_TICKETS*
- *CONFIG\_MBEDTLS\_SERVER\_SSL\_SESSION\_TICKETS*
- *CONFIG\_MBEDTLS\_ROM\_MD5*
- *CONFIG\_MBEDTLS\_USE\_CRYPTO\_ROM\_IMPL*
- *CONFIG\_MBEDTLS\_DYNAMIC\_BUFFER*

## CONFIG\_MBEDTLS\_MEM\_ALLOC\_MODE

Memory allocation strategy

Found in: *Component config > mbedTLS*

Allocation strategy for mbedTLS, essentially provides ability to allocate all required dynamic allocations from,

- Internal DRAM memory only
- External SPIRAM memory only
- Either internal or external memory based on default malloc() behavior in ESP-IDF
- Custom allocation mode, by overwriting calloc()/free() using mbedtls\_platform\_set\_malloc\_free() function
- Internal IRAM memory wherever applicable else internal DRAM

Recommended mode here is always internal (\*), since that is most preferred from security perspective. But if application requirement does not allow sufficient free internal memory then alternate mode can be selected.

(\*) In case of ESP32-S2/ESP32-S3, hardware allows encryption of external SPIRAM contents provided hardware flash encryption feature is enabled. In that case, using external SPIRAM allocation strategy is also safe choice from security perspective.

### Available options:

- Internal memory (MBEDTLS\_INTERNAL\_MEM\_ALLOC)
- External SPIRAM (MBEDTLS\_EXTERNAL\_MEM\_ALLOC)
- Default alloc mode (MBEDTLS\_DEFAULT\_MEM\_ALLOC)
- Custom alloc mode (MBEDTLS\_CUSTOM\_MEM\_ALLOC)
- Internal IRAM (MBEDTLS\_IRAM\_8BIT\_MEM\_ALLOC)  
Allows to use IRAM memory region as 8bit accessible region.  
TLS input and output buffers will be allocated in IRAM section which is 32bit aligned memory. Every unaligned (8bit or 16bit) access will result in an exception and incur penalty of certain clock cycles per unaligned read/write.

## CONFIG\_MBEDTLS\_SSL\_MAX\_CONTENT\_LEN

TLS maximum message content length

Found in: *Component config > mbedTLS*

Maximum TLS message length (in bytes) supported by mbedTLS.

16384 is the default and this value is required to comply fully with TLS standards.

However you can set a lower value in order to save RAM. This is safe if the other end of the connection supports Maximum Fragment Length Negotiation Extension (max\_fragment\_length, see RFC6066) or you know for certain that it will never send a message longer than a certain number of bytes.

If the value is set too low, symptoms are a failed TLS handshake or a return value of MBEDTLS\_ERR\_SSL\_INVALID\_RECORD (-0x7200).

### Range:

- from 512 to 16384

### Default value:

- 16384

### CONFIG\_MBEDTLS\_ASYMMETRIC\_CONTENT\_LEN

Asymmetric in/out fragment length

*Found in: [Component config](#) > [mbedtls](#)*

If enabled, this option allows customizing TLS in/out fragment length in asymmetric way. Please note that enabling this with default values saves 12KB of dynamic memory per TLS connection.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_SSL\_IN\_CONTENT\_LEN

TLS maximum incoming fragment length

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_ASYMMETRIC\\_CONTENT\\_LEN](#)*

This defines maximum incoming fragment length, overriding default maximum content length (MBEDTLS\_SSL\_MAX\_CONTENT\_LEN).

**Range:**

- from 512 to 16384

**Default value:**

- 16384

### CONFIG\_MBEDTLS\_SSL\_OUT\_CONTENT\_LEN

TLS maximum outgoing fragment length

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_ASYMMETRIC\\_CONTENT\\_LEN](#)*

This defines maximum outgoing fragment length, overriding default maximum content length (MBEDTLS\_SSL\_MAX\_CONTENT\_LEN).

**Range:**

- from 512 to 16384

**Default value:**

- 4096

### CONFIG\_MBEDTLS\_DYNAMIC\_BUFFER

Using dynamic TX/RX buffer

*Found in: [Component config](#) > [mbedtls](#)*

Using dynamic TX/RX buffer. After enabling this option, mbedtls will allocate TX buffer when need to send data and then free it if all data is sent, allocate RX buffer when need to receive data and then free it when all data is used or read by upper layer.

By default, when SSL is initialized, mbedtls also allocate TX and RX buffer with the default value of “MBEDTLS\_SSL\_OUT\_CONTENT\_LEN” or “MBEDTLS\_SSL\_IN\_CONTENT\_LEN” , so to save more heap, users can set the options to be an appropriate value.

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_DTLS](#) && [CONFIG\\_MBEDTLS\\_SSL\\_VARIABLE\\_BUFFER\\_LENGTH](#)

### CONFIG\_MBEDTLS\_DYNAMIC\_FREE\_CONFIG\_DATA

Free private key and DHM data after its usage

*Found in:* [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_DYNAMIC\\_BUFFER](#)

Free private key and DHM data after its usage in handshake process.

The option will decrease heap cost when handshake, but also lead to problem:

Because all certificate, private key and DHM data are freed so users should register certificate and private key to ssl config object again.

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_DYNAMIC\\_BUFFER](#)

### CONFIG\_MBEDTLS\_DYNAMIC\_FREE\_CA\_CERT

Free SSL CA certificate after its usage

*Found in:* [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_DYNAMIC\\_BUFFER](#) > [CONFIG\\_MBEDTLS\\_DYNAMIC\\_FREE\\_CONFIG\\_DATA](#)

Free CA certificate after its usage in the handshake process. This option will decrease the heap footprint for the TLS handshake, but may lead to a problem: If the respective ssl object needs to perform the TLS handshake again, the CA certificate should once again be registered to the ssl object.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_DYNAMIC\\_FREE\\_CONFIG\\_DATA](#)

### CONFIG\_MBEDTLS\_DEBUG

Enable mbedtls debugging

*Found in:* [Component config](#) > [mbedtls](#)

Enable mbedtls debugging functions at compile time.

If this option is enabled, you can include “mbedtls/esp\_debug.h” and call `mbedtls_esp_enable_debug_log()` at runtime in order to enable mbedtls debug output via the ESP log mechanism.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_DEBUG\_LEVEL

Set mbedtls debugging level

*Found in:* [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_DEBUG](#)

Set mbedtls debugging level

**Available options:**

- Warning (MBEDTLS\_DEBUG\_LEVEL\_WARN)
- Info (MBEDTLS\_DEBUG\_LEVEL\_INFO)
- Debug (MBEDTLS\_DEBUG\_LEVEL\_DEBUG)
- Verbose (MBEDTLS\_DEBUG\_LEVEL\_VERBOSE)

**mbedtls v3.x related** Contains:

- [DTLS-based configurations](#)
- [CONFIG\\_MBEDTLS\\_PKCS7\\_C](#)
- [CONFIG\\_MBEDTLS\\_SSL\\_CONTEXT\\_SERIALIZATION](#)
- [CONFIG\\_MBEDTLS\\_X509\\_TRUSTED\\_CERT\\_CALLBACK](#)

- `CONFIG_MBEDTLS_SSL_KEEP_PEER_CERTIFICATE`
- `CONFIG_MBEDTLS_SSL_CID_PADDING_GRANULARITY`
- `CONFIG_MBEDTLS_SSL_PROTO_TLS1_3`
- `CONFIG_MBEDTLS_ECDH_LEGACY_CONTEXT`
- `CONFIG_MBEDTLS_SSL_VARIABLE_BUFFER_LENGTH`

### **CONFIG\_MBEDTLS\_SSL\_PROTO\_TLS1\_3**

Support TLS 1.3 protocol

*Found in: Component config > mbedTLS > mbedTLS v3.x related*

**Default value:**

- No (disabled) if `CONFIG_MBEDTLS_SSL_KEEP_PEER_CERTIFICATE` && `CONFIG_MBEDTLS_DYNAMIC_BUFFER`

### **TLS 1.3 related configurations** Contains:

- `CONFIG_MBEDTLS_SSL_TLS1_3_KEXM_EPHEMERAL`
- `CONFIG_MBEDTLS_SSL_TLS1_3_COMPATIBILITY_MODE`
- `CONFIG_MBEDTLS_SSL_TLS1_3_KEXM_PSK_EPHEMERAL`
- `CONFIG_MBEDTLS_SSL_TLS1_3_KEXM_PSK`

### **CONFIG\_MBEDTLS\_SSL\_TLS1\_3\_COMPATIBILITY\_MODE**

TLS 1.3 middlebox compatibility mode

*Found in: Component config > mbedTLS > mbedTLS v3.x related > CONFIG\_MBEDTLS\_SSL\_PROTO\_TLS1\_3 > TLS 1.3 related configurations*

**Default value:**

- Yes (enabled) if `CONFIG_MBEDTLS_SSL_PROTO_TLS1_3`

### **CONFIG\_MBEDTLS\_SSL\_TLS1\_3\_KEXM\_PSK**

TLS 1.3 PSK key exchange mode

*Found in: Component config > mbedTLS > mbedTLS v3.x related > CONFIG\_MBEDTLS\_SSL\_PROTO\_TLS1\_3 > TLS 1.3 related configurations*

**Default value:**

- Yes (enabled) if `CONFIG_MBEDTLS_SSL_PROTO_TLS1_3`

### **CONFIG\_MBEDTLS\_SSL\_TLS1\_3\_KEXM\_EPHEMERAL**

TLS 1.3 ephemeral key exchange mode

*Found in: Component config > mbedTLS > mbedTLS v3.x related > CONFIG\_MBEDTLS\_SSL\_PROTO\_TLS1\_3 > TLS 1.3 related configurations*

**Default value:**

- Yes (enabled) if `CONFIG_MBEDTLS_SSL_PROTO_TLS1_3`

### **CONFIG\_MBEDTLS\_SSL\_TLS1\_3\_KEXM\_PSK\_EPHEMERAL**

TLS 1.3 PSK ephemeral key exchange mode

*Found in: Component config > mbedTLS > mbedTLS v3.x related > CONFIG\_MBEDTLS\_SSL\_PROTO\_TLS1\_3 > TLS 1.3 related configurations*

**Default value:**

- Yes (enabled) if `CONFIG_MBEDTLS_SSL_PROTO_TLS1_3`

### CONFIG\_MBEDTLS\_SSL\_VARIABLE\_BUFFER\_LENGTH

Variable SSL buffer length

*Found in: [Component config](#) > [mbedtls](#) > [mbedtls v3.x related](#)*

This enables the SSL buffer to be resized automatically based on the negotiated maximum fragment length in each direction.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_ECDH\_LEGACY\_CONTEXT

Use a backward compatible ECDH context (Experimental)

*Found in: [Component config](#) > [mbedtls](#) > [mbedtls v3.x related](#)*

Use the legacy ECDH context format. Define this option only if you enable MBEDTLS\_ECP\_RESTARTABLE or if you want to access ECDH context fields directly.

**Default value:**

- No (disabled) if `CONFIG_MBEDTLS_ECDH_C` && `CONFIG_MBEDTLS_ECP_RESTARTABLE`

### CONFIG\_MBEDTLS\_X509\_TRUSTED\_CERT\_CALLBACK

Enable trusted certificate callbacks

*Found in: [Component config](#) > [mbedtls](#) > [mbedtls v3.x related](#)*

Enables users to configure the set of trusted certificates through a callback instead of a linked list.

See mbedtls documentation for required API and more details.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_SSL\_CONTEXT\_SERIALIZATION

Enable serialization of the TLS context structures

*Found in: [Component config](#) > [mbedtls](#) > [mbedtls v3.x related](#)*

Enable serialization of the TLS context structures This is a local optimization in handling a single, potentially long-lived connection.

See mbedtls documentation for required API and more details. Disabling this option will save some code size.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_SSL\_KEEP\_PEER\_CERTIFICATE

Keep peer certificate after handshake completion

*Found in: [Component config](#) > [mbedtls](#) > [mbedtls v3.x related](#)*

Keep the peer's certificate after completion of the handshake. Disabling this option will save about 4kB of heap and some code size.

See mbedtls documentation for required API and more details.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_PKCS7\_C

Enable PKCS #7

*Found in: [Component config > mbedTLS > mbedTLS v3.x related](#)*

Enable PKCS #7 core for using PKCS #7-formatted signatures.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_SSL\_CID\_PADDING\_GRANULARITY

Record plaintext padding

*Found in: [Component config > mbedTLS > mbedTLS v3.x related](#)*

Controls the use of record plaintext padding in TLS 1.3 and when using the Connection ID extension in DTLS 1.2.

The padding will always be chosen so that the length of the padded plaintext is a multiple of the value of this option.

**Notes:** A value of 1 means that no padding will be used for outgoing records. On systems lacking division instructions, a power of two should be preferred.

**Range:**

- from 0 to 32 if [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_TLS1\\_3](#) || [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#)

**Default value:**

- 16 if [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_TLS1\\_3](#) || [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#)

**DTLS-based configurations** Contains:

- [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_SRTP](#)
- [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#)

### CONFIG\_MBEDTLS\_SSL\_DTLS\_CONNECTION\_ID

Support for the DTLS Connection ID extension

*Found in: [Component config > mbedTLS > mbedTLS v3.x related > DTLS-based configurations](#)*

Enable support for the DTLS Connection ID extension which allows to identify DTLS connections across changes in the underlying transport.

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_DTLS](#)

### CONFIG\_MBEDTLS\_SSL\_CID\_IN\_LEN\_MAX

Maximum length of CIDs used for incoming DTLS messages

*Found in: [Component config > mbedTLS > mbedTLS v3.x related > DTLS-based configurations > CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#)*

Maximum length of CIDs used for incoming DTLS messages

**Range:**

- from 0 to 32 if [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#) && [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_DTLS](#)

**Default value:**

- 32 if [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#) && [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_DTLS](#)

### CONFIG\_MBEDTLS\_SSL\_CID\_OUT\_LEN\_MAX

Maximum length of CIDs used for outgoing DTLS messages

*Found in:* [Component config > mbedTLS > mbedTLS v3.x related > DTLS-based configurations > CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#)

Maximum length of CIDs used for outgoing DTLS messages

**Range:**

- from 0 to 32 if [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#) && [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_DTLS](#)

**Default value:**

- 32 if [CONFIG\\_MBEDTLS\\_SSL\\_DTLS\\_CONNECTION\\_ID](#) && [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_DTLS](#)

### CONFIG\_MBEDTLS\_SSL\_DTLS\_SRTP

Enable support for negotiation of DTLS-SRTP (RFC 5764)

*Found in:* [Component config > mbedTLS > mbedTLS v3.x related > DTLS-based configurations](#)

Enable support for negotiation of DTLS-SRTP (RFC 5764) through the use\_srtp extension.

See mbedTLS documentation for required API and more details. Disabling this option will save some code size.

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_SSL\\_PROTO\\_DTLS](#)

**Certificate Bundle** Contains:

- [CONFIG\\_MBEDTLS\\_CERTIFICATE\\_BUNDLE](#)

### CONFIG\_MBEDTLS\_CERTIFICATE\_BUNDLE

Enable trusted root certificate bundle

*Found in:* [Component config > mbedTLS > Certificate Bundle](#)

Enable support for large number of default root certificates

When enabled this option allows user to store default as well as customer specific root certificates in compressed format rather than storing full certificate. For the root certificates the public key and the subject name will be stored.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_DEFAULT\_CERTIFICATE\_BUNDLE

Default certificate bundle options

*Found in:* [Component config > mbedTLS > Certificate Bundle > CONFIG\\_MBEDTLS\\_CERTIFICATE\\_BUNDLE](#)

**Available options:**

- Use the full default certificate bundle (MBEDTLS\_CERTIFICATE\_BUNDLE\_DEFAULT\_FULL)
- Use only the most common certificates from the default bundles (MBEDTLS\_CERTIFICATE\_BUNDLE\_DEFAULT\_CMN)  
Use only the most common certificates from the default bundles, reducing the size with 50%, while still having around 99% coverage.
- Do not use the default certificate bundle (MBEDTLS\_CERTIFICATE\_BUNDLE\_DEFAULT\_NONE)

### CONFIG\_MBEDTLS\_CUSTOM\_CERTIFICATE\_BUNDLE

Add custom certificates to the default bundle

*Found in:* [Component config](#) > [mbedtls](#) > [Certificate Bundle](#) > [CONFIG\\_MBEDTLS\\_CERTIFICATE\\_BUNDLE](#)

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_CUSTOM\_CERTIFICATE\_BUNDLE\_PATH

Custom certificate bundle path

*Found in:* [Component config](#) > [mbedtls](#) > [Certificate Bundle](#) > [CONFIG\\_MBEDTLS\\_CERTIFICATE\\_BUNDLE](#) > [CONFIG\\_MBEDTLS\\_CUSTOM\\_CERTIFICATE\\_BUNDLE](#)

Name of the custom certificate directory or file. This path is evaluated relative to the project root directory.

### CONFIG\_MBEDTLS\_CERTIFICATE\_BUNDLE\_MAX\_CERTS

Maximum no of certificates allowed in certificate bundle

*Found in:* [Component config](#) > [mbedtls](#) > [Certificate Bundle](#) > [CONFIG\\_MBEDTLS\\_CERTIFICATE\\_BUNDLE](#)

**Default value:**

- 200

### CONFIG\_MBEDTLS\_ECP\_RESTARTABLE

Enable mbedtls ecp restartable

*Found in:* [Component config](#) > [mbedtls](#)

Enable “non-blocking” ECC operations that can return early and be resumed.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_CMAC\_C

Enable CMAC mode for block ciphers

*Found in:* [Component config](#) > [mbedtls](#)

Enable the CMAC (Cipher-based Message Authentication Code) mode for block ciphers.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_HARDWARE\_AES

Enable hardware AES acceleration

*Found in:* [Component config](#) > [mbedtls](#)

Enable hardware accelerated AES encryption & decryption.

Note that if the ESP32 CPU is running at 240MHz, hardware AES does not offer any speed boost over software AES.

**Default value:**

- Yes (enabled) if SPIRAM\_CACHE\_WORKAROUND\_STRATEGY\_DUPLDST && SOC\_AES\_SUPPORTED

### CONFIG\_MBEDTLS\_AES\_USE\_INTERRUPT

Use interrupt for long AES operations

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_HARDWARE\\_AES](#)*

Use an interrupt to coordinate long AES operations.

This allows other code to run on the CPU while an AES operation is pending. Otherwise the CPU busy-waits.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_HARDWARE\\_AES](#)

### CONFIG\_MBEDTLS\_HARDWARE\_GCM

Enable partially hardware accelerated GCM

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_HARDWARE\\_AES](#)*

Enable partially hardware accelerated GCM. GHASH calculation is still done in software.

If MBEDTLS\_HARDWARE\_GCM is disabled and MBEDTLS\_HARDWARE\_AES is enabled then mbedtls will still use the hardware accelerated AES block operation, but on a single block at a time.

**Default value:**

- Yes (enabled) if SOC\_AES\_SUPPORT\_GCM && [CONFIG\\_MBEDTLS\\_HARDWARE\\_AES](#)

### CONFIG\_MBEDTLS\_GCM\_SUPPORT\_NON\_AES\_CIPHER

Enable support for non-AES ciphers in GCM operation

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_HARDWARE\\_AES](#)*

Enable this config to support fallback to software definitions for a non-AES cipher GCM operation as we support hardware acceleration only for AES cipher. Some of the non-AES ciphers used in a GCM operation are DES, ARIA, CAMELLIA, CHACHA20, BLOWFISH.

If this config is disabled, performing a non-AES cipher GCM operation with the config MBEDTLS\_HARDWARE\_AES enabled will result in calculation of an AES-GCM operation instead for the given input values and thus could lead to failure in certificate validation which would ultimately lead to a SSL handshake failure.

This config being by-default enabled leads to an increase in binary size footprint of ~2.5KB. In case you are sure that your use case (for example, client and server configurations in case of a TLS handshake) would not involve any GCM operations using a non-AES cipher, you can safely disable this config, leading to reduction in binary size footprint.

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_HARDWARE\\_AES](#)

### CONFIG\_MBEDTLS\_HARDWARE\_MPI

Enable hardware MPI (bignum) acceleration

*Found in: [Component config](#) > [mbedtls](#)*

Enable hardware accelerated multiple precision integer operations.

Hardware accelerated multiplication, modulo multiplication, and modular exponentiation for up to SOC\_RSA\_MAX\_BIT\_LEN bit results.

These operations are used by RSA.

**Default value:**

- Yes (enabled) if SPIRAM\_CACHE\_WORKAROUND\_STRATEGY\_DUPLDST && SOC\_MPI\_SUPPORTED

### CONFIG\_MBEDTLS\_MPI\_USE\_INTERRUPT

Use interrupt for MPI exp-mod operations

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_HARDWARE\\_MPI](#)*

Use an interrupt to coordinate long MPI operations.

This allows other code to run on the CPU while an MPI operation is pending. Otherwise the CPU busy-waits.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_HARDWARE\\_MPI](#)

### CONFIG\_MBEDTLS\_HARDWARE\_SHA

Enable hardware SHA acceleration

*Found in: [Component config](#) > [mbedtls](#)*

Enable hardware accelerated SHA1, SHA256, SHA384 & SHA512 in mbedtls.

Due to a hardware limitation, on the ESP32 hardware acceleration is only guaranteed if SHA digests are calculated one at a time. If more than one SHA digest is calculated at the same time, one will be calculated fully in hardware and the rest will be calculated (at least partially calculated) in software. This happens automatically.

SHA hardware acceleration is faster than software in some situations but slower in others. You should benchmark to find the best setting for you.

**Default value:**

- Yes (enabled) if SPIRAM\_CACHE\_WORKAROUND\_STRATEGY\_DUPLDST

### CONFIG\_MBEDTLS\_HARDWARE\_ECC

Enable hardware ECC acceleration

*Found in: [Component config](#) > [mbedtls](#)*

Enable hardware accelerated ECC point multiplication and point verification for points on curve SECP192R1 and SECP256R1 in mbedtls

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_ECC\_OTHER\_CURVES\_SOFT\_FALLBACK

Fallback to software implementation for curves not supported in hardware

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_HARDWARE\\_ECC](#)*

Fallback to software implementation of ECC point multiplication and point verification for curves not supported in hardware.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_ROM\_MD5

Use MD5 implementation in ROM

*Found in: [Component config](#) > [mbedtls](#)*

Use ROM MD5 in mbedtls.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_ATCA\_HW\_ECDSA\_SIGN

Enable hardware ECDSA sign acceleration when using ATECC608A

*Found in: [Component config](#) > [mbedtls](#)*

This option enables hardware acceleration for ECDSA sign function, only when using ATECC608A cryptoauth chip (integrated with ESP32-WROOM-32SE)

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_ATCA\_HW\_ECDSA\_VERIFY

Enable hardware ECDSA verify acceleration when using ATECC608A

*Found in: [Component config](#) > [mbedtls](#)*

This option enables hardware acceleration for ECDSA sign function, only when using ATECC608A cryptoauth chip (integrated with ESP32-WROOM-32SE)

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_HAVE\_TIME

Enable mbedtls time support

*Found in: [Component config](#) > [mbedtls](#)*

Enable use of time.h functions (time() and gmtime()) by mbedtls.

This option doesn't require the system time to be correct, but enables functionality that requires relative timekeeping - for example periodic expiry of TLS session tickets or session cache entries.

Disabling this option will save some firmware size, particularly if the rest of the firmware doesn't call any standard timekeeping functions.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_PLATFORM\_TIME\_ALT

Enable mbedtls time support: platform-specific

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_HAVE\\_TIME](#)*

Enabling this config will provide users with a function “mbedtls\_platform\_set\_time()” that allows to set an alternative time function pointer.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_HAVE\_TIME\_DATE

Enable mbedtls certificate expiry check

*Found in: [Component config](#) > [mbedtls](#) > [CONFIG\\_MBEDTLS\\_HAVE\\_TIME](#)*

Enables X.509 certificate expiry checks in mbedtls.

If this option is disabled (default) then X.509 certificate “valid from” and “valid to” timestamp fields are ignored.

If this option is enabled, these fields are compared with the current system date and time. The time is retrieved using the standard time() and gmtime() functions. If the certificate is not valid for the

current system time then verification will fail with code `MBEDTLS_X509_BADCERT_FUTURE` or `MBEDTLS_X509_BADCERT_EXPIRED`.

Enabling this option requires adding functionality in the firmware to set the system clock to a valid timestamp before using TLS. The recommended way to do this is via ESP-IDF's SNTP functionality, but any method can be used.

In the case where only a small number of certificates are trusted by the device, please carefully consider the tradeoffs of enabling this option. There may be undesired consequences, for example if all trusted certificates expire while the device is offline and a TLS connection is required to update. Or if an issue with the SNTP server means that the system time is invalid for an extended period after a reset.

**Default value:**

- No (disabled)

### **CONFIG\_MBEDTLS\_ECDSA\_DETERMINISTIC**

Enable deterministic ECDSA

*Found in: [Component config](#) > [mbedtls](#)*

Standard ECDSA is “fragile” in the sense that lack of entropy when signing may result in a compromise of the long-term signing key.

**Default value:**

- Yes (enabled)

### **CONFIG\_MBEDTLS\_SHA512\_C**

Enable the SHA-384 and SHA-512 cryptographic hash algorithms

*Found in: [Component config](#) > [mbedtls](#)*

Enable `MBEDTLS_SHA512_C` adds support for SHA-384 and SHA-512.

**Default value:**

- Yes (enabled)

### **CONFIG\_MBEDTLS\_SHA3\_C**

Enable the SHA3 cryptographic hash algorithm

*Found in: [Component config](#) > [mbedtls](#)*

Enabling `MBEDTLS_SHA3_C` adds support for SHA3. Enabling this configuration option increases the flash footprint by almost 4KB.

**Default value:**

- No (disabled)

### **CONFIG\_MBEDTLS\_TLS\_MODE**

TLS Protocol Role

*Found in: [Component config](#) > [mbedtls](#)*

`mbedtls` can be compiled with protocol support for the TLS server, TLS client, or both server and client.

Reducing the number of TLS roles supported saves code size.

**Available options:**

- Server & Client (`MBEDTLS_TLS_SERVER_AND_CLIENT`)
- Server (`MBEDTLS_TLS_SERVER_ONLY`)
- Client (`MBEDTLS_TLS_CLIENT_ONLY`)

- None (MBEDTLS\_TLS\_DISABLED)

**TLS Key Exchange Methods** Contains:

- [CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_DHE\\_RSA](#)
- [CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_ECJPAKE](#)
- [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#)
- [CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_RSA](#)
- [CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_ELLIPTIC\\_CURVE](#)

### **CONFIG\_MBEDTLS\_PSK\_MODES**

Enable pre-shared-key ciphersuites

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#)

Enable to show configuration for different types of pre-shared-key TLS authentication methods.

Leaving this options disabled will save code size if they are not used.

**Default value:**

- No (disabled)

### **CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_PSK**

Enable PSK based ciphersuite modes

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#) > [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#)

Enable to support symmetric key PSK (pre-shared-key) TLS key exchange modes.

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#)

### **CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_DHE\_PSK**

Enable DHE-PSK based ciphersuite modes

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#) > [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#)

Enable to support Diffie-Hellman PSK (pre-shared-key) TLS authentication modes.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#) && [CONFIG\\_MBEDTLS\\_DHM\\_C](#)

### **CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_ECDHE\_PSK**

Enable ECDHE-PSK based ciphersuite modes

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#) > [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#)

Enable to support Elliptic-Curve-Diffie-Hellman PSK (pre-shared-key) TLS authentication modes.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#) && [CONFIG\\_MBEDTLS\\_ECDH\\_C](#)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_RSA\_PSK

Enable RSA-PSK based ciphersuite modes

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#) > [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#)

Enable to support RSA PSK (pre-shared-key) TLS authentication modes.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_PSK\\_MODES](#)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_RSA

Enable RSA-only based ciphersuite modes

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#)

Enable to support ciphersuites with prefix TLS-RSA-WITH-

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_DHE\_RSA

Enable DHE-RSA based ciphersuite modes

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#)

Enable to support ciphersuites with prefix TLS-DHE-RSA-WITH-

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_DHM\\_C](#)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_ELLIPTIC\_CURVE

Support Elliptic Curve based ciphersuites

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#)

Enable to show Elliptic Curve based ciphersuite mode options.

Disabling all Elliptic Curve ciphersuites saves code size and can give slightly faster TLS handshakes, provided the server supports RSA-only ciphersuite modes.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_ECDHE\_RSA

Enable ECDHE-RSA based ciphersuite modes

*Found in:* [Component config](#) > [mbedtls](#) > [TLS Key Exchange Methods](#) > [CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_ELLIPTIC\\_CURVE](#)

Enable to support ciphersuites with prefix TLS-ECDHE-RSA-WITH-

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_ECDHE\_ECDSA

Enable ECDHE-ECDSA based ciphersuite modes

*Found in:* [Component config > mbedTLS > TLS Key Exchange Methods > CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_ELLIPTIC\\_CURVE](#)

Enable to support ciphersuites with prefix TLS-ECDHE-RSA-WITH-

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_ECDH\_ECDSA

Enable ECDH-ECDSA based ciphersuite modes

*Found in:* [Component config > mbedTLS > TLS Key Exchange Methods > CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_ELLIPTIC\\_CURVE](#)

Enable to support ciphersuites with prefix TLS-ECDHE-RSA-WITH-

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_ECDH\_RSA

Enable ECDH-RSA based ciphersuite modes

*Found in:* [Component config > mbedTLS > TLS Key Exchange Methods > CONFIG\\_MBEDTLS\\_KEY\\_EXCHANGE\\_ELLIPTIC\\_CURVE](#)

Enable to support ciphersuites with prefix TLS-ECDHE-RSA-WITH-

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_KEY\_EXCHANGE\_ECJPAKE

Enable ECJPAKE based ciphersuite modes

*Found in:* [Component config > mbedTLS > TLS Key Exchange Methods](#)

Enable to support ciphersuites with prefix TLS-ECJPAKE-WITH-

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_ECJPAKE\\_C](#) && [CONFIG\\_MBEDTLS\\_ECP\\_DP\\_SECP256R1\\_ENABLED](#)

### CONFIG\_MBEDTLS\_SSL\_RENEGOTIATION

Support TLS renegotiation

*Found in:* [Component config > mbedTLS](#)

The two main uses of renegotiation are (1) refresh keys on long-lived connections and (2) client authentication after the initial handshake. If you don't need renegotiation, disabling it will save code size and reduce the possibility of abuse/vulnerability.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_SSL\_PROTO\_TLS1\_2

Support TLS 1.2 protocol

*Found in: [Component config](#) > [mbedtls](#)*

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_SSL\_PROTO\_GMTSSL1\_1

Support GM/T SSL 1.1 protocol

*Found in: [Component config](#) > [mbedtls](#)*

Provisions for GM/T SSL 1.1 support

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_SSL\_PROTO\_DTLS

Support DTLS protocol (all versions)

*Found in: [Component config](#) > [mbedtls](#)*

Requires TLS 1.2 to be enabled for DTLS 1.2

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_SSL\_ALPN

Support ALPN (Application Layer Protocol Negotiation)

*Found in: [Component config](#) > [mbedtls](#)*

Disabling this option will save some code size if it is not needed.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_CLIENT\_SSL\_SESSION\_TICKETS

TLS: Client Support for RFC 5077 SSL session tickets

*Found in: [Component config](#) > [mbedtls](#)*

Client support for RFC 5077 session tickets. See mbedtls documentation for more details. Disabling this option will save some code size.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_SERVER\_SSL\_SESSION\_TICKETS

TLS: Server Support for RFC 5077 SSL session tickets

*Found in: [Component config](#) > [mbedtls](#)*

Server support for RFC 5077 session tickets. See mbedtls documentation for more details. Disabling this option will save some code size.

**Default value:**

- Yes (enabled)

**Symmetric Ciphers** Contains:

- [CONFIG\\_MBEDTLS\\_AES\\_C](#)
- [CONFIG\\_MBEDTLS\\_BLOWFISH\\_C](#)
- [CONFIG\\_MBEDTLS\\_CAMELLIA\\_C](#)
- [CONFIG\\_MBEDTLS\\_CCM\\_C](#)
- [CONFIG\\_MBEDTLS\\_DES\\_C](#)
- [CONFIG\\_MBEDTLS\\_GCM\\_C](#)
- [CONFIG\\_MBEDTLS\\_NIST\\_KW\\_C](#)
- [CONFIG\\_MBEDTLS\\_XTEA\\_C](#)

**CONFIG\_MBEDTLS\_AES\_C**

AES block cipher

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_CAMELLIA\_C**

Camellia block cipher

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

**Default value:**

- No (disabled)

**CONFIG\_MBEDTLS\_DES\_C**

DES block cipher (legacy, insecure)

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

Enables the DES block cipher to support 3DES-based TLS ciphersuites.

3DES is vulnerable to the Sweet32 attack and should only be enabled if absolutely necessary.

**Default value:**

- No (disabled)

**CONFIG\_MBEDTLS\_BLOWFISH\_C**

Blowfish block cipher (read help)

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

Enables the Blowfish block cipher (not used for TLS sessions.)

The Blowfish cipher is not used for mbedtls TLS sessions but can be used for other purposes. Read up on the limitations of Blowfish (including Sweet32) before enabling.

**Default value:**

- No (disabled)

**CONFIG\_MBEDTLS\_XTEA\_C**

XTEA block cipher

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

Enables the XTEA block cipher.

**Default value:**

- No (disabled)

### **CONFIG\_MBEDTLS\_CCM\_C**

CCM (Counter with CBC-MAC) block cipher modes

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

Enable Counter with CBC-MAC (CCM) modes for AES and/or Camellia ciphers.

Disabling this option saves some code size.

**Default value:**

- Yes (enabled)

### **CONFIG\_MBEDTLS\_GCM\_C**

GCM (Galois/Counter) block cipher modes

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

Enable Galois/Counter Mode for AES and/or Camellia ciphers.

This option is generally faster than CCM.

**Default value:**

- Yes (enabled)

### **CONFIG\_MBEDTLS\_NIST\_KW\_C**

NIST key wrapping (KW) and KW padding (KWP)

*Found in: [Component config](#) > [mbedtls](#) > [Symmetric Ciphers](#)*

Enable NIST key wrapping and key wrapping padding.

**Default value:**

- No (disabled)

### **CONFIG\_MBEDTLS\_RIPEMD160\_C**

Enable RIPEMD-160 hash algorithm

*Found in: [Component config](#) > [mbedtls](#)*

Enable the RIPEMD-160 hash algorithm.

**Default value:**

- No (disabled)

**Certificates** Contains:

- [CONFIG\\_MBEDTLS\\_PEM\\_PARSE\\_C](#)
- [CONFIG\\_MBEDTLS\\_PEM\\_WRITE\\_C](#)
- [CONFIG\\_MBEDTLS\\_X509\\_CRL\\_PARSE\\_C](#)
- [CONFIG\\_MBEDTLS\\_X509\\_CSR\\_PARSE\\_C](#)

### **CONFIG\_MBEDTLS\_PEM\_PARSE\_C**

Read & Parse PEM formatted certificates

*Found in: [Component config](#) > [mbedtls](#) > [Certificates](#)*

Enable decoding/parsing of PEM formatted certificates.

If your certificates are all in the simpler DER format, disabling this option will save some code size.

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_PEM\_WRITE\_C**

Write PEM formatted certificates

*Found in: [Component config](#) > [mbedtls](#) > [Certificates](#)*

Enable writing of PEM formatted certificates.

If writing certificate data only in DER format, disabling this option will save some code size.

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_X509\_CRL\_PARSE\_C**

X.509 CRL parsing

*Found in: [Component config](#) > [mbedtls](#) > [Certificates](#)*

Support for parsing X.509 Certificate Revocation Lists.

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_X509\_CSR\_PARSE\_C**

X.509 CSR parsing

*Found in: [Component config](#) > [mbedtls](#) > [Certificates](#)*

Support for parsing X.509 Certificate Signing Requests

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_ECP\_C**

Elliptic Curve Ciphers

*Found in: [Component config](#) > [mbedtls](#)*

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_DHM\_C**

Diffie-Hellman-Merkle key exchange (DHM)

*Found in: [Component config](#) > [mbedtls](#)*

Enable DHM. Needed to use DHE-xxx TLS ciphersuites.

Note that the security of Diffie-Hellman key exchanges depends on a suitable prime being used for the exchange. Please see detailed warning text about this in file *mbedtls/dhm.h* file.

**Default value:**

- No (disabled)

**CONFIG\_MBEDTLS\_ECDH\_C**

Elliptic Curve Diffie-Hellman (ECDH)

*Found in:* [Component config > mbedTLS](#)

Enable ECDH. Needed to use ECDHE-xxx TLS ciphersuites.

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_ECDSA\_C**

Elliptic Curve DSA

*Found in:* [Component config > mbedTLS > CONFIG\\_MBEDTLS\\_ECDH\\_C](#)

Enable ECDSA. Needed to use ECDSA-xxx TLS ciphersuites.

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_ECJPAKE\_C**

Elliptic curve J-PAKE

*Found in:* [Component config > mbedTLS](#)

Enable ECJPAKE. Needed to use ECJPAKE-xxx TLS ciphersuites.

**Default value:**

- No (disabled)

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP192R1\_ENABLED**

Enable SECP192R1 curve

*Found in:* [Component config > mbedTLS](#)

Enable support for SECP192R1 Elliptic Curve.

**Default value:**

- Yes (enabled) if `(CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN || CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY) && CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP224R1\_ENABLED**

Enable SECP224R1 curve

*Found in:* [Component config > mbedTLS](#)

Enable support for SECP224R1 Elliptic Curve.

**Default value:**

- Yes (enabled) if `(CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN || CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY) && CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP256R1\_ENABLED**

Enable SECP256R1 curve

*Found in:* [Component config > mbedTLS](#)

Enable support for SECP256R1 Elliptic Curve.

**Default value:**

- Yes (enabled)

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP384R1\_ENABLED**

Enable SECP384R1 curve

*Found in: Component config > mbedTLS*

Enable support for SECP384R1 Elliptic Curve.

**Default value:**

- Yes (enabled) if (`CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN` || `CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY`) && `CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP521R1\_ENABLED**

Enable SECP521R1 curve

*Found in: Component config > mbedTLS*

Enable support for SECP521R1 Elliptic Curve.

**Default value:**

- Yes (enabled) if (`CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN` || `CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY`) && `CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP192K1\_ENABLED**

Enable SECP192K1 curve

*Found in: Component config > mbedTLS*

Enable support for SECP192K1 Elliptic Curve.

**Default value:**

- Yes (enabled) if (`CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN` || `CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY`) && `CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP224K1\_ENABLED**

Enable SECP224K1 curve

*Found in: Component config > mbedTLS*

Enable support for SECP224K1 Elliptic Curve.

**Default value:**

- Yes (enabled) if (`CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN` || `CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY`) && `CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_SECP256K1\_ENABLED**

Enable SECP256K1 curve

*Found in: Component config > mbedTLS*

Enable support for SECP256K1 Elliptic Curve.

**Default value:**

- Yes (enabled) if (`CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN` || `CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY`) && `CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_BP256R1\_ENABLED**

Enable BP256R1 curve

*Found in: [Component config > mbedTLS](#)*

support for DP Elliptic Curve.

**Default value:**

- Yes (enabled) if `(CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN || CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY) && CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_BP384R1\_ENABLED**

Enable BP384R1 curve

*Found in: [Component config > mbedTLS](#)*

support for DP Elliptic Curve.

**Default value:**

- Yes (enabled) if `(CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN || CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY) && CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_BP512R1\_ENABLED**

Enable BP512R1 curve

*Found in: [Component config > mbedTLS](#)*

support for DP Elliptic Curve.

**Default value:**

- Yes (enabled) if `(CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN || CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY) && CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_DP\_CURVE25519\_ENABLED**

Enable CURVE25519 curve

*Found in: [Component config > mbedTLS](#)*

Enable support for CURVE25519 Elliptic Curve.

**Default value:**

- Yes (enabled) if `(CONFIG_MBEDTLS_ATCA_HW_ECDSA_SIGN || CONFIG_MBEDTLS_ATCA_HW_ECDSA_VERIFY) && CONFIG_MBEDTLS_ECP_C`

**CONFIG\_MBEDTLS\_ECP\_NIST\_OPTIM**

NIST ‘modulo p’ optimisations

*Found in: [Component config > mbedTLS](#)*

NIST ‘modulo p’ optimisations increase Elliptic Curve operation performance.

Disabling this option saves some code size.

**Default value:**

- Yes (enabled)

### CONFIG\_MBEDTLS\_ECP\_FIXED\_POINT\_OPTIM

Enable fixed-point multiplication optimisations

*Found in: [Component config > mbedtls](#)*

This configuration option enables optimizations to speedup (about 3 ~ 4 times) the ECP fixed point multiplication using pre-computed tables in the flash memory. Enabling this configuration option increases the flash footprint (about 29KB if all Elliptic Curve selected) in the application binary.

# end of Elliptic Curve options

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_POLY1305\_C

Poly1305 MAC algorithm

*Found in: [Component config > mbedtls](#)*

Enable support for Poly1305 MAC algorithm.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_CHACHA20\_C

Chacha20 stream cipher

*Found in: [Component config > mbedtls](#)*

Enable support for Chacha20 stream cipher.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_CHACHAPOLY\_C

ChaCha20-Poly1305 AEAD algorithm

*Found in: [Component config > mbedtls > CONFIG\\_MBEDTLS\\_CHACHA20\\_C](#)*

Enable support for ChaCha20-Poly1305 AEAD algorithm.

**Default value:**

- No (disabled) if `CONFIG_MBEDTLS_CHACHA20_C` && `CONFIG_MBEDTLS_POLY1305_C`

### CONFIG\_MBEDTLS\_HKDF\_C

HKDF algorithm (RFC 5869)

*Found in: [Component config > mbedtls](#)*

Enable support for the Hashed Message Authentication Code (HMAC)-based key derivation function (HKDF).

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_THREADING\_C

Enable the threading abstraction layer

*Found in:* [Component config > mbedTLS](#)

If you do intend to use contexts between threads, you will need to enable this layer to prevent race conditions.

**Default value:**

- No (disabled)

### CONFIG\_MBEDTLS\_THREADING\_ALT

Enable threading alternate implementation

*Found in:* [Component config > mbedTLS > CONFIG\\_MBEDTLS\\_THREADING\\_C](#)

Enable threading alt to allow your own alternate threading implementation.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_THREADING\\_C](#)

### CONFIG\_MBEDTLS\_THREADING\_PTHREAD

Enable threading pthread implementation

*Found in:* [Component config > mbedTLS > CONFIG\\_MBEDTLS\\_THREADING\\_C](#)

Enable the pthread wrapper layer for the threading layer.

**Default value:**

- No (disabled) if [CONFIG\\_MBEDTLS\\_THREADING\\_C](#)

### CONFIG\_MBEDTLS\_LARGE\_KEY\_SOFTWARE\_MPI

Fallback to software implementation for larger MPI values

*Found in:* [Component config > mbedTLS](#)

Fallback to software implementation for RSA key lengths larger than SOC\_RSA\_MAX\_BIT\_LEN. If this is not active then the ESP will be unable to process keys greater than SOC\_RSA\_MAX\_BIT\_LEN.

**Default value:**

- Yes (enabled) if [CONFIG\\_MBEDTLS\\_HARDWARE\\_MPI](#)
- No (disabled) if [CONFIG\\_MBEDTLS\\_HARDWARE\\_MPI](#)

### CONFIG\_MBEDTLS\_USE\_CRYPTO\_ROM\_IMPL

Use ROM implementation of the crypto algorithm

*Found in:* [Component config > mbedTLS](#)

Enable this flag to use mbedtls crypto algorithm from ROM instead of ESP-IDF.

This configuration option saves flash footprint in the application binary. Note that the version of mbedtls crypto algorithm library in ROM(ECO1~ECO3) is v2.16.12, and the version of mbedtls crypto algorithm library in ROM(ECO4) is v3.6.0. We have done the security analysis of the mbedtls revision in ROM (ECO1~ECO4) and ensured that affected symbols have been patched (removed). If in the future mbedtls revisions there are security issues that also affects the version in ROM (ECO1~ECO4) then we shall patch the relevant symbols. This would increase the flash footprint and hence care must be taken to keep some reserved space for the application binary in flash layout.

**Default value:**

- No (disabled)

### **ESP-MQTT Configurations** Contains:

- *CONFIG\_MQTT\_CUSTOM\_OUTBOX*
- *CONFIG\_MQTT\_TRANSPORT\_SSL*
- *CONFIG\_MQTT\_TRANSPORT\_WEBSOCKET*
- *CONFIG\_MQTT\_PROTOCOL\_311*
- *CONFIG\_MQTT\_PROTOCOL\_5*
- *CONFIG\_MQTT\_TASK\_CORE\_SELECTION\_ENABLED*
- *CONFIG\_MQTT\_USE\_CUSTOM\_CONFIG*
- *CONFIG\_MQTT\_OUTBOX\_EXPIRED\_TIMEOUT\_MS*
- *CONFIG\_MQTT\_REPORT\_DELETED\_MESSAGES*
- *CONFIG\_MQTT\_SKIP\_PUBLISH\_IF\_DISCONNECTED*
- *CONFIG\_MQTT\_MSG\_ID\_INCREMENTAL*

### **CONFIG\_MQTT\_PROTOCOL\_311**

Enable MQTT protocol 3.1.1

*Found in: Component config > ESP-MQTT Configurations*

If not, this library will use MQTT protocol 3.1

**Default value:**

- Yes (enabled)

### **CONFIG\_MQTT\_PROTOCOL\_5**

Enable MQTT protocol 5.0

*Found in: Component config > ESP-MQTT Configurations*

If not, this library will not support MQTT 5.0

**Default value:**

- No (disabled)

### **CONFIG\_MQTT\_TRANSPORT\_SSL**

Enable MQTT over SSL

*Found in: Component config > ESP-MQTT Configurations*

Enable MQTT transport over SSL with mbedtls

**Default value:**

- Yes (enabled)

### **CONFIG\_MQTT\_TRANSPORT\_WEBSOCKET**

Enable MQTT over Websocket

*Found in: Component config > ESP-MQTT Configurations*

Enable MQTT transport over Websocket.

**Default value:**

- Yes (enabled)

### CONFIG\_MQTT\_TRANSPORT\_WEBSOCKET\_SECURE

Enable MQTT over Websocket Secure

*Found in:* [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_TRANSPORT\\_WEBSOCKET\\_SECURE](#)

Enable MQTT transport over Websocket Secure.

**Default value:**

- Yes (enabled)

### CONFIG\_MQTT\_MSG\_ID\_INCREMENTAL

Use Incremental Message Id

*Found in:* [Component config](#) > [ESP-MQTT Configurations](#)

Set this to true for the message id (2.3.1 Packet Identifier) to be generated as an incremental number rather than a random value (used by default)

**Default value:**

- No (disabled)

### CONFIG\_MQTT\_SKIP\_PUBLISH\_IF\_DISCONNECTED

Skip publish if disconnected

*Found in:* [Component config](#) > [ESP-MQTT Configurations](#)

Set this to true to avoid publishing (enqueueing messages) if the client is disconnected. The MQTT client tries to publish all messages by default, even in the disconnected state (where the qos1 and qos2 packets are stored in the internal outbox to be published later) The MQTT\_SKIP\_PUBLISH\_IF\_DISCONNECTED option allows applications to override this behaviour and not enqueue publish packets in the disconnected state.

**Default value:**

- No (disabled)

### CONFIG\_MQTT\_REPORT\_DELETED\_MESSAGES

Report deleted messages

*Found in:* [Component config](#) > [ESP-MQTT Configurations](#)

Set this to true to post events for all messages which were deleted from the outbox before being correctly sent and confirmed.

**Default value:**

- No (disabled)

### CONFIG\_MQTT\_USE\_CUSTOM\_CONFIG

MQTT Using custom configurations

*Found in:* [Component config](#) > [ESP-MQTT Configurations](#)

Custom MQTT configurations.

**Default value:**

- No (disabled)

### CONFIG\_MQTT\_TCP\_DEFAULT\_PORT

Default MQTT over TCP port

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

Default MQTT over TCP port

**Default value:**

- 1883 if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)

### CONFIG\_MQTT\_SSL\_DEFAULT\_PORT

Default MQTT over SSL port

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

Default MQTT over SSL port

**Default value:**

- 8883 if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#) && [CONFIG\\_MQTT\\_TRANSPORT\\_SSL](#)

### CONFIG\_MQTT\_WS\_DEFAULT\_PORT

Default MQTT over Websocket port

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

Default MQTT over Websocket port

**Default value:**

- 80 if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#) && [CONFIG\\_MQTT\\_TRANSPORT\\_WEBSOCKET](#)

### CONFIG\_MQTT\_WSS\_DEFAULT\_PORT

Default MQTT over Websocket Secure port

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

Default MQTT over Websocket Secure port

**Default value:**

- 443 if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#) && [CONFIG\\_MQTT\\_TRANSPORT\\_WEBSOCKET](#) && [CONFIG\\_MQTT\\_TRANSPORT\\_WEBSOCKET\\_SECURE](#)

### CONFIG\_MQTT\_BUFFER\_SIZE

Default MQTT Buffer Size

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

This buffer size using for both transmit and receive

**Default value:**

- 1024 if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)

### CONFIG\_MQTT\_TASK\_STACK\_SIZE

MQTT task stack size

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

MQTT task stack size

**Default value:**

- 6144 if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)

### CONFIG\_MQTT\_DISABLE\_API\_LOCKS

Disable API locks

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

Default config employs API locks to protect internal structures. It is possible to disable these locks if the user code doesn't access MQTT API from multiple concurrent tasks

**Default value:**

- No (disabled) if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)

### CONFIG\_MQTT\_TASK\_PRIORITY

MQTT task priority

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)*

MQTT task priority. Higher number denotes higher priority.

**Default value:**

- 5 if [CONFIG\\_MQTT\\_USE\\_CUSTOM\\_CONFIG](#)

### CONFIG\_MQTT\_TASK\_CORE\_SELECTION\_ENABLED

Enable MQTT task core selection

*Found in: [Component config](#) > [ESP-MQTT Configurations](#)*

This will enable core selection

### CONFIG\_MQTT\_TASK\_CORE\_SELECTION

Core to use ?

*Found in: [Component config](#) > [ESP-MQTT Configurations](#) > [CONFIG\\_MQTT\\_TASK\\_CORE\\_SELECTION\\_ENABLED](#)*

**Available options:**

- Core 0 (MQTT\_USE\_CORE\_0)
- Core 1 (MQTT\_USE\_CORE\_1)

### CONFIG\_MQTT\_CUSTOM\_OUTBOX

Enable custom outbox implementation

*Found in: [Component config](#) > [ESP-MQTT Configurations](#)*

Set to true if a specific implementation of message outbox is needed (e.g. persistent outbox in NVM or similar). Note: Implementation of the custom outbox must be added to the mqtt component. These CMake commands could be used to append the custom implementation to lib-mqtt sources: `idf_component_get_property(mqtt mqtt COMPONENT_LIB) set_property(TARGET ${mqtt} PROPERTY SOURCES ${PROJECT_DIR}/custom_outbox.c APPEND)`

**Default value:**

- No (disabled)

### CONFIG\_MQTT\_OUTBOX\_EXPIRED\_TIMEOUT\_MS

Outbox message expired timeout[ms]

*Found in: [Component config](#) > [ESP-MQTT Configurations](#)*

Messages which stays in the outbox longer than this value before being published will be discarded.

**Default value:**

- 30000 if `CONFIG_MQTT_USE_CUSTOM_CONFIG`

**Newlib** Contains:

- `CONFIG_NEWLIB_NANO_FORMAT`
- `CONFIG_NEWLIB_STDIN_LINE_ENDING`
- `CONFIG_NEWLIB_STDOUT_LINE_ENDING`
- `CONFIG_NEWLIB_TIME_SYSCALL`

### **CONFIG\_NEWLIB\_STDOUT\_LINE\_ENDING**

Line ending for UART output

*Found in: [Component config](#) > [Newlib](#)*

This option allows configuring the desired line endings sent to UART when a newline ( ' n ' , LF) appears on stdout. Three options are possible:

CRLF: whenever LF is encountered, prepend it with CR

LF: no modification is applied, stdout is sent as is

CR: each occurrence of LF is replaced with CR

This option doesn't affect behavior of the UART driver (drivers/uart.h).

**Available options:**

- CRLF (`NEWLIB_STDOUT_LINE_ENDING_CRLF`)
- LF (`NEWLIB_STDOUT_LINE_ENDING_LF`)
- CR (`NEWLIB_STDOUT_LINE_ENDING_CR`)

### **CONFIG\_NEWLIB\_STDIN\_LINE\_ENDING**

Line ending for UART input

*Found in: [Component config](#) > [Newlib](#)*

This option allows configuring which input sequence on UART produces a newline ( ' n ' , LF) on stdin. Three options are possible:

CRLF: CRLF is converted to LF

LF: no modification is applied, input is sent to stdin as is

CR: each occurrence of CR is replaced with LF

This option doesn't affect behavior of the UART driver (drivers/uart.h).

**Available options:**

- CRLF (`NEWLIB_STDIN_LINE_ENDING_CRLF`)
- LF (`NEWLIB_STDIN_LINE_ENDING_LF`)
- CR (`NEWLIB_STDIN_LINE_ENDING_CR`)

### **CONFIG\_NEWLIB\_NANO\_FORMAT**

Enable 'nano' formatting options for printf/scanf family

*Found in: [Component config](#) > [Newlib](#)*

ESP32 ROM contains parts of newlib C library, including printf/scanf family of functions. These functions have been compiled with so-called "nano" formatting option. This option doesn't support 64-bit integer formats and C99 features, such as positional arguments.

For more details about "nano" formatting option, please see newlib readme file, search for 'enable-newlib-nano-formatted-io' : <https://sourceware.org/newlib/README>

If this option is enabled, build system will use functions available in ROM, reducing the application binary size. Functions available in ROM run faster than functions which run from flash. Functions available in ROM can also run when flash instruction cache is disabled.

If you need 64-bit integer formatting support or C99 features, keep this option disabled.

**Default value:**

- Yes (enabled)

### CONFIG\_NEWLIB\_TIME\_SYSCALL

Timers used for gettimeofday function

*Found in: [Component config](#) > [Newlib](#)*

This setting defines which hardware timers are used to implement ‘gettimeofday’ and ‘time’ functions in C library.

- **If both high-resolution (systemer for all targets except ESP32) and RTC timers are used,** timekeeping will continue in deep sleep. Time will be reported at 1 microsecond resolution. This is the default, and the recommended option.
- **If only high-resolution timer (systemer) is used, gettimeofday will** provide time at microsecond resolution. Time will not be preserved when going into deep sleep mode.
- **If only RTC timer is used, timekeeping will continue in** deep sleep, but time will be measured at 6.(6) microsecond resolution. Also the gettimeofday function itself may take longer to run.
- **If no timers are used, gettimeofday and time functions** return -1 and set errno to ENOSYS.
- **When RTC is used for timekeeping, two RTC\_STORE registers are** used to keep time in deep sleep mode.

**Available options:**

- RTC and high-resolution timer (NEWLIB\_TIME\_SYSCALL\_USE\_RTC\_HRT)
- RTC (NEWLIB\_TIME\_SYSCALL\_USE\_RTC)
- High-resolution timer (NEWLIB\_TIME\_SYSCALL\_USE\_HRT)
- None (NEWLIB\_TIME\_SYSCALL\_USE\_NONE)

**NVS** Contains:

- [CONFIG\\_NVS\\_ENCRYPTION](#)
- [CONFIG\\_NVS\\_COMPATIBLE\\_PRE\\_V4\\_3\\_ENCRYPTION\\_FLAG](#)
- [CONFIG\\_NVS\\_ASSERT\\_ERROR\\_CHECK](#)

### CONFIG\_NVS\_ENCRYPTION

Enable NVS encryption

*Found in: [Component config](#) > [NVS](#)*

This option enables encryption for NVS. When enabled, AES-XTS is used to encrypt the complete NVS data, except the page headers. It requires XTS encryption keys to be stored in an encrypted partition. This means enabling flash encryption is a pre-requisite for this feature.

**Default value:**

- Yes (enabled) if [CONFIG\\_SECURE\\_FLASH\\_ENC\\_ENABLED](#)

### CONFIG\_NVS\_COMPATIBLE\_PRE\_V4\_3\_ENCRYPTION\_FLAG

NVS partition encrypted flag compatible with ESP-IDF before v4.3

*Found in: [Component config](#) > [NVS](#)*

Enabling this will ignore “encrypted” flag for NVS partitions. NVS encryption scheme is different than hardware flash encryption and hence it is not recommended to have “encrypted” flag for NVS partitions. This was not being checked in pre v4.3 IDF. Hence, if you have any devices where this flag

is kept enabled in partition table then enabling this config will allow to have same behavior as pre v4.3 IDF.

### **CONFIG\_NVS\_ASSERT\_ERROR\_CHECK**

Use assertions for error checking

*Found in: [Component config](#) > [NVS](#)*

This option switches error checking type between assertions (y) or return codes (n).

**Default value:**

- No (disabled)

### **OpenThread** Contains:

- [CONFIG\\_OPENTHREAD\\_ENABLED](#)

### **CONFIG\_OPENTHREAD\_ENABLED**

OpenThread

*Found in: [Component config](#) > [OpenThread](#)*

Select this option to enable OpenThread and show the submenu with OpenThread configuration choices.

**Default value:**

- No (disabled)

### **CONFIG\_OPENTHREAD\_LOG\_LEVEL\_DYNAMIC**

Enable dynamic log level control

*Found in: [Component config](#) > [OpenThread](#) > [CONFIG\\_OPENTHREAD\\_ENABLED](#)*

Select this option to enable dynamic log level control for OpenThread

**Default value:**

- Yes (enabled) if [CONFIG\\_OPENTHREAD\\_ENABLED](#)

### **CONFIG\_OPENTHREAD\_LOG\_LEVEL**

OpenThread log verbosity

*Found in: [Component config](#) > [OpenThread](#) > [CONFIG\\_OPENTHREAD\\_ENABLED](#)*

Select OpenThread log level.

**Available options:**

- No logs (OPENTHREAD\_LOG\_LEVEL\_NONE)
- Error logs (OPENTHREAD\_LOG\_LEVEL\_CRIT)
- Warning logs (OPENTHREAD\_LOG\_LEVEL\_WARN)
- Notice logs (OPENTHREAD\_LOG\_LEVEL\_NOTE)
- Info logs (OPENTHREAD\_LOG\_LEVEL\_INFO)
- Debug logs (OPENTHREAD\_LOG\_LEVEL\_DEBUG)

### **CONFIG\_OPENTHREAD\_RADIO\_TYPE**

Config the Thread radio type

*Found in: [Component config](#) > [OpenThread](#) > [CONFIG\\_OPENTHREAD\\_ENABLED](#)*

Configure how OpenThread connects to the 15.4 radio

**Available options:**

- Native 15.4 radio (OPENTHREAD\_RADIO\_NATIVE)  
Select this to use the native 15.4 radio.
- Connect via UART (OPENTHREAD\_RADIO\_SPINEL\_UART)  
Select this to connect to a Radio Co-Processor via UART.

**CONFIG\_OPENTHREAD\_DEVICE\_TYPE**

Config the Thread device type

*Found in: [Component config](#) > [OpenThread](#) > [CONFIG\\_OPENTHREAD\\_ENABLED](#)*

OpenThread can be configured to different device types (FTD, MTD, Radio)

**Available options:**

- Full Thread Device (OPENTHREAD\_FTD)  
Select this to enable Full Thread Device which can act as router and leader in a Thread network.
- Minimal Thread Device (OPENTHREAD\_MTD)  
Select this to enable Minimal Thread Device which can only act as end device in a Thread network. This will reduce the code size of the OpenThread stack.
- Radio Only Device (OPENTHREAD\_RADIO)  
Select this to enable Radio Only Device which can only forward 15.4 packets to the host. The OpenThread stack will be run on the host and OpenThread will have minimal footprint on the radio only device.

**CONFIG\_OPENTHREAD\_CLI**

Enable Openthread Command-Line Interface

*Found in: [Component config](#) > [OpenThread](#) > [CONFIG\\_OPENTHREAD\\_ENABLED](#)*

Select this option to enable Command-Line Interface in OpenThread.

**Default value:**

- Yes (enabled) if [CONFIG\\_OPENTHREAD\\_ENABLED](#)

**CONFIG\_OPENTHREAD\_DIAG**

Enable diag

*Found in: [Component config](#) > [OpenThread](#) > [CONFIG\\_OPENTHREAD\\_ENABLED](#)*

Select this option to enable Diag in OpenThread. This will enable diag mode and a series of diag commands in the OpenThread command line. These commands allow users to manipulate low-level features of the storage and 15.4 radio.

**Default value:**

- Yes (enabled) if [CONFIG\\_OPENTHREAD\\_ENABLED](#)

**CONFIG\_OPENTHREAD\_COMMISSIONER**

Enable Commissioner

*Found in: [Component config](#) > [OpenThread](#) > [CONFIG\\_OPENTHREAD\\_ENABLED](#)*

Select this option to enable commissioner in OpenThread. This will enable the device to act as a commissioner in the Thread network. A commissioner checks the pre-shared key from a joining device with the Thread commissioning protocol and shares the network parameter with the joining device upon success.

**Default value:**

- No (disabled) if [CONFIG\\_OPENTHREAD\\_ENABLED](#)

### CONFIG\_OPENTHREAD\_JOINER

Enable Joiner

*Found in: Component config > OpenThread > CONFIG\_OPENTHREAD\_ENABLED*

Select this option to enable Joiner in OpenThread. This allows a device to join the Thread network with a pre-shared key using the Thread commissioning protocol.

**Default value:**

- No (disabled) if *CONFIG\_OPENTHREAD\_ENABLED*

### CONFIG\_OPENTHREAD\_SRP\_CLIENT

Enable SRP Client

*Found in: Component config > OpenThread > CONFIG\_OPENTHREAD\_ENABLED*

Select this option to enable SRP Client in OpenThread. This allows a device to register SRP services to SRP Server.

**Default value:**

- No (disabled) if *CONFIG\_OPENTHREAD\_ENABLED*

### CONFIG\_OPENTHREAD\_BORDER\_ROUTER

Enable Border Router

*Found in: Component config > OpenThread > CONFIG\_OPENTHREAD\_ENABLED*

Select this option to enable border router features in OpenThread.

**Default value:**

- No (disabled) if *CONFIG\_OPENTHREAD\_ENABLED*

### CONFIG\_OPENTHREAD\_NUM\_MESSAGE\_BUFFERS

The number of openthread message buffers

*Found in: Component config > OpenThread > CONFIG\_OPENTHREAD\_ENABLED*

**Range:**

- from 50 to 100 if *CONFIG\_OPENTHREAD\_ENABLED*

**Default value:**

- 65 if *CONFIG\_OPENTHREAD\_ENABLED*

### CONFIG\_OPENTHREAD\_DNS64\_CLIENT

Use dns64 client

*Found in: Component config > OpenThread > CONFIG\_OPENTHREAD\_ENABLED*

Select this option to acquire NAT64 address from dns servers.

**Default value:**

- No (disabled) if *CONFIG\_OPENTHREAD\_ENABLED*

**Protocomm** Contains:

- *CONFIG\_ESP\_PROTOCOMM\_SUPPORT\_SECURITY\_VERSION\_0*
- *CONFIG\_ESP\_PROTOCOMM\_SUPPORT\_SECURITY\_VERSION\_1*
- *CONFIG\_ESP\_PROTOCOMM\_SUPPORT\_SECURITY\_VERSION\_2*

### CONFIG\_ESP\_PROTocomm\_SUPPORT\_SECURITY\_VERSION\_0

Support protocomm security version 0 (no security)

*Found in: [Component config](#) > [Protocomm](#)*

Enable support of security version 0. Disabling this option saves some code size. Consult the Enabling protocomm security version section of the Protocomm documentation in ESP-IDF Programming guide for more details.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_PROTocomm\_SUPPORT\_SECURITY\_VERSION\_1

Support protocomm security version 1 (Curve25519 key exchange + AES-CTR encryption/decryption)

*Found in: [Component config](#) > [Protocomm](#)*

Enable support of security version 1. Disabling this option saves some code size. Consult the Enabling protocomm security version section of the Protocomm documentation in ESP-IDF Programming guide for more details.

**Default value:**

- Yes (enabled)

### CONFIG\_ESP\_PROTocomm\_SUPPORT\_SECURITY\_VERSION\_2

Support protocomm security version 2 (SRP6a-based key exchange + AES-GCM encryption/decryption)

*Found in: [Component config](#) > [Protocomm](#)*

Enable support of security version 2. Disabling this option saves some code size. Consult the Enabling protocomm security version section of the Protocomm documentation in ESP-IDF Programming guide for more details.

**Default value:**

- Yes (enabled)

### **PThreads** Contains:

- [CONFIG\\_PTHREAD\\_TASK\\_NAME\\_DEFAULT](#)
- [CONFIG\\_PTHREAD\\_TASK\\_CORE\\_DEFAULT](#)
- [CONFIG\\_PTHREAD\\_TASK\\_PRIO\\_DEFAULT](#)
- [CONFIG\\_PTHREAD\\_TASK\\_STACK\\_SIZE\\_DEFAULT](#)
- [CONFIG\\_PTHREAD\\_STACK\\_MIN](#)

### CONFIG\_PTHREAD\_TASK\_PRIO\_DEFAULT

Default task priority

*Found in: [Component config](#) > [PThreads](#)*

Priority used to create new tasks with default pthread parameters.

**Range:**

- from 0 to 255

**Default value:**

- 5

### CONFIG\_PTHREAD\_TASK\_STACK\_SIZE\_DEFAULT

Default task stack size

Found in: [Component config](#) > [PThreads](#)

Stack size used to create new tasks with default pthread parameters.

**Default value:**

- 3072

### CONFIG\_PTHREAD\_STACK\_MIN

Minimum allowed pthread stack size

Found in: [Component config](#) > [PThreads](#)

Minimum allowed pthread stack size set in attributes passed to pthread\_create

**Default value:**

- 768

### CONFIG\_PTHREAD\_TASK\_CORE\_DEFAULT

Default pthread core affinity

Found in: [Component config](#) > [PThreads](#)

The default core to which pthreads are pinned.

**Available options:**

- No affinity (PTHREAD\_DEFAULT\_CORE\_NO\_AFFINITY)
- Core 0 (PTHREAD\_DEFAULT\_CORE\_0)
- Core 1 (PTHREAD\_DEFAULT\_CORE\_1)

### CONFIG\_PTHREAD\_TASK\_NAME\_DEFAULT

Default name of pthreads

Found in: [Component config](#) > [PThreads](#)

The default name of pthreads.

**Default value:**

- “pthread”

**SoC Settings** Contains:

- [MMU Config](#)

### MMU Config

**Main Flash configuration** Contains:

- [Optional and Experimental Features \(READ DOCS FIRST\)](#)
- [SPI Flash behavior when brownout](#)

**SPI Flash behavior when brownout** Contains:

- [CONFIG\\_SPI\\_FLASH\\_BROWNOUT\\_RESET\\_XMC](#)

### CONFIG\_SPI\_FLASH\_BROWNOUT\_RESET\_XMC

Enable sending reset when brownout for XMC flash chips

*Found in: Component config > Main Flash configuration > SPI Flash behavior when brownout*

When this option is selected, the patch will be enabled for XMC. Follow the recommended flow by XMC for better stability.

DO NOT DISABLE UNLESS YOU KNOW WHAT YOU ARE DOING.

**Default value:**

- Yes (enabled) if APP\_BUILD\_TYPE\_PURE\_RAM\_APP

### Optional and Experimental Features (READ DOCS FIRST) Contains:

- [CONFIG\\_SPI\\_FLASH\\_FORCE\\_ENABLE\\_XMC\\_C\\_SUSPEND](#)
- [CONFIG\\_SPI\\_FLASH\\_HPM\\_DC](#)

### CONFIG\_SPI\_FLASH\_HPM\_DC

Support HPM using DC (READ DOCS FIRST)

*Found in: Component config > Main Flash configuration > Optional and Experimental Features (READ DOCS FIRST)*

This feature needs your bootloader to be compiled DC-aware (BOOTLOADER\_FLASH\_DC\_AWARE=y). Otherwise the chip will not be able to boot after a reset.

**Available options:**

- Auto (Enable when bootloader support enabled (BOOTLOADER\_FLASH\_DC\_AWARE)) (SPI\_FLASH\_HPM\_DC\_AUTO)
- Disable (READ DOCS FIRST) (SPI\_FLASH\_HPM\_DC\_DISABLE)

### CONFIG\_SPI\_FLASH\_FORCE\_ENABLE\_XMC\_C\_SUSPEND

Enable XMC-C series flash chip suspend feature anyway

*Found in: Component config > Main Flash configuration > Optional and Experimental Features (READ DOCS FIRST)*

XMC-C series is regarded as not qualified for the Suspend feature, since its specification has a tRS >= 1ms restriction. We strongly do not suggest using it for the Suspend feature. However, if your product in field has enabled this feature, you may still enable this config option to keep the legacy behavior.

For new users, DO NOT enable this config.

**Default value:**

- No (disabled) if APP\_BUILD\_TYPE\_PURE\_RAM\_APP

### SPI Flash driver Contains:

- *Auto-detect flash chips*
- [CONFIG\\_SPI\\_FLASH\\_BYPASS\\_BLOCK\\_ERASE](#)
- [CONFIG\\_SPI\\_FLASH\\_ENABLE\\_ENCRYPTED\\_READ\\_WRITE](#)
- [CONFIG\\_SPI\\_FLASH\\_ENABLE\\_COUNTERS](#)
- [CONFIG\\_SPI\\_FLASH\\_ROM\\_DRIVER\\_PATCH](#)
- [CONFIG\\_SPI\\_FLASH\\_YIELD\\_DURING\\_ERASE](#)
- [CONFIG\\_SPI\\_FLASH\\_CHECK\\_ERASE\\_TIMEOUT\\_DISABLED](#)
- [CONFIG\\_SPI\\_FLASH\\_WRITE\\_CHUNK\\_SIZE](#)
- [CONFIG\\_SPI\\_FLASH\\_OVERRIDE\\_CHIP\\_DRIVER\\_LIST](#)
- [CONFIG\\_SPI\\_FLASH\\_SIZE\\_OVERRIDE](#)
- [CONFIG\\_SPI\\_FLASH\\_SHARE\\_SPI1\\_BUS](#)

- [CONFIG\\_SPI\\_FLASH\\_ROM\\_IMPL](#)
- [CONFIG\\_SPI\\_FLASH\\_VERIFY\\_WRITE](#)
- [CONFIG\\_SPI\\_FLASH\\_DANGEROUS\\_WRITE](#)

### CONFIG\_SPI\_FLASH\_VERIFY\_WRITE

Verify SPI flash writes

*Found in: [Component config](#) > [SPI Flash driver](#)*

If this option is enabled, any time SPI flash is written then the data will be read back and verified. This can catch hardware problems with SPI flash, or flash which was not erased before verification.

**Default value:**

- No (disabled)

### CONFIG\_SPI\_FLASH\_LOG\_FAILED\_WRITE

Log errors if verification fails

*Found in: [Component config](#) > [SPI Flash driver](#) > [CONFIG\\_SPI\\_FLASH\\_VERIFY\\_WRITE](#)*

If this option is enabled, if SPI flash write verification fails then a log error line will be written with the address, expected & actual values. This can be useful when debugging hardware SPI flash problems.

**Default value:**

- No (disabled) if [CONFIG\\_SPI\\_FLASH\\_VERIFY\\_WRITE](#)

### CONFIG\_SPI\_FLASH\_WARN\_SETTING\_ZERO\_TO\_ONE

Log warning if writing zero bits to ones

*Found in: [Component config](#) > [SPI Flash driver](#) > [CONFIG\\_SPI\\_FLASH\\_VERIFY\\_WRITE](#)*

If this option is enabled, any SPI flash write which tries to set zero bits in the flash to ones will log a warning. Such writes will not result in the requested data appearing identically in flash once written, as SPI NOR flash can only set bits to one when an entire sector is erased. After erasing, individual bits can only be written from one to zero.

Note that some software (such as SPIFFS) which is aware of SPI NOR flash may write one bits as an optimisation, relying on the data in flash becoming a bitwise AND of the new data and any existing data. Such software will log spurious warnings if this option is enabled.

**Default value:**

- No (disabled) if [CONFIG\\_SPI\\_FLASH\\_VERIFY\\_WRITE](#)

### CONFIG\_SPI\_FLASH\_ENABLE\_COUNTERS

Enable operation counters

*Found in: [Component config](#) > [SPI Flash driver](#)*

This option enables the following APIs:

- [spi\\_flash\\_reset\\_counters](#)
- [spi\\_flash\\_dump\\_counters](#)
- [spi\\_flash\\_get\\_counters](#)

These APIs may be used to collect performance data for [spi\\_flash](#) APIs and to help understand behaviour of libraries which use SPI flash.

**Default value:**

- 0

### CONFIG\_SPI\_FLASH\_ROM\_DRIVER\_PATCH

Enable SPI flash ROM driver patched functions

*Found in: [Component config](#) > [SPI Flash driver](#)*

Enable this flag to use patched versions of SPI flash ROM driver functions. This option should be enabled, if any one of the following is true: (1) need to write to flash on ESP32-D2WD; (2) main SPI flash is connected to non-default pins; (3) main SPI flash chip is manufactured by ISSI.

**Default value:**

- Yes (enabled)

### CONFIG\_SPI\_FLASH\_ROM\_IMPL

Use esp\_flash implementation in ROM

*Found in: [Component config](#) > [SPI Flash driver](#)*

Enable this flag to use new SPI flash driver functions from ROM instead of ESP-IDF.

If keeping this as “n” in your project, you will have less free IRAM. But you can use all of our flash features.

If making this as “y” in your project, you will increase free IRAM. But you may miss out on some flash features and support for new flash chips.

Currently the ROM cannot support the following features:

- SPI\_FLASH\_AUTO\_SUSPEND (C3, S3)

**Default value:**

- No (disabled)

### CONFIG\_SPI\_FLASH\_DANGEROUS\_WRITE

Writing to dangerous flash regions

*Found in: [Component config](#) > [SPI Flash driver](#)*

SPI flash APIs can optionally abort or return a failure code if erasing or writing addresses that fall at the beginning of flash (covering the bootloader and partition table) or that overlap the app partition that contains the running app.

It is not recommended to ever write to these regions from an IDF app, and this check prevents logic errors or corrupted firmware memory from damaging these regions.

Note that this feature \*does not\* check calls to the esp\_rom\_XXX SPI flash ROM functions. These functions should not be called directly from IDF applications.

**Available options:**

- Aborts (SPI\_FLASH\_DANGEROUS\_WRITE\_ABORTS)
- Fails (SPI\_FLASH\_DANGEROUS\_WRITE\_FAILS)
- Allowed (SPI\_FLASH\_DANGEROUS\_WRITE\_ALLOWED)

### CONFIG\_SPI\_FLASH\_SHARE\_SPI1\_BUS

Support other devices attached to SPI1 bus

*Found in: [Component config](#) > [SPI Flash driver](#)*

Each SPI bus needs a lock for arbitration among devices. This allows multiple devices on a same bus, but may reduce the speed of esp\_flash driver access to the main flash chip.

If you only need to use esp\_flash driver to access the main flash chip, disable this option, and the lock will be bypassed on SPI1 bus. Otherwise if extra devices are needed to attach to SPI1 bus, enable this option.

**Default value:**

- No (disabled)

**CONFIG\_SPI\_FLASH\_BYPASS\_BLOCK\_ERASE**

Bypass a block erase and always do sector erase

*Found in: [Component config](#) > [SPI Flash driver](#)*

Some flash chips can have very high “max” erase times, especially for block erase (32KB or 64KB). This option allows to bypass “block erase” and always do sector erase commands. This will be much slower overall in most cases, but improves latency for other code to run.

**Default value:**

- No (disabled)

**CONFIG\_SPI\_FLASH\_YIELD\_DURING\_ERASE**

Enables yield operation during flash erase

*Found in: [Component config](#) > [SPI Flash driver](#)*

This allows to yield the CPUs between erase commands. Prevents starvation of other tasks. Please use this configuration together with `SPI\_FLASH\_ERASE\_YIELD\_DURATION\_MS` and `SPI\_FLASH\_ERASE\_YIELD\_TICKS` after carefully checking flash datasheet to avoid a watchdog timeout. For more information, please check *SPI Flash API* reference documentation under section *OS Function*.

**Default value:**

- Yes (enabled)

**CONFIG\_SPI\_FLASH\_ERASE\_YIELD\_DURATION\_MS**

Duration of erasing to yield CPUs (ms)

*Found in: [Component config](#) > [SPI Flash driver](#) > [CONFIG\\_SPI\\_FLASH\\_YIELD\\_DURING\\_ERASE](#)*

If a duration of one erase command is large then it will yield CPUs after finishing a current command.

**Default value:**

- 20

**CONFIG\_SPI\_FLASH\_ERASE\_YIELD\_TICKS**

CPU release time (tick) for an erase operation

*Found in: [Component config](#) > [SPI Flash driver](#) > [CONFIG\\_SPI\\_FLASH\\_YIELD\\_DURING\\_ERASE](#)*

Defines how many ticks will be before returning to continue a erasing.

**Default value:**

- 1

**CONFIG\_SPI\_FLASH\_WRITE\_CHUNK\_SIZE**

Flash write chunk size

*Found in: [Component config](#) > [SPI Flash driver](#)*

Flash write is broken down in terms of multiple (smaller) write operations. This configuration options helps to set individual write chunk size, smaller value here ensures that cache (and non-IRAM resident interrupts) remains disabled for shorter duration.

**Range:**

- from 256 to 8192

**Default value:**

- 8192

**CONFIG\_SPI\_FLASH\_SIZE\_OVERRIDE**

Override flash size in bootloader header by ESPTOOLPY\_FLASHSIZE

*Found in: [Component config](#) > [SPI Flash driver](#)*

SPI Flash driver uses the flash size configured in bootloader header by default. Enable this option to override flash size with latest ESPTOOLPY\_FLASHSIZE value from the app header if the size in the bootloader header is incorrect.

**Default value:**

- No (disabled)

**CONFIG\_SPI\_FLASH\_CHECK\_ERASE\_TIMEOUT\_DISABLED**

Flash timeout checkout disabled

*Found in: [Component config](#) > [SPI Flash driver](#)*

This option is helpful if you are using a flash chip whose timeout is quite large or unpredictable.

**Default value:**

- No (disabled)

**CONFIG\_SPI\_FLASH\_OVERRIDE\_CHIP\_DRIVER\_LIST**

Override default chip driver list

*Found in: [Component config](#) > [SPI Flash driver](#)*

This option allows the chip driver list to be customized, instead of using the default list provided by ESP-IDF.

When this option is enabled, the default list is no longer compiled or linked. Instead, the *default\_registered\_chips* structure must be provided by the user.

See example: `custom_chip_driver` under `examples/storage` for more details.

**Default value:**

- No (disabled)

**Auto-detect flash chips** Contains:

- [CONFIG\\_SPI\\_FLASH\\_SUPPORT\\_BOYA\\_CHIP](#)
- [CONFIG\\_SPI\\_FLASH\\_SUPPORT\\_GD\\_CHIP](#)
- [CONFIG\\_SPI\\_FLASH\\_SUPPORT\\_ISSI\\_CHIP](#)
- [CONFIG\\_SPI\\_FLASH\\_SUPPORT\\_MXIC\\_CHIP](#)
- [CONFIG\\_SPI\\_FLASH\\_SUPPORT\\_TH\\_CHIP](#)
- [CONFIG\\_SPI\\_FLASH\\_SUPPORT\\_WINBOND\\_CHIP](#)

**CONFIG\_SPI\_FLASH\_SUPPORT\_ISSI\_CHIP**

ISSI

*Found in: [Component config](#) > [SPI Flash driver](#) > [Auto-detect flash chips](#)*

Enable this to support auto detection of ISSI chips if chip vendor not directly given by `chip\_drv` member of the chip struct. This adds support for variant chips, however will extend detecting time.

**Default value:**

- Yes (enabled)

### CONFIG\_SPI\_FLASH\_SUPPORT\_MXIC\_CHIP

MXIC

*Found in: Component config > SPI Flash driver > Auto-detect flash chips*

Enable this to support auto detection of MXIC chips if chip vendor not directly given by `chip\_drv` member of the chip struct. This adds support for variant chips, however will extend detecting time.

**Default value:**

- Yes (enabled)

### CONFIG\_SPI\_FLASH\_SUPPORT\_GD\_CHIP

GigaDevice

*Found in: Component config > SPI Flash driver > Auto-detect flash chips*

Enable this to support auto detection of GD (GigaDevice) chips if chip vendor not directly given by `chip\_drv` member of the chip struct. If you are using Wrover modules, please don't disable this, otherwise your flash may not work in 4-bit mode.

This adds support for variant chips, however will extend detecting time and image size. Note that the default chip driver supports the GD chips with product ID 60H.

**Default value:**

- Yes (enabled)

### CONFIG\_SPI\_FLASH\_SUPPORT\_WINBOND\_CHIP

Winbond

*Found in: Component config > SPI Flash driver > Auto-detect flash chips*

Enable this to support auto detection of Winbond chips if chip vendor not directly given by `chip\_drv` member of the chip struct. This adds support for variant chips, however will extend detecting time.

**Default value:**

- Yes (enabled)

### CONFIG\_SPI\_FLASH\_SUPPORT\_BOYA\_CHIP

BOYA

*Found in: Component config > SPI Flash driver > Auto-detect flash chips*

Enable this to support auto detection of BOYA chips if chip vendor not directly given by `chip\_drv` member of the chip struct. This adds support for variant chips, however will extend detecting time.

**Default value:**

- Yes (enabled)

### CONFIG\_SPI\_FLASH\_SUPPORT\_TH\_CHIP

TH

*Found in: Component config > SPI Flash driver > Auto-detect flash chips*

Enable this to support auto detection of TH chips if chip vendor not directly given by `chip\_drv` member of the chip struct. This adds support for variant chips, however will extend detecting time.

**Default value:**

- Yes (enabled)

## CONFIG\_SPI\_FLASH\_ENABLE\_ENCRYPTED\_READ\_WRITE

Enable encrypted partition read/write operations

*Found in: [Component config](#) > [SPI Flash driver](#)*

This option enables flash read/write operations to encrypted partition/s. This option is kept enabled irrespective of state of flash encryption feature. However, in case application is not using flash encryption feature and is in need of some additional memory from IRAM region (~1KB) then this config can be disabled.

**Default value:**

- Yes (enabled)

## SPIFFS Configuration

 Contains:

- [Debug Configuration](#)
- [CONFIG\\_SPIFFS\\_USE\\_MAGIC](#)
- [CONFIG\\_SPIFFS\\_GC\\_STATS](#)
- [CONFIG\\_SPIFFS\\_PAGE\\_CHECK](#)
- [CONFIG\\_SPIFFS\\_FOLLOW\\_SYMLINKS](#)
- [CONFIG\\_SPIFFS\\_MAX\\_PARTITIONS](#)
- [CONFIG\\_SPIFFS\\_USE\\_MTIME](#)
- [CONFIG\\_SPIFFS\\_GC\\_MAX\\_RUNS](#)
- [CONFIG\\_SPIFFS\\_OBJ\\_NAME\\_LEN](#)
- [CONFIG\\_SPIFFS\\_META\\_LENGTH](#)
- [SPIFFS Cache Configuration](#)
- [CONFIG\\_SPIFFS\\_PAGE\\_SIZE](#)
- [CONFIG\\_SPIFFS\\_MTIME\\_WIDE\\_64\\_BITS](#)

## CONFIG\_SPIFFS\_MAX\_PARTITIONS

Maximum Number of Partitions

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

Define maximum number of partitions that can be mounted.

**Range:**

- from 1 to 10

**Default value:**

- 3

## SPIFFS Cache Configuration

 Contains:

- [CONFIG\\_SPIFFS\\_CACHE](#)

## CONFIG\_SPIFFS\_CACHE

Enable SPIFFS Cache

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [SPIFFS Cache Configuration](#)*

Enables/disable memory read caching of nucleus file system operations.

**Default value:**

- Yes (enabled)

### CONFIG\_SPIFFS\_CACHE\_WR

Enable SPIFFS Write Caching

*Found in:* [Component config](#) > [SPIFFS Configuration](#) > [SPIFFS Cache Configuration](#) > [CONFIG\\_SPIFFS\\_CACHE](#)

Enables memory write caching for file descriptors in hydrogen.

**Default value:**

- Yes (enabled)

### CONFIG\_SPIFFS\_CACHE\_STATS

Enable SPIFFS Cache Statistics

*Found in:* [Component config](#) > [SPIFFS Configuration](#) > [SPIFFS Cache Configuration](#) > [CONFIG\\_SPIFFS\\_CACHE](#)

Enable/disable statistics on caching. Debug/test purpose only.

**Default value:**

- No (disabled)

### CONFIG\_SPIFFS\_PAGE\_CHECK

Enable SPIFFS Page Check

*Found in:* [Component config](#) > [SPIFFS Configuration](#)

Always check header of each accessed page to ensure consistent state. If enabled it will increase number of reads from flash, especially if cache is disabled.

**Default value:**

- Yes (enabled)

### CONFIG\_SPIFFS\_GC\_MAX\_RUNS

Set Maximum GC Runs

*Found in:* [Component config](#) > [SPIFFS Configuration](#)

Define maximum number of GC runs to perform to reach desired free pages.

**Range:**

- from 1 to 10000

**Default value:**

- 10

### CONFIG\_SPIFFS\_GC\_STATS

Enable SPIFFS GC Statistics

*Found in:* [Component config](#) > [SPIFFS Configuration](#)

Enable/disable statistics on gc. Debug/test purpose only.

**Default value:**

- No (disabled)

### CONFIG\_SPIFFS\_PAGE\_SIZE

SPIFFS logical page size

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

Logical page size of SPIFFS partition, in bytes. Must be multiple of flash page size (which is usually 256 bytes). Larger page sizes reduce overhead when storing large files, and improve filesystem performance when reading large files. Smaller page sizes reduce overhead when storing small (< page size) files.

**Range:**

- from 256 to 1024

**Default value:**

- 256

### CONFIG\_SPIFFS\_OBJ\_NAME\_LEN

Set SPIFFS Maximum Name Length

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

Object name maximum length. Note that this length include the zero-termination character, meaning maximum string of characters can at most be SPIFFS\_OBJ\_NAME\_LEN - 1.

SPIFFS\_OBJ\_NAME\_LEN + SPIFFS\_META\_LENGTH should not exceed SPIFFS\_PAGE\_SIZE - 64.

**Range:**

- from 1 to 256

**Default value:**

- 32

### CONFIG\_SPIFFS\_FOLLOW\_SYMLINKS

Enable symbolic links for image creation

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

If this option is enabled, symbolic links are taken into account during partition image creation.

**Default value:**

- No (disabled)

### CONFIG\_SPIFFS\_USE\_MAGIC

Enable SPIFFS Filesystem Magic

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

Enable this to have an identifiable spiffs filesystem. This will look for a magic in all sectors to determine if this is a valid spiffs system or not at mount time.

**Default value:**

- Yes (enabled)

### CONFIG\_SPIFFS\_USE\_MAGIC\_LENGTH

Enable SPIFFS Filesystem Length Magic

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [CONFIG\\_SPIFFS\\_USE\\_MAGIC](#)*

If this option is enabled, the magic will also be dependent on the length of the filesystem. For example, a filesystem configured and formatted for 4 megabytes will not be accepted for mounting with a configuration defining the filesystem as 2 megabytes.

**Default value:**

- Yes (enabled)

### CONFIG\_SPIFFS\_META\_LENGTH

Size of per-file metadata field

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

This option sets the number of extra bytes stored in the file header. These bytes can be used in an application-specific manner. Set this to at least 4 bytes to enable support for saving file modification time.

SPIFFS\_OBJ\_NAME\_LEN + SPIFFS\_META\_LENGTH should not exceed SPIFFS\_PAGE\_SIZE - 64.

**Default value:**

- 4

### CONFIG\_SPIFFS\_USE\_MTIME

Save file modification time

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

If enabled, then the first 4 bytes of per-file metadata will be used to store file modification time (mtime), accessible through stat/fstat functions. Modification time is updated when the file is opened.

**Default value:**

- Yes (enabled)

### CONFIG\_SPIFFS\_MTIME\_WIDE\_64\_BITS

The time field occupies 64 bits in the image instead of 32 bits

*Found in: [Component config](#) > [SPIFFS Configuration](#)*

If this option is not set, the time field is 32 bits (up to 2106 year), otherwise it is 64 bits and make sure it matches SPIFFS\_META\_LENGTH. If the chip already has the spiffs image with the time field = 32 bits then this option cannot be applied in this case. Erase it first before using this option. To resolve the Y2K38 problem for the spiffs, use a toolchain with 64-bit time\_t support.

**Default value:**

- No (disabled) if [CONFIG\\_SPIFFS\\_META\\_LENGTH](#) >= 8

**Debug Configuration** Contains:

- [CONFIG\\_SPIFFS\\_DBG](#)
- [CONFIG\\_SPIFFS\\_API\\_DBG](#)
- [CONFIG\\_SPIFFS\\_CACHE\\_DBG](#)
- [CONFIG\\_SPIFFS\\_CHECK\\_DBG](#)
- [CONFIG\\_SPIFFS\\_TEST\\_VISUALISATION](#)
- [CONFIG\\_SPIFFS\\_GC\\_DBG](#)

### CONFIG\_SPIFFS\_DBG

Enable general SPIFFS debug

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [Debug Configuration](#)*

Enabling this option will print general debug messages to the console.

**Default value:**

- No (disabled)

### **CONFIG\_SPIFFS\_API\_DBG**

Enable SPIFFS API debug

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [Debug Configuration](#)*

Enabling this option will print API debug messages to the console.

**Default value:**

- No (disabled)

### **CONFIG\_SPIFFS\_GC\_DBG**

Enable SPIFFS Garbage Cleaner debug

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [Debug Configuration](#)*

Enabling this option will print GC debug messages to the console.

**Default value:**

- No (disabled)

### **CONFIG\_SPIFFS\_CACHE\_DBG**

Enable SPIFFS Cache debug

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [Debug Configuration](#)*

Enabling this option will print cache debug messages to the console.

**Default value:**

- No (disabled)

### **CONFIG\_SPIFFS\_CHECK\_DBG**

Enable SPIFFS Filesystem Check debug

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [Debug Configuration](#)*

Enabling this option will print Filesystem Check debug messages to the console.

**Default value:**

- No (disabled)

### **CONFIG\_SPIFFS\_TEST\_VISUALISATION**

Enable SPIFFS Filesystem Visualization

*Found in: [Component config](#) > [SPIFFS Configuration](#) > [Debug Configuration](#)*

Enable this option to enable SPIFFS\_vis function in the API.

**Default value:**

- No (disabled)

**TCP Transport** Contains:

- [Websocket](#)

**Websocket** Contains:

- [CONFIG\\_WS\\_TRANSPORT](#)

### CONFIG\_WS\_TRANSPORT

Enable Websocket Transport

*Found in: [Component config](#) > [TCP Transport](#) > [Websocket](#)*

Enable support for creating websocket transport.

**Default value:**

- Yes (enabled)

### CONFIG\_WS\_BUFFER\_SIZE

Websocket transport buffer size

*Found in: [Component config](#) > [TCP Transport](#) > [Websocket](#) > [CONFIG\\_WS\\_TRANSPORT](#)*

Size of the buffer used for constructing the HTTP Upgrade request during connect

**Default value:**

- 1024

### CONFIG\_WS\_DYNAMIC\_BUFFER

Using dynamic websocket transport buffer

*Found in: [Component config](#) > [TCP Transport](#) > [Websocket](#) > [CONFIG\\_WS\\_TRANSPORT](#)*

If enable this option, websocket transport buffer will be freed after connection succeed to save more heap.

**Default value:**

- No (disabled)

**Ultra Low Power (ULP) Co-processor** Contains:

- [CONFIG\\_ULP\\_COPROC\\_ENABLED](#)
- [ULP RISC-V Settings](#)

### CONFIG\_ULP\_COPROC\_ENABLED

Enable Ultra Low Power (ULP) Co-processor

*Found in: [Component config](#) > [Ultra Low Power \(ULP\) Co-processor](#)*

Enable this feature if you plan to use the ULP Co-processor. Once this option is enabled, further ULP co-processor configuration will appear in the menu.

**Default value:**

- No (disabled) if SOC\_ULP\_SUPPORTED || SOC\_RISCV\_COPROC\_SUPPORTED

### CONFIG\_ULP\_COPROC\_TYPE

ULP Co-processor type

*Found in: [Component config](#) > [Ultra Low Power \(ULP\) Co-processor](#) > [CONFIG\\_ULP\\_COPROC\\_ENABLED](#)*

Choose the ULP Coprocessor type: ULP FSM (Finite State Machine) or ULP RISC-V. Please note that ESP32 only supports ULP FSM.

**Available options:**

- ULP FSM (Finite State Machine) (ULP\_COPROC\_TYPE\_FSM)
- ULP RISC-V (ULP\_COPROC\_TYPE\_RISCV)

## CONFIG\_ULP\_COPROC\_RESERVE\_MEM

RTC slow memory reserved for coprocessor

*Found in:* [Component config](#) > [Ultra Low Power \(ULP\) Co-processor](#) > [CONFIG\\_ULP\\_COPROC\\_ENABLED](#)

Bytes of memory to reserve for ULP Co-processor firmware & data. Data is reserved at the beginning of RTC slow memory.

**Range:**

- from 32 to 8176 if [CONFIG\\_ULP\\_COPROC\\_ENABLED](#) && (SOC\_ULP\_SUPPORTED || SOC\_RISCV\_COPROC\_SUPPORTED)

## ULP RISC-V Settings

 Contains:

- [CONFIG\\_ULP\\_RISCV\\_UART\\_BAUDRATE](#)

## CONFIG\_ULP\_RISCV\_UART\_BAUDRATE

Baudrate used by the bitbanged ULP RISC-V UART driver

*Found in:* [Component config](#) > [Ultra Low Power \(ULP\) Co-processor](#) > [ULP RISC-V Settings](#)

The accuracy of the bitbanged UART driver is limited, it is not recommend to increase the value above 19200.

**Default value:**

- 9600 if ULP\_COPROC\_TYPE\_RISCV && (SOC\_ULP\_SUPPORTED || SOC\_RISCV\_COPROC\_SUPPORTED)

## Unity unit testing library

 Contains:

- [CONFIG\\_UNITY\\_ENABLE\\_COLOR](#)
- [CONFIG\\_UNITY\\_ENABLE\\_IDF\\_TEST\\_RUNNER](#)
- [CONFIG\\_UNITY\\_ENABLE\\_FIXTURE](#)
- [CONFIG\\_UNITY\\_ENABLE\\_BACKTRACE\\_ON\\_FAIL](#)
- [CONFIG\\_UNITY\\_ENABLE\\_64BIT](#)
- [CONFIG\\_UNITY\\_ENABLE\\_DOUBLE](#)
- [CONFIG\\_UNITY\\_ENABLE\\_FLOAT](#)

## CONFIG\_UNITY\_ENABLE\_FLOAT

Support for float type

*Found in:* [Component config](#) > [Unity unit testing library](#)

If not set, assertions on float arguments will not be available.

**Default value:**

- Yes (enabled)

## CONFIG\_UNITY\_ENABLE\_DOUBLE

Support for double type

*Found in:* [Component config](#) > [Unity unit testing library](#)

If not set, assertions on double arguments will not be available.

**Default value:**

- Yes (enabled)

### CONFIG\_UNITY\_ENABLE\_64BIT

Support for 64-bit integer types

*Found in: [Component config](#) > [Unity unit testing library](#)*

If not set, assertions on 64-bit integer types will always fail. If this feature is enabled, take care not to pass pointers (which are 32 bit) to UNITY\_ASSERT\_EQUAL, as that will cause pointer-to-int-cast warnings.

**Default value:**

- No (disabled)

### CONFIG\_UNITY\_ENABLE\_COLOR

Colorize test output

*Found in: [Component config](#) > [Unity unit testing library](#)*

If set, Unity will colorize test results using console escape sequences.

**Default value:**

- No (disabled)

### CONFIG\_UNITY\_ENABLE\_IDF\_TEST\_RUNNER

Include ESP-IDF test registration/running helpers

*Found in: [Component config](#) > [Unity unit testing library](#)*

If set, then the following features will be available:

- TEST\_CASE macro which performs automatic registration of test functions
- Functions to run registered test functions: `unity_run_all_tests`, `unity_run_tests_with_filter`, `unity_run_single_test_by_name`.
- Interactive menu which lists test cases and allows choosing the tests to be run, available via `unity_run_menu` function.

Disable if a different test registration mechanism is used.

**Default value:**

- Yes (enabled)

### CONFIG\_UNITY\_ENABLE\_FIXTURE

Include Unity test fixture

*Found in: [Component config](#) > [Unity unit testing library](#)*

If set, `unity_fixture.h` header file and associated source files are part of the build. These provide an optional set of macros and functions to implement test groups.

**Default value:**

- No (disabled)

### CONFIG\_UNITY\_ENABLE\_BACKTRACE\_ON\_FAIL

Print a backtrace when a unit test fails

*Found in: [Component config](#) > [Unity unit testing library](#)*

If set, the unity framework will print the backtrace information before jumping back to the test menu. The jumping is usually occurs in assert functions such as `TEST_ASSERT`, `TEST_FAIL` etc.

**Default value:**

- No (disabled)

**Virtual file system** Contains:

- `CONFIG_VFS_SUPPORT_IO`

### **CONFIG\_VFS\_SUPPORT\_IO**

Provide basic I/O functions

*Found in:* [Component config](#) > [Virtual file system](#)

If enabled, the following functions are provided by the VFS component.

open, close, read, write, pread, pwrite, lseek, fstat, fsync, ioctl, fcntl

Filesystem drivers can then be registered to handle these functions for specific paths.

Disabling this option can save memory when the support for these functions is not required.

Note that the following functions can still be used with socket file descriptors when this option is disabled:

close, read, write, ioctl, fcntl.

**Default value:**

- Yes (enabled)

### **CONFIG\_VFS\_SUPPORT\_DIR**

Provide directory related functions

*Found in:* [Component config](#) > [Virtual file system](#) > [CONFIG\\_VFS\\_SUPPORT\\_IO](#)

If enabled, the following functions are provided by the VFS component.

stat, link, unlink, rename, utime, access, truncate, rmdir, mkdir, opendir, closedir, readdir, readdir\_r, seekdir, telldir, rewinddir

Filesystem drivers can then be registered to handle these functions for specific paths.

Disabling this option can save memory when the support for these functions is not required.

**Default value:**

- Yes (enabled)

### **CONFIG\_VFS\_SUPPORT\_SELECT**

Provide select function

*Found in:* [Component config](#) > [Virtual file system](#) > [CONFIG\\_VFS\\_SUPPORT\\_IO](#)

If enabled, select function is provided by the VFS component, and can be used on peripheral file descriptors (such as UART) and sockets at the same time.

If disabled, the default select implementation will be provided by LWIP for sockets only.

Disabling this option can reduce code size if support for “select” on UART file descriptors is not required.

**Default value:**

- Yes (enabled) if `CONFIG_VFS_SUPPORT_IO` && `CONFIG_LWIP_USE_ONLY_LWIP_SELECT`

## CONFIG\_VFS\_SUPPRESS\_SELECT\_DEBUG\_OUTPUT

Suppress select() related debug outputs

*Found in: Component config > Virtual file system > CONFIG\_VFS\_SUPPORT\_IO > CONFIG\_VFS\_SUPPORT\_SELECT*

Select() related functions might produce an inconveniently lot of debug outputs when one sets the default log level to DEBUG or higher. It is possible to suppress these debug outputs by enabling this option.

**Default value:**

- Yes (enabled)

## CONFIG\_VFS\_SUPPORT\_TERMIOS

Provide termios.h functions

*Found in: Component config > Virtual file system > CONFIG\_VFS\_SUPPORT\_IO*

Disabling this option can save memory when the support for termios.h is not required.

**Default value:**

- Yes (enabled)

**Host File System I/O (Semihosting)** Contains:

- *CONFIG\_VFS\_SEMIHOSTFS\_MAX\_MOUNT\_POINTS*

## CONFIG\_VFS\_SEMIHOSTFS\_MAX\_MOUNT\_POINTS

Host FS: Maximum number of the host filesystem mount points

*Found in: Component config > Virtual file system > CONFIG\_VFS\_SUPPORT\_IO > Host File System I/O (Semihosting)*

Define maximum number of host filesystem mount points.

**Default value:**

- 1

**Wear Levelling** Contains:

- *CONFIG\_WL\_SECTOR\_MODE*
- *CONFIG\_WL\_SECTOR\_SIZE*

## CONFIG\_WL\_SECTOR\_SIZE

Wear Levelling library sector size

*Found in: Component config > Wear Levelling*

Sector size used by wear levelling library. You can set default sector size or size that will fit to the flash device sector size.

With sector size set to 4096 bytes, wear levelling library is more efficient. However if FAT filesystem is used on top of wear levelling library, it will need more temporary storage: 4096 bytes for each mounted filesystem and 4096 bytes for each opened file.

With sector size set to 512 bytes, wear levelling library will perform more operations with flash memory, but less RAM will be used by FAT filesystem library (512 bytes for the filesystem and 512 bytes for each file opened).

**Available options:**

- 512 (WL\_SECTOR\_SIZE\_512)
- 4096 (WL\_SECTOR\_SIZE\_4096)

## CONFIG\_WL\_SECTOR\_MODE

Sector store mode

*Found in: Component config > Wear Levelling*

Specify the mode to store data into flash:

- In Performance mode a data will be stored to the RAM and then stored back to the flash. Compared to the Safety mode, this operation is faster, but if power will be lost when erase sector operation is in progress, then the data from complete flash device sector will be lost.
- In Safety mode data from complete flash device sector will be read from flash, modified, and then stored back to flash. Compared to the Performance mode, this operation is slower, but if power is lost during erase sector operation, then the data from full flash device sector will not be lost.

### Available options:

- Performance (WL\_SECTOR\_MODE\_PERF)
- Safety (WL\_SECTOR\_MODE\_SAFE)

**Wi-Fi Provisioning Manager** Contains:

- [CONFIG\\_WIFI\\_PROV\\_BLE\\_BONDING](#)
- [CONFIG\\_WIFI\\_PROV\\_BLE\\_SEC\\_CONN](#)
- [CONFIG\\_WIFI\\_PROV\\_BLE\\_FORCE\\_ENCRYPTION](#)
- [CONFIG\\_WIFI\\_PROV\\_KEEP\\_BLE\\_ON\\_AFTER\\_PROV](#)
- [CONFIG\\_WIFI\\_PROV\\_SCAN\\_MAX\\_ENTRIES](#)
- [CONFIG\\_WIFI\\_PROV\\_AUTOSTOP\\_TIMEOUT](#)
- [CONFIG\\_WIFI\\_PROV\\_STA\\_SCAN\\_METHOD](#)

## CONFIG\_WIFI\_PROV\_SCAN\_MAX\_ENTRIES

Max Wi-Fi Scan Result Entries

*Found in: Component config > Wi-Fi Provisioning Manager*

This sets the maximum number of entries of Wi-Fi scan results that will be kept by the provisioning manager

### Range:

- from 1 to 255

### Default value:

- 16

## CONFIG\_WIFI\_PROV\_AUTOSTOP\_TIMEOUT

Provisioning auto-stop timeout

*Found in: Component config > Wi-Fi Provisioning Manager*

Time (in seconds) after which the Wi-Fi provisioning manager will auto-stop after connecting to a Wi-Fi network successfully.

### Range:

- from 5 to 600

### Default value:

- 30

## CONFIG\_WIFI\_PROV\_BLE\_BONDING

Enable BLE bonding

*Found in: Component config > Wi-Fi Provisioning Manager*

This option is applicable only when provisioning transport is BLE.

**CONFIG\_WIFI\_PROV\_BLE\_SEC\_CONN**

Enable BLE Secure connection flag

*Found in: [Component config](#) > [Wi-Fi Provisioning Manager](#)*

Used to enable Secure connection support when provisioning transport is BLE.

**Default value:**

- Yes (enabled) if `BT_NIMBLE_ENABLED`

**CONFIG\_WIFI\_PROV\_BLE\_FORCE\_ENCRYPTION**

Force Link Encryption during characteristic Read / Write

*Found in: [Component config](#) > [Wi-Fi Provisioning Manager](#)*

Used to enforce link encryption when attempting to read / write characteristic

**CONFIG\_WIFI\_PROV\_KEEP\_BLE\_ON\_AFTER\_PROV**

Keep BT on after provisioning is done

*Found in: [Component config](#) > [Wi-Fi Provisioning Manager](#)*

**CONFIG\_WIFI\_PROV\_DISCONNECT\_AFTER\_PROV**

Terminate connection after provisioning is done

*Found in: [Component config](#) > [Wi-Fi Provisioning Manager](#) > [CONFIG\\_WIFI\\_PROV\\_KEEP\\_BLE\\_ON\\_AFTER\\_PROV](#)*

**Default value:**

- Yes (enabled) if `CONFIG_WIFI_PROV_KEEP_BLE_ON_AFTER_PROV`

**CONFIG\_WIFI\_PROV\_STA\_SCAN\_METHOD**

Wifi Provisioning Scan Method

*Found in: [Component config](#) > [Wi-Fi Provisioning Manager](#)*

**Available options:**

- All Channel Scan (`WIFI_PROV_STA_ALL_CHANNEL_SCAN`)  
Scan will end after scanning the entire channel. This option is useful in Mesh WiFi Systems.
- Fast Scan (`WIFI_PROV_STA_FAST_SCAN`)  
Scan will end after an AP matching with the SSID has been detected.

**Supplicant** Contains:

- `CONFIG_WPA_TESTING_OPTIONS`
- `CONFIG_WPA_WPS_SOFTAP_REGISTRAR`
- `CONFIG_WPA_11KV_SUPPORT`
- `CONFIG_WPA_11R_SUPPORT`
- `CONFIG_WPA_DPP_SUPPORT`
- `CONFIG_WPA_MBO_SUPPORT`
- `CONFIG_WPA_SUITE_B_192`
- `CONFIG_WPA_WAPI_PSK`
- `CONFIG_WPA_DEBUG_PRINT`
- `CONFIG_WPA_WPS_STRICT`
- `CONFIG_WPA_MBEDTLS_CRYPT`

### CONFIG\_WPA\_MBEDTLS\_CRYPTO

Use MbedTLS crypto APIs

*Found in:* [Component config](#) > [Supplicant](#)

Select this option to enable the use of MbedTLS crypto APIs. The internal crypto support within the supplicant is limited and may not suffice for all new security features, including WPA3.

It is recommended to always keep this option enabled. Additionally, note that MbedTLS can leverage hardware acceleration if available, resulting in significantly faster cryptographic operations.

**Default value:**

- Yes (enabled)

### CONFIG\_WPA\_MBEDTLS\_TLS\_CLIENT

Use MbedTLS TLS client for WiFi Enterprise connection

*Found in:* [Component config](#) > [Supplicant](#) > [CONFIG\\_WPA\\_MBEDTLS\\_CRYPTO](#)

Select this option to use MbedTLS TLS client for WPA2 enterprise connection. Please note that from MbedTLS-3.0 onwards, MbedTLS does not support SSL-3.0 TLS-v1.0, TLS-v1.1 versions. In case your server is using one of these version, it is advisable to update your server. Please disable this option for compatibility with older TLS versions.

**Default value:**

- Yes (enabled)

### CONFIG\_WPA\_WAPI\_PSK

Enable WAPI PSK support

*Found in:* [Component config](#) > [Supplicant](#)

Select this option to enable WAPI-PSK which is a Chinese National Standard Encryption for Wireless LANs (GB 15629.11-2003).

### CONFIG\_WPA\_SUITE\_B\_192

Enable NSA suite B support with 192 bit key

*Found in:* [Component config](#) > [Supplicant](#)

Select this option to enable 192 bit NSA suite-B. This is necessary to support WPA3 192 bit security.

### CONFIG\_WPA\_DEBUG\_PRINT

Print debug messages from WPA Supplicant

*Found in:* [Component config](#) > [Supplicant](#)

Select this option to print logging information from WPA supplicant, this includes handshake information and key hex dumps depending on the project logging level.

Enabling this could increase the build size ~60kb depending on the project logging level.

**Default value:**

- No (disabled)

### CONFIG\_WPA\_TESTING\_OPTIONS

Add DPP testing code

*Found in: [Component config](#) > [Supplicant](#)*

Select this to enable unity test for DPP.

**Default value:**

- No (disabled)

### CONFIG\_WPA\_WPS\_STRICT

Strictly validate all WPS attributes

*Found in: [Component config](#) > [Supplicant](#)*

Select this option to enable validate each WPS attribute rigorously. Disabling this add the workarounds with various APs. Enabling this may cause inter operability issues with some APs.

**Default value:**

- No (disabled)

### CONFIG\_WPA\_11KV\_SUPPORT

Enable 802.11k, 802.11v APIs Support

*Found in: [Component config](#) > [Supplicant](#)*

Select this option to enable 802.11k 802.11v APIs(RRM and BTM support). Only APIs which are helpful for network assisted roaming are supported for now. Enable this option with BTM and RRM enabled in sta config to make device ready for network assisted roaming. BTM: BSS transition management enables an AP to request a station to transition to a specific AP, or to indicate to a station a set of preferred APs. RRM: Radio measurements enable STAs to understand the radio environment, it enables STAs to observe and gather data on radio link performance and on the radio environment. Current implementation adds beacon report, link measurement, neighbor report.

**Default value:**

- No (disabled)

### CONFIG\_WPA\_SCAN\_CACHE

Keep scan results in cache

*Found in: [Component config](#) > [Supplicant](#) > [CONFIG\\_WPA\\_11KV\\_SUPPORT](#)*

Keep scan results in cache, if not enabled, those will be flushed immediately.

**Default value:**

- No (disabled) if [CONFIG\\_WPA\\_11KV\\_SUPPORT](#)

### CONFIG\_WPA\_MBO\_SUPPORT

Enable Multi Band Operation Certification Support

*Found in: [Component config](#) > [Supplicant](#)*

Select this option to enable WiFi Multiband operation certification support.

**Default value:**

- No (disabled)

### CONFIG\_WPA\_DPP\_SUPPORT

Enable DPP support

Found in: *Component config > Supplicant*

Select this option to enable WiFi Easy Connect Support.

**Default value:**

- No (disabled)

### CONFIG\_WPA\_11R\_SUPPORT

Enable 802.11R (Fast Transition) Support

Found in: *Component config > Supplicant*

Select this option to enable WiFi Fast Transition Support.

**Default value:**

- No (disabled)

### CONFIG\_WPA\_WPS\_SOFTAP\_REGISTRAR

Add WPS Registrar support in SoftAP mode

Found in: *Component config > Supplicant*

Select this option to enable WPS registrar support in softAP mode.

**Default value:**

- No (disabled)

### Deprecated options and their replacements

## 2.8 Provisioning API

### 2.8.1 Protocol Communication

#### Overview

The Protocol Communication (protocomm) component manages secure sessions and provides the framework for multiple transports. The application can also use the protocomm layer directly to have application-specific extensions for the provisioning or non-provisioning use cases.

Following features are available for provisioning:

- Communication security at the application level
  - `protocomm_security0` (no security)
  - `protocomm_security1` (Curve25519 key exchange + AES-CTR encryption/decryption)
  - `protocomm_security2` (SRP6a-based key exchange + AES-GCM encryption/decryption)
- Proof-of-possession (support with `protocomm_security1` only)
- Salt and Verifier (support with `protocomm_security2` only)

Protocomm internally uses protobuf (protocol buffers) for secure session establishment. Users can choose to implement their own security (even without using protobuf). Protocomm can also be used without any security layer.

Protocomm provides the framework for various transports:

- Bluetooth LE
- Wi-Fi (SoftAP + HTTPD)
- Console, in which case the handler invocation is automatically taken care of on the device side. See Transport Examples below for code snippets.

Note that for `protocomm_security1` and `protocomm_security2`, the client still needs to establish sessions by performing the two-way handshake. See *Unified Provisioning* for more details about the secure handshake logic.

### Enabling Protocomm Security Version

The `protocomm` component provides a project configuration menu to enable/disable support of respective security versions. The respective configuration options are as follows:

- Support `protocomm_security0`, with no security: `CONFIG_ESP_PROTOCOMM_SUPPORT_SECURITY_VERSION_0`, this option is enabled by default.
- Support `protocomm_security1` with Curve25519 key exchange + AES-CTR encryption/decryption: `CONFIG_ESP_PROTOCOMM_SUPPORT_SECURITY_VERSION_1`, this option is enabled by default.
- Support `protocomm_security2` with SRP6a-based key exchange + AES-GCM encryption/decryption: `CONFIG_ESP_PROTOCOMM_SUPPORT_SECURITY_VERSION_2`.

**Note:** Enabling multiple security versions at once offers the ability to control them dynamically but also increases the firmware size.

### SoftAP + HTTP Transport Example with Security 2

For sample usage, see `wifi_provisioning/src/scheme_softap.c`.

```

/* The endpoint handler to be registered with protocomm. This simply echoes back
↳the received data. */

        {"security_endpoint", 0xFF51},
        {"echo_req_endpoint", 0xFF52}
    };

    /* Config for protocomm_ble_start(). */
    protocomm_ble_config_t config = {
        .service_uuid = {
            /* LSB <-----
            * -----> MSB */
            0xfb, 0x34, 0x9b, 0x5f, 0x80, 0x00, 0x00, 0x80,
            0x00, 0x10, 0x00, 0x00, 0xFF, 0xFF, 0x00, 0x00,
        },
        .nu_lookup_count = sizeof(nu_lookup_table)/sizeof(nu_lookup_table[0]),
        .nu_lookup = nu_lookup_table
    };

    /* Start protocomm layer on top of Bluetooth LE. */
    protocomm_ble_start(pc, &config);

    /* For protocomm_security0, Proof of Possession is not used, and can be kept_
↳NULL. */
    protocomm_set_security(pc, "security_endpoint", &protocomm_security0, NULL);
    protocomm_add_endpoint(pc, "echo_req_endpoint", echo_req_handler, NULL);
    return pc;
}

/* The example function for stopping a protocomm instance. */
void stop_pc(protocomm_t *pc)
{
    protocomm_remove_endpoint(pc, "echo_req_endpoint");
    protocomm_unset_security(pc, "security_endpoint");

    /* Stop the Bluetooth LE protocomm service. */
    protocomm_ble_stop(pc);

    protocomm_delete(pc);
}

```

## API Reference

### Header File

- `components/protocomm/include/common/protocomm.h`

### Functions

`protocomm_t` \***protocomm\_new** (void)

Create a new protocomm instance.

This API will return a new dynamically allocated protocomm instance with all elements of the `protocomm_t` structure initialized to NULL.

#### Returns

- `protocomm_t*` : On success
- NULL : No memory for allocating new instance

void **protocomm\_delete** (`protocomm_t` \*pc)

Delete a protocomm instance.

This API will deallocate a protocomm instance that was created using `protocomm_new()`.

**Parameters** `pc` –[in] Pointer to the protocomm instance to be deleted

`esp_err_t` **protocomm\_add\_endpoint** (`protocomm_t` \*pc, const char \*ep\_name, `protocomm_req_handler_t` h, void \*priv\_data)

Add endpoint request handler for a protocomm instance.

This API will bind an endpoint handler function to the specified endpoint name, along with any private data that needs to be pass to the handler at the time of call.

---

#### Note:

- An endpoint must be bound to a valid protocomm instance, created using `protocomm_new()`.
  - This function internally calls the registered `add_endpoint()` function of the selected transport which is a member of the `protocomm_t` instance structure.
- 

#### Parameters

- `pc` –[in] Pointer to the protocomm instance
- `ep_name` –[in] Endpoint identifier(name) string
- `h` –[in] Endpoint handler function
- `priv_data` –[in] Pointer to private data to be passed as a parameter to the handler function on call. Pass NULL if not needed.

#### Returns

- ESP\_OK : Success
- ESP\_FAIL : Error adding endpoint / Endpoint with this name already exists
- ESP\_ERR\_NO\_MEM : Error allocating endpoint resource
- ESP\_ERR\_INVALID\_ARG : Null instance/name/handler arguments

`esp_err_t` **protocomm\_remove\_endpoint** (`protocomm_t` \*pc, const char \*ep\_name)

Remove endpoint request handler for a protocomm instance.

This API will remove a registered endpoint handler identified by an endpoint name.

---

#### Note:

- This function internally calls the registered `remove_endpoint()` function which is a member of the `protocomm_t` instance structure.
-

**Parameters**

- **pc** –[in] Pointer to the protocomm instance
- **ep\_name** –[in] Endpoint identifier(name) string

**Returns**

- ESP\_OK : Success
- ESP\_ERR\_NOT\_FOUND : Endpoint with specified name doesn't exist
- ESP\_ERR\_INVALID\_ARG : Null instance/name arguments

*esp\_err\_t* **protocomm\_open\_session** (*protocomm\_t* \*pc, uint32\_t session\_id)

Allocates internal resources for new transport session.

---

**Note:**

- An endpoint must be bound to a valid protocomm instance, created using `protocomm_new()`.
- 

**Parameters**

- **pc** –[in] Pointer to the protocomm instance
- **session\_id** –[in] Unique ID for a communication session

**Returns**

- ESP\_OK : Request handled successfully
- ESP\_ERR\_NO\_MEM : Error allocating internal resource
- ESP\_ERR\_INVALID\_ARG : Null instance/name arguments

*esp\_err\_t* **protocomm\_close\_session** (*protocomm\_t* \*pc, uint32\_t session\_id)

Frees internal resources used by a transport session.

---

**Note:**

- An endpoint must be bound to a valid protocomm instance, created using `protocomm_new()`.
- 

**Parameters**

- **pc** –[in] Pointer to the protocomm instance
- **session\_id** –[in] Unique ID for a communication session

**Returns**

- ESP\_OK : Request handled successfully
- ESP\_ERR\_INVALID\_ARG : Null instance/name arguments

*esp\_err\_t* **protocomm\_req\_handle** (*protocomm\_t* \*pc, const char \*ep\_name, uint32\_t session\_id, const uint8\_t \*inbuf, ssize\_t inlen, uint8\_t \*\*outbuf, ssize\_t \*outlen)

Calls the registered handler of an endpoint session for processing incoming data and generating the response.

---

**Note:**

- An endpoint must be bound to a valid protocomm instance, created using `protocomm_new()`.
  - Resulting output buffer must be deallocated by the caller.
- 

**Parameters**

- **pc** –[in] Pointer to the protocomm instance
- **ep\_name** –[in] Endpoint identifier(name) string
- **session\_id** –[in] Unique ID for a communication session
- **inbuf** –[in] Input buffer contains input request data which is to be processed by the registered handler
- **inlen** –[in] Length of the input buffer

- **outbuf** –[out] Pointer to internally allocated output buffer, where the resulting response data output from the registered handler is to be stored
- **outlen** –[out] Buffer length of the allocated output buffer

**Returns**

- ESP\_OK : Request handled successfully
- ESP\_FAIL : Internal error in execution of registered handler
- ESP\_ERR\_NO\_MEM : Error allocating internal resource
- ESP\_ERR\_NOT\_FOUND : Endpoint with specified name doesn't exist
- ESP\_ERR\_INVALID\_ARG : Null instance/name arguments

*esp\_err\_t* **protocomm\_set\_security** (*protocomm\_t* \*pc, const char \*ep\_name, const *protocomm\_security\_t* \*sec, const void \*sec\_params)

Add endpoint security for a protocomm instance.

This API will bind a security session establisher to the specified endpoint name, along with any proof of possession that may be required for authenticating a session client.

---

**Note:**

- An endpoint must be bound to a valid protocomm instance, created using `protocomm_new()`.
  - The choice of security can be any `protocomm_security_t` instance. Choices `protocomm_security0` and `protocomm_security1` and `protocomm_security2` are readily available.
- 

**Parameters**

- **pc** –[in] Pointer to the protocomm instance
- **ep\_name** –[in] Endpoint identifier(name) string
- **sec** –[in] Pointer to endpoint security instance
- **sec\_params** –[in] Pointer to security params (NULL if not needed) The pointer should contain the security params struct of appropriate security version. For protocomm security version 1 and 2 `sec_params` should contain pointer to struct of type `protocomm_security1_params_t` and `protocomm_security2_params_t` respectively. The contents of this pointer must be valid till the security session has been running and is not closed.

**Returns**

- ESP\_OK : Success
- ESP\_FAIL : Error adding endpoint / Endpoint with this name already exists
- ESP\_ERR\_INVALID\_STATE : Security endpoint already set
- ESP\_ERR\_NO\_MEM : Error allocating endpoint resource
- ESP\_ERR\_INVALID\_ARG : Null instance/name/handler arguments

*esp\_err\_t* **protocomm\_unset\_security** (*protocomm\_t* \*pc, const char \*ep\_name)

Remove endpoint security for a protocomm instance.

This API will remove a registered security endpoint identified by an endpoint name.

**Parameters**

- **pc** –[in] Pointer to the protocomm instance
- **ep\_name** –[in] Endpoint identifier(name) string

**Returns**

- ESP\_OK : Success
- ESP\_ERR\_NOT\_FOUND : Endpoint with specified name doesn't exist
- ESP\_ERR\_INVALID\_ARG : Null instance/name arguments

*esp\_err\_t* **protocomm\_set\_version** (*protocomm\_t* \*pc, const char \*ep\_name, const char \*version)

Set endpoint for version verification.

This API can be used for setting an application specific protocol version which can be verified by clients through the endpoint.

**Note:**

- An endpoint must be bound to a valid `protocomm` instance, created using `protocomm_new()`.
- 

**Parameters**

- **pc** –[in] Pointer to the `protocomm` instance
- **ep\_name** –[in] Endpoint identifier(name) string
- **version** –[in] Version identifier(name) string

**Returns**

- `ESP_OK` : Success
- `ESP_FAIL` : Error adding endpoint / Endpoint with this name already exists
- `ESP_ERR_INVALID_STATE` : Version endpoint already set
- `ESP_ERR_NO_MEM` : Error allocating endpoint resource
- `ESP_ERR_INVALID_ARG` : Null instance/name/handler arguments

`esp_err_t` **protocomm\_unset\_version** (`protocomm_t` \*pc, const char \*ep\_name)

Remove version verification endpoint from a `protocomm` instance.

This API will remove a registered version endpoint identified by an endpoint name.

**Parameters**

- **pc** –[in] Pointer to the `protocomm` instance
- **ep\_name** –[in] Endpoint identifier(name) string

**Returns**

- `ESP_OK` : Success
- `ESP_ERR_NOT_FOUND` : Endpoint with specified name doesn't exist
- `ESP_ERR_INVALID_ARG` : Null instance/name arguments

**Type Definitions**

```
typedef esp_err_t (*protocomm_req_handler_t)(uint32_t session_id, const uint8_t *inbuf, ssize_t inlen, uint8_t **outbuf, ssize_t *outlen, void *priv_data)
```

Function prototype for `protocomm` endpoint handler.

```
typedef struct protocomm protocomm_t
```

This structure corresponds to a unique instance of `protocomm` returned when the API `protocomm_new()` is called. The remaining `Protocomm` APIs require this object as the first parameter.

---

**Note:** Structure of the `protocomm` object is kept private

---

**Header File**

- `components/protocomm/include/security/protocomm_security.h`

**Structures**

```
struct protocomm_security1_params
```

`Protocomm Security 1` parameters: Proof Of Possession.

**Public Members**

`const uint8_t *data`  
Pointer to buffer containing the proof of possession data

`uint16_t len`  
Length (in bytes) of the proof of possession data

struct `protocomm_security2_params`  
Protocomm Security 2 parameters: Salt and Verifier.

### Public Members

`const char *salt`  
Pointer to the buffer containing the salt

`uint16_t salt_len`  
Length (in bytes) of the salt

`const char *verifier`  
Pointer to the buffer containing the verifier

`uint16_t verifier_len`  
Length (in bytes) of the verifier

struct `protocomm_security`  
Protocomm security object structure.  
The member functions are used for implementing secure protocomm sessions.

---

**Note:** This structure should not have any dynamic members to allow re-entrancy

---

### Public Members

`int ver`  
Unique version number of security implementation

`esp_err_t (*init)(protocomm_security_handle_t *handle)`  
Function for initializing/allocating security infrastructure

`esp_err_t (*cleanup)(protocomm_security_handle_t handle)`  
Function for deallocating security infrastructure

`esp_err_t (*new_transport_session)(protocomm_security_handle_t handle, uint32_t session_id)`  
Starts new secure transport session with specified ID

`esp_err_t (*close_transport_session)(protocomm_security_handle_t handle, uint32_t session_id)`  
Closes a secure transport session with specified ID

*esp\_err\_t* (\***security\_req\_handler**)(*protocomm\_security\_handle\_t* handle, const void \*sec\_params, uint32\_t session\_id, const uint8\_t \*inbuf, ssize\_t inlen, uint8\_t \*\*outbuf, ssize\_t \*outlen, void \*priv\_data)

Handler function for authenticating connection request and establishing secure session

*esp\_err\_t* (\***encrypt**)(*protocomm\_security\_handle\_t* handle, uint32\_t session\_id, const uint8\_t \*inbuf, ssize\_t inlen, uint8\_t \*\*outbuf, ssize\_t \*outlen)

Function which implements the encryption algorithm

*esp\_err\_t* (\***decrypt**)(*protocomm\_security\_handle\_t* handle, uint32\_t session\_id, const uint8\_t \*inbuf, ssize\_t inlen, uint8\_t \*\*outbuf, ssize\_t \*outlen)

Function which implements the decryption algorithm

## Type Definitions

typedef struct *protocomm\_security1\_params* **protocomm\_security1\_params\_t**

Protocomm Security 1 parameters: Proof Of Possession.

typedef *protocomm\_security1\_params\_t* **protocomm\_security\_pop\_t**

typedef struct *protocomm\_security2\_params* **protocomm\_security2\_params\_t**

Protocomm Security 2 parameters: Salt and Verifier.

typedef void \***protocomm\_security\_handle\_t**

typedef struct *protocomm\_security* **protocomm\_security\_t**

Protocomm security object structure.

The member functions are used for implementing secure protocomm sessions.

---

**Note:** This structure should not have any dynamic members to allow re-entrancy

---

## Header File

- [components/protocomm/include/security/protocomm\\_security0.h](#)

## Header File

- [components/protocomm/include/security/protocomm\\_security1.h](#)

## Header File

- [components/protocomm/include/transport/protocomm\\_httpd.h](#)

## Functions

*esp\_err\_t* **protocomm\_httpd\_start** (*protocomm\_t* \*pc, const *protocomm\_httpd\_config\_t* \*config)

Start HTTPD protocomm transport.

This API internally creates a framework to allow endpoint registration and security configuration for the protocomm.

**Note:** This is a singleton. ie. Protocomm can have multiple instances, but only one instance can be bound to an HTTP transport layer.

---

#### Parameters

- **pc** –[in] Protocomm instance pointer obtained from `protocomm_new()`
- **config** –[in] Pointer to config structure for initializing HTTP server

#### Returns

- `ESP_OK` : Success
- `ESP_ERR_INVALID_ARG` : Null arguments
- `ESP_ERR_NOT_SUPPORTED` : Transport layer bound to another protocomm instance
- `ESP_ERR_INVALID_STATE` : Transport layer already bound to this protocomm instance
- `ESP_ERR_NO_MEM` : Memory allocation for server resource failed
- `ESP_ERR_HTTPD_*` : HTTP server error on start

*esp\_err\_t* **protocomm\_httpd\_stop** (*protocomm\_t* \*pc)

Stop HTTPD protocomm transport.

This API cleans up the HTTPD transport protocomm and frees all the handlers registered with the protocomm.

**Parameters** **pc** –[in] Same protocomm instance that was passed to `protocomm_httpd_start()`

#### Returns

- `ESP_OK` : Success
- `ESP_ERR_INVALID_ARG` : Null / incorrect protocomm instance pointer

### Unions

union **protocomm\_httpd\_config\_data\_t**

*#include <protocomm\_httpd.h>* Protocomm HTTPD Configuration Data

#### Public Members

void \***handle**

HTTP Server Handle, if `ext_handle_provided` is set to true

*protocomm\_http\_server\_config\_t* **config**

HTTP Server Configuration, if a server is not already active

### Structures

struct **protocomm\_http\_server\_config\_t**

Config parameters for protocomm HTTP server.

#### Public Members

uint16\_t **port**

Port on which the HTTP server will listen

size\_t **stack\_size**

Stack size of server task, adjusted depending upon stack usage of endpoint handler

unsigned **task\_priority**

Priority of server task

struct **protocomm\_httpd\_config\_t**

Config parameters for protocomm HTTP server.

### Public Members

bool **ext\_handle\_provided**

Flag to indicate of an external HTTP Server Handle has been provided. In such as case, protocomm will use the same HTTP Server and not start a new one internally.

*protocomm\_httpd\_config\_data\_t* **data**

Protocomm HTTPD Configuration Data

### Macros

**PROTOCOLM\_HTTPD\_DEFAULT\_CONFIG** ()

### Header File

- [components/protocomm/include/transport/protocomm\\_ble.h](#)

### Functions

*esp\_err\_t* **protocomm\_ble\_start** (*protocomm\_t* \*pc, const *protocomm\_ble\_config\_t* \*config)

Start Bluetooth Low Energy based transport layer for provisioning.

Initialize and start required BLE service for provisioning. This includes the initialization for characteristics/service for BLE.

#### Parameters

- **pc** –[in] Protocomm instance pointer obtained from `protocomm_new()`
- **config** –[in] Pointer to config structure for initializing BLE

#### Returns

- **ESP\_OK** : Success
- **ESP\_FAIL** : Simple BLE start error
- **ESP\_ERR\_NO\_MEM** : Error allocating memory for internal resources
- **ESP\_ERR\_INVALID\_STATE** : Error in ble config
- **ESP\_ERR\_INVALID\_ARG** : Null arguments

*esp\_err\_t* **protocomm\_ble\_stop** (*protocomm\_t* \*pc)

Stop Bluetooth Low Energy based transport layer for provisioning.

Stops service/task responsible for BLE based interactions for provisioning

---

**Note:** You might want to optionally reclaim memory from Bluetooth. Refer to the documentation of `esp_bt_mem_release` in that case.

---

**Parameters** **pc** –[in] Same protocomm instance that was passed to `protocomm_ble_start()`

#### Returns

- **ESP\_OK** : Success
- **ESP\_FAIL** : Simple BLE stop error
- **ESP\_ERR\_INVALID\_ARG** : Null / incorrect protocomm instance

## Structures

struct **name\_uuid**

This structure maps handler required by protocomm layer to UUIDs which are used to uniquely identify BLE characteristics from a smartphone or a similar client device.

### Public Members

const char \***name**

Name of the handler, which is passed to protocomm layer

uint16\_t **uuid**

UUID to be assigned to the BLE characteristic which is mapped to the handler

struct **protocomm\_ble\_config**

Config parameters for protocomm BLE service.

### Public Members

char **device\_name**[MAX\_BLE\_DEVNAME\_LEN + 1]

BLE device name being broadcast at the time of provisioning

uint8\_t **service\_uuid**[BLE\_UUID128\_VAL\_LENGTH]

128 bit UUID of the provisioning service

uint8\_t \***manufacturer\_data**

BLE device manufacturer data pointer in advertisement

ssize\_t **manufacturer\_data\_len**

BLE device manufacturer data length in advertisement

ssize\_t **nu\_lookup\_count**

Number of entries in the Name-UUID lookup table

*protocomm\_ble\_name\_uuid\_t* \***nu\_lookup**

Pointer to the Name-UUID lookup table

unsigned **ble\_bonding**

BLE bonding

unsigned **ble\_sm\_sc**

BLE security flag

unsigned **ble\_link\_encryption**

BLE security flag

uint8\_t \***ble\_addr**

BLE address

## Macros

### MAX\_BLE\_DEVNAME\_LEN

BLE device name cannot be larger than this value 31 bytes (max scan response size) - 1 byte (length) - 1 byte (type) = 29 bytes

### BLE\_UUID128\_VAL\_LENGTH

### MAX\_BLE\_MANUFACTURER\_DATA\_LEN

Theoretically, the limit for max manufacturer length remains same as BLE device name i.e. 31 bytes (max scan response size) - 1 byte (length) - 1 byte (type) = 29 bytes However, manufacturer data goes along with BLE device name in scan response. So, it is important to understand the actual length should be smaller than (29 - (BLE device name length) - 2).

### BLE\_ADDR\_LEN

## Type Definitions

```
typedef struct name_uuid protocomm_ble_name_uuid_t
```

This structure maps handler required by protocomm layer to UUIDs which are used to uniquely identify BLE characteristics from a smartphone or a similar client device.

```
typedef struct protocomm_ble_config protocomm_ble_config_t
```

Config parameters for protocomm BLE service.

## 2.8.2 Unified Provisioning

### Overview

The unified provisioning support in the ESP-IDF provides an extensible mechanism to the developers to configure the device with the Wi-Fi credentials and/or other custom configuration using various transports and different security schemes. Depending on the use case, it provides a complete and ready solution for Wi-Fi network provisioning along with example iOS and Android applications. The developers can choose to extend the device-side and phone-app side implementations to accommodate their requirements for sending additional configuration data. The followings are the important features of this implementation:

#### 1. Extensible Protocol

The protocol is completely flexible and it offers the ability for the developers to send custom configuration in the provisioning process. The data representation is also left to the application to decide.

#### 2. Transport Flexibility

The protocol can work on Wi-Fi (SoftAP + HTTP server) or on Bluetooth LE as a transport protocol. The framework provides an ability to add support for any other transport easily as long as command-response behavior can be supported on the transport.

#### 3. Security Scheme Flexibility

It is understood that each use case may require different security scheme to secure the data that is exchanged in the provisioning process. Some applications may work with SoftAP that is WPA2 protected or Bluetooth LE with the “just-works” security. Or the applications may consider the transport to be insecure and may want application-level security. The unified provisioning framework allows the application to choose the security as deemed suitable.

#### 4. Compact Data Representation

The protocol uses [Google Protobufs](#) as a data representation for session setup and Wi-Fi provisioning. They provide a compact data representation and ability to parse the data in multiple programming languages in native format. Please note that this data representation is not forced on application-specific data and the developers may choose the representation of their choice.

## Typical Provisioning Process

### Deciding on Transport

The unified provisioning subsystem supports Wi-Fi (SoftAP+HTTP server) and Bluetooth LE (GATT based) transport schemes. The following points need to be considered while selecting the best possible transport for provisioning:

1. The Bluetooth LE-based transport has the advantage of maintaining an intact communication channel between the device and the client during the provisioning, which ensures reliable provisioning feedback.
2. The Bluetooth LE-based provisioning implementation makes the user experience better from the phone apps as on Android and iOS both, the phone app can discover and connect to the device without requiring the user to go out of the phone app.
3. However, the Bluetooth LE transport consumes about 110 KB memory at runtime. If the product does not use the Bluetooth LE or Bluetooth functionality after provisioning is done, almost all the memory can be reclaimed and added into the heap.
4. The SoftAP-based transport is highly interoperable. However, there are a few considerations:
  - The device uses the same radio to host the SoftAP and also to connect to the configured AP. Since these could potentially be on different channels, it may cause connection status updates not to be reliably received by the phone
  - The phone (client) has to disconnect from its current AP in order to connect to the SoftAP. The original network will get restored only when the provisioning process is complete, and the softAP is taken down.
5. The SoftAP transport does not require much additional memory for the Wi-Fi use cases.
6. The SoftAP-based provisioning requires the phone-app user to go to `System Settings` to connect to the Wi-Fi network hosted by the device in the iOS system. The discovery (scanning) as well as connection APIs are not available for the iOS applications.

### Deciding on Security

Depending on the transport and other constraints, the security scheme needs to be selected by the application developers. The following considerations need to be given from the provisioning-security perspective:

1. The configuration data sent from the client to the device and the response have to be secured.
2. The client should authenticate the device that it is connected to.
3. The device manufacturer may choose proof-of-possession (PoP), a unique per-device secret to be entered on the provisioning client as a security measure to make sure that only the user can provision the device in their possession.

There are two levels of security schemes, of which the developer may select one or a combination, depending on requirements.

#### 1. Transport Security

For SoftAP provisioning, developers may choose WPA2-protected security with unique per-device passphrase. Unique per-device passphrase can also act as a proof-of-possession. For Bluetooth LE, the “just-works” security can be used as a transport-level security after assessing its provided level of security.

#### 2. Application Security

The unified provisioning subsystem provides the application-level security (*Security 1 Scheme*) that provides data protection and authentication through PoP, if the application does not use the transport-level security, or if the transport-level security is not sufficient for the use case.

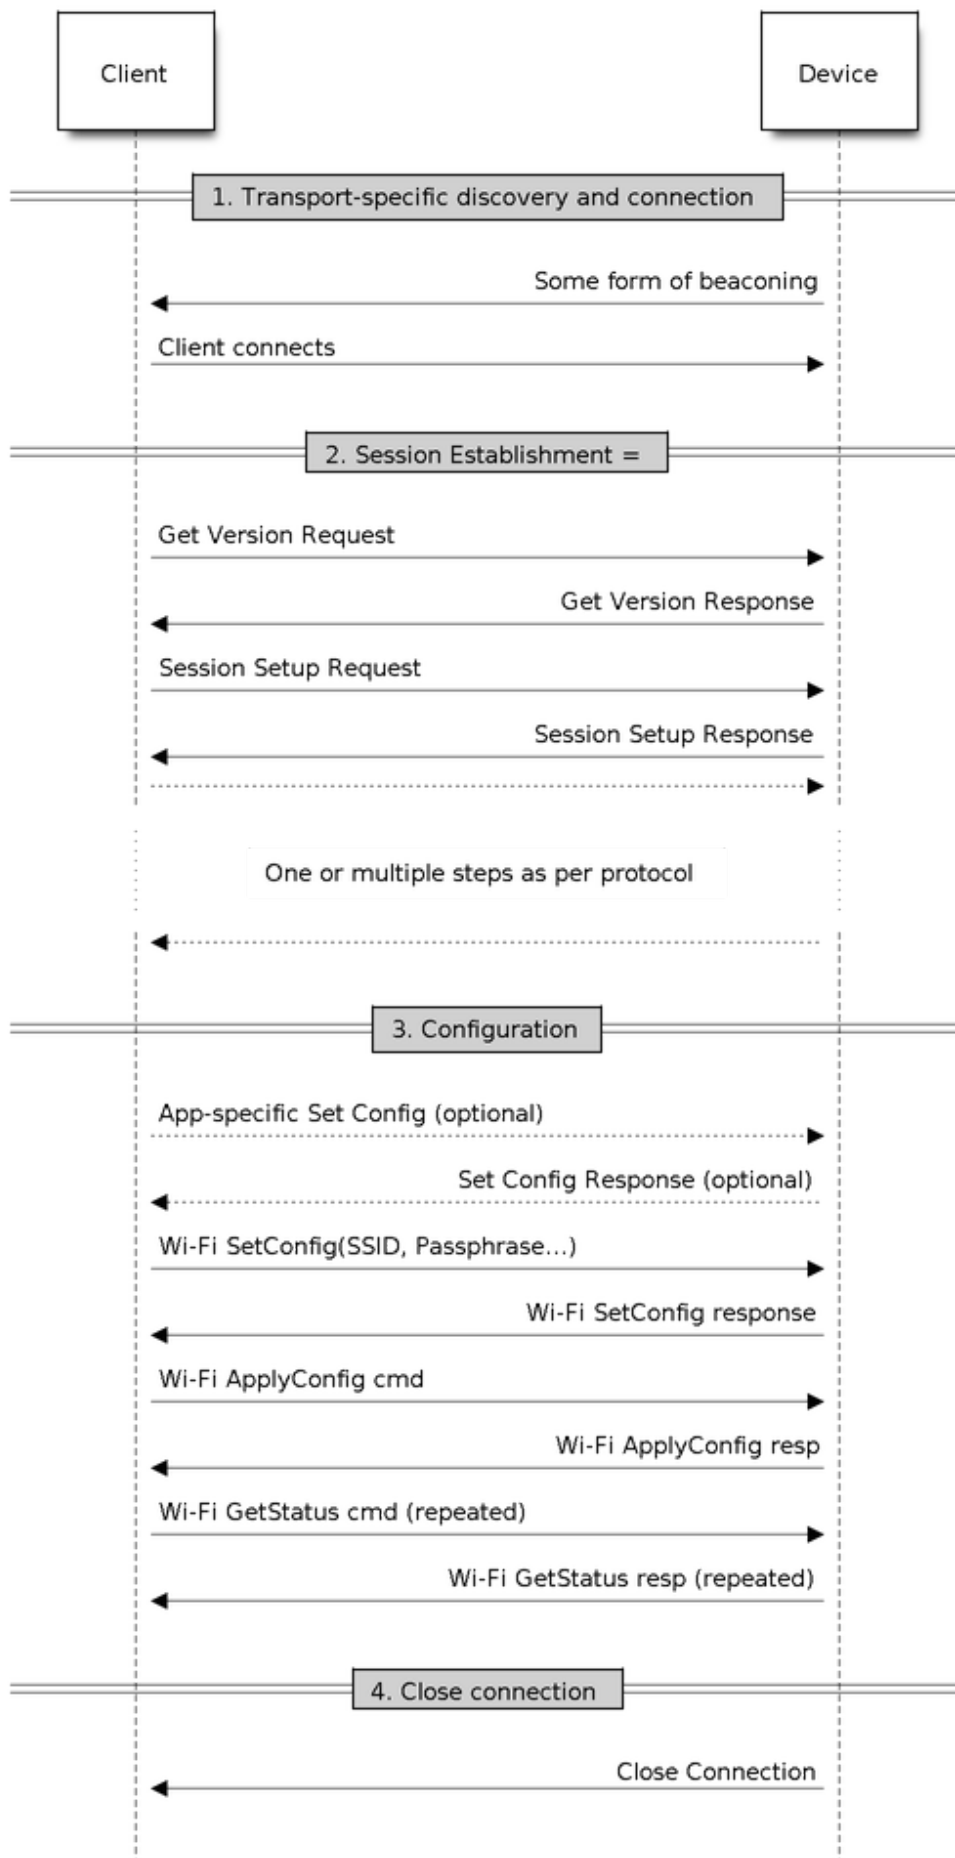

Fig. 6: Typical Provisioning Process

## Device Discovery

The advertisement and device discovery is left to the application and depending on the protocol chosen, the phone apps and device-firmware application can choose appropriate method for advertisement and discovery.

For the SoftAP+HTTP transport, typically the SSID (network name) of the AP hosted by the device can be used for discovery.

For the Bluetooth LE transport, device name or primary service included in the advertisement or a combination of both can be used for discovery.

## Architecture

The below diagram shows the architecture of unified provisioning:

Fig. 7: Unified Provisioning Architecture

It relies on the base layer called *Protocol Communication* (protocomm) which provides a framework for security schemes and transport mechanisms. The Wi-Fi Provisioning layer uses protocomm to provide simple callbacks to the application for setting the configuration and getting the Wi-Fi status. The application has control over implementation of these callbacks. In addition, the application can directly use protocomm to register custom handlers.

The application creates a protocomm instance which is mapped to a specific transport and specific security scheme. Each transport in the protocomm has a concept of an “end-point” which corresponds to the logical channel for communication for specific type of information. For example, security handshake happens on a different endpoint from the Wi-Fi configuration endpoint. Each end-point is identified using a string and depending on the transport internal representation of the end-point changes. In case of the SoftAP+HTTP transport, the end-point corresponds to URI, whereas in case of Bluetooth LE, the end-point corresponds to the GATT characteristic with specific UUID. Developers can create custom end-points and implement handler for the data that is received or sent over the same end-point.

## Security Schemes

At present, the unified provisioning supports the following security schemes:

1. Security 0

No security (No encryption).

2. Security 1

Curve25519-based key exchange, shared key derivation and AES256-CTR mode encryption of the data. It supports two modes :

- a. Authorized - Proof of Possession (PoP) string used to authorize session and derive shared key.
- b. No Auth (Null PoP) - Shared key derived through key exchange only.

3. Security 2

SRP6a-based shared key derivation and AES256-GCM mode encryption of the data.

---

**Note:** The respective security schemes need to be enabled through the project configuration menu. Please refer to [Enabling Protocomm Security Version](#) for more details.

---

## Security 1 Scheme

The Security 1 scheme details are shown in the below sequence diagram:

## Security 2 Scheme

The Security 2 scheme is based on the Secure Remote Password (SRP6a) protocol, see [RFC 5054](#).

The protocol requires the Salt and Verifier to be generated beforehand with the help of the identifying username  $I$  and the plaintext password  $p$ . The Salt and Verifier are then stored on ESP32-C2.

- The password  $p$  and the username  $I$  are to be provided to the Phone App (Provisioning entity) by suitable means, e.g., QR code sticker.

Details about the Security 2 scheme are shown in the below sequence diagram:

## Sample Code

Please refer to [Protocol Communication](#) and [Wi-Fi Provisioning](#) for API guides and code snippets on example usage.

Application implementation can be found as an example under [provisioning](#).

## Provisioning Tools

Provisioning applications are available for various platforms, along with source code:

- **Android:**
  - [Bluetooth LE Provisioning app on Play Store](#).
  - [SoftAP Provisioning app on Play Store](#).
  - Source code on GitHub: [esp-idf-provisioning-android](#).
- **iOS:**
  - [Bluetooth LE Provisioning app on App Store](#).
  - [SoftAP Provisioning app on App Store](#).
  - Source code on GitHub: [esp-idf-provisioning-ios](#).
- Linux/macOS/Windows: [tools/esp\\_prov](#), a Python-based command line tool for provisioning.

Fig. 8: Security 1

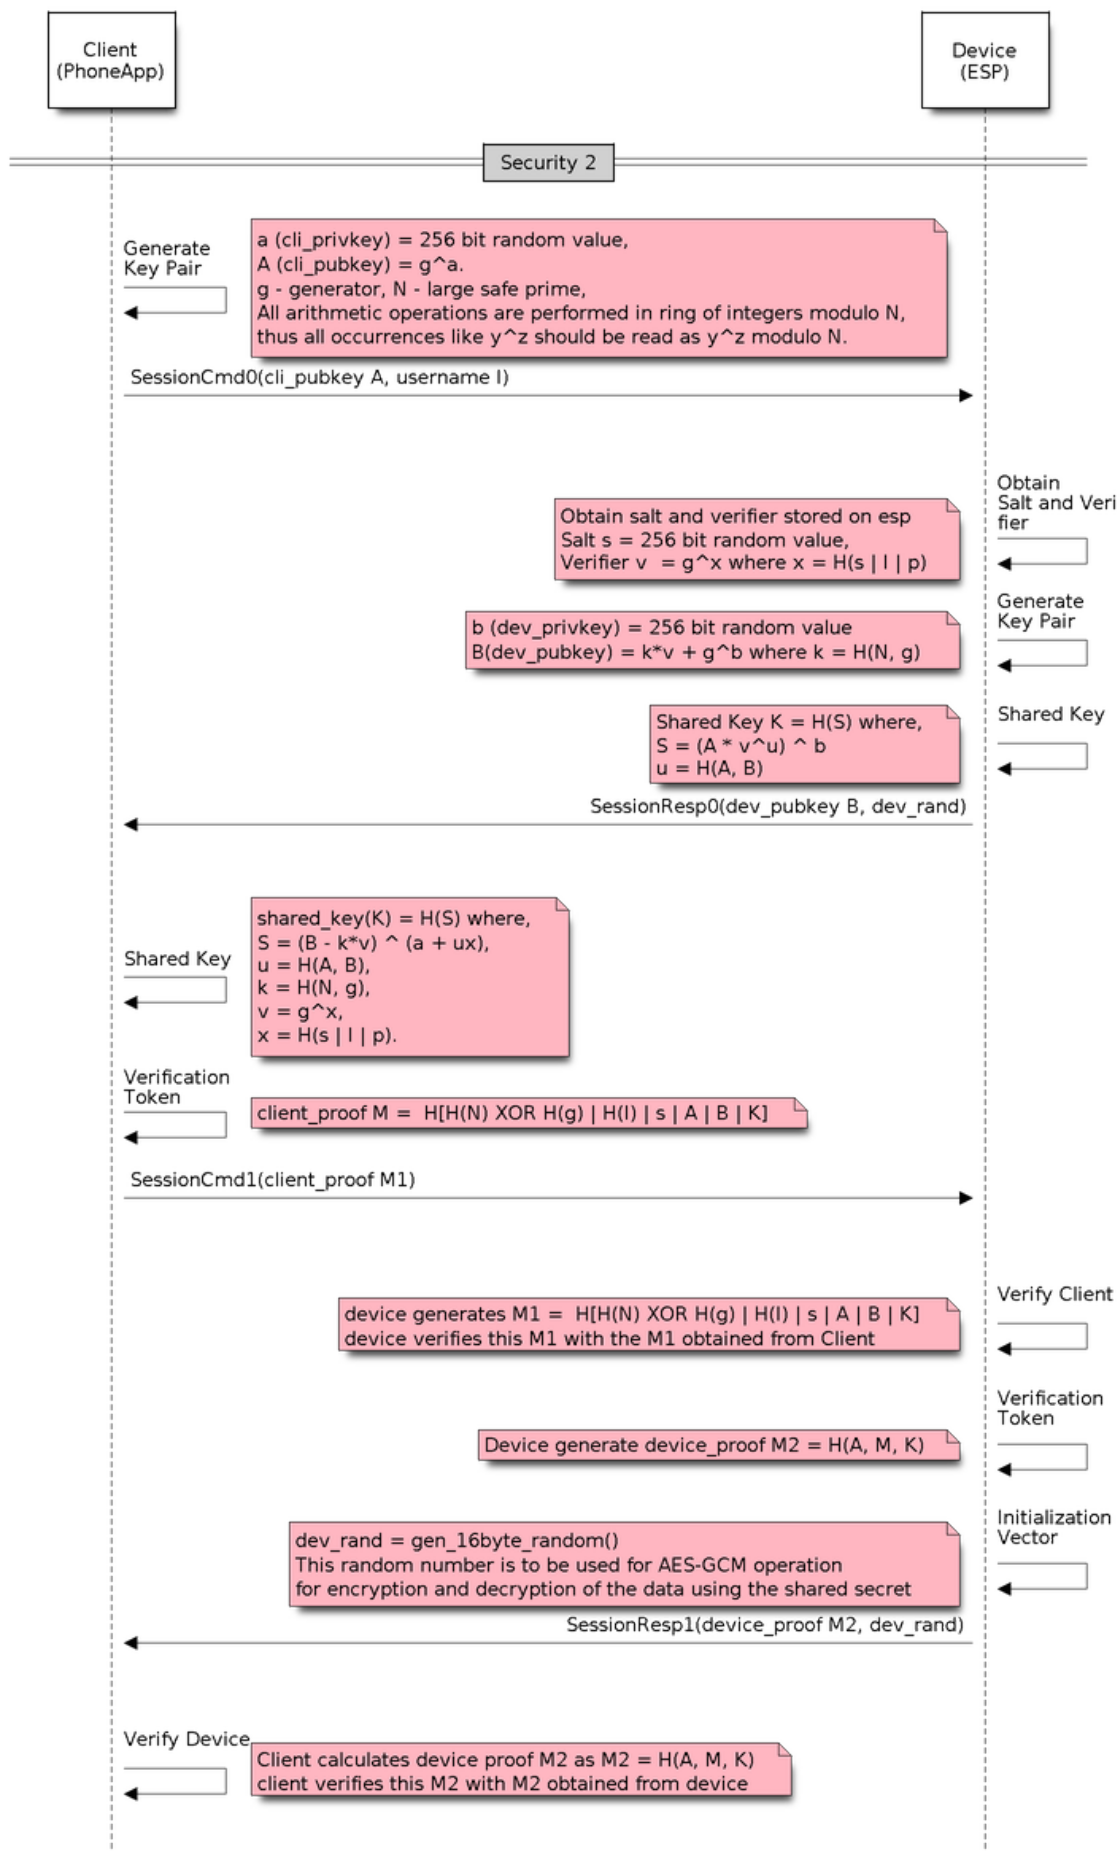

Fig. 9: Security 2

The phone applications offer simple UI and are thus more user centric, while the command-line application is useful as a debugging tool for developers.

### 2.8.3 Wi-Fi Provisioning

#### Overview

This component provides APIs that control the Wi-Fi provisioning service for receiving and configuring Wi-Fi credentials over SoftAP or Bluetooth LE transport via secure *Protocol Communication* sessions. The set of `wifi_prov_mgr_` APIs help quickly implement a provisioning service that has necessary features with minimal amount of code and sufficient flexibility.

**Initialization** `wifi_prov_mgr_init()` is called to configure and initialize the provisioning manager, and thus must be called prior to invoking any other `wifi_prov_mgr_` APIs. Note that the manager relies on other components of ESP-IDF, namely NVS, TCP/IP, Event Loop and Wi-Fi, and optionally mDNS, hence these components must be initialized beforehand. The manager can be de-initialized at any moment by making a call to `wifi_prov_mgr_deinit()`.

```
wifi_prov_mgr_config_t config = {
    .scheme = wifi_prov_scheme_ble,
    .scheme_event_handler = WIFI_PROV_SCHEME_BLE_EVENT_HANDLER_FREE_BTDM
};

ESP_ERROR_CHECK( wifi_prov_mgr_init(config) );
```

The configuration structure `wifi_prov_mgr_config_t` has a few fields to specify the desired behavior of the manager:

- `wifi_prov_mgr_config_t::scheme` - This is used to specify the provisioning scheme. Each scheme corresponds to one of the modes of transport supported by protocomm. Hence, support the following options:
  - `wifi_prov_scheme_ble` - Bluetooth LE transport and GATT Server for handling the provisioning commands.
  - `wifi_prov_scheme_softap` - Wi-Fi SoftAP transport and HTTP Server for handling the provisioning commands.
  - `wifi_prov_scheme_console` - Serial transport and console for handling the provisioning commands.
- `wifi_prov_mgr_config_t::scheme_event_handler`: An event handler defined along with the scheme. Choosing the appropriate scheme-specific event handler allows the manager to take care of certain matters automatically. Presently, this option is not used for either the SoftAP or Console-based provisioning, but is very convenient for Bluetooth LE. To understand how, we must recall that Bluetooth requires a substantial amount of memory to function, and once the provisioning is finished, the main application may want to reclaim back this memory (or part of it) if it needs to use either Bluetooth LE or classic Bluetooth. Also, upon every future reboot of a provisioned device, this reclamation of memory needs to be performed again. To reduce this complication in using `wifi_prov_scheme_ble`, the scheme-specific handlers have been defined, and depending upon the chosen handler, the Bluetooth LE/classic Bluetooth/BTDM memory is freed automatically when the provisioning manager is de-initialized. The available options are:
  - `WIFI_PROV_SCHEME_BLE_EVENT_HANDLER_FREE_BTDM` - Free both classic Bluetooth and Bluetooth LE/BTDM memory. Used when the main application does not require Bluetooth at all.
  - `WIFI_PROV_SCHEME_BLE_EVENT_HANDLER_FREE_BLE` - Free only Bluetooth LE memory. Used when main application requires classic Bluetooth.

- `WIFI_PROV_SCHEME_BLE_EVENT_HANDLER_FREE_BT` - Free only classic Bluetooth. Used when main application requires Bluetooth LE. In this case freeing happens right when the manager is initialized.
- `WIFI_PROV_EVENT_HANDLER_NONE` - Do not use any scheme specific handler. Used when the provisioning scheme is not Bluetooth LE, i.e., using SoftAP or Console, or when main application wants to handle the memory reclaiming on its own, or needs both Bluetooth LE and classic Bluetooth to function.
- `wifi_prov_mgr_config_t::app_event_handler` (Deprecated) - It is now recommended to catch `WIFI_PROV_EVENT` that is emitted to the default event loop handler. See definition of `wifi_prov_cb_event_t` for the list of events that are generated by the provisioning service. Here is an excerpt showing some of the provisioning events:

```

static void event_handler(void* arg, esp_event_base_t event_base,
                        int event_id, void* event_data)
{
    if (event_base == WIFI_PROV_EVENT) {
        switch (event_id) {
            case WIFI_PROV_START:
                ESP_LOGI(TAG, "Provisioning started");
                break;
            case WIFI_PROV_CRED_RECV: {
                wifi_sta_config_t *wifi_sta_cfg = (wifi_sta_config_t_
↪*)event_data;
                ESP_LOGI(TAG, "Received Wi-Fi credentials"
                        "\n\tSSID      : %s\n\tPassword : %s",
                        (const char *) wifi_sta_cfg->ssid,
                        (const char *) wifi_sta_cfg->password);
                break;
            }
            case WIFI_PROV_CRED_FAIL: {
                wifi_prov_sta_fail_reason_t *reason = (wifi_prov_sta_fail_
↪reason_t *)event_data;
                ESP_LOGE(TAG, "Provisioning failed!\n\tReason : %s"
                        "\n\tPlease reset to factory and retry_
↪provisioning",
                        (*reason == WIFI_PROV_STA_AUTH_ERROR) ?
                        "Wi-Fi station authentication failed" : "Wi-Fi_
↪access-point not found");
                break;
            }
            case WIFI_PROV_CRED_SUCCESS:
                ESP_LOGI(TAG, "Provisioning successful");
                break;
            case WIFI_PROV_END:
                /* De-initialize manager once provisioning is finished */
                wifi_prov_mgr_deinit();
                break;
            default:
                break;
        }
    }
}

```

The manager can be de-initialized at any moment by making a call to `wifi_prov_mgr_deinit()`.

**Check the Provisioning State** Whether the device is provisioned or not can be checked at runtime by calling `wifi_prov_mgr_is_provisioned()`. This internally checks if the Wi-Fi credentials are stored in NVS.

Note that presently the manager does not have its own NVS namespace for storage of Wi-Fi credentials, instead it relies on the `esp_wifi_` APIs to set and get the credentials stored in NVS from the default location.

If the provisioning state needs to be reset, any of the following approaches may be taken:

- The associated part of NVS partition has to be erased manually
- The main application must implement some logic to call `esp_wifi_` APIs for erasing the credentials at runtime
- The main application must implement some logic to force start the provisioning irrespective of the provisioning state

```
bool provisioned = false;
ESP_ERROR_CHECK( wifi_prov_mgr_is_provisioned(&provisioned) );
```

**Start the Provisioning Service** At the time of starting provisioning we need to specify a service name and the corresponding key, that is to say:

- A Wi-Fi SoftAP SSID and a passphrase, respectively, when the scheme is `wifi_prov_scheme_softap`.
- Bluetooth LE device name with the service key ignored when the scheme is `wifi_prov_scheme_ble`.

Also, since internally the manager uses `protocomm`, we have the option of choosing one of the security features provided by it:

- Security 1 is secure communication which consists of a prior handshake involving X25519 key exchange along with authentication using a proof of possession `pop`, followed by AES-CTR for encryption or decryption of subsequent messages.
- Security 0 is simply plain text communication. In this case the `pop` is simply ignored.

See *Unified Provisioning* for details about the security features.

```
const char *service_name = "my_device";
const char *service_key = "password";

wifi_prov_security_t security = WIFI_PROV_SECURITY_1;
const char *pop = "abcd1234";

ESP_ERROR_CHECK( wifi_prov_mgr_start_provisioning(security, pop, service_
→name, service_key) );
```

The provisioning service automatically finishes only if it receives valid Wi-Fi AP credentials followed by successful connection of device to the AP with IP obtained. Regardless of that, the provisioning service can be stopped at any moment by making a call to `wifi_prov_mgr_stop_provisioning()`.

**Note:** If the device fails to connect with the provided credentials, it does not accept new credentials anymore, but the provisioning service keeps on running, only to convey failure to the client, until the device is restarted. Upon restart, the provisioning state turns out to be true this time, as credentials are found in NVS, but the device does fail again to connect with those same credentials, unless an AP with the matching credentials somehow does become available. This situation can be fixed by resetting the credentials in NVS or force starting the provisioning service. This has been explained above in *Check the Provisioning State*.

**Waiting for Completion** Typically, the main application waits for the provisioning to finish, then de-initializes the manager to free up resources, and finally starts executing its own logic.

There are two ways for making this possible. The simpler way is to use a blocking call to `wifi_prov_mgr_wait()`.

```
// Start provisioning service
ESP_ERROR_CHECK( wifi_prov_mgr_start_provisioning(security, pop, service_
→name, service_key) );

// Wait for service to complete
wifi_prov_mgr_wait();
```

(continues on next page)

(continued from previous page)

```
// Finally de-initialize the manager
wifi_prov_mgr_deinit();
```

The other way is to use the default event loop handler to catch `WIFI_PROV_EVENT` and call `wifi_prov_mgr_deinit()` when event ID is `WIFI_PROV_END`:

```
static void event_handler(void* arg, esp_event_base_t event_base,
                          int event_id, void* event_data)
{
    if (event_base == WIFI_PROV_EVENT && event_id == WIFI_PROV_END) {
        /* De-initialize the manager once the provisioning is finished */
        wifi_prov_mgr_deinit();
    }
}
```

**User Side Implementation** When the service is started, the device to be provisioned is identified by the advertised service name, which, depending upon the selected transport, is either the Bluetooth LE device name or the SoftAP SSID.

When using SoftAP transport, for allowing service discovery, mDNS must be initialized before starting provisioning. In this case, the host name set by the main application is used, and the service type is internally set to `_esp_wifi_prov`.

When using Bluetooth LE transport, a custom 128-bit UUID should be set using `wifi_prov_scheme_ble_set_service_uuid()`. This UUID is to be included in the Bluetooth LE advertisement and corresponds to the primary GATT service that provides provisioning endpoints as GATT characteristics. Each GATT characteristic is formed using the primary service UUID as the base, with different auto-assigned 12th and 13th bytes, presumably counting from the 0th byte. Since an endpoint characteristic UUID is auto-assigned, it should not be used to identify the endpoint. Instead, client-side applications should identify the endpoints by reading the User Characteristic Description (0x2901) descriptor for each characteristic, which contains the endpoint name of the characteristic. For example, if the service UUID is set to `55cc035e-fb27-4f80-be02-3c60828b7451`, each endpoint characteristic is assigned a UUID like `55cc____-fb27-4f80-be02-3c60828b7451`, with unique values at the 12th and 13th bytes.

Once connected to the device, the provisioning-related protocomm endpoints can be identified as follows:

Table 5: Endpoints Provided by the Provisioning Service

Endpoint Name i.e., Bluetooth LE + GATT Server	URI, i.e., SoftAP + HTTP Server + mDNS	Description
prov-session	<a href="http://&lt;mdns-hostname&gt;.local/prov-session">http://&lt;mdns-hostname&gt;.local/prov-session</a>	Security endpoint used for session establishment
prov-scan	<a href="http://wifi-prov.local/prov-scan">http://wifi-prov.local/prov-scan</a>	the endpoint used for starting Wi-Fi scan and receiving scan results
prov-ctrl	<a href="http://wifi-prov.local/prov-ctrl">http://wifi-prov.local/prov-ctrl</a>	the endpoint used for controlling Wi-Fi provisioning state
prov-config	<a href="http://&lt;mdns-hostname&gt;.local/prov-config">http://&lt;mdns-hostname&gt;.local/prov-config</a>	the endpoint used for configuring Wi-Fi credentials on device
proto-ver	<a href="http://&lt;mdns-hostname&gt;.local/proto-ver">http://&lt;mdns-hostname&gt;.local/proto-ver</a>	the endpoint for retrieving version info

Immediately after connecting, the client application may fetch the version/capabilities information from the `proto-ver` endpoint. All communications to this endpoint are unencrypted, hence necessary information, which may be relevant for deciding compatibility, can be retrieved before establishing a secure session. The response is in JSON format and looks like: `prov: { ver: v1.1, cap: [no_pop] }, my_app: { ver: 1.345, cap: [cloud, local_ctrl] }, .....` Here label `prov` provides provisioning service version `ver`

and capabilities `cap`. For now, only the `no_pop` capability is supported, which indicates that the service does not require proof of possession for authentication. Any application-related version or capabilities are given by other labels, e.g., `my_app` in this example. These additional fields are set using `wifi_prov_mgr_set_app_info()`.

User side applications need to implement the signature handshaking required for establishing and authenticating secure protocomm sessions as per the security scheme configured for use, which is not needed when the manager is configured to use protocomm security 0.

See *Unified Provisioning* for more details about the secure handshake and encryption used. Applications must use the `.proto` files found under `protocomm/proto`, which define the Protobuf message structures supported by `prov-session` endpoint.

Once a session is established, Wi-Fi credentials are configured using the following set of `wifi_config` commands, serialized as Protobuf messages with the corresponding `.proto` files that can be found under `wifi_provisioning/proto`:

- `get_status` - For querying the Wi-Fi connection status. The device responds with a status which is one of connecting, connected or disconnected. If the status is disconnected, a disconnection reason is also to be included in the status response.
- `set_config` - For setting the Wi-Fi connection credentials.
- `apply_config` - For applying the credentials saved during `set_config` and starting the Wi-Fi station.

After session establishment, the client can also request Wi-Fi scan results from the device. The results returned is a list of AP SSIDs, sorted in descending order of signal strength. This allows client applications to display APs nearby to the device at the time of provisioning, and users can select one of the SSIDs and provide the password which is then sent using the `wifi_config` commands described above. The `wifi_scan` endpoint supports the following protobuf commands :

- `scan_start` - For starting Wi-Fi scan with various options:
  - `blocking` (input) - If true, the command returns only when the scanning is finished.
  - `passive` (input) - If true, the scan is started in passive mode, which may be slower, instead of active mode.
  - `group_channels` (input) - This specifies whether to scan all channels in one go when zero, or perform scanning of channels in groups, with 120 ms delay between scanning of consecutive groups, and the value of this parameter sets the number of channels in each group. This is useful when transport mode is SoftAP, where scanning all channels in one go may not give the Wi-Fi driver enough time to send out beacons, and hence may cause disconnection with any connected stations. When scanning in groups, the manager waits for at least 120 ms after completing the scan on a group of channels, and thus allows the driver to send out the beacons. For example, given that the total number of Wi-Fi channels is 14, then setting `group_channels` to 3 creates 5 groups, with each group having 3 channels, except the last one which has  $14 \% 3 = 2$  channels. So, when the scan is started, the first 3 channels will be scanned, followed by a 120 ms delay, and then the next 3 channels, and so on, until all the 14 channels have been scanned. One may need to adjust this parameter as having only a few channels in a group may increase the overall scan time, while having too many may again cause disconnection. Usually, a value of 4 should work for most cases. Note that for any other mode of transport, e.g. Bluetooth LE, this can be safely set to 0, and hence achieve the shortest overall scanning time.
  - `period_ms` (input) - The scan parameter specifying how long to wait on each channel.
- `scan_status` - It gives the status of scanning process:
  - `scan_finished` (output) - When the scan has finished, this returns true.
  - `result_count` (output) - This gives the total number of results obtained till now. If the scan is yet happening, this number keeps on updating.
- `scan_result` - For fetching the scan results. This can be called even if the scan is still on going.
  - `start_index` (input) - Where the index starts from to fetch the entries from the results list.
  - `count` (input) - The number of entries to fetch from the starting index.
  - `entries` (output) - The list of entries returned. Each entry consists of `ssid`, `channel` and `rssi` information.

The client can also control the provisioning state of the device using `wifi_ctrl` endpoint. The `wifi_ctrl` endpoint supports the following protobuf commands:

- `ctrl_reset` - Resets internal state machine of the device and clears provisioned credentials only in case of provisioning failures.

- `ctrl_reprov` - Resets internal state machine of the device and clears provisioned credentials only in case the device is to be provisioned again for new credentials after a previous successful provisioning.

**Additional Endpoints** In case users want to have some additional protocol endpoints customized to their requirements, this is done in two steps. First is creation of an endpoint with a specific name, and the second step is the registration of a handler for this endpoint. See *Protocol Communication* for the function signature of an endpoint handler. A custom endpoint must be created after initialization and before starting the provisioning service. Whereas, the protocol handler is registered for this endpoint only after starting the provisioning service.

```
wifi_prov_mgr_init(config);  
wifi_prov_mgr_endpoint_create("custom-endpoint");  
wifi_prov_mgr_start_provisioning(security, pop, service_name, service_  
→key);  
wifi_prov_mgr_endpoint_register("custom-endpoint", custom_ep_handler, ↵  
→custom_ep_data);
```

When the provisioning service stops, the endpoint is unregistered automatically.

One can also choose to call `wifi_prov_mgr_endpoint_unregister()` to manually deactivate an endpoint at runtime. This can also be used to deactivate the internal endpoints used by the provisioning service.

**When/How to Stop the Provisioning Service?** The default behavior is that once the device successfully connects using the Wi-Fi credentials set by the `apply_config` command, the provisioning service stops, and Bluetooth LE or SoftAP turns off, automatically after responding to the next `get_status` command. If `get_status` command is not received by the device, the service stops after a 30s timeout.

On the other hand, if device is not able to connect using the provided Wi-Fi credentials, due to incorrect SSID or passphrase, the service keeps running, and `get_status` keeps responding with disconnected status and reason for disconnection. Any further attempts to provide another set of Wi-Fi credentials, are to be rejected. These credentials are preserved, unless the provisioning service is force started, or NVS erased.

If this default behavior is not desired, it can be disabled by calling `wifi_prov_mgr_disable_auto_stop()`. Now the provisioning service stops only after an explicit call to `wifi_prov_mgr_stop_provisioning()`, which returns immediately after scheduling a task for stopping the service. The service stops after a certain delay and `WIFI_PROV_END` event gets emitted. This delay is specified by the argument to `wifi_prov_mgr_disable_auto_stop()`.

The customized behavior is useful for applications which want the provisioning service to be stopped some time after the Wi-Fi connection is successfully established. For example, if the application requires the device to connect to some cloud service and obtain another set of credentials, and exchange these credentials over a custom protocol endpoint, then after successfully doing so, stop the provisioning service by calling `wifi_prov_mgr_stop_provisioning()` inside the protocol handler itself. The right amount of delay ensures that the transport resources are freed only after the response from the protocol handler reaches the client side application.

## Application Examples

For complete example implementation see [provisioning/wifi\\_prov\\_mgr](#).

## Provisioning Tools

Provisioning applications are available for various platforms, along with source code:

- **Android:**
  - [Bluetooth LE Provisioning app on Play Store](#).
  - [SoftAP Provisioning app on Play Store](#).
  - Source code on GitHub: [esp-idf-provisioning-android](#).
- **iOS:**

- [Bluetooth LE Provisioning app on App Store](#).
- [SoftAP Provisioning app on App Store](#).
- Source code on GitHub: [esp-idf-provisioning-ios](#).
- Linux/MacOS/Windows: [tools/esp\\_prov](#), a Python-based command-line tool for provisioning.

The phone applications offer simple UI and are thus more user centric, while the command-line application is useful as a debugging tool for developers.

## API Reference

### Header File

- [components/wifi\\_provisioning/include/wifi\\_provisioning/manager.h](#)

### Functions

*esp\_err\_t* **wifi\_prov\_mgr\_init** (*wifi\_prov\_mgr\_config\_t* config)

Initialize provisioning manager instance.

Configures the manager and allocates internal resources

Configuration specifies the provisioning scheme (transport) and event handlers

Event WIFI\_PROV\_INIT is emitted right after initialization is complete

**Parameters** **config** –[in] Configuration structure

**Returns**

- ESP\_OK : Success
- ESP\_FAIL : Fail

void **wifi\_prov\_mgr\_deinit** (void)

Stop provisioning (if running) and release resource used by the manager.

Event WIFI\_PROV\_DEINIT is emitted right after de-initialization is finished

If provisioning service is still active when this API is called, it first stops the service, hence emitting WIFI\_PROV\_END, and then performs the de-initialization

*esp\_err\_t* **wifi\_prov\_mgr\_is\_provisioned** (bool \*provisioned)

Checks if device is provisioned.

This checks if Wi-Fi credentials are present on the NVS

The Wi-Fi credentials are assumed to be kept in the same NVS namespace as used by esp\_wifi component

If one were to call esp\_wifi\_set\_config() directly instead of going through the provisioning process, this function will still yield true (i.e. device will be found to be provisioned)

---

**Note:** Calling wifi\_prov\_mgr\_start\_provisioning() automatically resets the provision state, irrespective of what the state was prior to making the call.

---

**Parameters** **provisioned** –[out] True if provisioned, else false

**Returns**

- ESP\_OK : Retrieved provision state successfully
- ESP\_FAIL : Wi-Fi not initialized
- ESP\_ERR\_INVALID\_ARG : Null argument supplied

*esp\_err\_t* **wifi\_prov\_mgr\_start\_provisioning** (*wifi\_prov\_security\_t* security, const void \*wifi\_prov\_sec\_params, const char \*service\_name, const char \*service\_key)

Start provisioning service.

This starts the provisioning service according to the scheme configured at the time of initialization. For scheme :

- `wifi_prov_scheme_ble` : This starts `protocomm_ble`, which internally initializes BLE transport and starts GATT server for handling provisioning requests
- `wifi_prov_scheme_softap` : This activates SoftAP mode of Wi-Fi and starts `protocomm_httpd`, which internally starts an HTTP server for handling provisioning requests (If mDNS is active it also starts advertising service with type `_esp_wifi_prov._tcp`)

Event `WIFI_PROV_START` is emitted right after provisioning starts without failure

---

**Note:** This API will start provisioning service even if device is found to be already provisioned, i.e. `wifi_prov_mgr_is_provisioned()` yields true

---

### Parameters

- **`security`** **–[in]** Specify which `protocomm` security scheme to use :
  - `WIFI_PROV_SECURITY_0` : For no security
  - `WIFI_PROV_SECURITY_1` : x25519 secure handshake for session establishment followed by AES-CTR encryption of provisioning messages
  - `WIFI_PROV_SECURITY_2`: SRP6a based authentication and key exchange followed by AES-GCM encryption/decryption of provisioning messages
- **`wifi_prov_sec_params`** **–[in]** Pointer to security params (NULL if not needed). This is not needed for `protocomm` security 0 This pointer should hold the struct of type `wifi_prov_security1_params_t` for `protocomm` security 1 and `wifi_prov_security2_params_t` for `protocomm` security 2 respectively. This pointer and its contents should be valid till the provisioning service is running and has not been stopped or de-initiated.
- **`service_name`** **–[in]** Unique name of the service. This translates to:
  - Wi-Fi SSID when provisioning mode is softAP
  - Device name when provisioning mode is BLE
- **`service_key`** **–[in]** Key required by client to access the service (NULL if not needed). This translates to:
  - Wi-Fi password when provisioning mode is softAP
  - ignored when provisioning mode is BLE

### Returns

- `ESP_OK` : Provisioning started successfully
- `ESP_FAIL` : Failed to start provisioning service
- `ESP_ERR_INVALID_STATE` : Provisioning manager not initialized or already started

void **`wifi_prov_mgr_stop_provisioning`** (void)

Stop provisioning service.

If provisioning service is active, this API will initiate a process to stop the service and return. Once the service actually stops, the event `WIFI_PROV_END` will be emitted.

If `wifi_prov_mgr_deinit()` is called without calling this API first, it will automatically stop the provisioning service and emit the `WIFI_PROV_END`, followed by `WIFI_PROV_DEINIT`, before returning.

This API will generally be used along with `wifi_prov_mgr_disable_auto_stop()` in the scenario when the main application has registered its own endpoints, and wishes that the provisioning service is stopped only when some `protocomm` command from the client side application is received.

Calling this API inside an endpoint handler, with sufficient `cleanup_delay`, will allow the response / acknowledgment to be sent successfully before the underlying `protocomm` service is stopped.

`Cleanup_delay` is set when calling `wifi_prov_mgr_disable_auto_stop()`. If not specified, it defaults to 1000ms.

For straightforward cases, using this API is usually not necessary as provisioning is stopped automatically once `WIFI_PROV_CRED_SUCCESS` is emitted. Stopping is delayed (maximum 30 seconds) thus allowing the client side application to query for Wi-Fi state, i.e. after receiving the first query and sending `Wi-Fi state connected` response the service is stopped immediately.

void **wifi\_prov\_mgr\_wait** (void)

Wait for provisioning service to finish.

Calling this API will block until provisioning service is stopped i.e. till event `WIFI_PROV_END` is emitted.

This will not block if provisioning is not started or not initialized.

*esp\_err\_t* **wifi\_prov\_mgr\_disable\_auto\_stop** (uint32\_t cleanup\_delay)

Disable auto stopping of provisioning service upon completion.

By default, once provisioning is complete, the provisioning service is automatically stopped, and all endpoints (along with those registered by main application) are deactivated.

This API is useful in the case when main application wishes to close provisioning service only after it receives some protocomm command from the client side app. For example, after connecting to Wi-Fi, the device may want to connect to the cloud, and only once that is successfully, the device is said to be fully configured. But, then it is upto the main application to explicitly call `wifi_prov_mgr_stop_provisioning()` later when the device is fully configured and the provisioning service is no longer required.

---

**Note:** This must be called before executing `wifi_prov_mgr_start_provisioning()`

---

**Parameters** **cleanup\_delay** –[in] Sets the delay after which the actual cleanup of transport related resources is done after a call to `wifi_prov_mgr_stop_provisioning()` returns. Minimum allowed value is 100ms. If not specified, this will default to 1000ms.

**Returns**

- `ESP_OK` : Success
- `ESP_ERR_INVALID_STATE` : Manager not initialized or provisioning service already started

*esp\_err\_t* **wifi\_prov\_mgr\_set\_app\_info** (const char \*label, const char \*version, const char \*\*capabilities, size\_t total\_capabilities)

Set application version and capabilities in the JSON data returned by proto-ver endpoint.

This function can be called multiple times, to specify information about the various application specific services running on the device, identified by unique labels.

The provisioning service itself registers an entry in the JSON data, by the label “prov” , containing only provisioning service version and capabilities. Application services should use a label other than “prov” so as not to overwrite this.

---

**Note:** This must be called before executing `wifi_prov_mgr_start_provisioning()`

---

**Parameters**

- **label** –[in] String indicating the application name.
- **version** –[in] String indicating the application version. There is no constraint on format.
- **capabilities** –[in] Array of strings with capabilities. These could be used by the client side app to know the application registered endpoint capabilities
- **total\_capabilities** –[in] Size of capabilities array

**Returns**

- `ESP_OK` : Success
- `ESP_ERR_INVALID_STATE` : Manager not initialized or provisioning service already started
- `ESP_ERR_NO_MEM` : Failed to allocate memory for version string

- `ESP_ERR_INVALID_ARG` : Null argument

*esp\_err\_t* **wifi\_prov\_mgr\_endpoint\_create** (const char \*ep\_name)

Create an additional endpoint and allocate internal resources for it.

This API is to be called by the application if it wants to create an additional endpoint. All additional endpoints will be assigned UUIDs starting from 0xFF54 and so on in the order of execution.

protocomm handler for the created endpoint is to be registered later using `wifi_prov_mgr_endpoint_register()` after provisioning has started.

---

**Note:** This API can only be called BEFORE provisioning is started

---

---

**Note:** Additional endpoints can be used for configuring client provided parameters other than Wi-Fi credentials, that are necessary for the main application and hence must be set prior to starting the application

---

---

**Note:** After session establishment, the additional endpoints must be targeted first by the client side application before sending Wi-Fi configuration, because once Wi-Fi configuration finishes the provisioning service is stopped and hence all endpoints are unregistered

---

**Parameters** `ep_name` –[in] unique name of the endpoint

**Returns**

- `ESP_OK` : Success
- `ESP_FAIL` : Failure

*esp\_err\_t* **wifi\_prov\_mgr\_endpoint\_register** (const char \*ep\_name, *protocomm\_req\_handler\_t* handler, void \*user\_ctx)

Register a handler for the previously created endpoint.

This API can be called by the application to register a protocomm handler to any endpoint that was created using `wifi_prov_mgr_endpoint_create()`.

---

**Note:** This API can only be called AFTER provisioning has started

---

---

**Note:** Additional endpoints can be used for configuring client provided parameters other than Wi-Fi credentials, that are necessary for the main application and hence must be set prior to starting the application

---

---

**Note:** After session establishment, the additional endpoints must be targeted first by the client side application before sending Wi-Fi configuration, because once Wi-Fi configuration finishes the provisioning service is stopped and hence all endpoints are unregistered

---

**Parameters**

- `ep_name` –[in] Name of the endpoint
- `handler` –[in] Endpoint handler function
- `user_ctx` –[in] User data

**Returns**

- `ESP_OK` : Success
- `ESP_FAIL` : Failure

void **wifi\_prov\_mgr\_endpoint\_unregister** (const char \*ep\_name)

Unregister the handler for an endpoint.

This API can be called if the application wants to selectively unregister the handler of an endpoint while the provisioning is still in progress.

All the endpoint handlers are unregistered automatically when the provisioning stops.

**Parameters** **ep\_name** –[in] Name of the endpoint

*esp\_err\_t* **wifi\_prov\_mgr\_get\_wifi\_state** (*wifi\_prov\_sta\_state\_t* \*state)

Get state of Wi-Fi Station during provisioning.

**Parameters** **state** –[out] Pointer to *wifi\_prov\_sta\_state\_t* variable to be filled

**Returns**

- ESP\_OK : Successfully retrieved Wi-Fi state
- ESP\_FAIL : Provisioning app not running

*esp\_err\_t* **wifi\_prov\_mgr\_get\_wifi\_disconnect\_reason** (*wifi\_prov\_sta\_fail\_reason\_t* \*reason)

Get reason code in case of Wi-Fi station disconnection during provisioning.

**Parameters** **reason** –[out] Pointer to *wifi\_prov\_sta\_fail\_reason\_t* variable to be filled

**Returns**

- ESP\_OK : Successfully retrieved Wi-Fi disconnect reason
- ESP\_FAIL : Provisioning app not running

*esp\_err\_t* **wifi\_prov\_mgr\_configure\_sta** (*wifi\_config\_t* \*wifi\_cfg)

Runs Wi-Fi as Station with the supplied configuration.

Configures the Wi-Fi station mode to connect to the AP with SSID and password specified in config structure and sets Wi-Fi to run as station.

This is automatically called by provisioning service upon receiving new credentials.

If credentials are to be supplied to the manager via a different mode other than through protocomm, then this API needs to be called.

Event WIFI\_PROV\_CRED\_RECV is emitted after credentials have been applied and Wi-Fi station started

**Parameters** **wifi\_cfg** –[in] Pointer to Wi-Fi configuration structure

**Returns**

- ESP\_OK : Wi-Fi configured and started successfully
- ESP\_FAIL : Failed to set configuration

*esp\_err\_t* **wifi\_prov\_mgr\_reset\_provisioning** (void)

Reset Wi-Fi provisioning config.

Calling this API will restore WiFi stack persistent settings to default values.

**Returns**

- ESP\_OK : Reset provisioning config successfully
- ESP\_FAIL : Failed to reset provisioning config

*esp\_err\_t* **wifi\_prov\_mgr\_reset\_sm\_state\_on\_failure** (void)

Reset internal state machine and clear provisioned credentials.

This API can be used to restart provisioning in case invalid credentials are entered.

**Returns**

- ESP\_OK : Reset provisioning state machine successfully
- ESP\_FAIL : Failed to reset provisioning state machine
- ESP\_ERR\_INVALID\_STATE : Manager not initialized

## Structures

struct **wifi\_prov\_event\_handler\_t**

Event handler that is used by the manager while provisioning service is active.

## Public Members

*wifi\_prov\_cb\_func\_t* **event\_cb**

Callback function to be executed on provisioning events

void **\*user\_data**

User context data to pass as parameter to callback function

struct **wifi\_prov\_scheme**

Structure for specifying the provisioning scheme to be followed by the manager.

---

**Note:** Ready to use schemes are available:

- `wifi_prov_scheme_ble` : for provisioning over BLE transport + GATT server
  - `wifi_prov_scheme_softap` : for provisioning over SoftAP transport + HTTP server
  - `wifi_prov_scheme_console` : for provisioning over Serial UART transport + Console (for debugging)
- 

## Public Members

*esp\_err\_t* (**\*prov\_start**)(*protocomm\_t* \*pc, void \*config)

Function which is to be called by the manager when it is to start the provisioning service associated with a protocomm instance and a scheme specific configuration

*esp\_err\_t* (**\*prov\_stop**)(*protocomm\_t* \*pc)

Function which is to be called by the manager to stop the provisioning service previously associated with a protocomm instance

void (**\*new\_config**)(void)

Function which is to be called by the manager to generate a new configuration for the provisioning service, that is to be passed to *prov\_start()*

void (**\*delete\_config**)(void \*config)

Function which is to be called by the manager to delete a configuration generated using *new\_config()*

*esp\_err\_t* (**\*set\_config\_service**)(void \*config, const char \*service\_name, const char \*service\_key)

Function which is to be called by the manager to set the service name and key values in the configuration structure

*esp\_err\_t* (**\*set\_config\_endpoint**)(void \*config, const char \*endpoint\_name, uint16\_t uuid)

Function which is to be called by the manager to set a protocomm endpoint with an identifying name and UUID in the configuration structure

*wifi\_mode\_t* **wifi\_mode**

Sets mode of operation of Wi-Fi during provisioning This is set to :

- `WIFI_MODE_APSTA` for SoftAP transport
- `WIFI_MODE_STA` for BLE transport

struct `wifi_prov_mgr_config_t`

Structure for specifying the manager configuration.

### Public Members

`wifi_prov_scheme_t` **scheme**

Provisioning scheme to use. Following schemes are already available:

- `wifi_prov_scheme_ble` : for provisioning over BLE transport + GATT server
- `wifi_prov_scheme_softap` : for provisioning over SoftAP transport + HTTP server + mDNS (optional)
- `wifi_prov_scheme_console` : for provisioning over Serial UART transport + Console (for debugging)

`wifi_prov_event_handler_t` **scheme\_event\_handler**

Event handler required by the scheme for incorporating scheme specific behavior while provisioning manager is running. Various options may be provided by the scheme for setting this field. Use `WIFI_PROV_EVENT_HANDLER_NONE` when not used. When using scheme `wifi_prov_scheme_ble`, the following options are available:

- `WIFI_PROV_SCHEME_BLE_EVENT_HANDLER_FREE_BTDM`
- `WIFI_PROV_SCHEME_BLE_EVENT_HANDLER_FREE_BLE`
- `WIFI_PROV_SCHEME_BLE_EVENT_HANDLER_FREE_BT`

`wifi_prov_event_handler_t` **app\_event\_handler**

Event handler that can be set for the purpose of incorporating application specific behavior. Use `WIFI_PROV_EVENT_HANDLER_NONE` when not used.

### Macros

`WIFI_PROV_EVENT_HANDLER_NONE`

Event handler can be set to none if not used.

### Type Definitions

typedef void (\*`wifi_prov_cb_func_t`)(void \*user\_data, `wifi_prov_cb_event_t` event, void \*event\_data)

typedef struct `wifi_prov_scheme` `wifi_prov_scheme_t`

Structure for specifying the provisioning scheme to be followed by the manager.

---

**Note:** Ready to use schemes are available:

- `wifi_prov_scheme_ble` : for provisioning over BLE transport + GATT server
  - `wifi_prov_scheme_softap` : for provisioning over SoftAP transport + HTTP server
  - `wifi_prov_scheme_console` : for provisioning over Serial UART transport + Console (for debugging)
- 

typedef enum `wifi_prov_security` `wifi_prov_security_t`

Security modes supported by the Provisioning Manager.

These are same as the security modes provided by protocomm

typedef *protocomm\_security2\_params\_t* **wifi\_prov\_security2\_params\_t**

Security 2 params structure This needs to be passed when using `WIFI_PROV_SECURITY_2`.

### Enumerations

enum **wifi\_prov\_cb\_event\_t**

Events generated by manager.

These events are generated in order of declaration and, for the stretch of time between initialization and de-initialization of the manager, each event is signaled only once

*Values:*

enumerator **WIFI\_PROV\_INIT**

Emitted when the manager is initialized

enumerator **WIFI\_PROV\_START**

Indicates that provisioning has started

enumerator **WIFI\_PROV\_CRED\_RECV**

Emitted when Wi-Fi AP credentials are received via `protocomm` endpoint `wifi_config`. The event data in this case is a pointer to the corresponding *wifi\_sta\_config\_t* structure

enumerator **WIFI\_PROV\_CRED\_FAIL**

Emitted when device fails to connect to the AP of which the credentials were received earlier on event `WIFI_PROV_CRED_RECV`. The event data in this case is a pointer to the disconnection reason code with type `wifi_prov_sta_fail_reason_t`

enumerator **WIFI\_PROV\_CRED\_SUCCESS**

Emitted when device successfully connects to the AP of which the credentials were received earlier on event `WIFI_PROV_CRED_RECV`

enumerator **WIFI\_PROV\_END**

Signals that provisioning service has stopped

enumerator **WIFI\_PROV\_DEINIT**

Signals that manager has been de-initialized

enum **wifi\_prov\_security**

Security modes supported by the Provisioning Manager.

These are same as the security modes provided by `protocomm`

*Values:*

enumerator **WIFI\_PROV\_SECURITY\_0**

No security (plain-text communication)

enumerator **WIFI\_PROV\_SECURITY\_1**

This secure communication mode consists of X25519 key exchange

- proof of possession (pop) based authentication
- AES-CTR encryption

enumerator **WIFI\_PROV\_SECURITY\_2**

This secure communication mode consists of SRP6a based authentication and key exchange

- AES-GCM encryption/decryption

### Header File

- [components/wifi\\_provisioning/include/wifi\\_provisioning/scheme\\_ble.h](#)

### Functions

void **wifi\_prov\_scheme\_ble\_event\_cb\_free\_bt***dm* (void \*user\_data, *wifi\_prov\_cb\_event\_t* event, void \*event\_data)

void **wifi\_prov\_scheme\_ble\_event\_cb\_free\_ble** (void \*user\_data, *wifi\_prov\_cb\_event\_t* event, void \*event\_data)

void **wifi\_prov\_scheme\_ble\_event\_cb\_free\_bt** (void \*user\_data, *wifi\_prov\_cb\_event\_t* event, void \*event\_data)

*esp\_err\_t* **wifi\_prov\_scheme\_ble\_set\_service\_uuid** (uint8\_t \*uuid128)

Set the 128 bit GATT service UUID used for provisioning.

This API is used to override the default 128 bit provisioning service UUID, which is 0000ffff-0000-1000-8000-00805f9b34fb.

This must be called before starting provisioning, i.e. before making a call to `wifi_prov_mgr_start_provisioning()`, otherwise the default UUID will be used.

---

**Note:** The data being pointed to by the argument must be valid at least till provisioning is started. Upon start, the manager will store an internal copy of this UUID, and this data can be freed or invalidated afterwards.

---

**Parameters** **uuid128** –[in] A custom 128 bit UUID

#### Returns

- `ESP_OK` : Success
- `ESP_ERR_INVALID_ARG` : Null argument

*esp\_err\_t* **wifi\_prov\_scheme\_ble\_set\_mfg\_data** (uint8\_t \*mfg\_data, ssize\_t mfg\_data\_len)

Set manufacturer specific data in scan response.

This must be called before starting provisioning, i.e. before making a call to `wifi_prov_mgr_start_provisioning()`.

---

**Note:** It is important to understand that length of custom manufacturer data should be within limits. The manufacturer data goes into scan response along with BLE device name. By default, BLE device name length is of 11 Bytes, however it can vary as per application use case. So, one has to honour the scan response data size limits i.e.  $(mfg\_data\_len + 2) < 31 - (device\_name\_length + 2)$ . If the `mfg_data` length exceeds this limit, the length will be truncated.

---

#### Parameters

- **mfg\_data** –[in] Custom manufacturer data
- **mfg\_data\_len** –[in] Manufacturer data length

#### Returns

- `ESP_OK` : Success
- `ESP_ERR_INVALID_ARG` : Null argument

*esp\_err\_t* **wifi\_prov\_scheme\_ble\_set\_random\_addr** (const uint8\_t \*rand\_addr)

Set Bluetooth Random address.

This must be called before starting provisioning, i.e. before making a call to `wifi_prov_mgr_start_provisioning()`.

This API can be used in cases where a new identity address is to be used during provisioning. This will result in this device being treated as a new device by remote devices.

This API is only to be called to set random address. Re-invoking this API after provisioning is started will have no effect.

---

**Note:** This API will change the existing BD address for the device. The address once set will remain unchanged until BLE stack tear down happens when `wifi_prov_mgr_deinit` is invoked.

---

**Parameters** **rand\_addr** **–[in]** The static random address to be set of length 6 bytes.

**Returns**

- ESP\_OK : Success
- ESP\_ERR\_INVALID\_ARG : Null argument

## Macros

**WIFI\_PROV\_SCHEME\_BLE\_EVENT\_HANDLER\_FREE\_BTDM**

**WIFI\_PROV\_SCHEME\_BLE\_EVENT\_HANDLER\_FREE\_BLE**

**WIFI\_PROV\_SCHEME\_BLE\_EVENT\_HANDLER\_FREE\_BT**

## Header File

- `components/wifi_provisioning/include/wifi_provisioning/scheme_softap.h`

## Functions

void **wifi\_prov\_scheme\_softap\_set\_httpd\_handle** (void \*handle)

Provide HTTPD Server handle externally.

Useful in cases wherein applications need the webserver for some different operations, and do not want the wifi provisioning component to start/stop a new instance.

---

**Note:** This API should be called before `wifi_prov_mgr_start_provisioning()`

---

**Parameters** **handle** **–[in]** Handle to HTTPD server instance

## Header File

- `components/wifi_provisioning/include/wifi_provisioning/scheme_console.h`

## Header File

- `components/wifi_provisioning/include/wifi_provisioning/wifi_config.h`

## Functions

*esp\_err\_t* **wifi\_prov\_config\_data\_handler** (uint32\_t session\_id, const uint8\_t \*inbuf, ssize\_t inlen, uint8\_t \*\*outbuf, ssize\_t \*outlen, void \*priv\_data)

Handler for receiving and responding to requests from master.

This is to be registered as the `wifi_config` endpoint handler (protocomm proto-comm\_req\_handler\_t) using `protocomm_add_endpoint()`

## Structures

struct **wifi\_prov\_sta\_conn\_info\_t**

WiFi STA connected status information.

### Public Members

char **ip\_addr**[IP4ADDR\_STRLEN\_MAX]

IP Address received by station

char **bssid**[6]

BSSID of the AP to which connection was established

char **ssid**[33]

SSID of the to which connection was established

uint8\_t **channel**

Channel of the AP

uint8\_t **auth\_mode**

Authorization mode of the AP

struct **wifi\_prov\_config\_get\_data\_t**

WiFi status data to be sent in response to `get_status` request from master.

### Public Members

*wifi\_prov\_sta\_state\_t* **wifi\_state**

WiFi state of the station

*wifi\_prov\_sta\_fail\_reason\_t* **fail\_reason**

Reason for disconnection (valid only when `wifi_state` is `WIFI_STATION_DISCONNECTED`)

*wifi\_prov\_sta\_conn\_info\_t* **conn\_info**

Connection information (valid only when `wifi_state` is `WIFI_STATION_CONNECTED`)

struct **wifi\_prov\_config\_set\_data\_t**

WiFi config data received by slave during `set_config` request from master.

### Public Members

char **ssid**[33]  
SSID of the AP to which the slave is to be connected

char **password**[64]  
Password of the AP

char **bssid**[6]  
BSSID of the AP

uint8\_t **channel**  
Channel of the AP

struct **wifi\_prov\_config\_handlers**

Internal handlers for receiving and responding to protocomm requests from master.

This is to be passed as `priv_data` for protocomm request handler (refer to `wifi_prov_config_data_handler()`) when calling `protocomm_add_endpoint()`.

### Public Members

*esp\_err\_t* (\***get\_status\_handler**)(*wifi\_prov\_config\_get\_data\_t* \*resp\_data, *wifi\_prov\_ctx\_t* \*\*ctx)  
Handler function called when connection status of the slave (in WiFi station mode) is requested

*esp\_err\_t* (\***set\_config\_handler**)(const *wifi\_prov\_config\_set\_data\_t* \*req\_data, *wifi\_prov\_ctx\_t* \*\*ctx)  
Handler function called when WiFi connection configuration (eg. AP SSID, password, etc.) of the slave (in WiFi station mode) is to be set to user provided values

*esp\_err\_t* (\***apply\_config\_handler**)(*wifi\_prov\_ctx\_t* \*\*ctx)  
Handler function for applying the configuration that was set in `set_config_handler`. After applying the station may get connected to the AP or may fail to connect. The slave must be ready to convey the updated connection status information when `get_status_handler` is invoked again by the master.

*wifi\_prov\_ctx\_t* \***ctx**  
Context pointer to be passed to above handler functions upon invocation

### Type Definitions

typedef struct *wifi\_prov\_ctx* **wifi\_prov\_ctx\_t**

Type of context data passed to each get/set/apply handler function set in `wifi_prov_config_handlers` structure.

This is passed as an opaque pointer, thereby allowing it be defined later in application code as per requirements.

typedef struct *wifi\_prov\_config\_handlers* **wifi\_prov\_config\_handlers\_t**

Internal handlers for receiving and responding to protocomm requests from master.

This is to be passed as `priv_data` for protocomm request handler (refer to `wifi_prov_config_data_handler()`) when calling `protocomm_add_endpoint()`.

## Enumerations

enum `wifi_prov_sta_state_t`

WiFi STA status for conveying back to the provisioning master.

*Values:*

enumerator `WIFI_PROV_STA_CONNECTING`

enumerator `WIFI_PROV_STA_CONNECTED`

enumerator `WIFI_PROV_STA_DISCONNECTED`

enum `wifi_prov_sta_fail_reason_t`

WiFi STA connection fail reason.

*Values:*

enumerator `WIFI_PROV_STA_AUTH_ERROR`

enumerator `WIFI_PROV_STA_AP_NOT_FOUND`

Code examples for above API are provided in the [provisioning](#) directory of ESP-IDF examples.

Code example for above API is provided in [wifi/smart\\_config](#).

Code example for above API is provided in [wifi/wifi\\_easy\\_connect/dpp-enrollee](#).

## 2.9 Storage API

### 2.9.1 FAT Filesystem Support

ESP-IDF uses the [FatFs](#) library to work with FAT filesystems. FatFs resides in the `fatfs` component. Although the library can be used directly, many of its features can be accessed via VFS using the C standard library and POSIX API functions.

Additionally, FatFs has been modified to support the runtime pluggable disk I/O layer. This allows mapping of FatFs drives to physical disks at runtime.

#### Using FatFs with VFS

The header file `fatfs/vfs/esp_vfs_fat.h` defines the functions for connecting FatFs and VFS.

The function `esp_vfs_fat_register()` allocates a FATFS structure and registers a given path prefix in VFS. Subsequent operations on files starting with this prefix are forwarded to FatFs APIs.

The function `esp_vfs_fat_unregister_path()` deletes the registration with VFS, and frees the FATFS structure.

Most applications use the following workflow when working with `esp_vfs_fat_` functions:

1. Call `esp_vfs_fat_register()` to specify:
  - Path prefix where to mount the filesystem (e.g., `"/sdcard"`, `"/spiflash"`)
  - FatFs drive number

- A variable which will receive the pointer to the FATFS structure
2. Call `ff_diskio_register()` to register the disk I/O driver for the drive number used in Step 1.
  3. Call the FatFs function `f_mount`, and optionally `f_fdisk`, `f_mkfs`, to mount the filesystem using the same drive number which was passed to `esp_vfs_fat_register()`. For more information, see [FatFs documentation](#).
  4. Call the C standard library and POSIX API functions to perform such actions on files as open, read, write, erase, copy, etc. Use paths starting with the path prefix passed to `esp_vfs_register()` (for example, `"/sdcard/hello.txt"`). The filesystem uses [8.3 filenames](#) format (SFN) by default. If you need to use long filenames (LFN), enable the `CONFIG_FATFS_LONG_FILENAMES` option. More details on the FatFs filenames are available [here](#).
  5. Optionally, by enabling the option `CONFIG_FATFS_USE_FASTSEEK`, you can use the POSIX lseek function to perform it faster. The fast seek will not work for files in write mode, so to take advantage of fast seek, you should open (or close and then reopen) the file in read-only mode.
  6. Optionally, call the FatFs library functions directly. In this case, use paths without a VFS prefix (for example, `"/hello.txt"`).
  7. Close all open files.
  8. Call the FatFs function `f_mount` for the same drive number with NULL FATFS\* argument to unmount the filesystem.
  9. Call the FatFs function `ff_diskio_register()` with NULL `ff_diskio_impl_t*` argument and the same drive number to unregister the disk I/O driver.
  10. Call `esp_vfs_fat_unregister_path()` with the path where the file system is mounted to remove FatFs from VFS, and free the FATFS structure allocated in Step 1.

The convenience functions `esp_vfs_fat_sdmmc_mount()`, `esp_vfs_fat_sdspi_mount()`, and `esp_vfs_fat_sdcard_unmount()` wrap the steps described above and also handle SD card initialization. These functions are described in the next section.

### Using FatFs with VFS and SD Cards

The header file `fatfs/vfs/esp_vfs_fat.h` defines convenience functions `esp_vfs_fat_sdmmc_mount()`, `esp_vfs_fat_sdspi_mount()`, and `esp_vfs_fat_sdcard_unmount()`. These functions perform Steps 1–3 and 7–9 respectively and handle SD card initialization, but provide only limited error handling. Developers are encouraged to check its source code and incorporate more advanced features into production applications.

The convenience function `esp_vfs_fat_sdmmc_unmount()` unmounts the filesystem and releases the resources acquired by `esp_vfs_fat_sdmmc_mount()`.

### Using FatFs with VFS in Read-Only Mode

The header file `fatfs/vfs/esp_vfs_fat.h` also defines the convenience functions `esp_vfs_fat_spiflash_mount_ro()` and `esp_vfs_fat_spiflash_unmount_ro()`. These functions perform Steps 1-3 and 7-9 respectively for read-only FAT partitions. These are particularly helpful for data partitions written only once during factory provisioning which will not be changed by production application throughout the lifetime of the hardware.

### FatFS Disk IO Layer

FatFs has been extended with API functions that register the disk I/O driver at runtime.

These APIs provide implementation of disk I/O functions for SD/MMC cards and can be registered for the given FatFs drive number using the function `ff_diskio_register_sdmmc()`.

void **ff\_diskio\_register** (BYTE pdrv, const `ff_diskio_impl_t` \*discio\_impl)

Register or unregister diskio driver for given drive number.

When FATFS library calls one of `disk_XXX` functions for driver number pdrv, corresponding function in `discio_impl` for given pdrv will be called.

#### Parameters

- **pdrv** –drive number
- **diskio\_impl** –pointer to *ff\_diskio\_impl\_t* structure with diskio functions or NULL to unregister and free previously registered drive

struct **ff\_diskio\_impl\_t**

Structure of pointers to disk IO driver functions.

See FatFs documentation for details about these functions

### Public Members

DSTATUS (**\*init**)(unsigned char pdrv)

disk initialization function

DSTATUS (**\*status**)(unsigned char pdrv)

disk status check function

DRESULT (**\*read**)(unsigned char pdrv, unsigned char \*buff, uint32\_t sector, unsigned count)

sector read function

DRESULT (**\*write**)(unsigned char pdrv, const unsigned char \*buff, uint32\_t sector, unsigned count)

sector write function

DRESULT (**\*ioctl**)(unsigned char pdrv, unsigned char cmd, void \*buff)

function to get info about disk and do some misc operations

void **ff\_diskio\_register\_sdmmc** (unsigned char pdrv, *sdmmc\_card\_t* \*card)

Register SD/MMC diskio driver

#### Parameters

- **pdrv** –drive number
- **card** –pointer to *sdmmc\_card\_t* structure describing a card; card should be initialized before calling *f\_mount*.

*esp\_err\_t* **ff\_diskio\_register\_wl\_partition** (unsigned char pdrv, *wl\_handle\_t* flash\_handle)

Register spi flash partition

#### Parameters

- **pdrv** –drive number
- **flash\_handle** –handle of the wear levelling partition.

*esp\_err\_t* **ff\_diskio\_register\_raw\_partition** (unsigned char pdrv, const *esp\_partition\_t* \*part\_handle)

Register spi flash partition

#### Parameters

- **pdrv** –drive number
- **part\_handle** –pointer to raw flash partition.

### FatFs Partition Generator

We provide a partition generator for FatFs ([wl\\_fatfsgen.py](#)) which is integrated into the build system and could be easily used in the user project.

The tool is used to create filesystem images on a host and populate it with content of the specified host folder.

The script is based on the partition generator ([fatfsgen.py](#)). Apart from generating partition, it can also initialize wear levelling.

The latest version supports both short and long file names, FAT12 and FAT16. The long file names are limited to 255 characters and can contain multiple periods (.) characters within the filename and additional characters +, , ;, =, [ and ].

**Build System Integration with FatFs Partition Generator** It is possible to invoke FatFs generator directly from the CMake build system by calling `fatfs_create_spiflash_image`:

```
fatfs_create_spiflash_image(<partition> <base_dir> [FLASH_IN_PROJECT])
```

If you prefer generating partition without wear levelling support, you can use `fatfs_create_rawflash_image`:

```
fatfs_create_rawflash_image(<partition> <base_dir> [FLASH_IN_PROJECT])
```

`fatfs_create_spiflash_image` respectively `fatfs_create_rawflash_image` must be called from project's CMakeLists.txt.

If you decide for any reason to use `fatfs_create_rawflash_image` (without wear levelling support), beware that it supports mounting only in read-only mode in the device.

The arguments of the function are as follows:

1. `partition` - the name of the partition as defined in the partition table (e.g. [storage/fatfsgen/partitions\\_example.csv](#)).
2. `base_dir` - the directory that will be encoded to FatFs partition and optionally flashed into the device. Beware that you have to specify the suitable size of the partition in the partition table.
3. flag `FLASH_IN_PROJECT` - optionally, users can have the image automatically flashed together with the app binaries, partition tables, etc. on `idf.py flash -p <PORT>` by specifying `FLASH_IN_PROJECT`.
4. flag `PRESERVE_TIME` - optionally, users can force preserving the timestamps from the source folder to the target image. Without preserving the time, every timestamp will be set to the FATFS default initial time (1st January 1980).

For example:

```
fatfs_create_spiflash_image(my_fatfs_partition my_folder FLASH_IN_PROJECT)
```

If `FLASH_IN_PROJECT` is not specified, the image will still be generated, but you will have to flash it manually using `esptool.py` or a custom build system target.

For an example, see [storage/fatfsgen](#).

### FatFs Partition Analyzer

([fatfsparse.py](#)) is a partition analyzing tool for FatFs.

It is a reverse tool of ([fatfsgen.py](#)), i.e. it can generate the folder structure on the host based on the FatFs image.

Usage:

```
./fatfsparse.py [-h] [--long-name-support] [--wear-leveling] fatfs_image.img
```

### High-level API Reference

#### Header File

- [components/fatfs/vfs/esp\\_vfs\\_fat.h](#)

## Functions

*esp\_err\_t* **esp\_vfs\_fat\_register** (const char \*base\_path, const char \*fat\_drive, size\_t max\_files, FATFS \*\*out\_fs)

Register FATFS with VFS component.

This function registers given FAT drive in VFS, at the specified base path. If only one drive is used, fat\_drive argument can be an empty string. Refer to FATFS library documentation on how to specify FAT drive. This function also allocates FATFS structure which should be used for f\_mount call.

---

**Note:** This function doesn't mount the drive into FATFS, it just connects POSIX and C standard library IO function with FATFS. You need to mount desired drive into FATFS separately.

---

### Parameters

- **base\_path** –path prefix where FATFS should be registered
- **fat\_drive** –FATFS drive specification; if only one drive is used, can be an empty string
- **max\_files** –maximum number of files which can be open at the same time
- **out\_fs** –[out] pointer to FATFS structure which can be used for FATFS f\_mount call is returned via this argument.

### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if esp\_vfs\_fat\_register was already called
- ESP\_ERR\_NO\_MEM if not enough memory or too many VFSes already registered

*esp\_err\_t* **esp\_vfs\_fat\_unregister\_path** (const char \*base\_path)

Un-register FATFS from VFS.

---

**Note:** FATFS structure returned by esp\_vfs\_fat\_register is destroyed after this call. Make sure to call f\_mount function to unmount it before calling esp\_vfs\_fat\_unregister\_ctx. Difference between this function and the one above is that this one will release the correct drive, while the one above will release the last registered one

---

**Parameters** **base\_path** –path prefix where FATFS is registered. This is the same used when esp\_vfs\_fat\_register was called

### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if FATFS is not registered in VFS

*esp\_err\_t* **esp\_vfs\_fat\_sdmmc\_mount** (const char \*base\_path, const *sdmmc\_host\_t* \*host\_config, const void \*slot\_config, const *esp\_vfs\_fat\_mount\_config\_t* \*mount\_config, *sdmmc\_card\_t* \*\*out\_card)

Convenience function to get FAT filesystem on SD card registered in VFS.

This is an all-in-one function which does the following:

- initializes SDMMC driver or SPI driver with configuration in host\_config
- initializes SD card with configuration in slot\_config
- mounts FAT partition on SD card using FATFS library, with configuration in mount\_config
- registers FATFS library with VFS, with prefix given by base\_prefix variable

This function is intended to make example code more compact. For real world applications, developers should implement the logic of probing SD card, locating and mounting partition, and registering FATFS in VFS, with proper error checking and handling of exceptional conditions.

---

**Note:** Use this API to mount a card through SDSPI is deprecated. Please call esp\_vfs\_fat\_sdspi\_mount () instead for that case.

---

**Parameters**

- **base\_path** –path where partition should be registered (e.g. “/sdcard” )
- **host\_config** –Pointer to structure describing SDMMC host. When using SDMMC peripheral, this structure can be initialized using SDMMC\_HOST\_DEFAULT() macro. When using SPI peripheral, this structure can be initialized using SDSPI\_HOST\_DEFAULT() macro.
- **slot\_config** –Pointer to structure with slot configuration. For SDMMC peripheral, pass a pointer to sdmmc\_slot\_config\_t structure initialized using SDMMC\_SLOT\_CONFIG\_DEFAULT.
- **mount\_config** –pointer to structure with extra parameters for mounting FATFS
- **out\_card** –[out] if not NULL, pointer to the card information structure will be returned via this argument

**Returns**

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if esp\_vfs\_fat\_sdmmc\_mount was already called
- ESP\_ERR\_NO\_MEM if memory can not be allocated
- ESP\_FAIL if partition can not be mounted
- other error codes from SDMMC or SPI drivers, SDMMC protocol, or FATFS drivers

*esp\_err\_t* **esp\_vfs\_fat\_sdspi\_mount** (const char \*base\_path, const *sdmmc\_host\_t* \*host\_config\_input, const *sdspi\_device\_config\_t* \*slot\_config, const *esp\_vfs\_fat\_mount\_config\_t* \*mount\_config, *sdmmc\_card\_t* \*\*out\_card)

Convenience function to get FAT filesystem on SD card registered in VFS.

This is an all-in-one function which does the following:

- initializes an SPI Master device based on the SPI Master driver with configuration in slot\_config, and attach it to an initialized SPI bus.
- initializes SD card with configuration in host\_config\_input
- mounts FAT partition on SD card using FATFS library, with configuration in mount\_config
- registers FATFS library with VFS, with prefix given by base\_prefix variable

This function is intended to make example code more compact. For real world applications, developers should implement the logic of probing SD card, locating and mounting partition, and registering FATFS in VFS, with proper error checking and handling of exceptional conditions.

---

**Note:** This function try to attach the new SD SPI device to the bus specified in host\_config. Make sure the SPI bus specified in host\_config->slot have been initialized by spi\_bus\_initialize() before.

---

**Parameters**

- **base\_path** –path where partition should be registered (e.g. “/sdcard” )
- **host\_config\_input** –Pointer to structure describing SDMMC host. This structure can be initialized using SDSPI\_HOST\_DEFAULT() macro.
- **slot\_config** –Pointer to structure with slot configuration. For SPI peripheral, pass a pointer to *sdspi\_device\_config\_t* structure initialized using SDSPI\_DEVICE\_CONFIG\_DEFAULT().
- **mount\_config** –pointer to structure with extra parameters for mounting FATFS
- **out\_card** –[out] If not NULL, pointer to the card information structure will be returned via this argument. It is suggested to hold this handle and use it to unmount the card later if needed. Otherwise it’ s not suggested to use more than one card at the same time and unmount one of them in your application.

**Returns**

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if esp\_vfs\_fat\_sdmmc\_mount was already called
- ESP\_ERR\_NO\_MEM if memory can not be allocated
- ESP\_FAIL if partition can not be mounted
- other error codes from SDMMC or SPI drivers, SDMMC protocol, or FATFS drivers

*esp\_err\_t* **esp\_vfs\_fat\_sdmmc\_unmount** (void)

Unmount FAT filesystem and release resources acquired using `esp_vfs_fat_sdmmc_mount`.

*Deprecated:*

Use `esp_vfs_fat_sdcard_unmount()` instead.

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if `esp_vfs_fat_sdmmc_mount` hasn't been called

*esp\_err\_t* **esp\_vfs\_fat\_sdcard\_unmount** (const char \*base\_path, *sdmmc\_card\_t* \*card)

Unmount an SD card from the FAT filesystem and release resources acquired using `esp_vfs_fat_sdmmc_mount()` or `esp_vfs_fat_sdspi_mount()`

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_ARG if the card argument is unregistered
- ESP\_ERR\_INVALID\_STATE if `esp_vfs_fat_sdmmc_mount` hasn't been called

*esp\_err\_t* **esp\_vfs\_fat\_spiflash\_mount\_rw\_wl** (const char \*base\_path, const char \*partition\_label, const *esp\_vfs\_fat\_mount\_config\_t* \*mount\_config, *wl\_handle\_t* \*wl\_handle)

Convenience function to initialize FAT filesystem in SPI flash and register it in VFS.

This is an all-in-one function which does the following:

- finds the partition with defined partition\_label. Partition label should be configured in the partition table.
- initializes flash wear levelling library on top of the given partition
- mounts FAT partition using FATFS library on top of flash wear levelling library
- registers FATFS library with VFS, with prefix given by base\_prefix variable

This function is intended to make example code more compact.

#### Parameters

- **base\_path** –path where FATFS partition should be mounted (e.g. “/spiflash” )
- **partition\_label** –label of the partition which should be used
- **mount\_config** –pointer to structure with extra parameters for mounting FATFS
- **wl\_handle** –[out] wear levelling driver handle

#### Returns

- ESP\_OK on success
- ESP\_ERR\_NOT\_FOUND if the partition table does not contain FATFS partition with given label
- ESP\_ERR\_INVALID\_STATE if `esp_vfs_fat_spiflash_mount_rw_wl` was already called
- ESP\_ERR\_NO\_MEM if memory can not be allocated
- ESP\_FAIL if partition can not be mounted
- other error codes from wear levelling library, SPI flash driver, or FATFS drivers

*esp\_err\_t* **esp\_vfs\_fat\_spiflash\_unmount\_rw\_wl** (const char \*base\_path, *wl\_handle\_t* wl\_handle)

Unmount FAT filesystem and release resources acquired using `esp_vfs_fat_spiflash_mount_rw_wl`.

#### Parameters

- **base\_path** –path where partition should be registered (e.g. “/spiflash” )
- **wl\_handle** –wear levelling driver handle returned by `esp_vfs_fat_spiflash_mount_rw_wl`

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if `esp_vfs_fat_spiflash_mount_rw_wl` hasn't been called

*esp\_err\_t* **esp\_vfs\_fat\_spiflash\_mount\_ro** (const char \*base\_path, const char \*partition\_label, const *esp\_vfs\_fat\_mount\_config\_t* \*mount\_config)

Convenience function to initialize read-only FAT filesystem and register it in VFS.

This is an all-in-one function which does the following:

- finds the partition with defined partition\_label. Partition label should be configured in the partition table.
- mounts FAT partition using FATFS library
- registers FATFS library with VFS, with prefix given by base\_prefix variable

---

**Note:** Wear levelling is not used when FAT is mounted in read-only mode using this function.

---

#### Parameters

- **base\_path** –path where FATFS partition should be mounted (e.g. “/spiflash” )
- **partition\_label** –label of the partition which should be used
- **mount\_config** –pointer to structure with extra parameters for mounting FATFS

#### Returns

- ESP\_OK on success
- ESP\_ERR\_NOT\_FOUND if the partition table does not contain FATFS partition with given label
- ESP\_ERR\_INVALID\_STATE if esp\_vfs\_fat\_spiflash\_mount\_ro was already called for the same partition
- ESP\_ERR\_NO\_MEM if memory can not be allocated
- ESP\_FAIL if partition can not be mounted
- other error codes from SPI flash driver, or FATFS drivers

*esp\_err\_t* **esp\_vfs\_fat\_spiflash\_unmount\_ro** (const char \*base\_path, const char \*partition\_label)

Unmount FAT filesystem and release resources acquired using esp\_vfs\_fat\_spiflash\_mount\_ro.

#### Parameters

- **base\_path** –path where partition should be registered (e.g. “/spiflash” )
- **partition\_label** –label of partition to be unmounted

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if esp\_vfs\_fat\_spiflash\_mount\_rw\_wl hasn't been called

*esp\_err\_t* **esp\_vfs\_fat\_info** (const char \*base\_path, uint64\_t \*out\_total\_bytes, uint64\_t \*out\_free\_bytes)

Get information for FATFS partition.

#### Parameters

- **base\_path** –Base path of the partition examined (e.g. “/spiflash” )
- **out\_total\_bytes** –[out] Size of the file system
- **out\_free\_bytes** –[out] Free bytes available in the file system

#### Returns

- ESP\_OK on success
- ESP\_ERR\_INVALID\_STATE if partition not found
- ESP\_FAIL if another FRESULT error (saved in errno)

## Structures

struct **esp\_vfs\_fat\_mount\_config\_t**

Configuration arguments for esp\_vfs\_fat\_sdmmc\_mount and esp\_vfs\_fat\_spiflash\_mount\_rw\_wl functions.

## Public Members

bool **format\_if\_mount\_failed**

If FAT partition can not be mounted, and this parameter is true, create partition table and format the filesystem.

int **max\_files**

Max number of open files.

size\_t **allocation\_unit\_size**

If `format_if_mount_failed` is set, and mount fails, format the card with given allocation unit size. Must be a power of 2, between sector size and  $128 * \text{sector size}$ . For SD cards, sector size is always 512 bytes. For wear\_leveling, sector size is determined by `CONFIG_WL_SECTOR_SIZE` option.

Using larger allocation unit size will result in higher read/write performance and higher overhead when storing small files.

Setting this field to 0 will result in allocation unit set to the sector size.

bool **disk\_status\_check\_enable**

Enables real `ff_disk_status` function implementation for SD cards (`ff_sdmmc_status`). Possibly slows down IO performance.

Try to enable if you need to handle situations when SD cards are not unmounted properly before physical removal or you are experiencing issues with SD cards.

Doesn't do anything for other memory storage media.

## Type Definitions

```
typedef esp_vfs_fat_mount_config_t esp_vfs_fat_sdmmc_mount_config_t
```

## 2.9.2 Manufacturing Utility

### Introduction

This utility is designed to create instances of factory NVS partition images on a per-device basis for mass manufacturing purposes. The NVS partition images are created from CSV files containing user-provided configurations and values.

Please note that this utility only creates manufacturing binary images which then need to be flashed onto your devices using:

- [esptool.py](#)
- [Flash Download tool](#) (available on Windows only). Just download it, unzip, and follow the instructions inside the *doc* folder.
- Direct flash programming using custom production tools.

### Prerequisites

This utility is dependent on `esp-idf`'s NVS partition utility.

- **Operating System requirements:**
  - Linux / MacOS / Windows (standard distributions)
- **The following packages are needed to use this utility:**
  - [Python](#)

**Note:****Before using this utility, please make sure that:**

- The path to Python is added to the PATH environment variable.
  - You have installed the packages from *requirement.txt*, the file in the root of the esp-idf directory.
- 

**Workflow****CSV Configuration File**

This file contains the configuration of the device to be flashed.

The data in the configuration file has the following format (the *REPEAT* tag is optional):

```
name1,namespace,    <-- First entry should be of type "namespace"
key1,type1,encoding1
key2,type2,encoding2,REPEAT
name2,namespace,
key3,type3,encoding3
key4,type4,encoding4
```

---

**Note:** The first line in this file should always be the `namespace` entry.

---

Each line should have three parameters: `key`, `type`, `encoding`, separated by a comma. If the `REPEAT` tag is present, the value corresponding to this key in the master value CSV file will be the same for all devices.

*Please refer to README of the NVS Partition Generator utility for detailed description of each parameter.*

Below is a sample example of such a configuration file:

```
app,namespace,
firmware_key,data,hex2bin
serial_no,data,string,REPEAT
device_no,data,i32
```

**Note:****Make sure there are no spaces:**

- before and after `'`,
  - at the end of each line in a CSV file
- 

**Master Value CSV File**

This file contains details of the devices to be flashed. Each line in this file corresponds to a device instance.

The data in the master value CSV file has the following format:

```
key1, key2, key3, .....
value1, value2, value3, .....
```

**Note:** The first line in the file should always contain the `key` names. All the keys from the configuration file should be present here in the **same order**. This file can have additional columns (keys). The additional keys will be treated as metadata and would not be part of the final binary files.

Each line should contain the `value` of the corresponding keys, separated by a comma. If the key has the `REPEAT` tag, its corresponding value **must** be entered in the second line only. Keep the entry empty for this value in the following lines.

The description of this parameter is as follows:

**value** Data value

Data value is the value of data corresponding to the key.

Below is a sample example of a master value CSV file:

```
id, firmware_key, serial_no, device_no
1, 1a2b3c4d5e6faabb, A1, 101
2, 1a2b3c4d5e6fccdd, , 102
3, 1a2b3c4d5e6feeff, , 103
```

**Note:** If the ‘`REPEAT`’ tag is present, a new master value CSV file will be created in the same folder as the input Master CSV File with the values inserted at each line for the key with the ‘`REPEAT`’ tag.

This utility creates intermediate CSV files which are used as input for the NVS partition utility to generate the binary files.

The format of this intermediate CSV file is as follows:

```
key, type, encoding, value
key, namespace, ,
key1, type1, encoding1, value1
key2, type2, encoding2, value2
```

An instance of an intermediate CSV file will be created for each device on an individual basis.

## Running the utility

### Usage:

```
python mfg_gen.py [-h] {generate, generate-key} ...
```

### Optional Arguments:

No.	Parameter	Description
1	-h, -help	show this help message and exit

### Commands:

Run `mfg_gen.py {command} -h` for additional help

No.	Parameter	Description
1	generate	Generate NVS partition
2	generate-key	Generate keys for encryption

**To generate factory images for each device (Default):****Usage:**

```
python mfg_gen.py generate [-h] [--fileid FILEID] [--version {1,2}] [--keygen]
                          [--keyfile KEYFILE] [--inputkey INPUTKEY]
                          [--outdir OUTDIR]
                          conf values prefix size
```

**Positional Arguments:**

Parameter	Description
conf	Path to configuration csv file to parse
values	Path to values csv file to parse
prefix	Unique name for each output filename prefix
size	<b>Size of NVS partition in bytes</b> (must be multiple of 4096)

**Optional Arguments:**

Parameter	Description
-h, -help	show this help message and exit
-fileid FILEID	Unique file identifier(any key in values file) for each filename suffix (Default: numeric value(1,2,3...))
-version {1,2}	Set multipage blob version. Version 1 - Multipage blob support disabled. Version 2 - Multipage blob support enabled. Default: Version 2
-keygen	Generates key for encrypting NVS partition
-inputkey INPUTKEY	File having key for encrypting NVS partition
-outdir OUTDIR	Output directory to store files created (Default: current directory)

You can run the utility to generate factory images for each device using the command below. A sample CSV file is provided with the utility:

```
python mfg_gen.py generate samples/sample_config.csv samples/sample_values_
↪singlepage_blob.csv Sample 0x3000
```

The master value CSV file should have the path in the `file` type relative to the directory from which you are running the utility.

**To generate encrypted factory images for each device:**

You can run the utility to encrypt factory images for each device using the command below. A sample CSV file is provided with the utility:

- Encrypt by allowing the utility to generate encryption keys:

```
python mfg_gen.py generate samples/sample_config.csv samples/sample_values_
↪singlepage_blob.csv Sample 0x3000 --keygen
```

**Note:** Encryption key of the following format `<outdir>/keys/keys-<prefix>-<fileid>.bin` is created. This newly created file having encryption keys in `keys/` directory is compatible with NVS key-partition structure. Refer to *NVS Key Partition* for more details.

- Encrypt by providing the encryption keys as input binary file:

```
python mfg_gen.py generate samples/sample_config.csv samples/sample_values_
↪singlepage_blob.csv Sample 0x3000 --inputkey keys/sample_keys.bin
```

**To generate only encryption keys:**

**Usage::** python mfg\_gen.py generate-key [-h] [--keyfile KEYFILE] [--outdir OUTDIR]

**Optional Arguments:**

Parameter	Description
-h, -help	show this help message and exit
--keyfile KEYFILE	Path to output encryption keys file
--outdir OUTDIR	Output directory to store files created. (Default: current directory)

You can run the utility to generate only encryption keys using the command below:

```
python mfg_gen.py generate-key
```

**Note:** Encryption key of the following format <outdir>/keys/keys-<timestamp>.bin is created. Timestamp format is: %m-%d\_%H-%M. To provide custom target filename use the `--keyfile` argument.

Generated encryption key binary file can further be used to encrypt factory images created on the per device basis.

The default numeric value: 1,2,3...of the `fileid` argument corresponds to each line bearing device instance values in the master value CSV file.

While running the manufacturing utility, the following folders will be created in the specified `outdir` directory:

- `bin/` for storing the generated binary files
- `csv/` for storing the generated intermediate CSV files
- `keys/` for storing encryption keys (when generating encrypted factory images)

## 2.9.3 Non-volatile Storage Library

### Introduction

Non-volatile storage (NVS) library is designed to store key-value pairs in flash. This section introduces some concepts used by NVS.

**Underlying Storage** Currently, NVS uses a portion of main flash memory through the `esp_partition` API. The library uses all the partitions with `data` type and `nvs` subtype. The application can choose to use the partition with the label `nvs` through the `nvs_open()` API function or any other partition by specifying its name using the `nvs_open_from_partition()` API function.

Future versions of this library may have other storage backends to keep data in another flash chip (SPI or I2C), RTC, FRAM, etc.

**Note:** if an NVS partition is truncated (for example, when the partition table layout is changed), its contents should be erased. ESP-IDF build system provides a `idf.py erase-flash` target to erase all contents of the flash chip.

**Note:** NVS works best for storing many small values, rather than a few large values of the type 'string' and 'blob'. If you need to store large blobs or strings, consider using the facilities provided by the FAT filesystem on top of the wear levelling library.

**Keys and Values** NVS operates on key-value pairs. Keys are ASCII strings; the maximum key length is currently 15 characters. Values can have one of the following types:

- integer types: `uint8_t`, `int8_t`, `uint16_t`, `int16_t`, `uint32_t`, `int32_t`, `uint64_t`, `int64_t`
- zero-terminated string
- variable length binary data (blob)

---

**Note:** String values are currently limited to 4000 bytes. This includes the null terminator. Blob values are limited to 508,000 bytes or 97.6% of the partition size - 4000 bytes, whichever is lower.

---

Additional types, such as `float` and `double` might be added later.

Keys are required to be unique. Assigning a new value to an existing key works as follows:

- If the new value is of the same type as the old one, value is updated.
- If the new value has a different data type, an error is returned.

Data type check is also performed when reading a value. An error is returned if the data type of the read operation does not match the data type of the value.

**Namespaces** To mitigate potential conflicts in key names between different components, NVS assigns each key-value pair to one of namespaces. Namespace names follow the same rules as key names, i.e., the maximum length is 15 characters. Furthermore, there can be no more than 254 different namespaces in one NVS partition. Namespace name is specified in the `nvs_open()` or `nvs_open_from_partition` call. This call returns an opaque handle, which is used in subsequent calls to the `nvs_get_*`, `nvs_set_*`, and `nvs_commit()` functions. This way, a handle is associated with a namespace, and key names will not collide with same names in other namespaces. Please note that the namespaces with the same name in different NVS partitions are considered as separate namespaces.

**NVS Iterators** Iterators allow to list key-value pairs stored in NVS, based on specified partition name, namespace, and data type.

There are the following functions available:

- `nvs_entry_find()` creates an opaque handle, which is used in subsequent calls to the `nvs_entry_next()` and `nvs_entry_info()` functions.
- `nvs_entry_next()` advances an iterator to the next key-value pair.
- `nvs_entry_info()` returns information about each key-value pair

In general, all iterators obtained via `nvs_entry_find()` have to be released using `nvs_release_iterator()`, which also tolerates NULL iterators. `nvs_entry_find()` and `nvs_entry_next()` will set the given iterator to NULL or a valid iterator in all cases except a parameter error occurred (i.e., return `ESP_ERR_NVS_NOT_FOUND`). In case of a parameter error, the given iterator will not be modified. Hence, it is best practice to initialize the iterator to NULL before calling `nvs_entry_find()` to avoid complicated error checking before releasing the iterator.

**Security, Tampering, and Robustness** NVS is not directly compatible with the ESP32-C2 flash encryption system. However, data can still be stored in encrypted form if NVS encryption is used together with ESP32-C2 flash encryption. Please refer to [NVS Encryption](#) for more details.

If NVS encryption is not used, it is possible for anyone with physical access to the flash chip to alter, erase, or add key-value pairs. With NVS encryption enabled, it is not possible to alter or add a key-value pair and get recognized as a valid pair without knowing corresponding NVS encryption keys. However, there is no tamper-resistance against the erase operation.

The library does try to recover from conditions when flash memory is in an inconsistent state. In particular, one should be able to power off the device at any point and time and then power it back on. This should not result in loss of data, except for the new key-value pair if it was being written at the moment of powering off. The library should also be able to initialize properly with any random data present in flash memory.

## NVS Encryption

Data stored in NVS partitions can be encrypted using AES-XTS in the manner similar to the one mentioned in disk encryption standard IEEE P1619. For the purpose of encryption, each entry is treated as one *sector* and relative address of the entry (w.r.t. partition-start) is fed to the encryption algorithm as *sector-number*. The NVS Encryption can be enabled by enabling `CONFIG_NVS_ENCRYPTION`. The keys required for NVS encryption are stored in yet another partition, which is protected using *Flash Encryption*. Therefore, enabling *Flash Encryption* is a prerequisite for NVS encryption.

The NVS Encryption is enabled by default when *Flash Encryption* is enabled. This is done because Wi-Fi driver stores credentials (like SSID and passphrase) in the default NVS partition. It is important to encrypt them as default choice if platform level encryption is already enabled.

For using NVS encryption, the partition table must contain the *NVS Key Partition*. Two partition tables containing the *NVS Key Partition* are provided for NVS encryption under the partition table option (menuconfig>Partition Table). They can be selected with the project configuration menu (idf.py menuconfig). Please refer to the example `security/flash_encryption` for how to configure and use NVS encryption feature.

**NVS Key Partition** An application requiring NVS encryption support needs to be compiled with a key-partition of the type *data* and subtype *nvs\_keys*. This partition should be marked as *encrypted* and its size should be the minimum partition size (4KB). Refer to *Partition Tables* for more details. Two additional partition tables which contain the *NVS Key Partition* are provided under the partition table option (menuconfig>Partition Table). They can be directly used for *NVS Encryption*. The structure of these partitions is depicted below.

-----+-----+-----+-----+-----
XTS encryption key (32)
-----+-----+-----+-----+-----
XTS tweak key (32)
-----+-----+-----+-----+-----
CRC32 (4)
-----+-----+-----+-----+-----

The XTS encryption keys in the *NVS Key Partition* can be generated in one of the following two ways.

### 1. Generate the keys on the ESP chip:

When NVS encryption is enabled the `nvs_flash_init()` API function can be used to initialize the encrypted default NVS partition. The API function internally generates the XTS encryption keys on the ESP chip. The API function finds the first *NVS Key Partition*. Then the API function automatically generates and stores the NVS keys in that partition by making use of the `nvs_flash_generate_keys()` API function provided by `nvs_flash/include/nvs_flash.h`. New keys are generated and stored only when the respective key partition is empty. The same key partition can then be used to read the security configurations for initializing a custom encrypted NVS partition with help of `nvs_flash_secure_init_partition()`.

The API functions `nvs_flash_secure_init()` and `nvs_flash_secure_init_partition()` do not generate the keys internally. When these API functions are used for initializing encrypted NVS partitions, the keys can be generated after startup using the `nvs_flash_generate_keys()` API function provided by `nvs_flash.h`. The API function will then write those keys onto the key-partition in encrypted form.

**Note:** Please note that *nvs\_keys* partition must be completely erased before starting the application in this approach. Otherwise the application may generate `ESP_ERR_NVS_CORRUPT_KEY_PART` error code assuming that *nvs\_keys* partition was not empty and contains malformed data. You can use the following command for this:

```
parttool.py --port PORT --partition-table-file=PARTITION_TABLE_FILE --
  ↪partition-table-offset PARTITION_TABLE_OFFSET erase_partition --
  ↪partition-type=data --partition-subtype=nvs_keys
```

### 2. Use pre-generated key partition:

This option will be required by the user when keys in the *NVS Key Partition* are not generated by the application. The *NVS Key Partition* containing the XTS encryption keys can be generated with the help of *NVS Partition Generator Utility*. Then the user can store the pre generated key partition on the flash with help of the following two commands:

i) Build and flash the partition table

```
idf.py partition-table partition-table-flash
```

ii) Store the keys in the *NVS Key Partition* (on the flash) with the help of `parttool.py` (see Partition Tool section in *partition-tables* for more details)

```
parttool.py --port PORT --partition-table-offset PARTITION_TABLE_
↪OFFSET write_partition --partition-name="name of nvs_key partition" -
↪-input NVS_KEY_PARTITION_FILE
```

**Note:** If the device is encrypted in flash encryption development mode and you want to renew the NVS key partition, you need to tell `parttool.py` to encrypt the NVS key partition and you also need to give it a pointer to the unencrypted partition table in your build directory (build/partition\_table) since the partition table on the device is encrypted, too. You can use the following command:

```
parttool.py --esptool-write-args encrypt --port PORT --partition-table-
↪file=PARTITION_TABLE_FILE --partition-table-offset PARTITION_TABLE_
↪OFFSET write_partition --partition-name="name of nvs_key partition" -
↪-input NVS_KEY_PARTITION_FILE
```

Since the key partition is marked as *encrypted* and *Flash Encryption* is enabled, the bootloader will encrypt this partition using flash encryption key on the first boot.

It is possible for an application to use different keys for different NVS partitions and thereby have multiple key-partitions. However, it is a responsibility of the application to provide correct key-partition/keys for the purpose of encryption/decryption.

**Encrypted Read/Write** The same NVS API functions `nvs_get_*` or `nvs_set_*` can be used for reading of, and writing to an encrypted nvs partition as well.

**Encrypt the default NVS partition:** To enable encryption for the default NVS partition no additional steps are necessary. When *CONFIG\_NVS\_ENCRYPTION* is enabled, the `nvs_flash_init()` API function internally performs some additional steps using the first *NVS Key Partition* found to enable encryption for the default NVS partition (refer to the API documentation for more details). Alternatively, `nvs_flash_secure_init()` API function can also be used to enable encryption for the default NVS partition.

**Encrypt a custom NVS partition:** To enable encryption for a custom NVS partition, `nvs_flash_secure_init_partition()` API function is used instead of `nvs_flash_init_partition()`.

When `nvs_flash_secure_init()` and `nvs_flash_secure_init_partition()` API functions are used, the applications are expected to follow the steps below in order to perform NVS read/write operations with encryption enabled.

1. Find key partition and NVS data partition using `esp_partition_find*` API functions.
2. Populate the `nvs_sec_cfg_t` struct using the `nvs_flash_read_security_cfg()` or `nvs_flash_generate_keys()` API functions.
3. Initialise NVS flash partition using the `nvs_flash_secure_init()` or `nvs_flash_secure_init_partition()` API functions.
4. Open a namespace using the `nvs_open()` or `nvs_open_from_partition()` API functions.
5. Perform NVS read/write operations using `nvs_get_*` or `nvs_set_*`.
6. Deinitialise an NVS partition using `nvs_flash_deinit()`.

## NVS Partition Generator Utility

This utility helps generate NVS partition binary files which can be flashed separately on a dedicated partition via a flashing utility. Key-value pairs to be flashed onto the partition can be provided via a CSV file. For more details, please refer to [NVS Partition Generator Utility](#).

### Application Example

You can find code examples in the [storage](#) directory of ESP-IDF examples:

#### [storage/nvs\\_rw\\_value](#)

Demonstrates how to read a single integer value from, and write it to NVS.

The value checked in this example holds the number of the ESP32-C2 module restarts. The value's function as a counter is only possible due to its storing in NVS.

The example also shows how to check if a read / write operation was successful, or if a certain value has not been initialized in NVS. The diagnostic procedure is provided in plain text to help you track the program flow and capture any issues on the way.

#### [storage/nvs\\_rw\\_blob](#)

Demonstrates how to read a single integer value and a blob (binary large object), and write them to NVS to preserve this value between ESP32-C2 module restarts.

- value - tracks the number of the ESP32-C2 module soft and hard restarts.
- blob - contains a table with module run times. The table is read from NVS to dynamically allocated RAM. A new run time is added to the table on each manually triggered soft restart, and then the added run time is written to NVS. Triggering is done by pulling down GPIO0.

The example also shows how to implement the diagnostic procedure to check if the read / write operation was successful.

#### [storage/nvs\\_rw\\_value\\_cxx](#)

This example does exactly the same as [storage/nvs\\_rw\\_value](#), except that it uses the C++ NVS handle class.

## Internals

**Log of Key-Value Pairs** NVS stores key-value pairs sequentially, with new key-value pairs being added at the end. When a value of any given key has to be updated, a new key-value pair is added at the end of the log and the old key-value pair is marked as erased.

**Pages and Entries** NVS library uses two main entities in its operation: pages and entries. Page is a logical structure which stores a portion of the overall log. Logical page corresponds to one physical sector of flash memory. Pages which are in use have a *sequence number* associated with them. Sequence numbers impose an ordering on pages. Higher sequence numbers correspond to pages which were created later. Each page can be in one of the following states:

**Empty/uninitialized** Flash storage for the page is empty (all bytes are 0xff). Page is not used to store any data at this point and does not have a sequence number.

**Active** Flash storage is initialized, page header has been written to flash, page has a valid sequence number. Page has some empty entries and data can be written there. No more than one page can be in this state at any given moment.

**Full** Flash storage is in a consistent state and is filled with key-value pairs. Writing new key-value pairs into this page is not possible. It is still possible to mark some key-value pairs as erased.

**Erasing** Non-erased key-value pairs are being moved into another page so that the current page can be erased. This is a transient state, i.e., page should never stay in this state at the time when any API call returns. In case of a sudden power off, the move-and-erase process will be completed upon the next power-on.

**Corrupted** Page header contains invalid data, and further parsing of page data was canceled. Any items previously written into this page will not be accessible. The corresponding flash sector will not be erased immediately and will be kept along with sectors in *uninitialized* state for later use. This may be useful for debugging.

Mapping from flash sectors to logical pages does not have any particular order. The library will inspect sequence numbers of pages found in each flash sector and organize pages in a list based on these numbers.

**Structure of a Page** For now, we assume that flash sector size is 4096 bytes and that ESP32-C2 flash encryption hardware operates on 32-byte blocks. It is possible to introduce some settings configurable at compile-time (e.g., via menuconfig) to accommodate flash chips with different sector sizes (although it is not clear if other components in the system, e.g., SPI flash driver and SPI flash cache can support these other sizes).

Page consists of three parts: header, entry state bitmap, and entries themselves. To be compatible with ESP32-C2 flash encryption, the entry size is 32 bytes. For integer types, an entry holds one key-value pair. For strings and blobs, an entry holds part of key-value pair (more on that in the entry structure description).

The following diagram illustrates the page structure. Numbers in parentheses indicate the size of each part in bytes.

Page header and entry state bitmap are always written to flash unencrypted. Entries are encrypted if flash encryption feature of ESP32-C2 is used.

Page state values are defined in such a way that changing state is possible by writing 0 into some of the bits. Therefore it is not necessary to erase the page to change its state unless that is a change to the *erased* state.

The version field in the header reflects the NVS format version used. For backward compatibility reasons, it is decremented for every version upgrade starting at 0xff (i.e., 0xff for version-1, 0xfe for version-2 and so on).

CRC32 value in the header is calculated over the part which does not include a state value (bytes 4 to 28). The unused part is currently filled with 0xff bytes.

The following sections describe the structure of entry state bitmap and entry itself.

**Entry and Entry State Bitmap** Each entry can be in one of the following three states represented with two bits in the entry state bitmap. The final four bits in the bitmap (256 - 2 \* 126) are not used.

**Empty (2' b11)** Nothing is written into the specific entry yet. It is in an uninitialized state (all bytes are 0xff).

**Written (2' b10)** A key-value pair (or part of key-value pair which spans multiple entries) has been written into the entry.

**Erased (2' b00)** A key-value pair in this entry has been discarded. Contents of this entry will not be parsed anymore.

**Structure of Entry** For values of primitive types (currently integers from 1 to 8 bytes long), entry holds one key-value pair. For string and blob types, entry holds part of the whole key-value pair. For strings, in case when a key-value pair spans multiple entries, all entries are stored in the same page. Blobs are allowed to span over multiple pages by dividing them into smaller chunks. For tracking these chunks, an additional fixed length metadata entry is stored called “blob index”. Earlier formats of blobs are still supported (can be read and modified). However, once the blobs are modified, they are stored using the new format.

Individual fields in entry structure have the following meanings:

**NS** Namespace index for this entry. For more information on this value, see the section on namespaces implementation.

**Type** One byte indicating the value data type. See the `ItemType` enumeration in `nvs_flash/include/nvs_handle.hpp` for possible values.

**Span** Number of entries used by this key-value pair. For integer types, this is equal to 1. For strings and blobs, this depends on value length.

**ChunkIndex** Used to store the index of a blob-data chunk for blob types. For other types, this should be `0xff`.

**CRC32** Checksum calculated over all the bytes in this entry, except for the CRC32 field itself.

**Key** Zero-terminated ASCII string containing a key name. Maximum string length is 15 bytes, excluding a zero terminator.

**Data** For integer types, this field contains the value itself. If the value itself is shorter than 8 bytes, it is padded to the right, with unused bytes filled with `0xff`.

For “blob index” entry, these 8 bytes hold the following information about data-chunks:

- **Size** (Only for blob index.) Size, in bytes, of complete blob data.
- **ChunkCount** (Only for blob index.) Total number of blob-data chunks into which the blob was divided during storage.
- **ChunkStart** (Only for blob index.) `ChunkIndex` of the first blob-data chunk of this blob. Subsequent chunks have `chunkIndex` incrementally allocated (step of 1).

For string and blob data chunks, these 8 bytes hold additional data about the value, which are described below:

- **Size** (Only for strings and blobs.) Size, in bytes, of actual data. For strings, this includes zero terminators.
- **CRC32** (Only for strings and blobs.) Checksum calculated over all bytes of data.

Variable length values (strings and blobs) are written into subsequent entries, 32 bytes per entry. The *Span* field of the first entry indicates how many entries are used.

**Namespaces** As mentioned above, each key-value pair belongs to one of the namespaces. Namespace identifiers (strings) are stored as keys of key-value pairs in namespace with index 0. Values corresponding to these keys are indexes of these namespaces.

+-----+   NS=0 Type=uint8_t Key="wifi" Value=1	Entry describing namespace "wifi"
+-----+   NS=1 Type=uint32_t Key="channel" Value=6	Key "channel" in namespace "wifi"
+-----+   NS=0 Type=uint8_t Key="pwm" Value=2	Entry describing namespace "pwm"
+-----+   NS=2 Type=uint16_t Key="channel" Value=20	Key "channel" in namespace "pwm"
+-----+	

**Item Hash List** To reduce the number of reads from flash memory, each member of the Page class maintains a list of pairs: item index; item hash. This list makes searches much quicker. Instead of iterating over all entries, reading them from flash one at a time, *Page::findItem* first performs a search for the item hash in the hash list. This gives the item index within the page if such an item exists. Due to a hash collision, it is possible that a different item will be found. This is handled by falling back to iteration over items in flash.

Each node in the hash list contains a 24-bit hash and 8-bit item index. Hash is calculated based on item namespace, key name, and ChunkIndex. CRC32 is used for calculation; the result is truncated to 24 bits. To reduce the overhead for storing 32-bit entries in a linked list, the list is implemented as a double-linked list of arrays. Each array holds 29 entries, for the total size of 128 bytes, together with linked list pointers and a 32-bit count field. The minimum amount of extra RAM usage per page is therefore 128 bytes; maximum is 640 bytes.

## API Reference

### Header File

- `components/nvs_flash/include/nvs_flash.h`

### Functions

`esp_err_t nvs_flash_init` (void)

Initialize the default NVS partition.

This API initialises the default NVS partition. The default NVS partition is the one that is labeled “nvs” in the partition table.

When “NVS\_ENCRYPTION” is enabled in the menuconfig, this API enables the NVS encryption for the default NVS partition as follows

- Read security configurations from the first NVS key partition listed in the partition table. (NVS key partition is any “data” type partition which has the subtype value set to “nvs\_keys” )
- If the NVS key partition obtained in the previous step is empty, generate and store new keys in that NVS key partition.
- Internally call “nvs\_flash\_secure\_init()” with the security configurations obtained/generated in the previous steps.

Post initialization NVS read/write APIs remain the same irrespective of NVS encryption.

### Returns

- ESP\_OK if storage was successfully initialized.
- ESP\_ERR\_NVS\_NO\_FREE\_PAGES if the NVS storage contains no empty pages (which may happen if NVS partition was truncated)
- ESP\_ERR\_NOT\_FOUND if no partition with label “nvs” is found in the partition table

- ESP\_ERR\_NO\_MEM in case memory could not be allocated for the internal structures
- one of the error codes from the underlying flash storage driver
- error codes from `nvs_flash_read_security_cfg` API (when “NVS\_ENCRYPTION” is enabled).
- error codes from `nvs_flash_generate_keys` API (when “NVS\_ENCRYPTION” is enabled).
- error codes from `nvs_flash_secure_init_partition` API (when “NVS\_ENCRYPTION” is enabled) .

*esp\_err\_t* **nvs\_flash\_init\_partition** (const char \*partition\_label)

Initialize NVS flash storage for the specified partition.

**Parameters** `partition_label` –[in] Label of the partition. Must be no longer than 16 characters.

**Returns**

- ESP\_OK if storage was successfully initialized.
- ESP\_ERR\_NVS\_NO\_FREE\_PAGES if the NVS storage contains no empty pages (which may happen if NVS partition was truncated)
- ESP\_ERR\_NOT\_FOUND if specified partition is not found in the partition table
- ESP\_ERR\_NO\_MEM in case memory could not be allocated for the internal structures
- one of the error codes from the underlying flash storage driver

*esp\_err\_t* **nvs\_flash\_init\_partition\_ptr** (const *esp\_partition\_t* \*partition)

Initialize NVS flash storage for the partition specified by partition pointer.

**Parameters** `partition` –[in] pointer to a partition obtained by the ESP partition API.

**Returns**

- ESP\_OK if storage was successfully initialized
- ESP\_ERR\_NVS\_NO\_FREE\_PAGES if the NVS storage contains no empty pages (which may happen if NVS partition was truncated)
- ESP\_ERR\_INVALID\_ARG in case partition is NULL
- ESP\_ERR\_NO\_MEM in case memory could not be allocated for the internal structures
- one of the error codes from the underlying flash storage driver

*esp\_err\_t* **nvs\_flash\_deinit** (void)

Deinitialize NVS storage for the default NVS partition.

Default NVS partition is the partition with “nvs” label in the partition table.

**Returns**

- ESP\_OK on success (storage was deinitialized)
- ESP\_ERR\_NVS\_NOT\_INITIALIZED if the storage was not initialized prior to this call

*esp\_err\_t* **nvs\_flash\_deinit\_partition** (const char \*partition\_label)

Deinitialize NVS storage for the given NVS partition.

**Parameters** `partition_label` –[in] Label of the partition

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NVS\_NOT\_INITIALIZED if the storage for given partition was not initialized prior to this call

*esp\_err\_t* **nvs\_flash\_erase** (void)

Erase the default NVS partition.

Erases all contents of the default NVS partition (one with label “nvs” ).

---

**Note:** If the partition is initialized, this function first de-initializes it. Afterwards, the partition has to be initialized again to be used.

---

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NOT\_FOUND if there is no NVS partition labeled “nvs” in the partition table
- different error in case de-initialization fails (shouldn’ t happen)

*esp\_err\_t* **nvs\_flash\_erase\_partition** (const char \*part\_name)

Erase specified NVS partition.

Erase all content of a specified NVS partition

---

**Note:** If the partition is initialized, this function first de-initializes it. Afterwards, the partition has to be initialized again to be used.

---

**Parameters** **part\_name** –[in] Name (label) of the partition which should be erased

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NOT\_FOUND if there is no NVS partition with the specified name in the partition table
- different error in case de-initialization fails (shouldn’ t happen)

*esp\_err\_t* **nvs\_flash\_erase\_partition\_ptr** (const *esp\_partition\_t* \*partition)

Erase custom partition.

Erase all content of specified custom partition.

---

**Note:** If the partition is initialized, this function first de-initializes it. Afterwards, the partition has to be initialized again to be used.

---

**Parameters** **partition** –[in] pointer to a partition obtained by the ESP partition API.

**Returns**

- ESP\_OK on success
- ESP\_ERR\_NOT\_FOUND if there is no partition with the specified parameters in the partition table
- ESP\_ERR\_INVALID\_ARG in case partition is NULL
- one of the error codes from the underlying flash storage driver

*esp\_err\_t* **nvs\_flash\_secure\_init** (*nvs\_sec\_cfg\_t* \*cfg)

Initialize the default NVS partition.

This API initialises the default NVS partition. The default NVS partition is the one that is labeled “nvs” in the partition table.

**Parameters** **cfg** –[in] Security configuration (keys) to be used for NVS encryption/decryption. If cfg is NULL, no encryption is used.

**Returns**

- ESP\_OK if storage has been initialized successfully.
- ESP\_ERR\_NVS\_NO\_FREE\_PAGES if the NVS storage contains no empty pages (which may happen if NVS partition was truncated)
- ESP\_ERR\_NOT\_FOUND if no partition with label “nvs” is found in the partition table
- ESP\_ERR\_NO\_MEM in case memory could not be allocated for the internal structures
- one of the error codes from the underlying flash storage driver

*esp\_err\_t* **nvs\_flash\_secure\_init\_partition** (const char \*partition\_label, *nvs\_sec\_cfg\_t* \*cfg)

Initialize NVS flash storage for the specified partition.

**Parameters**

- **partition\_label** –[in] Label of the partition. Note that internally, a reference to passed value is kept and it should be accessible for future operations
- **cfg** –[in] Security configuration (keys) to be used for NVS encryption/decryption. If **cfg** is null, no encryption/decryption is used.

**Returns**

- ESP\_OK if storage has been initialized successfully.
- ESP\_ERR\_NVS\_NO\_FREE\_PAGES if the NVS storage contains no empty pages (which may happen if NVS partition was truncated)
- ESP\_ERR\_NOT\_FOUND if specified partition is not found in the partition table
- ESP\_ERR\_NO\_MEM in case memory could not be allocated for the internal structures
- one of the error codes from the underlying flash storage driver

*esp\_err\_t* **nvs\_flash\_generate\_keys** (const *esp\_partition\_t* \*partition, *nvs\_sec\_cfg\_t* \*cfg)

Generate and store NVS keys in the provided esp partition.

**Parameters**

- **partition** –[in] Pointer to partition structure obtained using `esp_partition_find_first` or `esp_partition_get`. Must be non-NULL.
- **cfg** –[out] Pointer to nvs security configuration structure. Pointer must be non-NULL. Generated keys will be populated in this structure.

**Returns** -ESP\_OK, if **cfg** was read successfully; -ESP\_INVALID\_ARG, if **partition** or **cfg**; -or error codes from `esp_partition_write/erase` APIs.

*esp\_err\_t* **nvs\_flash\_read\_security\_cfg** (const *esp\_partition\_t* \*partition, *nvs\_sec\_cfg\_t* \*cfg)

Read NVS security configuration from a partition.

---

**Note:** Provided partition is assumed to be marked ‘encrypted’ .

---

**Parameters**

- **partition** –[in] Pointer to partition structure obtained using `esp_partition_find_first` or `esp_partition_get`. Must be non-NULL.
- **cfg** –[out] Pointer to nvs security configuration structure. Pointer must be non-NULL.

**Returns** -ESP\_OK, if **cfg** was read successfully; -ESP\_INVALID\_ARG, if **partition** or **cfg**; -ESP\_ERR\_NVS\_KEYS\_NOT\_INITIALIZED, if the partition is not yet written with keys. -ESP\_ERR\_NVS\_CORRUPT\_KEY\_PART, if the partition containing keys is found to be corrupt -or error codes from `esp_partition_read` API.

**Structures**

struct **nvs\_sec\_cfg\_t**

Key for encryption and decryption.

**Public Members**

uint8\_t **eky**[NVS\_KEY\_SIZE]

XTS encryption and decryption key

uint8\_t **tky**[NVS\_KEY\_SIZE]

XTS tweak key

**Macros**

**NVS\_KEY\_SIZE**

## Header File

- `components/nvs_flash/include/nvs.h`

## Functions

`esp_err_t nvs_set_i8(nvs_handle_t handle, const char *key, int8_t value)`

set int8\_t value for given key

Set value for the key, given its name. Note that the actual storage will not be updated until `nvs_commit` is called.

### Parameters

- **handle** –[in] Handle obtained from `nvs_open` function. Handles that were opened read only cannot be used.
- **key** –[in] Key name. Maximum length is `(NVS_KEY_NAME_MAX_SIZE-1)` characters. Shouldn't be empty.
- **value** –[in] The value to set.

### Returns

- `ESP_OK` if value was set successfully
- `ESP_FAIL` if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- `ESP_ERR_NVS_INVALID_HANDLE` if handle has been closed or is `NULL`
- `ESP_ERR_NVS_READ_ONLY` if storage handle was opened as read only
- `ESP_ERR_NVS_INVALID_NAME` if key name doesn't satisfy constraints
- `ESP_ERR_NVS_NOT_ENOUGH_SPACE` if there is not enough space in the underlying storage to save the value
- `ESP_ERR_NVS_REMOVE_FAILED` if the value wasn't updated because flash write operation has failed. The value was written however, and update will be finished after re-initialization of `nvs`, provided that flash operation doesn't fail again.

`esp_err_t nvs_set_u8(nvs_handle_t handle, const char *key, uint8_t value)`

set uint8\_t value for given key

This function is the same as `nvs_set_i8` except for the data type.

`esp_err_t nvs_set_i16(nvs_handle_t handle, const char *key, int16_t value)`

set int16\_t value for given key

This function is the same as `nvs_set_i8` except for the data type.

`esp_err_t nvs_set_u16(nvs_handle_t handle, const char *key, uint16_t value)`

set uint16\_t value for given key

This function is the same as `nvs_set_i8` except for the data type.

`esp_err_t nvs_set_i32(nvs_handle_t handle, const char *key, int32_t value)`

set int32\_t value for given key

This function is the same as `nvs_set_i8` except for the data type.

`esp_err_t nvs_set_u32(nvs_handle_t handle, const char *key, uint32_t value)`

set uint32\_t value for given key

This function is the same as `nvs_set_i8` except for the data type.

`esp_err_t nvs_set_i64(nvs_handle_t handle, const char *key, int64_t value)`

set int64\_t value for given key

This function is the same as `nvs_set_i8` except for the data type.

`esp_err_t nvs_set_u64(nvs_handle_t handle, const char *key, uint64_t value)`

set uint64\_t value for given key

This function is the same as `nvs_set_i8` except for the data type.

`esp_err_t nvs_set_str(nvs_handle_t handle, const char *key, const char *value)`

set string for given key

Set value for the key, given its name. Note that the actual storage will not be updated until `nvs_commit` is called.

#### Parameters

- **handle** –[in] Handle obtained from `nvs_open` function. Handles that were opened read only cannot be used.
- **key** –[in] Key name. Maximum length is `(NVS_KEY_NAME_MAX_SIZE-1)` characters. Shouldn't be empty.
- **value** –[in] The value to set. For strings, the maximum length (including null character) is 4000 bytes, if there is one complete page free for writing. This decreases, however, if the free space is fragmented.

#### Returns

- `ESP_OK` if value was set successfully
- `ESP_ERR_NVS_INVALID_HANDLE` if handle has been closed or is `NULL`
- `ESP_ERR_NVS_READ_ONLY` if storage handle was opened as read only
- `ESP_ERR_NVS_INVALID_NAME` if key name doesn't satisfy constraints
- `ESP_ERR_NVS_NOT_ENOUGH_SPACE` if there is not enough space in the underlying storage to save the value
- `ESP_ERR_NVS_REMOVE_FAILED` if the value wasn't updated because flash write operation has failed. The value was written however, and update will be finished after re-initialization of `nvs`, provided that flash operation doesn't fail again.
- `ESP_ERR_NVS_VALUE_TOO_LONG` if the string value is too long

`esp_err_t nvs_get_i8(nvs_handle_t handle, const char *key, int8_t *out_value)`

get `int8_t` value for given key

These functions retrieve value for the key, given its name. If `key` does not exist, or the requested variable type doesn't match the type which was used when setting a value, an error is returned.

In case of any error, `out_value` is not modified.

`out_value` has to be a pointer to an already allocated variable of the given type.

```
// Example of using nvs_get_i32:
int32_t max_buffer_size = 4096; // default value
esp_err_t err = nvs_get_i32(my_handle, "max_buffer_size", &max_buffer_size);
assert(err == ESP_OK || err == ESP_ERR_NVS_NOT_FOUND);
// if ESP_ERR_NVS_NOT_FOUND was returned, max_buffer_size will still
// have its default value.
```

#### Parameters

- **handle** –[in] Handle obtained from `nvs_open` function.
- **key** –[in] Key name. Maximum length is `(NVS_KEY_NAME_MAX_SIZE-1)` characters. Shouldn't be empty.
- **out\_value** –Pointer to the output value. May be `NULL` for `nvs_get_str` and `nvs_get_blob`, in this case required length will be returned in `length` argument.

#### Returns

- `ESP_OK` if the value was retrieved successfully
- `ESP_FAIL` if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- `ESP_ERR_NVS_NOT_FOUND` if the requested key doesn't exist
- `ESP_ERR_NVS_INVALID_HANDLE` if handle has been closed or is `NULL`
- `ESP_ERR_NVS_INVALID_NAME` if key name doesn't satisfy constraints
- `ESP_ERR_NVS_INVALID_LENGTH` if `length` is not sufficient to store data

*esp\_err\_t* **nvs\_get\_u8** (*nvs\_handle\_t* handle, const char \*key, uint8\_t \*out\_value)

get uint8\_t value for given key

This function is the same as `nvs_get_i8` except for the data type.

*esp\_err\_t* **nvs\_get\_i16** (*nvs\_handle\_t* handle, const char \*key, int16\_t \*out\_value)

get int16\_t value for given key

This function is the same as `nvs_get_i8` except for the data type.

*esp\_err\_t* **nvs\_get\_u16** (*nvs\_handle\_t* handle, const char \*key, uint16\_t \*out\_value)

get uint16\_t value for given key

This function is the same as `nvs_get_i8` except for the data type.

*esp\_err\_t* **nvs\_get\_i32** (*nvs\_handle\_t* handle, const char \*key, int32\_t \*out\_value)

get int32\_t value for given key

This function is the same as `nvs_get_i8` except for the data type.

*esp\_err\_t* **nvs\_get\_u32** (*nvs\_handle\_t* handle, const char \*key, uint32\_t \*out\_value)

get uint32\_t value for given key

This function is the same as `nvs_get_i8` except for the data type.

*esp\_err\_t* **nvs\_get\_i64** (*nvs\_handle\_t* handle, const char \*key, int64\_t \*out\_value)

get int64\_t value for given key

This function is the same as `nvs_get_i8` except for the data type.

*esp\_err\_t* **nvs\_get\_u64** (*nvs\_handle\_t* handle, const char \*key, uint64\_t \*out\_value)

get uint64\_t value for given key

This function is the same as `nvs_get_i8` except for the data type.

*esp\_err\_t* **nvs\_get\_str** (*nvs\_handle\_t* handle, const char \*key, char \*out\_value, size\_t \*length)

get string value for given key

These functions retrieve the data of an entry, given its key. If key does not exist, or the requested variable type doesn't match the type which was used when setting a value, an error is returned.

In case of any error, `out_value` is not modified.

All functions expect `out_value` to be a pointer to an already allocated variable of the given type.

`nvs_get_str` and `nvs_get_blob` functions support WinAPI-style length queries. To get the size necessary to store the value, call `nvs_get_str` or `nvs_get_blob` with zero `out_value` and non-zero pointer to length. Variable pointed to by length argument will be set to the required length. For `nvs_get_str`, this length includes the zero terminator. When calling `nvs_get_str` and `nvs_get_blob` with non-zero `out_value`, length has to be non-zero and has to point to the length available in `out_value`. It is suggested that `nvs_get/set_str` is used for zero-terminated C strings, and `nvs_get/set_blob` used for arbitrary data structures.

```
// Example (without error checking) of using nvs_get_str to get a string into
↳dynamic array:
size_t required_size;
nvs_get_str(my_handle, "server_name", NULL, &required_size);
char* server_name = malloc(required_size);
nvs_get_str(my_handle, "server_name", server_name, &required_size);

// Example (without error checking) of using nvs_get_blob to get a binary data
into a static array:
uint8_t mac_addr[6];
size_t size = sizeof(mac_addr);
nvs_get_blob(my_handle, "dst_mac_addr", mac_addr, &size);
```

**Parameters**

- **handle** –[in] Handle obtained from `nvs_open` function.
- **key** –[in] Key name. Maximum length is `(NVS_KEY_NAME_MAX_SIZE-1)` characters. Shouldn't be empty.
- **out\_value** –[out] Pointer to the output value. May be `NULL` for `nvs_get_str` and `nvs_get_blob`, in this case required length will be returned in `length` argument.
- **length** –[inout] A non-zero pointer to the variable holding the length of `out_value`. In case `out_value` a zero, will be set to the length required to hold the value. In case `out_value` is not zero, will be set to the actual length of the value written. For `nvs_get_str` this includes zero terminator.

**Returns**

- `ESP_OK` if the value was retrieved successfully
- `ESP_FAIL` if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- `ESP_ERR_NVS_NOT_FOUND` if the requested key doesn't exist
- `ESP_ERR_NVS_INVALID_HANDLE` if handle has been closed or is `NULL`
- `ESP_ERR_NVS_INVALID_NAME` if key name doesn't satisfy constraints
- `ESP_ERR_NVS_INVALID_LENGTH` if `length` is not sufficient to store data

`esp_err_t nvs_get_blob(nvs_handle_t handle, const char *key, void *out_value, size_t *length)`

get blob value for given key

This function behaves the same as `nvs_get_str`, except for the data type.

`esp_err_t nvs_open(const char *namespace_name, nvs_open_mode_t open_mode, nvs_handle_t *out_handle)`

Open non-volatile storage with a given namespace from the default NVS partition.

Multiple internal ESP-IDF and third party application modules can store their key-value pairs in the NVS module. In order to reduce possible conflicts on key names, each module can use its own namespace. The default NVS partition is the one that is labelled “nvs” in the partition table.

**Parameters**

- **namespace\_name** –[in] Namespace name. Maximum length is `(NVS_KEY_NAME_MAX_SIZE-1)` characters. Shouldn't be empty.
- **open\_mode** –[in] `NVS_READWRITE` or `NVS_READONLY`. If `NVS_READONLY`, will open a handle for reading only. All write requests will be rejected for this handle.
- **out\_handle** –[out] If successful (return code is zero), handle will be returned in this argument.

**Returns**

- `ESP_OK` if storage handle was opened successfully
- `ESP_FAIL` if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- `ESP_ERR_NVS_NOT_INITIALIZED` if the storage driver is not initialized
- `ESP_ERR_NVS_PART_NOT_FOUND` if the partition with label “nvs” is not found
- `ESP_ERR_NVS_NOT_FOUND` if namespace doesn't exist yet and mode is `NVS_READONLY`
- `ESP_ERR_NVS_INVALID_NAME` if namespace name doesn't satisfy constraints
- `ESP_ERR_NO_MEM` in case memory could not be allocated for the internal structures
- `ESP_ERR_NVS_NOT_ENOUGH_SPACE` if there is no space for a new entry or there are too many different namespaces (maximum allowed different namespaces: 254)
- other error codes from the underlying storage driver

`esp_err_t nvs_open_from_partition(const char *part_name, const char *namespace_name, nvs_open_mode_t open_mode, nvs_handle_t *out_handle)`

Open non-volatile storage with a given namespace from specified partition.

The behaviour is same as `nvs_open()` API. However this API can operate on a specified NVS partition instead of default NVS partition. Note that the specified partition must be registered with NVS using `nvs_flash_init_partition()` API.

**Parameters**

- **part\_name** –[in] Label (name) of the partition of interest for object read/write/erase
- **namespace\_name** –[in] Namespace name. Maximum length is (NVS\_KEY\_NAME\_MAX\_SIZE-1) characters. Shouldn't be empty.
- **open\_mode** –[in] NVS\_READWRITE or NVS\_READONLY. If NVS\_READONLY, will open a handle for reading only. All write requests will be rejected for this handle.
- **out\_handle** –[out] If successful (return code is zero), handle will be returned in this argument.

#### Returns

- ESP\_OK if storage handle was opened successfully
- ESP\_FAIL if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- ESP\_ERR\_NVS\_NOT\_INITIALIZED if the storage driver is not initialized
- ESP\_ERR\_NVS\_PART\_NOT\_FOUND if the partition with specified name is not found
- ESP\_ERR\_NVS\_NOT\_FOUND id namespace doesn't exist yet and mode is NVS\_READONLY
- ESP\_ERR\_NVS\_INVALID\_NAME if namespace name doesn't satisfy constraints
- ESP\_ERR\_NO\_MEM in case memory could not be allocated for the internal structures
- ESP\_ERR\_NVS\_NOT\_ENOUGH\_SPACE if there is no space for a new entry or there are too many different namespaces (maximum allowed different namespaces: 254)
- other error codes from the underlying storage driver

*esp\_err\_t* **nvs\_set\_blob** (*nvs\_handle\_t* handle, const char \*key, const void \*value, size\_t length)

set variable length binary value for given key

This family of functions set value for the key, given its name. Note that actual storage will not be updated until `nvs_commit` function is called.

#### Parameters

- **handle** –[in] Handle obtained from `nvs_open` function. Handles that were opened read only cannot be used.
- **key** –[in] Key name. Maximum length is (NVS\_KEY\_NAME\_MAX\_SIZE-1) characters. Shouldn't be empty.
- **value** –[in] The value to set.
- **length** –[in] length of binary value to set, in bytes; Maximum length is 508000 bytes or (97.6% of the partition size - 4000) bytes whichever is lower.

#### Returns

- ESP\_OK if value was set successfully
- ESP\_FAIL if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- ESP\_ERR\_NVS\_INVALID\_HANDLE if handle has been closed or is NULL
- ESP\_ERR\_NVS\_READ\_ONLY if storage handle was opened as read only
- ESP\_ERR\_NVS\_INVALID\_NAME if key name doesn't satisfy constraints
- ESP\_ERR\_NVS\_NOT\_ENOUGH\_SPACE if there is not enough space in the underlying storage to save the value
- ESP\_ERR\_NVS\_REMOVE\_FAILED if the value wasn't updated because flash write operation has failed. The value was written however, and update will be finished after re-initialization of `nvs`, provided that flash operation doesn't fail again.
- ESP\_ERR\_NVS\_VALUE\_TOO\_LONG if the value is too long

*esp\_err\_t* **nvs\_erase\_key** (*nvs\_handle\_t* handle, const char \*key)

Erase key-value pair with given key name.

Note that actual storage may not be updated until `nvs_commit` function is called.

#### Parameters

- **handle** –[in] Storage handle obtained with `nvs_open`. Handles that were opened read only cannot be used.
- **key** –[in] Key name. Maximum length is (NVS\_KEY\_NAME\_MAX\_SIZE-1) characters. Shouldn't be empty.

#### Returns

- ESP\_OK if erase operation was successful

- ESP\_FAIL if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- ESP\_ERR\_NVS\_INVALID\_HANDLE if handle has been closed or is NULL
- ESP\_ERR\_NVS\_READ\_ONLY if handle was opened as read only
- ESP\_ERR\_NVS\_NOT\_FOUND if the requested key doesn't exist
- other error codes from the underlying storage driver

*esp\_err\_t* **nvs\_erase\_all** (*nvs\_handle\_t* handle)

Erase all key-value pairs in a namespace.

Note that actual storage may not be updated until `nvs_commit` function is called.

**Parameters** **handle** –[in] Storage handle obtained with `nvs_open`. Handles that were opened read only cannot be used.

**Returns**

- ESP\_OK if erase operation was successful
- ESP\_FAIL if there is an internal error; most likely due to corrupted NVS partition (only if NVS assertion checks are disabled)
- ESP\_ERR\_NVS\_INVALID\_HANDLE if handle has been closed or is NULL
- ESP\_ERR\_NVS\_READ\_ONLY if handle was opened as read only
- other error codes from the underlying storage driver

*esp\_err\_t* **nvs\_commit** (*nvs\_handle\_t* handle)

Write any pending changes to non-volatile storage.

After setting any values, `nvs_commit()` must be called to ensure changes are written to non-volatile storage. Individual implementations may write to storage at other times, but this is not guaranteed.

**Parameters** **handle** –[in] Storage handle obtained with `nvs_open`. Handles that were opened read only cannot be used.

**Returns**

- ESP\_OK if the changes have been written successfully
- ESP\_ERR\_NVS\_INVALID\_HANDLE if handle has been closed or is NULL
- other error codes from the underlying storage driver

void **nvs\_close** (*nvs\_handle\_t* handle)

Close the storage handle and free any allocated resources.

This function should be called for each handle opened with `nvs_open` once the handle is not in use any more. Closing the handle may not automatically write the changes to nonvolatile storage. This has to be done explicitly using `nvs_commit` function. Once this function is called on a handle, the handle should no longer be used.

**Parameters** **handle** –[in] Storage handle to close

*esp\_err\_t* **nvs\_get\_stats** (const char \*part\_name, *nvs\_stats\_t* \*nvs\_stats)

Fill structure *nvs\_stats\_t*. It provides info about used memory the partition.

This function calculates to runtime the number of used entries, free entries, total entries, and amount namespace in partition.

```
// Example of nvs_get_stats() to get the number of used entries and free_
↪entries:
nvs_stats_t nvs_stats;
nvs_get_stats(NULL, &nvs_stats);
printf("Count: UsedEntries = (%d), FreeEntries = (%d), AllEntries = (%d)\n",
      nvs_stats.used_entries, nvs_stats.free_entries, nvs_stats.total_
↪entries);
```

**Parameters**

- **part\_name** –[in] Partition name NVS in the partition table. If pass a NULL than will use `NVS_DEFAULT_PART_NAME` ( "nvs" ).

- **nvs\_stats** –[out] Returns filled structure `nvs_states_t`. It provides info about used memory the partition.

#### Returns

- `ESP_OK` if the changes have been written successfully. Return param `nvs_stats` will be filled.
- `ESP_ERR_NVS_PART_NOT_FOUND` if the partition with label “name” is not found. Return param `nvs_stats` will be filled 0.
- `ESP_ERR_NVS_NOT_INITIALIZED` if the storage driver is not initialized. Return param `nvs_stats` will be filled 0.
- `ESP_ERR_INVALID_ARG` if `nvs_stats` equal to `NULL`.
- `ESP_ERR_INVALID_STATE` if there is page with the status of `INVALID`. Return param `nvs_stats` will be filled not with correct values because not all pages will be counted. Counting will be interrupted at the first `INVALID` page.

*esp\_err\_t* **nvs\_get\_used\_entry\_count** (*nvs\_handle\_t* handle, *size\_t* \*used\_entries)

Calculate all entries in a namespace.

An entry represents the smallest storage unit in NVS. Strings and blobs may occupy more than one entry. Note that to find out the total number of entries occupied by the namespace, add one to the returned value `used_entries` (if `err` is equal to `ESP_OK`). Because the name space entry takes one entry.

```
// Example of nvs_get_used_entry_count() to get amount of all key-value pairs.
↳in one namespace:
nvs_handle_t handle;
nvs_open("namespace1", NVS_READWRITE, &handle);
...
size_t used_entries;
size_t total_entries_namespace;
if(nvs_get_used_entry_count(handle, &used_entries) == ESP_OK){
    // the total number of entries occupied by the namespace
    total_entries_namespace = used_entries + 1;
}
```

#### Parameters

- **handle** –[in] Handle obtained from `nvs_open` function.
- **used\_entries** –[out] Returns amount of used entries from a namespace.

#### Returns

- `ESP_OK` if the changes have been written successfully. Return param `used_entries` will be filled valid value.
- `ESP_ERR_NVS_NOT_INITIALIZED` if the storage driver is not initialized. Return param `used_entries` will be filled 0.
- `ESP_ERR_NVS_INVALID_HANDLE` if handle has been closed or is `NULL`. Return param `used_entries` will be filled 0.
- `ESP_ERR_INVALID_ARG` if `used_entries` equal to `NULL`.
- Other error codes from the underlying storage driver. Return param `used_entries` will be filled 0.

*esp\_err\_t* **nvs\_entry\_find** (const char \*part\_name, const char \*namespace\_name, *nvs\_type\_t* type, *nvs\_iterator\_t* \*output\_iterator)

Create an iterator to enumerate NVS entries based on one or more parameters.

```
// Example of listing all the key-value pairs of any type under specified
↳partition and namespace
nvs_iterator_t it = NULL;
esp_err_t res = nvs_entry_find(<nvs_partition_name>, <namespace>, NVS_TYPE_
↳ANY, &it);
```

(continues on next page)

```

while(res == ESP_OK) {
    nvs_entry_info_t info;
    nvs_entry_info(it, &info); // Can omit error check if parameters are
    ↪ guaranteed to be non-NULL
    printf("key '%s', type '%d' \n", info.key, info.type);
    res = nvs_entry_next(&it);
}
nvs_release_iterator(it);

```

**Parameters**

- **part\_name** **–[in]** Partition name
- **namespace\_name** **–[in]** Set this value if looking for entries with a specific namespace. Pass NULL otherwise.
- **type** **–[in]** One of `nvs_type_t` values.
- **output\_iterator** **–[out]** Set to a valid iterator to enumerate all the entries found. Set to NULL if no entry for specified criteria was found. If any other error except `ESP_ERR_INVALID_ARG` occurs, `output_iterator` is NULL, too. If `ESP_ERR_INVALID_ARG` occurs, `output_iterator` is not changed. If a valid iterator is obtained through this function, it has to be released using `nvs_release_iterator` when not used any more, unless `ESP_ERR_INVALID_ARG` is returned.

**Returns**

- `ESP_OK` if no internal error or programming error occurred.
- `ESP_ERR_NVS_NOT_FOUND` if no element of specified criteria has been found.
- `ESP_ERR_NO_MEM` if memory has been exhausted during allocation of internal structures.
- `ESP_ERR_INVALID_ARG` if any of the parameters is NULL. Note: don't release `output_iterator` in case `ESP_ERR_INVALID_ARG` has been returned

`esp_err_t nvs_entry_next` (`nvs_iterator_t *iterator`)

Advances the iterator to next item matching the iterator criteria.

Note that any copies of the iterator will be invalid after this call.

**Parameters** **iterator** **–[inout]** Iterator obtained from `nvs_entry_find` function. Must be non-NULL. If any error except `ESP_ERR_INVALID_ARG` occurs, `iterator` is set to NULL. If `ESP_ERR_INVALID_ARG` occurs, `iterator` is not changed.

**Returns**

- `ESP_OK` if no internal error or programming error occurred.
- `ESP_ERR_NVS_NOT_FOUND` if no next element matching the iterator criteria.
- `ESP_ERR_INVALID_ARG` if `iterator` is NULL.
- Possibly other errors in the future for internal programming or flash errors.

`esp_err_t nvs_entry_info` (`const nvs_iterator_t iterator, nvs_entry_info_t *out_info`)

Fills `nvs_entry_info_t` structure with information about entry pointed to by the iterator.

**Parameters**

- **iterator** **–[in]** Iterator obtained from `nvs_entry_find` function. Must be non-NULL.
- **out\_info** **–[out]** Structure to which entry information is copied.

**Returns**

- `ESP_OK` if all parameters are valid; current iterator data has been written to `out_info`
- `ESP_ERR_INVALID_ARG` if one of the parameters is NULL.

void `nvs_release_iterator` (`nvs_iterator_t iterator`)

Release iterator.

**Parameters** **iterator** **–[in]** Release iterator obtained from `nvs_entry_find` function. NULL argument is allowed.

## Structures

struct **nvs\_entry\_info\_t**

information about entry obtained from `nvs_entry_info` function

### Public Members

char **namespace\_name**[16]

Namespace to which key-value belong

char **key**[NVS\_KEY\_NAME\_MAX\_SIZE]

Key of stored key-value pair

*nvs\_type\_t* **type**

Type of stored key-value pair

struct **nvs\_stats\_t**

---

**Note:** Info about storage space NVS.

---

### Public Members

size\_t **used\_entries**

Amount of used entries.

size\_t **free\_entries**

Amount of free entries.

size\_t **total\_entries**

Amount all available entries.

size\_t **namespace\_count**

Amount name space.

## Macros

**ESP\_ERR\_NVS\_BASE**

Starting number of error codes

**ESP\_ERR\_NVS\_NOT\_INITIALIZED**

The storage driver is not initialized

**ESP\_ERR\_NVS\_NOT\_FOUND**

A requested entry couldn't be found or namespace doesn't exist yet and mode is `NVS_READONLY`

**ESP\_ERR\_NVS\_TYPE\_MISMATCH**

The type of set or get operation doesn't match the type of value stored in NVS

**ESP\_ERR\_NVS\_READ\_ONLY**

Storage handle was opened as read only

**ESP\_ERR\_NVS\_NOT\_ENOUGH\_SPACE**

There is not enough space in the underlying storage to save the value

**ESP\_ERR\_NVS\_INVALID\_NAME**

Namespace name doesn't satisfy constraints

**ESP\_ERR\_NVS\_INVALID\_HANDLE**

Handle has been closed or is NULL

**ESP\_ERR\_NVS\_REMOVE\_FAILED**

The value wasn't updated because flash write operation has failed. The value was written however, and update will be finished after re-initialization of nvs, provided that flash operation doesn't fail again.

**ESP\_ERR\_NVS\_KEY\_TOO\_LONG**

Key name is too long

**ESP\_ERR\_NVS\_PAGE\_FULL**

Internal error; never returned by nvs API functions

**ESP\_ERR\_NVS\_INVALID\_STATE**

NVS is in an inconsistent state due to a previous error. Call `nvs_flash_init` and `nvs_open` again, then retry.

**ESP\_ERR\_NVS\_INVALID\_LENGTH**

String or blob length is not sufficient to store data

**ESP\_ERR\_NVS\_NO\_FREE\_PAGES**

NVS partition doesn't contain any empty pages. This may happen if NVS partition was truncated. Erase the whole partition and call `nvs_flash_init` again.

**ESP\_ERR\_NVS\_VALUE\_TOO\_LONG**

Value doesn't fit into the entry or string or blob length is longer than supported by the implementation

**ESP\_ERR\_NVS\_PART\_NOT\_FOUND**

Partition with specified name is not found in the partition table

**ESP\_ERR\_NVS\_NEW\_VERSION\_FOUND**

NVS partition contains data in new format and cannot be recognized by this version of code

**ESP\_ERR\_NVS\_XTS\_ENCR\_FAILED**

XTS encryption failed while writing NVS entry

**ESP\_ERR\_NVS\_XTS\_DECR\_FAILED**

XTS decryption failed while reading NVS entry

**ESP\_ERR\_NVS\_XTS\_CFG\_FAILED**

XTS configuration setting failed

**ESP\_ERR\_NVS\_XTS\_CFG\_NOT\_FOUND**

XTS configuration not found

**ESP\_ERR\_NVS\_ENCR\_NOT\_SUPPORTED**

NVS encryption is not supported in this version

**ESP\_ERR\_NVS\_KEYS\_NOT\_INITIALIZED**

NVS key partition is uninitialized

**ESP\_ERR\_NVS\_CORRUPT\_KEY\_PART**

NVS key partition is corrupt

**ESP\_ERR\_NVS\_WRONG\_ENCRYPTION**

NVS partition is marked as encrypted with generic flash encryption. This is forbidden since the NVS encryption works differently.

**ESP\_ERR\_NVS\_CONTENT\_DIFFERS**

Internal error; never returned by nvs API functions. NVS key is different in comparison

**NVS\_DEFAULT\_PART\_NAME**

Default partition name of the NVS partition in the partition table

**NVS\_PART\_NAME\_MAX\_SIZE**

maximum length of partition name (excluding null terminator)

**NVS\_KEY\_NAME\_MAX\_SIZE**

Maximum length of NVS key name (including null terminator)

### Type Definitions

```
typedef uint32_t nvs_handle_t
```

Opaque pointer type representing non-volatile storage handle

```
typedef nvs_handle_t nvs_handle
```

```
typedef nvs_open_mode_t nvs_open_mode
```

```
typedef struct nvs_opaque_iterator_t *nvs_iterator_t
```

Opaque pointer type representing iterator to nvs entries

### Enumerations

```
enum nvs_open_mode_t
```

Mode of opening the non-volatile storage.

*Values:*

enumerator **NVS\_READONLY**

Read only

enumerator **NVS\_READWRITE**

Read and write

enum **nvs\_type\_t**

Types of variables.

*Values:*

enumerator **NVS\_TYPE\_U8**

Type uint8\_t

enumerator **NVS\_TYPE\_I8**

Type int8\_t

enumerator **NVS\_TYPE\_U16**

Type uint16\_t

enumerator **NVS\_TYPE\_I16**

Type int16\_t

enumerator **NVS\_TYPE\_U32**

Type uint32\_t

enumerator **NVS\_TYPE\_I32**

Type int32\_t

enumerator **NVS\_TYPE\_U64**

Type uint64\_t

enumerator **NVS\_TYPE\_I64**

Type int64\_t

enumerator **NVS\_TYPE\_STR**

Type string

enumerator **NVS\_TYPE\_BLOB**

Type blob

enumerator **NVS\_TYPE\_ANY**

Must be last

## 2.9.4 NVS Partition Generator Utility

### Introduction

The utility `nvs_flash/nvs_partition_generator/nvs_partition_gen.py` creates a binary file based on key-value pairs provided in a CSV file. The binary file is compatible with NVS architecture defined in *Non-Volatile Storage*. This utility is ideally suited for generating a binary blob, containing data specific to ODM/OEM, which can be flashed externally

at the time of device manufacturing. This allows manufacturers to generate many instances of the same application firmware with customized parameters for each device, such as a serial number.

### Prerequisites

To use this utility in encryption mode, install the following packages:

- cryptography package

All the required packages are included in *requirements.txt* in the root of the esp-idf directory.

### CSV File Format

Each line of a CSV file should contain 4 parameters, separated by a comma. The table below provides the description for each of these parameters.

No.	Parameter	Description	Notes
1	Key	Key of the data. The data can be accessed later from an application using this key.	
2	Type	Supported values are <code>file</code> , <code>data</code> , and <code>namespace</code> .	
3	Encoding	Supported values are: <code>u8</code> , <code>i8</code> , <code>u16</code> , <code>i16</code> , <code>u32</code> , <code>i32</code> , <code>u64</code> , <code>i64</code> , <code>string</code> , <code>hex2bin</code> , <code>base64</code> , and <code>binary</code> . This specifies how actual data values are encoded in the resulting binary file. The difference between the <code>string</code> and <code>binary</code> encoding is that <code>string</code> data is terminated with a NULL character, whereas <code>binary</code> data is not.	As of now, for the <code>file</code> type, only <code>hex2bin</code> , <code>base64</code> , <code>string</code> , and <code>binary</code> encoding is supported.
4	Value	Data value	Encoding and Value cells for the <code>namespace</code> field type should be empty. Encoding and Value of <code>namespace</code> are fixed and are not configurable. Any values in these cells are ignored.

**Note:** The first line of the CSV file should always be the column header and it is not configurable.

Below is an example dump of such a CSV file:

```
key,type,encoding,value      <-- column header
namespace_name,namespace,,  <-- First entry should be of type "namespace"
key1,data,u8,1
key2,file,string,/path/to/file
```

**Note:**

**Make sure there are no spaces:**

- before and after `'`
- at the end of each line in a CSV file

## NVS Entry and Namespace Association

When a namespace entry is encountered in a CSV file, each following entry will be treated as part of that namespace until the next namespace entry is found. At this point, all the following entries will be treated as part of the new namespace.

---

**Note:** First entry in a CSV file should always be a namespace entry.

---

## Multipage Blob Support

By default, binary blobs are allowed to span over multiple pages and are written in the format mentioned in Section [Structure of Entry](#). If you intend to use an older format, the utility provides an option to disable this feature.

## Encryption Support

The NVS Partition Generator utility also allows you to create an encrypted binary file. The utility uses the AES-XTS encryption. Please refer to [NVS Encryption](#) for more details.

## Decryption Support

This utility allows you to decrypt an encrypted NVS binary file. The utility uses an NVS binary file encrypted using AES-XTS encryption. Please refer to [NVS Encryption](#) for more details.

## Running the Utility

### Usage:

```
python nvs_partition_gen.py [-h] {generate,generate-key,encrypt,decrypt} ...
```

### Optional Arguments:

No.	Parameter	Description
1	-h, -help	Show this help message and exit

### Commands:

```
Run nvs_partition_gen.py {command} -h for additional help
```

No.	Parameter	Description
1	generate	Generate NVS partition
2	generate-key	Generate keys for encryption
3	encrypt	Generate NVS encrypted partition
4	decrypt	Decrypt NVS encrypted partition

### To Generate NVS Partition (Default): Usage:

```
python nvs_partition_gen.py generate [-h] [--version {1,2}] [--outdir OUTDIR]
                                     input output size
```

**Positional Arguments:**

Parameter	Description
input	Path to CSV file to parse
output	Path to output NVS binary file
size	Size of NVS partition in bytes (must be multiple of 4096)

**Optional Arguments:**

Parameter	Description
-h, -help	Show this help message and exit
-version {1,2}	Set multipage blob version Version 1 - Multipage blob support disabled Version 2 - Multipage blob support enabled Default: Version 2
-outdir OUTDIR	Output directory to store files created (Default: current directory)

You can run the utility to generate NVS partition using the command below. A sample CSV file is provided with the utility:

```
python nvs_partition_gen.py generate sample_singlepage_blob.csv sample.bin 0x3000
```

**To Generate Only Encryption Key Partition: Usage:**

```
python nvs_partition_gen.py generate-key [-h] [--keyfile KEYFILE]
                                         [--outdir OUTDIR]
```

**Optional Arguments:**

Parameter	Description
-h, -help	Show this help message and exit
-keyfile KEYFILE	Path to output encryption key partition file
-outdir OUTDIR	Output directory to store file created (Default: current directory)

You can run the utility to generate only the encryption key partition using the command below:

```
python nvs_partition_gen.py generate-key
```

**To Generate Encrypted NVS Partition: Usage:**

```
python nvs_partition_gen.py encrypt [-h] [--version {1,2}] [--keygen]
                                     [--keyfile KEYFILE] [--inputkey INPUTKEY]
                                     [--outdir OUTDIR]
                                     input output size
```

**Positional Arguments:**

Parameter	Description
input	Path to CSV file to parse
output	Path to output NVS binary file
size	Size of NVS partition in bytes (must be multiple of 4096)

**Optional Arguments:**

Parameter	Description
-h, -help	Show this help message and exit
-version {1,2}	Set multipage blob version Version 1 - Multipage blob support disabled Version 2 - Multipage blob support enabled Default: Version 2
-keygen	Generates key for encrypting NVS partition
-keyfile KEY-FILE	Path to output encryption keys file
-inputkey INPUTKEY	File having key for encrypting NVS partition
-outdir OUTDIR	Output directory to store files created (Default: current directory)

You can run the utility to encrypt NVS partition using the command below. A sample CSV file is provided with the utility:

- Encrypt by allowing the utility to generate encryption keys:

```
python nvs_partition_gen.py encrypt sample_singlepage_blob.csv sample_encr.bin_
↪0x3000 --keygen
```

**Note:** Encryption key of the following format <outdir>/keys/keys-<timestamp>.bin is created.

- Encrypt by allowing the utility to generate encryption keys and store it in provided custom filename:

```
python nvs_partition_gen.py encrypt sample_singlepage_blob.csv sample_encr.bin_
↪0x3000 --keygen --keyfile sample_keys.bin
```

**Note:** Encryption key of the following format <outdir>/keys/sample\_keys.bin is created.

**Note:** This newly created file having encryption keys in keys/ directory is compatible with NVS key-partition structure. Refer to [NVS Key Partition](#) for more details.

- Encrypt by providing the encryption keys as input binary file:

```
python nvs_partition_gen.py encrypt sample_singlepage_blob.csv sample_encr.bin_
↪0x3000 --inputkey sample_keys.bin
```

### To Decrypt Encrypted NVS Partition: Usage:

```
python nvs_partition_gen.py decrypt [-h] [--outdir OUTDIR] input key output
```

#### Positional Arguments:

Parameter	Description
input	Path to encrypted NVS partition file to parse
key	Path to file having keys for decryption
output	Path to output decrypted binary file

#### Optional Arguments:

Parameter	Description
-h, -help	Show this help message and exit
-outdir OUTDIR	Output directory to store files created (Default: current directory)

You can run the utility to decrypt encrypted NVS partition using the command below:

```
python nvs_partition_gen.py decrypt sample_encr.bin sample_keys.bin sample_decr.bin
```

**You can also provide the format version number:**

- Multipage Blob Support Disabled (Version 1)
- Multipage Blob Support Enabled (Version 2)

**Multipage Blob Support Disabled (Version 1):** You can run the utility in this format by setting the version parameter to 1, as shown below. A sample CSV file is provided with the utility:

```
python nvs_partition_gen.py generate sample_singlepage_blob.csv sample.bin 0x3000 -  
↪-version 1
```

**Multipage Blob Support Enabled (Version 2):** You can run the utility in this format by setting the version parameter to 2, as shown below. A sample CSV file is provided with the utility:

```
python nvs_partition_gen.py generate sample_multipage_blob.csv sample.bin 0x4000 --  
↪version 2
```

---

**Note:** *Minimum NVS Partition Size needed is 0x3000 bytes.*

---

---

**Note:** *When flashing the binary onto the device, make sure it is consistent with the application's sdkconfig.*

---

### Caveats

- Utility does not check for duplicate keys and will write data pertaining to both keys. You need to make sure that the keys are distinct.
- Once a new page is created, no data will be written in the space left on the previous page. Fields in the CSV file need to be ordered in such a way as to optimize memory.
- 64-bit datatype is not yet supported.

## 2.9.5 SD/SDIO/MMC Driver

### Overview

The SD/SDIO/MMC driver currently supports SD memory, SDIO cards, and eMMC chips. This is a protocol level driver built on top of SDMMC and SD SPI host drivers.

SDMMC and SD SPI host drivers ([driver/include/driver/sdmmc\\_host.h](#) and [driver/include/driver/sdspi\\_host.h](#)) provide API functions for:

- Sending commands to slave devices
- Sending and receiving data
- Handling error conditions within the bus

For functions used to initialize and configure:

- SD SPI host, see [SD SPI Host API](#)

## Application Example

An example which combines the SDMMC driver with the FATFS library is provided in the [storage/sd\\_card](#) directory of ESP-IDF examples. This example initializes the card, then writes and reads data from it using POSIX and C library APIs. See README.md file in the example directory for more information.

**Combo (memory + IO) cards** The driver does not support SD combo cards. Combo cards are treated as IO cards.

**Thread safety** Most applications need to use the protocol layer only in one task. For this reason, the protocol layer does not implement any kind of locking on the `sdmmc_card_t` structure, or when accessing SDMMC or SD SPI host drivers. Such locking is usually implemented on a higher layer, e.g., in the filesystem driver.

## API Reference

### Header File

- `components/sdmmc/include/sdmmc_cmd.h`

### Functions

`esp_err_t sdmmc_card_init` (const `sdmmc_host_t` \*host, `sdmmc_card_t` \*out\_card)

Probe and initialize SD/MMC card using given host

---

**Note:** Only SD cards (SDSC and SDHC/SDXC) are supported now. Support for MMC/eMMC cards will be added later.

---

#### Parameters

- **host** –pointer to structure defining host controller
- **out\_card** –pointer to structure which will receive information about the card when the function completes

#### Returns

- ESP\_OK on success
